A study of Sir Thomas Arnold's book will convince all but the wilfully blind that the Khalifate of the theologians perished centuries ago, and that the pretence that the Ottoman Sultan was the successor of Umar the Discriminator, Mu'awiya, and Harun-ur-Rashid is a comparatively recent fiction. The institution cannot be revived; the sentiment of nationality forbids it, and Islam has done very well without it. Now that the last pretender to the vanished dignity has disappeared from the stage, it is to be hoped that there will be no attempt to resuscitate a title which, despite its degradation, still retains sufficient prestige to foment strife and bitterness between those likely to contend for it. What Angora has thrown away is not worth picking up.

WOLSELEY HAIG.

INDIAN EMIGRATION.

"INDIAN EMIGRATION." By "Emigrant." (London: Humphrey Milford. 3s. net.

This booklet is one of the series called "India of To-day," and published under the general editorship of the Director of the Central Bureau of Information at Delhi, to enable students "to keep in touch with the current problems of India." It is well suited to its declared purpose, giving a clear account of the last century, during which the Government first strove to abolish the evils incidental to the system of indentured emigration, and then, in deference to middle-class sentiment, abolished the system itself. We should have preferred to know the author's name: to our mind, pseudonyms are as unsuitable to such semi-official publications as caricatures would be, and there seems to be a *suggestio falsi* in this particular pseudonym, for the book could not have been written by an emigrant, but strongly suggests someone with a settled home in an Indian secretariat. Its weakest point is its failure to place the system in its proper historical position. The author, indeed, indulges in a little speculation regarding emigration a thousand years ago, but he seems never to have heard of the Indian slave trade as it flourished, at any rate, from the sixteenth to the eighteenth century, and consequently ignores the facts that indentured emigration met the social and economic needs formerly met in part by the Indian slave dealer, and that the "crimping" which marred it so seriously derives directly from the slaver's methods. In the old days, Indians, oppressed by Indians, sold themselves to Indian slavers for export, and were very often cheated in the bargain; more recently, they sold themselves to Indian recruiters for the same reason, and were cheated as before; at present they cannot sell themselves, and must endure the social and economic oppression, from which they would escape if they could. Such is the position to-day; the next step is to open out more effective avenues of escape, but on this topic "Emigrant" has little to tell us.

GYPSY TALES.

"LOVE AND THE GYPSY." By Konrad Bercovici. (London: Nash and Grayson. 7s. 6d. net.)

The country through which the old gypsy chief Murdo and Mr. Bercovici's other characters move is wild and uncivilised, and it is a good background for the primitive emotions which he describes. We find Murdo first "up in the Carpathians, trying to enter Hungary by an unknown path in the mountains."

There is something of the freshness of mountain air in these tales of people who love and hate frankly and without subtlety. Mr. Bercovici can introduce an exciting situation and work it up to a satisfying climax. Sometimes he achieves a wild pathos which is truly touching.

We liked best the story of Ileana. Ileana's Jewish blood kept her from going to the young Greek who waited for her on the shore of the Danube until he had had to sacrifice all his boatful of golden melons, and her gypsy blood, when he had gone, kept her watching in vain for his return until she was a shrunken old woman.

PERSONAL AND GENERAL.

TO-DAY.

September 18, 1924 (New Style).
August 5, 1924 (Old Style).
Saphar 18, 1343 A.H., of the Moslem Calendar.
Ellul 19, 5684, of the Jewish Calendar.

The Duke of Sutherland arrived in Athens on September 10.

Husrew Bey has been appointed Turkish Minister in Budapest.

Sir Harry Brittain, M.P., left London last Thursday for Bucharest.

Lady Willcocks left London on September 12 in the liner Morvada for Port Said.

Prince Nicolas of Roumania left London last Monday for Bucharest, to visit the King and Queen of Roumania.

The Greek Archimandrite, Dr. Pagonis, has returned to London from the South Coast, where he has been spending several weeks.

Mr. U. Grant Smith, the United States Minister to Albania, has arrived in London from Aix-les-Bains, and will shortly leave for Tirana.

Dr. Gavrilovitch, Minister in London of the Kingdom of the Serbs, Croats, and Slovenes, has left for the Continent, and expects to be away for four weeks.

M. Venizelos and Mme. Venizelos have arrived at Venice, and are coming to London at the end of September for the purpose of visiting the British Empire Exhibition.

Vedil Bey, who has been appointed Archivist at the Turkish Diplomatic Mission, and Mme. Vedil arrived in London last Friday from Angora. They are staying in Portland Place.

M. Radu T. Djuvara, Counsellor at the Roumanian Legation, left London on September 15 to take up an appointment at the Foreign Office in Bucharest. M. Nicolas Mishu will act as Chargé d'Affaires.

A. M. Hassanein Bey, First Secretary to the Egyptian Legation at Washington, has gone into a London nursing home to undergo an operation, and has been obliged to postpone his return to the United States.

Princess Hassan, daughter of the Egyptian Minister in London, with her two children, arrived last week in London, and is staying with the Egyptian Minister and Mme. Aziz Izzet at 41, Berkeley Square.

Princess Ileana, the youngest daughter of the King and Queen of Roumania, arrived in London on September 13 from Bucharest, and left the same day for Poole, to pay a visit to the Infanta Beatrice of Spain.

Sir Arthur and Lady Crosfield will give a garden party next Saturday at 41, West Hill, Highgate, to meet the F.I.D.A.C. delegates from America, Belgium, Czecho-Slovakia, France, Italy, Poland, Roumania, and Yugoslavia.

Earl Beatty arrived in Athens on September 10 on a private visit. He was the guest of the Minister of Marine at a dinner given in his honour. Earl and Countess Beatty are expected to return to London at the end of September.

The Rev. Hon. L. Morgan-Grenville left London last Thursday by the P. and O. Bombay Express for Marseilles, where he embarked for Karachi in the P. and O. s.s. China, in which Sir Norcot Warren is also travelling to Bombay.

The chairman and directors of Messrs. Vickers, Limited, D. Napier and Son, Limited, and Shell-Mex, Limited, are giving a luncheon at the Hotel Cecil on September 25 in honour of Squadron-Leader A. S. C. S. MacLaren, O.B.E., M.C., D.F.C., A.F.C., and the crew of the Vickers-Napier "Vulture."

Lord Thomson, Secretary of State for Air, accompanied by Mr. C. Ll. Bullock, his private secretary, and Squadron-Leader R. Graham, of the Air Staff, leaves this week for a tour of inspection of the Royal Air Force units in the Middle East and Iraq. The outward and homeward journeys between Egypt and Iraq will be made by air.

King George, of Greece, and Queen Elizabeth ended their visit to London last Friday, and left for Italy and Roumania. Their Majesties, who travelled from Victoria Station, were seen off by Prince Nicolas of Roumania, the Queen's brother, Prince Nicolas and Prince Paul of Greece, the Roumanian Chargé d'Affaires, M. Rizo-Rangabé, a former Greek Chargé d'Affaires in London, Mme. Rizo-Rangabé, M. Nicolas Mishu, of the Roumanian Legation, and several other friends, many of whom brought bouquets for her Majesty.

NEW TURKISH AMBASSADOR IN LONDON.

Zekiaï Bey, the newly appointed Turkish Ambassador to the Court of St. James', arrived in London on September 10 from Angora. His Excellency was met at Dover by Orhan Habid Bey, who accompanied him to London. Mme. Zekiaï, with her sons and infant daughter, arrived in London last Friday from Angora. H.E. Zekiaï Bey and Mme. Zekiaï are staying at 60, Portland Place, W.1.

SOME FACTORS IN INDIAN POLITICS.

When last we surveyed the field of Indian politics we were concerned mainly to point out the tendencies to growth and expansion which have resulted from the working of the new Constitution. To-day we desire to direct attention to the other side of the shield, and examine the principal factors which are working for sterilisation rather than for growth, which are inhibiting beneficent activities and which may possibly retard the development of the country for an indefinite period. The most obvious of these factors is the tendency to form groups round persons instead of policies, and to substitute motives of affection, jealousy, or spite for considerations relating to the public benefit. It would be easy to multiply instances of this tendency, the effect of which is written large over the evidence recorded by the Reforms Committee now at work in Simla, but it is perhaps sufficient to refer to the situation in Bengal, where practically all observers agree that the recent suspension of one side of the Constitution was effected, not by a hostile majority, but by a hostile minority reinforced by the personal enemies of the individuals who happened to be Ministers. Of course, nobody hopes to exclude personal considerations altogether from politics, but the matter is one of degree, and we think all good Aristotelians will concur in the view that it is an error of excess to upset the omnibus because of a tiff with the conductor. Much as we may regret that incident, we cannot, however, agree with those of our contemporaries in India who regard it as unnatural. In fact it derives directly from India's past. In the days when the throne was the only fountain of policy men did not take sides on questions of principle or expediency, but supported this candidate or that for high preferment. Who should be the next Prime Minister? Who should be relegated to Bengal, or one of the other penal settlements? Such were the questions which people discussed most eagerly under the Moguls, and the habit has persisted through more than a century of British rule. Ten years ago Indians took far more interest in personal questions than in anything else. They asked who would be the new Governor, or the new Finance Member, and to-day they ask who will be the new Minister in precisely the same tones. The difference is that what did no harm under the old *régime* does a great deal of harm now, and so long as Indians maintain this obsolete attitude the new field of political effort recently thrown open to them will yield a disappointing harvest.

A second sterilising factor is the newer Indian nationalism. This mental attitude is in itself a healthy reaction from the time when Indians held that India offered nothing good, but at the moment the reaction is being carried to a ridiculous and dangerous length. Things good in themselves are rejected, solely on the ground of their foreign origin, tasks of first-rate importance are assigned to third-rate Indians rather than to the most competent agents available, isolation is regarded as the highest ideal, and scarcely a voice is raised in favour of the synthesis of East and West on which India's aims must ultimately be concentrated.

Fortunately for India we believe this phase will prove to be of short duration. The momentary prominence of the ideal of exclusiveness, fostered as it has been by active dissemination of the gospel of racial hate, has done an infinity of harm, not merely in politics, but in business, in the schools, and in nearly every department of the national activity, but the results are already being recognised, the influence of the preachers of hate has perceptibly decreased, and there are signs of a healthy reaction towards that saner nationalism which commands the respectful sympathy of the world at large. The near future depends largely on the extent to which Indians of position and capacity assist this movement. Some of them are already working for it; what is wanted now is more workers and harder work.

We wish it were possible to take an equally hopeful view of the third factor we have to examine, the profound pessimism which is ingrained so deeply in the Indian mind. It spreads over the whole field of national endeavour like some insidious blight, barely visible perhaps to the eye, but its existence made manifest by stunted growth and disappointing produce. Many examples of its operation could be drawn from the evidence given before the Reform Committee. If there have been any optimists among the witnesses, they have escaped the notice of the reporters. The whole tale is a tale of discouragement in face of minor difficulties. Given the advantages which India enjoys, one-tenth of the optimism which so often carried one or other of the Dominions over the dead points in their early struggles would have sufficed to keep the wheels of the new Constitution running smoothly; institutions have not failed, but hearts have fainted. This habit of pessimism is, as we have said, ingrained in the national mind, and, in the field of politics at least, it finds an ample explanation in history. The popular myth which embodies it, the Golden Age in the distant past, the Black Age in the present and the indefinite future, was a perfectly sound inference from the facts at the time it arose, for the indigenous Indian polity led inevitably to progressive deterioration and ultimate ruin. What the old philosophers failed to realise was the possibility of some alternative polity giving scope for national progress, but even while they were drawing correct conclusions from their limited experience further data were being brought to light in other countries. The Indian polity was a failure, but the remedy lay in profiting by what had been learned elsewhere, and this remedy was brought within reach by the period of foreign domination from which India is now emerging. The view which we wish to press upon our Indian readers is this: Their tradition of the Black Age embodies an historical fact, and one of the most terrible facts in the world's history, but with the eighteenth century the worst was over, and since then the light has increased slowly but steadily. There are dark shadows still, where people may think that it is still night, but those who look upward and forward, instead of backward and downward, will see that a new age has dawned in which India as a nation can go forward with increasing confidence towards a position which will satisfy her highest aspirations. Pessimism was justified in the past, but it is indefensible to-day, and in our view it is the worst of all the enemies which India has to fight.

THE TRANSJORDAN FIGHTING.

By MAJOR E. W. POLSON NEWMAN.

On August 14 the peaceful hills and dales which surround the Transjordan capital were suddenly transformed into a scene of bloodshed and strife. Early in the morning an R.A.F. lorry was proceeding from Amman to Ziza, on the Hejaz railway, with petrol to fill up the Cairo-Baghdad air mail, when it was stopped on the road by some Bedouin, who informed the driver that a force of Wahhabis was advancing on Amman. The lorry at once returned to the aerodrome, and the driver reported the matter to the officer commanding. An air reconnaissance was at once sent out, and the observer had no difficulty in recognising the nationality of the advancing hordes. These warlike men of the desert had trekked northward from the plateau in the centre of Arabia, known as the Nejd, a journey which must have taken them about forty-four days. For the most part they were mounted on camels and carried the green and white banners of their tribes.

In their advance the Wahhabis swarmed into the villages and slaughtered as many Transjordan tribesmen as they could lay hands on. Coming in the very early hours of the morning, they caught most of the people in their beds. In one small village which the writer visited they cut the throats of thirty-three people. There are now only three men, one woman, and two children left there. The first resistance they encountered was but slight, namely, men of the Beni Sakhr tribe, who cleared off with considerable rapidity. At about nine o'clock, however, three aeroplanes left the Amman aerodrome and attacked the Wahhabis with bombs and machine-guns, supported about half an hour later by three armoured cars. A sharp encounter ensued, and the stillness of the Transjordan landscape was broken by the crash of bombs and the crackle of rifle-fire. The Wahhabis shot at the aeroplanes with their rifles, but only succeeded in inflicting one slight casualty. The power of modern weapons was, however, soon too much for the enemy, and their attack was very quickly broken, the assailants retiring east of the railway line at Ziza. The invaders were then pursued in a running fight by the armoured cars until about 11.30 a.m., when the action had to be broken off owing to shortage of ammunition.

A second air-raid left Amman a little before eleven and attacked the enemy east of Meshetta, shortly after the armoured cars had given up the pursuit. A further air-raid, which left Amman at 2.30 p.m., located and attacked the retreating Wahhabis forty miles from Amman and fleeing in an easterly direction. After that the Wahhabis faded away into the "blue." Their retreat eastward proved to be a most disastrous operation, for subsequent reconnaissance, both by air and by means of Bedouin scouts, has found the whole country from Kaf as far as Jauf literally strewn with corpses. Hundreds must have died for want of water, both men and animals. The casualties of the troops were one officer and one other rank slightly wounded, while the Transjordan tribesmen also sustained some losses. The casualties of the enemy were estimated at several hundreds. Eight banners were captured in the fight, and a large quantity of arms and miscellaneous loot. It was only when the time for looting the dead arrived that the Beni Sakhr tribe really became a potential force, and this part of the operation they certainly carried out with great thoroughness, loading up their camels with every article of any value they could find. One of the tribe took £E1,000 in notes off the dead body of a Damascus merchant who had been slaughtered at Kastel. A number of prisoners were taken. The leaders will be hanged, and the remainder sent back to the Nejd. It is possible that the Transjordan Government will find that a good number of the prisoners are leaders.

Undoubtedly, the object of the raid was to increase the Wahhabi territory and revenue. As tents, carpets, etc., were found amongst their baggage, the raiders obviously came intending to stay. A good number—unfortunately for them—have made Transjordan their home for all time. Their leaders are reported to have told them that it was a religious war, that no mercy was to be shown to the Transjordan tribesmen, but that British troops were to be spared.

The Wahhabis are best described as a Puritan sect of Islam. Their teaching differs very considerably from the orthodox Moslem doctrine. They reject Ijma, or the agreement of later interpreters; they offer no prayers to prophet, wali, or saint, nor visit their tombs for that purpose; they say Mohammed is not yet an intercessor, although he will be one at the last day. They forbid women to visit the graves of the dead, and they allow only four festivals: Fitr, Azha, 'Ashura, and Lailat El Mobarek. They do not celebrate Mohammed's birth. They use their knuckles for prayer-counting instead of rosaries, and they strictly forbid the use of silk, gold, silver, ornaments, tobacco, music, opium, and every luxury of the Orient, except perfume and women. They have anthropomorphic ideas of God by a strictly literal interpretation of the Koran texts about "His hand," "sitting," etc., and they believe that Jihad, or religious war, is not out of date, but incumbent on the believer. They condemn minarets, tombstones, and everything that was not in use during the first years of Islam. An example of their beliefs with regard to the wearing of silk assumed a concrete form during their advance through Transjordan. In one of the villages they came upon a wedding party, and, finding the bride all dressed up in silks and ornaments, they proceeded to strip her and chase her across the desert in the costume in which she was born.

The Wahhabis are sworn enemies of the Hashimite House, and refuse to acknowledge King Hussein as Khalif. They are, therefore, a constant source of danger to the Hejaz, Transjordan, and Irak. This time, however, they have been severely punished, and it is not likely that they will try to compete with aeroplanes and armoured cars for some considerable time to come.

As a result of this Wahhabi raid and some serious cases of brigandage, which took place at the beginning of the month, Rikabi Pasha, the Transjordan Prime Minister, has been involved in the most compromising intrigue. The march of events was as follows:—On August 3 and 4 an attack was made by a band of Transjordan brigands on the railway station at Mekarem, and a motor-car was held up in the vicinity of Mezareb by another gang of bandits, who inflicted several casualties among the occupants. Mekarem and Mezareb are both in Syria, but close to the Transjordan frontier, across which the brigands fled as rapidly as possible. At the time of these incidents the Emir Abdullah was on his return journey from Mecca, so, in His Highness's absence, the Prime Minister, Ali Rida Pasha er-Rikabi, thinking it very probable that the bandits were of Transjordan nationality, gave orders for the arrest of all suspected persons found either in Transjordan or returning from Syria. In order to accomplish this, he gave full powers to Peake Pasha, the British officer commanding the local Transjordan forces. About ten days later a detachment of British gen-

Digitized by Google

darmerie was sent to reinforce the local troops. This detachment was ordered to Irbid, and placed under the command of Peake Pasha. This action was taken in order to do everything possible to put an end to the activities of these brigand bands. Meanwhile some thirty suspected persons had been arrested.

On the same day as the British gendarmes were ordered to move to Transjordan, the Wahhabis delivered their attack, and although the raiders were driven off with heavy loss, the British forces at Amman were reinforced by one squadron of cavalry and some armoured cars. These reinforcements arrived in Amman on the evening of the attack and during the following day. As a result of all this a violent attack has been launched at Rikabi Pasha by a section of the Syrian and Palestinian Press. The newspapers in question actually accuse him of arranging a movement of brigands into Syria, of plotting for the overthrow of His Highness the Emir, of causing the country to be occupied by British troops with a view to its annexation to Palestine, and, worst of all, of arranging, in consultation with the British authorities, that the Wahhabis should invade Transjordan in order to provide an excuse for occupying it with British troops.

There is not one grain of truth in the above accusations. If they were less childish they would be more dangerous. Rikabi Pasha is a man of exceptional ability, who was before the war a major-general in the Turkish Army, and has held some of the highest appointments in the Turkish Empire. Transjordan is very fortunate to have him as Prime Minister. He has the good of the country at heart, which is more than can be said of those who hurl false accusations at him and use the Press of other countries in order to further their nefarious schemes.

NEWS IN BRIEF.

Serious floods have overwhelmed several parts of the Punjab. In Bharatpur State 200 villages have been flooded, and Bharatpur City itself is threatened.

According to reports from Batoum, the Soviet has detrained troops there, and is using the Batoum-Tiflis railway for the transport of Red troops to crush the Georgian revolt.

Jackie Coogan, the famous American child film star, after spending this week in London, is proceeding to the Near East to distribute his 1,000,000 dollars for the relief of children in that region.

Mustapha Kemal Pasha, on board the cruiser Hamidieh, passed through the Bosphorus last Friday *en route* for Trebizond, where he is staying for a fortnight. No stop was made at Constantinople.

According to a Reuter message from Bombay, dated September 12, the Central Khalifat Committee has issued an appeal to Indian Moslems to pray for the success of the Rifi, and has resolved to organise financial help.

King Alexander of Yugoslavia and Queen Marie returned last week to Belgrade from their five weeks' tour in the country. It is understood their Majesties have arranged to pay a visit to England in the course of next year.

A parcels service is to be added by the Nairn Transport Company to its motor-car passenger service from Beirut to Baghdad. It will begin on October 30, and will run weekly. Parcels despatched from London by this route will reach Baghdad within fifteen days.

A telegram from Simla states that Aeroplane DH9A, belonging to the 60th Squadron, Royal Air Force, crashed while taking off at Arawali on September 10. Pilot-officer C. H. Ratcliffe and Aircraftsman Gomm were slightly injured.

The *Morning Post* Cairo correspondent reports that the Egyptian Ministry of Finance has instructed the Customs authorities to treat Germans and Austrians as in the same category as the subjects of Powers not entitled to the privileges of the Capitulations.

The Greek Government has brought to the knowledge of the Allied Powers its inability, owing to the country's laws, to surrender to Albania the fourteen villages of the Koritza district without the assent of the National Assembly, which will meet in about a month's time.

All the members of the Bulgarian Cabinet and of the Diplomatic Body, as well as sixteen Archbishops and Bishops and numerous high military and civil officials, attended the consecration of the new cathedral of Saint Alexander Nevski at Sofia last Friday.

Ali Haidar Pasha, the Prefect of Angora, together with a number of Turkish technical experts, paid a visit to the Mayor of Budapest last week. The experts are leaving to visit the different European capitals to get ideas for the construction of the new Turkish capital at Angora.

A strike of electricians at Athens, which began on September 9, was still in progress at the beginning of this week. Athens was without trams, but these were replaced by omnibuses, including a dozen old London General omnibuses. The electric light supply was maintained.

According to the *Daily Telegraph* Constantinople correspondent, two serious earthquake shocks were felt on September 7 in the district of Erzeroum. Eighteen villages were badly affected. Eighty per cent. of the houses were completely destroyed, and the remainder were rendered uninhabitable.

The Queen of Yugoslavia has consented to become the president of the Society for Training Serbian Women. The society, which has been in existence since 1917, aims at educating in some of the professions a number of Serbian girls in England, and sending them back, when fully trained and qualified, to work in their own country.

Tuesday Morning.

The Near Eastern Exchanges.

The course of the Near Eastern exchanges during the present year deserves more than a little attention by British business men. One of the excuses made for not seeking trade in the Near East is that the exchanges put commerce almost out of the question. Like all the excuses put forward in this connection, there is a certain amount of truth in it, but not nearly so much as those who put it forward would have us believe. To explain what I mean I shall quote some of the rates of these exchanges during the present year. Early in April the Greek drachma stood at 250 for sterling, the Yugoslav dinar at 350, the Roumanian leu at 825, the Bulgarian lev at 600, and the Turkish piastre at 825. By the middle of July the drachma stood at 257, the dinar at 371, the lev at 600, the piastre at 860, and the leu, which had depreciated owing to political developments, at 960. Yesterday the respective rates were: 250 for the drachma, 330 for the dinar, 840 for the leu, 610 for the lev, and 822½ for the piastre. In other words, over a long period there has been, except in the case of the Roumanian exchange, comparatively little variation in the rates. They are, in short, becoming stabilised.

Near Eastern Trade.

Now, the importance of that fact is obvious. Provided an exchange is stabilised trade can be done; it is the constant fluctuations that upset business and bring commerce to a standstill. The rate is, in fact, relatively immaterial, and the reason why I lay stress on this development in the Near Eastern exchanges is because the stabilising tendency should give our business men their opportunity to enter the markets in that part of the world. All accounts agree that in many of the markets there business is beginning to revive, and now that a European settlement is a *fait accompli* there is every reason to anticipate that the near future will see a great revival of trade in the Near East. If British merchants and manufacturers are to share in this growing business it behoves them to lose no time in looking after the markets. They cannot expect Near Eastern traders to come to Great Britain to find them; on the contrary, they must use every means of catering for the requirements of the markets in question, and thus only will they share in the trade.

Trade Conferences at Wembley.

It has been an essentially practical development of the spirit of the British Empire Exhibition to bring together representatives of the various trades and the Exhibition Commissioners for an exchange of views on subjects with which they are immediately concerned. In the ordinary course of events a business man interested, it may be, in cotton, silk, or tobacco will go to Wembley, take stock of the exhibits, and decide which, if any, are suited to his purpose. If he finds what he wants, Empire trade will presumably benefit. It may happen, however, that he finds lacking something on which he sets special store or to which he is accustomed, and the Dominion or colony may lose business just from want of knowledge of the particular requirements of the Home business man. The informal conferences that are now being held enable the overseas representatives to meet leading exhibitors in the different trades, to hear from them what they want, and to inform them in turn of the capabilities of the territories with which the representatives are connected. In this way valuable information can be exchanged, and the results should conduce to the promotion of Imperial trade.

The Future of the Exhibition.

Opinion seems to be gradually veering round to the view that it would be foolish not to keep the Exhibition in being for another year, and while we may have to wait some time for a definite statement on the subject, it may now be assumed, I think, that we shall be able to go to Wembley again next summer (or winter, if you like) just as we have this one. I must confess that I have never seen what could be gained by closing down this year. The weather ruined all chance of attendances on an adequate scale, but, despite the climatic conditions, there has been a gradual development of interest in the undertaking, and most of this year's visitors will probably come again, while the favourable political developments abroad should mean a greater influx of foreign visitors.

The British Industries Fair.

We shall soon be hearing details of the British Industries Fair, which it is proposed to hold, I

believe, in February next year, instead of a couple of months later, as was the case this year. Of course, if the Exhibition is to run another year there can scarcely be any question of transferring the Fair to Wembley, and it will doubtless be found in its old home at the White City, which has the advantage of being much more accessible than Wembley. Hitherto conditions abroad have never favoured the Fair, but this time it looks as if it will take place at a time of marked trade revival, and I shall look to see it justify itself in no uncertain way.

Nicosia, September 6.

Forest Fires.

A recent fire in the Papho district, which destroyed trees valued at over £10,000, has caused much concern, not only on account of the value of the timber lost, but having regard to its climatic effects. Unfortunately, this has been followed by a far more disastrous conflagration, which is probably the worst the island has suffered, not only since the British occupation, but for a far longer period. The area of destruction is said to embrace a circuit of over fifty miles. Two minor forest fires have also taken place in the Troödos range. The first mentioned spread with great rapidity, dense clouds of smoke being visible in many places. The forest staff, police, and thousands of villagers hastened to the spots, and worked day and night, and all the British soldiers who could be spared from the detachment in summer quarters on Mt. Troödos were dispatched to help.

The origin of a forest fire can seldom be traced. Sometimes it is due to accident, such as the end of a cigarette; sometimes no doubt to an act of revenge by a convicted shepherd or other villager.

The British Government in 1878 stepped in just in time to save what remained of the Cyprus forests. By delimitation of State forests, and by strict enforcement of the laws, much has been done. Re-afforestation to some, but an insufficient, extent has proceeded for some years. It does not probably keep pace with the destruction that goes on. Preservation has done much, and, if pre-British Consular reports are to be trusted, the rainfall has improved to a marked extent during our administration.

Under Ottoman law villagers residing close to the forests have a right to collect dry fuel for their own domestic purposes, but no more. Other villagers resent their exclusion from this privilege. It is much the same as regards salt. Villagers living near the salt lagoons, where it is collected under Government monopoly or guarded, cannot see why they should have to pay for "the gift of God," which Nature has provided close to their doors. They, moreover, have no privilege like those who enjoy forest rights.

There can be no doubt that strict execution of the laws has been the right policy. There has been a never-ending controversy over Government policy, and there will now be a renewal of discussion, and probably a strong outburst of adverse comment, in view of this very serious misfortune to the island. Critics of Government policy advocate relaxation of the regulations, and a wide extension of grazing permits for goats and sheep within the delimited forests. More damage, they say, is done by incendiaries than can be done by grazing flocks. This view is often urged by "political bishops" and others in the Legislative Council and by the Press. If the Government would alter its policy the vindictive villager would, they say, be converted into the best friend and guardian of the forest. It is, however, to the credit of several members of the Council that they fully realise the immense value of the forests, and favour strict application of the laws, and that they have the courage to say so. Indeed many villagers have learned that forests play an important part in agriculture, and admit the need of preservation, except perhaps where their own interests are concerned! The Government, it is said, will now appoint a Commission to inquire into the causes of forest fires, and report on the fresh measures that should be taken to prevent them.

The "National Council."

At a meeting of the so-called Council it has been decided to appeal directly to the Houses of Parliament, and to lay before them the claims of the Greek Cypriots. The Colonial Office is to be made acquainted with this step, and copies of the "appeal" (to be drafted by the "Council") are to be sent to all members of Parliament, and to the friends of Cyprus in England. Letters received from Mr. T. P. O'Connor, Mr. Kenworthy, Mr. Pember Reeves, and others were placed before the Council. All this seems hardly consistent with the professed resolution (which is believed to have been come to) to work harmoniously with the Government.

VICKERS' EXHIBITS AT OLYMPIA.

Vickers, Ltd., has a complete range of small tools and machine tools at the British Empire Exhibition, and their exhibits at Olympia are confined to a few representative tools such as broaches, adjustable reamers, unbreakable all-steel independent four-jaw chucks, and quick-change drill chucks. These are displayed on Stand No. 59 of Messrs. Chas. Churchill and Co., who are the sole selling agents for the United Kingdom for Vickers machine tools, four-jaw chucks, and broaches.

At the British Empire Exhibition Vickers machine tools and small tools are to be seen in operation at the Vickers stand in the Palace of Engineering. Demonstrations of the Vickers Vanadium high-power drills and patent adjustable reamers are given on a town radial drilling machine. Here may also be seen Vickers gear-shaping machine and tool room lathe, as well as Vickers No. 3 broaching machine in operation.

The report of the Minerva (Roumania) Oil Company, Ltd., for August states that 800 metres were drilled in four wells in Moreni and Runcu. The total production of oil, including oil derived from royalty wells, was 777 tons.

A Reuter message from Athens, dated September 14, states:—"The strike situation has not improved, and the strikers have so far disregarded the Government's warnings. The railway workmen and employees have announced their decision to go on strike in spite of the Government's threat to mobilise them if they strike. A bakers' and millers' strike is also a possibility, and the Government is taking measures to meet every eventuality. Naval engineers are in charge of the power works and sufficient current for lighting purposes and for the running of the tramways has been provided."

THE FINANCIAL SITUATION IN GREECE.

STATEMENT BY FINANCE MINISTER.

The Greek Minister of Finance made a lengthy statement to the Press the other day concerning the present financial situation in Greece and the prospects of the near future. The tone of his statement—the chief points of which are given below—is one of confidence in the financial conditions of the country, which are improving every day. In view of the approaching issue, in London and New York, of the Greek Loan for the settlement of the Asia Minor refugees, the Minister's declarations will be read with interest in this country. There is no doubt that Greece is steadily progressing on the road of healthy finance, and if account be taken of the large resources of the country, of the intelligence of its people, and of the determination of its rulers to put their house in order, one may be sure that the day is not remote when Greece will see her Budget balanced and her currency improved.

As the treaty of peace was signed at Lausanne only towards the end of July, 1923, it cannot be said that the past year was a peace year for Greece. This must be taken into consideration when drawing conclusions from the returns for that period. The budgetary estimates for 1923-1924 were originally as follows (in millions of drachmæ):—Revenue: Ordinary, 3,031; extraordinary, 910; total, 3,941. Expenditure: Ordinary, 2,961; extraordinary, 3,663; total, 6,624; deficit, 2,683. In consequence of additional credits during the year, the estimated deficit rose subsequently to 3,038 millions. The returns from April 1, 1923, to March 31, 1924, show the following results:—Revenue: Ordinary, 3,117; extraordinary, 588; total, 3,705. Expenditure: Ordinary, 1,582; extraordinary, 2,311; total, 3,893. Deficit, 188 millions.

The above deficit of 188 millions is due to extraordinary expenditure, the deficit from which was greatly reduced by the surplus of 1,535 millions from ordinary revenue. As the books for the financial year 1923-1924 would be closed at the end of July, 1924, the above deficit of 188 millions will finally be increased to 1,316 millions, in consequence of payments that would be made by the Treasury up to that date. Thus the year under review will show a deficit of 1,316 millions in lieu of the estimated amount of 3,038 millions—*i.e.*, 1,722 millions drachmæ less. As the Treasury disposes of a credit balance from previous years of 350 millions, the deficit is reduced by that amount to 966 millions.

In this connection it should be stated that the deficit is due exclusively to war expenditure. In fact, since the financial year 1920-1921, when the Asia Minor campaign began, to the end of 1923-1924, war expenditure amounted to no less than 7,731 million drachmæ, distributed as follows:—War Office, 5,802; Ministry of Marine, 956; refugee relief, 479; refugee settlement, 250; soldiers' families relief, 244; total, 7,731 millions. This amount has been raised either by internal loans or by taxation. The items for the refugees do not include the advances made by the Bank of England and the Greek banks against the Refugee Loan. Nor do they comprise the sums disbursed for the settlement of refugees by the Refugee Settlement Commission.

To understand the fiscal effort made by the country one need only mention that the amount derived from direct taxes has risen from 23 millions in 1912 to 719 millions for the financial year 1923-1924. On the other hand, indirect taxes have equally increased from 71 millions to 1,870 millions. During the war period not only has Greece paid regularly the interest and sinking fund on its public debt, domestic and foreign, but has even improved the rate of interest paid on the old gold loans which are controlled by the International Financial Commission.

In the first months of 1923, when a continuation of the war was still feared, the national currency showed a depreciating tendency. Exchange on London was then fluctuating between 385 and 428 drachmæ to the pound sterling. Since then the Greek exchange has greatly improved. It has appreciated to 200 drachmæ to the pound, and has not declined much above 260 drachmæ. This improvement is a proof of confidence in the economic robustness of the country.

The original Budget estimates for 1924-1925, as subsequently modified, are as follows (in millions of drachmæ):—Revenue: Ordinary, 3,458; extraordinary, 500; total, 3,958. Expenditure: Ordinary, 2,906; extraordinary, 1,569; total, 4,475; deficit, 517. Extraordinary expenditure includes an amount of 761 millions, representing certain quite exceptional items. This expenditure, reduced to the minimum possible, is due to the elementary need of providing for the refugees and replacing the material lost in Asia Minor. But for this item the Budget would close with a surplus.

The Public Debt, internal and external, amounted on March 31, 1924, to 9,288 million drachmæ. Loans in foreign money, calculated at the par of exchange, account for 1,675 millions in the above total. The service of the Debt required a sum of 1,005 millions. The average rate at which exchange on London for the service of the Foreign Debt was acquired during the past year was 298 drachmæ. During the current year it is much below 240 drachmæ.

Expenditure for this year has been put at 903 millions less than in the previous year. This reduction is due to the cutting down of war expenditure and to difference in exchange. The extraordinary expenditure of the War and Marine Ministries amounted in 1923-1924 to 1,328 millions. The estimated expenditure under this heading is only 518 millions for the current year. On the other hand, the loss difference in exchange is reduced this year by 244 millions. These figures suffice to show the exactness of the estimates. As

regards revenue the actual returns of the past year have been taken as basis. However, a greater yield of the taxes is anticipated this year. A comparison of the returns for the first four months of the current financial year with those of the past year supports this assumption. Revenue receipts for each month were as follows (in millions of drachmæ) :—1923 : April, 110; May, 140; June, 58; July, 44; total, 352. 1924 : April, 69; May, 124; June, 174; July, 129 total, 496. The position of the Public Treasury is considered as satisfactory. Its disposable funds amount to-day to 434,500,000 drachmæ, £60,000, and 4,300,000 francs.

This balance arises almost entirely from tax receipts. Only a small part is due to the sale of Treasury Bills. The latter, representing the largest part of the Floating Debt, amounted on August 9 to 1,690 millions. The interest paid on this sum is not higher than 5½ per cent. By the sale of these bills the Treasury was supplied with liquid funds in moments of cash shortage. However, the fact is not lost sight of that recourse to this measure must be as limited as possible.

The Minister ended his statement with the following remarks : "Avoiding all comment, we leave to the figures which we have given the care for a more eloquent support of the optimistic view which we take of the economic future of Greece."

NEW COMPANIES.

Belfante and Catoni.

Belfante and Catoni, Ltd., has been registered as a private company, with a nominal capital of £10,000, in £1 shares, to acquire the business carried on at Alexandretta, Syria, as Belfante and Catoni, and a branch carried on at Mersine, Cilicia, as Joseph Catoni and Co., shipowners and brokers, shipping agents, ships' chandlers and general traders, etc. The directors are :—J. Catoni, Alexandretta, Syria, merchant; A. Catoni, Alexandretta, Syria, merchant; R. H. Littlehales, 78-82, George Street, Manchester (managing director, Anglo-Syrian Trading Company). The registered office is at 82, George Street, Manchester.

Oilwells Selection Corporation.

Oilwells Selection Corporation (Drillers and Contractors), Ltd., was registered as a public company on September 11, with a nominal capital of £150,000, in £1 shares, to carry on the business of well sinkers, drillers, refiners, sellers, and distributors of petroleum and other oils, and to acquire securities issued or guaranteed by any company constituted or carrying on business in Roumania, the United Kingdom, or elsewhere.

COMPANY NOTES AND REPORTS.

Smyrna-Aidin Railway.

The report of the Council of Administration of the Ottoman Railway from Smyrna to Aidin for the half-year to June 30, 1924, states that working conditions during the period have been far from satisfactory, and the general conditions in Asia Minor, together with the continual fall in value of the Turkish piastre, have occasioned a heavy decrease in profits as compared with the corresponding period of 1923. To these adverse conditions must be added the fact that trade as a whole from the port of Smyrna has not increased with that celerity which it was expected would ensue after the termination of hostilities. It is hoped that the ratification of the Treaty of Peace with Turkey by Great Britain will ameliorate the general situation.

With regard to reparations from Turkey, the Council state that some considerable progress has been attained with regard to this important matter. It is hoped that an agreement will shortly be arrived at with the Turkish Government representatives which will be submitted to the Grand National Assembly of Turkey for ratification when that body meets at Angora in October next. The Council desire to intimate that the terms of the proposed agreement do not provide for the immediate payment of any sums in cash. If the agreement is ratified, however, substantial advantages should accrue to the company, in due course, and when local conditions permit, by reason of greater latitude being granted on the question of tariffs.

The Turkish Government have lately intimated their desire that in future formal general meetings of the company should be held in Turkey. This matter is at present engaging the attention of the Council, and it is hoped that an arrangement which will be satisfactory to both parties will be arrived at in due course.

The amount and method of payment of considerable sums due to the company by the Greek Government, both on account of damage and also in respect of the utilisation of the company's services during the period of Greek occupation of Asia Minor, still remain unsettled.

The general manager, in his report, states that owing to an unfortunate concurrence of adverse conditions, the results of the half-year's working are the poorest on record. The factors producing this result were (1) the failure of the grain crops on the high plateau last autumn; (2) failure of the cotton and olive crops, both paying high rates; (3) continued depreciation of paper currency; (4) reduced tariffs brought into force in July, 1923; (5) unsettled state of the country through exchange of populations; and (6) general stagnation of trade. Owing to (1) and (2) the principal traffics of the winter season were practically non-existent. The tonnage of all goods carried was nearly 26 per cent. less than in the first half of 1923.

Gross receipts amounted to £140,604, against £216,247 in the first half of 1923, a drop of 35 per cent. Coaching receipts fell from £82,007 to £63,290, and goods receipts from £129,730 to £77,288. Working expenses were £124,629, against £128,669—a decrease of £4,040. The number of passengers carried was 35 per cent. greater than last year, being 773,018, against 571,661. A certain proportion of these, however, were immigrants, who were carried at half ordinary fares. The drop in tonnage of goods, from 102,283 last year to 75,783 this year, is accounted for by the failure of the wheat, cotton, and olive crops, smaller cattle traffic (owing to disease), and depression of trade.

THE COTTON OUTLOOK.

Importance of Empire Production.

The cotton position, always interesting at this period of the year on account of the contingencies attaching to a good, moderate, or bad crop yield, is particularly intriguing at the present time for reasons which will be obvious to all familiar with developments since the War. Ever since the Armistice the question of a probable cotton shortage has been hanging like a cloud over the Lancashire industry. It has coloured the future, and has been the driving force behind the efforts that promise at no distant date to give us a really substantial supply of Empire-grown cotton. There has been no shortage up to the present, simply because the War reduced the world's purchasing power to negligible proportions. But for this consequence there would have been a shortage very soon after the Armistice, for for five years a great part of the world had been out of the market. Many crops have come to harvest since 1918, but still the same tale has to be told of restricted purchases, though all the foreign markets have been, and are, extremely short of supplies. But all the time very gradually but quite perceptibly the tendency has been for the position to improve, while on the whole the yield of American cotton has been on the down grade, and the result has been that year by year the carry-over of American cotton—that index of the outlook—has declined, until to-day it has reached almost negligible proportions. For 1920-21 the carry-over was rather over nine million bales, a year later it was just under five million bales, for 1922-23 it was estimated at a shade over two and a-half million bales, while at the end of July it was more than two hundred thousand bales lower. These figures speak for themselves. While the visible supply of American cotton has thus been reduced so greatly, the world position has suddenly undergone a very marked change for the better. For all practical purposes developments in regard to Russia can be ignored for the time being, but the agreement over German Reparations is in a very different category, and promises in a very short time to bring about a very great change in the world position. It is not so much the potential purchases of cotton goods by Central Europe that is going to affect the position, but the purchases by other markets whose buying power will develop following purchases by Europe of raw material from them. It has been well said that if the natives of Africa were able to purchase a shirt apiece, or if the Chinese were able to add slightly to the length of their garments, Europe would have to go short of cotton goods, and it is no less equally certain that with cotton crops on the level of those of recent years we should now be faced with something akin to the shortage that has for so long been foreseen. Fortunately, however, concurrently with the prospects of expanding markets, we have also the likelihood of much larger crops, and instead of a marked and perhaps rapid rise in cotton, we see a gradual decline in that commodity—a development which will be hailed with relief in Lancashire, for dear cotton means restricted purchases, and a cotton shortage now would have as one inevitable result the curtailment of buying by those markets which will chiefly be affected by the favourable political developments.

It is worth while glancing at the statistical position in regard to cotton at this juncture. The latest American crop forecast indicates a yield of 12,787,000 bales, but as the condition figure of 62.1 is above the average for the period, and as the area planted—40,403,000 acres—shows a very considerable advance on the totals for any of the four previous years, there seems every reason for believing that the crop yield will be substantially in advance of the total given above, and that the final result may be somewhat in advance of 13,000,000 bales. A yield of that nature would, it is needless to say, be very satisfactory. The reports with regard to the Egyptian crop are also fairly encouraging. The area under cotton is estimated at about 2,000,000 acres, and the proportion devoted to Sakellarides is given as over 48 per cent., which is higher than was expected. From this quarter it would seem that a crop considerably larger than the previous one may be looked for. The Sudan cotton crop will again show a substantial increase, as will be the case in many other parts of the Empire where increased attention is now being devoted to cotton cultivation, but the time has not yet arrived when these crops can compensate for an appreciable decline in the production outside the Empire, though the rate of progress in the Sudan is little short of astonishing, and it is obvious that very soon an output of 100,000 bales may be looked for from that quarter. But if the Empire cotton yield is as yet small, if the yield of the Indian crop be excluded, it is very far from being negligible. From a trifle of 300 bales in 1902 the yield in Africa has risen to 167,000 bales for 1923, and for the coming season it may well be in the neighbourhood of 250,000 bales, which can only be regarded as a very substantial contribution to the world's supplies. Making allowance for regions that have not been specified, it would seem probable that the world's crops this year may be round about 23,000,000 bales, some distance below the total for 1914, but well above the figures for last year, and, it would seem, ample to safeguard us against any shortage in the coming year, though no more than that. It must be emphasised, however, that this estimate must, in the nature of things, be very largely of a hypothetical nature. There are too many "ifs" in the equation for any very certain result to be forthcoming. It is very possible, for one thing, that the crop yield may fall short of expectations, and, on the other hand, there is the inherent possibility that, as a result of the German settlement, world trade may deviate to the normal at a greater rate than would at present seem likely. The war taught us to take nothing as finite, but to accept change as an ever-present possibility, and so, in viewing the present situation with some degree of complacency, the satisfaction felt must inevitably be tempered with the knowledge that the unexpected may hap-

pen. We have, at any rate, cause for congratulation that, so far as can be seen, a further interval is before us in which to press on with all possible vigour in the development of cotton cultivation in the Empire. Our aim must be to reach the margin of safety in home production which will remove us from dependence on the chances of production outside the Empire, and will enable us to view with equanimity reports of outside crops, whether they are good, bad, or indifferent. Until that end is accomplished there must be no halting, and it would be little less than tragic if we allowed a temporary increase in other crops to lull us into a feeling of security. The result of that would be to precipitate the shortage which even now it may not be possible to avoid, but which, if it comes, can be greatly alleviated from Lancashire's point of view if the fullest advantage is taken of the intervening period to push on with Empire production.

THE CLAY DEPOSITS OF PALESTINE.

The Geological Adviser to the Palestine Government, in a report on the clay deposits of the country in the Palestine *Commercial Bulletin*, states :—

The clay burning industry is still in its infancy in this country, and may be developed extensively, especially with regard to the roofing and flooring tile industry. The demand for this article is relatively large, and burnt clay roofing tiles from Marseilles are imported in considerable numbers. There also appears to be a large demand for good quality roofing tiles and ceramics in Syria, Egypt, and the Sudan.

The clays of this country may be classified as follows :—(a) Residual clays, (b) bedded clays, (c) marine clays and marls.

The soil of the limestone hills is derived from the solution of the limestone in carbonated waters in which the alumina, iron oxide, calcium phosphate, and a certain amount of silica and other compounds are insoluble. These substances, mixed with more or less fragments of limestone, form the basis of the soils in the hills, whether in terraces or in the valleys, and if not mixed with too much limestone are essentially clay soils. A certain amount of levigation or infiltration occurs during the winter rains, and it is from such a partly purified clay that the potter may get his material. They are not a very satisfactory source owing to the almost invariable presence of fragments of limestone. In addition to the residual clays occurring in situ or near their place of origin, there occurs on the plains bordering the hills large tracts covered with transported residual clays. These clay beds often attain considerable thickness and are of better quality than those in situ, but are variable in texture.

Bedded clays of fresh water origin belong either to recent Jordan beds or were laid down in the lakes existing during the pluvial period in the hill districts. The Jordan clays occur in the flooded flats bordering the bank, particularly in those parts where the river moves slowly and presents ground, when the river rises, suitable for the deposition of the clay. Much of this clay is fine and plastic and free from lime, but it is only suitable for the manufacture of earthenware goods owing to the amount of iron oxide present. They are also a long distance from any large centre. The bedded clays of the hills occur as terrace clays often high above the present level of the valley, and often at varying heights in the same locality. One of the best-known localities is at Kolonia near Jerusalem. The clay has a green to yellowish colour. It is ferruginous, and contains a certain amount of lime, but is free from coarse particles. After maturing it forms a plastic body, and is the favourite material for the Jerusalem potter. It suffers also from the disadvantage of containing a considerable amount of iron, so that the fired biscuit is red, and while used for producing very beautiful articles by means of highly coloured glazes, it is not suitable for crockery.

Those deposits generally known as loams in the geological maps have an extensive distribution, particularly in South-West Palestine. They vary in texture from almost a loess where mixed with blown sand to a fairly rich brown or black loam, which is the more northern type. Where the wadis have cut through the deposits, as in the Wadi Gaza, they exhibit 20 to 25 ft. in thickness, and may be considerably more. Their origin may have been in the flooded marshes of the low-lying shore during pluvial times. At present only the natural levigated portions are used for the common water vases, but there would appear to be a wide field open here for the manufacture of bricks if only a cheap fuel were available.

The uppermost marine deposit for 10 to 20 km. around Jaffa is a deep red argillaceous sandstone. In many parts there is sufficient clay to give plasticity for brick-making, and hence forms a second extensive bed of material suitable for this industry if cheap fuel could be obtained.

Some of the beds of the upper Senonian or later formations contain sufficient clay for them to be classed as marls, and while probably of no value for the potter's wheel, they could be used for moulding work. In the Nablus district marl clays exist which are sufficiently plastic to mould on the wheel, and when fired give a fairly white but friable biscuit. While these are not in favour with the present potters, it would appear that the body of the best tiles of the Mosque building period were made from a mixture of these marls with crushed quartz, which is found abundantly associated with the Mizzi Jehudi beds. The lime in this case was a beneficial element, for it enabled the furnace man to frit the body so as to form a hard biscuit on which he could fix his porcelain glaze, which has so well stood the wear of centuries. There is here, in following the lead of these ancient potters, with the use of local material, the making of an industry which would be unrivalled for the particular class of work which has become world famed.

NEWS FROM ALL SOURCES.

The production of oil during August by the British Burmah Petroleum Co., Ltd., and the Rangoon Oil Co., Ltd., amounted to 59,379 barrels.

The surcharge levied in Yugoslavia when Customs duties are paid in paper or silver has been increased, as from September 1, from 800 to 900 per cent. Duties when paid in silver or paper currency are now, therefore, payable at the rate of ten silver or paper dinars to each gold dinar of the tariff. The surcharge on the luxury tax has been increased from 300 to 500 per cent.

A scheme is now being put into operation that will provide Prague with one of the most spacious fair grounds in Europe. Four large permanent pavilions of ferro-concrete and glass, an additional exhibit space of 60,000 sq. metres, a warehousing area of 30,000 sq. metres, a large modern hotel, a post office, a bank, and a wireless station are among the details of the scheme, the execution of which will occupy some three years.

Among the exhibits in the machinery section at the forthcoming Prague Samples Fair will be several branches which have not been represented at previous fairs. Textile machines of Czecho-Slovak make, for example, will occupy some 250 sq. metres of space. There will also be exhibits of American, Austrian, and German machinery for the leather and boot and shoe trades.

Near East Markets.

LONDON PRODUCE REPORT.

Good Demand for Maize.

(From Our Own Correspondent.)

London, Tuesday Morning.

Coffee.—A firm tone has ruled. East Indian has been done at 140s., an advance of 5s.; Santos is 2s. 6d. up at 102s. 6d.; while Costa Rica has come to business round about 150s.

Sugar.—Home refined has continued in fair request. Tate's cubes at 46s. 9d., London granulated at 40s. 10½d., and Lyle's granulated at 41s. 1½d. are 6d. up. Foreign descriptions have been firm. West Indian crystallised is unchanged at 35s. 6d., White Mauritius is 4½d. up at 35s. 4½d., White Java is 1½d. up at 36s. 4½d., while Czech granulated at 39s. 3d. shows an advance of 6d. Futures are firm. Quotations are: October, 23s. 9d.; December, 21s. 3d.; March, 20s. 9d.

Maize.—There has been a good demand, and prices are a trifle higher on the week. La Plata has been done at 41s. 10½d. spot, at 42s. 7½d. for September-October, and at 43s. 9d. for December-January.

Currants.—Business has been very quiet, as is invariably the case on the threshold of the new season's trade. The market is very short of supplies, so that prices at the outset may rule high, but so far forward quotations are rather low.

Sultanas.—Samples have now arrived of the new crop of Smyrna sultanas. Prices for the fruit range high, and the effect has been to turn traders' attention to the Australian fruit.

Figs.—The market is very firm. The new crop appears to be of excellent quality, and it seems likely that prices will rule high.

Plums.—There is a good demand for this commodity, and prices are harder. Reports regarding the Bosnian crop are still unfavourable, and it seems probable that this fruit will play a small part in the market this season.

Oilcakes.—A steady tendency has prevailed. Linseed cake is unchanged at 280s., coconut cake is the same at 210s.; while cottonseed cake is unaltered at 185s.

Oilseeds.—Linseed has been steady, Indian being 1½d. up at 22s. 6d., while La Plata is 6d. up at 21s. Rapeseed has been firm. Toria is 21s. 9d., while real bold Ferozepore is 22s. 6d. Cottonseed has been variable; Indian is 11s. 1½d., Egyptian black is 12s. 9d., while Sakellaridis is 12s. 1½d.

Seed Oils.—Linseed oil has been firm, closing at 43s. 3d. Rape oil has been firm, with crude at 48s. 6d., and technical refined at 51s. 6d. Cottonseed oil has been steady. Refined common edible is 50s., Egyptian crude is 44s., while deodorised is 51s. 6d.

In view of the termination of summer time in this country on September 21 and in France on the night of October 4-5, the train running in connection with the P. and O. Bombay express will leave Victoria at 12.50 p.m. on Thursdays, September 25 and October 2. Subsequently the express will be dispatched at 1.50 p.m.

The Governor of the State of the Great Lebanon has recently issued a Legislative Decree instituting a commercial register for the registration of merchants and companies, whether Lebanese, Syrian, or foreign. Registration is necessary in all cases, whether the head office is in the Lebanon or whether the business there is merely a branch or agency. The text (in French) of the Decree may be consulted by British firms interested on application to the Board of Trade (Commercial Relations and Treaties Department), Great George Street, London, S.W.1.

CZECHO-SLOVAK EXPORTS AND IMPORTS IN JULY.

The value of Czecho-Slovakia's imports in July was 1,229,526,645 crowns, slightly under the figure for June. Exports were some 15 millions under the June figure, with the result that the favourable trade balance of 96 million crowns in June has been reduced to one of 82 millions for July. The total favourable balance for 1924 to date is as follows:—Exports, 9,143,551,435 crowns; imports, 8,492,848,007 crowns—650,703,428 crowns. The main items of imports were (in millions of Czecho-Slovak crowns): Raw cotton and yarns, 227; grain, flour, pulse, 209; wool, woollen yarns, 133; cattle, 65; fats, 57; silk and silk goods, 53; animal products, 44. Other considerable imports included iron and hardware, timber and coal, flax, hemp and jute, common metals (36 millions), tobacco, chemicals, waste, mineral oils, leather, paints, dyes, perfumery, rubber, instruments, clocks and watches. Most of the items show a considerable increase on last year's figures.

Compared with the previous month, imports from the U.S.A. at 67 millions show an increase of 5 millions; those from England (41 millions) a decrease of 8 millions. For the period January to July imports have increased from every country except Switzerland.

THE AGRICULTURAL POSITION IN INDIA.

The following was the agricultural situation in India at the end of August. Rainfall was generally favourable; excessive on the west coast and hills in Madras, Lower Burma, and the greater part of Eastern Bengal, and parts of Northern Bengal. Cyclonic winds and torrential rains over the Western Ghats caused almost unprecedented floods, resulting in serious damage to houses, roads, bridges, culturable lands, fodder, stacks and crops. The extent of the damage is not yet fully estimated. Relief measures were organised in the affected areas, and reconstruction works are progressing. Rainfall was poor in the rest of the Madras Presidency. In Lower Burma crops were flooded by the heavy rains. The outlook for rice is still gloomy, and gives cause for anxiety. Floods in the Brahmaputra river have resulted in some damage to the paddy crop and jute in the lowland tracts of Bengal. Continuous and heavy rain has in most places in the United Provinces retarded agricultural operations. In Central India the outlook is promising, except the few parts where continuous rain has damaged the crops. Rain, though sufficient in some districts in the Punjab, was generally below normal. Rainfall was deficient in Orissa, Chota Nagpur, and Baluchistan. More rain is needed in the rice districts in the Central Provinces and in North-West Frontier Province, and in parts of Rajputana. Conditions and prospects of standing crops are, on the whole, satisfactory, except in the flooded tracts of Madras and Bengal. A sudden rise of the river necessitated premature harvesting of jute in certain lowland tracts of Eastern Bengal. The condition of jute is generally normal, but comparatively poor in South-Eastern Bengal. Prospects of the winter crop are favourable in Bihar, but in Orissa and Chota Nagpur this depends on future rains. The outturn of autumn crops in Bihar is expected to be below normal. The supply of food grains is, on the whole, sufficient. Prices are generally dear,

Digitized by Google

with a tendency to rise in Madras, United Provinces, Bombay, Burma, Central Provinces, Bengal, Bihar, and Orissa. The jute market in Bengal has also risen sharply. Otherwise, prices are practically stationary. Fodder is adequate, except in parts of Madras and Bombay. The situation in Madras is being relieved by the free removal of grass from, and free grazing in, reserves, and grant of other concessions. The economic condition of the people is generally satisfactory. On the whole the agricultural outlook is satisfactory.

SUDAN PRODUCE.

The following extracts are taken from the report of the Central Economic Board of the Sudan Government for July :—

Gum.

The exports during July via Port Sudan were as follows :—89 tons of bleached of the value of £E6,522, 1,734 tons of hashab of the value of £E73,133, and 180 tons of talh of the value of £E4,748.

Kordofan Province.—9,351 kantars of gum were sold in El Obeid market during the month, as against 16,029 kantars during July last year. The average price was 982 m/ms. per kantar. The 9,351 kantars include 3,208 kantars received from Nahud for sale and exclude 1,609 kantars already sold in Nahud and sent to El Obeid for re-sale The arrivals at El Obeid from Nahud, for checking, were 12,520 kantars, as against 7,099 kantars during the same month last year. The amount sold at Nahud during the month was 8,473 kantars, as against 5,135 kantars during the same month last year. The average price was 844 m/ms. per kantar. 155 kantars were sold at Um Ruaba at an average price of 858 m/ms. per kantar as against 238 kantars during the same month last year.

Cotton.

Blue Nile Province.—June : A small quantity of rain cotton, both Baladi and American, left the province during the month. It is estimated that 11,700 kantars of 315 rottles left the Blue Nile Province Stations during the season 1923-24 as follows :—American cotton grown in the Blue Nile Province, 5,000; Baladi cotton grown in the Blue Nile Province, 3,150; Baladi cotton grown in the White Nile Province and brought into Hassa Heissa, 500; half Baladi and half American cotton grown in Kassala Province, 1,200; the Fung Province, 1,850; total, 11,700 kantars. The Fung cotton is mostly bastard American descended from American cotton issued a few years ago. Last year the export of American cotton from Blue Nile Province amounted to 1,700 kantars. A small quantity of this cotton left the Blue Nile Province by boat, and it is probable a small quantity remains with the people or is being used locally, but the total crop cannot be far short of 5,500 kantars against approximately 2,000 in the previous year, when the rains were much better, although the seed issue was less. Seed issues were 550 bags of seed, of which a little was not sown. Assuming one bag is sufficient for 20 feddans, a yield of ½ kantar of 315 rottles is produced, against 1 kantar in the previous year, when rains were better. The seed issue arranged for the coming season is 3,200 bags (all that can be obtained), although the actual demand for seed exceeds this figure.

Bahr el Ghazal Province.—June : The Department of Agriculture is now superintending experiments in cotton growing in the Nuer, Eastern, and Rumbek districts. Cotton seed has been distributed to the tribesmen. An experimental area of 3 feddans, under the supervision of the Department of Agriculture, has been sown at Shambe. Cotton seed has also been distributed in Meridi district, and experimental areas have been sown in Yambio and Wau.

Kassala Province.—Sowing of rainland cotton still continues. The following distribution of cotton seed for rainland cotton has been made :—Gedaref, 27,202 rottles; Gallabat, 2,380 rottles; Mefaza, 25,500 rottles. Prospects to date are good, crops are expected to be normal. This does not include the large increase in rain cotton land, which is estimated approximately for the coming season at 6,983 kantars for the three southern districts. In the Gash Delta it is estimated that about 20,000 feddans will be brought under cotton cultivation this coming season. The watering of the land is proceeding on the three canals of Mekali, Magauda, and Hadaliya. The final distribution of land was made on August 1.

Mongalla Province.—June : A considerable quantity of cotton seed has been distributed in the province, and cotton sowing has started in the Moru district, where universal keenness is being shown. The people have grown an inferior type of cotton for their own use since the old slave trading days. Sowing has commenced in Yei district. Only a little sowing, mainly where the people practice irrigation, has been attempted in the Latuka district, owing to lack of rain.

Dougala Province.—June and July. Pumping Stations Reports. Gureir.—The total crop for the 1923-1924 season was 785 kantars, representing an average yield of 2.45 kantars of 315 rottles (unginned) per feddan. Ghaba.—July. 200 feddans of cotton are under cultivation. Cotton has germinated well and is healthy. It received its first watering on July 17. Nuri.—July. A small area of cotton has been sown, and preparation of land is well in hand.

Berber Province.—Pumping Stations Reports. Bouga.—Cotton sowing has started and received the first watering on July 31. Mikeilab.—Cotton sowing will begin on August 1, except at Dikka, where it will be sown later. Kitiab.—750 feddans of cotton are under cultivation. Cotton, on the whole, has germinated well, and the early sown has received two hoeings, three waterings, and is now being thinned. Absence of rains has considerably lightened the work of cleaning.

Dura.

Berber Province.—Mekeilab Pumping Station : 140 feddans of seifi dura are under cultivation. Bouga Pumping Station : 256 feddans of seifi dura are under cultivation.

Kordofan Province : 41 ardebs of dura Zinari were sold in El Obeid market during the month. The average price was £E1.125 m/ms. per ardeb.

The Fung Province.—June : 250 standard ardebs were exported from Singa and 269 ardebs were imported into Singa. The highest price per ardeb was 550 m/ms. and the lowest 450 m/ms. Forty standard ardebs were exported from Karkoj and 36 ardebs were imported. The highest price was 360 m/ms. and the lowest 300 m/ms. Eighty-six tons of dura were exported by rail from Makwar River Siding during the month. Arrangements have been made for the trial of quick-maturing dwarf dura supplied by the Department of Agriculture, and the results of the experiment will be watched with interest. If this dura could be successfully introduced a reasonable crop could be ensured in years when the late September rains, which are essential for maturing the ordinary dura crop, prove inadequate.

Cotton and Cotton Goods.

THE EGYPTIAN MARKET.

Further Decline in Futures.

The Alexandria Commercial Company, in their report for the week ended September 4, state :—

The market during the past week has been rather heavy. The net changes since Thursday last are : Sakellaridis, $0.73 down for November, $0.70 down for January, $0.32 down for March. Ashmouni, $0.80 down for October, $0.78 down for December, $0.55 down for February. The decline must be attributed to the continued liquidation of speculative bull positions. Speculators are disappointed at the failure of the expected big trade demand to materialise and, faced with daily increasing arrivals, they have been getting rid of their contracts; we think that the long position has now been reduced to comparatively small proportions. The week's receipts amount to 69,462 krs. against exports 83,477 krs.; the stock stands at 281,259 krs.

Spot.—Total sales this week amount to about 6,500 bales, of which we estimate 1,600 B/s Sakellaridis, 4,700 B/s Uppers, and 200 B/s Pilion.

Sakellaridis.—We have had, during the week, about 600 B/s of new crop arrivals, but the demand for this cotton has not been very active, and premiums for the good grades are down more than $1 from last week. With regard to the old crop, there is still some demand for fully fair to fully good fair; sellers appear rather more inclined to part with their cotton and prices of spot as compared with contracts are a little easier.

Lower Egypt Zagora.—About 600 B/s of new crop cotton of this variety have come down from the Interior, but sellers have not been able to find a ready market. The premiums paid are about on a parity with those for similar grades of Uppers.

Uppers.—Practically all the business transacted has been in the top grades, and with the daily increasing arrivals a fair supply of this cotton is now to be found on the market. Sellers have been anxious to maintain the premiums, but the lack of buyers at high prices has forced them to moderate their demands. A small turnover has been registered in fully fair to good fair.

Pilion.—The few new crop arrivals of this variety were quickly snapped up at prices ranging about two dollars dearer than corresponding grades of uppers.

Crop 1924.—Crop news is without much change. Our further inspection of the uppers crop confirms that it is by no means so good as it promised to be a month ago. Variable climatic conditions and insufficiency of water during the hot spells has caused rather heavy shedding and premature opening in some districts, whilst the pink boll worm attack in Middle Egypt has been heavier than usual. As a preliminary estimate, we think that the uppers yield per feddan will be less than last year by from 7 to 10 per cent. The Sakel crop is shaping satisfactorily, and the attack of pink worm is about normal.

The report of the Alexandria General Produce Association for the month of August reads :—

Lower Egypt.—The temperature experienced during the month of August has helped the early development and maturing of the bolls. Pink worm and boll worm have caused fresh damage; the number of bolls attacked varies from 10 per cent., according to the locality; it appears that the Zagora variety has suffered more than others. Morning mists have caused some damage of little importance. Watering has been carried out under normal conditions, although, early in the month, complaints were made on the subject of the difficulty of obtaining water. First picking, which is ten to fifteen days early, has commenced for varieties other than Sakellaridis, and will become general towards September 15. The crop, taken altogether, promises better results than last year.

Upper Egypt and Fayoum.—The high temperature during the month has hastened the ripening of the bolls. Some damage from attacks of pink worm and boll worm has been reported. First picking commenced about August 15; results obtained to date are good.

COTTON TRADE REVIEW.

Better Reports from Near East.

The Manchester Cotton Trade Review of the Imperial Ottoman Bank for the week ended September 13 states :—

Business has not been so good during the past week. Both in Manchester and abroad the view appears to have prevailed that a lower range of values for raw cotton is imminent. Offers to manufacturers are adjusted accordingly, whilst the latter, being in a stronger position as a result of the increased activity recently, are presenting a firm front and endeavouring to retain for themselves the benefit of cheaper cotton. There are many indications, however, that requirements of Lancashire goods are on a considerable scale, and it is hoped that when the size of the American crop is finally determined, prices of raw cotton will stabilise and enable the business to be definitely secured.

Yarn.—There is still a shortage of supplies in certain counts, and spinners endeavour to make the most of it. Consequently, quotations are not reduced proportionately to the fall in raw cotton. There is little doubt, however, that in connection with most of the business which has been done some concession has had to be made. The question of increasing the number of hours worked in the American section is being discussed. Shipments of yarn in August amounted to 11,851,900 lbs., against 12,655,000 lbs. in July and 12,802,800 lbs. in August last year.

Cloth.—There has been a considerable inquiry, but, for the reason already mentioned, the number of orders booked has not been large. Comparatively small sales have taken place for India. In view of the state of affairs in China, it would have been reasonable to expect an absence of business for that quarter, but a small number of contracts have been placed. Reports from Egypt and the Near East are rather better. The home trade has operated a little more freely. Shipments of cloth last month amounted to 373,643,900 sq. yds., against 383,751,000 sq. yds. in July and 329,945,600 sq. yds. in August, 1923.

Raw Cotton.—The American Agricultural Bureau Report published on Monday last gave the condition of the crop as 59.3, and the estimated yield 12,787,000 bales. This was somewhat better than had been anticipated, and prices of American fell sharply. Private advices recently have been favourable, and there appears every prospect of ample supplies for the next twelve months. Egyptian cotton has been steady, and quotations are little changed.

Closing quotations yesterday were as follows :—American Middling, 14.21; Egyptian Fully Good Fair, 24.80.

LIVERPOOL COTTON REPORT.

Quiet Markets.

Messrs. Reynolds and Gibson, in their report for the week ended September 10, state :—

Egyptian Futures.—The general tendency in this market has been towards a lower level since we last wrote, the proximity of a large and early crop and a general trade policy to abstain from purchases of weight till prices become more attractive being responsible for the rather heavy tone displayed. In addition to this, sentiment has been affected by favourable crop developments in the States, leading to a further fall in the value of American cotton.

The Alexandria market is beginning to show the effect of the crop movement, and has lost some of its premium over local values. At the moment, the difference is roughly 75 points (excluding shipping charges). Taking the November positions in the respective markets, probably a gradual readjustment will take place in the next two or three weeks. Meanwhile, we will attract the bulk of shippers' covering operations and speculative buying. Trade reports do not reveal any great activity, apparently all sections marking time in the full belief that ample supplies are assured and that later on values will reach a more tempting level. We still think that prices will decline gradually, but careful attention will have to be paid to spot differences, as a further widening between F.G.F. Upper and Sakel may reveal Novembers in a favourable light as a "take up" proposition against sales in the American market.

Egyptian Spot.—Markets have ruled quiet, and a very little buying power has been in evidence during the week. Pending the issue of last Monday's American Bureau report, spinners kept aloof in the hope that the figure to be published would have a "bearish" influence on the market. The figure of 59.3 proved to be slightly more than expected, but the general effect, as far as Egyptian cotton is concerned, has been practically nil. Reports of first pickings in Egypt have been satisfactory, and consignments of new crop (other than Sakel) are expected here in about a fortnight's time.

No unusual feature has shown itself in the daily inquiry, which has continued on much the same lines as has been the case during the past three weeks or so. That is to say, in Sakellaridis the better qualities at about 300 to 600 points on November have been in steady request, together with the lower qualities (say, from fair to good fair), the price for which has shown considerable irregularity, and bears little resemblance to the official quotations for similar grades. In uppers the "best" is repeatedly asked for by certain spinners, but when it comes to actual business the best (for want of better) has generally resolved itself into something like strict fully good fair—or hardly that. The basis for spot uppers on this market continues to sag, and although up to now Sakellaridis has maintained its position fairly well, with the result that the difference between the two has now reached over 500 points, it seems probable that with American cotton at 13.50d. it cannot maintain such a premium much longer, even with a comparatively limited supply coming from the new crop. This fact is being realised by those consignors and merchants who still have stocks of old crop Sakel unsold and who now are anxious to throw out the remainder without reserve.

In Sudan cotton a fair inquiry has continued, chiefly for the white variety, but here, as elsewhere, actual business has been strictly limited. A little fresh business has taken place in brown cotton. C.i.f. business has remained quiet. Forwardings to spinners for the week ending 5th inst. were about 6,000 bales. Estimated sales, 1,800 bales Egyptians and 360 Sudan. Quotations of upper are reduced 125 points, with fair exceptionally 75 points lower. In brown all grades are reduced 100 points, with the exception of fair, which is 50 points lower only. In Sakellaridis good fair to extra fine are reduced 10 points, whilst fair exceptionally is 55 points lower on the week. F.G.F. Sakellaridis to-day 24.80d.

TEXTILES.

IF you wish to obtain your Textile goods from England at the lowest possible prices, communicate with K. JEBARA, 25, Princess Street, Manchester. (Established 1887).

SHIPPING INTELLIGENCE.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Brocklebank Line.—S.s. Dorsetshire for Port Said, Colombo, Madras, and Calcutta (London, September 20).

Anchor Line.—S.s. Scindia for Bombay (Liverpool, September 25).

British India Line.—S.s. Mandala for Bombay and Karachi (London, September 26); s.s. Morvasa for Colombo, Madras, and Calcutta (London, September 27).

Clan Line.—S.s. Clan MacBrayne for Bombay and Persian Gulf (Birkenhead, October 2).

Ellerman "City" Line.—S.s. City of Simla for Calcutta (Birkenhead, September 30).

Ellerman's Westcott and Laurance Line.—S.s. Mardinian for Gibraltar, Malta, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Galatz, and Braila (London, September 20).

Johnston Line.—S.s. Aviemore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 20); s.s. Tramore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, October 18).

P. and O. Line.—S.s. Caledonia for Bombay (London, September 19); s.s. Narkunda for Bombay (London, October 3); s.s. Khyber for Colombo, Madras, and Calcutta (London, October 4).

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.)

Egypt.

Soap. — The Financial Secretary, Egyptian Army, War Office, Cairo, invites tenders for the supply of 110 tons of hard soap to Egyptian Army Supply Stores, Tura. December 2.

Safes.—The Central Stationery Stores, Ministry of Finance, Cairo, invites tenders for the supply of 75 money safes, iron. October 25.

The progress report of the Phœnix Oil and Transport Company for August states that the total crude oil production was 20,078 tons, and the throughput of the refineries 22,020 tons. The production for the eight months of the year has been 106,000 tons, which is in excess of the total production for 1923.

Digitized by Google

THE SUDAN'S TRADE WITH ABYSSINIA.

The current issue of the monthly journal of the Sudan Chamber of Commerce contains the first part of a report on the Sudan's trade with Abyssinia. We give the following extracts :—

Although the Abyssinian market cannot be described as a profitable outlet for this country's merchandise, yet a fair trade has been carried on for some years in the purchase during the season at Gambela of hides, beeswax, and coffee, in exchange for cotton piece goods, Sudan salt, and Maria Theresa dollars; but, since 1920, the trade in hides has declined very much and in beeswax almost entirely disappeared owing to the limited demand and low ruling prices abroad. As a rough indication of the market, £E40,000 may be taken as an average year's exports and £E150,000 seems a fair figure for imports. Some trade is also done via Gallabat and Roseires, the total for these outlets being about £E30,000 for exports and £E50,000 for imports.

From the data we have been able to collect, and the reports of our correspondents, it does not appear likely that the improvement anticipated earlier in the season is likely to materialise. The imports of coffee were estimated at the beginning of the season at 55/60,000 kantars, which would have been a good year, but it is now realised that 50,000 is not likely to be exceeded, as better prices are being offered in Addis Abeba than in Gambela district. The reason of the improved market at Addis Abeba appears to be the growing difficulties of transporting goods from the interior to Gambela, due to bad roads and to the chiefs of the various districts interfering with the porters; in striking contrast to the very reasonable railway freight charges on the Ethiopian Railway and the short journey of only about four days between Addis Abeba and the port of Djibouti.

It is rumoured that the Abyssinian Corporation intends making a road from either Gore or Boure to Gambela, which, if correct, would do much to improve trade, but our correspondents agree that the first necessity is not so much improved roads, but better administrative methods, reduced taxation, and the introduction of a sound currency system.

The people in Western Abyssinia are very poor, and live a simple life. Their needs in the way of imported goods are consequently small, being mainly cotton sheeting, silk fabrics, and salt. Other articles imported are enamel ware, glass ware, foodstuffs and cotton yarn, but the outlet at Gambela for such goods is small and scarcely worth consideration. The imports of textiles to the country generally have fallen about 80 per cent. since 1913. Japanese grey sheeting holds the market, being 10 per cent. cheaper than American, although the latter is of better quality. Great Britain can compete neither in price nor quality, but Manchester holds its own in cotton yarn, striped white pieces, muslin and fancy textiles. A great variety of imports reaches the capital via Djibouti; such as French soaps, German locks and general ironmongery, French perfumery and tinned foods, Italian wines, fruits and macaroni and Scotch whisky for Europeans.

Piece goods serve a useful purpose in the Gambela trade in obtaining dollars at a slightly reduced rate. Salt, on the other hand, provides work for the carriers on their return journey—or did so rather, before the present scarcity of the dollar—and is necessary, therefore, to the trader in reducing costs on his coffee. Sudan exporters have an unhappy knack of over-estimating the local requirements in both these commodities, and the resulting competition on a market where supply exceeds demand is not profitable. Gambela is shut off from Khartoum for practically three parts of the year, so that traders are compelled to buy their stocks at stated times and thereby lose any subsequent fluctuations in their favour. Addis Abeba, on the other hand, is in constant direct touch with European markets, and its traders compete in markets as far distant from the capital as Gore. In the case of a decline in prices, the consequences to the Gambela trader are therefore serious, but he is at a disadvantage in any case owing to the freights by rail from the port to the capital being so much less than the charges between Port Sudan and Gambela. In this respect the Sudan Government might help trade greatly by lowering, if possible, the rates by the latter route.

The production of the Dacia Romano Petroleum Company for August was 870 tons.

The quantity of gold extracted from the mines in India during the month of June amounted to 37,068 ozs., valued at Rs. 22,51,292.

The production of the Anglo-Egyptian Oilfields at Gemsah for the week ended September 5 was 11 tons (previous week 7 tons), and at Hurghada 2,966 tons (2,831 tons).

The fourth International Danubian Fair, which has just come to an end, was better attended than any of its predecessors, the number of visitors amounting to 200,000. The exhibits were arranged in 18 sections, and among foreign exhibits were numbers from England, Holland, France, Austria, Germany, Hungary, and Roumania.

The Dacia Romano Petroleum Syndicate hope shortly to have three more wells at Moreni in production. No. 2 was plugged, and is now being cleaned; No. 3 is awaiting the final water test; No. 4 is down 685 metres; No. 1 has been flowing since June 2 at the rate of 2 to 3 cars per day. The wells at Chiciura and Baicoi are producing as usual. Drilling has also been commenced on newly acquired land at Moreni, and extensive drilling operations have been commenced at Bustenari and Runcu. The company hope soon to be able to reopen their refinery with their own production.

IONIAN BANK, Ltd.

LONDON, GREECE, EGYPT.

The only British Bank or Financial House in Greece originally established in London and the Ionian Islands in 1839, subsequently incorporated by Royal Charter in 1844, and registered under the Companies Acts in 1883. The Bank now has branches and correspondents throughout Old Greece, the Ionian Islands, Macedonia and the Islands recently rejoined to Greece; and is therefore able to offer special facilities to all British and Allied firms having business with that country.

In Egypt the Bank's principal office is at Alexandria; but it also has agencies throughout the cotton-growing districts, and specialises in all operations connected with the moving of the cotton crop.

In Turkey the Bank has a branch at Constantinople.

For information as to terms of business, etc., apply to the HEAD OFFICE:

NOTES OF THE WEEK.

The Arrival of Zaghloul Pasha.

Saad Pasha Zaghloul is due to arrive in London as this week's issue of THE NEAR EAST goes to press. The intention is that he should explore with Mr. Ramsay MacDonald the various questions at present outstanding between Egypt and Great Britain. Nothing in the nature of formal negotiations is to be undertaken at first; but it is obvious that the course of the discussions will determine the fate of the negotiations. If, because he is unable to settle the Sudan question according to Egyptian wishes, Zaghloul Pasha should decide that it is useless to attempt a solution of the other problems, his empty-handed return to Egypt would be equivalent to the failure of formal negotiations. It is not possible to say what will happen in such circumstances, but it would be idle to ignore the direction in which general fears are running. Although eighteen months have passed since disturbances occurred in Egypt, the recent outbreaks in the Sudan suggest that the policy of violence may not have been altogether abandoned as a means of attaining political ends. Uneasiness on this point may seriously affect Egypt's material prosperity during the coming tourist season, although there may be no real ground for anticipating the worst. For this reason we hope that the informal discussions between Zaghloul Pasha and Mr. MacDonald will not only run smoothly and satisfactorily, but will also be finished quickly, and be soon followed by the formal negotiations in order that Egypt may settle down to normal conditions and confidence abroad may be completely restored.

The Mosul Question.

The question at issue between Turkey and Great Britain regarding the Iraq frontier came before the Council of the League of Nations last Saturday At the Constantinople conference between Sir Percy Cox and Fethi Bey it had been found impossible to devise any method for bridging the gulf between the Turkish and British points of view; Fethi Bey insisted that he had come to discuss the future of the Mosul vilayet, while Sir Percy Cox pointed out that the matter awaiting settlement was the delimitation of the northern boundary of Iraq. In view of this divergence of opinion, the first thing for the League's Council to decide is the exact scope of the question under reference. On this point Fethi Bey's presentation of the Turkish case on Saturday would not seem to have been particularly helpful; he repeated the old arguments that have already done duty at Lausanne and Constantinople to show why the Mosul vilayet should be Turkish, but he did not show that this matter was under discussion. Lord Parmoor, the British delegate, had no difficulty in showing that the wording of the Treaty of Lausanne clearly indicated that it was the frontier between Turkey and Iraq that had to be laid down in friendly agreement between Turkey and Britain. There was no question of the disposal of the Mosul vilayet, which had been administered as part of Iraq for nearly six years. Great Britain, he declared, could not regard the definition of a frontier as a question for a plebiscite as Turkey had suggested, quite apart from the physical difficulties in the way of holding a plebiscite and providing an adequate neutral force to maintain order. On the other hand, there could be no objection to the appointment of a commission to settle the dispute. The meeting was adjourned to enable the Council to study the questions further.

A Loan for Greece.

M. Tsouderos, Greek Minister of Finance, is at present in London in connection with the raising of a loan for the settlement of refugees in Greece. The International Commission responsible under the League of Nations for the establishment of the refugees on Greek soil has already received a loan of £3,000,000, the greater part of which has been expended, and it is anticipated that a further sum amounting to £8,500,000 may ultimately be required. The total amount of the loan authorised by the League last year was £6,000,000. It is one of the objects of M. Tsouderos's visit to see whether he can gain support for the increase of this amount to £10,000,000. There can be little doubt that the success of his mission and the satisfactory establishment of the refugees would be a permanent boon to Greece. Already a Greek carpet industry is springing up at the expense of

Digitized by Google

the Turkish republic, which deliberately expelled its carpet workers.

Murder Run Riot.

The death of Todor Alexandroff has been the signal for an orgy of murder in the Macedonian Organisation. An attempt is being made to represent Alexandroff as the first to start the grim sequence of assassinations, and he is even credited with having spread the news of his own death in order to justify the subsequent crimes. Europe, in a matter of this kind, will not feel called upon to take sides. What interests it more than the method of settling Macedonian disputes is the nature of the dispute. In the present instance we have ample evidence that the Macedonian Organisation found itself at the parting of the ways; for years it had been pinning its faith on the intervention of the Western Powers, but they refused to give any help to or to take any notice of Macedonia. Then arose a school of thought which decided that the only chance of help lay with Russia—a contention that the Soviet Government was quick to endorse. Alexandroff blocked the way and was removed. It remains to be seen whether Communists or anti-Communists among the Macedonians will win the day. The lesson for the West and for the Balkan States is clear enough. They may deny as vehemently as they like that there is any Macedonian question, but the Bolshevists will take good care that there is a Communist question in its place. If the new Yugoslav Government has the least glimmer of statesmanship in it it will take care that the devotion of the Macedonian people to their Balkan heritage is not superseded as a result of the denial of the right of self-determination by the disintegrating doctrines of Communist tyranny.

The Wahhabis.

The capture of Taif in the Hejaz by Wahhabis is now seen to be part of a deliberate move of Sultan Ibn Saud of Nejd against King Hussein. According to the Sultan's spokesman in Damascus, the attack was made in response to the wishes of the Moslem world, especially of the Moslems of India—a strange theory in view of the fact that the Wahhabis regard themselves as having little in common with co-religionists who do not share their tenets. It is true, however, that there is a common link for all Moslems in the Mecca pilgrimage in connection with which remarkable unanimity seems to prevail regarding the inadequacy of the arrangements made by the Hejaz authorities. For the moment the invaders have not attempted to advance beyond Taif. The statement has been made that they will not actually attack the Holy City, but will try to expel King Hussein by showing themselves outside his capital. If the latter has any chance of holding his ground the delay in the Wahhabi advance ought to prove of great service to him. Failure to take advantage of it will confirm the belief that military matters, as well as administrative affairs in general, in the Hejaz are in a parlous condition.

TO READERS OF "THE NEAR EAST."

If you find any merit in "The Near East," if you hold with us that British interests in the Near and Middle East call for a Paper devoted exclusively to the affairs of that part of the world; if you consider it a worthy cause that Britain and the British should be sanely interpreted to the people of the East, and those people in their turn be made better known to Britons, support "The Near East" by becoming a subscriber yourself if you are not already, and by securing for us new subscribers. Specimen copies will be forwarded gratis. A subscription form will be found on page 338 of this issue.

The Georgian Rising.

The fear to which expression was given in these columns last week that the Bolshevists would be able by sheer weight of numbers to suppress the rising in Georgia would seem to be in process of being realised. During the last few days the Red armies are reported to have made considerable headway against the insurgents. Kutais and Tiflis have been recaptured, and the fighting is now for the most part of the guerilla order. Everywhere the Soviet Government is exacting the most ruthless reprisals in the belief, it must be supposed, that their only chance of maintaining their hold on power is by making a fearful example of those who are rash enough to challenge their tyranny. The whole episode is nauseating, the more so because the very Government that seemingly does not hesitate to resort to wholesale butchery to save its own skin has only recently been invited to enter into friendly conference with the British Government, which appears to have allowed itself to be impressed by the unctuous attitude of the Soviet delegates. The Moscow Government cannot be accused of not having nailed its colours to the mast; the trouble is that with the lapse of time—a very short time, as it happens—the impression had got abroad that those particular colours had been hauled down. If it was the case, they have been very quickly run up again at the first opportunity in Georgia. Even the extension of the insurrection to Azerbaijan is hardly likely to bring relief to the Georgians.

Communal Tension in India.

The news from India continues to be dominated by manifestations of religious and communal bitterness. Taking together the actual outbreaks of violence reported by the cable and the far more numerous cases in which disorder has been successfully averted by the efforts of the Administration, we are bound to conclude that the tension is now greater than at any time since the proclamation of the Indian Empire. The utterances of responsible leaders leave no room for doubt that the principal cause of this tension is the minorities' fear of undiluted Hindu rule. The politicians' insistent demand for the elimination of the British element in the Administration has, in fact, produced the inevitable result, fear, rising rapidly to panic terror of what the politicians would do when they should become masters of the country, and already the suggestion is being made that Moslems would be given the option between perversion and expatria-

tion, or that the history of Spain may shortly be repeated in India. Such ideas would, of course, be utterly abhorrent to many Hindus, but not to all, and the important fact is their actual existence rather than their logical foundation; very many Moslems believe that their religion would suffer under Hindu rule. and the belief is a fact with which statesmen have to reckon.

The Moslem Claim.

A good idea of the Moslem position is furnished by the accounts of Dr. Ziauddin Ahmad's recent campaign in the United Provinces. The doctor, known hitherto as a distinguished scholar and educationist, has been impelled to take to the platform, and the resolutions passed at his meetings insist that Moslem interests must be safeguarded before any further instalment of reform is granted, or, in the alternative, that the country should go back beyond the days—now almost forgotten—of Lord Morley's embryo Councils. The safeguards demanded are of the familiar type, reservation of sufficient seats on all public bodies, separate electorates, an adequate share in all public services, special facilities for education, guarantees of religious liberty, and a communal veto on general legislation. The last item, by the way, is closely related to the idea of a Tribunate which, as we recently indicated, has been put forward for the protection of the depressed classes of Hindus, but the whole programme may fairly be described as the negation of that national unity which Hindu politicians so confidently assume. To say so much is not, however, to condemn the programme, some items of which are, in our judgment, indispensable; its formulation is a measure of the distance which separates us from a homogeneous India.

Servants of India.

On the same day we read of the death of two men who, in very different ways, had given their best to the service of India. Sir Thomas Holderness passed nearly half a century, first in the Civil Service and then at the India Office, of which he was the permanent head for seven years. By general consent he was almost the ideal chief of a large public office, loyal to his political superiors, at once firm and considerate to his subordinates, resourceful and calmly efficient in his conduct of business. Mr. Bhupendra Nath Basu was a self-made man who first achieved prominence as an agitator in the days of the partition of Bengal, and then took the long step upward to constructive statesmanship, serving first on the Secretary of States Council, and more recently as a member of the Government of Bengal. Like other Indians who have taken the same step, he had to bear a certain amount of ill-will from former associates, and a measure of that jealousy which is one of the most unpleasant features of Bengal politics, but he continued to work for progress on reasonable lines, and, if we may judge from his latest public utterances, he remained hopeful to the end. an example which ought to be of exceptional value in the India of to-day.

Sir Henry Dobbs, High Commissioner for Iraq, who left Cairo on September 16 for Baghdad, by air, arrived there the following day.

The memorial service for Todor Alexandroff, the murdered Macedonian leader, held on September 18 at Sofia, was attended by 20,000 people. All the shops were shut, and many houses were draped in black. It was announced after the service that the murderers of the dead leader had been caught by the Macedonian Organisation, and had been put to death.

The following announcement is issued by the Turkish Minister in London:—"In view of the coming into force of the Peace Treaty, the Turkish Government begs to notify those whom it may concern that, in accordance with the Treaty of Lausanne, a period of two years has been granted to all residents in ex-Turkish territories to decide whether they desire to retain their Turkish nationality."

THE WEEK AT HOME.

London, Tuesday Morning.

The Russian Treaty.

If the cynic were minded to find an example of how completely lost that national outlook which was developed during the War has become, he could not do better than point to the Liberals' wavering over the Russian Treaty. Even the leaders of Liberalism, he would point out, blow at once hot and cold over this proposed Treaty with Soviet Russia; they assert that they are completely in agreement in opposing it, but, he would note, few people believe that that agreement is the result of independent examination. They are merely jockeying for position, although all their horsemanship is of no avail, for they can arouse the enthusiasm of the punters neither by supporting nor by opposing the Russian Treaty and Loan.

The truth is that in this Russian business there is little beyond party interests at stake. Some observers imagine that it would be a fine thing for the Labour Party to go to the country on in the November election, for which the Liberals are supposed to be pressing, but it is difficult to see how passionate defence can be entered upon over such nebulous things as are contained in the Treaty to Russia. Logically speaking, there is a good deal to be said for the attitude which the Premier has adopted towards Russia, but the factors that would count in an election—Soviet atrocities, Soviet attitude towards religion, Soviet oppression of Georgia, and so on—would all redound to the benefit of the anti-Bolshevists. In other words, the Tories would on balance have the better case. The poor Liberals, of course, some of whom are as honest as daylight, have none at all that would appeal to the democratic mind.

Preparing for Battle.

There is now in the political world a sense of coming conflict, although that sense is as yet confined to the organisers of the various parties. Nobody seems keenly to want an election this year—the handful of Liberals who in this connection are bent on suicide do not count--but all parties appear to be afraid of one. The Conservative Party, indeed, is taking the drastic step of trying to enlist, not working-class support, but working-class guidance, and there is at the moment a great cry about the necessity of "Labour Conservatives." This is, of course, very laudable, but one would be more

convinced by it if one felt that it was more the outcome of principle than the result of fear. The feeling that expediency is directing the present path of the Conservative Party is very deep. One will admit one's error when one sees Conservative working men offered safe seats in by-elections by the Conservative Central Office. Previous experience of Conservative working-class candidature does not warrant much hope that this belated plan to steal thunder from Labour will succeed.

When the Gods Laughed.

It was commonly assumed, when the Labour Party entered office, that a period of dullness had descended upon the gods on high Olympus, who used—so it was said—to feed principally upon the frailties and follies of our politicians. No one so much as they regretted the passing of a certain impetuous Premier who was wont to deal out honours in generous and sometimes coincident fashion, and no one less than they suspected that they would find matter for mirth in the private dealings of a Labour Premier.

But frailty or folly inevitably attends sooner or later the noblest minded of our politicians; and even Labour and Socialist journals are aghast at the revelations which have been made over Mr. Ramsay MacDonald's receipt last spring of £30,000 from Mr. Alexander Grant, who three months later was made a baronet. Some journals demand the Premier's demission; others announce it; and others fain would prevent it.

This is all a little premature. If the Marconi scandal could not bring about the removal of Mr. Lloyd George and certain of his compeers, there is small point in demanding for this much smaller Grant affair the head of Mr. Ramsay MacDonald. To talk as if the Premier's career were already at an end is very affecting; it argues a belief in the righteousness of parliamentary human nature that is in these days amazing. And the attempt to prevent the fall of the Premier comes about from possession of the fact that Labour lacks limelit leaders in an unsuspected degree.

The wisest attitude to take would appear to be that one must remember, whatever party be in office—the records of all parties are stained beyond forgetting—that politicians are always politicians, the more so when, as Labouchère said of Gladstone, it is God who has placed cards up their sleeve, and especially to remember that economic power precedes political power. If the Olympians were asked who was the more powerful man—Mr. Ramsay MacDonald or Sir Alexander Grant—their quick reply would probably be an unmistakable and yet pitying smile.

The All-Blacks.

The Rugby season opened properly on Saturday, although important games had been played earlier. September is really too soon for the county sides to get together, and already Cornwall, Devon, and Somerset have succumbed to our visitors from New Zealand, the All-Blacks. According to most accounts, they are not the equal of the wonderful fifteen of 1905, but they must be good to have beaten, on strange grounds and in unfamiliar conditions, even such scratch sides as represented the South-western counties.

The England cricket team for Australia has already sailed, and, except for a few gallant clubs who carry on bravely to the end of this month, football and hockey are reigning. Public attention will concentrate on the doings of the All-Blacks here and of our cricketers in Australia. By no means a bad winter to look forward to!

Daylight Saving.

Last Sunday that which the Government servants, who, of course, are above all merely climatic considerations, have called "summer time" came to an end. Opinion is still divided on the wisdom of cutting summer time short by a fortnight, but in any case we have all had our extra hour's sleep now. Workers who get up early in the morning welcome the reversion to "real time," but there are those who would like a full six months of summer time. It really is impossible to have a decided opinion on the matter. If one could reasonably expect to see the sun in the summer, we would alter our clocks every week to suit its convenience. But one cannot.

Alter Ego.

A PIANIST FROM PALESTINE.

Mr. Arié Abilié, the well-known Palestinian pianist, gave a pianoforte recital, including works of Bach, Beethoven, Chopin, Liszt, and Debussy, as well as of modern Jewish composers, at Jews' College, Guilford Street, W.C.1, last Sunday evening under the auspices of the Anglo-Palestinian Club. Mr. Abilié was accorded a rousing reception.

NEWS IN BRIEF.

Over 2,000 Jewish immigrants entered Palestine during August.

Sir Paul Chater has given a cheque for £1,000 to the Lord Mayor's Armenian Relief Fund.

M. Duca, the Roumanian Foreign Minister, returned to Bucharest from Geneva last week.

Mr. Lindsay, the British diplomatic representative, returned to Constantinople on September 18.

A disastrous cinema fire, due to the igniting of the film, is reported from Smyrna, in which more than 100 persons are stated to have perished. Among the victims is the sister-in-law of Ismet Pasha.

Lord Thomson, Minister for Air, started on September 17 on his tour of inspection of the R.A.F. units in the Middle East and Iraq. He travelled overland from Calais to Trieste, and then by boat to Egypt. From Cairo he proceeds by aeroplane.

The rearrangement of the Central Asian administrative areas by the Soviet is to be ratified at the beginning of October, and the Governments of the new Uzbeg and Turcoman Republics and of the autonomous regions of Kara-Kirghiz and Tajik will begin to function in November.

Mr. Thomas Griffiths, M.P., Treasurer of the Household (Labour), Mr. A. T. Davies, M.P. (Unionist), and Dr. J. H. Williams, M.P. (Labour) arrived in Baghdad last week by special overland motor-car convoy from Beyrout. They will study the oil question and will visit the Anglo-Persian oilfields.

The destruction of 102 villages, hundreds of deaths, and considerable material damage are reported in a message to Constantinople from Erzeroum as a result of the earthquake which occurred on September 13. The Turkish Government and the Red Cross despatched immediate assistance.

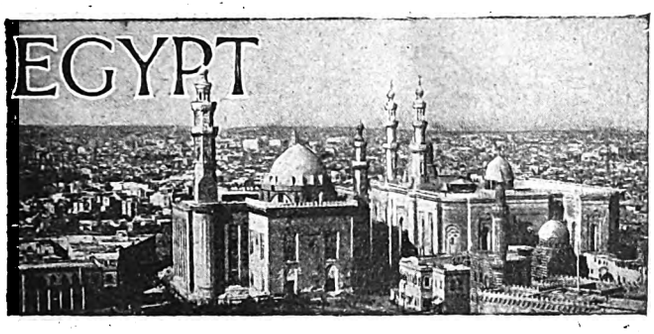
The Near and Middle East.*

From Our Own Correspondents.



Cairo, September 13.

The London "Conversations."

A week ago Egypt was in the depths of despondency owing to the fact that Zaghloul Pasha had cabled to say that he had decided to abandon negotiations, and that, if his health permitted, he was returning to Egypt on the 17th inst. To-day everyone is correspondingly hopeful, as it is now known that a meeting has after all been arranged between Mr. MacDonald and Zaghloul Pasha, and that they will meet in London on or about the 25th inst.

The State of Cairo.

Those returning to Cairo after a short visit to Alexandria would be pardoned if on driving through the capital they came to think that it was suffering from the effects of a serious earthquake. On inquiry, however, they will find that what they see is not due to any climatic disturbance, but to the deliberate action of the Tanzim authorities. It follows so closely the departure of Mr. Haswell, who for many years ably held the post of Director-General, and whose retirement as a result of the treatment he had received is openly condemned by high-placed Egyptians as well as Europeans, that one is constrained to wonder whether those who have succeeded him are indulging in an orgy in celebration of the emancipation of their department from British control.

Joking apart, however, Cairo is to-day in a most scandalous condition. There is scarcely a street that is not under repair of some sort—repair that is being carried out in no ordered manner, but higgledy-piggledy, so that one's conveyance has to thread its way as through a maze, while streets that are not "up" have sidewalks encumbered with débris of every description. On such a large scale have operations been started that it will be a positive miracle if everything is finished for the season. To crown it all, the city is now in a permanently filthy condition, utterly unlike the good old days, but strangely reminiscent of the period in the early part of 1919, when, in order to help refute Lord Curzon's unfortunate statement that "the Civil Service in Egypt is, at any rate, loyal to us," the scavengers of Cairo were persuaded to go out on strike for three weeks.

Far be it from me to want to "crab" thus early in their career the work of those now responsible for the municipal supervision of the capital, but the matter is so serious from a public health point of view, and a continuation of this neglect of the hygienic control of the streets can so easily, and will most certainly, lead to epidemics, that it is in the public interest that I make this indictment of the municipal authorities of Cairo, which has now lost the great reputation it used, by common accord, to have of being a model city in respect of cleanliness.

Atef Barakat Pasha and Makkabati Bey.

The Cabinet came to Cairo this week in order to attend the commemoration of the death of Atef Barakat Pasha, Under-Secretary for Education, which took place some three weeks ago. At that time pressure on my space prevented me from commenting on the passing of this well-known and capable Egyptian, who was certainly one of the hopes of New Egypt. Already in the short time he had been Under-Secretary he had done much to promote the development of education on rational lines, which promised well for the future, and the impression he gave when he came to the Chamber of Deputies to answer questions on the Budget of his administration was certainly an excellent one. To the Wafd he will be as much a loss as the death of Abdel Latif Bey Makkabati, who died last week, will be to the Liberal Constitutionals. Makkabati Bey had at one time been a member of the Wafd, and he was, in fact, one of the "four" who brought back to Egypt the Milner Memorandum in 1920 and reported to Zaghloul Pasha in Paris the feeling in the country. Later he disagreed with Wafd methods, and joined the Opposition under Adly Pasha, later assisting to form the Liberal Constitutional Party. He was a strong character, intelligent, courageous, and of an extraordinarily frank disposition, and his death at this early age is a loss not only to his party but also, as time will prove, to his country. It is, indeed, unfortunate that in such a short time Egypt should have lost two such valuable sons.

Constantinople, September 7.

The Re-opening of the Assembly.

All sections of public opinion are awaiting with impatience the reopening of the Assembly in October after its six months' vacation, and the general feeling is that there will be wigs on the green. It is felt that the vacation has done a great deal towards promoting the disintegration of the Government majority, a process which had begun some months ago. Some go so far as to predict the speedy fall of the present Government. The feeling of the unbiassed foreigners who are closely following the course of events here is by no means unanimously in favour of a political upset. There are already signs, "no bigger than a man's hand," of the development of a saner frame of mind, even under the régime of this much execrated Government.

September 16.

The Ghazi's Passage through the Bosphorus.

The last week or ten days have been fertile in events of some local importance and interest. The two most significant incidents have been the passage of the Ghazi Pasha through the Bosphorus on his way from Mudania to Trebizond, and the deadlock in the Exchange of Populations Commission between the Greeks and Turks concerning the interpretation of the terms of the Treaty on the question of the categories of Greeks resident in Constantinople who are due for exportation.

The passage of Mustapha Kemal through Constantinople without stopping has been the subject of the most bitter comment in local circles; it has done more than any other incident to bring out into the light of day the hostility between the new and the old capital. The local Press considers the President's action as a graceless insult to the town and its population, and the tone of the comments is more hostile to the person of the President than any journal has yet ventured to use. It is freely rumoured that official fears for the safety of the Pasha's person are the real reason which prevented his landing, and there are numerous circumstantial stories about organisations of subversive elements in the town which are keeping the police and the military authorities in a perpetual state of ferment. Although it is perfectly evident to any resident that there is a strong current of uneasiness about public order at the present time, the action of the President is much more likely to be due to the habit of mind of Angora to send Constantinople to Coventry than to any personal fears. It is important, but regrettable, to note that that habit of mind is still a dominant factor in Turkish internal policy.

Exchange of Populations.

The trouble in the Exchange of Populations Commission has arisen over the interpretation of the clause which exempts certain categories of Ottoman Greek inhabitants of Constantinople from exchange. The Turkish attitude is, shorn of all technicalities, to get rid of as many Greeks as can possibly be squeezed in under the terms of the clause in question; the Greek attitude is naturally to interpret the clause in the opposite sense. The neutral members of the Commission have apparently tried to find a formula to reconcile the irreconcilable, to which the Greeks, as clever diplomats, have adhered, whereas the Turks, both in the Commission and in the Press, have merely indulged in a fanfaronade of "firmness." Tewfik Rushdi Bey, the chief delegate, resigned, but Angora refused to accept his resignation; we may, therefore, conclude that the Turkish Government is looking a little further ahead than the rather short-tempered men who were bandying hard words across the green cloth the other day, and then going out and telling the journalists all about it. One would have thought that the experience of the Turkish State during the past year would have inculcated a wiser view of the value of the politically cowed Greeks to Turkey than appears to be held by many Turks.

A Polish Exhibition.

An interesting event in the economic life of Turkey was the opening last Friday on the quay of Tophané of a Polish Trade and Industrial Exhibition. It is a very modest affair to those who have been debauched by Wembley. It consists of three or four tastefully-arranged pavilions of Polish products, one pavilion of Turkish exhibits, and some machinery and railway material in the open. The intrinsic importance of the exhibition is not great, and with the exception of the agricultural machinery and the arms and munitions—of which there appears to be a disproportionate quantity—there does not seem to be much in the exhibition which Turkey could not buy in several other countries with which communications are easier. The enterprise of the Polish State in arranging the exhibition is, however, most praiseworthy, and it has been well carried out. In addition, lovers of music owe a great debt to the Polish authorities for sending the magnificent band of the 36th Regiment to play at the exhibition; its playing is one of the few musical treats we have had since the Armistice.

Embellishment of Constantinople.

Our local municipal administration is still dividing its time between the composition of grandiose projects of embellishment of the city and personal recrimination between past and present prefects, past and present valis, and so on. The latest bee in the municipal bonnet is a competition for a prize of a thousand liras for the best scheme of embellishment of the city so that it shall attract floods of tourists. Brilliant ideas of boulevards, casinos, parks, bands, and what not are being aired on all sides, and one is left with the impression that these men are propos-

ing to turn this wonderful city into a sort of Blackpool or Margate. It does not seem to have soaked into the minds of one of them that nothing has yet been done to simplify and organise on a civilised model the reception of tourists at the port when they arrive: nobody has thought of staffing the passport control with a set of smart, young, well-dressed men who speak some foreign language and can examine a passport quickly and decisively; nobody has thought of putting a capable, decisive gendarme officer with an intelligent force of gendarmes to cow and keep in order the appalling crowd of insolent and rapacious boatmen; nobody has seen to it that the one or two main streets of Pera are safe for civilised people to use after eight o'clock in the evening without the risk of encountering the worst *canaille* of the lowest slum quarters; nobody has sufficient push to see that the time-tables of the steamboats and railways and the names of the stations and landing-places are printed in European figures and characters. Before our municipal fathers amuse themselves in sketching chimerical projects for which no money is likely to be available for years, they would do well to carry through some few elementary reforms on the lines suggested above, for which they would gain the thanks of the tourist and casual visitor, who is not amused by gratuitous difficulties when on holiday and business, and who is sure to carry home an exaggerated tale of the unpleasant side of his experiences here.

HEALTH AND PLEASURE.

The Cure at Chatel Guyon.

By H. CHARLES WOODS.

Châtel Guyon, September 20.

Readers of THE NEAR EAST, so many of whom know those climates which are less favourable than our own, may or should be interested in Châtel Guyon and its cure, if only on account of the natural attractions of this place.

Situated in the Auvergne, and therefore in the centre of France, the place lies at a distance of some 260 miles to the south of Paris. With an elevation of rather over 1,200 feet above the level of the sea, it is possessed of a fresh invigorating climate, responsible even at this late season of the year for warm dry days with fresh and even cool nights. The village and bathing establishments lie among or rather on the edge of hills, the lower slopes of which are covered with vines and the higher summits of which are well wooded with oak, pine, and chestnut. The visitor, therefore, who desires to walk, to drive, or to make excursions by motor is provided with favourable opportunities for so doing; for whereas it is possible for almost everybody to summon energy to wander on foot in the charming valleys des Prades and de Sans-Souci, the more energetic among us can walk to the magnificent Chateau de Chazeron, which was recently purchased and has now been beautifully restored by M. Léouzon Le Duc—the famous Paris barrister. By private motor or by means of the numerous conveyances which make excursions it is easy to visit such places as Vichy, Clermont-Ferrand, Le Puy de Dome, Mont Dore, Royat, and other resorts which are too numerous to mention.

The town is served by a branch of the main line from Paris to Clermont-Ferrand, which lies distant about twelve miles. At the top of the main street, which takes its name (Avenue Baraduc) from a former famous doctor, one comes to the park, which measures about half a mile in length, and which lies in a hollow, through which a small stream ripples by day and by night. Here are situated two large bathing establishments, five principal wells, a casino, and numerous small shops, most of which are installed in small wooden buildings. This park, which is well shaded and provided with countless winding paths and an attractive display of flowers (somewhat damaged this year by the August bad weather), is backed by the pine-covered Chalusset (a rocklike hill), up which one wends one's way between many a glass of water. Situated around this park, too, are the principal hotels and the houses of several among the twenty-six physicians who spend their summers in caring for the between 10,000 and 12,000 men and women who come here to do the cure from all parts of the world each year. Indeed, so cosmopolitan is the place, which is visited by Algerians, Egyptians, Turks, Armenians, Indians, South Americans, and by those belonging to most of the worlds, that one may talk in any language in which one is the most familiar. Indeed, sitting round a table the other evening we were a distinguished Frenchman, a Dutch lady (who is the widow of a famous Italian senator), an Armenian from Russia, and a Circassian lady who once had her home in the same country. At another moment one is talking to an Irishman from the Argentine, a Greek from Salonika, a Portuguese from Tangier, and so on. Thus to mention the names of the Maharaja of Kapurthala, Princess Emma Ismail (sister of King Fuad), Prince Kemal el Dine Hussein, General Moukhtar Pasha, the Brazilian Ambassador in Paris, Frederick Dixon Pasha, Madame Emin Pasha, Baroness Myriam de Rothschild, Madame Omar Sultan Pasha, Professor Bayet (of Brussels), General and Mrs. Macdonald, Ismail Abazza Pasha, Mrs. Swinburne, Ratib Bey, Madame Souher de Souzenburg, Mr. and Mrs. Nicholas Martin, is only to refer to a few of the well-known people who are or have been here this year.

With regard to the complaints for which

Chatel Guyon is beneficial and to the actual cure, it would be out of place to enter into details here. Nevertheless, it should be stated that the diseases which arise from residence in hot climates, from unhealthy food, and from impure water are especially suitable for treatment at Chatel Guyon, and that the after effects of typhoid, dysentery, and malaria are often obliterated by remedies which include the disinfection of the intestines and the stimulation of the liver. The cure, which varies very much in different cases, consists in drinking small quantities of tepid iron-tasting water at intervals during the day and of having various baths. The most common of these is that generally called the running water bath. It is taken in separate cabins or bathrooms, and in the naturally warm water of the place, which comes in at the bottom and flows out at the top of the bath, thus securing an even temperature and always circulating water during the some twenty minutes for which the patient is immersed. At the end of this bath there is generally a "*Douche Sousmarin*," when the patient is sprayed with a hose of hotter water whilst he or she still lies in the running liquid. Over and above this there are poultices of hot mineralised mud, applied either dry or in a bath—poultices which draw the inflammation out of the section of the body to which they are applied. Moreover, among many other treatments it has now become the fashion here to order the visitor to eat "Yaghourt," which is widely advertised as being made according to the Bulgarian system. And last, but far from least, whilst the matter naturally depends upon the tastes and requirements of the visitor, at the present time a cure at Chatel Guyon can probably be accomplished for about 1,200 francs, including accommodation in a modest hotel. To this must be added, say, another 300 francs for a second-class hotel, and as much more as is desired for residence in the two houses which may be described as first class in every way.

The season lasts from May 1 to October 15, but, owing to the climate and to the overcrowding at its height, the best periods to be here are either between May 20 and June 15 or in the earlier part of September. The communications are good, for whereas Paris can be reached by through train in less than eight hours, the connections with Marseilles, Geneva, Lyons, and Milan, and thence with the Simplon-Orient Express, are excellent. Moreover, in addition to the fact of the existence of hotels suitable to the pocket of every visitor, I think that, on the whole, and speaking from the experience of three visits, the management of the "Etablissement" is well conducted, and that the interests of the invalid are well cared for. But, considering the price to which the cure has necessarily been put up, I think that the introduction of certain minor improvements would constitute a great attraction to visitors, especially to those who come from England or who have already done "cures" in some of Europe's famous watering-places. For instance, without undue expense, something might perhaps be done to provide a covered promenade, where the visitor could walk or sit, the bathing establishments ought to be enlarged, the *personnel* might be better supervised, and clocks should be put up at least in various parts of the park, if not actually in every bath-room, since the whole cure here must be carried out to time. With these minor criticisms, coupled with the suggestion that Chatel Guyon should be made much better known to the outer world than it is at present, I can only repeat that the cure is excellent for the purposes for which it is intended, that the place is a quiet and homely one where everybody can secure the rest and tranquillity of which we are in such need in these days, and that the expense of a visit to Chatel Guyon is no more, and probably less, than that of any other holiday taken in comfortable surroundings.

THE PERSIA SOCIETY.

THE DEATH OF M. ARAOUZOS.

We have received from the Greek Press Bureau at Limassol, Cyprus, the following telegram:—"The death has occurred of M. Spyros Araouzos, delegate in London of the Cyprus Assembly, ex-member of the Legislative and Executive Councils, and National Councillor. The funeral was on Sunday." A later telegram states:—"The funeral of M. Araouzos was attended by the English Commissioner, the Greek Consul, Mayors, Councillors, and representatives of the whole island. Two metropolitans and over fifty clergymen officiated. Two hundred wreaths were placed on the coffin, which was covered and surrounded with Greek flags. Orators declared the confidence of Cyprus in the accomplishment of the national will. Three thousand people, villagers and citizens, followed the coffin to the cemetery, walking in extremely hot weather."

OBITUARY.

The death is announced of Sir Thomas William Holderness, G.C.B., K.C.S.I., formerly Permanent Under-Secretary of State, India Office. Sir Thomas, who was in his 76th year, was appointed to the I.C.S. in 1873 and retired in 1919. In his earlier days in India Sir Thomas earned great praise for his grasp of the difficulties in land revenue administration. He was taken, in 1901, from the Revenue and Agriculture Department of the Government of India, to Whitehall, as Secretary of the Revenue and Statistics Department of the India Office. In 1912 he was appointed as Permanent Under-Secretary, which office he occupied until 1919.

The death is reported from Calcutta of Mr. Bhupendra Nath Basu, member of the Council of the Secretary of State for India and Vice-Chancellor of Calcutta University. Mr. Basu, who was in his 66th year, was educated at Presidency College, Calcutta. He served on the Bengal Legislative Council and the Viceroy's Legislative Council, and was President of the Indian National Congress held in Madras in 1914. Mr. Basu represented the Indian Government at the International Labour Conference at Geneva in 1922, and was a member of the Royal Commission on the Indian Public Services last year.

Three Indian children were burnt to death and Miss Edwards, a European missionary, was seriously burnt in a fire at a missionary school in Calcutta last week.

SCHOOL OF ORIENTAL STUDIES, LONDON INSTITUTION
(University of London), Finsbury Circus, E.C.2.

THE HEART OF AN ANCIENT PEOPLE.

"ARABS IN TENT AND TOWN." By A. Goodrich-Freer (Mrs. Spoer). (London: Seeley Service and Co., Ltd. 21s. net.)

The sub-title of this book exactly describes what it is—viz., "an intimate account of the family life of the Arabs of Syria, their manner of living in desert and town, their hospitality, customs, and mental attitude, with a description of the animals, birds, flowers, and plants of their country." "Syria" means little more than the Holy Land, and the term "Arabs" includes both Christian and Muslim Arabs, and often the indigenous Jews. It is written after 24 years' residence in Palestine, and represents the fruit of constant and loving observation by the author and her husband. Much of it was put together as refreshment for the mind in war time, when we gather that she and he were treated with suspicion and even severity by Turks and Germans, finally falling into the hands of Azerbaijan Bolshevists and escaping with difficulty and much hardship, but always holding fast to the precious note-books.

The author is definitely "*laudatrix temporis acti*," and we readily forgive her for her constant and often undeserved sneers at modern occidental ways for the spirit which has enabled her to give us this book. After six chapters mainly "about" women and children and family life, sixteen more follow about pilgrimages, hospitality, bread, coffee and coffee customs, property, weather, the camel, the horse, etc., birds and insects, dogs and cats, locusts and their customs, flowers and plants, trees, and the olive. Obviously, each chapter has originally been written as a little separate treatise. It is a pity that, in bringing these chapters together, the author has not taken more pains to avoid the repetitions which have necessarily crept in owing to the method of construction. And, to get rid of fault-finding, it is much to be regretted that the proofs were not more carefully read and that so little respect is so often shown to the English language. Mrs. Spoer is clearly Scottish by birth (does she not write Edward VII. as "I. of Scotland"?). She is American by marriage, but we do not recognise the following sentence as written in the English, Scots, or American language:—"We had repeatedly urged upon our young house-servant to drink only boiled water, for his father and sister had died of malaria while in our service, and who himself, as well as his mother, was often ill from fever." The book is too good to be allowed to contain such passages. Another edition is pretty sure to be demanded, and we would earnestly "urge upon" Mrs. Spoer to revise, not the matter of the book, but much of the language in which it is presented. A jewel of price deserves to be well set.

It is not easy to describe the charm of this book. It seems to consist mainly in its spirit of sympathy and the easy mastery which the writer has over her subject and her apt facility of illustrating her points by anecdotes, stories told her by her Arab friends, proverbs, or ancient tradition. There is an appreciative smile or chuckle for the reader once or twice on every page. As an example, taken at random, here is the explanation of the curious bray of the donkey stallion as heard in the streets of Jerusalem, which "was such a bray as one can hear nowhere else. It is not a cry of alarm, or excitement, it is not a call to others, it is not a song of love or incitement to amours; but it is one long, continuous heart-broken wail of anguish, ending, strange to say, with a most mirth-provoking little chuckle, a performance likely to produce distress and perplexity to the uninitiated rider, specially as, with the chuckle, there is a sudden run forward, following upon a determined stand, with neck stretched out and fore-foot planted wide. The occasion of it all is that the devil whispers into one ear: 'All the lady-donkeys are dead.' Hence the wail. Then he passes to the other and adds: 'But there is one left for you.' Hence the chuckle. No one who has passed through the experience will doubt the authenticity of this explanation. It fits the case precisely."

Or take this:—"They say the dog not only guards his master's house, but also his honour. When the cat has dined and they say 'Have you eaten well?' she replies, 'I am not satisfied'; whereas the dog, even if hungry, will make eructations to show that he is satisfied with what he receives. '*Mafeesh asal minu*,' added my informant ('There is none so noble as he')."

The book is a record of things and ways, many of which are hundreds and even thousands of years old, but are gradually disappearing with the advance of what Mrs. Spoer bitterly calls "higher civilisation." Whether as such a record for generations to come or whether as a series of pictures appealing both to those who know and to those who would like to know, we thank the author most heartily for what has been to her most clearly a labour of love. At the end of her chapter, "About the Olives," which is one of the most charming, she adds a paragraph: "Many readers would perhaps be more interested in details as to the commercial profits of the olive tree rather than in old stories of historical associations and old memories of the Arab peasantry, who have tended them for nearly thirteen hundred years. Even in these days, however, there are happily still a few choice souls who care for such things as 'please' rather than 'improve' the mind." To which we reply that she is too modest and at the same time too disdainful. Too modest because she not only pleases but definitely improves her readers' minds, and too disdainful, for the kind of information which she rightly avoids giving has its own value, though we look for it elsewhere, and would not for worlds wish to find it in her delightful pages.

PERSONAL AND GENERAL.

TO-DAY.

September 25, 1924 (New Style).
September 12, 1924 (Old Style).
Saphar 25, 1343 A.H., of the Moslem Calendar.
Ellul 26, 5684, of the Jewish Calendar.

The Maharaja of Kutch returned last week to the Carlton Hotel, London, from the country.

M. Oromolu, Governor of the National Bank of Roumania, arrived in London last Thursday from Paris.

H.E. M. Hadji Misheff, the Bulgarian Minister, has taken up his residence at 24, Queen's Gate Gardens.

The Maharani of Baroda left Genoa on September 16 for Bombay on board the Italian steamship Genova.

The Albanian Minister, who is in the South of France, will not return to London before the end of October.

M. George V. Mélas, Secretary at the Greek Legation, returned to London on September 18 from Scotland.

The Hon. Evan Morgan has left England for Palestine and Rome, and expects to remain abroad for several months.

Mr. H. E. Satow, O.B.E., Consul-General at Beyrout since 1920, has been appointed Consul-General at Algiers.

M. Radu T. Djuvara, Counsellor at the Roumanian Legation, left London last Saturday for the Continent on leave.

Mme. Yovan Yovanovitch, wife of the Yugoslav Consul-General in London, has returned to 37, Gloucester Place from the country.

Zaghloul Pasha, the Egyptian Premier, arrived in London last Tuesday from Paris. His Excellency is staying at Claridge's Hotel.

M. Luke Pierides, Swedish Consul in Larnaca, Cyprus, arrived in London on September 18, and is staying at the Great Central Hotel.

Princess Ileana, daughter of the King and Queen of Roumania, is visiting the Infanta Beatrice of Spain at Brownsea Island, near Poole.

Viscount and Viscountess Erleigh will arrive in London on October 11 from India, where they have been visiting the Earl and Countess of Reading.

Princess Marguerite and Princess Theodora of Greece returned to London last Thursday from visiting the Crown Prince and Crown Princess of Sweden.

The Bishop of Waterford and Major-General G. M. Franks were among the passengers in the Caledonia, which left last Friday for Marseilles and Bombay.

M. Grégoire Michaesco, Commercial Attaché at the Roumanian Legation, returned to London last week from Brussels, where he had been on a special mission.

Princess Marie of Greece (Madame Ioannides) has been joined by Rear-Admiral Ioannides at Harrogate, where other visitors include Prince Madansinghi.

Mr. Justice Harrison left London last Thursday by the P. and O. Bombay express to join the s.s. Malwa at Marseilles. Colonel Sir Lawless Hepper and Sir Shadi Lal also embarked at Marseilles in the Malwa for Bombay.

Mr. Harold Knox-Shaw, M.A., Trinity College, Cambridge, who has been appointed by the Radcliffe Trustees to be Radcliffe Observer in succession to the late Dr. A. Rambaut, was formerly Head of the Observatory at Helwan, Egypt.

Zekiaï Bey, the newly appointed Turkish Ambassador to the Court of St. James, recently visited the Foreign Office, and was received by Sir William G. Tyrrell, Assistant Under-Secretary of State. The Prime Minister is receiving Zekiaï Bey some time this week.

The King has approved the appointment of General Sir William R. Birdwood, Bart., G.C.B., G.C.M.G., G.C.S.I., C.I.E., D.S.O., Ind. Army, to act as Commander-in-Chief of His Majesty's Forces in India, during the absence on leave of General Lord Rawlinson, G.C.B., G.C.S.I., G.C.V.O., K.C.M.G.

M. Mishu, the Roumanian Chargé d'Affaires, entertained at dinner on September 17 General and Mme. Anastasiu, General Cingureanu, M. Lupescu, Colonel Teiusanu (late Roumanian Attaché at Washington), Major Cadere, Major Boeresco, Major Rant, Lieutenant and Mme. Zamfiresco, Lieutenant and Mme. Stefanesco, Lieutenant Tanculesco, and Lieutenant Slod.

The will of the late Major-General Sir Vere Bonany Fane (61), K.C.B., K.C.I.E., of Dunvegan, Mayoneyo, Burmah, lately G.O.C., Burmah Command, who saw service in China, on the North-West Frontier of India, and during the Great War in Mesopotamia and Palestine (unsettled) (net personalty £2,885) has been proved at £2,970.

ALBANIA.

The absence of news from Albania might in ordinary circumstances be regarded as a satisfactory indication that the change of government had been appreciated in the country, and that the new Ministers were busy with the routine work of administration. When, however, it is learned that a strict censorship is being enforced, the suspicion that all is not as well as it seems begins to gain ground. There may be no justification for the suspicion, but if it exists, the Albanian Government probably has only itself to blame. In Great Britain, owing to conflicting interpretations of the tendencies at work in the recent changes, there was some uncertainty at first as to whether Albania stood to benefit by the insurrection of last June; but when it was realised that the old Government had incontinently fled the country at the first sign of public disapproval of its actions, and that the programme of the new Cabinet under Monsignor Fan Noli promised an enlightened attempt to introduce ordered and progressive Government in Albania, there was a general readiness to welcome the change and to hope for the best. The enforcement of a strict censorship inevitably arouses misgivings in the British public; it is a war measure, entirely justified when a country is fighting for its existence, but superfluous and out of place under peace conditions if the Government has the sympathy and support of the people. If, as we are led to infer, two letters to THE NEAR EAST from a correspondent in Albania have been suppressed by the censorship, we can only suppose that the new Government has so little confidence in itself and its position that it shrinks from any publicity on the course of events in the country. This seems an unfortunate and even foolish attitude to adopt. No one looks for the establishment of a model administration in Albania in a day, or a month, or a year. It is enough if the Government shows that its intentions are good, and that it is conscientiously working to replace the unsatisfactory inheritance left by its predecessors by a system more broadly based on the popular will. The suppression of communications to newspapers suggests that, if exception is taken to certain acts of the Government, the Ministers are aware that they are doing wrong and are anxious not to have the fact known. No foreign Government striving to do its best by its country has anything to fear from criticism in the British Press.

A danger by which all Balkan Governments are beset on taking office is to lose sight of the country's interests in their anxiety to rid themselves for ever of their political opponents. In its statement of policy issued by Archbishop Fan Noli's Ministry last June, there was a trenchant diagnosis of the ills from which Albania was suffering as a result of the previous régime, which was held responsible for "insecurity throughout the country, anarchy among the organs of the State, and the creation of personal powers outside and above those of the State, together with the assassination and attempted assassination of citizens and foreigners," and there followed an enumeration of a score and more of reforms that the new Government proposed to introduce. This programme was ambitious enough to occupy the whole time of the Cabinet, and it contained no reference to the establishment of a Political Court which should throw a cloak of legality over the wreaking of vengeance on the previous Government and its adherents. That is the time-honoured Balkan method which has brought disaster and misery to every country in turn. The Western Powers had every right to look for something better from the head of a Ministry who was also a high dignitary of the Church, and who had spent many years of his life in the civilised West. The best way to encompass the political death of opponents, especially when they have already fled the country, is to provide such a striking contrast to their inefficient administration that the country of its own accord will pronounce their perpetual banishment from power. To sink to their level by the passing of death sentences and by confiscating property is to fan the flame of vendetta and inevitably to prepare for a further swing of the political pendulum. There can be little inducement to Western Powers to recognise a Government that has little else than the persecution of its opponents to show for its first three months of office. Foreign countries are not interested in Albanian party politics, but they are naturally keen to see a Government get on with much-needed reforms, instead of introducing tribal strife into the conduct of public affairs.

No country in the Balkans has better reason than Albania to present a united front to the outside world, and anything that tends to perpetuate internal strife cannot be too strongly criticised. The hope engendered by Monsignor Fan Noli's accession to power was based on the recognition of the fact that he knew how the government of a country ought to be conducted. If he fails, therefore, he will be held far more to blame than a man in the position of Ahmed Zogu, who was wholly inexperienced in anything but Albanian mountain life. Every allowance will be made for the difficulties of the new Government's position; it suffers from the troubles of all coalition Ministries, intensified in its case by religious differences and the clash of regional interests, and it has a very difficult country to administer, with an empty exchequer and a tradition of unrest. Its chief hope lay in attending strictly to its business, with a single eye to placing the administration of the country on a satisfactory basis in the shortest possible time. It could have ignored the fugitive ex-Ministers, and there was no need to identify any of the people left in the country with the discredited policy of the late régime. By adopting the attitude that no Albanian needed to be convinced of the inherent inferiority of the "old gang" it would have provided public opinion with the strongest possible incentive—the fear of looking foolish—to rally to its support. As things are, it has reintroduced the wretched game of "ins-and-outs"; by attempting to prosecute or persecute its opponents it has driven them to self-defence by the only means known to them, and this has given a stimulus to unrest and has undermined public security. The tragedy of it all is that the present Government can probably say with considerable justice that it is the best that Albania can produce. For this reason we would strongly urge the Prime Minister and his colleagues to have done with pettiness, whether displayed in the persecution of opponents or in quarrels among themselves, and to show confidence in their own capacity to lift Albania on to a higher plane than she has hitherto reached.

BRITAIN AND THE ARABS.

No more debatable subject has arisen out of the War than that of Great Britain's treatment of the Arabs. It is known that the Shereef of Mecca was encouraged to throw in his lot with the Allies by a number of promises made to him on behalf of the British Government, but considerable uncertainty exists as to the precise nature of those promises and as to the degree of justification there may be for any particular interpretation placed upon them by the Arabs in general. A good deal of Arab capital is made out of the failure attributed to Great Britain to carry out her promises, without being met with any specific refutation, with the result that many Britons are left with the uncomfortable feeling that the Arabs have been badly "let down." At one time it was hoped that the whole matter would be formally adjusted by a treaty between the Hejaz and Great Britain, which would register once and for all the resultant that both parties had agreed to accept of the two conflicting forces, represented by what has happened and what should have happened. Unfortunately, King Hussein has not been able to accept any of the several draft treaties negotiated in his name, and even if the course of events in Arabia still leaves him in a position to negotiate in the name of the Hejaz, it seems unlikely that the British Government will consider it worth while to devote any more time to a document that will obviously never satisfy King Hussein. In these circumstances it is not without interest to examine what is probably the fullest and most dispassionate analysis that has yet appeared of British relations with the Arabs during the War and after the Armistice, as set out in "A History of the Peace Conference of Paris," edited by Mr. H. W. V. Temperley. The pertinent section in Volume VI. is the work of Professor D. G. Hogarth, who writes not only with first-hand knowledge of the Arabs, but also with the advantage of close association with the peace negotiations. From a summary of this section it may be possible for many to form a more correct estimate of the various obligations and commitments of the Allies, first to one another, and then to King Hussein and other Arab chiefs, and of the extent to which the Allies as a whole, and Great Britain in particular, have carried them out or evaded them.

It was during the spring of 1914 that the Shereef informed the British Residency in Cairo, through his son Abdullah, that he was desirous of obtaining administrative autonomy in his Shereefate. When, therefore, the prospect of Turkey's entering the War became more and more certain, the Emir Abdullah, as the Shereef's Foreign Secretary, was asked about his father's intentions in the event of a *jehad* being proclaimed, and he received a hint to the effect that, in the event of war with Turkey, the co-operation of the Hejaz with the Allies would be to the advantage of both. The Shereef returned a non-committal reply. When Turkey actually declared war, an assurance was sent to the Emir Hussein of British support of his dynastic independence, and of our readiness to assist in the liberation of the Arabs, subject, in his case and theirs, to active participation on our behalf. An unequivocal answer was received from the Shereef a month later to say that he would abstain from helping our enemy. For many months no further communication passed between Great Britain and the Hejaz. The Emir was busy testing the temper and intentions of other Arab leaders. For the moment he filed our pledges, the one given to himself, and the other, as he interpreted it, to all of Arab race in Asia, and not merely Arabs of the Peninsula. Dr. Hogarth adds: "Though later communications from London made it evident that, in fact, those responsible for framing the second part of our pledge had not in view the Arabs of Asia outside the Peninsula any more than those of Africa, the wording justified Hussein's interpretation, and sowed seeds of misunderstanding not only with him and with our Allies, but also with the Government of India."

While the Imperial Government was in touch with the Hejaz, the Government of India undertook the work of dealing with the Arabs of the Eastern part of the Peninsula. It was also responsible for the campaign in Mesopotamia, and here no suggestion of ultimate sovereign independence was ever conveyed to the Arabs, nor, in our proclamation issued on the fall of Baghdad, was anything foreshadowed beyond self-government under tutelage.

In the spring of 1915 Great Britain was still free from any obligation to assist Arabs in warfare against the Turks, but she was no longer free from obligations to recognise Arab independence, whenever and wherever it should be self-established, and, further, to accept the substitution of an Arab Khalifate for the Turkish, if the Moslem world were to pronounce for it and bring it to pass. In the Arabian Peninsula, in particular, she had committed herself to the establishment and support of an Arab sovereign State, controlling the Holy Cities. All these commitments, announced in November, 1914, were confirmed by the distribution of a second proclamation in June, 1915. Actual treaties followed—with the Idrisi and with Ibn Saud (November, 1915).

In August, 1915, negotiations with the Hejaz were reopened with a letter from the Emir Hussein. Claiming to speak for an Arab nation-to-be, he asked Great Britain to acknowledge the potential sovereign independence of all the Arabs of Asia from the Indian Ocean to the 37th parallel N. latitude (i.e., Adana-Nisibin), and from the Red Sea and Mediterranean shores to the borders of Persia, Aden territory alone excepted. For a variety of reasons, particularly in view of the undefined but lately reasserted French interests in Syria, and the declarations and intentions of the Government of India in regard to Mesopotamia, a temporising reply was sent; but this served only to draw from the Emir an emphatic reiteration of the Arab territorial claim. A further communication was sent to Mecca in November, 1915. This, while explicitly ruling out of the negotiations all the Turkish-speaking districts which the Emir Hussein had claimed as Arab, and all Arab

societies with whose chiefs we already had treaties —while, further, reserving to French discretion any assurance about the independence of the Syrian littoral, or the freedom from tutelage of the interior—i.e., the district of the four towns, Damascus, Homs, Hamah, and Aleppo—while reserving other Arab regions in which France might prefer peculiar interests, and leaving the Mosul district and even, perhaps, Palestine in doubt—while, finally, stating expressly that no guarantee for the unconditional delivery of either Lower or Upper Iraq to the Arabs could be given by us; in spite of all these reservations and exceptions, this communication recognised an Arab title to almost all the vast territories which the Emir Hussein had claimed, including Mesopotamia, and therein promised our support to Arab independence, subject only to limiting but not annulling conditions. The Emir either took no notice of these reservations, or refused to agree to them; he agreed to none about Syria and Palestine. The British Government, on its part, neither modified its reservations nor gave them greater precision. At the end of the year the Emir, convinced at last that territorial questions were insoluble at that stage of the war, wrote to put them aside against the hour of an Allied victory, asking only for a pledge that Arab belligerents should not be deserted by the Allies in the conclusion of peace, and for financial and other help towards his preparations for action. These requests were agreed to, but with a final warning that in peace Great Britain would regard her obligations to France with the same eyes as in war.

These negotiations naturally affected both the Government of India and France. They called forth a protest from the former in so far as they compromised Indian policy in Iraq by making the country a subject of negotiation with a spokesman of an Arab nation. Conversations with France at this time began and ended with an assumption that the French had an indefeasible right to exclusive paramountcy in all Syria north of Palestine, with the implied recognition of a similar paramountcy for British influence south of the French limit; but an Arab right to independence under varying degrees of tutelage, within those zones, as without them, was conceded explicitly or implicitly by both parties. In the Sykes-Picot Agreement of May 16, 1916, to which Russia became a party, the three Governments engaged mutually to support and recognise an Arab National State in the interior of Syria, with probable centre at Damascus, whenever established by the Arabs themselves. This document represented the compromises capable of attainment at the time between interests that were in almost direct and unvarying opposition. "Honour demanded that previous British undertakings to the Shereef of Mecca and the Arabs should be amply fulfilled; it was urgently necessary to maintain concord and unity of effort between the chief European Allies, and—more difficult still—between European Allies and Arab Allies . . . it was necessary to provide for the future of Palestine—or, at least, of Jerusalem—without placing this region, held in world-wide sanctity, under unqualified Arab rule."

During the Hejaz revolt the Emir Hussein and his sons were constantly exhorted by Great Britain to promote the expansion of their local revolt into a pan-Arab rising. There followed a gradual extension of Allied-Arab co-operation committing us to an identification of the Shereefian cause with Arab Nationalism in general. The Emir's claims may have been officially ignored; but diplomatic representatives gave him, as spokesman of his nation, certain provisional undertakings about the future of Syria and that of Mesopotamia. We also communicated to certain representative Syrians in Cairo an assurance that, subject to unspecified interests of France, Great Britain would recognise Arab sovereignty in all places liberated by Arab (i.e., Shereefian) arms during the War. Both the Emir Hussein and the Emir Faisal, however, were aware by this time of the circumstances conditioning the undertakings given to the Arabs—the limitations imposed on action in Syria and by the Balfour declaration in regard to Palestine—and when this latter was communicated officially to the Emir Hussein, "he took it philosophically, contenting himself with an expression of good will towards a kindred Semitic race."

At the Paris Peace Conference it was the Sykes-Picot Agreement that was adopted as forming a pre-determined base for the settlement of the regions to which the undertaking applied, with the result that the Arab prospects created by British promises were, to say the least, greatly confused and diminished. It has to be borne in mind, however, that both the Agreement and the Balfour Declaration were war measures, called into being not merely, nor even chiefly, for the protection of the interests of individual Allies, but still more for the general purpose of securing Allied victory. Unfortunately, the very success of the Syrian campaign contributed to Allied difficulties in the ultimate settlement of Syrian questions. "The same French sentiments, susceptibilities and ambitions which the Sykes-Picot Agreement had been designed to soothe or to satisfy were grievously wounded by the fact that the conquest of Syria was made by British arms." The Arabs, conscious of French hostility to their aims, laid themselves out to obtain a footing in Syria so as to defeat

NOTES AND NEWS.

167, Strand, London, W.C.2,
Tuesday Morning.

Egypt's Cotton Market.

For the fourth year in succession, the Egyptian Government has taken the decision to intervene as a purchaser on the Alexandria cotton market, with a view to bolstering up prices. Last year a credit of £E500,000 was opened with the intention of purchasing about ten thousand bales, but only three-fourths of this amount was actually bought. A substantial profit on the amount sold was made, but the Government is left with a certain amount of cotton on its hands, as was the case in 1923. The cotton market has lately been falling, and there has been a steadily growing demand for Government intervention from all the classes of the population interested in cotton. To this the Cabinet has again yielded, expressing its readiness to purchase, if necessary, up to two million kantars.

Near Eastern Exchanges.

Attention was directed in these notes last week to the gradual stabilisation of Near Eastern exchanges, and it was pointed out that with the elimination of violent fluctuations the chief hindrance to trade was being overcome. The statistics of Bulgaria's foreign trade for the first six months of the current year confirms this view. There has been an increase of nearly 10 per cent. in the value of the imports as compared with the corresponding period in 1923, and an increase of more than 20 per cent. in the value of the exports. In view of all the circumstances, this must be regarded as satisfactory progress for the country that is more handicapped than any other Balkan State in regard to the resumption of normal relations with the rest of Europe. It is the instability of exchange rather than the rate that interferes with trade. After a period economic conditions adjust themselves to the depreciated currency, which becomes less and less of a burden to the community, except in the case of the unfortunate people with fixed incomes that still bear some relation to pre-War standards. This fact will not prevent a return to a gold basis for the currency to enable a country to have a more suitable unit than one which may be 1-300th or even 1-600th part of a pound sterling.

British Business Methods.

A recent issue of the *Bulletin* of the Federation of British Industries published a letter from a correspondent contrasting the methods of German business men and some British firms in dealing with business inquiries, with particular reference to actual instances in Greece. The point of the comparison was in each case the readiness of the German to go out of his way to make things easy for the potential purchaser, while a British house would proceed on stereotyped soulless business lines, which in nine cases out of ten might involve technical details altogether above the head of the Greek concerned. The correspondent drew attention to the number of people in Greece of the *nouveaux riches* type, who are anxious to put their money into industrial undertakings, in regard to which they may not have much technical knowledge, although their instinct as to their paying nature is sound. A German, it was pointed out, would make himself acquainted with the Greek's ideas, would forthwith work out all the particulars, and then would present him with a specification for the completed undertaking; a British house, it was suggested, would almost invariably require the man to furnish it with particulars of which he is quite ignorant. Little wonder that the German gets the business.

The Compleat Business Man.

Generalisations are almost invariably misleading, and I refuse to endorse the strictures of the *Bulletin's* correspondent as a hard-and-fast rule applicable to all British firms. But the point made is worth bearing in mind. It is an instance in business of the red-tape that we all decry when we come across it in Government departments. We can easily defend by business canons the steps taken by the British house; but the fact remains that the business is lost. If the inquiry had come from one of our own nationals, the demand for fuller particulars would not have seemed anything out of the ordinary. It is lack of imagination that credits the foreigner with an intimate knowledge of British methods and expects him to conform with our ways. What is required is just that amount of *savoir-faire* and courtesy which enables the representative to put himself in the other man's place and to spare no trouble to meet his wishes. It is probably the exception when these qualifications are entirely missing; but too often it is thought that there is no time for their indulgence. A great mistake, because a hundred per cent. efficiency without courtesy may quite easily fail to secure business that would come to half the efficiency with a full measure of courtesy. With a little business vision advantage could be taken by British manufacturers of many openings in Serbia at the present time.

The British Industries Fair.

According to present arrangements, the eleventh British Industries Fair should be held from February 16 to February 27 in two sections at the White City, London, and at Castle Bromwich, Birmingham, and invitations to this end have been sent out to potential exhibitors. It remains to be seen, however, whether the decision to continue the

British Empire Exhibition at Wembley next year, if it is taken, will affect the Industries Fair. In all probability the reopening of the Empire Exhibition would make it difficult, if not impossible, to hold the White City section of the Fair, in view of the fact that so many exhibitors would not wish to be represented concurrently at both places. This obstacle would certainly prevent the chemical trade from figuring at the Fair. For the sake of the latter, therefore, it is desirable that an early decision should be reached in regard to the fate of the Empire Exhibition.

COMMENTATOR.

PERSIAN MINES AND MINERALS.

There are few countries where the exploitation of minerals has been so much neglected as is the case in Persia. In ancient times mining was extensively carried on, though in a primitive way, and traces of copper and lead mines which had been worked, as well as foundries—large excavations, galleries, shafts, and mounds of scoria, as likewise bits of litharge—the latter indicating that silver had been extracted—are found at different places in the mountain regions all over the country. Since the invasion of the Arabs, Turks, and Tartars, mining has dwindled away almost to nothing. At present only slight attempts are made by the natives to extract coal, lead, copper, iron, sulphur, etc., and only rock salt and gypsum are produced in larger quantities.

A more serious attempt at mining operations was started about the year 1889, but after a few years of unsuccessful work this enterprise came to an end. A Belgian and French company also began the exploitation of some coal mines in the neighbourhood of Teheran, but soon this work also had to be abandoned. Later on the Anglo-Persian Oil Co. acquired an extensive concession in Southern Persia, and here we have the first really important and successful mining enterprise in the country.

The oil belt which begins in Mesopotamia stretches in a south-easterly direction through Persia as far as the district of Makran and Persian Baluchistan. In Persian territory there are over thirty oil-fields known where petroleum occurs in the tertiary deposits. As yet only three of the oil-fields have been exploited. They are situated to the south and south-east of the town of Shustar—viz., Maidan-i-Naphtun, which is the most productive one; White-Oil-Springs, situated about 35 miles to the south-east of the former, and the third near the town of Ahwaz. At Maidan-i-Naphtun oil was struck at a depth of about 1,000 feet.

In the northern provinces of Persia, which are outside the above concession, only seven or eight oil-fields are known, and these have not yet been sufficiently explored. Most of them are situated on the Caspian coast, and an export from here to Europe can be effected only *via* Baku-Batoum or Petrovsk-Novorossisk.

Occurrences of copper ores are very numerous in all parts of the country where older crystalline rocks outcrop. In many places these ores also contain a more or less considerable percentage of gold, as is the case in a Russian concession in the Karadagh district, situated in the province of Azerbaijan, to the south of the Aras River, where quite a number of rich copper mines are found, and where a ton of the ores contains about 0.3 oz. of gold.

Except in the district of Anarek, in Central Persia, where small quantities of copper are won by fusing oxides and carbonates of copper with the aid of charcoal, no copper mining is done. The principal drawbacks are the scarcity of fuel and the absence of proper and cheap means of transport; besides, Persian knowledge of metallurgy is not adequate to deal with sulphides, in which the country is so rich.

Coals of Jurassic age are abundantly distributed all over the central part of the Elburz Mountains, and especially in the environs of Teheran, Semnan, and Shahrud, and to the north as far as the Caspian coast. In other parts of the country the occurrence of coal beds are known in the districts of Kuhbenan, Kerman, Nehavend, and some other places. On an average the beds seldom exceed the thickness of one yard, and are for the most part thinner, though there is generally quite a series of them with intercalary beds of shales and sandstones.

The quality of the coal changes considerably in the various schists; some of the coals are strongly bituminous (Gagat), some yield up to 60 per cent. of coke, others are dry and anthracitic. As on the whole extent of the table-land no forests are found, mineral coals of even an inferior quality have a great importance, since no real industry is possible without the necessary fuel. At present the only coal mines which are worked at all and in a primitive way, are situated about thirty or forty miles distant to the north-east and north-west of Teheran. The coal is transported on donkeys. Rationally worked and with improved means of transport, these coal mines could possibly be made paying concerns and a great help to the development of different industrial enterprises.

Lead ores also occur very frequently all over Persia, and contain sometimes a considerable percentage of silver. Only three or four mines are at present worked, in a primitive fashion, and the quantity of lead extracted hardly covers the small demands of the Persian market. Zinc and antimony ores are also found in some places in sufficient quantities for exploitation, but are not worked. Iron mines are numerous, especially in the central parts of the country, and some of the ores are very pure and contain no pyrites or other sulphurous minerals, and are very rich, containing 65 to 70 per cent. of metallic iron. Some of the mines contain very great quantities of ores, and as the mineral lies on the surface working is easy. Except some limonites, which generally accompany the coal schists, no iron mines are worked on account of the absence of the necessary fuel, water supply, and means of cheap and effective transport. An export trade is impossible, since the principal mines of crystalline iron ores are situated much too far from any seaport. The iron produced by the Persians from limonites and analogous ores at Mazanderan, where charcoal is used as fuel, is very soft, and the natives use it in a cold condition for the forging of horseshoes, nails, etc.

Gold placers in diluvial and alluvial sands are known at different places, and the percentage of metal in the sands is high enough to yield profits; but the natives do not know a practical method of extracting the gold. Moreover, there is not always sufficient water at hand. They wash the sands in wooden dishes, and this method of manipulation certainly does not pay. Gold in quartz veins is also known in the mountains near Meshhad, Kuhbenan, Zenjan, and elsewhere, but these occurrences have neither been sufficiently prospected nor ever worked. Real silver ores are said to exist somewhere to the south-east of the Sahend mountains, but the exact place is as yet unknown. Cinnabar and quicksilver are found in the sands of a stream in the Afshar district near the ruins of Takht-i-Soleiman, where gold also is

Digitized by Google

present, but the mountains whence the stream brings the sand and metals have not been explored. Nickel and cobalt ores exist in the mountains to the south-west of Kashan and to the north of Anarek in Central Persia. Oxide of cobalt is extracted, fused with borax and used as blue colour for glazed tiles, etc. Tin ore is said to exist in the mountains about Kuhbenan, but the exact place is not known. Besides the minerals named, there are in different parts of the country known occurrences of pyrites, arsenic ores, chrome, molybdenum, manganese, sulphur, barium, asbestos, borax, rock-salt and other salts, gypsum, etc., of which only arsenic ores, sulphur, borax, rock-salt, and gypsum are extracted in more or less large quantities.

As regards precious stones, only turquoises are won, and though it is reported that rubies and emeralds occur at Khorassan, nobody knows where.

Prospecting for useful minerals is very difficult in the provinces of Mazanderan and Gilan, along the southern coast of the Caspian Sea, as dense forests cover the plains, hills, and part of the mountains, which rise up to an altitude of 10,000 to 14,000 feet. The remaining principal, and largest, part of Persia is, on the contrary, a table-land, void of any forests to speak of, and consists of extensive arid plains and valleys and a great number of high, barren, rocky mountain ranges, cross-cut by deep valleys and ravines, with precipitous borders, exposing to the eye of the observer all the formations of which the mountains consist. Here prospecting for useful minerals is very much facilitated, and an experienced geologist or mining engineer could hardly overlook the traces and indications which point to the presence of useful metals and minerals.

In some districts of the country the Persians are hardy workmen and miners. It is possible to see mines where these men, following a mineral lode, dig holes in the rock like moles in the earth, crawling sometimes on hands and knees, with a smoking old-fashioned lamp before them, and working away with their short picks, lying stretched out, till they meet a richer mineral deposit and here work out lofty and extensive galleries and caves, without using any timber for support. These men only want guidance and knowledge to become first-rate miners.

With the construction of railways and proper roads, mining operations are sure to be extended, as the railway constructors must necessarily consider the possible exploitation of mines on both sides of the line in order to make it a paying concern. The transport of goods and passengers alone in a poorly populated country would never provide sufficient revenues to cover the expenses and give dividends. First of all, oilfields and coal mines and their exploitation have to be considered, as the essential sources of the necessary fuel. Wood and timber must be brought from the Caspian provinces to the table-land and the mining districts, and all this requires capital and enterprise.

The Persian Government by itself is powerless to create any enterprise on a large scale, possessing neither the necessary funds, nor the professional men for the purpose.

BULGARIA'S FOREIGN TRADE.

Information is now available of Bulgarian imports and exports for the first six months of the current year. Imports for this period amounted to 2,724,990,241 leva (£4,540,000) and exports to 2,050,804,792 leva (£3,420,000), as compared with the following figures for the first half-year 1923:—Imports, 2,486,257,084 leva (£4,144,000); exports, 1,795,025,440 (£2,992,000).

Bulgaria's best customers are as follow, value of the combined imports and exports for each for the first six months of 1924 being given in brackets:—Germany (£1,436,000), France (£1,034,000), Italy (£1,013,000), Austria (£950,000), Great Britain (£646,000), Belgium (£428,000).

Imports for the same period by country of origin were as follow, the second sum in each case being the corresponding amount for the first six months of 1923:—Germany (£902,544, £877,370), Italy (£675,246, £725,900), Great Britain (£619,560, £662,154), Austria (£500,000, £376,000), France (£378,407, £405,622), Belgium (£325,661, £164,626), Roumania (£282,730, £241,540), Czechoslovakia (£258,460, £121,036).

Exports for the same period by country of destination were as follow, the second sum in each case being the corresponding amount for the first six months of 1923:—France (£655,926, £463,242), Germany (£533,577, £172,538), Austria (£450,000, £381,000), Italy (£337,948, £483,170), Greece (£330,000, £185,000), Turkey (£197,652, £623,827), U.S.A. (£114,833, £84,710), Belgium (£102,434, £62,017), Great Britain (£26,444, £25,683).

The value of British imports reaching Bulgaria during the month of June was £90,265 as compared with £92,000 in June, 1923. The principal articles imported from Great Britain were:—Textiles (£51,666), metals (£19,170), oils, fats (£9,430), machinery (£2,133), and chemicals (£2,061).

JAM IN PALESTINE

In view of the fact that a large stock of unsold wine remains in the cellars of Rishon le Zion and Zicron Jacob in Palestine, it has been decided to use a considerable portion of this year's grape crop for the purposes of making jam and concentrated grape juice. An experiment in this direction proved successful last year, when thirty-five tons of concentrated grape juice were produced and exported from Zicron Jacob to European and especially to English markets. This year it is anticipated that with the exception of a few hundred kantars of grapes, from which sweet wine is to be manufactured, nearly the whole grape crop will be converted into jam and concentrated grape juice.

British Consular Reports.

EGYPT.

FINANCIAL AND COMMERCIAL PROGRESS.

The following extracts are taken from the Report on the Economic and Financial Situation of Egypt (dated April), by Mr. E. Homan Mulock, British Commercial Secretary in Cairo, published for the Department of Overseas Trade by H.M. Stationery Office :—

Egypt is to be envied, writes Mr. E. Homan Mulock, both for the flourishing state of her public finances and for the satisfactory economic situation arising out of the general prosperity of the country. For the third time since the war the total foreign trade of Egypt has passed the hundred million mark, and for the second calendar year in succession the balance is in Egypt's favour, having reached in 1923 a figure in excess of that of the favourable trade balance in 1922 and the adverse trade balance in 1921. For the third successive financial year, too, the actual surplus has enormously exceeded budgetary estimates. Thus, an expected deficit of nearly two millions in 1921-22 was converted into a surplus of over four millions; the estimated surplus of two millions for 1922-23 grew to £E7,516,573; while the budgetary surplus of £E550,000 for 1923-24 was expected to reach £E4,975,000 by March 31, 1924. When it is realised that the respective budgetary receipts for the three periods specified above totalled £E36,701,000, £E33,630,000, and £E34,905,000, the significance of the proportion thereto borne by the corresponding surpluses is worth noting.

Of the surplus resulting from the financial year 1922-23 all but £E1,290,000 (of which £E1,250,000 was kept as a Special Reserve for payment of regraded salaries, the remaining £E40,000 being utilised to bring the carry-over and Fonds de Roulement held by the Caisse de la Dette up to a total of £E1,610,000) was passed to the General Reserve Fund, which thereby rose from £E5,569,659—the figure at which it stood on April 1, 1922, to £E11,796,232 on the same date in 1923. During the course of 1923-24 the Special Reserve above referred to was found to be superfluous, and the sum of £E1,250,000 was therefore returned to the General Reserve Fund, which, if it is further increased by the whole of the budgetary surplus finally realised on March 31, 1924, should prove to be in the neighbourhood of £E18 millions on April 1, 1924. Accurate figures are not available at the time of writing, as the final accounts of any given financal year are not completed till some twelve months later; while by a Royal Decree of March 31, 1924, the Budget for 1923-24 is to be applied provisionally to 1924-25, pending Parliamentary approval of the new Budget.

The Budget of 1924-25.

The first Egyptian Budget framed under the ægis of Parliamentary control of the country's finances was not presented to the Chamber of Deputies until April 26, 1924, and, as it is at the moment of writing in the Committee stages, the following figures from an article in the Press on the Note on the Budget drafted by the Finance Committee of the Ministry concerned are quoted, subject to possible subsequent alteration.

The Budget for 1924-25, as presented to Parliament, was balanced at £E34,400,000: the expenditure being estimated at £E34,180,000, a surplus of £E220,000 is thus forecast. In comparison with 1923-24, the estimated receipts and expenditure show decreases of £E505,000 and £E175,000 respectively.

Receipts.—There is nothing of an unusual character about the estimated revenue other than the sum of £E150,000 representing the proceeds of the sale of cotton purchased by the Egyptian Government. The estimated gross increase of revenue under certain heads amounts to about a million and a-half, of which £E719,000 is expected to accrue from increased Customs revenue; but this gross increase must be offset by an estimated total decrease of £E829,000, for £E581,000 of which the railways (as is explained elsewhere in Mr. Mulock's Report) are expected to be responsible. The receipts from the cotton tax are estimated at £E1,250,000, calculated on a basis of 5 millions of kantars of ginned cotton taxed at the rate of Pt. 25 per kantar.

Expenditure.—Economies in the credits for all Departments of the Egyptian Government are accounted for by the decline in the prices of materials, and the reduction of railway freight charges. The sum of £E3,964,000 is allowed for new works, of which the following are of commercial or industrial interest :—

Public Works.—£E50,000 is to be used for the purchase of the two new pumps at Abou Menage; £E165,000 is allotted for irrigation works in the Sudan; new machinery will be required for the pumps at Atf, for the Government Arsenal, and for Mex Pumping Station. A new Palais de Justice for the Mixed Courts in Cairo has already been begun, and a further extension of the Cairo Museum is needed to house the Tutankhamen treasures; expropriation, with a view to constructing two new tram-lines in Cairo, is provided for, as is also the purchase of mechanically propelled water-carts for its streets.

Harbour Works.—£E201,000 is allotted for the extension of Suez Harbour, £E20,000 for rebuilding the Customs House at Port Said, and £E7,000 for a floating dock for Government vessels.

Communications and Railways. — The credit allotted to the Egyptian State Railways for 1924-25 is considerably less than in 1923-24, and, as a result of the diminution in cost of working, freight charges and passenger rates have been reduced to such an extent that the public benefits to the amount of £E800,000, although it is expected that

the normal development of traffic will make good £E219,000 of this, thus accounting for the estimated decrease of £E581,000 in revenue from the railways. In spite of the diminution of this important source of revenue, it is confidently anticipated that the financial situation of the railways will not suffer, but that their exploitation in 1924 will give the minimum profit that can be expected from an enterprise of this nature—viz., 5 per cent. of the capital sunk in the railways. The system has suffered greatly from difficulties in the way of its normal upkeep, and will therefore call for heavy expenditure on the work of, and supplies needed for, renewal to make good the extensive deterioration of track and railway material.

Telegraphs and telephones, roads and bridges, and agriculture have all had money allocated to them, and particularly interesting in connection with the last-named is the allotment of £E14,000 for the purchase of flax seed in order to encourage its cultivation in Egypt, while £E156,000 is to be used for the purchase and distribution of cotton seed, and a sum of £E400,000 is to be devoted to the purchase of reliable and harmless chemical manures, which will be sold to cultivators at cost price.

Government Purchase of Cotton.

It is to be expected that, however conservative the financial policy of the Government may be, money will always be forthcoming when needed for intervention in the cotton market, as happened in 1923 for the third successive year, in an attempt to bolster up prices regardless of the laws of supply and demand.

On July 31, 1923, a credit of £E500,000 was opened, with a view to the purchase during the then ensuing cotton season of about 10,000 bales, for which storage was duly arranged. However, up to March 31, 1924, less than half this quantity —viz., about 4,000 bales—had been purchased, at a total cost of about £E210,000. A profit of 50 per cent. could have been made had the Egyptian Government sold their cotton at the top price attained during the current season up to the end of the financial year 1923-24, but the opportunity was lost, and on March 31, 1924, they still had on their hands, not only the 4,000 bales purchased during the current season, but also 2,000 bales left over from their purchases in the preceding season.

Movement of the Cotton Crop.

The partition among the principal purchasing countries of bales exported in the 1921-22 and 1922-23 seasons is shown in an appendix to Mr. Mulock's Report, from which it will be seen that Great Britain's purchases fell from 46 per cent. of the 1921-22 exports to 43 per cent. in 1922-23, whereas those of the United States remained constant at about 22 per cent. As the result of appreciable proportional increases in the exports of cotton to every country except Germany during the 1922-23 season as compared with its predecessor, the total quantity of kantars exported rose from 5,806,813 to 7,172,510, with the result that the stock in Alexandria was only 803,000 kantars at the end of the season, as compared with 1,332,000 twelve months previously. It is also satisfactory to note that the almost complete clearing up of the stocks of old-crop cotton in the interior, some two, or even three, years old, accounted to some extent for the large increase in arrivals and exports during 1922-23.

Thus the 1923-24 season opened under much more favourable conditions than the previous one, owing to prospects of greater uniformity of quality and staple resulting from the reduction of old-crop cotton in the interior to practically *nil*. How far these prospects are borne out by results during the whole of the current season remains to be seen, but in the meantime, taking the Customs statistics as a uniform basis for calculation of prices, the value per kantar for the total exports during the first four months of the 1923-24 season—35 dols. 99 cts. per kantar—compares most favourably with the 30 dols. 29 cts. of the whole 1922-23 season.

Sakel v. Uppers.

There is one factor which merits the earnest consideration of all consumers of long-staple cotton, viz., the tendency of the growers of cotton in Egypt to plant more Ashmouni and Zagora and less Sakellarides in Lower Egypt. As this tendency is dictated by financial considerations pure and simple, the remedy for the evil, if they consider it to be one, lies in their own hands.

The strides which curtailment of Sakel in Lower Egypt (the only part of the country where it can be grown with any success) has made in 1923 and 1924 are best realised by a comparison of the percentages of Lower Egypt acreage sown with Sakel in the two years above mentioned with those of previous seasons. The average percentage of Lower Egypt acreage under Sakel during the seasons 1917-18 to 1920-21 was 91.84, and in 1922-23 the percentage was as high as 97.24. In 1923-24 this had shrunk to 79, and provisional estimates for the next season are placed at 68.

(To be concluded.)

TRADE CONFERENCES.

The conferences that have been held during September at the British Empire Exhibition between representatives of trades, who are among the exhibitors, and Dominion or Colonial representatives will be continued in October. This week the subjects of discussion have been Engineering Manufactures and Motors; Silk, Lace, and Miscellaneous Textiles is the topic for October 1, Woollen Goods for October 2, Printing, Paper, and Stationery for October 7, and Boots, Leather, and Indiarubber Goods for October 8. Subsequent subjects include Sports, Games, and Fancy Goods; Foods, Beverages, and Tobacco; Coal and Gas Appliances; Furniture and Musical Instruments; Textile Machinery; Pottery. The object of the Conferences is to provide an opportunity for manufacturers to learn at first hand of the requirements of overseas markets, and to make known their own points of view regarding both the finished products and the raw materials that they may draw from overseas.

TO INTENDING SETTLERS IN U.S.A.

FIG ORCHARDS On West Columbia Estates, Texas,

yield over 50 per cent. per annum, after third year. The Fruit is sought for by the Preserving Companies, and the produce is sold five years ahead. Cost, including clearing, planting and cultivating until end of third year, £120 per acre freehold. Living conditions delightful. Soil recommended by Government Department of Agriculture.

BALKAN TRADE NOTES.

In their Weekly Review of Foreign Exchanges for the week ending September 18, Messrs. Samuel Montagu and Co. publish the following notes :—

Roumania.—The *Central European Observer* publishes a report from Bucharest which states that negotiations for a loan on the strength of profits from petroleum are proceeding very successfully. It is asserted in Roumanian financial circles that M. Bratianu, the Finance Minister, has come to an agreement with the French interests concerned in regard to the guarantees demanded. Roumania is to be given immediately an advance of 500 million French francs on the production of petroleum for a period of five years. Simultaneously with the above negotiations, the liquidation of the old unsettled questions relating to the treasury bonds is being discussed. These negotiations are being conducted in France, England, and Belgium, and are proceeding very satisfactorily. The Roumanian Government is investigating the result of this year's grain crops with a view to relaxing the regulations relating to grain exports.

Yugoslavia.—According to a report of the Secretary of the General Syndicate of Industries, the total exports for the first half of the current year amounted to 4,176,000,000 dinars, manufactured goods accounting for 2,820,000,000, or more than 50 per cent. (In 1923 the total exports amounted to 8,408,000,000 dinars, manufactured goods to 3,600,000,000 dinars.) It is probable that between September 1, 1924, and August 31, 1925, the export of manufactured goods will reach the value of 4,459,000,000 dinars. From this it is evident that Yugoslavian industry is the main factor in the stabilising of the Yugoslav currency.

This year's tobacco crop in Yugoslavia promises to be an excellent one, and a large surplus will be available for export. There are also in hand considerable stocks from previous years—320,000 kilogrammes of the 1922 crop, and some 5,000,000 kilogrammes of last year's, including both cigarette and pipe tobacco in different grades of quality from ordinary to fine select. It is expected that, in view of the good quality of Yugoslavian tobacco and the low transport costs, the Hungarian Tobacco Régie will this year make large purchases in Yugoslavia, instead of, as hitherto, in Turkey and Bulgaria. The value of Yugoslavia's egg exports in July was upwards of 58 million dinars. Of this quantity 27 million dinars' worth went to Switzerland, 11½ to Austria, and 7½ to Italy. In the first six months of the current year Yugoslavia's exports totalled 1,585,939 tons, of a value of 4,186 million dinars, an increase of 24 per cent. in weight and 25 per cent. in value on the exports for the first half of 1923. The import figures are not yet out, but those for the first three months of the year were 1,928 million dinars, so that the balance of trade for the first six months is likely to be upwards of 300 million dinars.

BRITAIN AND THE ARABS.

(*Continued from page* 326).

French ambitions and prevent the execution of the terms of the Anglo-French agreement. At first, with the establishment of the Emir Faisal's administration at Damascus, the Shereefian scheme for Syria went well. From this point Syrian history becomes for a time the story of a triangular struggle of conflicting interests—the story of the Emir Faisal's efforts to realise his ambitions; of French hostility to the Shereefian movement in Syria, and, later, to the Emir himself; and of British endeavours to honour the undertakings given to the Arabs and the French. In Paris it was soon recognised that complete execution of the Anglo-French Agreement was impracticable owing to the course of events, and that some other arrangement was required—the more so that the French showed every sign of exacting to the letter the rights conferred upon them by the agreement. On November 7, 1918, the Joint Declaration by Great Britain and France regarding British and French war aims in the East was published. The Arabs regarded it as superseding, or, at least, qualifying, the provisions of the Sykes-Picot Agreement; and although there was nothing in the verbal form of the Declaration inconsistent with strict adherence to the terms of the Agreement, the spirit apparently was quite different. Modifications of the Agreement in regard to Mosul and Paris were made during December, 1918, but further efforts by Mr. Lloyd George in this direction failed, and the British Government urged the Emir Faisal to come to terms with the French. In the Paris Conference itself a sharp dispute over Syrian affairs took place between France and Great Britain, and President Wilson proposed an Inter-Allied commission of inquiry with a view to discovering the desires of the population. The suggestion came to nothing. Ultimately, in September, 1919, a provisional agreement on Syrian questions was reached by Mr. Lloyd George and M. Clemenceau; French troops were to replace British troops in Syria, and the area reserved by the Sykes-Picot Agreement for an independent Arab State (i.e., the area east of and including the cities of Damascus, Hamah, Homs, and Aleppo) was to be occupied not by French troops, but by Arab. For Great Britain this arrangement fulfilled alike British undertakings to France, contained in the Sykes-Picot Agreement, and British pledges to the Shereef of Mecca. "The weakness of the arrangement lay in a cause outside these earlier commitments. It lay in the obvious intention of France to adopt her own interpretation of promises, actual or implied, which the Allies had given to the Arabs."

The rest of the Syrian story is well known. King Faisal's independent Syrian State fell because its existence was in direct conflict with French ambitions, in circumstances which prevented British influence being made effective for its preservation. To make the best of a bad job, Great Britain fulfilled her pledges to the Shereef of Mecca and to the Arabs in the other directions open to her, by installing the Emir Abdullah in Transjordan and the Emir Faisal as King of Iraq. With regard to Palestine, this country, as far as Great Britain was concerned, had been excluded from the area destined for an independent Arab State. The phraseology "lying west of the Damascus-Aleppo line" may not have been particularly felicitous, but can be justified in the same way as Russia may be said to lie, in Europe, north of the Danube. King Hussein, however, had been left in no uncertainty regarding Great Britain's intentions, and the Emir Faisal had declared his agreement with the proposals of the Zionist leaders as laid before the Peace Conference. It was only with the British evacuation of Syria that an agitation arose for the inclusion of Palestine in an independent Syria, and the drawing of attention to the quietness in Palestine by the French may be said to have acted as a stimulus to the bolstering up of an Arab agitation in that country as well.

Cotton and Cotton Goods.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended September 11, state :—

Futures.—The market during the past week has been fairly active. The net changes since last Thursday are :—Sakellaridis, $1.59, $1.50, and $1.20 down respectively for November, January, and March; Ashmouni, $0.95, $0.80, $0.95 down respectively for October, December, and February. The decline experienced during the week is merely the reflection of the drop in New York, and is not attributable to any local factor. The Sakel contract has been rather heavy. General opinion now seems to be realising the fact that the Sakel supply is not going to be so small as at one time expected; the Sakel crop has succeeded relatively much better than either Ashmouni or Zagora. The difference between November Sakel and October Ashmouni at the close to-day is 925 points, and looks like narrowing further. The volume of business has been fairly large, but has not reflected much new spinners business. The monthly bulletin issued by the Government at the end of last month forecasts an average yield over the whole of Egypt of kantars 3.37 per feddan. On the Government figures of acreage this would give a crop of 6,025,000 kantars. The week's receipts amount to 129,210 kantars, against exports 43,769 kantars; the stock stands at 366,700 kantars.

Spot.—Total sales during the week amount to about 10,000 bales, of which we estimate 2,900 bales Sakel, 6,900 bales Uppers, 100 bales Pilion, and 100 bales White. The spot market was open last Saturday, and will continue to open on Saturdays until further notice.

Sakellarides.—The market has shown a little more activity during the week, but buyers are not inclined to pay high prices. With new crop cotton coming down in fair quantities, the premiums paid for the higher grades have declined considerably. There are still some buyers of the lower grades, and prices of these as compared with contracts remain more or less unchanged.

Lower Egypt Zagora.—This variety, of which there is now a good quantity on the market, has been quite neglected, and is offered rather cheaper than similar grades of Uppers.

Uppers.—A larger business has been done in all grades from Fully Good Fair upwards; premiums remain about the same as last week. The lower grades have been entirely neglected.

Pilion and White.—A small business has been done in the better grades of both these varieties at about last week's premiums.

Crop 1924.—Crop news is unchanged, and calls for no special comment. The Sakel crop is maturing well all over the Delta, and the prospects are for a good average yield. Cultivators are not at all satisfied with the results of Zagora in the Delta; this variety has been very susceptible to climatic conditions, and does not look like giving a yield of more than about half a kantar per feddan better than Sakel in the same districts.

The report of the Ministry of Agriculture for the month of August reads :—

Average condition for the whole of Egypt, 90; average forecast yield per feddan, 3.37 kantars. (In the system of notation employed 100 is taken to represent an average condition of the crop reported on in each division of the country; this average is calculated from the crop results of the preceding ten years.)

Generally speaking, the weather has improved since the publication of the last bulletin and has been favourable. Attacks of bollworms, together with consequent attacks of fungous diseases, are reported from all provinces with a degree of severity higher, on the whole, than last year. Slight attacks of minor pests and diseases, including aphis, wilt, and *Rhizopus Nigricans*, have also been reported from some provinces, where they have caused no great damage.

Apart from the effect of unfavourable conditions reported in last month's bulletin, now reflected by the irregular opening of part of the bolls and the drying up of others, the usual harmful practice of over-watering cotton has again resulted in a considerable amount of boll-shedding, besides favouring vegetative growth and attacks of bollworms.

The crop is considered to be somewhat earlier than last year. In basin lands, picking began towards the middle of August, while a few early sown fields in perennially irrigated areas were also picked during the last week of the month; picking, however, is not expected to be general before the middle of September.

LIVERPOOL COTTON REPORT.

Messrs. Reynolds and Gibson, in their report for the week ending September 17, state :—

Egyptian Futures.—We have again to report a substantial drop in values in this market, increasing pressure from the New Crop finding insufficient support from trade and speculative sources to permit anything but temporary reactions from the downward movement. In spite of being relatively by far the dearer market, and therefore presumably attracting more than its usual share of the hedging operations, Alexandria maintains last week's heavy premium over our contract. To import cotton here at present differences is quite out of the question, and with the local stock of tenderable cotton a negligible factor, near positions show increasing strength. The trade continues to "mark time," as far as operations of importance in New Crop cotton are concerned, and their attitude is certainly having an appreciable effect on the market outlook at the moment. Probably this season, shippers have fewer commitments than customary, and, whilst there are yet no indications that values have grounded, there is always the danger of a concerted buying movement being started by what otherwise would have been a temporary reaction. The Egyptian/American straddle has not moved much during the past few weeks, but the continued appreciation in near positions is a reassuring feature

Digitized by Google

for those who have entered into this transaction. There is little to report as far as the new crop is concerned, except that in some quarters it is stated that the Upper Egyptian crop is not turning out as satisfactorily as the promise of a few weeks ago indicated. The general level has now fallen to a more attractive figure than that obtaining for some time, and any degree of steadiness will bring in its train an increasing volume of trade support. Taking a long view, probably the market will touch a lower figure than that now obtaining, but we have fallen so far below Alexandria that we would not dissuade those who have profits here from closing out for the time being or transferring their sales to the overseas market.

Egyptian Spot.—Once more we have had to record a substantial drop in spot prices, which brings Fully Good Fair Sakel to 230 points below what it was on August 13, or just over a month ago. The market is very irregular, but, generally speaking, holders have shown considerable eagerness to dispose of their stocks, except in the case of F.G.F. to Good Sakel of good staple, for which class of cotton big premiums are asked and obtained. A fair general inquiry has been witnessed, practically all growths of Egyptian and Sudan cotton receiving a share of attention at one time or another. The greatest scarcity in Sakel cotton continues to be felt in the ordinary Fully Good Fair quality, and spinners who depend on this for the bulk of their mixings are finding it very difficult to obtain their requirements, even with the aid of "outsiders," odds and ends, and "damp" cotton. Difficult as the situation is to-day, it is likely to become still more acute before supplies of F.G.F. new crop can come to hand, which will not be for another six weeks probably. A steady trade continues in the "off" cotton at prices which continue to favour buyers, in spite of a slight tendency to harden which has been shown in the official quotations for Fair Sakel. At the other extreme, Sakel cotton at from 250 to 350 on has met with a fair amount of support. With Sakellaridis relatively dear, and with a poor selection from which to choose, Sudan Sakel and Tokar Sakel have claimed many adherents, their freedom from "Nep" proving an attraction to spinners. White Sudan has also been in fair request, and rather more business has been got through at prices varying from 150 to 250 on American contracts. The Upper market is practically swept, so much so that the official quotations are now only nominal. In spite of this, a fair inquiry from spinners still persists, especially for the best. The diverting of a steamer carrying the first Upper shipments to this country has caused much dissatisfaction amongst spinners, many of whom had paid high premiums in order to obtain cotton during the first week of September. A large volume of c.i.f. inquiry has been noticeable, the shipments asked for extending up to December. The Alexandria basis, both for Sakel and Upper, has continued to decline, but it is a moot point whether the bottom has not now been reached, at all events for Sakellaridis. Forwardings to spinners for the week ending 12th inst. have been returned as 4,452 bales. Estimated sales 2,000 bales Egypts and about 860 bales Sudan. Quotations of Brown and Upper are reduced 50 points with the exception of Fair, which is 25 points lower. In Sakel, Fair to Good are 75 points lower. Fine and Extra Fine 100 points lower. F.G. Fair Sakel to-day 24.05d.

(Manchester Cotton Trade Review will be found on p. 337.)

The receipts of the Czecho-Slovak State Railways in May amounted to Kr. 314,918,846, an increase of nearly six million kronen on the returns for the preceding month.

SHIPPING INTELLIGENCE.

A New P. & O. Liner.

A new P. and O. liner, Ranpura, was launched on September 13 at Hebburn from the yards of Messrs. Hawthorn, Leslie, and Co., Ltd. The Ranpura has a length overall of 570 ft., her beam is 71 ft. 3 in., depth 47 ft., gross tonnage 16,000, and speed 17 knots. She has seven decks in all, and is designed on the most up-to-date lines, particular attention having been directed to the comfort of passengers travelling in tropical countries. Her passenger capacity is 305 first saloon and 282 second saloon. The cabin accommodation is spacious and well lighted; a lift will serve all the passenger decks; a number of special cabins, each with a separate bathroom, are situated on "B" deck.

Shipping Dues in Syria.

The French High Commission in Syria has published a decree imposing certain navigation and manifest dues on vessels calling at Lebanese and Syrian ports, with effect from August 1 last. Navigation dues are payable according to tonnage on arrival, while a fixed sum is paid on departure. The decree provides for a reduction of dues in the case of vessels passing direct from one Syrian or Lebanese port to another, irrespective of the nationality of the vessels concerned. Companies maintaining a regular passenger service are granted a 20 per cent. reduction. The full text of the decree may be consulted by companies of British origin, capital, and control at the City Office of the Department (Shipping and Transport Section), 73, Basinghall Street, London, E.C.2.

Soviet Shipping.

Soviet nationalisation of shipping has not been a success in the Black Sea. Before the Bolshevists came into power a successful steamship service was maintained between Russian, Turkish, Bulgarian, and Roumanian ports by the Russian Shipping and Trading Company. The company was taken over by the Soviet Government as a State concern, and it is now announced that the services between Russian and foreign ports are to be discontinued as a result of the total absence of cargoes and passengers.

Launch at Barrow.

The steamer Don, the second of the two cargo and passenger steamers ordered by the London Midland and Scottish Railway Company from Vickers, Limited, in December last, for their Goole and Continental service, was launched from the Naval Construction Works at Barrow-in-Furness on the 18th instant. The dimensions of the vessel are:—Length B.P., 240 ft.; breadth moulded, 34 ft.; depth moulded, 16 ft. 4 in. There is accommodation for eight passengers on the bridge deck forward, in two state-rooms on each side of the dining saloon. Between decks there is accommodation for the transport of 57 horses.

A Rangoon message states that an oil tank at Syriam, of 2,000,000 gallons capacity, belonging to the Burma Oil Company, was struck by lightning last Friday. It contained crude oil.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Brocklebank Line.—S.s. Manaar for Port Said, Colombo, Madras, and Calcutta (London, October 4).

Anchor Line.—S.s. Massilia for Bombay (Liverpool, October 6).

British India Line.—S.s. Manela for Bombay and Karachi (London, October 10); s.s. Nevasa for Colombo, Madras, and Calcutta (London, October 11).

Clan Line.—S.s. Clan MacBrayne for Bombay and Persian Gulf (Birkenhead, October 2); s.s. Clan MacInnes for Bombay and Persian Gulf (Birkenhead, October 15).

Ellerman "City" Line.—S.s. City of Simla for Calcutta (Birkenhead, September 30); s.s. City of Hong Kong for Calcutta (Birkenhead, October 15).

Ellerman's Westcott and Laurance Line.—S.s. Falernian for Gibraltar, Malta, Piræus, Salonika, Smyrna, Constantinople, Galatz, and Braila (London, October 18).

Johnston Line.—S.s. Tramore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, October 18); s.s. Sycamore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila. Closing November 5. (The last steamer of the season to Galatz and Braila.)

P. and O. Line.—S.s. Narkunda for Bombay (London, October 3); s.s. Khyber for Colombo, Madras, and Calcutta (London, October 4).

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.)

Egypt.

The Ministry of Finance, Cairo, invites tenders for the supply and delivery of 75 iron safes in accordance with specification. Alternative quotations are desired, however, for 100 safes. Tenders must be submitted on the proper form, and will be received in Cairo up to noon on October 25 It is stipulated in the conditions of contract that the tenderer must be a person resident in Cairo or must have a representative in Cairo.

Soap. — The Financial Secretary, Egyptian Army, War Office, Cairo, invites tenders for the supply of 110 tons of hard soap to Egyptian Army Supply Stores, Tura. December 2.

The Canadian Pacific Railway has prepared a useful booklet in connection with the Government scheme for the settlement of 3,000 families upon farm lands in Canada ready for occupation. The booklet, which is entitled "Your Chance to Own Your Farm," is illustrated with a large map and interesting photographs, and deals with the situation of the farms, the loans which will be made to settlers, the conditions of settlement, agriculture in Canada, etc. The booklet may be obtained free on application to the Canadian Pacific Railway, 62, Charing Cross, London, S.W.1.

OIL WELL PUMPS AND SUCKER RODS. Axelson pumps are made to meet every oil pumping condition. 27 years' successful service. They increase production from 25 to 100 per cent. Leaders in every field. Write for catalogue.

Near East Markets.

LONDON PRODUCE REPORT.

(From Our Own Correspondent.)

London, Tuesday Morning.

Coffee.—The firm tone of last week has been more than maintained, owing to shortage of stocks. Santos is a further 1s. 6d. up at 104s.; Costa Rica has gone to 160s., with an average still at 150s., and Kenya has had an average of 136s., with ranges of 10s. either way.

Sugar.—Home refined has continued in fair request at prices slightly lower than last week. Tate's cubes at 45s. 9d. (1s. down); London granulated at 40s. 4½d. (6d. down); Lyle's granulated, 40s. 7½d. Foreign descriptions have been firm, West Indian crystallised averaging 35s. 6d.; White Java, 36s. 4½d. Czech granulated at 39s. is 3d. down. Futures are about 1s. easier: October, 22s. 8d.; December, 20s. 3d.; March, 20s.

Maize.—After a rise the demand fell off. La Plata has been done at 43s. 6d. spot, at 44s. for October-November, and 44s. 6d. for November-December, with a downward tendency.

Currants.—Only a little business has been done in the old fruit, the market in general waiting for the new crop, the first consignment of which is on its way. The attitude towards the new season is cautious, but not without confidence. Part, at least, of the new fruit is known to be an improvement on last year's.

Sultanas.—The market in the new crop from Smyrna is firm, without much demand. There has been a good deal of Continental buying.

Figs.—Expectations of the new crop have not been realised in regard to the first consignment, owing to bad packing.

Plums.—The demand for plums has continued, with prices constant.

Oilcakes.—The steady tendency has been maintained: Linseed cake at 275s. and cottonseed cake at 185s.

SMYRNA FRUIT MARKET.

Messrs. C. J. Giraud and Co. report as follows for the week ending September 6:—

The arrivals of sultanas on the Smyrna market since the opening of the season are estimated at 13,000 tons, as compared with 6,757 tons for the similar period in 1923, and sales to date are put at 10,360, as compared with 5,382.

The market, on the whole, closed quieter. Business over the week was active, but arrivals, now at their heaviest point, are overlapping demand, permitting of some accumulation of stock. Decline in quotations in foreign currencies has been offset by the adverse tendency of exchange rates.

The fig market is steady. Government is controlling supplies to market, stopping arrivals on an over-accumulation of stocks. Supplies coming forward are adequate for all requirements, and Government intervention constitutes a healthy feature. The crop is estimated at about 100,000 loads, or, say, about 20 per cent. short of last year.

FIG-GROWING AS A LIVELIHOOD.

Throughout the Near and Middle East, or wherever the sounds of self-determination or the Geddes axe are still reverberating, the old question "What to do with our boys?" has given place to the far more pressing "What are retrenched British officials to do with themselves?" They have little desire to start office-work again; they do not want to be idle; they would much prefer to be "on their own" than in the employment of others. Little wonder in these circumstances that they are being encouraged to turn to an open-air life, and various countries are endeavouring to attract them as settlers. It is of little use to expect everyone to develop into an experienced farmer, but there are several ways in which any man of a practical turn of mind without an elaborate course of training can earn a livelihood from the soil. To orange-growing in South Africa or Kenya as one such way may be added fig-growing in Southern Texas, where the Magnolia fig industry has become a highly organised vocation. Facilities are provided for the immediate marketing of the figs, and they are preserved in the district where they grow. Preserving in this case does not mean compressing them dried into boxes, but bottling them skinless and practically seedless, in which state they become an article of consumption all the year round, and are not identified merely with Christmas fare.

As will be seen from an advertisement in this issue, the Land and Planting Syndicate, Ltd., is attracting settlers to the West Columbia Estates, in the Texas fig belt, and offering facilities to those who wish to take up fig-growing. The purchaser of fig orchards under this system has his land planted for him, with all the pioneer work, clearing, ploughing, planting, pruning, spraying, and cultivating, done for him until the end of the third year, when the orchard can be handed over scientifically developed and in a healthy and bearing condition. A four-year-old orchard is estimated to produce from 4,500 to 6,000 lb. of fruit per acre, and prices average from 120 dollars to 140 dollars per 2,000 lb. of ripe fruit, or, say, an initial return of £60 on an expenditure of £120 on every acre of orchard. The soil on the West Columbia Estates is recommended by the United States Department of Agriculture as productive of larger quantities of fruit than any other section of the fig belt. The fig is a long-lived tree, and if for commercial purposes it is not allowed to grow high enough to enable the owner to conform to the biblical precept of living under it, he can in Texas at least live by it.

Vickers, Limited, Hydro-Electric Department, have received an order from the Government of New Zealand for two large water turbines, output of each 12,650 horse power. These will be installed at Lake Coleridge in the South Island, and will provide power for Christchurch, Ashburton, Timaru and district. The turbines will be constructed at Barrow-in-Furness.

YUGOSLAVIA'S FOREIGN TRADE.

Imports in March Quarter.

The British Commercial Secretary in Belgrade reports that according to a statement in the local press the import trade during the March quarter of the current year amounted to 204,971,986 kilogrammes, valued at 1,928,057,415 dinars, as compared with 209,795,012 kgs., valued at 1,913,443,860 dinars, in the corresponding quarter of 1923, while the exports during the period under review were valued at 2,061,738,454 dinars. It will thus be seen that the quarter's trade balance is a favourable one, to the extent of 133,321,039 dinars. The values of the principal imports were as follows, in dinars (average rate of exchange 355 dinars to £1) :—

Cotton fabrics, 397,596,000; woollen fabrics, 158,748,000; cotton yarns, 120,581,000; manufactured iron, 65,396,000; sugar, 57,397,000; raw cotton, 45,567,000; machines and apparatus, 43,754,000; iron, crude and half-manufactured, 38,694,000; coal, 37,581,000. Over 60 per cent. of the imports came from Czechoslovakia, Austria, and Italy, the respective shares being 412,269,946 dinars, 407,302,873 dinars, and 402,375,788 dinars. Other countries included: The United Kingdom. 188,680,308 dinars; Germany, 147,424,208 dinars; the United States, 72,582,091 dinars; France. 70,642,917 dinars; Greece, 57,287,315 dinars; Hungary, 36,540,116 dinars; and Roumania, 30,336,643 dinars.

It will be noted that the first place is taken by Czechoslovakia. Hitherto Austria and Italy have competed for first place, but now for the first time Czechoslovakia has gained it.

Certificates of Origin.

According to a circular issued in May by the Director-General of Customs, the Customs Houses of Yugoslavia shall only accept certificates of origin, in respect of goods imported into the Kingdom, bearing a statement by the owner of the goods or of the respective certificate, in his own writing, certifying that, accepting legal responsibility, he guarantees the authenticity of the certificate of origin, which he submits in the declaration as a proof that the goods originate in a country with which the Kingdom of the Serbs, Croats and Slovenes has concluded a commercial treaty.

If the certificate is found not to be in order, the Customs authorities shall take measures against the persons responsible—i.e., they shall charge such persons before the competent courts with falsification—and, in addition, Customs duty on the goods covered by the certificate will be levied at the maximum tariff rates.

COTTON TRADE REVIEW.

The Manchester Cotton Trade Review of the Imperial Ottoman Bank for the week ended September 20 states :—

A quiet state of affairs has prevailed; there has been a fairly good inquiry, but contracts have been difficult to arrange. Buyers appear to have satisfied their immediate requirements, and, in view of the general expectation of lower prices, it is not surprising that they postpone other operations. It should also be taken into account that both spinners and manufacturers here have improved their positions considerably during the past few weeks and are not so easy to deal with as they were.

Yarn.—There has been no development of importance in this section. The holidays at various centres are now over, and the production week by week will be larger and more regular. Whilst there has been no business of special interest, a number of small lots have been booked. Spinners hold firmly to their quotations, and the tone generally may be described as fairly satisfactory.

Cloth.—Inquiry has been on a good scale, but the results have not been commensurate therewith. Manufacturers are not so ready to make concessions as they were a little time ago: neither are they able to give such early deliveries. India has taken moderate quantities. but not very much has been done for China. A fair amount of business has been noted for smaller markets, such as South American and Egypt, and the same applies also to the home trade.

Raw Cotton.—During the early part of the week this market was again dropping rapidly, falls of 39, 26, and 33 points respectively taking place on Saturday, Monday, and Tuesday last. Since then prices have steadied owing to reports of heavy rains in the American cotton area, which it is thought may delay the gathering of the crop. A further Bureau report will be published on Tuesday next. Closing quotations yesterday were as follows :—American middling, 13.54; Egyptian fully good fair, 24.70.

This year 130,000 hectolitres of methylated spirit have been exported from Czecho-Slovakia compared with 10,000 hectolitres last year.

The traffic receipts of the Egyptian Delta Light Railways for the eleven days ended August 31 amounted to £E8,773, making the total from April £E110,379.

IONIAN BANK, Ltd.

LONDON, GREECE, EGYPT.

The only British Bank or Financial House in Greece originally established in London and the Ionian Islands in 1839, subsequently incorporated by Royal Charter in 1844, and registered under the Companies Acts in 1883. The Bank now has branches and correspondents throughout Old Greece, the Ionian Islands, Macedonia and the Islands recently rejoined to Greece; and is therefore able to offer special facilities to all British and Allied firms having business with that country.

In Egypt the Bank's principal office is at Alexandria; but it also has agencies throughout the cotton-growing districts, and specialises in all operations connected with the moving of the cotton crop.

In Turkey the Bank has a branch at Constantinople.

For information as to terms of business, etc., apply to the HEAD OFFICE:

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

Zaghloul Pasha in London.

Whatever may be the outcome of the conversations between Saad Pasha Zaghloul and Mr. Ramsay MacDonald, the wisdom of the meeting of the two Prime Ministers has been at once established. Not only has Zaghloul Pasha expressed himself as well content with the course of the opening discussion, but there has also been a welcome change in Egypt from the strained atmosphere of the last few months. Whether the new spirit will be proof against any serious disappointment remains to be seen. It would seem to be now admitted in responsible circles in Egypt that the country would be quite prepared to follow its Prime Minister in any decision that he takes, if only it were spared attempts in irresponsible quarters to excite its fanaticism. In other words, if Zaghloul Pasha is given a chance of being the first to announce in Egypt the terms on which a treaty with Great Britain is possible, and is able to say at the same time that he considers those terms in all the circumstances acceptable and the best that Egypt can expect to obtain, the country will welcome the settlement, and all will be well. If, on the other hand, the terms are first announced in London or reach Egypt otherwise than by word of mouth from Zaghloul Pasha, and the Press, particularly the Opposition Press, elects to denounce them and to try to make capital out of them, it is certain that Zaghloul Pasha will himself make no effort to plead the cause of a settlement with Great Britain. It is to be hoped, therefore, that both the Egyptian and the British Press will study the interests of Anglo-Egyptian relations, and in the event of a favourable issue to the conversations refrain from an attempt to probe behind whatever *communiqué* may be issued, until Zaghloul Pasha is able to give a personal lead to the attitude of the Egyptian public.

Frontier Bluff.

The proceedings at Geneva, where the Council of the League was to determine the point at issue between Great Britain and Turkey regarding the delimitation of the Turco-Iraqi frontier, have been interrupted by Turkey's military violation of a section of the frontier in regard to which there was no possibility of any misunderstanding on the part of the Turkish Government. Whatever may be the extent of Turkey's claims in regard to the Mosul vilayet, the fact remains that in July, 1923, by the Treaty of Lausanne, she agreed not to interfere with the *status quo* as it then was, before a settlement had been reached with Great Britain. A stretch of territory in which some Assyrian Christians had resettled in 1921 proved too attractive a Naboth's vineyard to allow her to keep her pledged word for long. At the Constantinople conference Fethy Bey was reminded a second time that Great Britain could not allow the Turks to interfere with the Assyrians, and he was informed that the British Government would consider any proposals that Turkey might make for compensation elsewhere. The Turks, however, refused to discuss any kind of settlement of the dispute, and the whole question is now in the hands of the League of Nations, which is unlikely to encourage Turkey in the open violation of her Treaty pledges.

Politics in Yugoslavia.

M. Petrovitch, Minister of the Interior in the Yugoslav Cabinet, has had a meeting with M. Raditch in Zagreb, as a result of which, it is stated, representatives of the Croatian Peasant Party will take their seats in the Government. A speech by M. Raditch on this occasion would seem to be the most statesmanlike utterance that he has ever made. He is stated to have expressed his acceptance of a monarchy and parliamentary institutions on English lines, which would leave the sovereignty of the people unchallenged. Such a parliamentary monarchy was essential for modern socialistic development and modern progress. He urged that Parliament and Crown must support the democratic and parliamentary régime in complete agreement, and stipulated that there must be no room for backstairs politics. As far as the Croatian Peasant Party was concerned, the agreement with the Government was no tactical move, but represented the settled conviction of the Croatian people, because the interests of Croats, Serbs, and Slovenes were not only analogous, but actually identical. The speech, as reported, sug-

Digitized by Google

gests that M. Petrovitch encountered a very different Raditch from the one that the Yugoslav people had expected, from the statements of the Radical Press, to see return from Moscow.

Military Discipline in Greece.

Opinion in Greece is inclined to consider that the country has added to its troubles by the acquittal of Generals Tseroulis and Panagiotopoulos on the charge of high treason. The two officers are said to have admitted in court that they had been responsible for the distribution of seditious pamphlets, but they were found not guilty of conspiracy. From this verdict it is inferred that military authority still exercises a paramount influence in Greek politics, and it must be admitted that in the absence of a fuller statement of the court's findings it is difficult to understand how the offence fell short of conspiracy. The Government, under pressure of public opinion, has announced its intention of taking the severest disciplinary measures against the two Generals, who were, indeed, found guilty of a grave breach of military discipline by the Court In a country where treason has had such a long run it would have been almost unfair to resort to extreme measures against an unsuccessful imitation: but it would have been expected that the responsible Court would have recognised conspiracy when it saw it and have left it to the Government to exercise what leniency it considered the conditions of the period required. Everyone will be glad that Greece has been spared further capital punishment for political offences, but it is time that the Greek army realised that it ought to have nothing to do with politics.

Wahhabis in the Hejaz.

Reports from the Hejaz these days have probably to be received with some reserve, but there would seem to be little doubt that, after a brief rest in Taif, awaiting reinforcements, the Wahhabis are reconnoitring in the direction of Mecca. The rapidity with which the Hejaz Government has thrown up the sponge in the face of a foe handicapped by having to advance for a month or so across the desert is eloquent of the precarious position that the ruler who claimed the title of King of the Arabs actually held. King Hussein's stand against the Turks at the outbreak of the Great War deserved a better ending. His unpopularity among his own people, however, is responsible for the success of the Wahhabis. So far the fighting in the Hejaz is a domestic concern of Arabians. British subjects are to be found in Mecca, and Jeddah is the residence of a British Consul; but until there is evidence to show that her subjects are in danger of molestation Great Britain has no call for intervention. She tried to bring about good relations between Nejd and the Hejaz at the Koweit Conference, but the failure of King Hussein to send a representative to the meeting probably embittered the Sultan Ibn Saud still more. The latter has not yet officially identified himself with the invasion of the Hejaz. If Mecca, however, should fall into the hands of the Wahhabis he would not be likely to disclaim responsibility for the punishment of the claimant to the Khalifate.

INDIA.

The Indian Legislative Assembly.

The Legislative Assembly has been having a busy and what we should call a very human session at Simla. Having begun by dissociating itself from the report of the Lee Commission, it has expressed its desire to kill the taxation inquiry and to repeal the Criminal Law Amendment Act, while, on the other hand, it has passed a resolution designed to "ginger up" the Government in its declared policy of abolishing the cotton excise, and it has reached an agreed solution of the vexed question of railway finance. We have indicated on a previous occasion our view of the taxation inquiry, and we shall not be very sorry if it is abandoned. The power to proclaim associations as illegal, which is the essence of the Criminal Law Amendment Act, seems, however, to be essential. Its withdrawal is urged on the ground that India is now in a normal condition. On that point we must presumably accept the view of the Indian majority in the Assembly, but if organised bomb-throwing in Bengal, something very like rebellion in the Punjab, and religious fighting all over the country are to be taken as normal, the logical conclusion is that the Act should be made normal also, and incorporated in the Code of Criminal Procedure.

Railways and Politics.

When the committee of the Assembly first condemned the Acworth scheme designed to take the railways out of politics, we described its action as a muddle-headed expression of a natural instinct. A period of eager negotiation followed, and now a compromise has been reached, which is being represented as the triumph of reason, but in our view it is one of those triumphs where the victor pays the indemnity. The railways are indeed to be run as a business, but the business must be run on political rather than commercial lines. The Commissioner may want to buy stores in the cheapest market, but he has to give a preference to Indian products. He may want to employ the most efficient staff, but, instead, he is expected to "Indianise." He may want to lease a line to a company, but, again, there is an assurance in the way. The Assembly knows quite enough of practical politics to work these assurances for at least as much as they are worth, and we fear the Commissioner will find himself as much hampered as his predecessors have been by the exponents of the policy fashionable at the moment, which consists in dissipating solid assets through a variety of quasi-philanthropical channels.

The Taxpayers' Share.

The most significant feature of the compromise is the increase in the railway contribution to the general Budget, which Sir Charles Innes justified on the ground that current railway earnings are, happily, well in excess of the estimate. This argument seems to us to give away the whole case for separation of the Budgets, because it will certainly be used as a precedent in the near future. The original scheme provided that the railways should have the benefit of increased earnings, but when the taxpayers' right to share in them has once been admitted, we do not see how further claims, which are certain to be made, can be summarily rejected. This year the commercial lines are to pay 1 per cent. on their capital. Presently the popular party will ask for 2 per cent., there will be friendly negotions, the difference will be split, and we shall gradually get back to the old plan in which the taxpayers' share of net earnings was determined by haggling every year. The whole story may serve to bring out the fundamental truth, which enthusiasts for commercialisation sometimes overlook, that taxpayers who own railways have the last word as to the disposal of the profits. If they like, they can put profits back into the business, but nobody can force them to do so against their will.

Lord Thomson, Secretary of State for Air, after visiting Aboukir Aerodrome, left on September 24 for Cairo. From there he flew to Baghdad. He is due back at Alexandria to-day, and will embark for England in the Triestino Lloyd on October 4.

Digitized by Google

THE WEEK AT HOME.

London, Tuesday Morning.

Britain and Russia.

Although it is over the question of Ireland that Parliament is meeting to-day, it is Russia and the proposed Treaty with her that are occupying most of the public attention. There is much wild talk about it from either side. There is the General Seely attitude of mind, which appears to imagine that anyone prepared to have any dealings at all with Soviet Russia is a moral Bolshevist, and there is the Mr. Ponsonby attitude of mind, which attributes any criticism of the Labour Government's Treaty to White Russian intrigue.

These attitudes are in the main childish, although in extenuation of the first may be preferred the undoubted fact that the real objection of Englishmen to treating with Soviet Russia is, where it exists at all, at bottom moral. The anti-Soviet people feel, simply, perhaps ignorantly, but nevertheless profoundly, that the Bolshevist is a man not to be trusted. And to represent this feeling as the product of "White" propaganda is absurd.

With the Liberal objection, an objection, that is, that is one of detail rather than of principle, the sponsors of the Treaty may, when Parliament assembles to discuss it, find it easier to deal. In his speech on Saturday the Prime Minister admitted much of the force of the "moderate" objection that adequate safeguards would have to be given before a loan was granted, and foreshadowed the possibility of amendments to the Treaty sufficient to get it through a critical House. But it need not be taken for granted that the Russian Treaty is as good as passed. If the older parties choose to make an election cry of it, their task is easy. The benefit that such an election would bring to us is, however, very questionable.

Home at Last?

It can scarcely be said that the Conservative Party lighted beacon fires to welcome Mr. Winston Churchill home, for he has slipped into the fold of these good fellows with remarkable restraint of emotion on their part. The fact of his adoption as a full-blown or full-blowing Conservative candidate for an Essex constituency comes about rather through his own exertions than through any pull of the Central Organisation. For the Conservative Party, less than any other party, likes "unsafe" men, and to talk of it as Mr. Churchill's spiritual home is far too pathetic to be true.

It was noticeable that Mr. Churchill, in his opening speech, had, although he is a thinker, nothing new to say. Socialism was *the* danger; no large practical measure separated the Conservative and Liberal Parties; Protection was for the time being dead, but he was a fool who would not avail himself of the Safeguarding of Industries Act; the attack from within on the institutions of the British Empire was imminent, and so rhetorically on. All this is very familiar, and in itself there is not much to be said against it. And if one likes Mr. Churchill in politics one will gratefully accept it all.

But the trouble is that the country does not like him. There is no one who does not acknowledge his ability, an ability far superior, indeed, to that of any man in the present Conservative Party. But this anti-Labour drum is over-banged, and one knows that, were he to be elected to Parliament, he himself would soon grow tired of its monotony and set up some other terrific illusion (supposing, that is, it were necessary to his immediate purpose). On his persistence in alleging that no real issue separates Conservative from Liberal there is nothing to say, except that it is repudiated by both parties alike as coming from one who is in fact neither Conservative nor Liberal. What he says is superficially, of course, true. There is at the moment scarcely a major issue on which the older parties are fundamentally divided. The difference, still and really existing, is one of outlook, more mental than actual.

The Parties.

Many men of all three parties are talking of an early election; outside opinion, however, inclines to the belief that there will be no election this year. But the Conservative and Labour Parties particularly are getting to work. Of the Labour Conference one may talk next week, but one hardly looks forward with hope to the results of the Conservative Party's Conference this week at Newcastle. Apart from the suggestion—recently commented on in this column—that there should be more working class candidates, and that the party should generally become more democratic, the profoundest thought of this party appears to be that it should alter its name from "Unionist" to "Conservative."

Into the more progressively minded this last suggestion has struck horror. They see in it the stark hand of reaction, blindly and negatively holding up its hand to the oncoming force of Labour. This, of course, is a superficial reading, and "Conservative" is a much more accurate title than "Unionist." In a few weeks, maybe, "Unionist" will have little meaning in this country, whereas there will always be some institutions in Britain worth the conserving. The whole trouble with the party of the Right is that they could not agree on what those institutions were.

Promenade Concerts.

There is a rumour that the Promenade Concerts which Sir Henry Wood has for twenty odd years faithfully given to the British public may be discontinued. Most people are duly lamenting the prospect, and undoubtedly these concerts would be very greatly missed. Whether the reason is an economic one—it is said that only well-known music gets much chance now owing to the cost of the rehearsal of new music—or whether it results from a natural fatigue on the part of the conductor I do not know. Since the War the first reason has become the most urgent of all problems connected with music.

From the strictly musical point of view the discontinuance of the "Proms." would perhaps be no bad thing. Every night the programme had, in the second half, to be disgraced by the singing of some piffling "ballad"; and every night one might hear the most undiscriminating applause. Those who attend these concerts are, however, the most faithful and kind-hearted of mortals, and it is difficult to see where else in London their beneficent praise could be bestowed.

Mr. F. H. Bradley, O.M.

So soon after he was granted the Order of Merit—it was but last June—Mr. F. H. Bradley, the most distinguished English philosopher of our time, perhaps of any time since Hume, has died. Of his greatness there is no question. And it was a characteristically English greatness. Bradley, who, of course, derived, as it seems nearly all English philosophers tend to derive, from the German Idealists, built up no philosophical system; his writings were essentially the result of reflection, and this is precisely what they caused. Just as he took from Hegel not dogma but stimulus, he provokes his reader not to disagreement but to deeper thought. Even in his more speculative flights he does not so loose the reins of imagination as to offend the more practicallly minded, but keeps

Digitized by Google

his feet firmly in the stirrups of sentiment and fact. And he was in possession of sentiments and facts not too commonly shown in philosophers. There is, for example, a passage in his "Appearance and Reality" where, in talking of the chances of a future life, he notes that "there are those who would not sit down among the angels till they had recovered their dog." That he himself was such a one does not depreciate from the justness and sanity of the remark.

September.

September, of all months, has played us false, and weighed down, as one must suppose, with the grief of her preceding sister months, has wept on us the most persistent and copious tears, with hardly a hint of the "conspiring sun." Grey skies have reached the climax in depression; ruined harvests were never a more melancholy sight; sodden—but enough!—October is now on us, and hope has for the last time invaded our dejected heads. If St. Luke and All Saints and St. Martin do not duly retrieve the reputation of the past summer, we shall all consider emigration. But if the "little summers" of autumn are as fine as they can be, all may yet be well with England.

Lord Long.

It is not wonder but lament that one is prompted to by the passing from our political life of Lord Long. For he cut no great figure; he attained really to no eminence. There was in him no consuming flame by which he could at once scorch his opponents up and illumine the path of his own party. But he was a real Englishman, in whom the fires of patriotism and of Conservatism glowed steadily and dutifully. His type will, one must presume, be seen less and less in politics, not only because it made the possession of soundness rather than of ability its first requisite, but because the lover of the countryside is becoming less and less attracted to politics.

Alter Ego.

An American Fellowship Group, composed of professors, authors, clergymen, and business men, visited Roumania last month, and were given a hearty reception by the Roumanian authorities.

The Bulgarian Minister in Berlin has protested against the projected performance of Bernard Shaw's play, "Arms and the Man," as being offensive to his country. The performance, however, will take place.

At the request of the Italian Government, the opening of the negotiations at Venice between Italy and Yugoslavia, originally fixed for October 1, has been postponed for ten days.

An Albanian raid, for the purpose of kidnapping shepherdesses and stealing cows, across the frontier near Vermosh, provoked a counter-raid by Montenegrins of the Kucha tribe, who killed several Albanians. Order has been restored.

THE ANGLO-EGYPTIAN ASSOCIATION.

The Anglo-Egyptian Association, which was formed last May, consists of past and present British Government officials, and has as its object the bringing into closer touch those who have settled in Great Britain, Ireland, or abroad, and those who still remain in Egypt. This purpose is admirably practical, and, since the association maintains regular communication with the association of British officials of the Egyptian Government in Cairo, much useful and urgent work may be performed. The names of those serving on the General Committee are alone sufficient indication of the necessity and nature of the association:—General Congreve, Sir Ernest Dowson, C. E. Dupuis, Sir Maurice FitzMaurice, Colonel Gathcart Garner, G. H. Griffith, the Rev. C. T. Horan, J. Langley, A. T. Loyd, Colonel H. G. Lyons, A. F. MacCullan, Sir Murdoch MacDonald, General Maxwell, R. E. Monteith Smith, Major Ormsby-Gore, A. E. Robinson, J. A. Spender, Lt.-Colonel J. K. Watson, Leo Weinthal, and Lewen B. Wilson. The offices of the association are at 12, Holborn Viaduct, E.C.1, and the annual subscription is £1.

OBITUARY.

Surgeon-General William Richard Browne, C.I.E., M.D., died in Switzerland on September 16, at the age of 74, after a distinguished career in the Indian Medical Service, which he joined fifty-one years ago.

The death is announced from Belgrade of M. Slobedan Ribnikar, the owner of the *Politika*, one of the most important Serbian daily newspapers. M. Ribnikar founded the paper with his two brothers, who both died on the same day in September, 1914, on the battlefield.

The death occurred on September 19 of Sir Reginald Pole-Carew, K.C.B., C.V.O. He went through the whole of the campaign in the Afghan War of 1878, and accompanied General Roberts on the march from Kabul to Kandahar. In 1882 he saw service in Egypt, and later occupied many important military posts in India.

Sir Arthur Robert Anderson, who died at a nursing home in London on September 24, was born in 1860, and was identified for the greater part of his life with Indian railways. Educated at Glasgow Academy and University as a civil engineer, he became Chief Engineer to the Madras and Southern Mahratta Railway in 1897, which position he held until 1908, when he became General Manager. He became a member of the Indian Railway Board in 1914 and chairman 1919-20, being largely instrumental in bringing the Indian railway strike to a conclusion.

A correspondent sends us the following information from the *Izvestiya*:—"The death is announced from Moscow of Professor Mikhail ben Yusuf Attoya, Professor of Arabic in Lazarewsky Institute. He was born in Damascus in 1852 and educated in the American College at Beyrout. He was sentenced to death by the Turks for his articles in the Arabic Press against despotism, and arrived as a political refugee in Russia in 1873. He was the author of a Russian-Arabic Grammar, a Russian-Arabic Dictionary, besides being the translator into Arabic of much political writing. He was the first director of the Lazarewsky Institute under the Soviets, and many of his pupils are well-known in Europe."

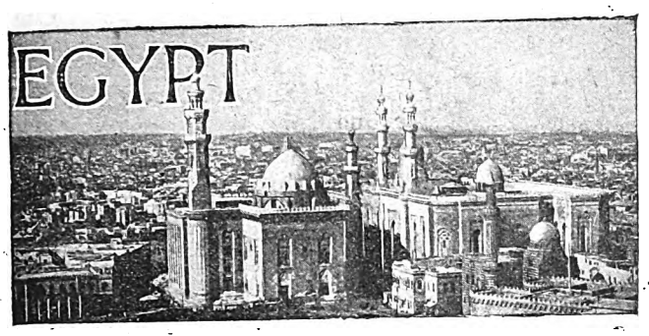
The Near and Middle East.*

From Our Own Correspondents.



Cairo, September 19.

The Italian "Crisis."

Every week seems to bring its crisis, and the week that has just come to an end has been no exception. The only difference to its predecessors is, however, that the last crisis appears to have existed solely in the imagination of the local Press and the representatives of certain London papers. This crisis centred round the question of the Tripoli frontier, which has for some time been under discussion between the Egyptian and the Italian Governments, and in regard to which it was recently decided to set up a *modus vivendi* for the control of a temporary frontier, pending a propitious moment for settling the whole question.

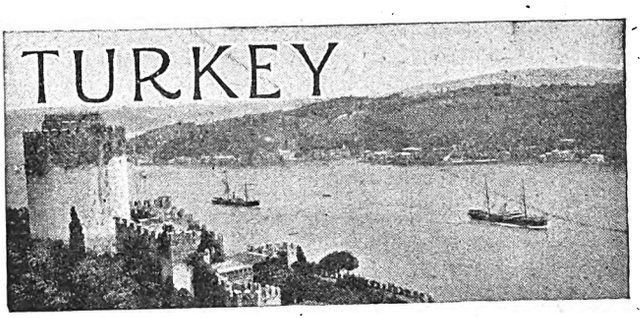
Suddenly last week-end the local Press—and the worst offenders were the papers known as the Government organs—began to publish the most alarming accounts of the progress of the discussion. They declared that Italy had made impossible demands with regard to the fixation of even the temporary frontier, that she had massed troops in close proximity to the frontier, that she was on the point of occupying Sollum and the oasis of Djarbub, the possession of both of which is in dispute, and, finally, that Mussolini was sending a fleet to Alexandria in order to compel Egypt to comply with his demands. The publication of these statements was accompanied by comments that were, to say the least of them, unfriendly to Italy, and that much upset the Italian community. They also created a good deal of uneasiness, and, in spite of what, to any ordinary person, would at once have appeared to be an utter absurdity, they were widely believed.

It was not until the Government somewhat belatedly issued a *communiqué* showing that there was not the slightest foundation for all the pother and alarm which the Press had created, and that negotiations were going on between the two Governments in quite the most amicable manner, that feeling was calmed, but the whole affair made a very bad impression on the foreign communities in general. While this incident is a revelation of the irresponsible manner in which events are treated in this country by certain newspapers which ought to know better, and of the readiness with which to-day the worst is believed when a foreign country or a foreigner is concerned, it is indeed incredible that the Government should have allowed the Press, particularly its own organs, which led the band, to continue what has proved to be an entirely mendacious campaign against a Power with whom it not only has always been on the most friendly terms—*vide* the warm telegrams exchanged on every available occasion by King Fuad with King Victor Emmanuel and other members of the Italian Royal Family—but with whom it was actually at the time in close and friendly negotiation. It has been altogether a most stupid affair, and it is almost impossible to explain the object of this outburst. Certainly it has done no good to the cause of Egypt, and, as one of the local Italian papers points out, the sole result appears to have been that the Italians have had afforded them proof of the extent to which Egyptian friendship can be relied upon, and that the Egyptians have alienated in a very great measure the goodwill of a people that has hitherto been regarded as exceedingly sympathetic towards them and their aspirations.

The Hejaz.

The developments in the Hejaz are being watched with great interest, but so far little can be ascertained beyond the facts that Taif has fallen, that the Wahabis are still in the vicinity of that town, and that the Hejazis are preparing to defend the Holy Places. The absence of news is all the more extraordinary seeing that Egypt is in fairly close contact with Jedda and ports on the Red Sea. The attacks on the Hejaz have clearly shown that King Hussein does not enjoy a good Press in this country. The incidents in connection with the pilgrimage and his pretensions to the Khalifate seem to be responsible for the lack of sympathy with which his difficulties are greeted in Egypt.

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Palestine, Iraq, and Persia.



Constantinople, September 23.

The President's Tour.

The travels of the President of the Republic in the eastern vilayets have given the population of Trebizond and other towns the opportunity of de-

monstrating their attachment to his person and to the State, and have also been the object of much conjecture on the part of persons who believe that the President's interest in that area is not entirely unconnected with the recent uprising in the Caucasus. Be that as it may, his trip along the coast to Rize has been shortened by his decision to go to Erzeroum and the neighbouring districts affected by the succession of earthquake shocks on the 13th and the following days.

The Rising in the Caucasus.

The situation in the Caucasus remains obscure, although there is every reason to suppose that the insurrection has been unsuccessful, and, as far as the plains and the main lines of communication are concerned, has already been stamped out. The condition of Transcaucasia must always be a matter of great interest to the Turkish Government, for it is a matter of common knowledge that the relations between Moscow and Angora are unsatisfactory, and that the chief bone of contention is the Caucasus frontier and cognate problems. The Soviets are not happy about the security of their Caucasian possessions, and are anxious to obtain a frontier which is strategically sounder than the present one; this can be done only at the expense of Turkey. The Turks, on the other hand, are suspected by the Soviets, and probably with reason, of fomenting pro-Turk, Pan-Islamic, anti-Soviet propaganda among their "blood-brothers," the Turco-Tartars of Azerbaijan. The importance of the matter lies in the fact that Baku is a prize worth fighting for; it is keeping Russia's head above water in the economic struggle, and the Turks might be excused for thinking that its possession would help to solve many of their more pressing economic problems. The Russian Government is reported to have telegraphed to Angora to thank the Turkish Government for its neutrality during the recent insurrection in the Caucasus, and the mere fact of its having done so is an illuminating comment upon the state of relations between the two Republics.

The Mosul Question.

The columns of the local Press have been full during the past week of the Turkish memorandum to the League of Nations on the subject of Mosul. Reduced to the lowest common denominator, the memorandum consists of a plea for a plebiscite in the Mosul Vilayet. The ethnological arguments and the quotations from the "Encyclopædia Britannica" make tolerable debating matter, which can be used by both sides with equally good effect, but when it comes to practical measures the real issue lies between a plebiscite and the decision of a neutral arbiter. One would have thought that the experience of plebiscites during the post-War years would have put the whole world off that method of deciding disputes for the next hundred years. This much is satisfactory, however: the Turks have had the wisdom to treat the League Council as a force to be reckoned with, and have to a certain extent justified their newly-found civilisation by an appeal to the League.

Local Affairs.

Local affairs in Constantinople present no new and especially startling features. The normal polemic between the newspapers and the authorities is pursuing its weary way; nobody has yet decided whether the late Vali, who was so ignominiously dismissed for mobilising the city's defence forces in the middle of the night, was drunk on the night of the event, or was merely a scapegoat for higher authority. The latest news is that a bold man has been found to take on the vacant job. Needless to say, all the projects for the *relèvement économique* of the city and the port are still in the theoretical stage.

The British Colony.

The British Colony is setting a good example to all the foreign inhabitants by going about the business of amusing itself with all due seriousness. The Cricket Club has played a good deal of cricket, although it has had to be sufficient unto itself. The Association Football Club has arranged a long list of fixtures with the best local clubs, and, thanks to the fact that it now has a ground of its own, it is able to pick and choose its opponents. The Hockey Club has constituted itself and is ready for the coming season; and golf is always with us. Altogether, it may be said that our compatriots are not allowing commercial depression and political difficulties to interfere unduly with the real business of life, which is to enjoy it.

PERSIA.

Teheran, September 10.

The New Cabinet.

Last Saturday week the Prime Minister presented his new Ministry to the Crown Prince, and the following day to the Mejliss. It is composed as follows, Sardar Sepah himself retaining the Premiership and Ministry of War:—

Moshar ul Mulk	Minister for Foreign Affairs.
Zoka ul Mulk	Minister of Finance.
Sardar Assad	Minister of Posts and Telegraphs.
Sardar Moazzam Khorassani	Minister of Public Works.
Amir Eghtedar	Minister of the Interior.
Adib es Saltaneh	Minister of Justice.
Moshar ed Dowleh	Acting Minister of Public Instruction.

Besides the Prime Minister, two of the above held office in the previous Cabinet, Zoka ul Mulk having been Minister of Finance and Amir Eghtedar having held the portfolio of Posts and Telegraphs. The new members are nearly all men of previous experience in public affairs, and the Ministry is, on the whole, well received. The Shah, in his reply to Sardar Sepah's telegram advising him of its formation, expressed his pleasure and approval.

The Northern Oil Concession.

Matters with regard to the Northern Oil Concession appear to have come to a deadlock, and

the Sinclair Company do not now seem over-anxious to take the concession, and the dependent loan of 10,000,000 dollars in consequence of the disquietude caused by the recent murder of the American Consul, and in view of the rumoured possibility of the withdrawal of the American financial advisers, seems highly improbable at the present juncture.

London to Quetta Overland.

Major Forbes-Leith, who is making the first overland journey from England to India, arrived here from Baghdad some days ago and is continuing in a day or two via Yezd. Kerman, and Duzdab to Quetta, his objective, having been delayed here by the illness of his two companions, his diarist and the Pathé cinema operator, who has been filming the trip and scenes and celebrities *en route*. The 14 h.p. Wolseley car "Felix II." seems little the worse for its 6,500 miles across France, North Italy, Yugoslavia, Bulgaria, Turkey, Asia Minor, Syria, and Mesopotamia, and the fact that so far there has been only one puncture speaks well for the Rapson tyres with which the car is fitted.

The Prime Minister.

Sardar Sepah left town a few days ago and, in his capacity as Minister of War and Commander-in-Chief, is paying a visit to the troops operating in the Luristan district.

CYPRUS.

Nicosia, September 16.

The Forests.

Several more forest fires have occurred, but, fortunately, not on a large scale. The Commission appointed to inquire into the subject of their prevention consists of the Acting Chief Secretary, the King's Advocate, and the Chief Commandant of Police. They have begun work at the summer quarters of the fortunate officials who go annually to Mt. Troödos and enjoy the cool breezes over 5,000 feet above the sea, amidst lofty pines. Those consulted include the Commissioners of the six administrative districts, the local Commandants of Police, and the Assistant Principal Forest Officer. It is believed that one of the principal subjects of discussion relates to the burning question whether or not greater grazing facilities should be granted to flock-owners, in view of the irreparable destruction caused by goats. The Principal Forest Officer, Dr. Unwin, who has, by the way, sent a good exhibit of Cyprus timbers to Wembley, and would have sent much more had space permitted, has worked unremittingly, and takes a keen interest in the future of the island forests, is, of course, the chief adviser. The Greek Press severely criticises the Government for not having appointed any Greeks as members of the Commission.

Cyprus and Wembley.

The High Commissioner, Sir Malcolm Stevenson, who has taken great interest in the Empire Exhibition from the early days when a Cyprus-Palestine Pavilion was agreed to, and who visited and approved of the site in 1923, has been pleased with the results, and with the efforts of those responsible for carrying out the scheme. He would give his full support if the Pavilion were re-opened next year, and in that case to a considerable enlargement, which is certainly needed for further exhibits. This year's experience has shown that many of the island products could be profitably sold. Among them may be mentioned articles of silk, bags and purses of lamb's skin, *Rahat-Lokoum*, and sweets made from the grape. One of the Greek papers has published statements disparaging the present Pavilion, and the output; but the general opinion of visitors appears to be that nothing better could have been achieved with the fund available.

Visions of an Agricultural Bank.

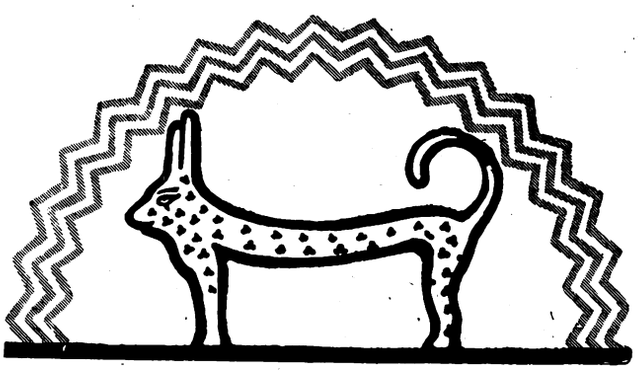
The hopes, which had almost entirely vanished, have been revived, and it is now rumoured that a bank is likely to be established early next year. The Agricultural Bank founded by Sir William Willcocks, under the auspices of the Egyptian Land Allotment Company, at Famagusta, has not fulfilled the hopes that were raised, and it is said that it is likely to be closed in the near future. It has been under the able management of Mr. B. Amiryan, who has an intimate knowledge of Cyprus finances and affairs. It is to be hoped that his valuable experience and advice will long be available. Owing to the plight of the farmers, there have been many late cases of insolvency in both town and country, and recourse has been had to a Bankruptcy Act which was passed in 1919, and affords some relief in hard cases. It is to be hoped that the rumour will prove correct, as the creation of a credit bank stands first in the claims and petitions of the rural classes throughout the island.

General News.

It is said that several British officials will be transferred to other colonies before the end of the year.

Under a new regulation the King's Advocate (whose salary is now £1,200 a year) is not allowed to carry on private practice, as has been hitherto the case.

Strong objections are made to the appointment of Mr. Noble, lately Assistant Principal Forest Officer, as Director of Agriculture. It is urged that this appointment should be given to a Greek, as it was to the predecessors of Mr. W. Bevan—viz., M. P. Gennadius and M. Saracoménos.



THE CALL OF EGYPT

LISTEN to the Call of Egypt, where romance and mystery were born and are deathless still to-day. Pay your homage of wonder to her mighty river and her stately temples. Explore the purple-shadowed streets of her fantastic cities; tread the gilded carpets of her deserts where silence falls supreme and absolute. Dream amid the glories of Thebes and Luxor in the lands of haunting vision. Come when, in the early Autumn, the after-glow of Summer is yet upon the land and the splendour of Egypt's climate is at its zenith.

Particulars of fares, tariffs, etc., of all principal Travel Bureaux and Tourist Agencies. Write for "Egypt and the Sudan," a copiously illustrated brochure, free on application to Egypt Promotion Association, 9, Quality Court, Chancery Lane, London, W.C.2, or Post Box 990, Cairo.

THE BRITISH WORLD FLIGHT.

The story of the British attempt at flight round the world which, six months ago, Squadron-Leader Maclaren, Flying-Officer Plenderleith, and Sergeant Andrews so gallantly made was told at a luncheon given on September 25 in their honour at the Hotel Cecil by the chairmen and directors of Vickers, Limited, D. Napier and Son, Limited, and Shell-Mex, Limited. Sergeant Andrews was unable, owing to illness consequent on exposure on the flight, to be present. Commander Sir Trevor Dawson, vice-chairman and managing director of Vickers, Limited, presided over a large company, which included Capt. H. E. P. D. Acland, Comdr. A. de Bahr, Wing-Comdr. W. G. Barker, V.C., D.S.O., M.C., Air-Commodore A. E. Borton, C.B., C.M.G., D.S.O., A.F.C., Lt.-Col. the Hon. S. P. Bouverie, D.S.O., Sq.-Ldr. Sir C. J. Q. Brand, K.B.E., D.S.O., M.C., Lt.-Col. W. A. Bristow, F. Crossley Broome, Esq., D.F.C., A.F.C., Mons. Demetrius Caclamanos, Sir Vincent Caillard, D.L., Dr. P. Chalmers Mitchell, LL.D., F.R.S., the Rt. Hon. J. R. Clynes, P.C., M.P., Wm. Clynes, Esq., Capt. S. Cockerell, A.F.C., the Hon. H. P. Colebatch, C.M.G., Air-Commodore B. C. H. Drew, C.M.G., C.B.E., Geo. Fairbairn, Esq., C. R. Fairey, Esq., M.B.E., Philip S. Foster, Esq., Air-Vice-Marshal P. I. Game, C.B., D.S.O., Capt. Victor Gordon, F. H. Halford, Esq., Baron Gonsuke Hayashi, G.C.V.O., Air-Comdr. T. C. R. Higgins, C.M.G., Brig.-Gen. Sir C. Holden, K.C.B., F.R.S., Capt. C. L. Hussey, U.S.N., Col. Kenyon Joyce, Lt. S. Kato, I.J.N., H.E. the Hon. Frank B. Kellogg, Admiral Mark Kerr, C.B., M.V.O., Air-Commodore C. A. H. Longcroft, C.B., C.M.G., D.S.O., the Hon. Sir E. Lucas, Sq.-Ldr. A. S. C. S. Maclaren, O.B.E., M.C., F.D.C., A.F.C., Lt.-Col. F. K. McClean, A.F.C., Lt.-Col. W. Lockwood Marsh, O.B.E., M.A., LL.B., Col. E. Mossberg, C.B.E., Maxwell P. Muller, Esq., Air-Commodore D. Munro, C.B., C.I.E., M.B., M.A., etc., T. P. O'Connor, Esq., M.P., Col. G. P. Ostoic, K.C.V.O., C.B., Capt. G. Panas, C.M.G., Lt.-Col. J. P. Pelletier, Lt.-Comdr. H. E. Perrin, Lt-Comdr. H. E. Pierson, Capt. de C. A. de A. Pimentel, Sir Alex. Richardson, Capt. de Corvette Sable, Air-Vice-Marshal Sir W. Geoffrey H. Salmond, K.C.M.G., C.B., D.S.O., Samuel Samuel, Esq., D.L., M.P., Air-Vice-Marshal F. R. Scarlett, C.B., D.S.O., Comdr. Don Edgardo von Schroeders, C. J. Fairfax Scott, Esq., Lord Herbert Scott, Ben Smith, Esq., Sir Henry White Smith, C.B.E., Rear-Admiral M. Sueter, R.N., C.B., Sir G. Owens Thurston, K.B.E., Comdr. John H. Towers, U.S.N., H. T. Vane, Esq., O.B.E., and F. C. Wade, Esq., K.C.

After the Chairman, in a speech in which he thanked the Greek Government, the United States of America, and the Imperial Japanese Government for the services rendered to Maclaren and his crew, had proposed the health of the three airmen, Mr. J. R. Clynes supported the toast in a happy speech, wherein comparison was made between the non-success of the "Vulture" and that of the Government of which he was a member. Squadron-Leader Maclaren, who was magnificently received, spoke in congratulation of the American fliers who had just completed their flight round the world, and of their unfailing sportsmanship. He mentioned particularly the cordiality that marked his progress wherever he went—the Italian welcome at Rome, the help given by the Greeks at Athens, the welcome extended by the Persian and Siamese Governments, and by the French in Indo-China, and the crowning hospitality of the Japanese. The failure of the "Vulture" was due not to mechanical defects—he was convinced that flight round the world could be achieved by one British machine and one British engine—but to bad luck. It was fog that finished the attempt. Of his bad luck he would say nothing: it was all in the game. But he would never say anything disrespectful of a London fog again.

SCHOOL OF ORIENTAL STUDIES, LONDON INSTITUTION

For particulars apply to THE SECRETARY.

ARMENIAN REFUGEES.

On September 26 Mr. Baldwin presented to the Prime Minister a memorial, signed by himself and Mr. Asquith, urging that the British Government should, in response to the League of Nations appeal, make a grant in aid for the resettlement of the Armenian refugees.

It is proposed to settle these refugees either in Russian Armenia or in Greece or other suitable territory. Such a grant would be administered by the Armenian (Lord Mayor's) Fund, which has been nominated by the British Government to collect moneys for the purpose within the Empire.

The reasons given in the memorial why a substantial contribution should be made to the scheme are:—

(1) Because the Armenians were encouraged by promises of freedom to support the Allied cause during the War, and suffered for this cause so tragically.

(2) Because during the War and since the Armistice statesmen of the Allied and Associated Powers have given repeated pledges to secure the liberation and independence of the Armenian nation.

(3) Because in part Great Britain is responsible for the final dispersion of the Ottoman Armenians after the sack of Smyrna in 1922.

(4) Because the sum of £5,000,000 (Turkish gold) deposited by the Turkish Government in Berlin, 1916, and taken over by the Allies after the Armistice, was in large part (perhaps wholly) Armenian money.

(5) Because the present conditions of the refugees are unstable and demoralising, and constitute a reproach to the Western Powers.

The plans and estimates of the scheme of settlement in Russian Armenia, according to the memorial, are already prepared, and call for an expenditure of about £1,000,000. The scheme once again is under discussion at the League of Nations Assembly.

In conclusion, the memorial states:—

We desire to express our view that, as some compensation for unfulfilled pledges is morally due to the Armenians, the British Government should forthwith make an important grant.

Lastly, be it noted that this scheme (1) has no political implications, (2) is intended to be a final liquidation of Allied responsibility for the Armenians.

Dr. Weizmann, head of the Zionist organisation, is now in Palestine on a visit the purpose of which is to inspect recent developments, and particularly the possibility of transferring the central Zionist organisation from London to Palestine.

CORRESPONDENCE.

The columns of The Near East *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* The Near East.

THE SPANISH MOROCCAN WAR.

To the Editor of The Near East.

Sir,—As long ago as 1857 one can trace the causes which have led up to the present-day entanglements of Spain in the Riff. At that date the rights of individuals and nations were of less consequence than now, and the invasion of a small country by hordes of a European Power was of no concern to the public conscience of civilised Europe. But to-day the rights of small nations are supposed to be guarded by the advance of international morality, so that when one realises what is still being done in the Riff one cannot help becoming more cynical than ever about the justice of Christian nations and the advancement of European morality.

Since 1909 Spain has been attacking the Riffis with forces varying from 50,000 to 120,000, and in 1910 A. Bartlett, as he was leaving Morocco, wrote: "Already the guns of an army of 40,000 are sounding the death knell of a nation."

But to-day, in 1924, the Riffis are more than holding their own, and daily reports point to the stubborn spirit still being shown by them in defence of their independence.

At 1,500 miles distant from London how many English people realise what monstrous injustice is being done, what sufferings are being borne by the Riffis and Spanish on account of the prestige of a few thousand officers?

Perhaps the sufferings of the Spanish soldiers have been given prominence enough for the British public to understand there is a ruinous war being fought, but for the Riffis, who has spoken or written on their behalf?

Blockaded by sea and land, their women and children have for years suffered from a paucity of food, and certain articles which had become of daily necessity can only be procured at enormous expense, such as tea and sugar. Recently, by the use of aeroplanes and bombs, their crops have been set on fire, and numerous women and children killed in their villages. Only a few weeks ago I received a letter stating that in one village fifteen women and eleven children had been killed.

Yet their patriotism is still unquenched, and the ardour of their resistance even more exalted than in 1909. Here is heroism, indeed! Here is an example which should stir every British heart to sympathy and admiration! Here is a heroic subject which should on contemplation exalt every heart and cleanse every soul by the purity of its desire, the sacrifice of everything for the attainment of its ideal.

But few are their friends, and the League of Nations will not countenance the presence of their representatives. They look to the British public for help. Time after time have various Riffis said to me, "If only the British public knew the facts, surely they would render us assistance."

They have been called "rebels" and "barbarians," but with what foul injustice!

They are but rebels to rapacity and violation, and barbarians by 2,000 years of aggression from Carthaginians, Romans, Vandals, Arabs, and modern European nations.

They have felt for generations the spirit of the crusades and the inquisition directed against them. Is there any wonder, then, they are wild, hostile, suspicious, and poor? As a French writer, after sketching the wars between Spain and the Moors since 1248, the attacks on the North African coast line since the XVI. Century by European Powers, says: "Résultat le plus durable, la Haine pour l'Infidel entretenue et inalterée par ces siécles de contact violent."

But Abdul Krim, granted the independence of his country, will erase these centuries from the memory of his countrymen, and, in conjunction with European science and money, wishes to develop his territory.

What of the Spanish?

Alone the army officers wish to continue this war of persecution. It is a question of their prestige! Twenty thousand officers; and the rest of Spain would be only too happy to put an end to this everlasting drain on their resources.—I am, etc.,

R. Gordon Canning.

19, Cadogan Square, S.W.1, September 27.

EGYPT IN LONDON.

SEPTEMBER 23, 1924.

For a brief space of time on the day of Zaghloul Pasha's arrival Egypt took charge, if not of London, at least of Claridge's Hotel, where its hero was staying. The number of Egyptian students or young people, female and male, domiciled in England was surprising. They must all have been there, a jostling, enthusiastic crowd, bearing their tributes of flowers or waving the flags of independent Egypt. There was no mistaking the genuineness of the idol-worship or the self-confidence of the demonstrators. In that it was a homely and a pleasing picture. Seated on a low chair in his sitting-room, Mme. Zaghloul beside him, both knee-deep in flowers, Saad Pasha Zaghloul accepted with a kindly, fatherly smile the exuberant homage of his youthful fellow-countrymen as they surged around him. With difficulty a space was cleared to enable the ubiquitous photographer to work his flashlight will, and one retired only to be succeeded by another, even more particular to secure his coign of vantage.

At last the pent-up enthusiasm reached the vocal point. A woman student led the cheering, and the room rang with the cries that have long been familiar in Cairo streets and elsewhere: "Long live Saad Pasha!" "Long live King Fuad, King of Egypt and the Sudan!" and many others, less suitable, perhaps, on British soil than in the exhilarating atmosphere of Egypt. But who would dream of saying them nay? The veteran Prime Minister, obviously wearied from a tiring journey and a distressful crossing, rose to withdraw. It was a signal for a further ovation. Then one of the gathering stood forward and within a few inches of Zaghloul Pasha's face proceeded to deliver himself in impassioned language of the whole science of negotiation and the duties of Egypt's Prime Minister. The set kindly smile never relaxed, and, gently shepherded by his staff, Zaghloul Pasha passed into another room. Young Egypt-in-exile, well pleased with itself, with its outing and shouting, melted cheerfully away, yielding place to senior and wiser heads, whose influence and advice will haply prove of greater weight in the final adjustment of Anglo-Egyptian relations.

THE FOUNTAIN HEAD OF HINDUISM.

"THE RELIGION OF THE RIGVEDA." By H. D. Griswold, D.D. (London: Oxford University Press, 1923. Price, 12s. 6d. net.)

The identity of many root-words in the chief languages of Europe and Eastern Asia raises a presumption that the races which speak them had a common source. It is generally admitted that the civilisation of these wide-spreading regions originated in the advent of a congeries of clans termed "Aryan"; but scholars differ as to the motherland of the great Indo-European family. The earliest conjecture placed it in Central Asia east of the Caspian Sea; claims were subsequently set up on behalf of the plains of Eastern Europe; and the former view is favoured by recent discoveries in Chinese Turkestan. It is argued with considerable force that wholesale migrations of our race must have been prompted by economic necessity. Now the world's civilisations were unquestionably born in its riverine systems; and in prehistoric ages Central Asia possessed one rivalling the deltas of Upper Egypt and Mesopotamia. Here the Aryan clans fed their flocks in lush pastures watered by the Amu Darya and the Sir Darya while the Caspian and the Aral Seas were connected with the Polar Ocean. During the third millennium B.C. the globe's surface north of the Pamirs was thrust upwards, probably by volcanic action. Rivers and inland seas shrunk in volume; dessication rendered the Aryans' territory uninhabitable; and a long series of migrations began which have changed the whole course of history. Some tribes invaded Europe, which belongs geographically to the Asiatic continent; others poured into India from the north-west. The Punjáb, watered by its five rivers, felt the first impact of Aryan invasion. The newcomers were highly organised, and the law of division of labour had long been in operation among them. Defence and aggression were in the hands of warriors termed Ksatriyas; knowledge was a monopoly of the priesthood, or Brahmans, and the inarticulate masses whose labour supported the hierarchy bore the generic term of Vaisya. They encountered fierce resistance from the negroid aborigines, but superior armament in the end prevailed. The Aryan bowmen were as skilful as their English descendants during the Hundred Years' War, and the Aryan war-chariots were prototypes of the "Tanks" which proved so efficacious during the recent struggle. External pressure and the geographical isolation of the Punjáb were responsible for the growth of an ironbound caste system based on colour. The Aryan invaders had white skins, while the conquered aborigines wore the dusky hue of their African kinsmen. It is a significant fact that caste connotes colour in Sanskrit, which was the Aryans' mother-tongue. The results of miscegenation are apparent in the Hindu hierarchy; but Panjábi Brahmans retain the physical characteristics of their remote ancestors. Pride of colour—still rampant in all countries where "white meets black"—is one proof the more that the Indo-European family descends from a common source.

Religion has always played a mighty part in determining the trend of civilisation. The Aryans brought with them the cult of Nature-Powers. In course of time each was credited with possessing human qualities: Varuna, probably identical with the Greek Ouranos, was an ethical god, the all-wise rewarder of the deeds of men; Agni, delighting in rites and sacrifice, was specially venerated by priests; Indra was the warriors' leader and protector; and Soma personified the sacrificial libation, which in all probability was some form of alcohol. As ages rolled by the Hindu pantheon became peopled by an infinity of minor deities; but the early Aryans worshipped under the open sky, temples and idols being later importations from Southern India. Religious cult rests on writings which are believed to be inspired; and the Rigveda was the forerunner of a vast mass of theology which regulates every action of Hindu life. Its title comes from the Sanskrit *Veda*, meaning knowledge, and *Rik*, a stanza; hence it may be translated as "Verse-wisdom." It consists of a vast collection of sacred hymns, the earliest dating from 1200 B.C. For several centuries they were transmitted orally by Brahmans, and were not reduced to writing until the commencement of the seventh century before Christ's Advent. The text has since been preserved with a reverent care transcending that which has been lavished on the Christian Scriptures. It ushered in the dawn of Indian faith and thought and art and song; the Oriental mind has no mysteries for students who are capable of assimilating its diction.

Dr. Griswold is well qualified to fulfil his self-imposed task of extracting the essence of Hinduism from the oldest of its sacred books. After serving for nearly thirty years as a missionary in the Punjáb, he studied Sanskrit at Oxford, and is now secretary to the Council of Presbyterian Missions in India. No European has enjoyed equal opportunities for tracing the course of Indian civilisation to its fountain-head. F. H. S.

The Egyptian Minister in Paris arrived in London last week.

The Yugoslav Minister is returning to London to-day from Vichy.

M. Oromolu, Governor of the National Bank of Roumania, left London last Thursday for Paris.

Lady Gauntlett has left London by the British India Company's s.s. Mandala for Bombay.

Mr. U. Grant Smith, United States Minister to Albania, left London on September 24 for Tirana.

The Maharaja of Bikanir has returned to London from Geneva. He is staying at the Carlton Hotel.

Lord Islington arrived in Paris last week from Constantinople, and is staying at the Hotel Matignon.

Dr. Dusan Tanaskovitch, Chancellor at the Yugoslav Legation, has left London for Belgrade on leave.

M. N. D. Ciotori, specially attached to the Roumanian Legation, has returned to London from Geneva.

M. and Mme. Venizelos arrived in London last week from the Continent, and are staying with Sir Arthur and Lady Crosfield.

The Roumanian Minister has left Geneva for the South of France. M. and Mme. Titulesco return to London about the middle of October.

Princess Margaret and Princess Theodora of Greece, who recently returned to London from Sweden, left for Paris last week.

Mme. Zaghloul, wife of the Egyptian Premier, on September 25 visited Mme. Aziz Izzet, the wife of the Egyptian Minister, at 41, Berkeley Square.

The Bulgarian Minister left London on September 23 for Geneva. During his absence M. Stoyan Petroff Tchomakoff is acting as Chargé d'Affaires.

M. Mootolea, Director-General of the Roumanian Ministry of the Interior, arrived in London on September 23 from Bucharest on a special mission.

Sir Dadiba Dalal, High Commissioner for India, has tendered his resignation to the Government of India. His health as been far from satisfactory of late.

Air-Marshal Sir John and the Hon. Lady Salmond do not expect to be settled in London before January. They will be staying at Panshanger, Hertford, during the autumn.

Among the passengers who left London on September 25 by the P. and O. Bombay express to join the Caledonia at Marseilles were Sir Benode Mitter, for Port Said, and Lady Kerr and Sir William Duff and Lady Reid for Bombay.

M. V. S. Anjelkovitch, Secretary at the Legation of the Kingdom of Serbs, Croats, and Slovenes, with Mme. Anjelkovitch, returned to London on September 23 from Belgrade.

A marriage has been arranged, and will shortly take place, between Arthur John Phillips, son of the late Octavius Phillips, of Fairstowe, Ealing, Middlesex, and Amy Louisa, daughter of the late Horace L. Beil, of Alexandria, Egypt.

Under the auspices of the Central Asian Society, Major D. McCallum (late British Liaison Officer in Syria) is lecturing, on October 10, on "The French in Syria, 1919-1924." The lecture, which will begin at 5 p.m., is to be delivered at the Royal United Service Institution, Whitehall.

Among the guests recently entertained at Blair Drummond by Sir Kay and Lady Muir for grouse shooting have been Mr. and Mrs. Hubert Walter, Colonel and Miss Garnet-Muir, Major Mark Sprot, Commander J. Moncreiffe, Major and Miss Villiers-Stuart, Madame Felix Guépin, Miss Addison, Miss Walter, and the Danish Chargé d'Affaires.

APPOINTMENTS, PROMOTIONS, ETC.

Lieutenant-General Sir Andrew Skeen, the new Chief of the General Staff of the Indian Army, is expected to assume office at Delhi on October 25.

The Air Ministry announces that Air Commodore H. C. T. Dowding has been appointed to the Royal Air Force Headquarters, Iraq, for duty as Chief Staff Officer, to date September 19.

The King has approved the appointment of Mr. J. R. Ellis Cunliffe to be a Puisne Judge of the High Court of Judicature in Burma in the vacancy created by the transfer to the Madras High Court of Mr. Justice H. O. C. Beasley.

Mr. Humphreys, former Commercial Secretary at the British Legation at Budapest, is proceeding to Bucharest, *vice* Mr. A. A. Adams, who has been transferred to Prague. Mr. E. C. D. Rawlins, who has been Commercial Secretary at Prague since September, 1923, has been transferred to Budapest. These changes were to take effect from yesterday.

THE IRAQ FRONTIER.

Some time before the negotiations took place in Constantinople between Fethi Bey and Sir Percy Cox on the subject of the settlement of the Turco-Iraqi frontier a warning was uttered in these pages that movements or reports of movements of Turkish troops in the area under dispute were to be anticipated as the date of the conference approached. Nothing of this nature, however, happened. The Turks entered into the conference expecting, apparently, an easy victory for their point of view, and it was not thought necessary to prepare any special setting for that particular meeting. Their surprise on finding that Great Britain refused to budge from a perfectly logical position was genuine; the smoothness of the proceedings was unruffled, but considerable umbrage was subsequently taken when the full significance of the British attitude was appreciated. Turkey, it was indignantly announced, would not consent to the submission of the question to the League of Nations; her claim was unchallengeable and must be conceded. Other counsels subsequently prevailed. It was seen to be impolitic to refuse the jurisdiction of the League, but the need for reinforcing the Turkish arguments was realised. Accordingly, the movements on the Iraqi frontier that we had considered probable at the time of the Constantinople conference were duly staged for the benefit of Geneva. If it seems difficult at first to understand the Turkish line of reasoning, this becomes quite clear on reference to the columns of a certain section of the British Press. The British Government very rightly protested at Geneva against an overt breach of the Treaty of Lausanne in the invasion of Iraq territory by Turkish forces, whose advance has naturally to be met with resistance. At once a few newspapers display a feverish zeal to play the Turkish game. "Our continued occupation of the barren wastes of Mesopotamia," we read, "has brought about a situation which may lead to another costly war." Then follow the time-honoured jeremiads about intolerable burdens, inhospitable wildernesses, interminable frontier expeditions, enormous military expenditure. A small force of Turks has only to make a raid into Iraq, and immediately, as Angora foresaw, the school for scuttle rushes to its pens and would throw to the winds all the present and future results of the great sacrifices of blood and treasure made by Great Britain in bearing her share of the white man's burden and bringing to the peoples of the Middle East for the first time in their history the boon of ordered government, the prospect of peace and progress.

The British Government, it must be repeated, is within its rights in protesting against this calculated infringement by the Turks of their recent treaty obligations; and it can afford to ignore the new breed of milk-and-water Imperialists, offspring of pique and a syndicated Press. Turkey has been curiously shortsighted in the scheme adopted for supplementing her case in Geneva. To the north of the Mosul vilayet, when the Turks and the British had settled down in their spheres of effective occupation, there was a stretch of no-man's land between the two spheres—the former home of certain Assyrian Christians. Hither a number drifted back, content with the sense of security provided by the absence of Turks and the proximity of the British in Iraq. At the time of the Treaty of Lausanne, July, 1923, this represented the *status quo*, which the Turks undertook to respect. In October they announced their intention of sending officials to administer the country, but an immediate protest by the British Government caused the scheme to be dropped. Two months ago it was revived without any previous announcement, but the official sent to take charge was put over the border by the Assyrians. Thereupon the Turks mobilised a force, and, with a view to taking the Assyrians in the rear, deliberately crossed a recognised section of the frontier, many miles to the west. If they had counted on Iraqi supineness in dealing with this treaty breach, they were quickly undeceived, as the invading force was immediately driven back with losses. The outrage is hardly likely to impress the League favourably, but it affords an excellent object-lesson of what would be in store for these Assyrians or others if left at the mercy of Turkish action. The Turks, however, need not be credited with any warlike intentions; undoubtedly they want the Mosul vilayet, both in the hope that it will provide them with oil and more revenue, and also because they know that a partition of Kurdistan will inevitably give rise to unflattering comparisons between the lot of Kurds left under Turkish jurisdiction and that of Kurdish subjects in Iraq. But Turkey is as averse from war over the Iraq frontier as Great Britain is. If, however, a single raid can start a section of the British Press whining pathetically for the evacuation of Iraq, and possibly bring about what Turkey of her own accord could never hope to achieve, Angora reasons that it is well worth the trouble. The wisest course, therefore, for the British Government to pursue is to prepare for all emergencies, but to allow nothing that Turkey does to deter it from a straightforward, unequivocal policy, which will be found capable of enduring when the present Turkish mood has passed.

The Turkish raids over the Iraq frontier are serious only in their political aspect; they prove the Turks to be still unable to appreciate the fact that modern civilisation calls for reciprocity and good faith among the nations. Anglo-Turkish relations will be determined by forces more fundamental and lasting than any particular frame of mind of her present rulers. For the moment the Turkish Government is not possessed of an accommodating spirit. It resembles its own Governor of Constantinople, who recently ordered a midnight mobilisation. It has drunk deep of the heady wine of victory; it can distinguish nothing but enemies on every side, who seem doubly dangerous in the intellectual twilight in which the country is involved; it has, therefore, to mobilise all its protective forces and stand, like a porcupine on guard, with quills erect. With a little patience on Great Britain's part—not of the flabby, scuttling order, but based on self-confidence and a world-wide millennium-long experience of human nature—the Turk will recover from his obsession, and will then be quick enough to realise who really filled the rôle of a friend when he was not responsible for his actions.

MOROCCAN HIGHWAYS AND BYWAYS.

By "RODAGOM."

1.—The Spanish Zone.

The normal way of approaching Tangier is by sea, but to those who are prepared to brave its attendant discomforts the road from Ceuta through Tetuan and the Fondak of Ain Yedida—once Raisuli's eyrie—forms a more picturesque and interesting route. A few kilometres from Ceuta, which is not considered as being in Morocco, the frontier is crossed and the Spanish zone entered. Tetuan can be reached by rail from Ceuta, rather more than an hour's journey by a primitive train, but the trip by motor is preferable. The road follows the sea until some ten miles from Tetuan, when it turns inland and winds up the valley to the white city perched in its alluring gorge. The bleak and precipitous hills rising on each side of the gorge give a good idea of the natural difficulties by which warfare in these parts is attended, and go far to explain the lack of success met with by the Spaniards up to date.

Tetuan itself is one of the most characteristic of Moroccan towns, and the crude ugliness of the unfinished *Ensanche*, the Spanish quarter, is soon forgotten once the winding covered streets of the old town are entered. The huge brass and iron-studded doors open on rare gems of Oriental architecture: water is abundant, and even the less assuming houses have their fountain, while the courtyards of the palaces are built round mosaic-encrusted tanks, which reach, in some cases, almost the dimensions of a swimming bath. The city is surrounded on the north-west and north-east sides by extensive fruit gardens dotted with pretty country houses. Unfortunately, immense damage was done both to trees and buildings by the guerilla fighting which took place round Tetuan in recent years, and by the wanton action of the Spanish soldiery, who cut down hundreds of trees and demolished many a house in their quest for timber. Leatherwork is the chief industry of Tetuan, and the local craftsmen hold their own with those in other parts of Morocco, over the whole of which the industry flourishes.

The journey of sixty odd kilometres to Tangier (in winter a longer *détour* is necessary) is performed by motor-car; the mail service is carried out by large charabancs seating from twenty to twenty-eight passengers, while ordinary touring cars are also available. Fares are expensive, compared with the French zone, but this is inevitable on account of the villainous state of the road. Before going on to Tangier it is worth while to make the trip to Sheshauen, the mystery city, which resisted all the efforts of the Spaniards up to a few years ago. The journey to Tangier occupies nearly four hours under the most favourable conditions, and in winter the car sometimes fails to get through in the day.

Travelling by night is not allowed, owing to the unsettled state of the country, and all along the route can be seen small pickets of solitary sentries, wretchedly equipped, show in *alpargatas*, and wearing a dejected and disillusioned air. The view from the Fondak, which is reached after a stiff climb from Tetuan, is magnificent, but the hairpin corners met with on the ascent and descent, together with the appalling narrowness and disrepair of the track, sometimes lead the repentant traveller to meditate rather on his past misdeeds than on the beauty of the scene unfolded. Accidents are surprisingly rare, however, the drivers, in spite of apparent recklessness, possessing considerable skill. A largish military camp is passed at R'gaia, and thence an hour's run leads to Tangier.

The International Zone.

On crossing the International bridge (if one has come by the "winter route") a notable change for the better is experienced. From a second-rate trail the car debouches on a first-class highway which would shame many in France or England, and farms, villas, and so forth begin to dot the landscape, showing that here, at any rate, the ever-present fear of the marauder does not exist.

Tangier is so well known to the tourist that description is superfluous. A choice of routes is again available. Casablanca may be reached either by sea or by motor through a portion of the Spanish zone, and thence via Kenitra and Rabat. The latter, until the Spanish zone is again left behind, is a hair-raising enterprise, but it has the advantage of enabling the traveller to make acquaintance with towns which he would otherwise not visit.

A very early start is made, as the Spanish zone must be cleared before sunset, and even so, in winter this often proves no easy task. The road back to the International bridge is taken, when a stop is made to examine passports. Once this is left behind, it is not necessary to inquire whether Spanish soil has again been reached: the jolting and swaying of the car are incontrovertible evidence. Larache, with its hideous modern quarter and general air of forlornness, and El Ksar-el-Kebir are the next stops: the latter is rather more picturesque, being almost wholly Moorish in character. Two miles from the town the French zone frontier is reached, where passports are again examined. An immediate change for the better in the road is at once evident, although the high standard maintained in other parts of the zone is not really attained until Kenitra is in sight. A fine bridge has now been built over the river Sebou, which obviates the loss of time and discomfort entailed in crossing by the ferry.

The French Zone.

Kenitra is the coming town of Morocco, and undoubtedly has a commercial future: it offers, however, nothing of interest to the tourist. An excellent road leads to Rabat, which is usually reached about 6 p.m. Most people prefer to break the journey here, though cars are in waiting to take any who wish to go on to Casablanca that night.

Rabat, the capital of the Protectorate, is a town of considerable charm, and one of the few in which the modern quarter does not jar on the eye. The Moorish town, though not to be compared with Fez, Meknes, or Marrakesh, is worthy of attention, as is Saleh, across the estuary.

Casablanca is a mere two hours away, and the journey may be made by charabanc, touring-car, or limousine; the latter is most comfortable and the charges very reasonable. For instance, the 420 kilometres from Casablanca to Mogador may be covered for 100 francs per head. Some fifteen years ago, Casablanca, or Dar-el-Baida, as it was then better known, was a comparatively unimportant native townlet. To-day its boulevards and public buildings are on a Parisian scale, and it is often hard to realise that one is in Africa. Great progress has been made with the port. The fall of the franc and other causes have brought about a temporary slump, it is true, and parts of the town wear an unfinished look, but there is no reason to doubt the advent of better times in the near future. Casablanca of to-day, the chief port in Morocco, the centre of a network of first-class motor-roads leading to every part of the zone, equipped with broad streets, an efficient motor-bus service, an excellent municipality, and luxurious hotels, is a lasting tribute to what French colonising genius has been able to accomplish in a short fifteen years.

A rather uninteresting road leads through old-

Digitized by Google

world Azzemour, where another magnificent bridge is being built, to Mazagan, an important centre of the grain and egg trades. The port boasts, like Rabat, Saffi, Mogador, and Agadir, an open roadstead, but the tonnage handled is considerable. Neither Mazagan nor Saffi, over a hundred kilometres away, offers much of interest, though the landscape improves on leaving the former town. Halfway between Saffi and Mogador, however, on crossing the Wad Tensift, a welcome change takes place, and the somewhat bare and flat grain country gives place to well-wooded hills and gorges. Arghan-trees, from which a valuable oil is obtained, and the wood of which forms the staple of the native carpentry, are especially numerous. Late in the afternoon the quaint little town of Mogador comes in sight, with its Portuguese fort and unique architecture, lost, apparently, in a desert of sand and a waste of water. A well-built causeway, however, gives means of access, and the most Jewish town in the world, except Salonika, is soon reached.

The Mogador Jew is very English: long years of direct trade with Manchester have left an indelible stamp on the older generation. Sad to relate, the *jeunesse dorée* have forgotten what English they learned from their sires and prefer to air their doubtful French. Also the trade with Manchester is dead. Mogador is moribund, and only awaits the "opening" of Agadir to receive its *coup-de-grâce*. For the tourist, however, a day here is well spent. The mysterious Agadir is now only 170 kilometres distant; but a really bad *piste* and the inexplicable refusal of the French authorities to allow foreigners to enter the town combine to form an impassable barrier. Those who have won through have met with prompt arrest and expulsion, while it is a fact that, at any rate up till recently, even the British Vice-Consul at Mogador, in whose district the town lay, was not allowed to enter its walls. The attitude of the French is hard to understand, and the reasons advanced for it many and ingenious. It is believed that the land question—and British interests are considerable in this direction—is in a hopeless tangle, plots having been sold several times over, and non-existent land or land actually covered by the sea having been foisted on to unsuspecting buyers, and this may be a reason for the delay in declaring the town "open." This commercial and international quarantining of a town is certainly an anomaly in these days.

Marrakesh now demands a visit, and is reached in about five hours from Mogador. In extent Marrakesh is the largest city in Morocco, but it is not so densely populated as Casablanca, for instance, enormous spaces being covered by the spacious gardens, for which it is renowned, chief among which is the peerless Aguedal. Save for the newly built suburb of Gueliz, the town is purely Moorish, and the races of the Near East, of the Occident, and of the African deserts mingle on the square of Vemaa-el-Fna. Scenes of interest for the traveller, the artist, and the student of Oriental life abound, and Marrakesh, take it all in all, is the most fascinating of all Moroccan towns, not even excepting Fez. Justice cannot be done to it in a hurried stay.

Fez and Meknes have still to be visited, and the road is via Casablanca and Rabat. Fez owes much to the natural beauty of its situation, and for many will always be their first choice in Morocco. More Oriental in some ways than Marrakesh, with its tortuous covered streets, only rivalled by those of Tetuan, it exercises an irresistible appeal. As at Tetuan, the water supply is abundant, and the use made of it adds to the charms of this gem of Morocco. Meknes cannot fail to attract, though it must be, to a certain extent, form an anti-climax after Marrakesh and Fez.

From Casablanca four alternative routes lead back to Europe: steamer may be taken to Bordeaux, Gibraltar, or Marseilles, the comfortable aeroplanes of the Compagnie Latécoère to Toulouse, or motor-car back over the awful trails to Tangier, Tetuan, and Ceuta, and thence by steamer to Algeciras; or the combined motor service of the Compagnie des Transports Marocains and the Compagnie Transatlantique may be chosen, and the long run made up through Ouezzan and over the Algerian frontier to Algiers, where ship can be taken for Marseilles or other ports.

From a travelling point of view, this excursion into Moroccan highways and byways can be accomplished without undue fatigue in three weeks; but, if justice is to be done to places like Tetuan, Tangier, Casablanca, Marrakesh, and Fez, this period can be extended indefinitely.

REFUGEES IN GREECE.

The latest messages from Greece continue to emphasise the serious need among the refugees, of whom 500,000 are still destitute, and whose numbers are being swelled by continuous new arrivals under the exchange of populations arrangement. The situation is likely to assume a very serious aspect this winter, as the funds which can be put at the disposal of the local authorities are totally inadequate. The All-British appeal earnestly begs for means to give assistance. Donations of money should be sent to Sir Maurice Bonham Carter, Hon. Treasurer, 26, Gordon Street, Gordon Square, W.C.1. Gifts of clothing, blankets, etc., should be addressed to the All-British Appeal, New Hibernia Wharf, London Bridge, S.E.1.

Commercial & Financial Section.

NOTES AND NEWS.

167, Strand, London, W.C.2,
Tuesday Morning.

The Egyptian Season.

Elsewhere in this issue will be found a report of the recent conference in London of the organisations concerned in the Egyptian tourist traffic. This is the third year of the conference, and there is no doubt now that it will be an annual affair. It enables the delegates of the various organisations to co-ordinate plans to avoid clashing in dates, etc., and so makes for the increased comfort of visitors to Egypt who might otherwise find themselves arriving at a time when railway and hotel accommodation is inadequate. The past season was very good, and the prospects for the coming one, it is satisfactory to know, are uniformly favourable. Egypt, in fact, is fast regaining her pre-War position in regard to tourist traffic.

Yugoslavia's Financial Position.

In the past two weeks I have touched on the evidence of the growing stabilisation of the Balkan exchanges. This development has been particularly noticeable in the case of Yugoslavia, whose exchange has fluctuated very little over a considerable period. This has been due to the very determined effort that has been made to place Yugoslavia's finances on a sound basis. For the first time since the War the Budget of the past year showed a surplus—a small one, it is true, but the development is none the less significant on that account. It is expected that there will be a larger surplus for the current year. Concurrently with this improvement in the national finances there has been a marked trade expansion. For the first six months of the present year the value of the exports amounted to 4,175,900,000 dinars, as compared with 3,333,800,000 dinars for the corresponding period of 1923, and for the first quarter of this year Yugoslavia had a favourable balance of trade of over 133,000,000 dinars. Thus it will be seen that the stabilisation of the exchange rests on solid foundations.

Turkish Finances.

The recent statement made by the Turkish Minister of Finance on the Budget throws an illuminating light on the precarious character of Turkey's financial situation. The Minister stated that the receipts were estimated at £T130,000,000, and the expenditure at £T300,000,000, giving a deficit of £T170,000,000, and he finds it impossible in the circumstances to present a Budget to the National Assembly. According to the Minister, the idea of a loan has not been considered, but it is obvious that Turkey will ultimately be compelled to have recourse to foreign assistance, though, unfortunately for her, her whole policy in recent years has been framed on lines calculated to discourage other countries from doing anything to help. The financial crisis will inevitably make the Turks realise the facts of the position. Alone they cannot develop the resources of the country; they must have foreign aid, and that can only be obtained if they pursue a policy which is not actuated by hostility to foreign enterprises of every description

The Cotton Position.

The cotton position has rather tended to improve from the manufacturers' point of view in the last few weeks. Although the last American Bureau report was not too favourable, it is fully anticipated now that the crop will be in the region of 13,000,000 bales, while the view taken with regard to the Egyptian crop is also on the optimistic side. In the circumstances it seems almost certain that lower prices will shortly obtain for cotton, even if there is a considerable development in consumption. The Egyptian Government, as I pointed out last week, has again decided to intervene in the cotton market, and is prepared, apparently, to make purchases on a more extensive scale than before. With large crops this attempt to sustain prices is likely to be a difficult and, it may be added, not improbably an expensive matter, and it is difficult to see how the policy can be justified on economic grounds. It is as likely as not to reduce the consumption of Egyptian cotton for the time being instead of raising prices.

Tea Shares.

The activity in tea shares has been quite a feature of the Stock Exchange for some time, and though the rise, interrupted now and again by inevitable fluctuations, has gone a long way, there seems no reason for thinking that we have seen the end of the boom. The support given by the public to this market can readily be understood. It is not merely the prospect of the continuance of substantial dividends that attracts, but the certainty that tea is not liable to the fluctuations that from time to time affect other markets, such as rubber. Tea, moreover, is a commodity that tends to be in increasing demand, and, in view of the fact that one of the most important markets of pre-War days—Russia—is still to all intents and purposes unavailable, and the demand is nevertheless fully adequate to absorb the existing production owing to the expansion of consumption in this and other countries, it is not surprising that confidence should be felt in the future of the industry.

BRITAIN AND YUGOSLAVIA.

The Yugoslav delegates attending the National Fidac Conference (Fédération Interalliée des Anciens Combatants) were entertained at luncheon at the Carlton Hotel on September 20 by the S.H.S. Fidac Entertainment Committee. Mr. Cyril Rhodes, honorary secretary of the Entertainment Committee, was in the chair, and among those present were Dr. George Todorovitch, Yugoslav Chargé d'Affaires; Major Gerald Sim, manager of the Yugoslav Express Agency; and the following Yugoslav delegates: Major Milan Radosavlevitch, M. Vladimir Bogdanovitch, Major Ljubomir Stefanovitch, Dr. M. S. Alkalay, Captain Vasa Simitch, Major Dragomir Ristitch, Major Jika Krstitch, M. Mirkovitch, M. Nedelkosavitch, M. M. Vukelitch, Mr. A. E. Maples, and Mr. Walter Grant.

In proposing the health of the delegates Mr. Cyril Rhodes said that he would take the opportunity of explaining the origin of the S.H.S. Fidac Entertainment Committee, whose privilege it was to entertain the delegates that day. When the British Legion found that Yugoslavia was sending such an influential delegation to the International Conference this year, Colonel Sir Arthur Crosfield approached the Yugoslavia Express Agency to know whether it would co-operate with the British Legion in helping to entertain the delegation. Not only did the company welcome this opportunity of expressing its good will towards Yugoslavia, but other leading British firms having relations with Yugoslavia readily co-operated, and the S.H.S. Fidac Entertainment Committee came into being. Dr. Gavrilovitch, Minister of the Kingdom of the Serbs, Croats, and Slovenes, consented to become its president. His absence that day was much regretted, but as he was on the Continent they were able to extend a cordial welcome to Dr. George Todorovitch, Yugoslav Chargé d'Affaires. The Committee received the support of the leading British steamship companies, banks, engineering and general trading companies having business relations with Yugoslavia, including the Cunard Line, the Ellerman Lines, the British Trade Corporation, and Messrs. Armstrong and Whitworth and many others. If the ideals for which the Fidac stands are to be fully realised, it is necessary that inter-Allied trade should be developed to its fullest; and this could only be done if they got to know one another personally, and thus were able to appreciate each other's point of view and know each other's requirements.

Major Gerald Sim, who also spoke, pointed out that the ideals of the F.I.D.A.C. could be furthered by the medium of mutual commercial advantage. He had been struck in his personal acquaintance with Serbia during the War, when he was a major in the Serbian Army, with the fact that there was no direct transport of goods between Britain and Serbia. Everything went either via Trieste or Salonika, or overland through Austria.

In February, 1920, therefore, he started the Yugoslavia Express Agency, Ltd., to provide direct transport from Yugoslav ports to England and America. They bought from the British Navy a small steamer to start the trade, and she was the first steamer to sail under the British flag direct from England to a Serbian port. In 1913 one British steamer went to the harbour of Gravosa. In 1923 there were seventy-seven large British steamers in Gravosa, and for the first six months of this year sixty. In fact, the resources of the harbour had been outgrown. This meant a great deal to Yugoslavia in direct and indirect revenue. The employment of hundreds of men as stevedores, the revenue to the railways, the port dues, purchases of stores and produce for the needs of the ships and their crews, these were some of the most obvious gains, and there were numbers of others. Their policy had been to encourage exports from Yugoslavia, in the sure knowledge that imports must inevitably follow in an ever-increasing scale. This policy had, therefore, the effect of tending always to improve the Yugoslav exchange.

THE EGYPTIAN TOURIST SEASON.

Annual Conference in London.

Under the auspices of the Egyptian Promotion Association, the third annual conference of representatives of the tourist associations, steamship companies, hotel syndicates, the Egyptian State Railways, etc., was held on September 25 at the offices of the Egyptian Government, Queen Anne's Chambers. Those present included Mr. H. W. Tite (International Sleeping Car Co.), Mr. Weaver (Egyptian State Railways), Major Newcombe, Mr. A. S. Bull and Mr. A. P. Bolland (Sudan Government), Mr. Petty and Mr. Jackson (Thos. Cook and Son, Ltd.), Mr. Charles Baehler, representing the Egypt Hotels, Ltd., the Grand Hotel of Egypt, the Swiss Egyptian Hotels, and the Upper Egypt Hotels, M. Barillet (Heliopolis Palace Hotel), Mr. Percy (the National Hotel), Mr. Lewis and Mr. Clarke (Cunard Steamship Co.), Mr. E. Trevor Lewis (White Star Line and Red Star Line), M. du Sejour (Messageries Maritimes), Major Stormont (Lloyd Triestino and Sevizi Marittimi), Mr. H. G. Dring and Mr. Fredk. G. Thaw (Canadian Pacific Railway Co.), and Mr. Philip S. Taylor (secretary).

On the proposal of Mr. Baehler, Mr. H. W. Tite was unanimously elected chairman. Mr. Tite said that it was reported to him in Cairo last winter that a representative of a certain group expressed the opinion that that annual meeting in London served no useful purpose. Personally he was of the opinion that it was extremely useful.

American cruises to Egypt appeared to be gaining in popularity. The number of cruises due in Egypt during the coming season was sixteen, beginning with the White Star s.s. Adriatic (which would pay two visits), and including the largest liner that has ever visited Egypt—the s.s. Mauretania.

The other vessels which will bring passengers will be the s.s. Homeric, Arcadian, Empress of France, Empress of Scotland, Lapland (three visits), Franconia, Scythia, Laconia, Belgenland, California, Rotterdam, Samaria, and Marloch.

Judging by the figures produced at the meeting, Egypt is going to have a record season, the numbers far exceeding those of any pre-war season. The bookings so far exceed the number of visitors to Egypt during the whole of last season.

At the conclusion of the meeting Mr. Baehler, managing director of the Egyptian Hotels, Ltd., invited all present to lunch at the Savoy Hotel the following day. The majority of the delegates availed themselves of Mr. Baehler's invitation. About thirty persons sat down to an excellent lunch, at the conclusion of which Major Newcombe, on behalf of the guests, thanked Mr. Baehler for his hospitality.

British Consular Reports.

VII.—EGYPT *(continued)*.

Machinery of Government Finance.

As considerable interest is now being taken in the machinery of Government finance in this country as the result of the opening of the first Egyptian Parliament on March 15, 1924, an explanation of the functions and composition of the General Reserve Fund; of the actual state and service of the Egyptian Public Debt; and of the mechanism of currency and exchange in Egypt, should not only prove of general interest, but also give a clearer indication than has been possible in previous annual reports of the economic and financial situation of the country.

General Reserve Fund.

The application in Egypt of the capitulatory régime to Europeans makes it impossible for taxation to be levied on the subjects of the Powers concerned without their unanimous consent, with the result that Egypt's choice of, and power to create, fresh sources of revenue are restricted. Her chief existing sources of revenue are the customs—*i.e.*, import duties on merchandise and tobacco dues; the railways; and the cotton crop, whose value affects almost every source of revenue either directly or indirectly, and it is to make good abnormal budgetary deficits which cannot be met by administrative economies or fresh taxation, that the general reserve fund has been created. The conspicuous example during the last ten years of its usefulness for this purpose was afforded by the way in which an exceptional deficit in the 1920-21 budget arising out of the purchase on a huge scale, and at high prices, of coal, wheat and wheat flour, was met. In this instance so large an inroad was made into the reserve fund that it shrank from over £E17 millions on March 31, 1920, to only a million and a-half a year later.

Although only three financial years have elapsed since that crisis, there is every prospect of the Reserve Fund being restored as from April 1, 1924, to a figure not far short of a million in excess of that at which it stood on March 31, 1920.

It must, however, be borne in mind that extensive and urgent use of the proper function of the reserve fund is only made possible by the investment of the bulk of it in securities that are easily realisable at any moment, and whose conversion into cash does not disturb the national credit. Thus, although a considerable proportion of such investments are in the form of Egyptian Government securities, it is British and Indian securities which, having from 1915 to 1920 been considerably in excess of the former, have so successfully borne the brunt of urgent and extensive requirements of ready money, that their sale has obviated almost entirely the need to realise any Egyptian securities, and thus precluded the possibility of a depression of the national credit which would have resulted from the realisation on a large scale by the Egyptian Government of its own securities.

The latter have thus been able to occupy, undisturbed, their particular sphere of usefulness—viz., firstly, that of providing cover for the debit balance at the National Bank of Egypt temporarily created every year, in which the Reserve Fund is at all fully invested, by the irregularity of revenue production from taxation under certain heads; and secondly, that of contributing to revenue in the form of interest on funds.

The Government Debt.

The Egyptian Government securities in which a portion of the reserve fund is invested take the form of bonds of the Unified Debt 4 per cent., the Privileged Debt 3½ per cent., and the Guaranteed Debt 3 per cent., which together constitute the Consolidated Debt. Its position on December 31, 1923, was as follows:—

Balance outstanding, £92,468,640 (Guaranteed Debt, £5,368,900; Privileged Debt, £31,127,780; Unified Debt, £55,971,960); Bonds in circulation, £83,856,620 (G. Debt, £5,006,300; P. Debt, £28,698,960; U. Debt, £50,151,360), the difference representing the value of the Bonds held by the Government and Debt Commission.

The Guaranteed Debt has been reduced by statutory annual amortisation from £9,424,000 in 1885.

As regards the bonds in circulation, it is a matter of considerable labour and difficulty to ascertain the proportion of the Debt respectively held in Egypt and elsewhere, owing to the fact that the quantity of coupons presented for payment in London, Paris, Cairo, and Alexandria forms no guide to the whereabouts of the holders, but, according to an authoritative statement, it was estimated that quite a substantial proportion of the public debt of Egypt was held in Egypt towards the end of 1923, and that the public fortune of the country stood at about £E95 millions.

Certain it is that there is an increasing and welcome tendency on the part of wealthy Egyptians to invest in Privileged and Unified Debt instead of hoarding their surplus funds anywhere but in banks. It is of interest in this connection to note that the market value of both these Government securities rose steadily during 1923. On December 31, 1922, Unified was quoted at £69 1s. 3d. and Privileged at £60 8s. 9d., whereas on the same date in 1923 they had risen to £74 3s. 9d. and £64 10s. respectively.

Service of the Debt.—The expenditure budgeted for yearly by the Egyptian Government for the service of the Consolidated Debt, including payment of interest thereon and statutory amortisation of the Guaranteed Debt totals £E3,552,266 per annum, to which must be added nearly £E44,500 for the expenses of the Debt Commission. The first-mentioned total is made up as follows:—

£E307,125 for the Guaranteed Debt.
£E1,062,235 for the Privileged Debt.
£E2,182,906 for the Unified Debt.

In order to meet this yearly expenditure the revenues of the Land Tax from all but one of the fourteen provinces of Egypt, together with the temporary surtax of 5 per cent. to 10 per cent. thereon levied since 1910 for educational purposes, are paid direct to the Debt Commissioners.

By the Decree of November 28, 1904, it was enacted that, without the consent of the Powers, no modifications in the Land Tax liable to reduce it below a total of £E4 millions can be made. The revenue from the provinces concerned, however, is more in the neighbourhood of 5 millions than 4 millions £E.

By this decree the Caisse de la Dette was granted a permanent reserve fund fixed at £E1,800,000, and a further sum of £E500,000, as a Fonds de Roulement or fund for working expenses which is always kept in cash. The latter sum has been virtually increased as the result of three subsequent agreements with the Ministry of

Digitized by Google

Finance, by £E1,110,000, but this addition is described as a "carry over," to distinguish it from the original Fonds de Roulement, fixed at £E500,000.

The reserve fund of the Caisse de la Dette, which is quite separate from, and independent of the general reserve fund of the Egyptian Government, is kept intact, thanks to the mechanism provided by the Fonds de Roulement, and "carry over," which is explained below. This reserve fund is entirely invested in the Government Debt securities, and of the totals given in column 2 of the table showing its position on December 31, 1923, the bonds held by the Debt Commission consisted of £Stg.1,561,220 of Unified, and £Stg.284,940 of Privileged (the latter including £Stg.49.800 held against the liquidation of the floating debt). Their holdings in the two debts, amounting in all to £Stg.1,846,160, represent the original total of £E1,800,000.

As the service of the Debt has to be met at regular intervals, the earliest of which coincides with a period when the revenue from the Land Tax, at best most irregular in time incidence, has not yet begun to come in, the Fonds de Roulement and the "carry over" are drawn upon, subject to their complete reconstitution by the end of the financial year out of the Land Tax revenues as they become available.

This reconstitution takes place by the end of November, and from then to March 31 the Debt Commission is at liberty to place sums from the "carry over" on loan, subject to repayment, without notice. When such loans are made to the Egyptian Government they are guaranteed by Government Debt securities. The interest accruing from these loans, which is generally at a very low rate, as well as that derived from the investments constituting the Reserve Fund, contribute towards the balance that has to be paid to the Egyptian Government at the end of each financial year, after the expenses of the Debt Commission, the service of the Debt, and the reconstitution of both the Fonds de Roulement and the "carry over" have been met out of the Land Tax revenues.

As a result of the use made of the Fonds de Roulement and the "carry over" the Reserve of the Caisse de la Dette is kept intact; it can only be drawn upon for the service of the Debt in the event of the total revenue of the Land Tax available therefor proving insufficient in any given year. In the unlikely event of this contingency the order in which sums drawn from the reserve are to be utilised is as follows:—Firstly, service of the Guaranteed Debt, which enjoys absolute priority under all circumstances secondly, payment of the interest on the Privileged Debt; and thirdly, interest on the Unified Debt.

Favourable Trade Balance.

An increase of some £E1,900,000 in imports and of £E9,671,000 in exports in 1923 over 1922 has, in spite of a decline of over a million in re-exports, not only produced a favourable trade balance of £E14,500,000, but also raised the total foreign trade of Egypt above the £E100 millions mark for the third time since the War. The greater increase in exports is due, as might be expected, to the successful marketing of Egypt's cotton, the export of which in the year 1923 realised nearly 50 millions £E, as compared with close on 40 millions £E in 1922.

The increase in imports is chiefly accounted for by cotton piece goods, wheat flour, tea, sugar, and coal, in that order, in spite of decreases, in six out of fourteen categories, and in tobacco as well.

The countries which have chiefly contributed to the total increase are Italy (who, by increasing her imports by more than £E1,100,000 and her percentage of the total imports from 7.3 to 9.42, has superseded France and attained second place after the United Kingdom), Australia and New Zealand. British India, other British possessions in the Far East, Palestine and Russia. Thus, although the increase in the United Kingdom's imports is so small that her percentage of the total imports has fallen from 34 to 32.6, the Dominions and Colonies, by increasing their combined percentage from 7.06 to 8.95, have raised that of the British Empire (excluding Palestine and Mesopotamia, which have both increased their imports) from 41.06 to 41.55.

Other countries whose imports have increased are Belgium, China, Czecho-Slovakia, Holland, Japan, Switzerland, Syria, and the United States of America, while decreases are to be seen in the case of Austria, Chile, France (whose drop of over £E200,000 helped Italy to usurp the place she held in 1922), Germany, Roumania, Sweden, and Turkey.

The increase of nearly half a million £E in imports from Australia and New Zealand, which rose in 1923 to the fifth place, and exceed those from the United States of America, is almost entirely due to wheat flour. This commodity also contributes, together with tea, jute textiles, cotton yarn, and cotton piece goods dyed in the yarn, to British India's increase of £E400,000. Tea also accounts for a good deal of the increase of £E130,000 from other British possessions in the Far East.

In spite of noteworthy increases of £E320,000 in coal, £E76,000 in stationary internal combustion engines, £E41,000 in tinplate of all kinds, £E37,000 in iron or steel axles, wheels, and springs, £E30,700 in sewing cotton, and £E29,500 in woollen hosiery, the net increase in imports from the United Kingdom in 1923 is only £E40,000. The principal decreases are cotton piece goods £70,000, carpets and floor rugs £E62,600, miscellaneous machinery £E60,000, cotton yarn and cheese £E46,000 each.

Competition.

The smallness of the net increase in United Kingdom imports is due to varying decreases in a large number of articles rather than to decreases in a few, and also to increasing competition.

The most conspicuous example of foreign competition afforded in 1923 is the increase in cotton piece goods from Italy, which accounts for more than half of her total increase of £E1,100,000 in 1923. The principal factors in the increase of the value of cotton piece goods from Italy by nearly 66 per cent. consist of goods dyed in the yarn—of

Digitized by Google

which her share in 1923 is considerably in excess of that of the United Kingdom—of printed goods and goods dyed in the piece. As regards the quantities imported from Italy, the increases are even more formidable: thus the number of square metres of goods dyed in the yarn is nearly double that imported in 1922, and, naturally, considerably in excess of the quantity imported from the United Kingdom, while the proportionate increases in greys, bleached and printed goods and in goods dyed in the piece, are also considerable; the total increase for all categories amounts to nearly 72 per cent.

The decrease in total value of cotton piece goods from the United Kingdom of £E70,000 is accounted for by the combined drop in bleached and printed being greater than the joint increase in greys, dyed in the piece and dyed in the yarn, and it should be noted that, although the value of the United Kingdom's imports of dyed in the yarn in 1922 exceeded that of Italian imports by over £E124,000, the increase in the latter has been so much greater than the rise in the former, that Italy in 1923 is £E187,000 ahead of the United Kingdom. The same feature characterises the increases in quantity from the two countries in this particular category, and increases in the number of square metres of greys, dyed in the yarn and in the piece imported from the United Kingdom have not sufficed to prevent the decreases in bleached and printed, from producing a net decrease in the United Kingdom total for all categories of 700,000 square metres.

The increase in the total number of motor-cars and motor-lorries from 1,248 to 1,543 in 1923 is due chiefly to a considerable rise in the number imported from the United States of America, which holds pride of place in both quantity and value, the latter having risen by nearly 50 per cent. French imports were more than doubled, British imports increased by about 60 per cent.—viz., 57 to 93, accompanied, however, by a considerable decline in value; but appreciable decreases both in number and value of German, Italian, Belgian, and Austrian imports, though failing to affect the increase in the total number, brought about a decrease in the total value. The increase in French cars in 1923 consisted, for the most part, of light and "baby" models. British light cars at very reasonable prices, as also those of American and French manufacture, are now successfully challenging the popularity of the Italian model, and it is to be hoped that the British light models, which have recently made their first appearance in the Egyptian market, including "runabouts," which compare very favourably with their cheap-looking German rival, will continue to be sold in Egypt at prices that will command a ready market. The import of taxicabs was marked by the introduction of a number of very smart coupés of Italian manufacture, which have proved very popular.

Exports.

The net increase of £E9,670,909 in the value of exports in 1923 is due primarily to cotton, which actually accounts for £E9,801,524, but other noteworthy increases are £E725,000 in sugar, £E595,000, in cotton-seed, and £E253,000 in cotton-seed oil, which more than offset the principal decreases, viz., £E800,000 in onions, £E265,000 in cigarettes, £E192,000 in benzine, £E122,000 in rice, and £E36,000 in eggs. The increase in sugar exports is remarkable in view of the fact that the removal on May 10, 1923, of control automatically terminated prohibition of the free import of this commodity, since, in spite of this, the quantity of refined cane sugar exported rose from 13,126 tons, worth £E332,450, in 1922, to 37,550 tons, worth £E1,057,760 in 1923, the largest share of it going to Great Britain, with lesser quantities to Mesopotamia, Palestine, French Mediterranean Possessions, and British India.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Brocklebank Line.—S.s. Manaar for Port Said, Colombo, Madras, and Calcutta (London, October 4).

Anchor Line.—S.s. Massilia for Bombay (Liverpool, October 6).

British India Line.—S.s. Manela for Bombay and Karachi (London, October 10); s.s. Nevasa for Colombo, Madras, and Calcutta (London, October 11).

Clan Line.—S.s. Clan MacInnes for Bombay and Persian Gulf (Birkenhead, October 15).

Ellerman "City" Line.—S.s. City of Hong Kong for Calcutta (Birkenhead, October 15).

Johnston Line.—S.s. Tramore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, October 18); s.s. Sycamore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila. Closing November 5. (The last steamer of the season to Galatz and Braila.)

P. and O. Line.—S.s. Narkunda for Bombay (London, October 3); s.s. Khyber for Colombo, Madras, and Calcutta (London, October 4).

Near East Markets.

LONDON PRODUCE REPORT.

Good Demand for Dried Fruit.

(From Our Own Correspondent.)

London, Tuesday Morning.

Coffee.—The firm tendency reported last week has continued. Costa Rica at 164s. is 4s. up, East Indian is unchanged at 140s.; Santos remains at 104s., while Kenya is unaltered at 136s.

Sugar.—Home refined has continued in fair request at last week's prices. Tate's cubes are 45s. 9d., London granulated is 40s. 4½d., while Lyle's granulated is 40s. 7½d. Foreign descriptions have been firm. West Indian crystallised has been done at 35s. 6d.; White Java at 36s. 4½d., and Czech granulated at 39s., all the same as last week. Futures are quiet: October, 23s. 3d.; December, 20s. 6d.; March, 20s. 3d.

Maize.—This commodity has been in good demand, and prices show an advancing tendency. La Plata has been done at 43s. 9d. spot, at 43s. 6d for October-November, and at 44s. 1½d. for November-December.

Currants.—Business has been on a very poor scale, the tendency being to await developments.

Sultanas.—A very firm tone prevails for Smyrnas. The fruit now arriving is of good quality, and this factor has naturally had its effect on the market. The demand for the Continent has continued.

Figs.—There is a good supply of figs, and this commodity is now moving off freely. Prices are firm, and there is an advancing tendency.

Plums.—The tone has continued to be very firm. The demand shows signs of broadening, and all the indications point to the continuance of last season's good trade.

Oilcakes.—A firm tendency has prevailed. Linseed cake is unchanged at 275s., cottonseed cake is the same at 185s., while coconut cake is unaltered at 220s.

Oilseeds.—Linseed has been quiet, Indian being 23s., while La Plata is 21s. 5d. Rapeseed has been firm. Toria is 23s. 6d., while real bold Ferozepore is 22s. 10½d. Cottonseed has been steady. Indian is 11s. 1½d., Egyptian black is 13s. 3d., while Sakellaridis is 13s. 4½d.

Seed Oils.—Linseed oil has been steady, closing at 43s. 6d. Rape oil has been firm, with crude at 48s. 6d., and technical refined at 51s. 6d. Cottonseed oil has been steady. Refined common edible is 49s., Bombay crude is 42s., Egyptian crude is 43s., technical is 46s., while deodorised is 51s.

The increased duties of 360 piastres and 1,140 piastres per 100 kilogs imposed in Turkey on imported wheat and flour were enforced at Constantinople as from September 1.

The Greek Ministry of Communications has signed Conventions for an air service to be carried on between Marseilles, Corfu, Athens, and Syria by a French company, and between Brindisi, Athens, and Constantinople by an Italian company.

SMYRNA FRUIT MARKET.

Messrs. C. J. Giraud and Co. report as follows for the week ended September 13:—

The arrivals of sultanas on the Smyrna market since the opening of the season are estimated at 15,500 tons, and the sales to date are put at 13,660 tons. Closing prices, per cwt., c.i.f., London/Liverpool, are Type 12, 45s.; 13, 48s.; 14, 51s.; 15, 53s.; 16, 58s.; 17, 65s.

The market closed firmer, with indications of a higher level of prices obtaining next week. Demand is showing increasing activity.

The fig market is very firm. The prices paid were above the previous week's level. The opinion is now becoming general that the crop will be over 20 per cent. short of last season.

In their report for the week ended September 20 Messrs. C. J. Giraud and Co. state:—The arrivals of sultanas since the opening of the season are estimated at 20,700 tons, and the sales are put at 17,482 tons. Closing prices: Per cwt., c.i.f. London/Liverpool: Type 12, 45s.; 13, 48s.; 14, 51s.; 15, 54s.; 16, 63s.; 17, 75s.

The sultana market up to the middle of the week advanced gradually to the highest point touched this season. Low and medium grades subsequently receded to last week's closing level, but fine fruit, owing to scarcity, is realising fancy prices. The high level of prices ruling is due to the heavy forward engagements for September shipment, and the level now reached is well over what consuming markets appear disposed to pay. Indications point to a decline next week, particularly in the low and medium grades, which should become more pronounced in October.

The fig market is firm. The Government has again stopped arrivals to the market up to October 3. The supplies on hand are barely sufficient for this interval.

NEWS FROM ALL SOURCES.

Wm. H. Muller and Co. have been appointed agents at Alexandria for the Roosevelt Steamship Company, of New York.

The Commercial Bank of the Near East has declared an interim dividend for the half-year ended June 30 at the rate of 8 per cent. per annum, less tax.

Imports into Czecho-Slovakia in July amounted in value to 1,229,526,645 crowns, while the exports were valued at 1,311,899,207 crowns. For the first seven months of this year Czecho-Slovakia had a favourable trade balance of 650,703,428 crowns.

The *Official Gazette* of the Serb-Croat-Slovene Kingdom states: The duties levied on the exportation of certain foodstuffs from Yugoslavia have been reduced or withdrawn as from September 11. The new duties are as follow:—Wheat, 16 dinars per 100 kilogs; rye, 10 dinars per 100 kilogs; semolina and wheat, rye, maize, oat and barley flours, and meal, free.

TO INTENDING SETTLERS IN U.S.A.

FIG ORCHARDS On West Columbia Estates, Texas,

yield over 50 per cent. per annum, after third year. The Fruit is sought for by the Preserving Companies, and the produce is sold five years ahead. Cost, including clearing, planting and cultivating until end of third year, £120 per acre freehold. Living conditions delightful. Soil recommended by Government Department of Agriculture.

Engineering Topics.

The Motor Show.

It was a happy idea on the part of the Society of Motor Manufacturers and Traders, Ltd., who are responsible for organising the Motor Show, to bring forward the date this year. November has been the month of previous Shows, but in view of the fact that a large number of Colonials and Overseas visitors are here in connection with the British Empire Exhibition, it was only natural to assume that it would be an advantage to hold the Show from October 17 to 25, to give them an opportunity of inspecting the latest productions of the automobile world.

The chief feature of the 1924 Exhibition will undoubtedly be the miracle in values, whilst the equipment will give occasion for wonder, especially when the days when hoods, windscreens, lamps, horns, and even lamp brackets formed extras on the bill are remembered. It really seems as if manufacturers have reached the limit in equipment furnishing, for in many instances it covers, besides the generally accepted equipment, windscreen, driving mirror, speedometer, spare wheel and tyre, rear windscreen, grease gun, spare petrol can and holder, a supply of lubricating oil, licence holder, shock absorbers, and spring gaiters.

The announcement of new prices a little time before the opening of the Show, which policy has been adopted by many firms of late years, is no doubt an advantage to the motorist, because it gives him an idea as to the prices which will rule for next season. The visitor to the Show, therefore, is already cognisant of the prices, and will be able to have his mind completely centred upon the comparisons in value, thereby permitting him to arrive at a much quicker decision.

The character of the Show has always been essentially international, which is largely responsible for Olympia being the recognised world's market, and gives the reply to the question why motorists and traders from all parts of the world are attracted to this great Exhibition; the nations represented including Great Britain, France, America, Italy, Belgium, and Holland.

The latest American licensing returns illustrate the remarkable strides made by the automobile; in U.S.A. it is reckoned that 7.2 of the population own a car, which record, however, is beaten by California, where every third person is an owner. It will, therefore, be perceived that Great Britain has a very long way to go before these figures are approached, but without doubt the gap will be considerably lessened, for the models at the Show will certainly exercise their persuasive powers and cause thousands of waverers to hesitate no longer. With petrol, tyres and cars cheaper, and with the opportunity of obtaining any make by deferred payments, enabling the vehicle to be purchased out of income, the chief obstacles against car ownership will be swept away.

In the miniature light car and the most expensive motor in the world Great Britain holds pride of place. but between these two extremes international rivalry of the keenest character is manifest, offering motorists a bewildering wealth of very fine vehicles. Fierce competition centres around the medium powered car, which, by reason of its utility, has the largest demand, and in the markets of the £300 to £500 classes the purchaser will be amazed at the various types at his command.

To the individual who talks of finality in design the various chassis will give emphatic contradiction, but although finality has been by no means reached, the Show reveals no revolutionary change. The general lay-out of the engine, clutch, gear-box, and final drive will follow the accepted lines. It is in improvements that progress is manifest; the employing of specially treated steels, which combine remarkable strength with extreme lightness, the development of miraculous power from miniature engines, and improved systems of suspensions, are a few points which will strike the observant visitor when examining the engineering side of the Show.

Those firms who entered upon what is termed "mass production" are now giving their customers the price advantages which this method of manufacture allows, together with a sound reliable car in which weaknesses have been eliminated by experience. It must not, however, be assumed that the "mass production" car predominates; the number of manufacturers who are exhibiting illustrates the desire for individuality; to have something different, something unique, and, it may be added, something better, is subconsciously ingrained into the motorist's ego, which is all for the good of the industry, resulting in features stamped with individuality, and thereby saving the motor from complete standardisation, which would be detrimental to progress. There is infinite variety in the models on view; engines with 8, 6, 4, and 2 cylinders; side by side valves still put up a good fight against the overhead system; three-speed or four-speed boxes have their adherents; and although the six-cylinder cars are increasing in number and marketing at extremely tempting prices, there appears to be a lull in the battle of the cylinders, even the "six" diehards apparently arriving at the conclusion that there are good points in a four-cylinder which cannot be denied, and for which there is a strong appeal among a large majority of motorists.

One of the great features of the 1924 Show is the popularity of the saloon type of vehicle. To-day even those who were most antagonistic in the past to the completely closed car not only admit its advantages, but in many instances decide that the saloon must be their choice when investing in a new car. The great drawback to the saloon in the old days was its excessive weight, making it only suitable for big powered chassis, but the great revelation in coachwork to-day permits saloon bodies to be fitted to quite baby chassis.

The two other features of outstanding attraction will be the development in tyres, known as the "Comfy," "Balloon," "Low Pressure," and front-wheel brakes. It must be confessed that when the Balloon tyre entered into the field it upset a good many of the existing theories.

Motorists had been urged to keep their tyres pumped hard, and the manufacturers used to produce a cover with a generous amount of rubber on the tread. It was only natural, therefore, that motorists viewed with suspicion the Balloon tyre, although its merits were immediately apparent, but to-day tyre manufacturers can furnish such remarkable evidence of long mileage, safety, and freedom from punctures, despite the fact that the tyres are much thinner than the orthodox type, that it is not surprising to find low pressure tyres figuring as standard equipment on a large number of 1925 cars.

YUGOSLAVIA AND THE ADRIATIC.

In the current issue of the *Economic and Financial Review* of Belgrade there is a most interesting article on "The Connection of the Danube with the Adriatic Sea," by M. G. Casteran. He points out that the different commercial routes of Yugoslavia are used almost exclusively for carrying towards foreign markets various commodities, and that, despite the advantages which the Adriatic ports and the lines leading to them might be able to offer, Yugoslav foreign trade is distinctly directed towards the north and north-west. He continues:—

In all economic circles it is unanimously agreed that the outlet on the Adriatic Sea obtained by the breaking up of the old Austro-Hungarian Empire should not remain a mere passive possession. The Southern Slavs have desired this frontage to the world too much not to feel all the advantages that they can get from it now and in the future. But the question of the reconstruction of the railways and the connection of the Danubian districts with the Adriatic ports then arises, and we find ourselves up against one of the most difficult questions with which the governments which have come to power in Belgrade since the War have had to deal.

At first it was a question of carrying out the junction of Belgrade with one of the Yugoslav ports nearest to Fiume. Bakar, Split, and even Shibenik were subject to choice, and each of them had ardent defenders. The conclusion of the gold dollar loan with the Blair group in America revived these disputes. The funds from this loan were to be used up to the amount of 75 million dollars for the construction of the Adriatic line and the equipment of the terminal port of the line.

After much hesitation and a long examination of the different plans which had been put before the Department in charge of new constructions at the Ministry of Communications (there were not less than eight plans to be studied), the line from Belgrade through Vishegrad to the Kotor estuary was adopted and the engineers of the Blair group began to work out plans with a view to starting work as soon as the loan had been successfully issued. . . . The choice of one single terminal point was strongly criticised. The question was clearly put; the connecting line between the Danube and the Adriatic should be a centre on which branch lines should converge and a route to be used by international traffic. Can this end be achieved by the construction of the single line or by the creation of a complete system? The Association of Yugoslav Engineers which was holding its congress in Zagreb at the time when the Blair Loan negotiations were in process, answered this question by rejecting the first solution and put forward a complete plan elaborated by the engineer Vasskovitch and supported by his thesis on the subject. We do not believe that amid all the controversy that has arisen over the route which this Adriatic line should take there exists a more clear and more complete statement of the whole question.

Send to-day to Whitelaw's, 39, Lombard Street, London.

Est. 1880. :: :: :: :: 'Phone: 4044 Royal.

The writer begins by stating bluntly enough that the kingdom has never had a railway policy properly speaking. We should note that this work was done in 1922, and that since then many of the deficiencies have been made good. M. Vasskovitch then recalls the fact that a conference of experts, delegates from the different regional administrative headquarters, arranged a programme including the construction of seventy-four new lines.

M. Vasskovitch criticises the suggestion of a Belgrade Adriatic line which does not provide for the satisfaction of the complex interests of post-War Serbia. He attributes a great importance to the communications of the different provinces of our kingdom with the Adriatic. He considers the communications with Italy, Austria-Hungary, Roumania, Bulgaria, and Greece are sufficient for the moment, even from the strategical point of view. The direction of our communications towards the south is of great importance. With the present development of our coast it cannot be a question either of a single Adriatic line, or even of a principal line which should be of predominant importance. Several lines of equal importance should be considered whose object should be to connect the Adriatic with the different districts of its hinterland by lines which should follow natural paths such as the beds of rivers, low-lying land, etc. Furthermore, these arterial lines should be interconnected.

It seems that the chief error committed up to the present has been that of elaborating plans for ideal systems. It is more necessary to think of plans which can be immediately carried out. There are some lines of which the need is most urgent, others which may form part of a programme to be carried out over a long period. It seems that it is not realised that the first works to be begun should be those which are intended to unite Serbia and Montenegro with the liberated districts of the south. It is in our opinion the surest way of ensuring economic and national consolidation. It must not be forgotten that these districts were centred economically on Salonika up to the year 1912, and that now that they are separated from this port they are constantly waiting in their isolation for the initiative which will give them the prosperity to which they can lay claim.

To sum up, all the advisers seem to agree that the port of Split is much better fitted than that which would have still to be created on the Kotor Estuary to act as the outlet for the goods brought towards the sea by the Adriatic line or other lines. That will in no way hinder Kotor from becoming the port of Southern Serbia, while the port at Baroshe will receive the traffic carried by the already existing Zagreb-Soushak line. We must, however, keep in view the material point of view, and consider, for example, that it will be more to the interest of Belgrade to be connected with Split, from which it is but 420 kilometres distant, than to Kotor by a line which would have to be constructed over a length of more than 600 kilometres. The cost of carriage of a ton of merchandise from Belgrade to the Kotor Estuary would be 28 dinars, whereas the cost to take it to Split would be only 20 dinars.

Cotton and Cotton Goods.

EGYPTIAN GOVERNMENT AND COTTON.

(From Our Own Correspondent.)

Cairo, September 19.

As a result of the great pressure put upon it by the large cultivators, the Government has decided to intervene as purchaser on the local cotton market—the spot market only, not as many wanted the futures market—and instructions have been given to the National Bank of Egypt to start operations forthwith. Though no limit has been announced, it is understood that the Government is prepared to make more extensive purchases than before, and that its main object is to maintain the margin between American and Egyptian at a reasonable figure. I gather that the financial authorities of the Government recognise that at best this can be but a palliative, but that they had to bow to the pressure of public opinion.

THE EGYPTIAN MARKET.

Futures Dull.

The Alexandria Commercial Company, in their report for the week ended September 18, state :—

The market during the week has, on the whole, been somewhat heavy. The net changes since last Thursday are :—Sakellaridis, $0.15 down for November, $0.10 down for January, $0.50 down for March; Ashmouni, $0.80 down for October, $0.95 down for December, $0.90 down for February. Prices have approximately followed the fluctuations of New York. At one time Sakel was $1½ and Uppers $2½ down from last week, but a reaction to-day raised prices, so that the losses on the week are reduced to small proportions. The demand from abroad has been rather better than last week, but it is not to this that the reaction is due; the reason of to-day's improvement is the report that the Government has decided this season again to support the market, if necessary. No details of this decision are known, but the mere report has been sufficient to inspire a return of confidence on the part of speculators, and the liquidation of the balance of the long positions created during the summer has ceased.

The difference between the Sakel and Uppers contract has widened again to 990 points; it appears that sales of Sakel for September shipment are rather larger than it was thought, and arrivals accordingly are not weighing on the market. The turnover of business has been fairly large, and the better demand from consuming centres has been reflected in the purchases by export houses. The week's receipts amount to 174,915 krs., against exports 73,055 krs.; the stock stands at 468,560 krs. The consumption figures of cotton in the U.S.A. for the month of August are 357,000 B/s, against 347,000 B/s the previous month and 492,000 B/s during August last year.

Spot.—The market has been somewhat more active during the week. Total sales amount to about 15,300 B/s, of which we estimate 4,500 B/s Sakel, 9,000 B/s Uppers, 1,500 B/s Zagora, 100 B/s Pilion, 100 B/s White, and 100 B/s Brown.

Sakellarides.—All grades have been dealt in, but the bulk of the business done has been in cotton above Fully Good Fair. Fully Good Fair is still much in demand, but the new crop arrivals have not so far included much of this grade. The premiums for the higher grades have stiffened somewhat.

Lower Egypt Zagora.—There has been a little more inquiry for this variety, but buyers are not out to pay high prices. Holders, however, are reasonable in their demands, and with the supply of this cotton increasing daily, they are fairly ready sellers.

Uppers.—A good business has been done in the grades from Fully Good Fair/Good to Fully Good at about last week's premiums. Fully Good Fair is as yet in small supply and difficult to buy except at very full prices. The lower qualities are neglected.

Various.—There has been a small turnover in Pilion, White, and Brown, practically all in the high grades.

Crop, 1924.—There is very little to say on the crop. The Sakel crop is maturing regularly, and prospects are for a good yield. The average condition is at present slightly above normal, and the pink boll worm attack is not heavier than usual. Our latest inspection in Upper and Middle Egypt confirms that the crop there has not turned out at all as well as expected; very hot weather during August forced many bolls to open prematurely, and the result will be an average yield about 10 per cent. lower than last year.

LIVERPOOL COTTON REPORT.

Egyptian Crop Estimates.

Messrs. Reynolds and Gibson report as follows for the week ended September 24 :—.

Egyptian Spot.—A very fair inquiry has again been witnessed, and although a decrease of some seven hundred bales has to be recorded in the sales, this is quite understandable when one considers the very poor selection of spot cotton which has been available, together with the fact that the week has been marked by two very surprising Government crop estimates. The first, from Egypt, was treated here with derision, but unfortunately Alexandria (which had already been electrified by some modest purchases on Government account) seized the opportunity to rush prices up, and this had the usual effect of checking business on this side.

The rise failed to hold (as was expected) and spinners were again showing interest in the spot cotton when out came an unexpectedly "bullish" American crop report. Prices in both markets again soared upwards, and a further check to spot

ARTHUR MORRIS & CO.

Digitized by BEIC

business has resulted. Apparently this second rise is not going to hold either, and we look for a further resumption of trade buying before long, as, generally speaking, it is surprising how calmly the trade has taken these two rapidly succeeding shocks. The opinion is becoming fixed that a crop of Egyptian cotton from 7,500,000 to 7,750,000 kantars may be confidently expected. The latest news speaks of the Sakel crop as turning out better than had been expected, but reports of increased damage to the Upper crop are on the increase. "Overland" samples of the earlier shipments (due here this next week-end) are satisfactory, both for Sakel anl Uppers, and a fair business has taken place in this cotton for early delivery. Shippers, on the whole, have not been unreasonable when bids have been sent.

A good c.i.f. businss took place early in the week, but this died away when price fluctuations became so erratic. The local inquiry has displayed few fresh features. Sakel, about Good Fair to Fully Good Fair, has been in good request at irregular prices, and "300 to 600 on" cotton has received its usual share of attention, but for both the results obtained have been poor. The "off" cotton continues to be pressed for sale. In Uppers, "the best close at hand," that is to say, on board the Sitra or the City of Lancaster, has been a popular inquiry, and such cotton has changed hands at prices ranging from 17.00d. to 18.50d. per lb.

A fair business has been done in Sudan cotton at hardening rates, Sakel predominating. Brown, Pilion and White cotton have been rather more in the limelight, chiefly for shipment. It will be interesting to observe to what extent the arrival of the two ships mentioned above will affect the spot prices here. A large proportion of their cargoes must already have been sold whilst in transit.

For the present, the discounts at which the Liverpool market stands as compared with Alexandria will act as a check on the sending of consignments, and this should have the effect of keeping up prices at this end. Thus, if any break occurs, it seems reasonable to expect it in Egypt, where the weight of the daily arrivals must soon be felt, rather than here. Forwardings to spinners for the week ending September 19 were returned as 7,094 bales. Estimated sales 1,500 Egyptian and 600 Sudan. Quotations for Upper and Brown have been raised 90 points. In Sakellaridis, Fair is 85 points up, Good Fair and Fully Good Fair are 115 points higher, while Good, Fine, and Extra Fine are 100 points higher on the week. Fully Good Fair Sakel to-day, 25.35d.

Egyptian Futures.—A steady upward movement has been in process throughout the interval since our last report, but more confidence could be expressed in the present level had the appreciation been due to legitimate supply and demand factors rather than interference from outside sources with the natural course of the market. Towards the end of last week rumours of Government intervention in Egypt to stabilise values began to gain ground, and we believe that actually some small purchases of spot cotton in Alexandria were effected on their account. This was evidently sufficient to cause the speculative element there to enter the market, with the result that prices were rapidly rushed up $2. The Government followed up their first move by issuing a crop estimate on Monday of 5,944,000 kantars; this figure was so absurdly low that it had little effect, and, in cabling the information, most of the larger commercial houses confirmed their own private estimates, which generally range from 7 to 7¾ million kantars. Yesterday prices started to react, but the publication of the American Bureau caused a sharp upturn, both here and in Egypt, and, following the movement in the American markets, the top prices of the week were registered this morning. Profit-taking and absence of sufficient trade support have since caused a drop of, roughly, 60 points from the high level, and at to-night's close the list shows gains of 70 to 117 points for near and 81 to 104 for more distant positions. The heavy and erratic fluctuations witnessed have proved very disconcerting to the trade, and spinners have adopted a conservative policy in their purchases. Improved supplies of American staple and outside growths should reduce the competition for the Egyptian qualities somewhat during the coming season; even although the carry-over is so small, the larger crop grown promises a visible supply about equal to that obtaining at this time last year. Although a further closing up in the Alexandria/Liverpool difference has taken place during the week, our contract is still far and away below value in comparison with the overseas market, a state of affairs that is reflected in the increasing strength of near positions. On the whole, we are inclined to take a moderately "bearish" view of the situation. If the trade were behind this week's rise, we would not oppose it, but the crop movement is as yet in its earliest stage, and to hold a permanent advance the Egyptian Government would have to commit themselves heavily.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

The Hejaz.

The abdication of King Hussein in favour of his son the Emir Ali will not necessarily clear up the situation in the Hejaz. He had antagonised his own people, and when the challenge came from the Nejd they refused to help him. Whether his downfall will satisfy Sultan Ibn Saud and cause the latter to withdraw his invading forces remains to be seen. If the Hejazis were united, they should experience little difficulty in expelling any force that the Wahhabis could send to occupy their country. Moreover, until a definite process of "conversion" has taken place, it is hardly to be expected that Hejazis will welcome Wahhabi doctrines, with their ban on tobacco and coffee, quite apart from possible interference with the Pilgrimage. The leisurely tactics of the Wahhabis suggest that they are not working to any very comprehensive programme; their immediate objective was King Hussein in Mecca, and he has eliminated himself without a struggle. If the Hejazis are as spineless as their ruler, the Wahhabis might have to remain in occupation in the absence of any other solution, for it is unlikely that other countries or people will come to the rescue of the Hejazis, if they do not care to help themselves. The Arabian peninsula is, perhaps, the one place where inter-State quarrels can be fought out to an issue without affecting the peace of the rest of the world. British feelings at the disappearance of King Hussein are necessarily mixed. He had been an ally during the War, and Great Britain wished him well; but when it came to a question of regulating the relations between the two countries in the light of actual developments the King proved himself quite impossible, and forfeited the regard that he had previously won. In view of what has happened, it is perhaps as well that no treaty with him was ever signed.

Turkey and Iraq.

The Turkish Government would seem to be anxious to establish a reputation for being as slow to acknowledge its mistakes as it is quick to commit them. It would have been a very easy matter to disown the violation of the Iraqi frontier, to attribute the incident to excess of zeal on the part of the authorities on the spot, and to promise an immediate investigation. Even if nothing further had happened, Turkey's attitude would have impressed the Council of the League of Nations favourably, and predisposed it to make allowances for local indiscretions. But to the offence against her Treaty obligations Turkey has added the discourtesy of delay in acknowledging the communications of the British Government. No further incidents have occurred on the Iraqi frontier; the Royal Air Force has seen to that. Turkish troops, however, are still on Iraqi territory, and, if they are not attacked and driven out, seem prepared to remain there. The whole episode betrays shortsightedness on the part of the Turks and a failure to grasp the essentials of the position. The discrepancy between the Turkish and the British claim is so great, affecting as it does the whole vilayet of Mosul, that a minor incursion of Turkish troops across the present frontier can have no practical effect on the relative positions of the two disputants. In these circumstances Turkey stands to gain nothing by placing herself in the wrong. Her arguments for the possession of the Mosul vilayet are prejudiced by the military movements on the frontier, and her troops will have to be withdrawn before the Commission appointed by the League to investigate the question can complete its task. The impression gained from the proceedings at Geneva is that the Turkish Government will consider that it has gained its end when it bows to the decision of the League of Nations, and is not compelled to acknowledge defeat at the hands of Great Britain alone.

Political Changes in Greece.

Political changes in Greece continue to take place with greater frequency than is good for the new Republic. When M. Sophoulis assumed office it was recognised that real political power was vested in other hands, and he has quickly found his position intolerable. When M. Kaphandaris proposed, without reference to the Prime Minister, that a Coalition Ministry would be an improvement upon the existing one, M. Sophoulis took umbrage at the slight imposed upon him and resigned. For

Digitized by Google

a short time M. Papanastasiou, the first Republican Prime Minister, stood in the way of a Coalition; but M. Kaphandaris has succeeded in carrying his point. M. Papanastasiou's followers remain in opposition, while the other parties combine to form a Government under M. Michalokopoulos. The new Cabinet will be in a position to retain office so long as the component parts pull together. It will have a substantial majority in the Chamber, and may be expected to submit to that body something in the nature of a comprehensive programme.

The Reparations Commission in Bulgaria.

On another page is published a long letter from M. Stoyanoff, Director of the Public Debt in Bulgaria, taking exception to certain views expressed in an article on the Bulgarian Reparations Commission that appeared in THE NEAR EAST of July 8. The main contention of the article in question was to urge a reduction in the size, and consequently cost, of the Commission. It was suggested that the Commission could still be of service to Bulgaria, but that for this purpose it should be able to draw upon the experience already gained by retaining some of the senior members, though not actually the heads, of each Allied mission. M. Stoyanoff, whose official position, as well as his personal attainments and character, entitles him to speak on the subject, challenges this point. He would like to see the Commission abolished altogether, or, at least, reduced to proportions that would make it a little more than a registry of payments made by Bulgaria. It is a matter for regret that the services rendered by the Commission should be so soon forgotten in the dispute that has arisen over its future composition. No one wishes the Commission to be other than a help to Bulgaria, and it was with this end in view, as well as to lessen its cost, that the British proposal for reducing its size was made. The opposition to the proposal came from the quarters that were responsible for the more onerous burdens laid upon Bulgaria. When responsibility could be shared, the heavy hand was favoured; as soon as there was a chance of posing as the lenient friend, the opportunity was seized, regardless of Bulgarian interests. It is only natural that the Bulgarians should wish to be free of the Commission, and in the face of the pettiness revealed in its ranks, there is some ground for supposing that its major usefulness has gone.

The Revolt in Georgia.

The British Government is probably as anxious as any member of Parliament or private citizen to see the Georgians protected from Bolshevist terrorism, but it finds itself powerless in the matter. If the draft Treaty with the Soviet Government had been concluded in any other way than the one in which it actually came to be signed, we should have expected an attempt on the part of the British Government to stipulate for decent treatment of the Georgians. But the British negotiators found themselves with a very small margin in hand in their dealings with the Soviet representatives, because they had allowed the latter to discover how eager the Labour Party was to make political capital out of a Treaty with Russia. Accordingly, violence has to be done to the nation's instincts in leaving the Georgians to the tender mercies of Bolshevist terrorism. In spite of the cold-blooded murder of hostages, the people of Georgia are putting up a good fight. Without help from outside, however, there can be but little chance of their holding their own against the overwhelming forces of the Soviet Government; and once more we must regret the ill-advised, though gallant, struggle for freedom. If the British Government's Treaty with the Soviets is wrecked, its rejection will be due in no small part to the loathing of Bolshevist tyranny that the story of Georgia's sufferings has once more revived.

Air Routes in the East.

Although no other country than Great Britain has much to show in the way of actual achievement in regard to air services outside Europe, it is noticeable that our rivals in the air are now coming forward with several ambitious programmes. A German company is reported to have concluded an agreement with the Persian Government which promises to place an important Trans-Asiatic airway in German hands. This line, starting from Stockholm, and connecting Leningrad (Petrograd) with Baku and Tiflis, is to be extended to Teheran and thence to Bushire. A contract between the Greek Government and a French company provides for an air service between Marseilles and Syria viâ Athens, with proposed subsequent extensions to Iraq and India and to Egypt. Not the least satisfactory feature of these agreements is the confidence that they imply in the future of the countries that will be served by these air routes. There is no need to feel pessimistic about British air potentialities after Lord Thomson's recent trip, which entailed a flight of over 2,500 miles in the air without the slightest hitch; but it is the Royal Air Force that has blazed the trail in the Middle East, and so far commercial aviation has held back. It will be unfortunate if British companies wake up to their duties in this sphere only when all the best air routes have been pegged out by other nationalities.

INDIA.

The Monsoon.

In nearly the whole of India the rains are now over, and once again it is possible to record a generally favourable season. In the North the end of September has been marked, as often happens, by a tremendous burst of rain, bringing floods, landslips, and breached railways, but such damage is merely local, and against it must be set the assurance of largely increased winter sowings, giving promise of an ample surplus of grain, oilseeds, and fodder for the country as a whole. The South has been somewhat less fortunate, with too much rain in some places and too little in others, but, speaking generally, and assuming a normal winter, India ought to have plenty to sell

next year, and, consequently, ought to be able to buy on an extended scale, a position which is healthy for politics as well as trade. It ought to mean also a progressive increase in wealth, but old vices die hard, and just now the country is squandering its surplus income on jewellery, precisely as it has done any time in the last twenty centuries. Indian politicians have been pressing for an inquiry into the economic condition of the people; if they would only take the trouble to study the facts already on the record they would require no further information regarding the greatest single cause of Indian poverty.

Affairs in Bengal.

Some of the papers on this side have lately been paying attention to the anxieties of the situation in Bengal, where the anarchists are again busy with threats to murder prominent officials, extended smuggling of arms, and the intimidation of witnesses, which is so effective locally in hampering the administration of the law. The precise nature of the connection between extremist politicians and political murderers is naturally obscure, but nobody really doubts that some sort of connection exists, and the conjecture may be hazarded that extremists are in a position to set murderers to work, but quite unable to control them if they are once started. The real danger lies in the failure of Bengal politicians as a body to develop even a rudimentary sense of political responsibility, such as the constitutional reforms postulate. Intent on a particular objective, some of them are willing to accept almost any help that may be offered, and in many cases they lack the courage necessary to make a stand, while decent people, so numerous in the province, think only of holding themselves aloof. The whole burden of keeping the peace thus falls on the Government, which cannot count on any active popular support. Lord Lytton's recent speeches have shown that he is alive to the danger, and it is for him to choose the moment when words must give place to acts.

Indianisation in England.

The eager publicists who insist that all India's work in Europe should be done by Indians, and by Indians only, may possibly find a useful lesson in the regrettable retirement of the High Commissioner, which was announced in our last issue. Sir Dadiba Dalal has worked in England for little over a year, and now leaves it with impaired health. A similar result has followed from appointment to the Secretary of State's Council so often that we believe it is regarded as normal in Whitehall, and it seems impossible to resist the conclusion that a prolonged stay in this country is a very risky experiment for Indians of mature age. We regard the post of High Commissioner as one which may appropriately be held by an Indian, provided one with the necessary qualifications and aptitudes can be found, but at the same time a reasonable continuity of tenure is essential to success, and will become more, rather than less, important as the functions of the High Commissioner increase. The City wants to know the man with whom it has to deal, and the interests of India are likely to suffer if its representative in London is changed with the frequency which may seem natural in Delhi.

The National Political League received a cable from King Hussein at Mecca last week, stating that his son, His Royal Highness Prince Zeid, had started for London. Prince Zeid has not been in England before.

The Air Ministry announces that Lord Thomson, the British Air Minister, returned to Egypt on October 2, from Baghdad by way of Amman, not Damascus, as had been intended, and stayed the night at Jerusalem before proceeding to Alexandria. Lord Thomson sailed for England last Friday, previously having been received by King Fuad at Montaza Palace.

THE WEEK AT HOME.

London, Tuesday Morning.

Dissolution.

The politicians, the party wirepullers, and all those who thrive on Parliamentary intrigue, are having the time of their lives. First they stuff us with one tale of the approaching election, then with another. First the issue is to be over the Campbell case—that monstrous and yet, from the severely political point of view, petty miscarriage of justice—then over the Soviet Treaty. First the Labour Party are to accept the kind offices of the pusillanimous Liberals to get them out of the Campbell mess, then they are to challenge the country on the question. From all of which it would appear that the country is once more to be the sport of tactics, party tactics, futile tactics.

It is, for those who cannot gather themselves to be good party men, a most disheartening time. Nobody—and this is the solidest, perhaps the only, truth in the whole situation—wants a General Election. And yet what do we see? The Socialists ready to resign if defeated on the Campbell case without consideration whether such resignation is in the national interest, and the Unionists ready to make their appeal to the country merely because it is considered that their party machinery is now fit to bear the strain. And as for the Liberals—Heaven knows what these wobbling tacticians want! They stand to lose whatever befalls. Their shroud is prepared and ready for them to wear as soon as they appeal to the national undertakers.

Party Chances.

Nobody, I say, wants an election, and this, not because satisfaction or confidence in the Government is felt, but because there is literally no urgent question that could better be solved by any other minority administration. The Government's record is plain for all the world to see; nothing to be clamant about, certainly, but neither was that of the preceding Conservative Administration. In short, the clear fact is that this Government has neither done well enough to merit a larger representation in Parliament, nor has it done badly enough to warrant the putting in of an effete party which has had its chance and missed it.

For it would be foolish to deny that the Conservative Party, as shown, at any rate by the Conference last week at Newcastle, is effete. It has, apparently, nothing new to say, nothing new to offer.

Digitized by Google

And if the old Conservatism was not sufficiently attractive to win the last election, what can be said of it now that it has not even the boldness to include Protection in its programme? However, its party agents have said "Go"; so that in a few weeks we shall all have to be voting against somebody or other.

The general anticipation is that the Tories will gain in the forthcoming election, mainly at the expense of the Liberals, but also to some extent at the expense of the Labour Party. If the Soviet Treaty is made the chief *casus belli*, this outlook seems to me a little optimistic, and I should say that Labour will gain, especially in the North of England, where, indeed, twenty-five Liberal members are reported to be in favour of the Treaty.

But no party, it is certain, will have an absolute majority in Parliament, and it is this fact which has brought out of its dusty corner the old Churchill and Beaverbrook musical-box, with its eternal jingle of "Coalition." Sweetly and soothingly this pleasant, remote ditty falls on our ears, but how meaningless it all is! It only reminds one of the sentimental past, and, as related to the present age, has no significance whatever.

The time is really very serious for the Liberals. Whatever happens in November to the Labour and Conservative parties, one can take it for granted that they will each live to renew their battles, but of the Liberals, who shall say that? If they join forces with the Conservatives, the Liberals are eclipsed, and if they do not, they can, as the present instance shows, be at the mercy of clever party manœuvre from either of the rival sides. Mr. Asquith may say that he commands the situation, but if he thwarts Mr. Baldwin he is liable in turn to be thwarted by Mr. Ramsay MacDonald. May the country be lenient to the Liberals in the days of their passing, for they once (so it is said) were great and good men!

The Conservative Leader.

Mr. Asquith has revived—"come back," as the papers say—and is now in his best fighting trim, which means, of course, that he is at his best in making ingenious compromises. Not because of his leadership, but rather because of what he represents, will Liberalism go down at the polls.

But what of Mr. Baldwin, the head of the Conservative Party? There has never, one is convinced, been a sincerer, more honest, and more patriotic man at the head of any party, and his political beliefs are beyond reproach. Then why does one feel no glow for his party, no sort of conviction that it has a greater balance of popular merit than have the other two? For two seemingly contradictory reasons—he is not a leader, and his party is not worthy of him.

His general attitude is noble; the particular acts of his party are either insignificant or petty. His work in all probability is done, his party's to be done. His lead has been a moral one; what his party wants first is the mental one. That is why, one feels, the leadership will fall eventually to Mr. Winston Churchill, whose brains are more equal to compensate for any lack of morality than Mr. Baldwin's morality is to compensate for any lack of brains. The present Conservative leader is a good man; but any greatness that he may have achieved will have been outside politics.

The Church and Youth.

At Oxford during the past week we have had a rather painful experience of the vanity and the inanity of youth, which addressed itself at the Church Conference to the shortcomings of ecclesiastical teaching and practice. It asserted that its spiritual demands were left unsatisfied, that the Church did not "move with the times," that clergymen concerned themselves more with local defects than with national omissions. One was heartily glad, after all this confident lecturing, to find one Church of England priest explaining that the middle-aged and the old, who, he implied, were not so critical, were also the care of the Church.

The Church—let us admit it—has lost its hold on society. But is it really in a worse position than it has been for centuries? Before the War there may have been a certain amount of lip-homage which is aggressively absent to-day, but in all probability this pother arises only through the fact that young men are not so reticent now as they were before the war, which undoubtedly prompted questions, the Church's answer to which left them unsatisfied.

That we are in this country in a phase of agnosticism is, however, not to be denied. But it will pass, and if the Church is wise—and it is—it will let it pass. The Church of England, more than most Churches, is peculiarly liable to the charge of neglecting social needs, because, not claiming, as did the medieval Church in England, actively to inform society and society's moral precepts and actual practices, it stands to lose by every mistake that the State makes. Without going into the question of whether the Church was formed by the State or *vice versâ*, it is patent that much of the criticism which youth last week levelled at the Church should have been directed at the State.

The Teaching of Russian.

Even more dangerous to the Labour Party than the genuine trade unionists are those of its followers who once were Liberals. It is extraordinary what measure of resentment these adherents of the Labour Party arouse in their opponents. The latest example is that provided by Mr. Trevelyan, Minister of Education, with his proposal to interchange Russian and British teachers. The resentment felt at the prospect of the inculcating in this country of real Bolshevist doctrines, taught by real Bolshevists, gives some idea of the moral force lying behind the opposition to the Treaty with Soviet Russia.

This feeling may be righteous, but it is probably based on ignorance. One's conclusion must be in this sense when one reads that the Government of Russia, while quite willing to receive British teachers in Moscow, is unwilling to allow Russian teachers to come to this country, in case they should be corrupted by the prosperity of a capitalist country. The psychology of the fearful is indeed a fascinating thing; one imagines that psychological poles meet (and collide) more frequently than any other sort.

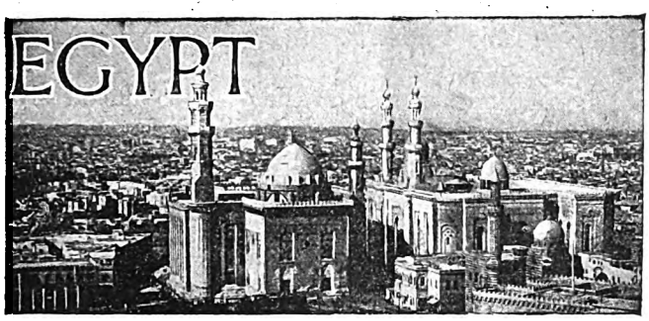
The Near and Middle East.*

From Our Own Correspondents.



Cairo, September 27.

H.M. King Fuad.

According to the cables, most alarming accounts have been published in the home Press about the health of King Fuad, who, it is stated, is suffering from a severe congestion of the nerves. This is a pure invention, and the only ground for any reference to His Majesty's health is the fact that he has been laid up for about three weeks with an attack of lumbago, which has forced him to suspend all receptions. The attack is, however, practically at an end now, and King Fuad will resume his public duties within the next few days.

The Plot Against the Régime.

The inquiry into the conspiracy which, it has been alleged in official circles, has been discovered against the present régime has come to the fore during the past week owing to a somewhat sensational article published by *Al Ahram*. In this article this paper declared that the inquiry had come to an end without any result, that it had been established that the accusations against the persons under arrest were without foundation, and that in the course of the inquiry the authorities had acted in violation of all constitutional guarantees; and it asked why no steps had been taken against those whose information inculpating innocent people who had been arrested and detained had been proved to be false. The Government at once issued a *communiqué* in which it formally denied these allegations, and declared that the inquiry had not yet been concluded, that it is, in fact, still in the hands of the Procureur-General, who has not yet made his committing or filing order, and that it is absolutely incorrect to say that measures have been taken in violation of the Constitution or the law.

I understand that the authorities are still awaiting the return of some Egyptians from Syria and the arrival of certain information from Rome, Vienna, and Paris before taking any decision with regard to the further steps to be adopted in regard to this conspiracy. Meanwhile, all but three of the people detained have been released, those still in custody including the redoubtable Sheikh Abdel Aziz Shawish.

The Treatment of British Officials.

From time to time references appear in the Press to the bad treatment which British officials are suffering at the hands of certain Egyptians in authority. It is rarely, however, that one has such definite evidence of such treatment as has been afforded by the case of Mr. St. Clair, of the Audit Department of the Egyptian State Railways.

Mr. St. Clair was amongst those due to leave the service on April last. Some time in the autumn of 1923 some frauds were discovered in the season ticket service and an inquiry was opened. Mr. St. Clair duly left on April 1, and received from his department the usual certificate to the effect that he was cleared of all responsibility and that the Egyptian Government had no claims against him.

At the end of April, having received no payment from the Government in connection with his compensation, he inquired as to the cause of delay, and was informed verbally that the delay was due to the responsibility which it was alleged lay upon him in connection with the season ticket frauds. This was the first intimation he had had that any complaint lay against him in this connection, and he at once wrote demanding particulars of the nature of charges that were made against him. To this letter he has never received a reply, nor has he ever been informed officially by the Egyptian Government that any charge lay against him.

In the meantime Mustapha Nahass Pasha, Minister for Communications, rose in his place in the Chamber of Deputies, and in reply to a question replied categorically that Mr. St. Clair's responsibility for the season ticket frauds had been established by his Departmnt. The Government, however, declined to substantiate this charge or put in writing the allegations made in Parliament, but did everything in its power to hold up the payment of the compensation due to Mr. St. Clair over six months ago. It is only thanks to the pressure that has been brought to bear that he has at last obtained settlement of his claim, but without any charge being formulated against him or any opportunity being afforded him to clear himself of the unwarrantable insinuations made by his Minister.

There had been ample time before Mr. St. Clair actually left the servce to formulate any charge in this connection, and the fact that his department, with the inquiry before it, gave him a clear certificate of discharge proves conclusively that there was no charge at all against him. A more glaring and disgraceful abuse of privilege and power than that committed by the Government in general, and the Minister for Communications in particular, in this case could not possibly be conceived, and Mr. St. Clair has the lively sympathy of his colleagues in the service, who together with the European community generally are most indignant at the behaviour of the Egyptian authorities.

Constantinople, September 29.

The Budget.

Now that the question of the Budget for the coming year is coming on the *tapis*, everyone, official or private person, is beginning to ask himself how the Budget for the past year has worked out in practice. Vague pessimistic prognostications have been current in business circles for some time past, and the other day somebody rushed into print with the statement that there was likely to be a deficit of about 200 millions of pounds Turkish. As the total expenditure provided for in this year's Budget, apart from the payment of any liabilities in respect of foreign debts, amounted to some hundred odd millions, the possibility of such a deficit aroused alarm and despondency. A *démenti* promptly appeared; it was probably quite justified, for it is difficult to believe that, notwithstanding the open-handed manner in which ready cash can be found for purchases of aeroplanes and war material, there can possibly be such a deficit in the State finances. It is, however, undoubted that a serious deficit will be obvious long before the end of the financial year, and it would not surprise one to learn that it approached the figure of 60-70 millions. The Press has begun to wonder why the price of the Interior Loan, which, according to the papers, should be rising up to and above 60, has suddenly slipped back to the region of 48 on the eve of the promised payment of the current coupon, and is demanding the head of the Assistant Commissary of the Bourse on a charger for not stopping the wicked speculation of the wicked banks, which are nefariously scheming to depress this magnificent security. The real reason of the depression might be found in the suspicion that there is something rotten in the financial "State of Denmark."

Trade Statistics.

The greatest difficulty experienced by the conscientious journalist in this country is the absence of any reliable statistics. A Government Department is utterly useless for this purpose; either it has no statistics at all or they are so hopelessly "cooked" as to be worse than useless. One is driven to depend upon the fleeting impressions of the few European travellers who adventure themselves into the wilds of Anatolia, and then—*quot homines tot sententiæ*. Only a few very general commonplaces may be stated with any degree of confidence. The cereal crop is not up to expectations for various reasons, such as unfavourable weather, want of labour, inefficient distribution of seed, and want of machinery. The importation of foreign flour has been hindered by the imposition of a prohibitive duty, and the result is a steady rise in the price of bread and the prohibition of the export of corn. The other staple crops—tobacco, opium, and fruit—are only fair to middling, for obvious reasons, and cannot be relied upon to do much to help the somewhat rickety national trade balance. The Smyrna export season, which in normal times may be expected to provide a large amount of foreign currency, led this year to nothing more than a very short period of appreciation of the Turkish currency, which is now slipping back to what has become its normal gentle depreciation.

State Monopolies.

Among the numerous projects of reform one of the most far-reaching is that of the creation of a State monopoly of tobacco, which will displace the present "Régie Ottomane des Tabacs." As far as can be judged from the official and semi-official statements which appear from time to time, it is intended to reimburse to the "Régie" the amount of its capital and withdraw its concession. In place of the "Régie" a Department of State will enter the open market for the purchase of tobacco at market prices, and will grant to one or more Turkish limited companies the privilege of manufacturing cigarettes for consumption in Turkey. The State reserves to itself, however, the right of selling cigarettes and tobacco in Turkey. The result will undoubtedly be the same as is produced by State monopolies everywhere. One will have to smoke bad cigarettes at high prices, whereas until now cheap, good cigarettes have been one of the few blessings of this country.

Another monopoly which is going to descend upon us is a monopoly of matches. Large-type advertisements have been appearing in all the papers for the past fortnight inviting all the *intéressés* to tender for the privilege of supplying the whole country with matches at a hundred paras a box, with the obligation of setting up a factory in the country for the manufacture of the matches required. The last date for sending in tenders is according to some papers October 20, and according to others October 30; in any case, lapse of time allowed to the *intéressés* to study the matter and prepare their offers is so short that reasonably acute local observers are hinting pretty broadly in the Press that the submission of this and similar enterprises to public tender is nothing but a form, and that the future *concessionnaire* has already fixed things up privately.

Jerusalem, September 27.

The Arab Executive.

The "Arab Executive" has, after many months' silence, come into vocal existence once more. Almost daily public protests and open letters to the High Commissioner make their appearance in the local Press. They adopt a curiously lofty tone, and very confidently repeat the sentiment that they voice the unanimous opinion of the Arabs of Palestine, whose absolute confidence the Arab Executive claims still to possess. And, it must certainly be admitted, that, despite the many other Arab parties that have sprung up in opposition to the Arab Executive of the Moslem-Christian Associations, it is the Arab Executive which still seems to speak with the greatest force (and to receive a correspondingly respectful hearing) in local Arab affairs.

At the moment the Arab Executive's chief protest is raised against the proposed land transaction in the neighbourhood of Nazareth. Some of the best agricultural land—or, to speak more correctly, land with the best agricultural possibilities—is in the Kishon Valley in South Galilee. For a long time Jewish colonies have been growing up here, and within the last two years more and more land in the valley has passed into the possession of one or other of the Jewish land-purchasing societies. A larger transaction than usual is in process of completion in the Afuleh neighbourhood, affecting the lands and fields of the Arab population of several villages. It would seem to the outsider to be but one more of the innumerable sales of land to Zionist organisations by non-resident owners, and hitherto nothing beyond theoretical opposition has even been raised from the guardians of Arab rights. This time, however, the Arab Executive is putting up a strong fight on behalf of the rights of the Arab tenants, who, it is maintained, will lose homes and livelihood if the transaction goes through, and that such deprival of rights is counter to this, that, or the other article in the Ottoman land laws, or that it is against the spirit of the second provision of the Balfour Declaration, or that it is contrary to such and such provisions made by the present Government of Palestine governing such land transfers. It is difficult to know just how much force there is in all the objections made. The owners of the territory in dispute are a Christian family named Sursuk living in Syria; and this is by no means the first deal that they have made with Jewish land purchasers. It is hardly likely that the Arab tenants stand to lose much by the change of a non-resident landlord interested purely and solely in his rents to a landlord whose only care is to sink as much money as possible into improving agricultural conditions and possibilities. The Arab tenant would seem to stand to gain considerably by the application of drainage, irrigation, modern agricultural machinery and methods. In view of the strained anxiety of the Government to avoid points of collision between Jew and Arab, it is inconceivable that it would allow a wholesale ousting of Arab villages and land workers, and it even more inconceivable that Jewish landowners would dare to attempt it. Political sentiment is, of course, the chief motive power at work in the Arab Executive's protest, and it would seem that there is sufficient strength in their position for the Government to promise that the negotiations shall be temporarily suspended until it has examined into the matter.

The Kadoorie Bequest.

There are other protests of less importance and interest. But one is curious enough to deserve mention. The Palestinian Arabs are beginning to show some interest in the "Kadoorie Bequest." This legacy of some £100,000, to be devoted to education in Palestine, has been referred to once or twice in these columns. First of all, the Jews considered it a grievance that they were not to get it all for their exclusive use, arguing that it had been left by a Zionist with purely Jewish needs in mind. After consulting the brother of the donor as to the probable intentions which lay behind the bequest, the trustees decided to devote the sum to both Jews and Arabs in equal shares, and, after much thought as to how best to apply the funds, it was resolved to use the Jewish half for the Hebrew Secondary School in Jerusalem and the Arab half for an agricultural school in Tul Keram. This Kadoorie Bequest problem has been under discussion now for well over a year, but to the present writer's knowledge no interest whatever was shown in it by Arab circles until a few days ago when the Arab Executive announced that, having gone into the question thoroughly, and having assured themselves that the money was not from a Zionist source, it claimed that a gross injustice was being perpetrated by giving half the benefits to Zionists; the fund must be utilised for the good of the entire population of Palestine equally—all communities benefiting in proportion

An Egyptian Night

NIGHT has fallen on Cairo. The streets of the Mousky are crowded—look closely, for the scene carries with it the glamour of the Arabian nights. Above the tric-trac of the dominoes in the cafes will be heard the sound of cymbals where the houris lead the dance—weird Salome dances which hold the senses spellbound. Across the desert, where the Sphinx and the Pyramids keep their eternal watch, silence and the miracle of stars enthral with mystery and imagination.

Come when, in the early Autumn, the after-glow of Summer is yet upon the land and the splendour of Egypt's climate is at its zenith.

to their numbers; the Zionists, far from receiving 50 per cent. must not be given more than a portion of the 7 per cent. (the official Arab Executive figures for the Jewish percentage of population in Palestine—it is most probably now something between 15 and 20 per cent.) which would fall to the Jews of Palestine, and be given no preference over the "non-Zionist" Jews of Palestine.

Dr. Weizmann.

Dr Chaim Weizmann is now on a visit to Palestine after an absence of two years. He first visited Tel Aviv, where he was given an official Jewish welcome. In a long statement, he announced his complete satisfaction with the way in which American Jewry was organising itself for providing for the Jewish National Fund, which would, quite certainly, be doubled or trebled in the two coming years. He was also optimistic about the political atmosphere (as it affected the Jewish National Home) both in British diplomatic circles and in Palestine. He thought that the edge of Arab opposition was broken. He promised to make another statement after three weeks on the basis of his examination of Palestinian and Zionist conditions on the spot.

IRAQ.

Baghdad. September 17.

The Hashimi Cabinet.

Shortly after taking office the new Cabinet issued a programme which is considered better than that of any of its predecessors. In view of Yassin Pasha's well-known tendency towards extreme opinions, its moderation is surprising, but is largely attributed to the restraining influence of Abdul Muhsin Beg (Interior) and Sir Sassoon Effendi (Finance). The programme reads as follows:—

(1) To hasten the promulgation of the Organic Law and the Electoral Law, to put them into force and assemble Parliament.

(2) To co-operate with our ally the British Government, to accept our responsibilities, to benefit from the experience and status of Britain in the development of Iraq, and to put the Anglo-Iraq Treaty into precise application.

(3) To endeavour to realise the wishes expressed in the amendments mentioned in the Assembly's resolution accepting the Treaty, and to lighten the burdens of the Iraq Government.

(4) To study the organisation and the cost of different Government departments, with a view to cutting down expenses in staff and maintenance to a figure which the country can afford; also to devote particular attention to the economic situation of the country, and to take measures which would promote great schemes of development.

(5) To investigate agricultural questions and irrigation, on which our economic progress depends, to co-ordinate the country's land policy and put it on a firm foundation.

(6) To strengthen national sentiment by all possible means, to complete our preparations for the defence of the country generally, and Mosul in particular, and to increase our armed forces. Also to establish as soon as possible diplomatic and friendly relations with neighbouring Governments and others.

(7) To promote the spread of education among all classes and inculcate the love of learning.

(8) To bring about happier conditions for the people of Sulaimaniyah, and to mitigate the hardships which they have undergone.

(9) To replace by new laws some of the laws and regulations which are now in force in the country, and which are not suited to the needs and habits of the country and the nation.

This programme was well received, and the Cabinet has done its best to put its intentions into effect. It has, for instance, passed the Customs Agreement with Syria, agreed to import teachers from Syria, instead of employing less efficient Iraqis, and considered the question of compulsory military service—all matters which the previous Cabinet had shelved. As the result of adhering to a programme which was greeted by the commendation of all classes, the Cabinet is now less popular than it was on its formation a month ago—another proof that however much the Baghdadi may admire perfection in the abstract, he dislikes any active effort to reach it.

Position of British Officials.

The Cabinet has devoted much time to the question of contracts for British officials. Under the terms of the Anglo-Iraq Treaty, a certain number of British officials have to be employed in the Iraq Administration. It is obligatory that eighteen specified posts should be filled, while the employment of the remainder is a matter for agreement between the two Governments. The Prime Minister, who is averse from the employment of British officials, is prepared to grant only short-term contracts, thereby fulfilling the letter if not the spirit of the Treaty. The British Government, realising the impossibility of obtaining the right type of official if only short contracts are offered, and also the probability that the present Treaty will on its conclusion be replaced by some other form of agreement which will prolong the alliance between the two countries, is urging the grant of ten or fifteen year contracts. The Cabinet has yielded to the extent of agreeing in principle to the granting of long contracts to a few specialists or officials holding important posts. Further deliberations will take place on the return of the High Commissioner from leave.

A Frontier Incident.

The Turkish Vali of Hakkiari decided to extend his law to the Assyrians who live just across the northern frontier of Iraq. By his indiscretions he impressed these tribes with the idea that he intended to bring them still closer under Turkish subjugation, and he was foolhardy enough to enter their territory with a comparatively small escort. He was promptly attacked and captured by a section of the Tkhuma, one of the most warlike of the Assyrian tribes. Though the Vali was subsequently released through the intercession of a headman of another section, the affray cannot but be damaging to Turkish prestige in that area.

It is probable that the recent crossing of the Iraq frontier by a body of Turkish irregulars is connected with this incident, especially as the Ottoman Government claims that the Vali's capture was engineered by the Government of Iraq. On

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.

Founded in 1911 to study all questions of common interest to Great Britain and Persia.

Subscription £1 per annum. Further particulars may be obtained of the Honorary Secretary, 74, Grosvenor St., W.1.

SCHOOL OF ORIENTAL STUDIES, LONDON INSTITUTION
(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to THE SECRETARY.

Digitized by Google

receipt of news of this infringement of the frontier, aeroplanes were sent to disperse the invading column, which retired hastily. In view of the necessity of precautionary measures against similar aggressive action, the Government has found it expedient to proclaim martial law in the *qadhas* of Zakho and Amadiyah.

Sulaimaniyah.

The situation is fairly satisfactory, and rapid strides are being made in setting up an administration. Shaikh Mahmud is still in the mountains with a small following, and it is improbable that his surrender or capture will be effected for some time to come.

Return of Saiyid Talib.

Some uneasiness is manifest at the expected return of Saiyid Talib, who, as the result of inaccurate articles in some of the English newspapers, has gained at home a certain amount of undeserved sympathy over his expulsion from this country in 1920. Combining great determination with the utmost unscrupulousness, he is more feared than any man in Iraq, and his return can only add another to the existing difficulties of Administration. Though under the recently passed Organic Law he cannot be prevented from entering this country, he has been informed, it is stated, that permission to return carries with it no guarantee that he will not be arrested and tried on a charge connected with one or more of his past misdemeanours.

Visit of King Faisal to the Oilfields.

His Majesty paid a visit to Khanikin to inspect the Anglo-Persian Oil Company's workings in the Transferred Territories—that is, the territories transferred from Persian to the Ottoman Empire under the Turco-Persian Boundary Commission of 1914. He was accompanied by the Prime Minister and the Ministers of Justice and of Communications and Works, also by Mr. Griffin, acting-Director of Railways; Mr. Keeling, of the Turkish Petroleum Company; and Mr. Mylles, of the A.P.O.C. The King was keenly interested in all he saw. It was explained to him that of the eight wells so far sunk, only two had yielded definite results. The more prolific of the two was producing 2,000 gallons per diem—a satisfactory figure in itself, but small compared with the yield of a quarter of a million gallons a day derived from some of the wells in the company's South Persian fields. Before leaving, His Majesty formally opened one of the new wells by breaking a bottle of champagne on the drilling machinery. It is stated that the A.P.O.C. propose to erect an oil refinery in Iraq; this will be much appreciated by many of the inhabitants, for the price of petrol and oil in this country is nearly double what it is in England.

General.

The body of Major Imbrie, the American Consul who was murdered by a Teheran mob, passed through Baghdad on August 23, *en route* to Basra and Bushire, where it was placed on the American warship Trenton for conveyance to the United States. Accompanying the body were Mrs. Imbrie, Major Miles, the American Military Attaché at Constantinople, and a Persian guard of honour consisting of eight officers and four non-commissioned officers. A salute of eleven guns was given at the crossing of the frontier. At Baghdad, the acting High Commissioner, the Air Vice-Marshal, and other senior British officials, together with a guard of honour supplied by the Iraq Army, were present as the body left by rail for Basra, where it was received by British and Iraq escorts and placed upon the R.M.S. Vita.

H.E. the High Commissioner arrived by air on the evening of September 16, returning from his brief leave in England. On the same day Mr. Thomas Griffiths, M.P. (Treasurer of the Household), Mr. A. T. Davies, M.P., and Dr. S. H. Williams, M.P., arrived by the Nairn Overland Convoy. Mr. Clynes, Jun., who was expected to be one of the party, was recalled to London from Beyrouth by his father. The three members, who are understood to have come out to this country to study, among other matters, the oil question, are the guests of the High Commissioner.

Mr. N. G. Davidson, who has been acting as High Commissioner during Sir Henry Dobbs' absence, is expected to return shortly to his permanent service—the Sudan Civil Service.

BELGRADE UNIVERSITY.

Miss Phyllis Kemp, a graduate of the School of Slavonic Studies, King's College, University of London, has been elected by the Ministry of Education in Belgrade to hold a bursary in Belgrade University for two years for the purpose of research work.

The Ministry, which sends every year some ten undergraduates, men and women, to study in this country, where they are maintained out of surplus funds contributed by the British public during the War, has chosen this way of repaying a part of their debt. A student from this country is elected each year.

PERSONAL AND GENERAL.

TO-DAY.

October 9, 1924 (New Style).
September 26, 1924 (Old Style).
Rabia I, 10, 1343 A.H. of the Moslem Calendar.
Tishri 11, 5685, of the Jewish Calendar.

M. and Mme. Venizelos left London on October 6 for Paris.

The Aga Khan has left the Ritz Hotel, London, for Brussels.

The Bulgarian Minister returned to London on October 1 from Geneva.

The Egyptian Minister in Paris left London on October 5 for the French capital.

The Bishop in Jerusalem and Mrs. MacInnes left England last week for Palestine.

Viscount Willingdon, who has been paying visits in Scotland, has now returned to London.

Sir Edward Boyle, the chairman of the Balkan Committee, is at present visiting Bulgaria.

M. Tsouderos, Greek Minister of Finance, left London on October 1 for Paris on his way to Athens.

Seyed Qasim Khan, the Afghan Chargé d'Affaires, is now convalescent, and has resumed his diplomatic duties.

Viscount Inchcape, accompanied by Viscountess Inchcape, went to Paris last week for the Suez Canal meeting.

Mme. Zaghloul, wife of the Egyptian Premier, with several Egyptian ladies, last Sunday attended the Mosque at Woking.

Prince and Princess Nicholas of Greece honoured Baron Ramsay with their company at luncheon last Thursday at Claridge's Restaurant.

Queen Olga of Greece, who is staying with Queen Alexandra at Sandringham, will probably return to London in the course of the next week.

Lord Islington, who returned to London recently from Constantinople, left last week with Lady Islington for Rushbrooke Hall, Bury St. Edmunds.

The Maharaja of Bikanir, who returned to London last week from Geneva, entertained the Aga Khan at dinner on October 1 at the Carlton Restaurant.

Prince and Princess Paul of Serbia have arrived at Claridge's Hotel after a stay of several weeks at the White Lodge, Richmond Park, as guests of the Duke and Duchess of York.

To-day, being the anniversary of King Fuad's accession to the throne, a reception will be held for all Egyptians and friends at 41, Berkeley Square, W.1, from 4 to 6 o'clock.

The Egyptian Minister in London and Mme. Aziz Izzet entertained at luncheon at the Legation on September 30 the Egyptian Premier and Madame Zaghloul, the Egyptian Minister of Communications, the Egyptian Minister in Paris, Princess Hassan, M. and Madame Lozi, Dr. Wahbi, and M. and Madame Mahmoud Sabet.

Lord Allenby, High Commissioner for Egypt, and Lady Allenby were the guests at luncheon of Aziz Izzet Pasha and Mme. Izzet at the Egyptian Legation on October 6.

Mr. K. N. Das Gupta, the Director of the Union of East and West, sailed from England for New York on October 1, to produce Oriental plays at the International Neighbours Festival to be held in Elizabeth, New Jersey, in November.

Colonel Sir William and Lady Campion and Sir Frederick and Lady Rowlatt left London last Thursday by the P. and O. express to join the steamship Maloja at Marseilles. Sir William and Lady McBeath, Sir Adrian Knox, and Lady McCormick also joined that vessel at Marseilles.

A marriage has been arranged, and will shortly take place, between Sir Percy Lyham Loraine, Bart., of Kirkharle, of Styford Hall, Stocksfield-on-Tyne, His Majesty's Minister at the Court of Persia, and Louise, elder daughter of Major-General the Hon. Edward and Mrs. Stuart Wortley, of Highcliffe Castle, Hampshire.

Among the passengers who sailed last Friday by the P. and O. steamship Narkunda from London were General Sir Charles and the Hon. Lady Monro, and Commander and Mrs. Biron for Gibraltar; the Marquis of Bute for Tangier; and the Bishop of Lahore, Lady Hepper, and the Hon. Sir Grimwood and Lady Mears for Bombay.

Dr. Percy Dearmer is giving a course of ten public lectures, illustrated by lantern, on "A Summary of Ancient Art," in the Great Hall, King's College, Strand, on the ten Tuesdays of term commencing at 5.30 p.m. The first lecture, which was given last Tuesday, dealt with the "Origins of Art," followed by discourses on what is known of the art of ancient Greece, Rome, and Egypt, etc. Non-members of the college may obtain tickets for admission for 1s. per lecture, or 7s. 6d. for the course of ten.

APPOINTMENTS, PROMOTIONS, ETC.

Mr. T. F. Garvin, K.C., has been appointed a Puisne Judge of the Supreme Court of Ceylon.

Rasmy Bey, Secretary at the Egyptian Legation in London, has been appointed Vice-Consul at Lyons, France.

ANGLO-EGYPTIAN RELATIONS.

The conversations between Saad Pasha Zaghloul and Mr. Ramsay MacDonald have been terminated without resulting in the discovery of a basis for a formal agreement between Egypt and Great Britain. We should be sorry to think that the discussions between the two Prime Ministers, which have been characterised by the utmost friendliness, will prove to have been wholly in vain. For the moment, however, it would be idle to ignore the fact that Egypt and Great Britain are moving in two different orbits, which seem to have no point of contact. Egyptian understanding is wholly unable to grasp the sense of Imperial responsibility which is second nature to the Briton. To the Egyptian, for all practical purposes the political horizon is bounded entirely by Egypt and Great Britain. The latter has undertaken to grant Egypt's independence, and to the Egyptian mind the only question at issue is what is the fullest interpretation that can be given to the word independence. Evolution and transition are ruled out of the Egyptian political vocabulary. Independence means this, that, and the other; all that it implies or can be made to imply must be conceded at once, or rather belongs without further question, to Egypt. There is nothing inherently hostile to Great Britain in the interpretation itself; animosity is aroused by the refusal to admit the unchallengable nature of the Egyptian contention. Many responsible people in Egypt, we are convinced, have no other wish than to be loyal to Great Britain; the honesty of their intentions serves only to increase their intolerance of British caution, which they are inclined to denounce as a cloak for Machiavellian designs. If Egypt is independent, they argue, there must be nothing to differentiate her from any other independent Power. Circumstances point to the advisability or necessity of a close understanding with Great Britain; this, therefore, should be arranged just as any other treaty of alliance would be concluded between two independent States.

It is conceivable that in practice the Egyptian scheme would work out smoothly and satisfactorily. No one, however, outside Egypt will hesitate for a single moment to say that Great Britain is entirely justified in her unwillingness to leave such a vital matter to chance. The point at issue is not, as is supposed in Egypt, one that concerns Great Britain and Egypt alone. The peace of the world at large is involved, and the more the Egyptians fail to understand this aspect of the case, the more is Great Britain confirmed in her resolve that no unnecessary risks must be run. If the history of Egypt during the last six years had been different, there might have been more readiness on the part of the British Government to leave the future to take care of itself, trusting to the efficacy of cold reason. As things are, it can only see in the ease with which Egypt can lash itself into fury at the slightest provocation an obstacle to such an understanding as would satisfy two nations whose outlook on life and political mentality more closely approximate the one to the other's. If a nation so quick-witted as the Egyptian would allow itself to appreciate the British point of view, it would very quickly change its tactics. Disuse of a limb or faculty leads to atrophy. The same would happen in the case of the safeguards which British caution, supported by the common sense of all other countries, considers to be necessary in the early years of the new régime in Egypt. Troops which seem to-day to be needed as much for the preservation of order at home as a nucleus of defence against threats of aggression from without will soon be found to be useless for the latter purpose when they are shown to be superfluous for the former. "Immediate evacuation" makes a convenient slogan; but the cry loses its point when reiterated for a number of years, and becomes foolish as a policy, if it can be shown that other tactics would achieve the end in view in a shorter time.

The London conversations began, progressed, and ended in an entirely friendly atmosphere. Zaghloul Pasha had stipulated that he should not be bound down to the four "reserved subjects," but should be allowed to explore the whole range of Anglo-Egyptian relations. His wish was granted; but in his second meeting with the British Prime Minister he found that the reserved subjects represented no arbitrary selection, but went straight to the root of any understanding between Great Britain and Egypt. He came to England pledged to his people not to yield ground on any one of the four points, and he has kept his word. The conversations, therefore, in so far as they were intended to lead up to a formal agreement between the two countries, have been barren of result. What, then, is to be the next stage in the relations between Egypt and Great Britain? Will Zaghloul Pasha return to his own country, actuated by the same friendly spirit with which he has carried through the discussions with Mr. Ramsay MacDonald, and counsel his people to leave the unsettled problem exactly where he himself has left it? Two honest men, each zealous of his country's interests as he has interpreted them, have been unable to come to an agreement. Honour and statesmanship alike require that nothing should be done to prejudice the relations between the two countries, in order that time may be given a free hand to determine whether the voluntary modification of the views of the one or of the other is possible. Or will Zaghloul Pasha throw off the rôle of statesman, mount the demagogue's platform, and cry, "England rejects my demands; we must force her to yield." If he chooses the latter course, he must know that intemperance of language begets intemperance of action, and that violence will be countered by violence.

MEETING OF EAST AND WEST.

The concluding session of the Conference on Some Living Religions within the Empire was held last Friday at the Imperial Institute, Sir E. Denison Ross presiding. A valedictory address and benediction to the Conference was given by the Khalifad in Hindustani, which was translated by Maulvie Muhammad Din, of the Chicago Ahmadiye Mission. His Holiness concluded by observing: "Kipling is mistaken. The East is East, and the West is West, but the twain have met to-day."

BRITAIN AND ARABIA.*

The End of the Arab Confederation?

(*From a Correspondent.*)

Somewhere on the seventy scorching miles between Taif, that dream-garden of the Hejaz, a city in which sophisticated and successful Sunni merchants cultivate their grapes and spend their long summer hours, and in whose palaces even goldfish are to be seen, and Mecca, the holiest and perhaps the most iniquitous city in all Islam, are gathered together the hosts of Sultan Hamid ed Din, chieftain of the redoubtable Abdul Aziz Ibn Saoud, head of the famous Wahhabi sect of Moslems Here for the moment they stand hesitant before plucking the noted prize which, unthoughtful of consequence, they snatched so long ago as 1803, and from which they were driven only by African arms under the Albanian, Mohammed Ali. Whether Ibn Saoud himself had directed this drive through Taruba and Taif on to the Prophet's birthplace is, however, not definitely known, and it is upon his decision—either to make peace or to advance, as did his predecessors at the beginning of the last century—that the whole Moslem world is waiting.

And not only the Moslem world. Britain and—in much smaller degree—France are watching with close and unforgetful eyes the succumbing of the Hejaz before the warriors of Nejd. Here it may be pointed out that, contrary to common estimation, France is not without interest in the fate of Arabia. Only last summer—and this is a fact which, I believe, escaped notice in all English newspapers—she attempted unsuccessfully to obtain a footing in the port of Sheikh Said in the Yemen, opposite French Somaliland. But Britain's interest is vital, because she will without doubt have to orientate her policy and combine more nearly than hitherto her Indian and Middle Eastern aims.

With the motives of this Wahhabi drive it is not my intention to deal here. The story of the rivalry between Riyadh, from which Ibn Saoud has ruled with terrifically strong hand, and Mecca, whence have gone forth Hussein's more interested and less swiftly obeyed edicts, is well known to students of the Arabian Peninsula. But the significance of this irruption from Nejd, of the complete collapse of the professed leaders of the Arab world—that at the moment is the all-important thing.

We have here, as I see it, nothing less than the thorough shattering of one of the greatest political conceptions of the century, almost as great as that of the as yet unachieved Balkan Federation—I mean the idea of an Arab Confederation—a Confederation, that is, which should comprise the Arabs not only of all Arabia, but of those places also from which at one time Arab glories most brightly irradiated—Syria, Palestine, and Iraq. Ibn Saoud, or one of his generals, has smashed one of the most fascinating dreams of Oriental history, and in the present confusion and disillusion heartburnings, not only among Arabs, but among European lovers of Arab civilisation, are abundant.

Now no idea fostered during and by the War has aroused more enthusiasm and more antagonism than the grand idea of an Arab Confederation. It is sufficient but to mention, on the one hand, Colonel T. E. Lawrence and Professor D. G. Hogarth—who, during the War, actively, the first on the field of battle and the second from behind the lines, assisted in the encouragement of the idea—and, on the other hand, Sir Arnold Wilson (High Commissioner of Iraq, 1918-1920) and Colonel Vickery (British Agent at Jeddah, 1917-1919), as sponsors and detractors respectively, to recollect under what distinguished auspices and, subsequently, with what misgivings, this conception of a united Arabia was launched and directed by the British. Despite European opposition—for, although help was given to Hussein of the Hejaz during the War by both France and Italy, it was promptly discontinued and, indeed, deplored, soon after the Armistice—Britain has persisted in her high endeavour to realise the age-long dream of a Confederation of the Arabs. And now it seems, from the fighting before Mecca between the Wahhabis and the adherents of the Hashimite family, that edifice, of which the Shereefian House was to be the main pillar, is falling down like a pack of cards. King Hussein's family is at Jeddah, and he himself, almost without a friend among neighbouring Arabs, is like to have difficulty in finding permanent refuge. It is impossible not to hear the chuckle of satisfaction on the part of the detractors of the policy of the Colonial Office, whose scheme, executed mainly by Mr. Winston Churchill and Colonel T. E. Lawrence, of bolstering up the Shereefian family in the Middle East (Hussein in the Hejaz, Faisal in Iraq, and Abdullah in Transjordan), would now appear to have collapsed, and to have collapsed owing to the very reason which opponents of the scheme have consistently preferred—the personal unworthiness of Hussein and the general unworthiness of the Hejazi Arabs.

But the Colonial Office need not be held wholly responsible for this nightmare which the hosts of Ibn Saoud have raised among certain Arabs. Its work in this connection was mainly war-work, and not until well after the Armistice was it found, in negotiation after negotiation, how hopeless it was to satisfy in the form of a treaty the promises made during the War to Hussein. The argument that the friendship of the Hejazi Arabs was essential to the safety of our communications *via* the Red Sea is unanswerable, and the fact that Sir Henry MacMahon made, in 1915, considerable promises to the Shereef of Mecca was not an error, but a necessity. Moreover, the idea of detaching the Arabs from the Turks originated much earlier than this, and in no less a brain than that of Lord Kitchener. This far-seeing Oriental diplomatist perceived that since in the years before the War Turkey was increasingly controlled by Germany, Arabia also would come under the Teu-

* It should be pointed out that this article, with all the contentions of which we do not agree, was written before the resignation of King Hussein and the definite position of the attacking Wahhabis were known.—Ed.

tonic shadow, and it was, therefore, to counteract the influence of Germany in the Middle East that he formulated a scheme of detaching from the Ottoman Empire the Arabs of Arabia, and of building them up into a great Confederation.

Why Britain chose for the instrument of this Confederation the Hejazis and not the Wahhabis (whose dominions at this moment extend from the Persian Gulf almost to the Red Sea), has been fully told in that classic of travel-books, Mr. St. John Philby's "Heart of Arabia." Therein Mr. Philby states his view that it was largely the result of accident, and does not disguise his estimate on the respective values of Ibn Saoud and Hussein. But, it is interesting to note, this distinguished Arabist would appear of late to have modified his views on the possibilities of the situation, for he recently delivered himself of the opinion that, of the known leaders of the Arab world, none could more effectively lead an Arab Confederation that Emir Ali, King Hussein's eldest son, who but a week or so ago had to fall back before the Wahhabi forces attacking Taif.

For the moment, the Wahhabis hold all the trump cards, and although Ibn Saoud is credited with a wish to form an Arab Confederation, it is inconceivable that, after his experiences, he would allow anyone but himself to lead it. Yet this uxorious Puritan as head very few Moslems outside the Wahhabite sect would for an instant tolerate. Twice, in fact—once at the time of the Carmathian heresy and again in the Wahhabism of the early nineteenth century—has external Mohammedan opinion spurned the claim of the ascetics to lead Islam. It would seem, therefore, that Arabia will once more fall back to its ancient disunity with rival tribe vying with rival tribe and with no main political purpose ever in the ascendant. Ibn Saoud himself, who alone can control his fanatical but supremely energetic and now self-supporting bands of "Ikhwan," may succeed for a time in holding his vast possessions together, but his work will probably in the long run fail, just as that of his great predecessor in the eighteenth century failed. It is very possible, incidentally, that this advance through Taif to Mecca has not been countenanced by him, for although he held in supreme contempt the man who arrogated to himself (Hussein could plead, however, sometime British encouragement) the title of Khalif, he has for some months desired permanently to settle the boundaries of his dominions. But whether deliberate or not, this accession to Ibn Saoud of Hejazi territory will make his problem of ruling more, not less, difficult.

Now, having sketched the present position—the bubble of the Hejaz Kingdom pricked, the "Western" States of Iraq and of Transjordan consequently in the air, and the unity of Central and Western Arabia dependent on one man, Ibn Saoud—we may ask ourselves finally, "What are to be the future relations between Britain and Arabia?" Is this barren peninsula to lapse into her eighteenth-century gloom under the forbidding shadow of the Wahhabis, and fiercely hostile to all foreign influence, or will Britain now pursue the policy, long advocated by the India Government as against the Colonial Office, of getting on the friendliest terms with the mighty ruler of Nejd?

For the time being a policy of "Wait and See" is, of course, the only possible one. But should Ibn Saoud extend his sway to the Red Sea, it will become imperative to come to a definite understanding with him. That such an understanding can be made is not to be doubted. Not only in several meetings with Sir Percy Cox, as High Commissioner of Iraq, to discuss Iraq-Nejd boundaries, but also at the unsuccessful Koweit Conference last winter under Colonel Knox, did the leader of the Wahhabis show his sense of the need of political stability. And it is not improbable that his remembrances of the late Captain Shakespear, and of Mr. St. John Philby, and, more recently, of Major Holmes, to whom on behalf of the Eastern and General Syndicate he granted an oil concession, and of Captain R. E. Cheesman, who, thanks to the Sovereign's personal permission, roamed at will in Nejd in search of flora and fauna, will help to make an Anglo-Nejd arrangement a reality, and something more than the subsidy-fed agreement which enabled him to act in concert with the Allies during the War, but never actively to assist them.

THE INTER-ALLIED REPARATIONS COMMISSION IN BULGARIA.

To the Editor of The Near East.

Sir,—I read with great interest the article "The Reparations Commission in Bulgaria" in the July 3 issue of The Near East. As the author of the said article has tried to present to the British public opinion the point of view of the Bulgarian Government regarding the reparations problem, I have the honour to request you to give space in your worthy magazine to the following explanations:—

The Inter-Allied Reparations Commission in Bulgaria began its work in Sofia, in March, 1921. It was received by the Bulgarian Government with all the attention and respect due to such a high institution, representing the three greatest European Powers. The Government and the people of Bulgaria had great hopes in connection with the Inter-Allied Reparations Commission. They expected that the Commission, being on the spot and living among the Bulgarian people, would be able to investigate and to appraise, better than any outsider, the real financial and economic situation of the country, which was aggravating, and would realise that the financial and economic burden imposed upon a diminished and impoverished Bulgaria was far beyond its economic and financial capacity; they trusted that the Commission, invested with the necessary authority by the Treaty of Peace and inspired by the principles of justice, would do everything in its power to reduce to a minimum the unbearable financial burden of Bulgaria and to postpone its payment, which would give Bulgaria a chance to consolidate its economic resources and to strengthen its disorganised finances so as to be able in the future to fulfil honourably its financial obligations.

Although the treaty had imposed very heavy and unjust political and economic burdens upon Bulgaria, the Bulgarian Government, desirous of giving proof of its firm decision to fulfil faithfully its treaty obligations to the extreme limits of its power, and to facilitate the work of the Commission, began the fulfilment of the treaty by making the restitutions under Articles 125-128 even before the arrival of the Commission in Sofia. The Bulgarian Government took all the necessary measures for the best possible establishment of the Commission in Sofia, and requested and received gladly its co-operation for the economic and financial restoration of Bulgaria. In April, 1921, the Bulgarian Government laid before the Commission a

Digitized by Google

candid and complete statement of the economic and financial situation of the country before and after the Balkan wars, as well as after the world War, and requested the Commission's intervention, in order that at least a three years' moratorium might be granted to Bulgaria for the payment of the reparations debts. Meanwhile the Bulgarian Government passed all the necessary legislative measures for the carrying out of the work of the Commission, and continued to fulfil the Treaty stipulations in the most conscientious manner.

The large expenditures growing out of the faithful discharging of the external pre-War debts, the fulfilment of the Treaty, and the sustaining of the Inter-Allied Commission, brought about an aggravation of the financial condition of the country. The results of this aggravation were: great Budget deficits, a considerable increase of the internal floating debt, great inflation of the banknote circulation, and a rapid depreciation of the Bulgarian exchange, which is evidenced by the falling of the lev from 44 gold centimes on December 31, 1918, to 3.7 gold centimes on December 31, 1921. Nevertheless, the Bulgarian Government, far from resorting to the system of unlimited issue of paper money, and although greatly handicapped by the large expenditures above-mentioned, did everything in its power to stop the inflation.

Under these circumstances, the Government and the people of Bulgaria anticipated the application of Article 122 of the Treaty of Neuilly, which would have given Bulgaria the necessary moratorium, at least concerning the reparations debt. Therefore, the Bulgarian Government was greatly surprised when, in March, 1922, the Commission presented a draft convention for the settlement of Bulgaria's reparation debt which was more drastic than the Treaty of Neuilly, and which, if applied, would jeopardise the political and economic independence of Bulgaria. In spite of the threats of the Commission, the Bulgarian Government, unable to accept the proposed draft convention, insisted repeatedly upon its withdrawal, until it finally succeeded in reaching an understanding with the Commission, according to which the Bulgarian reparations question was to be settled by mutual agreement between the two parties at more favourable terms for Bulgaria. Nevertheless, at the time of the settlement of this question, the willingness of Bulgaria to live up to the Treaty obligations and the great material sacrifices already made for the fulfilment of the cruel Peace Treaty were not taken into consideration. In spite of all solicitations, the reparations debt, which greatly exceeds the financial and economic capacity of Bulgaria, was not reduced under Article 122 of the Treaty, but was only divided into two parts, as follows:—Part I., of 550,000,000 gold francs, payable in sixty years at 5 per cent. interest, and Part II., of 1,700,000,000 gold francs, the payment of which was postponed for thirty years.

Another heavy financial burden was imposed upon Bulgaria by charging her for "cost of military occupation of the country" a sum out of proportion with the real situation. The Bulgarian Government made all efforts to persuade the Commission that, on account of heavy financial obligations, Bulgaria was unable to stand additional charges, and that from a legal point of view she was not liable to assume such charges. The Bulgarian Government claimed that under the Armistice agreement of Salonika, and in view of Article 133 of the Treaty of Neuilly, Bulgaria was not to be considered as an occupied country, only certain strategical points having been occupied: moreover, Bulgaria had already paid 65,000,000 gold francs to meet the expenses of the Allied armies which have been stationed in or passed through Bulgaria. Finally, the Commission reduced its original claim of 130,000,000 gold francs to 25,000,000 gold francs, and Bulgaria agreed to pay the reduced amount in ten years at 5 per cent. interest.

There is no doubt that the Commission has rendered certain services in connection with the fulfilment of Articles 127 and 135 of the Treaty regarding restitutions and deliveries of cattle to Greece, Roumania, and Yugoslavia. The tactful and impartial attitude of the Commission was very helpful for the prompt and orderly carrying out of the deliveries. Also it could not be denied that the Commission lent its kind co-operation for the settlement of some other minor questions, and that it supported Bulgaria in the question of reintroducing obligatory military service. However, the services rendered by the Commission are greatly exaggerated, and still more exaggerated is the statement that the Commission is necessary in the future for Bulgaria.

As to the question of the limitation of public debt to the Bulgarian National Bank and of the inflation, the interests of the Bulgarian Government and those of the Commission were identical. This question was openly discussed in Bulgaria, and all prominent Bulgarian financiers were in favour of a restrictive legislation. The Bulgarian Government also, impressed by the example of the financial collapse of Austria and Germany, has been invariably in favour of a restriction of the inflation: this is evidenced by the fact that the banknote circulation in Bulgaria is at the present time 3,800,000,000 leva—namely, considerably below the legal limit of 5,600,000,000 leva, and this result has been achieved by Bulgaria without any assistance from the Commission. The Grain Corporation was in principle a beneficial enterprise, but, unfortunately, conditions were unfavourable, and, at the instance of the Commission, the Bulgarian Government abolished it. The balancing of the Budget was not due to the Commission. It was achieved thanks to the united efforts of the Government, of members of Parliament, and of many leaders of public opinion, who realised that the only alternative to a complete financial collapse was an increased production and a budgetary equilibrium. As to the question of obtaining financial help on the foreign money markets, the attitude of the Commission has been negative; so in 1921 the Commission declined to give its consent to a loan, although the contract was already signed by the Bulgarian Government, at fairly favourable terms, and the proceeds of the loan were destined to the construction of several railroads of great importance for the economic restoration of the country.

Therefore, as the deliveries of cattle have been already carried out, and the problems of reparations and occupation cost and other questions of a temporary character have been settled, no Bulgarian Government and no Bulgarian citizen would think to have the Commission continued in Bulgaria—not even with a considerably reduced staff. As the payment of reparations and occupation expenses has been guaranteed by the Customs revenues, under the supervision of the Bulgarian National Bank, there is no excuse for a further interference of the Commission with Bulgarian public finances. Moreover, Bulgaria should be relieved as soon as possible of the first mortgage on all her property and resources under Article 102 of the Treaty. The Commission has played its part in shaping the financial legislation of the country, and there is no longer any need for its "authority and respect."

It is true that hitherto the Bulgarian Govern-

Digitized by Google

ment has made no official protest against the continued existence of the Commission. The Bulgarian Government wished to respect the susceptibilities of the Commission, and trusted that the latter would see the uselessness of its further stay in Bulgaria, and would withdraw of its own accord before having aroused public indignation. No Bulgarian Government would subscribe, even unofficially, to the Commission's "utility to the country."

In these circumstances, and in view of the fact that the task of the Commission is practically accomplished, the suggestion of a continuation of the existence of the Commission was received with perplexity and regret by public opinion in Bulgaria. The Commission ought to be withdrawn entirely, or its existence might be continued for a very short time until the questions coming under Articles 134, 139, and 141 of the Treaty are definitely settled; but in the latter case its staff ought to be reduced to a minimum of three members and one clerk, and with salaries low enough so that the total cost of the Commission might be reduced considerably below £8,000 a year. For the sake of comparison I may point out that the cost of the Bulgarian "Direction of Public Debts, of Debts guaranteed by the State, and of Pensions," with a staff of 210 officials, is about £8,000 a year. Moreover, it must be taken into consideration that the sums paid for the cost of the Reparations Commission and other similar Commissions are practically deducted from the salaries of Bulgarian officials and teachers who are obliged to live in greatest privation.

I am of the opinion that the remaining task of the Commission could easily be accomplished by one representative only, appointed among the members of the Commission's staff. The continued existence of the Commission in its present form, even with a reduced staff, would mean a superfluous burden to the overburdened Bulgarian Budget, and would be an insult to Bulgaria and the Bulgarian nation.—I am, etc.,

Nicolas Stoyanoff,
Director of the Public Debt of Bulgaria.

THE DEPARTURE OF ZAGHLOUL PASHA.

The conversations between Saad Pasha Zaghloul and Mr. Ramsay MacDonald came to an end last Friday, and on October 7 the Egyptian Prime Minister and Madame Zaghloul left London for Paris *en route* to Egypt. Zaghloul Pasha was accompanied by Wassef Ghali Bey, Minister for Foreign Affairs, and Mustapha Nahass Bey, Minister for Communications, and by the numerous suite that had come with him to London. Aziz Pasha Izzet, Egyptian Minister to the Court of St. James's, travelled by the same train to Paris, where he will stay until Zaghloul Pasha leaves for Marseilles. At Victoria Station the Egyptian Prime Minister was bidden farewell by a large gathering of his compatriots, who raised cheers for Zaghloul Pasha and Madame Zaghloul and for Egypt and King Fuad, as well as the cry, "Egypt and the Sudan for the Egyptians." Addressing them from the train, Zaghloul Pasha stated that no harm had been done by the negotiations: he had surrendered nothing, and was now returning to Egypt to consult as to what was to be done next. Mr. W. H. M. Selby, private secretary to the Secretary of State for Foreign Affairs, represented Mr. Ramsay MacDonald at the station, and bade farewell to Zaghloul Pasha on behalf of the Prime Minister.

THE B.E.F. IN SALONIKA.

Floral tributes in remembrance of the dead heroes of the British Expeditionary Force to Salonika were laid on the Cenotaph last Sunday by General Sir George Milne, who commanded the Salonika Forces. The first wreath, which had been made by disabled ex-soldiers in the workshops of the British Legion, consisted of artificial Flanders poppies, and it bore the inscription upon a streamer of silk, "1914—1918 Salonika." The other wreath, made of laurel, was a tribute "To the valorous British defenders of freedom, who fought and died on the Salonica front, in grateful remembrance from the Greek people and the Greek army." Accompanying General Sir George Milne were the French Naval Attaché, the Greek Minister, the Serbian Consul-General, Major-General J. Duncan, Colonel-Commandant T. E. Kelly, R.A., Colonel W. J. Frogley, and the Rev. W. Stevenson Jaffray (principal chaplain to the Salonika Army).

THE PALESTINE ORIENTAL SOCIETY.

No. 4, Vol. IV., of the *Journal* of the Palestine Oriental Society contains two very interesting articles entitled, "Notes on the Jewish Graffiti of Bath-Phage," by E. L. Sukenik, and "Rules of Hospitality," by Omar Salih El-Barghuthi. This journal is performing, under the authoritative editorship of the Rev. Dr. Herbert Danby, a quite invaluable work in setting down, before they are completely decayed, the beliefs and customs prevalent in Palestine in the pre-British era.

M. Kalfoff, the Bulgarian Minister for Foreign Affairs, arrived in Paris from Geneva on October 1.

THE

Tuesday Morning.

The Rubber Position.

Reference is called for to the exceedingly interesting character of the present position of the rubber market. For a long time it certainly looked as if the restriction scheme was not going to justify the hopes that had been based upon it. But the reduction of the output on August 1 by a further 5 per cent. seems to have been the turning point. For a few weeks there was little change, and then rubber began to rise steadily, and yesterday stood at 1s. 3¼d. per lb. The cause of this change is the great improvement in the statistical position. Stocks in London are now over 10,000 tons below the figures at this time last year, while the supply in America, which, of course, is a vital factor in the situation, is now no more than will suffice for a few weeks. If the output remained on the present scale, there is no doubt that rubber would continue to rise, but there is every prospect of a further reduction in output. Rubber, it must be pointed out, has to average 1s. 3d. in the quarter, otherwise there is a 5 per cent. reduction. To average 1s. 3d. in the present quarter, it will be necessary for rubber to average 1s. 5d. for the remaining weeks, which is very unlikely, and if there is a reduction to 50 per cent. it is very evident that we can look forward to a sharp rise in rubber. I should not be in the least surprised to see it go to 1s. 7d. or 1s. 8d., or even considerably higher, for all the indications point to the output for next year being below what may be required.

Markets for Motors.

I wish to draw the attention of British motor manufacturers to the article in this issue on markets for motors in the Near East. So far, as the writer points out, these outlets have been largely neglected, although there is a growing trade in motors throughout the Near East, and the result is that foreign manufacturers have benefited from our lack of enterprise. In many parts of the Near East the nature of the terrain is such, it is true, as to restrict motor traffic, but there is quite a wide scope for motoring, as the inhabitants are discovering, even in the Balkans, while in countries like Egypt the use of the motor is rapidly developing. In the Sudan, too, the motor is widely used, and it goes without saying that only the question of cost stands in the way of a great extension of motoring. Then in the Middle East, as the writer of the article suggests, the successful motor services now being run have brought home to the inhabitants the utility of the motor in a way which nothing else could have done, and it is to be expected that the result will be a greatly increased demand for motors. It is the business of British manufacturers to see that they obtain an adequate share of the trade, and it is in the belief that it is only necessary to bring the potentialities of the Near East markets before them that I draw attention to them here.

Egypt's Obligations.

An unfortunate position has arisen in regard to the payment of interest on the Ottoman Loans of 1891 and 1894, which are secured on the Egyptian Tribute. As I have already had occasion to point out, Egypt has taken up the attitude that she is no longer liable in respect of these loans, and she has now suspended payment of the funds required for the service of the loans. The result is that the bonds of the 1891 loan drawn for redemption on October 10 and those of the later loan drawn for redemption on October 15 cannot be paid. There are, however, funds in hand to meet portions of the coupons due, and the announcement is made that £1 5s. per cent. will be paid by Messrs. Glyn, Mills and Co. in respect of the 1891 loan and 15s. 10d. per cent. by Messrs. N. M. Rothschild and Sons in respect of the 1894 loan. The Egyptian Government, it must be pointed out, have offered to refer the question of their position in regard to the loans to the Hague Tribunal, and there the matter stands at present.

The B.I.F.

It now appears certain that the British Industries Fair will be held, as usual, next year at the White City, London, and at Birmingham. This year, it will be recalled, the Fair was held later than usual, in order that it might coincide with the British Empire Exhibition, but I do not think that any great benefit was derived from that course, for fewer foreigners visited the Exhibition than were expected to do so, at any rate, at the commencement, and it is now proposed to revert to the usual dates in February. In view of the improved political situation as a result of the recent conferences, it is possible to look forward to the development of trade in the next few months with a considerable amount of optimism, and if nothing happens in the meantime to alter the situation, the Fair promises to take place at a time when commerce generally will be decidedly on the upgrade, and the result should be that excellent business will be done at the Fair.

A New Feature.

I wish to draw attention to a new feature in this part of the paper—chess notes. This feature will be found this week on page 382.

COMMENTATOR.

BANK OF ROUMANIA LIMITED

(FOUNDED 1866).

Head Office: - 16, GRACECHURCH STREET, LONDON, E.C.3.

Branch: 11, CALEA VICTORIEI, BUCAREST.

Directors:

E. W. H. BARRY, Esq.
C. De CERJAT, Esq.
General The Hon. SIR H. A. LAWRENCE, K.C.B
LORD ORANMORE AND BROWNE, K.P., P.C.
Lieut-Col. SIR ALBERT STERN, K.B.E., C.M.G.

Bankers:

BANK OF ENGLAND. Messrs. GLYN, MILLS & CO.

A general Banking business with Roumania is conducted and correspondence from those having interests in that country is invited.

CHESS.

(BY "CARO-KANN.")

It is many months since I was last responsible for these notes, and in the interval much chess history has been made. But the tournaments that have been held abroad and at home have been dealt with fully at the time, and I do not propose to refer to them here with the exception of the recent British Championship at Southport. The retirement of Mr. H. E. Atkins before the War after an unprecedented record of successes in the Championship was greatly regretted by the chess community, and it has been hoped that he would ultimately make another appearance in the arena. Now he has done so, and has shown that his skill is unimpaired, and his victory in the circumstances can only be regarded as one of the greatest performances ever put up in the Championship.

We are now, of course, on the threshold of the new season. October is a month of peculiar delight to chess players since it signifies the rapid approach of the tournaments and league matches. The first event at the City of London Chess Club is a Lightning Tournament, which is to take place on October 16. The club is holding its usual tournaments, entries for which have to be made by October 17.

The following game was played in the summer tournament of the Midland Bank Chess Club :— White, Mr. C. M. Payne; Black, Mr. R. K. Page. 1, P—K4, P—K4; 2, Kt—KB3, Kt—QB3; 3, B—B4, B—B4; 4, P—QKt4, B x P; 5, P—B3, B—B (a); 6, P—Q4, P—Q3; 7, O—O, Q—B3 (b); 8, B—Kt5, Q—Kt3; 9, P x P, B—Kt5 (c); 10, QKt—Q2, P x P; 11, Q—Kt3, P—Kt3 (d); 12, Q—R4, B—Q2; 13, KR—Q, P—B3; 14, B—Kt5 (e), KKt—K2; 15 Kt—B4, R—Q; 16, R—Q2 Q—B2; 16, QR—Q, Q—K3 (f); 18, R—Q6 (g), Q—Kt5; 19, P—KR3, Q—R4; 20, R x B, R x R; 21, B x Kt, Kt x B; 22, Q x Kt, Q—B2; 23, KKt x P, P x Kt; 24, Q—R8 (ch), resigns.

(a) This is unusual and too defensive. B—R4 and B—B4 are the usual continuations.

(b) It is difficult to find a good move in this cramped position. P x P, followed by B—K2 would seem to be as good a line as any.

(c) If Kt x P, 10, Kt x Kt.

(d) Simply inviting an attack. R—Kt should have been played.

(e) The attack is now becoming overwhelming.

(f) There was nothing else. It is interesting to note that all this time it has been impossible safely to capture the Bishop.

(g) Very pretty and quite decisive.

BULGARIAN FINANCES.

The receipts of the Bulgarian Treasury during August, 1924, amounted to the sum of 482,577,250 levas (£804,295), as against 820,204,882 levas (£800,342) in July last, and 439,011,381 (£731,685) in August, 1923.

The receipts for the first five months (April 1-August 31) of the financial year 1924-1925 were : 2,363,896,105 levas (£3,941,000), giving a monthly average of 473,000,000 levas (£788,000). Thus the last months of the financial year have been marked with a tendency towards an increase of the receipts. This improvement is expected to be maintained through the autumn and the winter, it having been noticed that taxpayers are generally in a better position to discharge their liabilities in those seasons.

The Bank of England are prepared to receive the coupons due October 15 on Egyptian preference bonds. The necessary lists can be procured on application at the dividend pay office.

INDIAN APPOINTMENTS.

The following appointments by the Secretary of State for India are announced : General Sir Havelock Hudson, K.C.B., K.C.I.E., Indian Army (retired), to be a member of the Council of India in the place vacated by the resignation on the expiry of his term of office of General E. G. Barrow, G.C.B., G.C.S.I.

Sir Reginald Arthur Mant, K.C.I.E., C.S.I., Indian Civil Service, to be a member of Council in succession to Sir J. B. Brunyate, K.C.S.I., C.I.E., whose tenure of office has expired.

Mr. Stuart Kelson Brown to be joint secretary in the Military Department of the India Office in succession to Mr. Samuel Findlater Stewart, C.S.I., C.I.E.

Lord Olivier has appointed Mr. Richard Henry Archibald Carter to be his private secretary, vice Mr. S. K. Brown (promoted), and Mr. Wilfrid Johnston, M.C., to be his assistant private secretary, vice Mr. John Gilbert Laithwaite (promoted).

THE RIF.

A meeting of the Near and Middle East Association will be held on October 15, at 8.30 p.m., at 55, Harrington Gardens, South Kensington, by kind permission of Mrs. Bruce Dick. The subject is to be "The Problem of the Rif," on which a paper written by Captain R. Gordon Canning and a Note by the Rt. Hon. Ameer Ali will be read by Mr. J. A. Bevan. Major-General Lord Edward Gleichen will preside.

NEWS FROM ALL SOURCES.

King Alexander of Yugoslavia returned last week to Belgrade after his provincial tour.

Captain Bernard Eckstein has been appointed a director of the Sudan Plantations Syndicate, Ltd.

It is reported that a Yugoslav Transatlantic steamship line has been formed with a capital of £600,000.

It is stated from Athens that the Greek Government has asked for a British naval mission to be sent to Athens.

A slight earthquake shock was felt at Constantinople and in the islands in the Sea of Marmora on September 29.

The traffic receipts of the South India Railway Company for the week ended August 30 amounted to Rs. 8,23,332, making the total from April 1 Rs. 2,06,37,945.

Mr. C. H. Bentinck, who was Chargé d'Affaires in Athens for eighteen months during the interruption of relations after Mr. Lindley's departure, left there on September 29 for his new post in Munich.

The Turkish Minister of Finance and the chief of the Constantinople Bourse, who have been spending several days in London in connection with the Imperial Ottoman Bank, left London on October 3 for Paris.

The *Tanin* of Constantinople publishes an account of the growth of brigandage in the *vilayet* of Adana and in Eastern Anatolia. It is said that murders, robberies, and kidnappings are of common occurrence, and that the Mayor of Bitlis has been assassinated.

According to the *Pioneer's* correspondent at Meshed, Persian troops successfully ambushed Turcoman raiders near the Nardin Pass, on the Teheran road, killing seventy of them. Telegraphic communication between Meshed and the capital is again open, after a fortnight's interruption.

Mr. Linfield and Mr. Calder, members of the East African Parliamentary Commission, arrived last week at Zanzibar. They were received by a delegation from the Chamber of Commerce and by Arab and Indian deputations. All parties expressed the opinion that Zanzibar did not wish to join the suggested East African Customs Federation.

Reuter's Constantinople correspondent reports that the Judicial Sub-Committee of the Commission dealing with the exchange of populations has decided by a vote of two to one to interpret the word "established" applied to Greeks in Constantinople as including all traders, merchants, and workmen who are able to prove residence in Constantinople previous to 1918. This decision affects over 60,000 Greeks in Constantinople. Tewfik Rushdi Pasha, the Chief Turkish Delegate, has resigned, and the work of the Commission is at a standstill pending the appointment of a successor.

(By Our Engineering Representative.)

Near East Markets for Motors.

Next week we shall have an opportunity of inspecting the latest products of the ingenuity of British motor manufacturers, and the occasion renders extremely apposite some reference to the very important question of markets for motors. The home market, of course, is steadily growing, and there is still immense scope for development even though there is no possibility that the ratio of motors to the population will ever even faintly approximate to the American figure, for which, it may be added, we have cause for profound satisfaction, for with the roads crowded as they are at the present time it is obvious that motoring on the American scale would mean that the roads would be almost impassable. But even if the home market at the moment was large enough to satisfy the desires of British manufacturers—and it is not—it would be a most futile and absurd policy to concentrate on its requirements to the exclusion of adequate attention to foreign markets. In this critical period for British commerce the value of an industry must mainly be measured by the part it plays in the export returns, for we cannot exist by, so to speak, taking in each others' washing, and we must export to an ever-increasing extent if the population of this country is to be supported. There is no question that despite the difficulties with which manufacturers have to contend, the motor industry ought to play a very important part in the export market, far more so than is now the case, and if this is to be so, it is very evident that much more energy and initiative must be put into the business of pushing sales abroad. There must be an end, for one thing, of the policy of only catering for foreign trade if the markets are inviting, in other words, if business can be obtained more or less easily. There must, in short, be an abandonment of the old methods, and all markets must be catered for, and where the position is most difficult, there the greatest efforts must be made to meet local requirements. It is only thus that in this new era, when all business that can be obtained is needed, that British motor manufacturers will be able to hold their own abroad in the face of the keen competition from our rivals—a competition which, it must be emphasised, is becoming more pronounced each year.

I have been led to make these remarks by the evidence of the comparative neglect of the Near East markets that is forthcoming in the latest reports from those regions. For various reasons British manufacturers as a whole—there are, of course, many notable exceptions—have never shown any outstanding keenness to enter these particular markets, and what is true of our manufacturers in general is emphatically so in regard to the motor industry, and the result is that, while the use of the motor is developing apace throughout the Near East, it is in the main the foreign motor and not the British product that is being used. Some manufacturers take the extreme view that it is practically impossible to compete in the Near East markets. It would be unless special care were taken to meet the needs of the various markets. There is a fair demand for luxury cars, and here, of course, the pre-eminent quality of British products is a sure guarantee that they will hold their own, but we have yet to introduce to these markets a light car at a price at which it will be a serious competitor to a well-known foreign make. As showing the potentialities of the market, it is noteworthy that a foreign firm has had under consideration the establishment of branch factories in the Near East. That fact ought to spur British manufacturers on to greater enterprise in that region, for if one of their most redoubtable competitors abroad is so impressed with the prospects there must surely be room for them too. It is, as I have pointed out, mainly a question of initiative. No one questions the British capacity for turning out good cars of any grade. Each succeeding Motor Show, with the ever-increasing variety of models, is the best proof on that score. All that is necessary is for our manufacturers to determine what is the best type of car for all-round purposes in the Near East, to concentrate on its production, and to see that it is put on the market at a competitive price. Then, provided there is adequate attention to the selling side of the business in the Near East, and that presupposes naturally considerable and continuous publicity, there will be every ground for confidence that this country will obtain an adequate share of the trade that is going.

I have no space here to deal in detail with all the Near East markets for motor-cars, but to illustrate my remarks I propose to give the gist of the comments in recent British official reports on two important outlets—Roumania and Greece. As regards the former country, while it is pointed out that in nearly every branch of trade there are openings for British goods, it is stated that there has as yet been no determined attempt to compete in the motor-car trade. "Such is the reputation of British cars," it is added, "that it would seem possible for them to command slightly higher prices than foreign-made cars of similar type. If a large maker, or possibly two or three makers, in conjunction, could set up their own representative in Roumania under such terms as would allow the latter to open a large repair shop, and, above all, if he were possessed of sufficient capital to enable

him to employ two or three reliable mechanics well acquainted with the makes handled by their employer, there is every reason to expect that cars could be sold." The writer adds that there are one or two elementary conditions that they would have to fulfil. A good clearance would be advisable, on account of the roads, while the springing should be specially good for the same reason, and the representative should handle some type of shock absorber along with the cars. Other essentials include fairly fool-proof lighting and starting systems, and, finally, says the writer, "a strongly built British-made car would probably sell even in competition with larger power cars from Italy and Austria." It is expected that there will be a considerable development in the demand for motors in Greece as soon as the construction and maintenance of roads has been taken in hand. American machines have a practical monopoly of the market, the writer of the report points out, and he adds: "Cheapness is, of course, the main factor in the situation, and if British makers can produce cars at anything like American prices, there is no reason why they should not find buyers, provided, of course, that they satisfy the peculiar requirements of the country--viz., high clearance and good springing, on account of the character of the roads, which are on a par with the worst roads in non-European countries, as well as efficient cooling and braking systems." These two countries are in no wise peculiar, and what applies to them applies in broad detail to the whole of the vast region included in the Near East. A little energy, a little initiative, and British manufacturers may look forward to reaping a rich harvest. In the Middle East the whole position has been vitally altered by the successful motor services that are now being run, and it is obvious that one effect of these services will be greatly to develop a market for motors, for those who can afford to have them will want to use the routes themselves. Here, again, there is a great opportunity.

AFFORESTATION IN PALESTINE.

It is estimated that between 1920 and 1924 nearly three million trees have been planted in Palestine. This figure conveys some idea of the extent, not generally appreciated, to which the havoc wrought during the war in the forests of Palestine is being repaired (says the *Commercial Bulletin* of Palestine). The Forest Service of the Department of Agriculture, drawing its supplies from Government nurseries, has been able to render valuable aid with this afforestation, and much commendable work has been done by the Palestine Zionist Executive and the Supreme Moslem Council. Planting operations have been carried out by villagers and other private persons, and by municipalities, hospitals, and institutions, which, in most cases, obtained their stocks free of charge or at cost price from Government nurseries. The Government Forest Service planted 1,048,650 timber, ornamental, and shade trees, and 241,412 fruit trees. It sold and distributed 269,102 timber trees and propagated 111,168 olive trees. The Palestine Zionist Executive planted 666,200 timber trees and 6,733 fruit trees, and the Supreme Moslem Council 3,200 timber trees and 11,500 eucalyptus trees; 155,050 fruit trees were planted by private persons. Over the same period—viz., 1920-1924--close on a million vines were planted, of which 700,000 came from Government nurseries. The benefits of afforestation have been advertised, and this work by villagers and others has been given frequent encouragement in the columns of the local Press.

PALESTINE CROP PROSPECTS.

The Director of Agriculture and Forests in Palestine, in a report for the month of August, states:

Tobacco picking is nearing completion throughout the country. The weight of leaf in the northern districts is slightly above, and in the south somewhat below, normal. There is, however, a marked improvement in quality, and in the demand for seed of the finer and better flavoured types, such as the "Sada," against which an earlier prejudice existed on account of the small size of the plant. A clearly indicated preference on the part of the manufacturers for the best obtainable qualities is having a marked effect both on the choice of varieties and on handling and curing methods.

An exceptionally heavy olive crop is promised. The weight of fruit in parts of northern Galilee has been such as to necessitate the use of supports for the branches to prevent their being broken down. Almonds, on the other hand, are a very poor crop. Picking is over and shelling is being completed. The vintage is also disappointing, and the yield considerably below average. Melons are realising poor prices as compared with last year, and the crop is light. Orange prospects are satisfactory, and a growing interest in the cultivation of bananas is exhibited. The pomegranate crop in Galilee is excellent.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.)

Egypt.

The Ministry of Finance, Cairo, invites tenders for the supply and delivery of 75 iron safes in accordance with specification. Alternative quotations are desired, however, for 100 safes. Tenders must be submitted on the proper form, and will be received in Cairo up to noon on October 25 It is stipulated in the conditions of contract that the tenderer must be a person resident in Cairo or must have a representative in Cairo.

Semi-Diesel Engines, etc.—The Director-General, State Domains Administration (Commercial Service), Savoy House, Cairo, invites tenders for the supply of four semi-Diesel engines and four centrifugal pumps. November 1.

Paint.—The Main Roads and Bridges Department of the Egyptian Ministry of Communications invites tenders for the supply of 45 metric tons of paint for the Cairo bridges. —November 10.

Diesel Motor.—The Egyptian Government invite tenders for the supply of a Diesel or Semi-Diesel motor of 30 h.p.—November 12.

Leather.—The Egyptian Ministry of Education invite tenders for the supply of leather required for the model workshops and trades schools of the Ministry. November 15.

Soap. — The Financial Secretary, Egyptian Army, War Office, Cairo, invites tenders for the supply of 110 tons of hard soap to Egyptian Army Supply Stores, Tura. December 2.

Railway Sleepers.—The General Manager, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply of wooden railway sleepers. December 16.

Turkey.

Galvanometers.—The Turkish Posts and Telegraphs Administration invite tenders for the supply of thirty galvanometers.—November 1.

Yugoslavia.

X-Ray Apparatus—A firm of dealers in scientific instruments and electro-medical apparatus in Novi Sad are desirous of receiving catalogues and prices of X-ray apparatus from British manufacturers. (D.O.T.)

The directors of Harrisons and Crosfield have resolved to recommend the payment of a final dividend of 15 per cent., less tax, on the deferred ordinary shares in respect of the year ended June 30 last, making 25 per cent.

Near East Markets.

LONDON PRODUCE REPORT.

(From Our Own Correspondent.)

London, Tuesday morning.

Coffee.—A firm tone has prevailed. Costa Rica at 165s. is 1s. up, East Indian is unchanged at 140s., Kenya is the same at 136s., while Santos is 2s. up at 106s.

Sugar.—Home refined has continued in fair demand. Tate's cubes are 44s. 3d., London granulated is 38s. 10½d., while Lyle's granulated is 39s. 1½d. Foreign descriptions have been dull. West Indian crystallised is unchanged at 35s. 6d., White Java at 35s. 10½d. is 6d. lower, while Czech granulated has been done at 21s. for November. Futures are easy: November 20s. 4½d., December 20s., March 19s. 10½d., May 20s.

Maize.—A good demand has continued for this commodity, and prices are again higher. La Plata has been done at 45s. 9d. spot; while 46s. 6d. is asked for November-December, and 47s. for January.

Currants.—Business has been much brisker, with Vostizzas in specially good request. Other varieties of Greeks have also been moving off fairly well, but prices have not yet settled down, and until the market in Greece is steadier business is bound to be restricted to some extent.

Sultanas.—A steady tone has prevailed, and prices are well maintained, though the quality of the Smyrna fruit that has so far appeared is somewhat below the average. There is still a strong demand for the Continent.

Figs.—Good business has been done. The fruit is of excellent quality, and the demand is evidently on the upgrade, particularly for Naturals.

Plums.—This commodity has continued to be in steady request. Stocks are below last year's figures, and as the demand is on the upgrade it follows that higher prices are to be expected.

Oilcakes.—The market has been quite firm. Linseed cake is unchanged at 275s., cottonseed cake is the same at 185s., while coconut cake is unaltered at 220s.

Oilseeds.—Linseed has been variable, Indian being 1½d. down at 22s. 10½d., while La Plata is 5½d. up at 21s. 10½d. Rapeseed has been firm. Toria is 6d. up at 24s., while real bold Ferozepore is 22s. 10½d. Cottonseed has been variable. Indian is 11s. 1½d., Egyptian black is 13s. 7½d., while Sakellaridis is 12s. 10½d.

Seed Oils.—Linseed oil has been firm, closing 1s. up at 44s. 6d. Rape oil has been firm, with crude 1s. up at 49s. 6d., and technical refined 1s. up at 52s. 6d. Cotton oil has been steady. Refined common edible is 49s., Bombay crude is 41s., Egyptian crude is 43s., technical is 45s., while deodorised is 51s.

Cyprus Oil Trust.—Trinidad.—Production for August and September from the company's well, 126 tons. Roumania.—A representative of the board will be leaving for the company's properties in the Tazlau Valley at an early date.

Messrs. J. Henry Schröder and Co. announce, with regard to the Royal Roumanian Government 4½ per Cent. Loan of 1913, that coupons due October 1 from stamped bonds, the numbers of which appear on what is known on the Stock Exchange as the Schröder list, and also coupons from bonds stamped by the Roumanian Commissions, may now be presented at 145, Leadenhall Street, E.C.3. Coupons must be left three clear days for examination. Bonds of the 4½ per Cent. Loan of 1913 appearing on the Schröder list and not yet stamped must be deposited with Messrs. J. H. Schröder and Co. as soon as possible.

CROP CONDITIONS IN IRAQ.

Good Yields of Dates.

The following particulars are taken from the *Agricultural Bulletin* of Iraq for the period August 16-September 15:—

During the calendar month of August, 1924, the mean maximum and mean minimum temperatures recorded at Hinaidi (near Baghdad) were 109.4° F. and 76.7° F., as compared with an average of 109.7° F. and 79.1° F. for the previous thirty-six years at Baghdad. The month was rainless. The hot dry northerly wind which prevailed at the beginning of August dropped towards the middle of the month, and a period of calm was experienced. This, though oppressive, had a beneficial effect on crops generally. Dates, which were beginning to shrivel and fall in serious quantities in exposed situation, were gently ripened. Cotton, which had felt the effects of the wind very badly, recovered condition, and was able to set bolls for the later pickings. The water demand of all crops became less.

There has been a good deal of fluctuation in the price of wheat and barley during the period under report. This is partly due to speculation in these commodities, but prices on the whole have remained on the up-grade. Prices at the close of August varied from Rs. 160 to Rs. 220 for wheat and from Rs. 85 to Rs. 105 for barley, the variations being due to quality and locality.

The water supply in all Euphrates canals remained good. Complaints have been received, however, of shortage in all Dialah canals. This river has fallen to an unprecedentedly low level. The situation is aggravated by the fact that, owing to a bad cereal harvest, larger areas than normal of late rice were sown. Naturally these areas have suffered from shortage of water. Pump owners on the Tigris have had difficulty in watering crops due to the very low level of the river. The unusually low water-level is also causing anxiety to rice cultivators in the Amarah Muqata'as, where the early sown crops have ripened prematurely. The later sowings appear to be in better condition, however.

The date packing season commenced during the last week in August. Hallawis were the first to be harvested, and the crop is picking off well, being estimated at 25 per cent. above the average. Khadrawi pickings commenced later, and are considered to be slightly below an average crop.

Digitized by Google

Sayers are not yet being cut in quantity, but should give an average crop. The opening prices were as follows (per kara of 3 tons) :—Hallawi, Rs. 400; Khadrawi, Rs. 320; Sayer, Rs. 230.

Pickings of cotton continued general throughout the period under report. Up to the end of August approximately 300 tons had been delivered to the ginnery, as compared with 220 tons during the corresponding period last year. The hot winds of July and August prevented flower setting, but most crops now show a good supply of flowers and young bolls.

The depredations of boll-worm have become more marked. Observations at the Experimental Farm, Rustam, showed that the fourth generation of this pest hatched out between July 21 and 28, leading to an increase in boll-worm population from 3 per 100 hills to 16 per 100 hills. At the same time the adverse weather conditions that then prevailed caused a large mortality to the worms, amounting in the particular experiment to 30 per cent. Crops that are in good healthy condition and setting plenty of bolls may be expected therefore to keep ahead of the pest, whereas those which, from any cause, are backward in setting their new bolls will suffer badly. In the main varietal test of cotton at the Central Experimental Station the different varieties had yielded by the end of August from 959 lbs. per acre up to 1,448 lbs. per acre.

A certain amount of grazing for stock has been provided over the harvested early rice fields. This was very badly needed. In many tracts where such grazing is not available flocks and herds have been sent far afield in search of pasture. The high price of grain is reflected in the poorer condition of live stock.

Cultivators, having finished their late sowings of maize, are preparing for next year's winter cereals. Where water is available it is being used to facilitate the ploughing up of old fallows.

The July-August, 1924, exports of wheat from Iraq were 947 tons and of barley 6,820 tons—total 7,767 tons, as compared with 38,456 tons exported during the same period last year. The August exports of dates from Iraq were 1,573 tons, valued at Rs. 2,52,675, as compared with 152 tons, valued at Rs. 16,391, for the corresponding season last year. The July-August, 1924, exports of wool from Iraq were 10,238 tons, as compared with 1,856 tons exported during the same season last year.

DRIED FRUIT REPORT.

Messrs. J. C. Houghton and Co., of Liverpool, in their report dated October 1, state :—

Currants.—The market has failed to shake off the feeling of uncertainty existing in the minds of buyers as to whether the Greek Government would be able to impose the tax and make it operative, but latest reports ought to give assurance on this. The tax of 600 drachmæ per 1,000 Venetian pounds, equivalent to about 5s. per cwt., is being collected in Greece on all shipments, and this fact alone should remove any doubts that remain. It is also stated that the Government will shortly be purchasing 20,000 tons.

The Darino, with 270 tons, inaugurated the new season, the bulk of her cargo being disposed of before arrival. Pyrgos, cleaned, 46s. 6d. to 48s.; Amalias, cleaned, 48s.; Patras, cleaned, 50s. to 52s.; Gulf, 54s. to 58s. Further supplies per Esneh, Phrygia and Sitra, about 2,100 tons, came to hand, comprising a better selection. More interest was shown, and Zante, Gulf, and Vostizza, of attractive colour, condition, and of good quality, were readily saleable. Zante, 50s.; Smalls, 51s. to 53s.; Gulf, 54s. to 56s.; Vostizza, 60s. to 63s.; Vostizza, S/D, 65s. to 70s.; Vostizza, small, up to 69s. Quotations: Pyrgos, 46s. 6d.; Pyrgos, cleaned, 48s.; Amalias, cleaned, 48s. to 50s.; Patras, 52s. to 54s.; Zante, 50s. to 52s.; Gulf, 52s. to 56s.; Vostizza, 60s. to 70s.

Australian Fruit.—The Somerset arrived, but both quality and condition show a great falling off on previous arrivals. Sales were 40s. to 45s. for inferior grades, up to 50s. for best lots.

Sultanas.—We opened the season with the Gerano cargo, consisting of 23,000 boxes, the quality being most disappointing, with an almost entire absence of fine fruit. Sales were: Ordinary, 54s.; medium to good, 58s. to 65s.; and a few fine at 75s. to 85s. The Esneh and Bavarian brought further supplies, but, unfortunately, no improvement in the quality is noticeable. Cretans, on the other hand, judged by overland samples, are distinctly attractive, and should benefit accordingly. Despite strong advices from Smyrna of the upward tendency of the market, owing to Continental purchases, the demand shows no improvement, and business has continued on a most disappointing scale, buyers adopting a very cautious policy. Australians keep selling steadily. Stocks were almost cleared previous to the arrival of the Somerset with 7,000 cases. Capes.—Some inquiry developed for bleached qualities, 52s. to 60s. Afghans.—Arrivals of the Red variety are unattractive and fail to find buyers, 35s. to 37s.

Figs.—The arrivals per Gerano, Esneh, and Bavarian met a ready sale, which is not surprising, as the quality and condition are excellent. Sales :—Skeleton cases, large boxes, 80s. to 95s.; small boxes, 90s. to 100s.; Locoums, 115s. to 120s. Bags Naturals.—A large quantity of genuine were disposed of afloat, 27s. c.i.f., spot sales; good, 31s. 6d. to 34s.; genuine, 37s. to 40s.

COMPANY NOTES AND REPORTS.

The report of Harrisons and Crosfield for the year ended June 30 last states that the company's business has been carried on successfully in spite of the continuance of difficult conditions in many markets. The net profit earned during the twelve months amounts to £242,475, and £66,526 was brought forward, making a total of £309,001. The directors have paid the full dividends of 6 per cent. on the cumulative preference shares and 10 per cent. on the preferred ordinary shares and interim dividends of 10 per cent. on the deferred ordinary and management shares. These dividends together amount to £159,298, leaving a balance of £149,703. The directors propose to transfer to general reserve, £10,000; to reserve for income-tax, £12,000, and recommend a final dividend of 15 per cent. on the deferred ordinary shares. After providing for the final dividend on the management shares, absorbing £28,497, there remains to be carried forward £70,706, against £66,526 brought in.

Cotton and Cotton Goods.

THE EGYPTIAN MARKET.

Activity in Futures.

The Alexandria Commercial Company in their report for the week ended September 25 state :—

Futures.—The market during the past week has been active but rather nervous. The net changes since Thursday last are : Sakellaridis, $1.35 up for November, $1.15 up for January, $1.15 up for March ; Ashmouni, $1.25 up for October, $1.10 up for December, $1.10 up for February. The feature of the week has been the entry of the Government into the market. The Government purchases so far have only totalled about 1,000 bales, but the mere fact they are prepared to put their decision into effect has been sufficient to induce heavy speculative purchases, so that between Friday and Monday prices showed a rise of about $2. The inevitable reaction followed this speculative buying, and on Tuesday the market lost a good part of the rise and looked like going lower; however, the publication of the American Bureau figure of 55.4 as condition of the American crop at September 15 and the consequent advance of about 1½ cents in New York improved the position and stopped a further decline. The difference between October Ashmouni and November Sakel is now $10, and the gold difference between October Ashmouni and October New York is about $4. We cannot think that Government interference in the market at present prices can be for the ultimate benefit of Egypt; the difference with American cotton is already large, and we think that any attempt to maintain an artificial level should be deprecated. The Egyptian crop is going to be large, in spite of the Government's preliminary estimate of 5,944,353 kantars, and in our opinion nothing should be done which might be calculated to interfere with the placing of the crop. Demand from consuming centres has been fairly good, and but for the unsettling influence of the Government buying the past week might have seen some good business concluded. The week's receipts amount to 284,458 kantars, against exports 124,834 kantars; the stock stands at 628,184 kantars.

Spot.—We have had a fairly busy week at Minet el Bassal, and sales amount to about 18,100 bales, of which we estimate 6,600 bales Sakel, 7,000 bales Uppers, 3,800 bales Zagora, and 700 bales other varieties. The Government have entered the Spot market and have bought about 1,000 bales Sakel, Zagora, and Uppers during the week. The crop is moving freely, and we have had large arrivals during the week.

Sakellarides.—The bulk of the business has been in cotton from Fully Good Fair upwards, there being no other qualities available as yet. Premiums, although slightly stiffer than last week, are now showing a decided tendency to ease under the weight of the crop movement.

Uppers.—There has been a good and steady demand for this growth in all grades. Spot premiums are rather dearer, and cotton is well held. Lower Egypt Zagora is, by comparison, neglected and can be bought fairly cheaply.

Various.—There has been a small business in White cotton. Pilion has been in request, and a fair business has resulted in good stapled styles.

Crop 1924.—There is nothing new to say on the crop. The daily reports from our expert at present touring the Delta all confirm the prospects for a good Sakel yield, considerably better than last year; the pink boll worm attack is light. Zagora has been a distinct failure in the Delta; the feddan yield is nowhere up to expectations, and in many districts very little better than the Sakel yield.

COTTON TRADE REVIEW.

Business on Moderate Scale.

The Manchester Cotton Trade Review of the Imperial Ottoman Bank for the week ended October 4 states :—

Business has been on only a moderate scale during the past week. On balance raw cotton has risen considerably, though in the earlier days the heavy fluctuations of the previous week were repeated. Reports from America regarding the yield of the new crop have not been so favourable, and Manchester is now beginning to have its doubts as to the large supplies and resultant lower prices which a short time ago seemed a certainty.

Yarn.—This section has had a rather difficult week. There is considerable pressure for early deliveries in some counts of American, and spinners of these naturally make the most of the position. Others, however, are still struggling to clear their weekly output, and probably have had to make concessions in order to secure business. Generally speaking, quotations are about 1d. per lb. higher on the week. Egyptian qualities have been in rather more active demand than recently, and the position here remains firm.

Cloth.—Buyers have not been willing to pay the higher prices which manufacturers have had to demand, and the turnover consequently has dwindled considerably. A little has been done for China, and the Near East has also sent fair orders, but India has been disappointing.

Raw Cotton.—As already mentioned, this has been, generally speaking, a much stronger market. The weather in the American cotton belt has not been good, and private estimates of the crop yield quote reduced figures. Another Bureau report is due on Wednesday next. Closing quotations yesterday were as follows :—American Middling, 15.23; Egyptian Fully Good Fair, 25.40.

TO INTENDING SETTLERS IN U.S.A.

FIG ORCHARDS On West Columbia Estates, Texas,

yield over 50 per cent. per annum, after third year. The Fruit is sought for by the Preserving Companies, and the produce is sold five years ahead. Cost, including clearing, planting and cultivating until end of third year, £120 per acre freehold. Living conditions delightful. Soil recommended by Government Department of Agriculture.

LIVERPOOL COTTON REPORT.

Sudan Sakel in Good Demand.

Messrs. Reynolds and Gibson report as follows for the week ended October 1 :—

Egyptian Futures.—Since our last report we have experienced a series of excited and rapidly fluctuating markets. The undertone at times has been highly nervous, and substantial reactions have taken place, but with limited selling pressure in evidence; these have been short-lived, and we close at practically the best of the week, with the level showing appreciation for near positions of 106 to 156 points, and distant options 115 to 141 points. Whilst no doubt the primary cause of the strength displayed can be attributed to the recent action of the American markets, other factors have become more prominent, the most important of which is the dangerously low level to which the majority of users have let their stocks run down and the uncovering on the advance of a much larger short interest than generally anticipated. Although a further closing up with Alexandria has taken place during the week, we have still considerably leeway to make up before a shipping parity is reached, and, for this reason, contracts cannot come into this market with their customary freeness. Many operators who took advantage of the wide difference ruling between our market and Alexandria during the summer months have been taking their profit during recent sessions, the cotton so released passing into the hands of covering shorts, and in a lesser degree to the building up of a straddle interest against sales of American. It is proposed that the Liverpool market should run in future two Egyptian contracts, the present option being restricted to Sakellaridis and/or similar varieties grown in Egypt and the Sudan, and the other to embrace the Upper Brown and shorter stapled qualities, the former to come into operation for deliveries November, 1925, and onwards, the latter to commence almost immediately. The existing contract would apparently remain as constituted till November, 1925. The alteration, if carried, should be of benefit to both the spinning and importing branches of the business, but, as the measure is not yet passed, we withhold further comment till next week. Business in yarns has apparently suffered a check owing to the wide fluctuations in the raw material, and, apart from their anxiety to secure cotton for immediate consumption, spinners have shown little interest in the market.

Although new crop arrivals have been on a large scale throughout the week in Alexandria, we are informed that holders are very firm in their attitude; no doubt the promise of Government support in the event of a decline has much to do with this; also, financially, the growers must be in a strong position owing to the very small amount of last season's cotton left on their hands. We rather hesitate to express a definite opinion at the present juncture, and probably the best policy for the time being is to watch events till the outlook becomes more settled.

Egyptian Spot.—The strong futures market, which has been such a feature of the past week, has proved detrimental to trade in actual cotton, and a decided restriction in the daily inquiry has been noticeable. Rightly or wrongly, spinners profess little faith in current rates, and wherever possible they have deliberately avoided making purchases, with the result that we find to-day the curious anomaly of a rise of 100 to 150 points in futures, and a drop of 35 to 145 points in spots for the same period. The arrival of the first two cotton ships, which carried a total of some 8,000 bales, was signalised here by a drop of 150 points in the official quotations of Upper, and 75 points in the quotation of Sakellaridis. The first consignments of Sakellaridis, which had not already been sold at sea, have already been snapped up, and to-day spinners were asking for more with a considerable degree of anxiety. The first supplies have evidently been insufficient to satisfy the pressing needs of the moment at the mills. There have been no complaints as to either quality or price, and no long invoice dates have been asked for. Prices obtained have been roughly between 25.00d. and 27.00d. The Uppers, of which the bulk of the new arrivals has consisted, have not been so eagerly sought after, and there is no disposition on the part of spinners to "snap up" where these are concerned. The cotton is very attractive both in grade and staple, and prices asked vary from about 18.50d. to 19.00d. The week's interest has been almost entirely centred in these early shipments. In old crop cotton a fair inquiry for fair to good fair Sakellaridis has continued, and prices amongst this lower cotton have again hardened.

A steady business has taken place in Sudan Sakel at prices ranging from 23.00d. to 25.00d. There are signs that the local stock of this very popular variety is becoming rapidly depleted. Tokar Sakellaridis of the first quality is no longer to be found, and very little of the lower qualities. White Sudan has been in quiet request at the steady rates. C.i.f. business has been much quieter. Forwardings to spinners for the week ending 26th ult. were returned as 3,536 bales. Estimated sales, 1,200 Egypts and 1,150 bales Sudan. Quotations of Sakel are quoted 35 points lower (fair exceptionally 40 points higher). Uppers and Brown are quoted 145 points lower (fair 25 lower only). F.G.F. Sakellaridis to-day 25.00d.

AN IRAQ DIRECTORY.*

With the publication of a directory Iraq may be said to have received the hall-mark of settled conditions. "The Commercial and Trades Directory of Iraq" makes a very creditable first appearance, containing a quantity of useful material in the course of its 424 pages. In subsequent editions closer attention will, no doubt, be paid to the arrangement of the contents and to headings, which should be repeated on each page when lists are continued over a number of pages. It goes without saying that a directory without an index is launched without half its proper equipment. Apart from these counsels of perfection, the Directory can be commended as a mine of information both for the business man anxious to trade with Iraq and for the general reader, who now has a single volume to turn to for his facts regarding the country. Special prominence is given to legislative enactments, and in addition to the text of the Organic Law we have the Commercial Code, the Company Law, and the Stamp Act. One section is devoted to statistical details, and under the heading "General Information" are grouped articles dealing with administration, cotton prospects, and the ancient cities of Iraq.

NEW VICKERS STEAMER.

Launch of L.C.C. Sludge Vessel.

Messrs. Vickers, Limited, launched on October 2 from their works at Barrow-in-Furness the J. H. Hunter, a twin-screw steamer, ordered from them by the London County Council for the conveyance of sludge from the sewage outfall works, Crosness and Barking Creek, to the North Sea. The vessel was christened by Mrs. John Perring, the wife of the chairman of the Main Drainage Committee, and has been named after Mr. J. H. Hunter, the present Chairman of the Council, who was present at the launch, with Mrs. Hunter, Mr. J. Perring, Mr. G. W. Humphreys (the Chief Engineer to the Council), Mr. Beard and Commander Wise (of the London County Council), in addition to Commander C. W. Craven (managing director) and Mrs. Craven, Mr. G. W. Barr (shipyard director) and Mrs. Barr, and Mr. and Mrs. G. W. Jackson, and other officials of the Naval Construction Works. At the subsequent luncheon in the works Commander Craven, on behalf of the directors of the company, presented a small souvenir to Mrs. Perring, and expressed the hope that it would at any rate tend to remind her of her visit to Barrow. The placing of the order for the J. H. Hunter and her sister ship the G. W. Humphreys was, he said, looked upon by the Vickers Company as a great compliment to the quality of the ships previously built for the London County Council.

The firm's associations with the London County Council commenced in the year 1887, when the Bazalgette was built by the Barrow Shipbuilding Company, and it was of interest to know that, on completion of the two ships now building at Barrow, the London County Council would possess a fleet of nine vessels, of which the Vickers Company had built eight. All the ships embody an ingenious principle, which was evolved nearly forty years ago by Mr. William John, who was then the general manager of the Barrow works. Competitive designs were called for by the Metropolitan Board of Works, and Mr. John secured the first prize of £500 for this design.

THE PORT OF CASABLANCA.

The *Vigie Marocaine*, in a recent issue, says that Casablanca port is insufficiently known in the shipping world, where its traditional inaccessibility seems to be still credited, though foreign visitors are greatly impressed by its safe and sheltered roadstead. Many means of popularising the port are being considered, all excellent in different degrees. It is of vital importance to its future commercial prosperity that the port and its advantages should be advertised amongst those likely to make use of it.

The Chamber of Commerce fully appreciates this, and is concentrating all its efforts on the preparation of notices and pamphlets giving full information upon the commercial situation of Morocco in general and of Casablanca in particular, upon the activity of the port, its merchandise, etc. These are to be published in several languages and completed by photographs.

Like other great ports, Casablanca will thus obtain publicity based on the newest and best opinions and recognised facts, which will undoubtedly bear fruit.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Brocklebank Line.—S.s. Media for Port Said, Colombo, Madras, and Calcutta (London, October 18).

Bibby Line.—S.s. Yorkshire for Rangoon (London, October 16); s.s. Lancashire for Port Said, Colombo, and Rangoon (Birkenhead, October 22).

British India Line.—S.s. Manela for Bombay and Karachi (London, October 10); s.s. Nevasa for Colombo, Madras, and Calcutta (London, October 11).

Clan Line.—S.s. Clan MacInnes for Bombay and Persian Gulf (Birkenhead, October 15).

Ellerman "City" Line.—S.s. City of Hong Kong for Calcutta (Birkenhead, October 15).

Ellerman's Westcott and Laurance Line.—S.s. Falernian for Gibraltar, Malta, Piræus, Salonika, Smyrna, Constantinople, Galatz, and Braila (London, October 18).

Johnston Line.—S.s. Tramore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, October 18); s.s. Sycamore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, November 5). (The last steamer of the season to Galatz and Braila.) S.s. Kenmore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, November 22).

P. and O. Line.—S.s. Naldera for Bombay (London, October 17); s.s. Nyanza for Colombo, Madras, and Calcutta (London, October 18).

NEW CABLE CODE.

Commercial readers will be interested in the issue of a new code, which claims greatly to reduce time and cost of cabling. It is known as the "Birchwood Code," containing many new features, and is published by Charles Birchall, Ltd., 17, James Street, Liverpool.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

The Iraqi Frontier.

It has taken two Notes from the British Government to extract an answer from Angora regarding the situation on the northern frontier of Iraq. The second Note, which was more peremptory than the first, was in the nature of an ultimatum, as it fixed a time limit within which the Turkish troops that have invaded Iraq were to be withdrawn behind the line of the "*status quo*" as it existed at the date of the signing of the Treaty of Lausanne. The Turkish answer is conciliatory rather than bellicose, but otherwise is eminently characteristic of the authors. It denies that there has been any violation of the *status quo* or concentration of troops; the main body of troops, which advanced for the purpose of punishing Assyrian bandits, has, it declares, achieved its end and has retraced its steps, and the Turks are prepared to respect a certain line, which happens to be well within the provisional Iraq frontier. Once again Turkey's rulers, who lay so much stress on the country's attainment of Western standards, have acted in a way that entirely belies their claims. It is unlikely that Great Britain will acquiesce in the equivocation to which the Angora Government has resorted, and Turkey will presumably have to take her medicine in two gulps instead of in one. The whole incident would be petty if it did not concern the fate of non-Turkish people in Asia Minor, who look to Great Britain for protection against the Turk. In any case it is so damaging to the Turks that it is difficult to understand the mentality of a Government that deliberately prejudices itself in the eyes of the world for no tangible advantage. The most charitable explanation is that there is no one in the Angora Government capable of following out in advance any line of policy to its logical end. Action is taken on a momentary impulse, and when it is proved to have been mistaken, the whole intelligence of the Cabinet is brought to bear on the best way of extricating the country from its difficulty with the least loss of face. This method of procedure may satisfy the Oriental mind, but must arouse the strongest possible misgivings in the minds of educated Turks who know something of the modern world.

A Political Adviser.

Turkey would derive considerable advantage from following the example of the Chinese Government a dozen years ago, when the attempt was made in Peking to introduce an administration on modern Western lines. A British subject was selected as Political Adviser to the President for the purpose, *inter alia*, of representing the Western point of view and explaining the probable effect of any proposed line of policy on the Western mind. It was not intended that his recommendations should always be acted upon, nor had he to regard himself as called upon to resign if they were not. His province was to make sure that in any given matter on which he was consulted or was allowed to express an opinion the Chinese Government should not take any step in ignorance of the likely effect on the foreign mind or on Chinese relations with foreign countries. As the Adviser was attached personally to the President, the post was in no way derogatory to the Cabinet; on the other hand, every Minister could consult the Adviser whenever he wished, and was under no obligation to reveal to what extent he acted under advice or on his own initiative in regard to any policy adopted by his Department. If a judicious selection were made in the appointment of a similar Adviser for Turkey, there can be little doubt that both the country and its Exchequer would benefit.

Political Currents in Yugoslavia.

Difficulties, it is now reported, have arisen in regard to the reconstruction of M. Davidovitch's Cabinet. M. Raditch is prepared to support the Government, but his party is not to be represented in the Ministry. The reasons for the change in the Croatian Party's plans are not stated. M. Davidovitch would seem not to be entirely satisfied with this arrangement, as he is credited with attempts to bring into the Ministry M. Yovanovitch, who at one time refused to endorse M. Pashitch's demand for a dissolution and was himself invited to form a Cabinet. At a subsequent meeting of the Radical Party M. Yovanovitch abandoned his views on the subject, and once more fell into line behind M. Pashitch. The net result of M. Raditch's refusal to allow his party to be associated in office with the Government will be, it is to be feared, to prolong the period of political

Digitized by Google

uncertainty which has been the bane of Yugoslavia ever since the Armistice.

King Ali of the Hejaz.

King Hussein has been succeeded on his abdication by his eldest son, the Emir Ali, who has tried, so far unsuccessfully, to enter into negotiations with the Sultan Ibn Saud. The Wahhabi forces have not remained content with the occupation of Taif, but have cut the Mecca communications with Jeddah, and King Ali, with his Government, has withdrawn from the capital towards the latter port. Until the Wahhabis make known the purpose of their invasion, the situation in the Hejaz remains tantalisingly obscure. Unless Sultan Ibn Saud is aiming at the incorporation of the Hejaz in his own dominions, he will sooner or later decide that the stage has been reached when negotiations are possible. If he should prove to have exaggerated ideas on the subject of an indemnity, the Hejaz Government would no doubt appeal to the good offices of Great Britain for an equitable adjustment. The question of the future residence of King Hussein may be one that will exercise Arab opinion. If it should prove that he intends to seek asylum with the Emir Abdullah in Transjordan, there would be some point in a contention from Sultan Ibn Saud that his presence so near to the scene of his former exploits was undesirable from the point of view of Arab harmony.

INDIA.

Unity and Sincerity.

The autumn recess is apparently to be devoted to yet another of those efforts for surface unity without regard to sincerity which make it so easy to laugh at India's infant politics. Judged by their records, the protagonists are hopelessly divided on points of principle. Some of them want English help to establish genuine self-government. Others want England only to keep the ring, while they play about inside, relieved from the danger of visits from inconvenient neighbours. Others want the English away, so that the old India of privilege, ascendancy, and, of course, bloodshed, may automatically revive. Others, again, merely want the moon. The immediate objective, however, is to get everybody on one platform at a place called Belgaum, where the next congress is to be held, and the idea seems to be that, if only all the trumpets will for once bray in unison, the walls of England will fall flat, after which everybody will reach the promised land. The difficulty is that the discordant sections place the promised land in different continents. Politicians of greater practical experience would see that this is what really matters, and would group themselves into parties according to their destination: novices insist on crowding into the same train, even though some of them want to go to Wembley and others are in search of Woolwich.

TO READERS OF "THE NEAR EAST."

If you find any merit in "The Near East," if you hold with us that British interests in the Near and Middle East call for a Paper devoted exclusively to the affairs of that part of the world; if you consider it a worthy cause that Britain and the British should be sanely interpreted to the people of the East, and those people in their turn be made better known to Britons, support "The Near East" by becoming a subscriber yourself if you are not already, and by securing for us new subscribers. Specimen copies will be forwarded gratis. A subscription form will be found on page 416 of this issue.

Can England be Squeezed?

An interesting explanation of this attitude is offered in the current *Asiatic Review* by Mr. S. R. Das, who, it will be remembered, put up a gallant fight for sincerity in the last election in Bengal. Mr. Das finds the basis of extremist activities in the widespread belief that England can be squeezed if only the pressure exercised is sufficiently strong, and he urges that the leaders of English parties should come together to lay down a definite policy for the future. The diagnosis is probable enough, for the same mistake has been made elsewhere, notably in Germany ten years or so ago, and we are not at all sure that the treatment recommended would not be effective, though it could not be applied in the middle of a General Election. All that is wanted is a clear statement of the truth that England stands by the preamble of the existing constitution. Indians ought to know that perfectly well, but our habit of taking the obvious for granted is apt to lead to misconception abroad, and a resolution of the new House of Commons, whatever its composition may be, affirming the unanimous decision of 1919, might be a most valuable help on the stony pathway to reality.

The New High Commissioner.

From the English standpoint, the Government of India can be congratulated unreservedly on the selection of Mr. A. C. Chatterjee as the new High Commissioner, for, in addition to his well-known gifts of statesmanship and administrative ability, he possesses the wide outlook which is still unfortunately so rare among his countrymen, and which is indispensable for effective work in London. A distinguished scholar at Cambridge, Mr. Chatterjee, has more recently paid frequent visits to this country; he has made his mark at international conferences in Washington and Geneva, and he may be accepted as a worthy representative of the best that India can offer. Whether he can be spared from Delhi just now is a different question. The succession to his seat in the Viceroy's Council is limited by convention as well as legislation, and within the limits so imposed there are, we fear, very few candidates from which to choose, but Lord Reading and his colleagues have doubtless taken this aspect of the question into consideration, and in any case the importance of the High Commissioner's post is already so great, and its increase so certain in the near future, that some sacrifice of efficiency at Delhi may be justified in the wider interests of India.

It is announced that Signor Mussolini will meet the Yugoslav Foreign Minister at Venice on October 21.

Masri Pasha el Saadi, who acted as President of the Wafd during the exile of Zaghloul Pasha in the Seychelles, died on October 7.

Precautions against plague, which had been imposed by the Turkish authorities on departure from Constantinople, have been withdrawn.

It is reported from Moscow that the Soviet Government has delivered to the Government of Afghanistan five aeroplanes, which flew to Kabul over the Hindu Kush mountains.

After trial before the Assizes at Alexandria, four of the Communist prisoners accused of inciting to revolt were sentenced to three years' simple imprisonment, and the other five to six months.

The Greek Government is reported to be protesting to the Great Powers against the continued Turkish obstruction of the exchange of Constantinople Greeks, due to the Turkish desire to make it more extensive.

According to *The Times* Belgrade correspondent, the Minister for War has tendered his resignation to the King, giving as his reason that the activities of the Raditch Party are not in accordance with the interests of the State.

THE WEEK AT HOME.

London, Tuesday Morning.

The Election.

The Cambridgeshire has been postponed. But on October 29 we are to have, as compensation, an even more exciting race, in which, however, the bookmakers, and not the public punters, stand as ever to win. The public simply does not want an election, not even for the purpose of destroying the much-abused three-party system, and although it will vote, it will do so in the doleful conviction that such procedure is in party rather than in national interest The party system has, as intelligent people say, "got us stiff"; we are hopeless under its present sway. What our duty on October 29 is is by no means plain, for it is possible that, if one voted according to dictates of temporary feeling, the country might be fatally divided into two classes—those who have possession and those who have not.

Even over how it all came about we are as ignorant as Peterkins. The papers last week made a tremendous "story" of how up to the very last minute of the division over the Campbell-Hastings affairs, leaders of the parties themselves did not know that an election would be on us before the end of the year. But nobody believes that. It is altogether childish to suppose that plans were not prepared weeks ago by all three parties—as soon, in fact, as the Russian Treaty was seen to be a bone of contention sufficiently meaty to ask the country according to it to reconsider the political position.

Everyone except the supremely intelligent is wondering how the three parties will fare, although nobody's opinion on this matters more than that of anyone else. Unless there is a landslide in favour of the Conservatives—a landslide impelled by the will to abolish the further possibility of annual elections—the situation cannot be very much altered. That fact in itself is sufficient condemnation of the election.

The Responsibility for it.

In quite the old intense way the two other parties and the Labour Party are accusing each other of responsibility for fobbing off this nefarious election upon us. The Labour Party accuses the Conservatives and Liberals of malignly uniting to defeat the Government on a petty side issue—the Hastings affair—to which the reply is made that resignation over such an affair is the last action in which any but the thinnest-skinned and most frightened rabbits would indulge. From all this "eye-wash" one can only conclude that all parties desire an election. But even then one is wrong, for the Liberals manifestly cannot wish for an appeal to the electors at the present moment, because of the simple and apparent reason that they have nothing with which to appeal.

It is probably near the truth that in the main personal reasons governed the situation. Latterly the personality of Mr. Ramsay MacDonald has got very badly on Liberal nerves, and even amongst former supporters of the Labour Party his stock has been declining. Particularly, the clash between the Premier and Mr. Lloyd George has for some time seemed inevitable; if there is one man in the Liberal Party who is glad of the chance to be rid of subservience to the Labour Party it is Mr. Lloyd George. This, of course, is very lamentable, but the only remedy would be to dispense with the services of both these politicians.

Over this question of responsibility for the election, then, it is impossible to raise any enthusiasm. All parties, laughing, while we, the dismayed multitudes, looked on, had a hand in it.

The Labour Record.

Labour is full of brave words about what it calls "the coming fight," and there is no doubt about the energy of its army of workers. But, in spite of the fact that it has chosen its own moment, it is doubtful whether it will gain more than ten to twenty seats (these, of course, from Liberals); many judges, indeed, and those not averse from Labour, prophesy even smaller gains, and some, a loss.

It will have to rely, once more, chiefly on promises, for its record is painfully barren. In foreign policy it has most to show (although in "informed" circles the success that has attended Mr. Ramsay MacDonald is put down much more to luck of circumstance than to any application of Labour principles), and success in foreign policy was never, even to the better educated Conservative and Liberal parties, a very inspiring cry. At home it has pulled out none of the bad teeth of the industrial sick man, and the temporary stopping in which it has indulged has pleased nobody very much. Once, in Mr. Wheatley's Housing Bill, it did try to introduce a false set, but the gas designed to make the patient oblivious of his surroundings was badly mixed, with the result that the poor dentist was seized by the sufferer and had half the stuffing knocked out of him.

To all this the reply can justifiably be made that Labour could but introduce half-measures because it was in a minority. That, from the politician's point of view, is reasonable enough. But perhaps the country is sick of politicians (it will prove itself to be fortunately so if it accepts once more Mr. Baldwin), and it is far from certain that, even from an electioneering point of view, it would not have been better to have stuck fast to Labour ideals and lost than to have compromised and thus to have been proved sterile. When the inner history of the last eight months comes to be written it is possible, in fact, that there will be found to have been no greater opportunist than Mr. MacDonald.

It is curious how, for a movement which is supposed to depend far more on mass-motive than on individual leadership, the history of the Labour movement this year has centred round the personality of Mr. MacDonald. The Labour record is his record. Its successes, its failures, and its compromises are the reflection, the creation, in fact, of his ups and his downs and his journeys along the principleless middle way. There has, further, been about him a touch of assumed divinity which, in the first months, when it was believed that Labour might create a new Earth with its Heaven-sent Ministers, the country doubtingly forgave, but which, when it saw that no miracles were coming out of the Labour box, has increasingly irritated it. There has, indeed, been, among the opponents of Labour, a serious danger of Labour principles coming into undeserved disrepute because of the somewhat unctuous way in which they were enunciated or disregarded by Mr. MacDonald.

The Campbell Case.

Upon the actual *casus belli*, the defeat of the Government upon the Liberal amendment that there should be a judicial inquiry into the case of the Communist editor, over which it was certain when it happened that there would be much fuss, History will surely record the verdict that it was the merest pretext on which to go to the country. Government supporters avow that it was the dirtiest trick to turn out an Administration on such a small issue as this, but they cut no ice in doing so. The ordinary Englishman knows that, when a political matter is hushed up, it is hushed up for some purpose, and the attempt of Mr. MacDonald to shield the Attorney-General (who, incidentally,

Digitized by Google

made an extremely bad impression with his speech in the Commons) has deceived no one.

In taking this view one need not disguise the fact that worse things than this bungled prosecution have been done under Conservative and Liberal Administrations. But the older parties had at least the sense to allow some sort of inquiry. The sanctity of the actions of the Labour Government, however, is absolute; and of it there could be no questioning.

Political Divisions.

There has during the past week been much discussion of the desirability—the inevitability, as some see it—of dividing the country politically once more into two divisions only, which are called variously Socialist and anti-Socialist, Labour and anti-Labour, and, discreetest of all, Labour and Constitutional. Such a division would, no doubt, be very convenient to party agents and political place-hunters; but their convenience is not our need. Observers who speak of the necessity of the restoration of the two-party system argue generally from the present state of things only, and ignore the fact that political divisions are almost invariably the reflex of economic divisions. Moreover, Tory and Whig conceptions were first acclaimed by people wealthy and educated enough to think; Labour ideals were first accepted (they were constated, of course, generally by well-to-do men) by people too poor to do much but aspire. Now if the successors of the Tories and Whigs were to unite as if in fear of oncoming Labour, what could be more natural than that Labour, inevitably baulked of the realisation of its aspirations, should turn to wilder methods? That is the danger which those who are now trying to unite Conservatives and Liberals are unconsciously running into. Far wiser it would be to let Liberalism die a natural death—the death which it has already suffered, sometimes by premature means, in many Continental countries—and to stifle this absurd Labour and anti-Labour cry.

The German Loan.

The German Loan, of which this country is providing £12,000,000, will, it is said, go like hot cakes. This fact can hardly be ascribed to a profound belief in the statesmanship of Mr. MacDonald's negotiations with Germany. All that it means, unfortunately, is that there is a rare chance for individuals to make money, and it need not be assumed that each investor has first asked himself the question whether his action is as much in the national interest as in his own.

However, finance is a queer business, scarcely designed for men of this world who have time to hope to go to the next. Financiers have spoken, and it is now for the world to obey. The restoration of Germany is assured, and the next thirty years or so will anxiously be spent in watching her grow. And by that time, of course, those who will have made their so much per cent. will be beyond the reach of any possible consequence of their present action.

Slippery Roads.

It will probably amuse readers in the East to read that the Ministry of Transport, having solved successfully the problem of laying dust, is now engaged on the problem of how to prevent the laying of cars and of horses. The asphaltic substances not only bite the dust, but they make fast progress by horse impossible and skids by cars very easy. After a shower on some of our great roads one can hardly prevent skating along in a car.

Obviously, more grit must be put in the top dressing, and one is delighted to think that by this means the poor old horse will once more have a chance of showing what he can do. After all, slippery roads were a danger to everybody, and the horse has been proved right in insisting that his interest, not like the car's, was the common interest.

Galli-Curci's Visit.

If one did not know from other sources that America does not possess the rudiments of musical taste, the knowledge is afforded by singers who come here from that country. Here is Galli-Curci, possessed, as we all were aware from the gramophone records of her voice, of the most perfect vocal mechanism, and yet, to the Albert Hall, crowded with people, what does she choose to sing? "Home, Sweet Home," "Love's Old Sweet Song," and so on!

It must be America which tells these artists which songs to sing in English, for it cannot be their own impulse.

The intelligent musical Press was obviously disappointed with her recital last Sunday. The critics had, justifiably, expected a singer of the century, and they found, apparently, but a singer of the day.

Alter Ego.

FANTASY AND ARABIA.

The combination of Mr. Eric Kennington and Mr. T. E. Lawrence promises to be most fascinating, if the three illustrations now being exhibited (among many other fine things) which the artist has made for the Arabic scholar's forthcoming book are fair samples of the whole series. It will be remembered that Mr. Kennington had an exhibition three years ago at the same galleries—the Leicester Galleries—which consisted mostly of paintings of people connected with Arabs, either of their personification, or of their encouragers, or of their controllers.

We do not know of what Mr. T. E. Lawrence's book is to consist, except that, to judge from these three illustrations, called "Ice Mountain," "Nightmare," and "Massacre at Tafas," there will probably be a good deal of fantasy, with Arabia and Colonel T. E. Lawrence in the background.

If the book is equal to the illustrations, it will be a great work, and immensely stimulating. Of Mr. Kennington's work, in fact, one is inclined to use the word genius, for a Blakish impishness is in it allied to rhythms of the most solid modernity. There are marvellous beauty and most virile restraint in his work. One only hopes that the forthcoming book will be worthy of the illustrations, for in this case we shall assist at an "event."

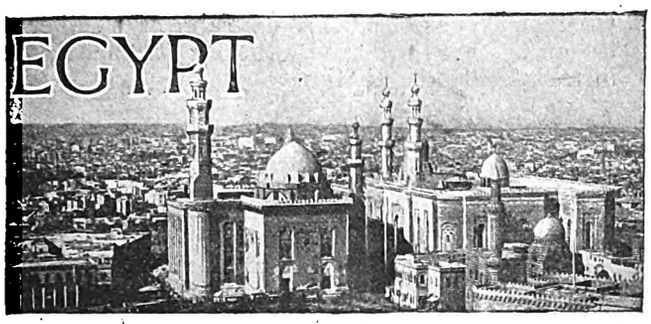
The Near and Middle East.*

From Our Own Correspondents.



Cairo, October 3.

The London Conversations.

As can be readily understood, little else but the London conversations is being thought of or discussed here The telegrams from Zaghloul Pasha that an atmosphere of cordiality is characterising his discussions with Mr. MacDonald, and that he is satisfied with the progress made, encouraged the hopes of agreement, but the subsequent reports of what is appearing in the British Press have created a certain amount of perplexity, and the extreme optimism that existed a week ago has been considerably tempered by the impression that what are called the "ultra-Imperialists" are getting restive and likely to influence the attitude of the British Government.

H.M. King Fuad.

King Fuad has resumed his public receptions and presided this week at the first Council of Ministers that has been held since he fell ill. Among those whom he received in private audience has been Lord Thomson, Secretary for Air, who waited upon him the morning of his departure for England and will have arrived back in London by the time this reaches you. Lord Thomson's visit has in every respect been a "flying" one, and he seems to have covered an amazing amount of ground during the ten days he spent in this part of the world. It is certainly a tribute to the advance that aviation has made that in that short time he should have been able to visit all the important points in Northern Iraq, including Mosul and the Turko-Iraq frontier, as well as the chief air stations in Palestine and Egypt. His visit was undoubtedly connected with the discussions that were expected to take place with regard to the position which Egypt should fill in the chain of Imperial communications. In this connection his verdict that the route followed at present for the Mesopotamian mail is the proper one for the mail for Northern India and the Far East may be regarded as indicating that the importance of this country as a strategic point on the air routes of the Empire will be recognised, and that, whatever may happen with regard to the purely military forces, this country will not be abandoned as an air base. In fact, the general impression in Service circles is that it will become an even greater base than it has been hitherto.

The Cotton Crop.

The more I have talked to the commercial community the more impressed have I become by the unanimity of the criticism, firstly, of the Government's action in intervening on the cotton market, and, secondly, of its estimates of the area and of the crop itself. It is not only those who are directly interested in the crop who complain, but also those who are engaged in ordinary financial business. The Government intervention is regarded as wholly unjustified by the conditions reigning in the market, where Egyptian already enjoyed a high premium over American, and it is considered that this continuous interference with the ordinary play of supply and demand is having a very bad influence on business in general. As for the estimates, I have not come across anyone who pays the slightest attention to the figures, which are regarded as quite unreliable. Nothing connected with the crop in the field has indeed occurred to justify such a small crop as is forecast by the Government. Indeed, both total area and that devoted to varieties other than the relatively small yielding Sakellarides are such as to call for the estimation of a much larger crop, and the market will be very surprised if it does not turn out to be at least 7,000,000, if not 7,250,000, kantars, as compared with the 5,900,000 kantars at which the Government set it.

The Hejaz.

There is no further news from the Hejaz, where the Wahhabis do not appear keen to advance on Mecca, and where the general situation seems to remain much as it was when I last wrote. Great interest is taken in the news that King Hussein has addressed an appeal to the British Government for its intervention. King Hussein is having a very bad Press here, and Egyptians seem to agree with certain Arab circles that the time has come for him to abdicate. His personality does not, it appears, conduce to the maintenance of good relations between the various chiefs in the peninsula; and it is believed that if he were to disappear from the arena there would be fair prospect of a reconciliation between the opposing factions.

THE SUDAN.

Khartoum, September 24.

The Political Situation.

For the last fortnight things have been extraordinarily quiet in the Sudan. Political agitators

appear to be sitting on the fence for a period, possibly waiting the result of the MacDonald-Zaghloul discussions before attempting further anti-British demonstrations.

A certain amount of trouble is anticipated by the authorities during the Mohammedan festival of Mulid el Nebi, which should commence on the night of the 30th inst., with the first appearance of the new moon. This festival will last approximately eleven days. For some months past the Egyptian propagandist has been subtly appealing to the susceptibilities of the fanatic native through religion and the Koran, and continually drawing contrasts between the Moslem elect and the infidel British. It has been realised that up to the present little success has rewarded the propagandist's efforts, but during a religious festival it may be possible to incite worshippers to a state of fanatical frenzy, a mental condition most suitable to perpetrate serious crimes against the "infidel British."

One is led to believe that, other than the foregoing possibility, the electrical elements in the atmosphere are quickly disappearing with the passage of time. This may be attributed to the present attitude of Egyptians in Egypt. Their political aspirations have undergone a complete change. From an almost insane desire to eject the British, lock, stock, and barrel, out of this country, their one great concern now appears to be focussed on the point whether or not Great Britain will permit Egypt to share in the future administration of the Sudan in accordance with the Condominium terms of the 1898 Agreement. They also show great concern, and loudly protest against the suggestion in the Home Press that Great Britain may eject the Egyptians from the Sudan.

Naturally, so much excited talk, coupled with subterranean intrigues of native societies, charged the atmosphere with electricity, and, paradoxically enough, disturbances and demonstrations had to take place to relieve the position.

With a more moderate Egyptian view-point and the possible cessation of extreme Egyptian propaganda in the Sudan, an opportunity will be provided of studying and gauging the extent of the "Sudan for the Sudanese" movement, and whether it is as deep as some claim or whether the Sudan has been utilised by the Egyptians as pawns in their political activities.

A Peculiar Occurrence.

On Saturday, the 11th inst., Moslem mosque-goers at Khartoum were treated to what they afterwards termed an amusing spectacle by the antics of a madman on the roof of the mosque building. It appears that a Sudanese ex-official, a certified lunatic, had, early in the morning, eluded the surveillance of his relatives and made a dash for the mosque. Bursting with anti-British enthusiasm he mounted the inside steps to the parapet of the roof, and from there delivered a speech to the large crowd of persons congregated outside the mosque grounds. His extraordinary choice of a platform and his peculiar and excessive bodily contortions, which were accompanied by terrific shouting, quickly drew together an inquisitive gathering. The madman played upon the religious susceptibilities of the "elect," and decried in no half measures the actions of the infidel British. He attempted to incite the listeners to rise against the oppressors by joining together in a *Jehad*.

Fortunately, the wildness of the statements made convinced the listeners that he was an irresponsible person, with the result that his suggestions were met with good-humoured laughter, even the most fanatical refusing to consider them with any degree of seriousness.

The speaker was eventually arrested and taken to the police station.

It may be interesting to record here that no asylum exists in this country. Lunatics are divided into two classes, dangerous or harmless. Cases classified under the former category are either sent to Egypt or placed in prison, and in the case of the latter, placed under direct control of parents or relatives.

An Attack on Sir Sayed Ali Mirghani.

The *Mokattam* of August 30 contained an article, purporting to have emanated from Khartoum, in which it was stated that at a meeting held at the house of Sir Sayed Ali Mirghani a resolution was passed defining allegiance to King Fuad, King of Egypt and the Sudan. The report also stated that the women were to take part in subsequent demonstrations.

Although Sir Sayed Ali did not consider the report sufficiently alarming to make a public denial to the representative of the British Press, a statement was issued to the Arabic reading public through the local vernacular paper, *Hadara el Sudan*, which is the property of the three religious chiefs, Sir Sayed Ali Mirghani, Abdel Rahman el Mahdi (son of the Mahdi), and Sherif Yusef el Hindi. This statement refuted the whole of the *Mokattam* story. No meeting, political or otherwise, was held in the house of either Sayed chiefs, and the women folk did not intend to participate in demonstrations—because they know nothing whatever about politics.

It may be stated that this ridiculous attack on Sir Sayed Ali Mirghani is only one of the numerous attempts to inveigle this chief into the throes of political agitation instigated by pro-Egyptian enthusiasts.

Step Back Four Thousand Years

A JOURNEY of 4½ days will transport you from the Rain and Cold of the English climate into the sunshine of Egypt. Here, amid ideal surroundings, with the unique attractions of an ancient civilisation, life assumes a new and radiant aspect. "He who drinks once of the waters of the Nile returns to drink again."

Splendidly equipped steamers and well-appointed hotels contribute to the enjoyment of a holiday which is both memorable and inexpensive.

Come when, in the early autumn the after glow of Summer is yet upon the land and the splendour of Egypt's climate is at its zenith.

GREECE.

Athens, October 2.

The Ministerial Crisis.

Greece is again in the throes of a Ministerial crisis, a crisis which seems altogether uncalled for to the political observer who has no party interests. Some two months ago the political parties in the National Assembly respectively under M. Kafandaris, M. Michalacopoulos, General Kondilis, and General Gonatas, and other small political factions clubbed together to overthrow the Papanastassiou Cabinet. This was achieved to the almost general satisfaction of the Greek people. But then arose the question of forming a new Government. The above-mentioned political leaders did not agree on many points, and it was not possible for any one of them to assume the Premiership. By common accord it was suggested to President Coundouriotis to entrust the formation of a Cabinet to M. Sofoulis, who, practically, has no party of his own. M. Sofoulis formed a Cabinet which made its bow to the National Assembly at its last sitting before the summer recess, and obtained a vote of confidence. Only the party known as the Democratic Union, under the leadership of M. Papanastassiou, voted against the Sofoulis Cabinet.

The Sofoulis Administration.

M. Sofoulis had to face a most difficult situation, the handling of which called for an iron grip and immediate action. For reasons already told, three-fourths of the naval officers in active service had resigned during M. Papanastassiou's premiership, and it fell to M. Sofoulis' lot to put the naval situation straight. He met strong reaction at the hands of the officers, under Captain Colialiexis, who had not resigned their commissions, and who were masters of the fleet, inasmuch as their comrades who resigned had left their ships. Readers of THE NEAR EAST will remember the outbreak of a promptly quelled naval mutiny. Order to-day prevails in the Navy, and this satisfactory result is due to M. Sofoulis' handling of the naval question.

During M. Sofoulis' short tenure of office, two generals, partisans of M. Papanastassiou, attempted a *coup d'état* in order to overthrow the Government. Happily, they found no support worth mentioning in the Army, and their seditious endeavours came to the knowledge of the Government. The Sofoulis Government had the two generals arrested, and they were tried by court-martial. It is true that they were treated with the utmost leniency, but the responsibility for their acquittal on the charge of conspiracy lies with the officers who constituted the court-martial and not with the Sofoulis Government.

Greece some three weeks ago was threatened with a general strike because the workmen of the Piræus-Athens railway objected to a foreman, and went on strike when the railway company refused to dismiss him. All, or nearly all, the labour unions declared themselves solidly with the strikers and threatened a general strike. The reason for the strike was so futile that it was obvious that the whole business had been engineered by Communists. M. Sofoulis, who has not the Communist tendencies of his immediate predecessor, adopted a firm attitude, took severe military measures, and won the day—the strike ended unconditionally, and the foreman kept his post. It is perhaps interesting to note that the general secretary of the Athens Communist centre was recently in Moscow, and that he is in contact with the Soviet Legation here—so at least is your Correspondent assured by those who closely follow the movements of the Communists.

During the past month or so important malversations amounting to several million drachmæ have been brought to light. Many minor officials implicated have been arrested, and are about to be brought to trial. In order to put a stop to malversations once for all, the Sofoulis Government passed a decree for the trial by court-martial of all accused of malversation to the detriment of the State. The procedure at courts-martial is not so long as at the civil courts, and there is little chance of the accused's benefiting by the leniency so characteristic of juries nowadays.

The Sofoulis Government showed the greatest solicitude for the refugees, and devoted all its efforts to enabling the Refugee Settlement Commission to continue its work when it ran short of funds owing to the delay in the conclusion of the refugee loan.

The great problem of the water supply of Athens is, to all appearances, about to be definitely solved, and this thanks to the activity of Colonel Botsaris, Minister of Communications in the Sofoulis Cabinet.

I have attempted to recapitulate the principal achievements of the Sofoulis Government, and it is difficult to realise why the political leaders who brought that Government into existence deemed it advisable to bring about its downfall before the way had been paved for some other ministerial combination.

The Situation.

M. Kafandaris, who was the first to make a public statement which left M. Sofoulis no alternative but to resign, now insists on the formation of a coalition Cabinet to include representatives of all the parties. M. Kafandaris quite recently conferred with M. Venizelos in Italy. Is his attitude to-day the outcome of his conversation with the Cretan statesman? M. Papanastassiou opposes M. Kafandaris's scheme, and the other party leaders are sitting on the fence. The result is a chaotic political situation, and President Coundouriotis has been unable to reach any decision in spite of his conferences yesterday and to-day with political leaders.* To-morrow they are all to be convened

[* This was written, of course, before the formation of a Cabinet under M. Michalacopoulos.—ED.]

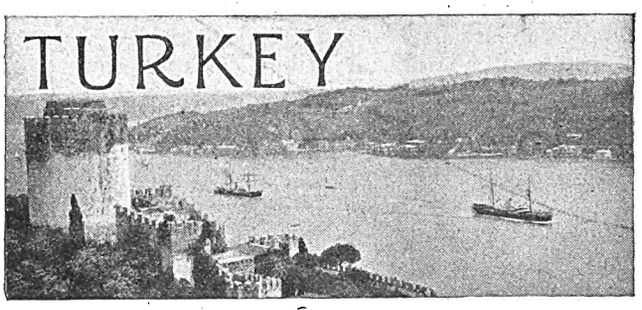
to the Presidential Palace, and Admiral Coundouriotis will recommend the shelving of all personal ambitions for the good of the country. At the present juncture the reconstitution of the Sofoulis Cabinet does not seem excluded. It seems more probable than the realisation of M. Papanastassiou's dream to reassume the Premiership.



Constantinople, October 7.

Thin Anniversary Festivities.

The anniversary of the reoccupation of Constantinople by the Turkish troops took place yesterday, and a programme of "festivities" was arranged. In comparison with the outburst of genuine enthusiasm of last year the ceremonies of yesterday were but a pale shadow, which bore the aspect of an officially imposed routine, in which no one took any real interest. The contrast between the bubbling activity of the Armistice years in this city and the living death of the past twelve months is an insistent fact of daily life.

"Unionist" Opposition.

As the date for the reassembling of the National Assembly approaches the official uneasiness concerning the nefarious doings of the Opposition, who are all lumped together under the generic appellation of "Unionists," is growing greater. The public scare was started by a newspaper report from Smyrna, which stated that a secret congress of the Unionist Party was to be held at Smyrna, and that informers had sent in to the competent authorities a list of the persons who were to be present, with the object presumably of causing their arrest or disappearance. A development of this incident was the report of a series of meetings of influential members of the party at the offices of the late Food Minister, Kemal Bey, at Stamboul. The secret police are as busy as bees; mysterious *communiqués* about meetings of the executive authorities to discuss questions of security and public order find their way into the papers, and the persons and papers which are supposed to have Unionist leanings rightly scoff at the habit of mind of those who, in the free and independent Republic of Turkey, in the year 1 of the new and epoch-making era of the Turkish renaissance, have not progressed beyond the Abdul Hamidian idea that, when two or three are gathered together, there is a sanguinary conspiracy afoot. They are, however, too occidental in their ideas, for there are sufficient indications to show that the uncrowned heads in this country are as uneasy as their crowned predecessors.

The Mosul Incidents.

The recent incidents on the frontier of the Mosul vilayet have provided the text for a number of acid comments on British brutality and bad faith, but on the whole the soft pedal has been down, presumably as a result of the influence of the Government Press Agency. Hints in the British papers, such as the *Daily News* and the *Westminster Gazette*, that Iraq is costing us more than it is worth, and the sooner we get out the better, have been avidly seized upon in gluttonous anticipation of the good time that is coming when we finally leave Iraq to the tender mercies of its northern neighbour. The Government is playing the prudent and cunning game of standing by the League of Nations whatever its decision may be, but the Press is licking its lips a little too obviously and prematurely.

A Constantinople Deal.

The Municipality of Constantinople has at last pulled off a deal with a foreign financial group, which, on the face of it, looks a fairly good thing for the municipality. The "Syndicat d'Entreprises en Orient," which is understood to be a Franco-Swiss combine, and is represented here by a M. Dumas, has engaged itself to lend to the town twenty millions of French francs, at 8 per cent., reimbursable in five years at latest, and to pay on the nail half a million francs as a deposit in guarantee of the fulfilment of its engagements. For this accommodation the Syndicate acquires the right to secure the tenders for the construction of covered markets, petroleum tanks and warehouses, which are to be built on the shores of the Golden Horn, as long as their tenders are not less favourable than those of other competitors. They have drawn up the plans and specifications of the proposed buildings, and if they are adjudged to other firms the Syndicate draws £T3,000 in reimbursement of its expenses in this respect. The repayment of the loan is guaranteed by the receipts of the petroleum depôts to be constructed, and if these are insufficient other municipal revenues will be earmarked for the purpose. One can only say that, with the example of the Municipal Loan of 1909 staring them in the face, the "Syndicat d'Entreprises en Orient" is to be admired for its courage and optimism.

IRAQ.

Baghdad, September 24.

Turks on the Northern Frontier.

The Turks have again crossed the frontier—this time with guns and in force. In the face of their advance a battalion of native levies and certain Arab police posts have been withdrawn. Aerial action has not been effective in checking the Turkish advance, partly because the terrain is unsuitable for aeroplanes, and partly because the Turks have marched by night and taken cover by day. In spite of these disadvantages, a certain number of casualties has been inflicted by machine-gun fire from the air, and considerable disorganisation of the Turkish transport occasioned. No casualties among British or Iraq forces have so far been reported, except injuries to its two occupants caused by the crashing of an aeroplane on landing.

It is certain now that the objective of the Turks is to bring retribution to the Assyrian tribes who captured the Vali of Hakkiari, and in this way recover their lost prestige. Taking advantage of the fact that the northern boundary of Iraq still remains unsettled, the Turks have marched through a part of the zone under the

Digitized by Google

administration of the Iraq Government, thereby avoiding an advance through difficult mountainous country and putting themselves in a position to attack the Assyrian tribes from an unexpected and vulnerable quarter.

Unfortunately, when it comes to a question of Muslim troops attacking Christian tribes, the result is too often wholesale massacre, and the British Government is deeply concerned at the possible butchery of some thousands of Assyrians.

As the air defence, for the reasons stated above, has been less effective than it might have been, and as the greater part of the available land forces are already engaged in the Sulaimaniyah operations, the Turks have been able to burn several Assyrian villages well within the administrative frontier. Having thus created among the inhabitants of the Mosul area the impression that the British and Iraq forces constitute no bulwark against Turkish aggression, the Ottoman Government is pressing for a plebiscite as to the future fate of the Mosul vilayet.

Sulaimaniyah.

Operations in the Sulaimaniyah district have assumed greater activity. Sheikh Mahmud, having secured the assistance of Jaf and Avroman tribesmen, attempted a night raid against Sulaimaniyah, but was repulsed with loss. During the following few days patrols round the town came into collision with several parties of the enemy, and as a result a column composed of a cavalry regiment of the Iraq army was sent out to punish the tribes concerned. In this it was successful, and the tribesmen have dispersed. Since then Sheikh Mahmud has visited some sections of the Jaf tribe, and demanded rifles from them. His request was refused; whereupon a fight ensued between the Jaf tribesmen and Mahmud's followers. The latter were defeated, suffering several casualties.

Visit of M.P.s.

The three members of Parliament who are on a visit to this country, as the guests, it is said, of the Anglo-Persian Oil Co., left Baghdad on September 19 for Basrah and the Persian oil-fields. During their brief stay of two days they managed to see a good deal. Early on Wednesday morning, in spite of the fatigue of the long desert run on the previous day, they visited Babylon, accompanied by Miss Gertrude Bell. In the evening they dined with H.E. the High Commissioner, and met the members of the Iraq Cabinet. The following day they visited the Royal Air Force at Hinaidi, and made a flying trip to Ctesiphon, where stands the great arch of Chosroes, returning to take tea with H.M. King Faisal. On their departure the members stated that they were most favourably impressed with all they had seen in Iraq, and that, in their opinion, the ill-considered attacks on the Government of Iraq made by some of the English papers were without foundation. Considering the present condition of the country, they were agreed that the Administration was being conducted on economical and fairly efficient lines, and they were impressed by the vast possibilities for economic expansion in Iraq.

General.

For some time past reports have been current that King Hussein had relented of his decision not to allow any of his son's family to visit Iraq. It now seems certain that King Faisal's son, the Emir Ghazi, is coming to Baghdad. A deputation consisting, among others, of the Minister of Interior, Safwat Pasha of the King's Household, and Hanna Beg Khayyat, is expected to leave to-day for Amman to receive the Crown Prince.

FRANCE AND SYRIA.

On October 10, before the Central Asian Society, Major D. McCallum, who from 1919-1924 was *liaison* officer with the French in Syria, gave some account of his experience of French rule in Syria, its difficulties, and its successes. He deliberately laid stress on the difficulties and the successes of the French, because, he said, most of the stories of the French administration of Syria that had reached Europe had come from superficial sources, and could not be credited. After reviewing the trouble that France had with the Arabs—whose habit of intrigue and whose cowardice he made no attempt to minimise, instancing Faisal's relations with the Damascus congress of extreme Nationalists and the conduct of Arab troops in the battle of Khan-Meiseloum—he went on to explain the defeats suffered by the French Army of the Levant in the North of Syria—defeats which culminated in the Angora Accord of 1921. That Accord had had grievous effects upon European prestige with the Turks, who since that time have made no effort to conceal their designs upon Aleppo and Alexandretta.

In conclusion, the lecturer insisted on the necessity of Anglo-French co-operation in the Middle East. The stability of Syria was essential, for it was a kind of buffer State between the British mandated territories of Palestine, Transjordan, and Iraq. The present discontents of the inhabitants of Syria were not due to political reasons, but to the bad condition of trade. They did not care greatly whom they were under so long as they could trade profitably, and in order to bring this state of affairs about the various Custom barriers that had been set up since the abolition of Ottoman rule should be abolished.

General Vicomte de la Panouse spoke of the improving situation in Syria and of the necessity for Anglo-French co-operation in the Middle East. The agreement between France and Turkey was hardly an absolute one.

Lord Peel, who presided, emphasised once more the urgency of Anglo-French co-ordination.

INSTITUTE OF JEWISH STUDIES.

The Hebrew University Committee announces that, as a result of the decisions of the University Conference recently held in London the following scholars have been offered and have accepted professorships for limited periods at the Institute of Jewish Studies in Jerusalem:—

Professor M. Guttmann, Breslau Rabbinical Seminary (Halacha); Professor L. Margolis, Dropsie College, Philadelphia (Bible versions); Professor Louis Ginsberg, Jewish Theological Seminary, New York; Rabbi Dr S. Klein, Nove Zamky, Czechoslovakia (Biblical topography); Chief Rabbi Dr. Immanuel Loew, Szegedin, Hungary; Mr. Chaim N. Bialik (modern Hebrew literature); Dr. Chaim Heller, Berlin; and Professor Mittwoch, Berlin University (Arabic).

AFFAIRS IN AFGHANISTAN.

(From an Afghan Correspondent.)

Progress in Afghanistan.

Recent events in Afghanistan tend to justify the belief that one day, not very distant, that country will play a very important part in the politics of the Middle East. The present ruler of Afghanistan has achieved much—both politically and economically—which his predecessors were unable to secure.

It has, for instance, been now fully realised that the very first step towards national greatness lies in education, education at once free and liberal. Rigorous measures are being adopted in Afghanistan to impart knowledge not only to the male elements, but also to the women. A ladies' college in Kabul, which would have been unthinkable fifty years ago in Afghanistan, is to-day a flourishing institution An American lady is employed as its head mistress, and the prejudice against giving higher education to Afghan women is fast disappearing. Great precautions are adopted for Purdah of the students, with the consequence that now girls, not only of the lower, but also those belonging to the upper classes, sit together with their poorer sisters.

Further, the cultivation of international relations, upon which Afghanistan is now engaging itself with great zest, has necessitated the giving by the Foreign Office at Kabul that special training to its units which is required of diplomats. A school of political science has been opened at Kabul. In this institution, not only are the younger candidates for the diplomatic services coached, but also the older officers are to be found taking advantages of the newer order of things. There are hardly any subjects, bearing upon politics, which are not taught in this school, and its fruitful results are greatly appreciated by the Afghans already.

War Training.

In this great desire of the Afghans for education, the facts that they are essentially a martial race and that the art of war must on no account be neglected have not been forgotten. Military training, therefore, has not been dethroned from its important position, and quite a large number of boys are receiving training at the military college, under both Afghan and foreign instructors. In this regard it is most interesting to observe that the Afghans now fully appreciate the value of the science of warfare according to modern conditions, and much attention is being paid to the real points of strategy. The Ameer, to commemorate the memory of his fallen soldiers, had an Arch of Victory erected at Kabul, and only the other day a distinguished nobleman performed the unveiling ceremony.

Diplomacy.

In matters of diplomacy in Afghanistan of to-day the Kabul Government is particularly careful to mete out the same treatment to representatives of all countries. A new Plenipotentiary has just arrived from Soviet Russia at Kabul; and, as is usual on such occasions, in offering his diplomatic credentials to the Ameer, he made a speech calculated to demonstrate the friendship which the Soviet desire with Afghanistan. The very first step towards that direction, he contended, was the establishment of a Trade Treaty between the two countries. A suitable reply was given that Afghanistan was quite willing to have that brought about.

But whilst there may not be any harm in making a trade treaty with foreigners, yet it is now very keenly felt in Afghanistan that, as far as possible, Afghan products must be bought always in preference to foreign goods. With a view to this extraordinary efforts are being made towards the production of necessary things in the country itself. Machines of many descriptions are being bought and worked in Afghanistan, and potentialities of the land are being exploited with great zeal. Only recently a company has been formed which has the mining of precious stones and coal in view. It may be remembered that the Province of Badakhshan is reputed for its rubies, and in western districts of Afghanistan not only has coal been tapped, but oil is suspected.

The Ameer.

As regards the present trend of Afghan politics, everyone seems to be agreed on the point that the present Ameer is by far the most popular who has ever ruled Afghanistan, and that he is a true well-wisher of his country. Practical proofs of this are to be found in abundance. Superficial observers think that, although the general feeling in Afghanistan is in favour of the Ameer, yet the new order of things to which he has given shape is not appealing to the conservative section of his subjects. That is, however, not the fact. That a sudden abolishing of old customs and traditions in a conservative country often brings uneasiness is an undeniable historical generalisation, but Afghanistan has proved an exception. The introduction of the newer methods was effected with full and unqualified co-operation and consent of the older section of the people.

The Khost Rising.

This brings us to the consideration of the fact, whether the Khost rising in Afghanistan occurred as the result of those new reforms.

Many followers of Middle Eastern politics still seem to attribute the Khost rising to the resentment which a certain element of the religiously minded people in Khost had felt against the amended form of the Afghan laws, called the *Nizam Nama*. Whether that was the real cause of the revolt can be judged from the fact that, when the Afghan *Mullahs* of repute assembled at the Loi Jigah in Kabul recently, and made the necessary alterations in it, and caused it to be sent to the Khost district, the expected results of the step failed to materialise. The rising did not subside.

Not a few people, otherwise well informed, have imagined that a certain ne'er-do-well, Abdul Karim, a son of the late exiled Amir Yakub Khan, is not only the perpetrator but the real soul-force of this revolution in Khost. Nothing can be further from the truth. All the prominence which he has been given has been invested upon him from ill-informed people, and even the revolutionaries themselves now pay no heed to his alleged attainments or the right of parentage.

The Ameer has given express orders to his army that arms are not to be used against the people of Khost, and a large number of regular troops at the point of trouble are really doing nothing. The Ameer is of opinion that the ties of nationality between the people of Khost and the rest of the Afghans are too close to warrant the employment of the force of arms. The troops have, however, been permitted to surround the reactionary group, and arms are to be used as a means of self-protection. Already the ingress and egress of the recalcitrants have been closed, half of them have submitted, and it will now be not long before the whole affair is settled. On the other hand, a sense of resentment towards the revolutionaries is perceptible amongst the general public of Afghanistan, and large numbers of influential clans have begged permission to smash the rebellion if the Government does not care to deal with the Khosties.

PERSONAL AND GENERAL.

TO-DAY.

October 16, 1924 (New Style).
October 3, 1924 (Old Style).
Rabia I, 17, 1343 A.H. of the Moslem Calendar.
Tishri 18, 5685, of the Jewish Calendar.

Zaghloul Pasha embarked at Marseilles for Egypt yesterday.

M. Norteza Gazvini is acting as Persian Consul-General in London.

The Indian Empire Club is holding a dance on October 18 at the Hyde Park Hotel.

Viscount and Viscountess Milner are leaving England at the end of the month for South Africa.

General Lord Rawlinson, Commander-in-Chief in India, is returning there from England next month.

Mr. Justice Page, Mrs. Arthur Page, and Miss Margot Page left London last Friday for Rome, *en route* for Calcutta.

The Infanta Beatrice entertained Prince and Princess Paul of Serbia at luncheon on October 7 at Claridge's Restaurant.

The Emil Zeid, youngest brother of King Ali of the Hejaz, has arrived in England in order to study at Balliol College, Oxford.

On Tuesday, October 14, Professor D. S. Margoliouth read to the Royal Asiatic Society a paper on "The Origins of Arabic Poetry."

Mme. Sabet Bey, the wife of Mahmoud Sabet Bey, First Secretary at the Egyptian Legation, has now recovered from her recent indisposition.

Miss Cornelia Sorabji is sailing from Naples to-day for Calcutta, where she intends to practise law. She was called to the Bar at Lincoln's Inn last year.

Viscount and Viscountess Erleigh arrived on October 11 at 65, Rutland Gate from India, where they have been on a visit to the Earl and Countess of Reading.

Mme. Aziz Izzet Pasha, wife of the Egyptian Minister, left London on Saturday, accompanied by her daughter, Princess Hassan, to join the Minister in Paris.

The Roumanian Minister in London and Mme. Titulesco left Geneva last week for the South of France, where they will spend a short holiday before returning to London.

Mme. Matila Costiesco-Ghyka, wife of M. Matila Costiesco - Ghyka, formerly Secretary at the Roumanian Legation in London, arrived in London last week from Paris.

Sir Frederick William Duke, G.C.I.E., K.C.S.I., Arbroath, Permanent Under-Secretary of State for India, formerly Lieutenant-Governor of Bengal, and prior to that Chief Secretary to the Governor of Bengal, who died in June, aged 60 years, left, in addition to considerable real estate and settled property, unsettled personal estate in Great Britain valued for probate at £9,156.

The Maharaja of Nawanagar on October 8 concluded his visit to England, and left Victoria by the forenoon boat-train express *en route* for Marseilles, where he embarked for Bombay.

Under the auspices of the East India Association, Sir Reginald H. Craddock will, on October 20, at 3.30 p.m., at the Caxton Hall, Westminster, read a paper on "India and Burma: Some Contrasts."

In the annual exhibition of the Royal Institute of Oil Painters, now being held at 195, Piccadilly, Mr. Percy R. Craft has two pictures, "Vegetable Market inside the Jaffa Gate, Jerusalem" and "In the Great Square, Damascus."

The Maharanee Regent of Travancore has appointed a Syrian Christian lady doctor, Mrs. Poonen Lukose, head of the State medical service, to be a member of the local Legislative Council. She is the first lady in all India to occupy either position.

The marriage arranged between Captain George Bambridge, M.C. (late Irish Guards), Attaché, H.M. Embassy, Madrid, and Elsie, daughter of Mr. and Mrs. Rudyard Kipling, of Bateman's, Burwash, Sussex, will take place at 2.15 p.m. next Wednesday at St. Margaret's, Westminster.

The Bishop of Gibraltar left London last week for Belgrade to visit various chaplaincies and British communities in the Balkans. He will then proceed to Constantinople *en route* for Smyrna. All letters should be sent to the Gibraltar Diocesan Office, Church House, Westminster.

Among the passengers by the P. and O. Bombay express which left London last Thursday to join the steamship Narkunda at Marseilles were Sir Gordon and Lady Fraser, Sir Dawson and Miss Miller, Sir B. K. and Lady Mullick, Sir John Bucknill, Sir George Buchanan, Sir Percy and Lady Thompson, Major-General Sir A. Skeen, and Sir Oswald Bosanquet. Lady Roberts, the Raja and Rani of Mandi, Sir Charles and Lady Todhunter, Lieutenant Sirdar Singh of Kapurthala, Lady Wheeler, Sir Cowasjee and Lady Jehanghir also sailed from Marseilles in the Narkunda for Bombay.

EGYPT'S TESTING TIME.

When the subject of Anglo-Egyptian relations was discussed in last week's issue of THE NEAR EAST Mr. Ramsay MacDonald's dispatch to His Majesty's High Commissioner for Egypt regarding the course of his conversations with Zaghloul Pasha had not been published. From this communication it is evident that the Egyptian Prime Minister's demands were even more extreme than he had been given credit for. The points on which he declared that he was bound to insist were the withdrawal of all British forces from Egyptian territory; the withdrawal of the Financial and Judicial Advisers; the disappearance of all British control over the Egyptian Government, notably in connection with foreign relations; the abandonment of the British claim to protect foreigners and minorities in Egypt; the abandonment of the British claim to share in any way in protecting the Suez Canal. From the wording of Mr. MacDonald's report it has to be inferred that these were in the nature of preliminary demands intended to pave the way to a discussion on the subject of the Sudan. Mr. MacDonald, however, raised the latter question himself, and called Zaghloul Pasha's attention to the statements which he was reported to have made before the Egyptian Parliament, only to find that Zaghloul Pasha adhered to all that he had said in Egypt, justifying himself on the ground that he was voicing the opinion not only of the Egyptian Parliament, but also of the Egyptian nation. In these circumstances it is not surprising that the conversations were abruptly terminated, and that Zaghloul Pasha returned immediately afterwards to Egypt. No Briton, however great his sympathy with the Egyptians in their desire for independence, can fail to be amazed at the course taken by the London conversations. The difficulties of Zaghloul Pasha's position in Egypt were well understood, and allowance was readily made for the necessity in which he found himself of having to endorse the cries of the extremists among his followers; but it was not anticipated that in private conversations the Egyptian Prime Minister would merely echo the irresponsible demands associated with mob clamour.

There must be many things clear to Zaghloul Pasha in regard to Anglo-Egyptian relations which the Egyptian man-in-the-street will overlook or be unable to appreciate. In the first place, the grant of independence to Egypt—however much it may have been her due and Great Britain's obligation to give it—was, under the conditions existing, in the nature of a bargain. No one in their senses would imagine that after forty years of occupation, after building up the prosperity of Egypt and causing it to occupy a special position in the scheme of the British Empire, the British would walk out of Egypt without a further thought for Egypt's interests or for their own. In making the formal grant of independence, it is true that the British Government of the day, instead of waiting for the *quid pro quos* to be agreed upon, said, in effect: "Here is the independence you want; we trust you sufficiently to leave our side of the bargain to be settled later." It was the gesture of an honourable man who imagined that he was dealing with some one of his own standing. As Mr. MacDonald points out in his report of the conversations, he has by no means abandoned hope that, on further consideration, the basis of an agreement acceptable to both countries can be found. In other words, Great Britain is confident that, sooner or later, she will be dealing with an Egypt that is not lost to all sense of honour; for the present, however, it is not this Egypt that Zaghloul Pasha represents. His attitude, which has rendered agreement between the two countries impossible for the moment, is that of a man who, having received what he wanted, repudiates his side of the bargain. Zaghloul Pasha can say that, personally, he never agreed to the bargain, and that he has continually reminded Great Britain of the fact. In dealings between countries, however, there is no place for these distinctions between the State and the individual. Egypt accepted her independence at Great Britain's hands and took note of the reservations made at the time by the latter. A Cairo mob or irresponsible students may shout that they will not have this, that, or the other, but a man who claims to be a leader of his people should be more zealous of his country's honour, and should refuse to be a party to the dishonouring of the nation's bond. That this is a rôle which Zaghloul Pasha is not qualified to play, he has himself shown in the London conversations. There were men in his entourage, and there must be many more in Egypt, who were prepared to acquiesce in a more honourable interpretation of Egypt's duty. For the time being, however, Zaghloul Pasha is Egypt and Egypt is Zaghloul Pasha. Great Britain has no need to take the situation too tragically. The day of the individual passes, while the nation endures, and in the long run its aggregate common sense and a higher code of honour will prevail.

In view of the demands that Zaghloul Pasha put forward in London, it may be doubted whether he was intellectually capable of profiting by the exchange of views with the British Prime Minister; but it is to be hoped that the reasoned statement of the British case now made public by Mr. MacDonald will carry conviction in Egypt beyond the circles where even now it is recognised that Egyptian interests require the maintenance of close ties of friendship and co-operation with Great Britain. The most astounding of Zaghloul Pasha's demands was that Great Britain should abandon her claim to share in any way in protecting the Suez Canal. The security of this waterway is a vital interest of the British Empire, and the absolute certainty that it will remain open in peace as well as in war for the free passage of British ships is the foundation on which the entire defensive strategy of the British Empire rests. But such is the mentality of the present Egyptian Prime Minister that he can seriously put forward the suggestion that Great Britain should divest herself of all interest in the security of the Suez Canal and leave it to be settled between an Egypt of fourteen million unwarlike inhabitants and the rest of the world. There is in this suggestion an indication of such complete detachment from actual realities that one would despair of the future of the country if it were not realised that one day it will be possible to appeal from Egypt drunk with the heady wine of mob oratory to Egypt sober. Great Britain can afford to be

Digitized by Google

patient and tolerant, so long as the policy outlined by Mr. MacDonald regarding the Suez Canal and the Sudan is carried out firmly and in its entirety, in the certainty that there are to be found in Egypt greater knowledge and higher statesmanship than are centred in Zaghloul Pasha.

EGYPT UNDER THE TURKS AND BEYS, 1517-1811.

By F. W. BUCKLER.

[*The following lecture was delivered on August 19 at the Cambridge University Summer School, and was preceded by lectures on the history of Egypt under Muslim rule down to 1517, given by Mrs. R. L. Devonshire, and on the history of Egypt from the time of Mohammed Ali to the eve of the Great War, given by Sir John Marriot. Between these two periods, as Mr. Buckler pointed out, lie three centuries of Egyptian history—a dismal record of oppression and tyranny. "There was," he said in the introduction to his lecture, "no hope of peace and good rule in Egypt until Mohammed Ali made good the neglect of Salim the Grim and exterminated the Mamluk Beys in 1811. That was his crowning triumph and greatest service to Egypt."*—Ed.]

In 1517 the Byzantine Empire was once more complete under Turkish rule, and the political ravages of Christian theologian Emperors nine and ten centuries earlier were repaired by the sword of the Muslim Salim the Grim. The position of Egypt in the Ottoman Empire was not unlike its position in the Roman Empire—it was a constant source of revenue and anxiety to its conquerors, and it was the granary of Constantinople. It was the centre of much of the political unrest of the Muslim Empire, just as it had been the centre of turmoil in the years following the Edict of Milan, with the difference that its later developments tended to be local and feudal, instead of being œcumenical and ecclesiastical, for Satan carried off the only person who could stir up religious strife—the Khalifah Mutawakkil.

Now, the great error to which most historians of the East are liable is the error of over-estimating the size of Muslim armies. The numbers are exaggerated to provide the victors with glory adequate to their importance—the simple method was to include all attendants, including *saises* (grooms), lackeys, butchers, and sweepers, who generally outnumbered the combatants by five to one. And, moreover, the historian, too, is prone to forget that an army is but an army, and not primarily an administrative body. In the East the functions of government are quite separate—the *amir*, who leads the army of the faithful and keeps order on the spot, and the *aru'l*, who collects the revenue, to hand it over either to the central government or to the *amir* or his deputies to whom the revenue of a district has been granted in payment of the services of his detachment and of himself.

Now, in order to provide for this element of local government—the collection of taxes—all Muslim conquerors have been forced to rely on the feudal chieftains or official classes of their predecessors. In Greece it was the Phanariots; in Egypt it was the Mamluk Beys, and a comparison between the history of Greece and Egypt under Muslim rule reveals but the rebellion of these official classes against the central government—the Western historian and politician calls these rebellions "national movements," and urges intervention in support of them, oblivious of the fact that too often they have been occasioned by the attempt of the central government to suppress local tyranny. It was to the Mamluk Beys that Salim the Grim looked to perform the revenue functions of Egypt—they were left in charge of the 12 *Sanjaks*.

The government of the country was left in the hands of a Viceroy—a *pasha*—supported by six regiments; his successor, Sulaiman the Magnificent, added a seventh regiment of Circassians. But a Viceroy, so strongly supported, was liable to rebel, and to provide against this contingency the governor was changed every few years and two councils or courts were created—the greater and lesser *Diwans*—the first council composed of the heads of the military forces, the second composed of the heads of the 12 Sanjaks—that is, of the 24 leaders of the Mamluks. Without their consent the Viceroy could do nothing. If he displeased them they could depose him, and at any time their agents at Constantinople could spread the rumour that the Viceroy was preparing to announce his independence. This rumour invariably resulted in the dispatch of two *firmans*, one appointing a fresh Viceroy, the other containing orders for the execution of the old. "A pasha's life was not a happy one," for his crime might merely be that he had listened with sympathy to an oppressed peasant. It will be seen, then, that reform of the government was impossible as long as the interests of the Beys were able to obtain effective support from Constantinople, and as long as the Mamluks were in such a strong position—they possessed both economic and political control of the country, together with the natural right to rebel. Each Bey had his private Mamluk following, and as the recruitment of the Diwans was from the most approved followers of the most influential Bey, the tendency of the Diwans was towards a close corporation, and therefore unreformable body.

Their power was considerably increased, however, by the fact that two offices were in their patronage—that of the *Sheikh ul Balad*—or Mayor of Cairo—and the *Amiru'l Hajj*—or the leader of the Pilgrimage. Each had its guard of Janissaries. Now it was round these two that political parties and controversies raged. It was under their leadership that the government was maintained; the *Sheikh ul Balad*, indeed, ultimately became *de facto* ruler of Egypt, while the Pasha gradually receded into the position of a theoretical source of authority—a *roi fainéant*. Both these officers were confirmed in their appointment, not by the Viceroy's *firman*, but by the Sultan's *firman*, so their prestige was high.

One concession was made—it is usually stated as such—to Egyptian pride—Egypt retained the right of its own coinage. But there, I think, the Western historian misinterprets an ignominious duty as a political privilege. Egypt was compelled to strike its coin bearing the superscription of her conqueror. The third Governor—one Ahmad—struck coin in his *own name*, and orders were issued for his deposition. These he tried to ignore, but they were enforced by two Beys whom he had imprisoned. They effected their escape, and Ahmad passed from the pleasures of the bath to the pleasures—or otherwise—of the beyond, in accordance with the fate-bearing decree of Destiny—and of the Sultan.

The religious settlement—in view of its present interest—calls for some notice. We have already seen that Salim the Grim removed the last Egyptian Abbassed Khalifa. The Ottomans maintain that the Khalifat surrendered his rights to Salim, who thereby became Khalifat in his stead. Now, he was certainly not entitled to do this, and an-

Digitized by Google

attempt has been made recently to discredit any transaction of the sort by Professor Nallino of Rome, and it has received some support, I believe, from Sir Thomas Arnold. We know, from contemporary poems in Aleppo and Mecca, that Salim was saluted as Khalifat as early as 1519. He was urged to take up the title even earlier by the Vali of Samargand in Persia. The Sunnis of Persia objected to forcible conversion to the Shi'ah heresy, and required a much stronger supporter than Mutawakkil—the Khalifat—so policy would dictate the action. Further, the old rivals of the Ottoman House—the House of Timur—at once began to move to a position from which it could assert its independence alike of Persia and Turkey. This movement culminated in Akbar's proclamation of himself as Khalifat of the age in 1579. Further, the Mughals never recognised the Ottoman claim. The actual history of the transfer is probably somewhat as follows :—It turns upon the double meaning underlying the word Khalifat—successor and deputy. The Ottoman Sultan might well have been appointed deputy of the successor of the Prophet, as well as successor of the successor of the Prophet at a later date—the word Khalifat would cover both and satisfy the political needs of the Ottoman. We shall see—later—a curious consequence of this step in the policy of Tipu, Sultan of Mysore. The chief Qadi was appointed annually by the Ottoman Court at Constantinople, and after his year of office proceeded to Mecca to perform the Pilgrimage. He was always a divine and lawyer of standing—not infrequently well versed in the principles of Roman Law.

The economic effects of the Turkish conquest of Egypt are liable to be overrated. It is quite true that a heavy subsidy of corn and money was a serious drain on the resources of the country, and that it led ultimately to a decline in cultivation. So serious did this decline become that Egypt tended to suffer from famine in years when she should have enjoyed prosperity. But it was not merely the subsidy which caused the decline. The maintenance of the establishment of the Beys fell on the agricultural districts, and *that* levy was even more rigorously exacted than the levy for the tribute to Constantinople. Moreover, the wealth of the Beys and their Mamluk followers tended to be spent in Cairo, so that the districts did not receive their proper return for their labour and outlay. Further, Egypt, like Venice, received a severe blow from the discovery of the Cape route to India, a blow from which she has not yet recovered, for merchandise no longer changes hands to any extent in Egypt, but passes straight through the canal to be unloaded in the ports of London and Marseilles. The severity of the blow is reflected in the warfare which took place between the Portuguese and the Egyptians in the Red Sea and Gulfs of Persia and Arabia. When the Ottoman Turks took Egypt, her commercial prosperity was already on the decline, and with her commercial prosperity was unfortunately linked much of her local prosperity. Salim, however, carried off the best of the artisans to beautify and embellish Constantinople; but here, again, the blow need not have been fatal but for the greed and rapacity of the Mamluk Beys who were left in power by Salim. The wealth they drew from Egypt tended only to increase their power to buy Circassian Mamluks, to increase their following, and consequently their power to perpetuate disorder. When Salim the Grim failed in his grim duty of extirpating the Mamluk feudalism, he sealed the fate of Egypt until there should arise one whose courage was equal to the task.

In 1527 the first survey of Egyptian lands was made to take the place of the old records which had been destroyed by fire. The Mamluks by that time were in full possession of their fiefs, so that when the system was applied in 1605 it merely strengthened their hold upon the country. The land was divided into four classes :—

(1) The Sultan's domain.
(2) Fiefs of the Mamluks.
(3) Lands for the maintenance of the army.
(4) Lands for the maintenance of religious foundations.

(To be continued.)

EGYPT AND THE SUDAN.

The *Sphinx* has now published its annual tourist number, entitled "Egypt and the Sudan." It is profusely and excellently illustrated, and contains a varied list of articles. The following may be singled out :—"The Voice of Egypt," by H. V. Morton; "Egypt for Change of Mind," by Valentine Williams; "Egypt as Health Resort," by T. Gerald Garry; and "The Sudan for Sport and Pleasure," by Edward Fothergill. Altogether it is an attractive production.

Mr. Gandhi on October 8 completed his three weeks' fast undertaken to induce Muslims and Hindus to compose their differences.

President Doumergue received recently Sardar Ali Mahomed Nadir Khan, who presented his credentials as Envoy Extraordinary and Minister Plenipotentiary of Afghanistan in Paris.

The Emir Ghazi, the Crown Prince of Iraq, King Faisal's twelve-year-old son, arrived at Baghdad on October 7 from the Hejaz. He is the only member of the Faisal family that King Hussein has so far allowed to visit Iraq. The young prince was given a public reception by all the notables of Baghdad, several hundred Boy Scouts being present.

THE
EUPHRATES & TIGRIS
STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the river Tigris and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

NOTES AND NEWS.

167, Strand, London, W.C.2,
Tuesday Morning.

Insurance of Credits.

The interesting announcement comes from Bucharest that an Anglo-Roumanian Insurance Company has been established in Roumania with the participation of two British companies, the Commercial Union Assurance Co., Ltd., and the Excess Insurance Co., Ltd. If I am not mistaken, the new company will be particularly interested in the insurance of credits, a branch of insurance that has not hitherto received the public attention to which it is entitled. The very limited application given to the Trade Facilities Act may be partly due to the inherent difficulty of working the scheme involved by means of a Government Department. If, however, trade with the Balkans and other countries suffering from a depreciated currency is to be placed once more on a satisfactory basis, it is evident that credit must be given by the British manufacturer, who to this end must be provided with a guarantee that payment will be forthcoming when it falls due. To obtain this he will be willing to pay a reasonable premium. A credit insurance scheme, therefore, requires that the British company accepting the risk should be able to satisfy itself through an allied company in any given country that the person to whom the British manufacturer's goods are consigned can be relied upon to honour his undertaking. This security can be provided in a number of ways, the choice being left, as far as the British insurance company is concerned, to the allied concern on the spot, which will naturally be cognisant of local conditions and better able to accept responsibility. It is this rôle, I hope, that the new Anglo-Roumanian Company in Roumania will be called upon to play, to the rapid development of trade between Great Britain and Roumania, and I shall hope to hear of similar ramifications in the other Balkan countries.

Agencies in Greece Required.

One of our readers in Athens writes to say that he is co-operating with a civil engineer who is an expert in building construction. He is desirous of being introduced to building manufacturers, such as cement, round steel, etc., in order to act as their agents in Greece, also in the same way to mineral oil concerns for benzine and all other oil products. Write, in first instance, to THE NEAR EAST, 167, Strand, London, W.C.

The Exhibition.

No definite decision has yet been arrived at with regard to the continuance of the British Empire Exhibition, and it may well be that nothing will now be done until after the election. Opinion among those most closely concerned in the Exhibition seems curiously divided. A number of the exhibitors appear to be profoundly dissatisfied with the results, while others say that they have been fully in accordance with their expectations. In the case of an exhibition like this one, the real value of participating lies in the influence that the publicity thus afforded may be expected to exert over a number of years. Viewed from this, the only reliable, standpoint, it is impossible to tell whether the Exhibition will justify itself; one simply has to take it on trust. On one point, however, there can be no doubt. The success of the Exhibition in 1925 must depend on the support of those who are now participating in it. Were there to be any notable absentees among the representatives of the Empire overseas, or were there to be any marked lack of support on the part of the principal British industries, the outlook could not fail to be unfavourable.

Turkish Reparations.

The present position with regard to Turkish reparations is the subject of a brief article in this issue. By a Convention of November 23, 1923, it was agreed by Great Britain, France, Italy, and Japan to devote jointly the sums in gold referred to in Article 58 of the Treaty of Lausanne and the £T846,100 Turkish Government Treasury Bills, purchased by the British Government from the holders in 1914, to the reparation of damage suffered by their nationals in Turkey. The Commission for the administration of this fund has now been set up, and has been holding preliminary meetings in Paris. Under the terms of the Convention, all claims must be received before August 6, 1925.

The Rise in Rubber.

For a few days last week the market in raw rubber remained relatively dull, but yesterday saw a new advance, and now the commodity stands at 1s. 4d. With a progressive reduction in stocks in London the position is certainly most interesting, particularly as a further restriction in output by 5 per cent. is in prospect at the end of the month. For this not to take place it would now be necessary for rubber to average something like 1s. 6d. between now and October 31. This is hardly likely, though I shall not be surprised to see rubber touch 1s. 6d. before November, and following a further restriction it ought to go much higher.

TURKISH REPARATIONS.

The Inter-Allied Assessment Commission for Turkish Reparations provided for by the Convention of November 23, 1923, has now been set up, and is holding its preliminary meetings in Paris. M. Clément-Simon, the French member, formerly Minister at Belgrade, is acting as the first President. The Italian member is Commendatore Diego Tripepi, formerly Italian judge in Constantinople, whilst the British member is Mr. H. Ernest Garle.

Information will shortly be forthcoming as to the place of the permanent sittings of the Commission and the methods to be adopted by claimants for the purpose of bringing their claims before it. In the meanwhile it may be of interest to remind claimants that, whilst the Treaty of Lausanne and the subsidiary documents forming the Turkish peace settlement make provision regarding such questions as pre-war debts, taxes, property, rights and interests, pre-war contracts, concessions, and prescriptions, it is the Convention of November 23, 1923, which deals with the question of reparations, with which the Inter-Allied Assessment Commission is solely concerned, and intending claimants are recommended to study that Convention in order to ascertain in respect of what damage they are entitled to claim. The Convention is published by H.M. Stationery Office, and copies can be procured directly from them or through any bookseller in Great Britain.

As the powers possessed by the Inter-Allied Assessment Commission in awarding compensation cover a wider field than those of the late Royal Commission on Suffering and Damage by Enemy Action, it is probable that in many cases claimants may have to make fresh claims. They are therefore recommended to refresh their memories as to their former claims, and in this connection it is believed that the Inter-Allied Assessment Commission will provide machinery to enable claimants to refer to documents submitted in connection with their former claims which may no longer be in their possession.

Furness Withy and Co. announce that warrants for the dividend on the Ordinary shares at the rate of 5 per cent. per annum for the half-year ending October 31, free of tax, will be posted on October 31 to shareholders registered on October 13.

CHESS.

BY "CARO-KANN."

The general meeting of the Metropolitan Chess Club will take place this evening. The club is holding its usual tournaments, entries for which must be made by October 30.

A number of matches took place on Saturday, the most important of which was the semi-final for the county championship between Surrey and Yorkshire, which was played at St. Bride Institute. Yorkshire's team included Mr. H. E. Atkins and Mr. F. D. Yates. The final score was 7½ to 3½ in Surrey's favour, with five games unfinished, and it is thought that the match will result in a win for Surrey by a narrow margin.

The following game was played in the British Championship at Southport between Mr. F. D. Yates (White) and Mr. H. E. Atkins (Black), and is specially interesting because of the adoption by Mr. Atkins of the Caro-Kann defence:—1, P—K4, P—QB3; 2, P—Q4, P—Q4; 3, QKt—B3 (a), P x P; 4, Kt x P, KKt—B3; 5, Kt x Kt (ch), KP x Kt (b); 6, Kt—B3, B—Q3; 7, B—K2, O—O; 8, O—O, R—K; 9, P—B4, Kt—Q2; 10, B—Q2, Kt—B; 11, R—K, B—Kt5; 12, P—Q5, P—QB4 (c); 13, QR—B, Kt—Kt3; 14, P—Kt4, P x P (d); 15, P—B5, B—B5; 16, R—B4, B x B; 17, Q x B, B x Kt; 18, P x B (e), P—QR4; 19, QR—B, Q—Q2; 20, Q—Q4, QR—Q; 21, QR—Q, R—K4; 22, B—B4, R—Kt4 (ch); 23, K—B, Q—R6 (ch); 24, K—K2, R—K4 (ch); 25, K—Q2, Q x BP; 26, K—B2, P—K5; 27, K—Kt, P—R3; 28, P—Q6, Q—B4 (ch); 29, B—Q3, Q—B5; 30, R—K4, Q—B6; 31, R—QB, P—B4; 32, R x R, Kt x R; 33, B—Kt5, Kt—B3; 34, B x Kt, P x B; 35, Q x P, Q x P; 36, Q—Kt6, R—KB; 37, P—Q7, Q—Q7; 38, Q—B7, P—R6; 39, Q—Kt7, Q—Q6 (ch); 40, R—B2, Q—Q8 (ch); 41, R—B, Q—Q6 (ch) (f).

(a) Possibly the most promising line for White is:—P x P; P x P; 4, P—QB4; Kt—QB3; 5, Kt—QB3.

(b) There is a division of opinion as to which Pawn it is best to make the capture with. The text move gives greater freedom, but White's Queen's side Pawns are liable to become dangerous. Capturing with the Knight's Pawn gives Black a strong centre, but a rather more cramped position.

(c) As White is bound to obtain a passed Pawn, this is better than P x P, for now the White Pawn at Q5 will serve Black as a kind of protection while preparing an attack against the K side.

(d) P—Kt3 holding the centre, would seem to be preferable.

(e) If B x B, R x R; 19, Q x R, Kt—K4, with good prospects.

(f) This was the position at the adjournment, and on continuing, Black, two Pawns up, won easily, for there is now little left for White to do but wait for the inevitable.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended September 20 amounted to £E10,645, making the total from April 1 £E130,268.

The *Central European Observer* states that this year's tobacco crop in Yugoslavia promises to be an excellent one, and a large surplus will be available for export. There are also in hand considerable stocks from previous years—320,000 kilogrammes of the 1922 crop, and some 5,000,000 kilogrammes of last year's, including both cigarette and pipe tobacco in different grades of quality from ordinary to fine select. It is expected that, in view of the good quality of Yugoslavian tobacco and the low transport costs, the Hungarian Tobacco Régie will this year make large purchases in Yugoslavia instead of, as hitherto, in Turkey and Bulgaria.

BALKAN MARKETS FOR MOTORS.

Since writing last week on the importance of Near Eastern markets for motors, and urging British manufacturers to spare no efforts to cater for these outlets, I have received an American Consular report which throws such an interesting light on the subject and, so to speak, emphasises what I have written, that I propose to pay considerable attention to it. It is a report on ten "lesser markets" for motors, and it is pointed out that "while these markets individually are not large at present, they present collectively an interesting situation for development, both immediate and future." Now if I were to ask some British manufacturers if it were likely that Near Eastern countries figured prominently among these ten "lesser markets," I should probably be met with a very positive negative. Such is the view taken of the Near East as a whole as a trade outlet in some quarters. It will surprise those who are of this way of thinking that the Near East does figure largely among these markets, and particularly that those Near Eastern countries which are included are probably just those which, on account of the prevailing conditions and the adverse exchanges, are regarded as holding out least prospects for trade development. Actually the ten markets include Roumania, Bulgaria, and Yugoslavia. That, be it noted, is the American viewpoint, and as America is the chief competitor that British motor manufacturers have to fear, and as American manufacturers have to face even greater handicaps than British firms, the view ought to carry considerable weight with firms who have hitherto regarded these markets as impossible.

Some of our firms will probably take the attitude that all this is very well, but that it is, after all, merely generalisation, and that it would be more interesting to have the actual facts as regards the recent trade with these markets. Well, the facts bear out the view that the ten markets in question are gradually improving. For the first half of this year the trade done by America in motor products almost equalled the total for the whole of 1923. That is sufficiently illuminating, and it is interesting to note that the report adds that "greatly increased sales are apparently dependent only upon that stabilisation in currency and credit which appears close at hand as conditions improve in Central Europe." In short, the markets do exist for cars, and a fair trade is being done now, the volume of which promises to be greatly increased in the near future, and it would be incredible that British firms should pay no attention to these markets while their American rivals are now carefully preparing the ground so as to be able to take the fullest advantage of the commercial expansion that is coming.

Turning to the trade statistics, in the first six months of this year America exported to Roumania 176 motors, as compared with 81 in the whole of 1923. Yugoslavia, in the first half of 1924, took 23 motors and 21 motor-cycles, as compared with 6 motors and 18 motor-cycles in 1923, and 16 motors and 3 motor-cycles in 1922. These totals are promising enough, and indicate very forcibly the progressive improvement that is going on in these markets. With regard to the Roumanian market, some interesting comments are made in the report. "The market for automotive products is attractive in Roumania at present," it is stated, "despite the fact that existing economic conditions are not entirely satisfactory. The principal factor favouring the automobile trade is the availability and low cost of gasoline, which retails at 14 cents per gallon, for Roumania now ranks sixth among the petroleum-producing countries of the world. Imports of automobiles into Roumania are not restricted in any way by law or regulation, but the general economic situation and instability of credit militate against extensive business. Registrations of motor vehicles in the country on January 1, 1924, included approximately 7,500 passenger cars, 2,250 motor trucks, and 550 motor-cycles, almost one-half of the total being in Bucharest. Twenty-five per cent. of this number is said to have been added in 1923."

It would seem obvious that if America can increase her trade in motors and motor-cycles in the Balkan countries, as the figures I have quoted make it evident that she is doing, there can be no reason why British motor manufacturers should not do likewise. If they will only enter these markets and cater for them thoroughly I am certain that the results they will achieve in a comparatively short time will astonish them. There are two essentials for their success. They must select the right type of car for the Balkans, one which will meet the special difficulties there, and they must also pay the fullest attention to the question of bringing their products before potential purchasers by the right kind of publicity.

SMYRNA FRUIT MARKET.

Messrs. C. J. Giraud and Co. report as follows for the week ended September 27 :—

The arrivals of sultanas in the Smyrna market since the opening of the season are estimated at 24,000 tons, and the sales to date are put at 20,950 tons.

The sultana market is very firm. Buying has been active all the week to cover heavy end of September engagements. There is a fair quantity of fruit sold forward for October, which is likely to give a backbone to the market.

The total sales of figs to date are 128,500 bags, against sales at September 26 of 72,500 bags. There is a tendency to increase the estimate of the yield to over 200,000 bags. Prices keep steady.

The production of the Steaua Romana, Bucharest, for September was 24,110 tons, as compared with 18,384 tons during September, 1923.

The Burma Railways Company recommends a final dividend of £1 5s. per cent., together with a bonus of £2 10s. per cent., both subject to tax, payable, together with the guaranteed interest of £1 5s. per cent., less tax, on Jan. 1, making in all £8 10s. per cent. for the year 1923-24.

THE ROLE OF RAILWAYS IN INDIA'S DEVELOPMENT.

Need for Development.

We give below some extracts from the address of the Viceroy at the Railway Conference at Simla on October 9 :—

"Apart from my keen interest in railways generally, on account of their connection with development and progress in India, circumstances place me in an even more intimate relation in regard to them. In India a very large portion of the railway system is owned by Government, and, in consequence, my Government is vitally interested and directly concerned in the efficient and economical management of the railway system. The difficulties which have had to be faced during the past war period are well known, and I need not explore their causes. The brief boom of 1919-20 was succeeded by a period of severe trade depression. There was leeway to make up in repairing wastages, while the cost of material had risen in an unprecedented fashion, and the wages bill had swelled, owing to the abnormal increase in prices and cost of living. In 1921-22 and 1922-23 the railways were unable to pay interest charges and a situation of great difficulty had arisen. The only solution of the problem was to introduce a policy of retrenchment and rigorous economy in working charges, while at the same time making a reasonable increase in rates and fares. My Government greatly appreciate the loyal manner in which the railway administrations and their staff co-operated in the execution of this policy. The fruit of their labours is already apparent. Last year the railway made a net contribution to the State of more than six crores, and paid a net return on capital invested of more than 5 per cent. It is too early to prophesy as regards the present year, and it is necessary to make allowance for the damage—not yet fully estimated—caused by the recent disastrous floods; but the prospects are hopeful, and, with the gross receipts up to the end of last August in excess of those of the corresponding period of last year by 309 lakhs, a confident view may be taken. I have on various occasions expressed my opinion that a slow but steady revival of trade is taking place, and the railway returns, which act as the barometer of trade, point to the indicator moving in that direction. The capital expenditure of the last few years is beginning to take effect in increased capacity and better facilities for handling traffic. In addition, in spite of greatly increased traffic and earnings, the ordinary working expenses for the early portion of the year stand at a lower figure than last year. The fall in prices is, without doubt, a contributing factor, but the main credit must be given to the agents and their staff, without whose continuous efforts and close attention to economy these satisfactory results could not have been secured. Some portion of the improvement effected may also be attributed to the process of overhauling the railway organisation in the Central Government. The Ackworth Committee and the Inchcape Committee offered my Government valuable advice both on the financial and administrative side of railway policy. The suggestions of the Inchcape Committee have borne fruit in resulting economies without loss of efficiency. The reorganisation of the Railway Department, which formed the subject of one of the recommendations of the Ackworth Committee, has been energetically carried out by Sir Charles Innes. The Railway Board has been strengthened by the inclusion of a financial adviser and by addition to the staff of a number of technical officers and, under Mr. Hindley's able guidance, the Central Directorate is now approximating more and more to the ideal of a general staff for railways. Time will not permit of my dwelling on all the benefits which have been derived from these new activities, but the public may rest assured that, in the Railway Board, they now possess a scientific and practical body, constantly engaged in the study of the railway problem of India as a whole, and in devising improvements and developments on a comprehensive scale. Great as the progress has been, nevertheless, owing to the size of India, development necessarily lags behind the needs of the continent. I am tempted to dwell at length on the fascinating subject of productive expenditure in India. In my view, after the completion of the rehabilitation of the existing railway system, a well-considered plan for the extension of cheap but efficient railway transport is a primary necessity in India, and no step is more likely to conduce to an increase in trade and industry and in the general prosperity of the country. I am glad to be able to state that we have already made some progress in this direction : projects for nearly 1,000 miles of new lines have been sanctioned, and little difficulty is anticipated in future in finding money for new projects of a remunerative nature."

"The most comprehensive change to which immediate effect is to be given, arising out of the consideration of the Ackworth Committee's Report. lies in the domain of finance. In the past in this aspect the Railway Department occupied the same position as that of other departments of the Government of India. In spite of the possession of special powers and of the theoretical advantage of treatment on a commercial working basis, in practice the Railway Department was crippled for development purposes by the restrictions inherent in the system. Railways depended for finance upon money voted each year, and the net earning of the railways went into the general Exchequer. I need not dwell on the weak points of this system. The inevitable tendency, especially apparent during the war, was to expect railways to contribute more than their just share to general revenues, and to class the powers of recovery through railways as a potentiality for adding to revenue from taxation. This tendency killed the incentive to economy in working and continuity in railway policy, and definitely operated to discourage initiative in commercial management and real increase in efficiency in the public service obtained by results in the working of the railways themselves. The Ackworth Committee's recommendations put the situation in a new light, and directed a fresh angle of vision towards the principle involved in the system. A step in

Digitized by Google

advance was made when, with the approval of the Legislative Assembly, a capital programme was guaranteed to the railways over a period of years. The spirit of reform progressed to a logical conclusion during the last session of the Legislature, when a convention received approval separating railway finance from general finance. I congratulate the Assembly on the wisdom of the decision arrived at. For a time during the debates on the subject the decision was in jeopardy. Non-official amendments were moved, the purpose of which was to subject the change to other conditions wholly unconnected with the principle involved. Had these conditions, which included the complete subordination of all initiative in executive action of the Executive Government to the Legislature, been pressed, Government would have been obliged to have abandoned the project for separation. It would not have been possible, as a condition of the latter, to have given up a constitutional principle of first importance. Fortunately, wiser counsels prevailed. I desire to express my appreciation of the able services of the officers who presented the Government case, and of the public spirit of those members of the Assembly who assisted in bringing about an acceptance of the proposals. I realise that in some cases their support was given to a Government measure of benefit to the interests of India, notwithstanding political differences with Government on other subjects. The resolution as finally framed and passed represents, on the chief point involved in the debate, a compromise honourable to both parties in the discussion. Government has agreed to a provision by which the Legislative Assembly are at liberty to terminate the arrangement, in the event of a State-managed line being handed over to a company against the advice of the Assembly, while the main question of a convention to separate railway from general finance has been accepted. The matter now rests on a proper basis. The importance of the reform cannot be overestimated. The State will continue to receive a fair and constant return from the money spent on railways, while communications will no longer run the risk of being taxed unfairly through the railways. General revenues may be expected to gain from stabilisation of railway revenues. The railway administration will now possess a real incentive to economy in working on commercial lines. Proper arrangements can now be made for depreciation and for building up railway reserves. Continuity and regular growth in railway policy has become possible; it is hoped that in due course the public will pay less for the existing service of the railways, while railway facilities will be largely increased without addition to the burden of general taxation."

"The separation of railway finance which, within limits, constitutes the agents as masters in their own house, increases their responsibility. Each year, whatever the conditions, the contribution has to be paid into general revenues. Any deficit which may occur cannot merely be passed on to those revenues. So long as the convention subsists, the agents have to depend on their own resources and contrive to succeed within these limitations. The closest supervision and most careful attention to economy and efficiency in working will, in consequence, be called for. I appreciate the difficulties of the task which lies ahead and the strain which the agents and their staff will be called upon to bear, but I am confident that the basis on which railway finances have now been placed is sound in principle, and, in view of the success of the efforts of the last two years, I have no doubt that the fullest reliance can be placed on the railway administrations to produce the most satisfactory results as the outcome of their new responsibilities and the wider field of initiative now before them. I know that the task will be undertaken in the right spirit, and that those engaged in it will derive encouragement from the great importance to India of the duties they perform. If they succeed, as I am confident they will, I shall be the first to rejoice with them in the issue of their labours and to offer my contribution of praise to their success.

"I have dwelt on the great part railways have played in the development of India; how they have spread civilisation and material prosperity, and changed the economic and social life of the Indian people as they have advanced; and how they have, in a great measure, contributed to the conditions which make it possible to-day to think of India as a united entity with common national aspirations. Those who have been for many years connected with railway administration in India can look back with satisfaction on the steady course of this advance. They can recall with pride the practical difficulties which have been overcome; the administrative problems at one time appearing insoluble which have been solved; and the technical triumphs, by which bridges have spanned the great rivers of India and baffling gradients have been surmounted. Their thoughts naturally turn towards what the future has in store. As far as it has been possible to contrive, the necessary machinery for the development of railways has been set up, and the ground has been cleared for expansion; but this expansion, from which nothing but benefit can accrue to India, must depend in a large measure on the peaceful and steady progress

of the people of India, with which the railways are so closely bound up and to which they directly react. It is my earnest hope that all that tends to retard that progress may be eliminated, that the distressing communal differences, unhappily so prominent at the present time and so fatal to moral and material well-being, may be composed. It is the unceasing preoccupation of myself and Governments to discover means to allay the intensity and, I deeply regret to say, the bitterness of feeling between members of the two great communities. No graver problem confronts India at this moment; none deserves closer attention; none more urgently calls for the whole-hearted co-operation and goodwill of all sections of Indian opinion. I also trust that all influences, unfortunately now existing, which operate to set back the ordered course of the constitutional advance of this great country towards the goal of responsible self-government in the Empire may disappear, and that the day may not be far distant when a keen sense of public duty and a desire to serve the true interests of India will rise superior to all sectional considerations and lead to union in whole-hearted efforts for the progress and prosperity of her people."

THE TRIBUTE LOANS.

In the House of Commons, on October 9, Sir F. Wise asked what was the position of the bondholders in the Egyptian Tribute.

Mr. Ponsonby: The three loans in question are the guaranteed loan of 1855 and the loans of 1891 and 1894. The interest on the loan of 1855 is guaranteed jointly and severally by the British and French Governments, and accordingly the bondholders will continue to receive payment of the interest due to them. The loans of 1891 and 1894 are not guaranteed. As regards all three loans, His Majesty's Government consider that the contentions of the Egyptian Government are entirely inadmissible, and are considering the whole matter in consultation with the representatives of financial interests in this country and with the other Governments concerned.

BULGARIAN EXTERNAL TRADE.

The amount of the external trade of Bulgaria during July last, compared with that of July last year, has been as follows:—Imports: 463,101,244 levas (£772,000), as against 323,056,086 levas (£540,000). Exports: 228,113,921 levas (£380,200), as against 93,729,955 levas (£156,216). For the month of July Great Britain exported to Bulgaria goods for an amount of £81,362, as against £79,167 last year.

COMPANY NOTES AND REPORTS.

South Indian Railway.

The report of the South Indian Railway for the year ended March 31 last states that the gross earnings were Rs. 5,07,03,923, while the working expenses were Rs. 2,89,08,724, the net earnings being Rs. 2,17,95,199. The company's share of surplus profits for the year 1923-24 amounted to Rs. 7,10,625, amount retained in India to meet Indian income-tax and super tax for 1924-25 Rs. 1,07,910, balance remitted to London Rs. 6,02,715, at average exchange of 1s. 4.9d. per rupee, realising £42,441. In addition to the guaranteed interest of 1¾ per cent. for the half-year to June 30, 1924, an interim dividend of 2 per cent. from surplus profits was paid, less income-tax, on July 1. The board now recommend that for the year 1924 there be paid from surplus profits on January 1, 1925, a final dividend of 2½ per cent., making, with the guaranteed interest of 1¾ per cent., a total payment for the half-year ending December 31, 1924, of 4¼ per cent., less income-tax. The total distribution for the year will then be 8 per cent. (4½ per cent. from surplus profits and 3½ per cent. from guaranteed interest).

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.)

Egypt.

Semi-Diesel Engines, etc.—The Director-General, State Domains Administration (Commercial Service), Savoy House, Cairo, invites tenders for the supply of four semi-Diesel engines and four centrifugal pumps. November 1.

Paint.—The Main Roads and Bridges Department of the Egyptian Ministry of Communications invites tenders for the supply of 45 metric tons of paint for the Cairo bridges. —November 10.

Diesel Motor.—The Egyptian Government invite tenders for the supply of a Diesel or Semi-Diesel motor of 30 h.p.—November 12.

Looms, etc.—The Director of Stores, Ministry of Education, Sharia Qasr el Aini, Cairo, invites tenders for the supply of (1) Looms and preparatory machines required for the Trades School at Mansûra. (2) Machines for rug factory at Assiout. November 15.

Leather.—The Egyptian Ministry of Education invites tenders for the supply of leather required for the model workshops and trades schools of the Ministry. November 15. (D.O.T.)

Soap. — The Financial Secretary, Egyptian Army, War Office, Cairo, invites tenders for the supply of 110 tons of hard soap to Egyptian Army Supply Stores, Tura. December 2.

Railway Sleepers.—The General Manager, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply of wooden railway sleepers. December 16.

Turkey.

Galvanometers.—The Turkish Posts and Telegraphs Administration invite tenders for the supply of thirty galvanometers.—November 1.

Yugoslavia.

X-Ray Apparatus—A firm of dealers in scientific instruments and electro-medical apparatus in Novi Sad are desirous of receiving catalogues and prices of X-ray apparatus from British manufacturers. (D.O.T.)

The production of the Anglo-Egyptian Oilfields for the week ended October 3 was as follows:—Gemsah, two tons; Hurghada, 3,202 tons.

The production of crude oil by the British Burmah Petroleum Company and the Rangoon Oil Company, Ltd., for September amounted to 58,121 barrels.

The surcharge levied in Yugoslavia, when Customs duties are paid in paper or silver, has been increased as from October 1 from 900 to 1,000 per cent. Duties when paid in silver or paper currency are now therefore payable at the rate of 11 silver or paper dinars to each gold dinar of the tariff.

Shipping Intelligence.

BUNKERING FACILITIES AT CASABLANCA.

The market for coal in the French zone of Morocco is not a very extensive one, except for use in vessels. The greater part of the population are Moors, who use charcoal almost entirely for fuel purposes, while charcoal and wood are used by the European and Moroccan Jews (says an American Consular report). There is very little manufacturing done in the district, making only a small demand for coal for such purposes. Most of the electric plants, which constitute the main industrial group, use oil for the generation of power.

Although there are seven ports of varying importance on the coast of French Morocco, Casablanca is the only one at which fuel supplies are obtainable in any appreciable quantity, and even here the facilities are far from adequate. Few, if any, vessels rely on this port for the replenishment of their coal supply. Nearly all of the steamers making this a regular port of call come from French, Spanish, or Portuguese ports, and carry with them fuel supplies for the entire trip.

There is a small Government-controlled coal depôt in the port, the supply of coal being mainly in the form of briquettes, and the maximum amount on hand at any one time is about 2,000 metric tons. This is the form of coal used on the narrow-gauge railways connecting the coast cities with interior points. The amount usually on hand and actually stored in this depôt is from 1,200 to 1,400 tons. From the principal dealers small and varying amounts of anthracite and Cardiff coal may be obtained.

Coal is put aboard ship in the harbour from lighters, the fuel being handled in baskets. The speed of delivery varies according to the number of vessels in the harbour and the consequent availability of lighters. Under the most favourable circumstances 600 tons of coal can be put aboard in a day, but ordinarily the rate is from 200 to 250 tons per day.

SHIPBUILDING BY VICKERS, LTD.

Launch of New Motor Vessel.

An interesting launch took place at the Naval Construction Works, Barrow-in-Furness, on October 10, when Messrs. Vickers, Limited, launched the motor vessel Moveria, which was designed and is being built by them to the order of the Donaldson Line, Limited. The launching ceremony was performed by Mrs. Donaldson, the wife of Mr. Norman P. Donaldson, a director of the Donaldson Line, Limited, and the Donaldson South American Line, Limited.

The Moveria, which has a dead weight capacity of 7,500 tons, has been designed to carry general cargo and cattle and, in addition, large refrigerated rooms have been provided for dealing with meat. A single heavy oil engine of the Vickers type provides the propulsive power, giving the vessel a speed of 11½ knots, while the auxiliaries, including the refrigerating plant, are steam-driven, three oil-fired cylindrical boilers being provided for the latter purpose. The overall length of the vessel is 398 feet, her breadth 51 ft. 6 ins., and when fully loaded she will draw close on 27 feet.

The hull construction is generally on the transverse frame system, but a special feature is the double bottom, built on the Vickers-Wingate longitudinal braced frame system, which, while fully maintaining the strength of the hull, results in a lighter and more open construction than is usual.

The accommodation for officers and crew is amidships, steam heating being provided on a liberal scale for use in extreme winter conditions. The captain's rooms are on the boat deck forward, in close proximity to the bridge and wireless telegraphy office, the deck and engine room officers being quartered on the bridge deck in deck houses around the engine casing. The saloon is amidships at the forward end of the bridge deck. The crew's accommodation is on the port side of the bridge deck, quarters for the cattlemen being on the opposite side.

The vessel has three continuous decks, a fourth deck being fitted in No. 2 hold, which, with No. 4 hold and the 'tween decks of these holds, is insulated, the total insulated space being over 170,000 cubic feet. General cargo is carried in the remaining holds, Nos. 1 and 5, which are fitted with a centre line bulkhead to suit them for carrying grain. The whole of the upper 'tween decks and the 'tween decks over Nos. 1 and 5 holds are fitted with cattle stalls, and these, with emergency stalls on the upper deck, permit of over 600 live cattle being carried. Six large ports are fitted in the ship's side for the passage of the cattle in or out of the ship.

The special water tanks for the cattle are under the engine-room, in close proximity to the fresh water for ship's use and for machinery purposes. Water ballast is carried in the end double tanks, and oil fuel or water ballast in the remaining double bottom tanks. Oil fuel is also carried in side tanks amidships, the total fuel capacity being over 900 tons.

The ship carries a complete set of rapid cargo handling appliances. Two hatches, with insulated hatch trunks, are fitted to each insulated hold. Fourteen steam winches, 7 in. x 12 in. size, are fitted for handling the cargo. The derricks are fitted to the two masts and to derrick posts, two of these on the foremast being of 10 tons capacity, the remainder being suited to 5-ton lifts.

The steering gear is of the Wilson Pirrie type mounted on the upper deck aft. Telemotor gear leading from the bridge and standby steering position aft, together with the emergency gear for operation by the after winches, is provided. Two steel masts with telescopic topmasts for use in the Manchester Ship Canal are fitted. Both signalling wireless and direction finding wireless gear are provided.

The main machinery is of particular interest, being a single eight-cylinder oil engine of the four-stroke, single-acting, solid injection type, with

cylinders 30 ins. in diameter and of 45 ins. stroke. Developing 2,700 brake horse-power at 110 revolutions per minute, this engine is the largest of its type afloat. It embodies many improvements in detail suggested by experience in tanker service of similar but smaller engines built by Messrs. Vickers, Limited. The main difference in principle between this Vickers engine and the ordinary air injection engine is that compressed air is used for starting and reversing alone, so that when at sea the separate steam-driven compressors are not in use. The engine drives, by means of gearing, its own circulating and forced lubrication pumps, together with a bilge pump.

Three boilers 10 ft. 6 ins. long x 10 ft. 6 ins. diameter, with double furnaces fitted for oil firing, and each having a heating surface of 1,098 square feet. are fitted at the aft end of the engine room for driving the remaining auxiliaries, including a 15 k.w. electric generator and the standby pumps. An 18-ton fresh water distiller, together with a 30-ton evaporator, and a contraflo condenser, are fitted on the port side of the engine room, both of the latter being of Vickers' make.

The refrigerating plant, supplied by Messrs Hall, is of the carbon dioxide duplex type, the gas compressors being driven by a compound horizontal steam engine. An independent pump in the engine room provides the cooling water. The brine is circulated by three independent duplex pumps, the system being arranged so that freezing, chilling, and thawing may be carried out at the same time in different compartments.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. California for Bombay (Liverpool, October 24).

Anchor Brocklebank Line.—S.s. Media for Port Said, Colombo, Madras, and Calcutta (London, October 18).

Bibby Line.—S.s. Lancashire for Port Said, Colombo, and Rangoon (Birkenhead, October 22).

British India Line.—S.s. Margha for Bombay and Karachi (London, October 24); s.s. Dumana for Colombo, Madras, and Calcutta (London, October 25).

Ellerman "City" Line.—S.s. City of Poona for Calcutta (Birkenhead, October 30).

Ellerman's Westcott and Laurance Line.—S.s. Falernian for Gibraltar, Malta, Piræus, Salonika, Smyrna, Constantinople, Galatz, and Braila (London, October 18).

Johnston Line.—S.s. Tramore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, October 18); s.s. Sycamore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, November 5). (The last steamer of the season to Galatz and Braila.) S.s. Kenmore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, November 22).

P. and O. Line.—S.s. Naldera for Bombay (London, October 17); s.s. Nyanza for Colombo, Madras, and Calcutta (London, October 18).

GREECE'S BUILDING PROGRAMME.

An extensive building programme has been in progress in Greece for nearly a year as a result of the practical suspension of building operations throughout the decade that Greece was at war, the extreme instability of the drachma, and the advent of more than 1,000,000 Christian refugees from Turkish territory (says an American Consular report). This building programme was encouraged by measures admitting, duty free, materials for the construction of refugee shelters and exempting new buildings from taxation for a period of twenty-five years.

By far the larger part of the domiciles under construction in Greece are of stone, cement, and adobe, but even the cheaper buildings require some lumber. Numbers of palatial residences also are being constructed in the Athens district, and these require the best grades of lumber. The demand for American lumber consists almost entirely of southern yellow pine, which is used for building construction and some small amount for shipbuilding.

Swedish lumber occupies the first rank in the Greek imports of floorings. While the total annual imports of southern yellow pine are estimated at from 400 to 500 standards (792,000 to 990,000 ft.), the Swedish lumber imported every year amounts to about 2,000 standards (3,960,000 ft.), due largely to the fact that it is approximately 50 per cent. cheaper than the American wood. Railroad sleepers previously imported from Turkey are now being obtained from Slavonia.

Greek imports of building lumber (shipbuilding excluded) amounted to about 92,000,000 ft. during 1923, as compared with 72,000,000 ft. in the previous year, Roumania and Yugoslavia being the principal sources of supply. Imports of shooks amounted to about 1,900,000 ft. in 1923, as compared with 8,000,000 ft. in 1922. While in the latter year this stock was obtained principally from Germany, Sweden, and Italy, in 1923 the first two countries were eliminated, Roumania and Italy supplying the major portion.

The domestic production of lumber is of no importance, being less than one-tenth of the domestic consumption. Euboea and certain islands of the northern Ægean produce small quantities of pine, but the exact quantity of this production is difficult to estimate.

Emigrants from Yugoslavia during the first three months of this year totalled 5,686, of whom 2,875 were agricultural labourers.

THE SOUTH INDIAN RAILWAY CO., LTD.

NOTICE IS HEREBY GIVEN that the next ORDINARY GENERAL MEETING of the South Indian Railway Company, Limited, will be held at the Offices of the Company, 91, Petty France, Westminster, S.W.1, on Wednesday, the 22nd October, 1924, at 12 noon, for the purpose of receiving the Directors' Report and Statements of Accounts for the year ended 31st March, 1924, and for the transaction of the ordinary general business of the Company.

The Transfer Books will be closed from Wednesday, the 17th, to Wednesday, the 31st day of December, 1924, both days inclusive, for the preparation of the half-yearly Warrants.

Transfers will not be received at the office while the books remain closed.

The Warrants payable on and after the 1st January, 1925, will be forwarded to the Proprietors on the 31st December, 1924.

By order,
ALEX. MUIRHEAD,
Managing Director.

Cotton and Cotton Goods.

LIVERPOOL COTTON REPORT.

Quiet Tone Prevails.

Messrs. Reynolds and Gibson report as follows for the week ended October 8 :—

Egyptian Futures.—A very firm undertone has been displayed by this market during the past week, and prices show considerable appreciation at the time of writing from those ruling at the date of our last report. Generally speaking, the underlying strength can be attributed to further "short" covering, the steadiness of the American markets, and the very large discount at which our contract still runs under spot values. Whilst trade reports continue to be favourable, spinners are still shy of entering into commitments of weight; in fact, in our opinion, it looks as if they had let their stocks run down to a dangerously low margin, and the probability is that should the Bureau report this evening turn out to be of a "bullish" character, a certain amount of covering will be forced into the market from this quarter. Judging from many recent half-yearly reports published, it would appear as if textiles had enjoyed a fair measure of prosperity, and it is doubly unfortunate in view of this that a threatened interference with the normal course of business should crop up in the shape of a General Election.

The Alexandria market has shown a very steady tone throughout the week, and has rather more than reflected the advances that have taken place at this side, with the result that, contrary to the general opinion, the parity between the two markets has again widened out, thus making our contract less of a "bear" proposition than ever. The September report issued by the Alexandria General Produce Association is on the whole rather disappointing, and indicates ginning yields inferior to those generally expected. This means that private estimates will probably have to be revised down to about seven million kantars. Upper Egyptians appear to have been more adversely affected than Sakel, and our own private reports on the last-named growth are to the effect that the crop is an improvement as regards quality on last season.

Referring back to our remarks of last week regarding the proposed new contracts, the alterations have now been practically confirmed by the Association. The new options will come into force for deliveries November, 1925, onwards; trading in same will commence on the 1st of next month.

Since writing the above, the publication of the American Bureau Report has caused a sharp break, and prices have reacted down to the level obtaining at the time of our last report. The recent elimination of the short interest has certainly left the market in a weaker technical position, and with prices now starting to go in their favour, it is quite likely that the trade will continue their present policy of limiting their commitments to the barest possible margin. Whilst the decline will probably be carried further for the time being, it hardly appears a sound proposition to advise sales in our market with the contract so far below spot values and quite out of parity with Alexandria.

Egyptian Spot.—Trade has been somewhat quieter during the past week, the imminence of another Bureau report, and the home political crisis, making spinners very cautious in their buying. A good inquiry has continued from day to day, and spinners have kept themselves well posted with market values which, on the whole, have remained very steady, with an upward tendency. The feature of the week has been the eagerness with which Sakel cotton (for immediate or close at hand delivery) has been sought for, thus confirming what has already been widely suspected, namely, that the majority of spinners have been running very short of cotton. Not for a long time has so much cotton been sold whilst still on the water. Fully Good Fair to Good has been the quality mostly in demand, and 25.00d. to 26.00d. indicates roughly the range of prices paid, though up to 26.75d. was recorded on one occasion. The result of all this buying afloat has been that in spite of the arrival of several ships, the Sakel scarcity on our market has hardly been relieved at all.

Some lots of new crop Pilion have arrived, and the cotton has found considerable favour in certain quarters, being of good length, grade, and lustre. To-day, quite a flood of inquiries for Pilion cotton appeared. We do not desire to mislead our friends in this connection, and this sudden inquiry must not be construed as the commencement of a new era for Pilion cotton in this country. What is now being marketed is, of course, the cream of the crop, and owing to the temporary Sakel scarcity, many spinners are willing to test it in the hope that it will help them to tide over a short, but difficult period. On a reasonable supply of Sakel coming to hand, and this should not now be far off, the chances are that the majority of them will drop it again immediately. The remnants of last season's Sakel cotton, of the Fair to Barely Good Fair variety, continue to be pressed for sale, and it is very difficult to make any headway except at ruinous prices.

Of Uppers, a good supply now seems available, and the basis has shown signs of easing lately. Local quotations are decidely misleading; for example, Good Uppers here are quoted to-day at 19.05d., but they can be freely purchased on the spot at 18.50d. or even less. Business in Sudan Sakel has been quieter at steady rates. White Sudan has been in request at about 100 points on American, but only a small business has been transacted. C.i.f. business has produced a good deal of inquiry, but here again the volume of actual trade shows a falling off on the week. It is significant that practically none of the inquiry extends beyond November shipment. Forwardings to spinners for week ending 3rd inst. have been returned as 7,872 bales. Estimated sales 1,300 Egypts, and about 500 Sudan. Quotations of Sakellaridis have advanced 40 points, whilst those of Uppers and Brown are 5 points higher on the week. Fully Good Fair Sakellaridis to-day, 25.45d.

The production of the Dacia Romano Petroleum Syndicate for September amounted to 515 tons.

The traffic receipts of the South Indian Railway for the week ended September 6 amounted to Rs. 8,91,466, making the total from April 1 Rs. 2,15,29,411. For the corresponding periods of 1923 the totals were Rs. 9,41,462 and Rs. 2,25,81,100.

TEXTILES.

IF you wish to obtain your Textile goods from England at the lowest possible prices, communicate with K. JEBARA, 25, Princess Street, Manchester. (Established 1887).

THE EGYPTIAN MARKET.

Futures Firm and Active.

The Alexandria Commercial Company in their report for the week ended October 2 state :—

Futures.—The market during the past week has been very firm and active; since last Thursday prices have secured the following advances :— Sakellaridis : $2.15 up for November, $2.30 up for January, $2.30 up for March; Ashmouni : $1.90 up for October, $2.10 up for December, $2.05 up for February. This week's advance is mainly due to speculative purchases induced by the sustained strength of New York. We do not think that buyers abroad have shown any willingness to follow the rise, and the larger turnover of business on the spot market must be attributed rather to the fulfilment of old contracts than to fresh business with spinners. There are rumours that it is the Government's intention to receive October tenders; we do not think there is any truth in this. At the first October tender 2,000 kantars dockets were issued, which were received by exporters. In view of the rise, the Government has abstained from buying spot cotton during the week. The difference between November Sakel and October Ashmouni has further widened during the week, and now stands at $10.25; the premium of Sakel over American remains about unchanged, whilst that of Uppers over American has somewhat narrowed. We are of opinion that the prices of the latter two varieties will come nearer together as the season advances. The week's receipts amount to 301,813 kantars, against exports 176,237 kantars; the stock stands at 753,760 kantars.

Spot.—We have had a week of active markets at Minet el Bassal, and sales for the five business days amount to about 20,900 bales, of which we estimate 9,700 bales Sakel, 6,400 bales Uppers, 4,100 bales Zagora, and 700 bales other varieties. The Government has not operated in the spot market this week. Arrivals are large, and the crop is moving freely from all districts.

Sakellaridis.—Business has been done in all grades from Good Fair to Extra. For Fully Good and Extra the premiums have been maintained, but for all other grades they are appreciably cheaper.

Uppers.—A good business has been done in all grades from Good Fair upwards. Prices of spot against contracts are easier for Good and below, but Fully Good maintains its premium. A fair business has been done in Lower Egypt Zagora at about last week's rates.

Various.—A moderate business has been done in White, mainly in the better grades. Prices of spot against contracts are easier for Good and below, but for above Good they are rather dearer. In Pilion a fair business has been done in Fully Good Fair and better. Spot prices against contracts are generally easier. In Brown no business has been reported.

Crop 1924.—Picking is now completed in Upper and Middle Egypt; the average results show a decrease in feddan yield on last year. In the Southern districts of the Delta picking has also been completed, in the Central districts nearly so, whilst in the Northern districts it will be finished in about three weeks' time. The first pickings of Sakel in the Delta have been on an average better than last year, the second pickings about the same. The plants in the Northern districts are still making a little cotton, but this will have little effect on the final results.

COTTON TRADE REVIEW.

Good Inquiry for Cloth.

The Manchester Cotton Trade Review of the Imperial Ottoman Bank for the week ended October 11 states :—

The American Agricultural Bureau report issued on Wednesday last gave the condition of the crop on the 1st instant at 53.5 per cent., and the estimated yield at 12,449,000 bales. This was decidedly better than had been anticipated, and has caused a revulsion of sentiment in this market, which, after becoming almost reconciled to the impossibility of "shilling cotton," is now cheerfully talking of it once more. Undoubtedly such a state of things, if it materialised, would be a very great advantage to Lancashire, and it is felt that a large business could be transacted on that basis. In the meantime, however, the renewed possibility of lower prices in the near future is causing buyers to continue a hand to mouth policy.

Yarn.—Although the volume of business passing cannot be described as by any means up to the standard of normal times, it is more than sufficient to clear the present output in certain American counts, and there is a decided shortage of them. Under these conditions producers find little difficulty in gradually improving their position, and, although raw cotton is much cheaper on the week, spinners' quotations do not reflect the full extent of the fall. Roughly speaking, whilst American cotton itself is 1d. per lb. cheaper on the week, yarns are approximately only ½d. per lb. lower. The Employers' Federation, however, is still of opinion that the improvement does not yet justify any increase in working hours, although there are complaints of a few firms not adhering to the short time recommendation. Egyptian Spinnings have been in fair request, and the position remains steady.

Cloth.—Quite a good inquiry has been experienced, and in the early days of the week resulting orders were not unsatisfactory. Since the publication of the bureau report, however, there has been considerably more hesitancy on the part of buyers to commit themselves, especially as manufacturers have endeavoured to retain the benefit of cheaper yarns for themselves. India has, of course, been the main source of inquiry, and bookings for Egypt and the Near East are said to have been on quite a good scale.

Raw Cotton.—There is little to add to what has been already mentioned in this connection. Following the bureau report, prices, of course, slumped heavily. Recent weather reports from the United States have been good. Closing quotations yesterday were as follows :—American Middling 14.09, Egyptian Fully Good Fair 25.00.

Near East Markets.

LONDON PRODUCE REPORT.

Further Rise in Coffee.

(From Our Own Correspondent.)

London, Tuesday morning.

Coffee.—A very firm tone has prevailed. Costa Rica at 165s. is unchanged, East India at 142s. is 2s. up, Kenya is 2s. up at 138s., while Santos has gained 2s. at 108s.

Sugar.—Home refined has continued in fair demand. Tate's cubes are 42s. 9d., London granulated is 37s. 10½d., while Lyle's granulated is 38s. 1½d. Foreign descriptions have been dull. West Indian crystallised is unchanged at 35s. 6d., White Java at 35s. 1½d. is 9d. lower, while Czech granulated has been done at 22s. 6d. for November. Futures are firm: November, 20s. 3d.; December, 20s. 1½d.; March, 19s. 10½d.; May, 20s.

Maize.—There has been a fair inquiry La Plata has been done at 46s. 6d. afloat, at 47s. 3d. for November-December, and at 48s. 6d. for January. These rates are substantially in advance of those of the previous week.

Currants.—Good business has continued to be done in this commodity. Vostizzas have again been in special request, while Gulf and Panariti have also been in demand. Prices are considerably lower than a week ago, and the market generally appears to be much steadier.

Sultanas.—The tone has been good, and the position generally is much the same as last week. The feature has been the business done in Cretans.

Figs.—An excellent inquiry has obtained. All the evidence points to the development of demand. Naturals have again been in special request.

Plums.—This commodity has been in fair request, and is now moving off more freely.

Oilcakes.—The market has generally been quite firm. Linseed cake is 5s. up at 280s., cottonseed cake is 5s. lower at 180s., while coconut cake is 20s. up at 240s.

Oilseeds.—Linseed has been very firm, Indian being 1s. 3d. up at 24s. 1½d., while La Plata is unchanged at 21s. 10½d. Rapeseed has been firm. Toria is 4½d. up at 24s. 4½d., while real bold Ferozepore is 1s. up at 25s. 10½d. Cottonseed has been strong. Indian is 9½d. up at 11s. 10½d., Egyptian black is 4½d. up at 14s., while Sakellaridis is 7½d. up at 13s. 6d.

Seed Oils.—Linseed oil has been firm, closing 9d. up at 45s. 3d. Rape oil has been firm, with crude 6d. up at 50s., and technical refined 6d. up at 53s. Cotton oil has been steady. Refined common edible is 1s. up at 50s. Egyptian crude is 1s. 6d. up at 44s. 6d., while deodorised is 1s. up at 52s.

SILK PRODUCTION IN SYRIA.

The annual production of silk in Syria is estimated at 445 tons of dry cocoons, practically all of which is exported (says an American Consular report). France takes the major portion, the rest going to Italy. The industry centres around Swedia, Lebanon, and Tripoli. The climate is favourable for silk production, and labour is cheap. Under the direction of French agricultural advisers, the methods of handling and feeding the worms have so much improved that the actual yield of silk from each hatch of eggs is a little more than double the average for pre-war years. With proper cultivation, it is claimed that silk may be produced which is equal to that grown anywhere except in special localities in Europe.

THE AGRICULTURAL SITUATION IN INDIA.

The following communiqué has been issued by the India Office:—

In September the rainfall was heavy in Sind and in certain parts of Central India, Rajputana (East), and the United Provinces, where it was very unevenly distributed; it was above normal in the Punjab and Lower Burma, and was generally sufficient elsewhere, except in Madras, Central Provinces, certain parts of Baluchistan, and Rajputana, where more rain is needed still.

There has been some damage to crops by heavy rains in parts of the United Provinces, Central India, Rajputana, and one district of the Punjab. Serious floods in Bharatpur State have washed away crops over large areas. In Eastern Bengal deep-water paddy in certain low-lying lands suffered from floods, and some damage by local floods has been caused in Bihar and Orissa also. The condition of standing crops, on the whole, is satisfactory, except in flood-affected areas in Madras, Sind, the United Provinces, and in certain tracts of Baluchistan. The paddy harvest yield is good in high-lying land and fair in low-lying land in Madras, and, on the whole, satisfactory in Bengal. Prospects of winter crops are generally good. A decrease of 4 per cent. is estimated in the yield of jute in Bengal, as compared with that of last year, but the quality of fibre is expected to be good. Prospects of elementary sugar cane and cotton crops are generally good, except in the United Provinces, where the cotton crop has fared badly.

The outturn of autumn crops, especially of maize, is considerably below normal in Bihar and Orissa. Food supplies are sufficient, except in parts of Burma, where they are low, but the time till harvest can be tided over. Fodder is scarce in parts of Madras, Bikanir, and the flood-affected areas in Bharatpur. The water supply is sufficient generally. In Madras, irrigation water is generally insufficient, except in the Circars and on the West Coast. The jute market in Bengal is ruling firm. The prices of paddy and rice are higher than last year in Burma, Madras and Assam, are rising in Bengal and in flooded areas in Madras. Otherwise prices are generally stationary, with a tendency to fall in Bombay, the Central Provinces, and Rajputana. Cattle are healthy, except in part of Baluchistan, where anthrax is prevailing among the sheep and goats. Economic conditions generally are satisfactory, and the agricultural outlook is, on the whole, satisfactory.

THE BRITISH INDIA CORPORATION LTD. CAWNPORE :: INDIA

The British India Corporation, Ltd., comprises an extensive group of industrial concerns including the Cawnpore Woollen Mills, The New Egerton Woollen Mills, Cawnpore Cotton Mills, Cooper, Allen and Co., The North-West Tannery, The Empire Engineering Co. and the Naini Tal M.T. Co. These firms, by pooling their resources and centralising control, form a Corporation which is able to supply Government Depts., Railways, Police and Armies, with every form of woollen and cotton clothing, boots, and all kinds of equipment of a quality and price which would not be possible for an individual undertaking.

Reference to the particulars below will give an idea of the Corporation's activities. Correspondence is invited from wholesale merchants, and may be addressed to the Corporation or direct to the Branches. Inquiries and applications for samples will receive immediate attention.

LAL-IMLI PURE WOOL

Makers of the famous Lal-Imli Pure Wool Products. Manufactures include: Rugs, Blankets, Lohis (shawls), all classes of Knit goods, Flannels, Tweeds, Serges, Worsteds, Broadcloths and Greatcoat Cloths. All requirements in Wool at lowest prices consistent with quality.

CAWNPOREWOOLLEN MILLS CO.,
CAWNPORE

Kakomi Cawnpore

These Mills produce the well-known Kakomi Cotton Goods.
The following articles are among their manufactures: Cotton Yarns, Twills, Table and Bed Linen of all kinds, Tents, Durries, etc.

CAWNPORE COTTON MILLS CO.,
CAWNPORE.

COOPER, ALLEN AND COMPANY.

This Company is one of the world's largest manufacturers of Army Boots, supplying the armies not only of India, but the world. Makers of all types of Boots, and every kind of Saddlery and Leather Equipment.
Everything in Leather.

COOPER, ALLEN & CO.,
CAWNPORE.

Dhariwal

Manufacturers of Dhariwal "Long Life Wool Wear."

Productions include: Serges, Tweeds, Broadcloths, Blankets, Rugs, Worsteds, and Woollen goods of all kinds.

The New Egerton Woollen Mills Co.,
DHARIWAL.

BUSINESS DIRECTORY.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

The Greek Ministry's Policy.

The new Greek Cabinet under M. Michalakopoulos met the National Assembly on October 15, and obtained a vote of confidence by 201 votes to 92. In the programme laid down by the new Ministry there was nothing very startling; such things as the speedy amendment of the Constitution, decentralisation of the Administration, and, less important, proportional representation, were put in its forefront. The Prime Minister then sketched out other reforms, and, as might naturally be expected of him, dealt chiefly with financial and commercial matters—the protection of grapes, wines, and tobacco, the simplification of fiscal legislation, the stabilisation of the exchange, and so on. In foreign policy there is to be no change, and the only matter on which emphasis was laid was the desire to consolidate the alliance with Yugoslavia. Greek politics at the moment are a bewildering study, for men rather than measures still remain the chief topic of conversation. The present Government's programme appears to be quite sound, and if only the irreconcilable militarist elements of the Papanastassiou party will consent to give it free play, there seems to be no reason why its sponsors should not enjoy a longer life than has been the lot of previous Administrations. It is comforting to know that, in spite of all these political changes, the commercial life of Greece is steadily improving, and that, whatever happens in the National Assembly, Athens and the Piræus are once more partaking of some of their pre-War prosperity. The economic weapon still is greater to impress foreigners than any political promise. There is little doubt that, however much the political flower in Greece may run to seed after seed, the main current of the country's life is in the right direction.

The Yugoslav Cabinet.

That which we feared last week came swiftly about, for the Davidovitch Government of Yugoslavia was forced to resign. Political uncertainty dismally shadows once more the lot of the Triune Kingdom, and yet again the old party intrigue, which has now since the Armistice hindered the progress of Yugoslavia, gains the ascendant. The causes that brought about the resignation of M. Davidovitch are curious. Apparently the personality of the Premier stood in the way of the Radicals' joining the Cabinet, and, while negotiations were proceeding to settle this difficulty, M. Raditch took the opportunity of creating another by asserting that, if this crisis did not end satisfactorily to his party, he would work for the secession of Croatia and the organising of a peasant movement in Serbia. Into this tangle of hopelessly conflicting aims the King of Yugoslavia bravely stepped. He pointed out the impossibility of M. Davidovitch's remaining, even with a majority, in office, for under his régime no accord between Serbs and Croats could be brought about. Possibly, too, the resignation of General Hajitch, a former Premier and an aide-de-camp to the King, for the reason that the anti-State propaganda of M. Raditch's deputies was not sufficiently noticed by the Government, had something to do with this demand for the removal of M. Davidovitch. This resignation causes great speculation on the composition of the next Cabinet. It will be a Coalition; but agreement has not yet been reached between Radicals, Democrats, Bosnian Mussulmans, and Slovenian Clericals. What the precise combination will be, and, particularly, how the party of M Raditch will fare, remain to be seen.

The League and Iraq.

It may have been a certain lack of precision in definition on the part of the British representative at the League of Nations, it was certainly quick and un-moral dealing on the part of the Turkish representatives, that left a loophole for mischievous interpretation of the *status quo* of the disputed northern territory of Iraq. To suppose that Britain, in assenting to refer, for final decision, the whole question of the Mosul vilayet to the League of Nations would take into account the movements during September of Turkish troops, is not only impudent, but childish. No wonder that such procedure by this headstrong Republic caused alarums in both London and Angora. But wise counsels have prevailed. Both sides have agreed to refer to the League the question of what

Digitized by Google

is the *status quo* which is to be maintained pending final settlement of the frontier. A meeting to decide the preliminary question is to take place in Brussels on October 27. There is in this fact alone thorough justification of the existence of the League. The one essential factor for peace in the situation—time—has been gained, and the matter has been taken out of the atmosphere, on the one side, of inflamed national passion, and, on the other, of righteous indignation, into the refined and detached storage-house of the League. It is impossible not to believe that, had the League not existed, this dispute would have lasted longer and would have had more serious consequences. That the British Government should, after having perforce adopted a very different tone towards the recalcitrancy of Angora, be so ready to accept the League's ruling in the matter is in itself a great compliment to the international Assembly.

Turkey's Mood.

But, although there are for the time being a lull on the diplomatic waters and calm on the military fronts, it should not easily be supposed that we are yet out of the wood. The Turks generally appear to have hailed the British decision to refer the matter to the League as a triumph for their powers of resolution. Kemal Pasha himself seems to have been thrasonically strutting the country (excluding Constantinople) saying that the Turkish nation knows that an attack on the smallest particle of its soil is a blow directed at its whole existence. It is difficult to presage a smooth solution of the Mosul question when leaders of Turkish opinion are still in such extravagant mood. There are, admittedly, certain cloudy signs, a little larger now than a man's hand, which indicate that in the present meeting of the Angora Assembly there may be criticism of the Turkish Cabinet, which might conceivably result in the formation of an Administration that could pursue its foreign policy with more consistency and *savoir faire*. It may, incidentally, be true that the Turkish Government has, as various Constantinople journals state, worked up this Mosul crisis to distract public attention from the defects of its home policy. Many Turks are strongly aggrieved at the way in which the exchange of populations is being carried out, and the large question of the needs of Moslem immigrants is, it is said, to be made a ground for attacking the Government. But too much should not be built on these reports. The ardour of Angora is taking a very long time to cool down, and whether a stronger Cabinet than that presided over by Ismet Pasha would produce better relations with Great Britain, is, of course, an open question.

Friction in Persia.

The troubles of Persia appear by no means to have ended with the collapse of the Republican agitation. That movement died down perhaps too quickly as the result of a surprising *volte face* on the part of the Prime Minister, the Sardar Sipah, and it seems that his subsequent motives and actions are not going unquestioned by certain outlying Persian chiefs. Friction between the Sheikh of Mohammerah, in Arabistan, and the Central Government is no new thing, but this time it is founded, according to general report, on personal hostility between these two powerful men. The Sheikh is convinced that Riza Khan has designs on the powers and possessions granted him by the Shahs, and demands the removal of the Premier. The Central Government has sought in vain to explain away the position, with the result that the present situation is controlled by the fact that there are now 2,000 Government troops in Ispahan, awaiting eventualities. Further danger has been provided by the return of Salar ed Dowleh, uncle of the Shah, to Ahwaz, north of Mohammerah. He has a certain popularity with the Lurs, and if he should actively join the Sheikh of Mohammerah this suspicion of the Government might assume a serious aspect. It is to be hoped that hostilities will not commence, for opinion is agreed that only in some such lead as the Sardar Sipah is giving to the Persians are stability and progress to be found. As matters stand, however, there is justification for the remark that Teheran is no more Persia than Dublin is Ireland.

Wahhabis in Mecca.

For the first time for some years Wahhabis made themselves last week free to go in and out of Mecca as they, or, rather, their great leader, willed. It was natural that the appearance of Ibn Saoud's men in the capital of ex-King Hussein should, in the mouths of those of the now fleeing Shereefian supporters who agreed with his policy of closing the *haj* to Wahhabis, have given rise to familiar stories of pillaging and defamation. But, it would appear, although news from Arabia is scanty and has to be carefully sifted, that the Wahhabis have actually been restrained by the very long and strong arm of their leader. According to the most probable accounts, soldiers of the "Ikhwan" are playing but little part in the occupation of Mecca. That they, who, after covering all the hundreds of miles from Nejd, put the Hejaz Army into the most ignominious plight (its sparse remains are said to have been withdrawn from Bahara), should not now be allowed to loot as is the wont of the Bedouin, implies that the tremendous organisation which is the work of Ibn Saoud has not yet broken down. Whether the Wahhabis will now stay their hand, or whether, as is reported, they are marching on Akaba, is uncertain; but one must be chary in predicting continued order and restraint. It is true that Ibn Saoud has with Great Britain a Treaty which binds him to keep open within his territories the roads which lead to the Holy Places, but the event alone will prove whether he is able to observe this clause, or whether he will, as did his predecessor more than a hundred years ago, make the Holy Cities closed to all but the followers of his Faith. Those who know him best believe in the former possibility, and this fact should provide relief to many Moslems.

British Policy in Arabia.

At once and insistently the question arises: What is to be the attitude of Great Britain towards the Wahhabis? Answer is variously made. Generally speaking, the attitude of the placid Briton towards the Wahhabis resembles that of the British General towards the compositions of Wagner: "We do not like 'em, but we are not afraid of 'em." But to consider views of more detailed knowledge. Those observers who believe that this success in the Hejaz is but a flash in the pan, that its agents are fundamentally but looting Bedouin, that the whole system of government which the ruler of Nejd has made the pride and the fear of the Peninsula will fall to pieces with his death, counsel vigilant caution. They realise that the collapse of the Hejaz Army and the flight of ex-King Hussein the Lord-knows-whither—Basra and Amman are alternatively stated as refuges—are a humiliation to this country, which in turn excited and fed and tempered his ambitions, but still they counsel delay in action. On the other and very considerable hand, there are those who advocate the immediate recognition by this country of Ibn Saoud's success over his ancient rival, and the sending to the Court of Riyadh of a British representative. Such advocates think, apparently, that the pan-Arab idea as a political bond and idea on which to conduct a policy is dead; let us, they say, cut away the romance which has in the last few years enshrouded British policy in Arabia, face the facts, and acknowledge the real master of the situation, Ibn Saoud. Other enthusiasts over Arabia have pleaded that Britain should enter the struggle, either actively or pacifically, on the side of the Shereefian family, but since their enthusiasm has been overtaken, and the object of it been engulfed, by events, their views need scarcely be considered now. On the whole, it is difficult not to incline to the side of caution. This move of Ibn Saoud cannot have been inspired wholly by hatred of Hussein, and its intentions have not yet been made clear. Why, for instance, he, or some of his followers, should ever have attacked Transjordan has not yet been satisfactorily explained. It is certain, moreover, that should he attack any British mandated territory, a warm reception is the fate of his fanatical tribesmen. If that should occur, one of two things is likely to happen: either the allegiance which outlying tribes now owe him will be compromised, or relations between Britain and Nejd will become even more difficult than they now are. But there is, in truth, little doubt of the goodness of his personal attitude towards this country, and if he should succeed in consolidating his position, we should not be slow to regularise relations with him. There can be no question that Ibn Saoud himself is anxious to open up the resources of his country and to see it progress. He is, for instance, sending students from the Nejd to civilised countries like Syria and Egypt, and he is said to be building hospitals and inviting doctors to his country. From one so sincerely desirous of enlightenment it would be difficult to withhold British support. But he must first prove that he is not the only link in the Central Arabian chain.

THE WEEK AT HOME.

London, Tuesday Morning.

The General Election.

Thirty-two members of the new Parliament have been already elected unopposed. These fortunate men, who are saved time, money, and temper by their possession of those ideal constituencies where nobody wants to challenge their right of possession, include the Speaker, Mr. Baldwin, and the two members for the City of London—which is more interested in finance than politics.

There remain 1,374 candidates for 583 seats—the total number of aspirants being 538 Conservatives, 524 Labour, and 333 Liberals. In fifty-one constituencies there will be a straight fight between Conservative and Liberal, in 247 the same between Conservative and Socialist, and fifty-four between Liberal and Socialist. There will be 225 triangular fights and three multiple contests.

A great deal has been written this last week about the negotiations between Conservatives and Liberals to avoid these three-cornered contests, and negotiations have been set on foot to escape them. The party headquarters, although taking no direct part in these pourparlers, have certainly smiled on them, and a good many pacts have undoubtedly been arranged—notably in Paisley, where Mr. Asquith's return has been rendered certain by the withdrawal of the Tory; and in Glasgow, where all fifteen seats have been partitioned to give either Liberal or Unionist a clean contest with the Government.

But the fact that there are still over two hundred three-cornered fights shows that these "pacts against Socialism" do not go so far as Lord Beaverbrook, at least, had hoped. The truth is that local rivalries are often very strong, and that a great many people do not take the "menace" of Socialism quite as seriously as professional politicians and leader-writers. If they really thought the Commonwealth in danger, there is little doubt that the two older parties would sink their differences.

It must be confessed, too, that not every politician is impressed by all the talk of the evil of minority members and minority governments. After all, there is something in the argument that anybody has the right to stand for any constituency, and that constitutionally at least you vote for a man and not for a party; the man who gets most votes being returned irrespective of party. The luck sometimes favours one side and sometimes the other, but statisticians who have investigated these things assure me that, on the whole, it evens out. Last time the luck favoured Labour, two years ago it was on the side of the Tories. This year, who knows?

Election Oratory.

For the time being, of course, the papers are full of party manifestoes and election oratory, and

the conscientious citizen who reads all sides will soon suffer from mental confusion in the first degree. I cannot honestly say that democracy shows its best side during these arguments; a few examples will suffice. The Trade Union Council, for instance, have issued a letter declaring that the Government has been destroyed by a combination of its opponents—whereas the fact is that the Government is still in existence, and will remain alive unless and until it is defeated in the next House of Commons. The same manifesto declares that the Labour Government is the only one within living memory which has reduced the taxes on food—whereas the Coalition Government of 1922 reduced the tea and coffee duties, and the Bonar Law Government would have reduced the sugar duty had there been any prospect that the consumer and not the producer would have benefited. Actually the reductions which Mr. Snowden made last May have gone into the pocket of the producer and not the consumer, so that the Trade Union boast has little point.

The Trend of Opinion.

It is extraordinarily difficult, with the huge modern electorate, to say how the fight is going, and I shall not attempt any prophecy as to the result. All parties, as usual, profess the utmost confidence, but the Liberals admit that they are campaigning under a tactical advantage against both right and left; the Conservatives confess in private that they would be happier with a more inspiring leader than the excellent Mr. Baldwin; and Labour is obviously getting rather rattled. Mr. MacDonald, for instance, becomes increasingly shrill—he has accused his opponents of being like "dogs barking round a heap of garbage," a double description which fits neither his opponents nor his own followers. The Prime Minister, indeed, is not a great asset for his side, and the hope that he would win the great middle-class vote is diminishing. Any seats that are won for Labour the week after next will have been won by obscure local politicians of the rank and file, who are working with an enthusiasm and energy that is the envy of their opponents.

For the first time, however, Labour is fighting under the handicap of having been in power; it has to justify its past, and to explain away its promises. The task, as the older organisations recognise, is not an easy one. Labour can point to the settlement with Germany as an asset—although the settlement is not popular in its own mining constituencies, for economic reasons—but against this must be set the Russian Treaty. The Campbell case, although referred to in every speech, does not seem to me to have much effect one way or the other; the two chief difficulties of the Government are unemployment and the cost of living.

A year ago they pledged themselves to cure the one and reduce the other. There is the usual squabble over the method of compiling the statistics of unemployment, as to which the Government speakers have made some effective points, but on the broad issue it has to be admitted that unemployment remains much the same. The real truth is, of course, that no political measures can make much difference to an economic question, but no politician will ever admit this. The result is that a year ago Labour won votes on this issue, and the probability is that this year it will lose votes on the same issue.

As to the cost of living, every Liberal and Labour candidate last year denounced Protection on the ground that it would increase the cost of living, and claimed that his policy of Free Trade would reduce the price of food. The Free Trade record of the Government is unimpeachable, but, unluckily, the cost of living has gone up. Once again, of course, the real defence is that the cost of living is dependent on world prices, which no Government can control, but no politician dare admit this.

Broadcasting Politics.

As I came across Trafalgar Square one evening last week I heard a voice that proceeded from nowhere. It was not so impressive as the unseen hand that wrote on the wall in the Biblical story, but nevertheless it was impressive—until I recognised that it was the voice of Mr. Baldwin being broadcasted. A few days earlier Mr. MacDonald had been broadcasted from the platform, but the attempt was a failure—first, because Mr. MacDonald strides up and down the platform as he talks, while the broadcaster cannot follow him; and secondly, because the machine does not take applause, hisses, cat-calls, and the usual interruptions of a political meeting very effectively. Mr. Asquith had rather better luck, but Mr. Baldwin was a real success—not because he is a better speaker, but simply because he realised the conditions, shut himself up in a room with the machine, and talked quietly into it. The result was that every word was audible, and people stopped to listen.

But, for all that, it is not the same thing as a meeting. One misses the personality of the speaker, and one is a little apt to resent the impersonality of the machine. To the imaginative it must seem a ghostly, eerie performance; the practical politician must lament that he cannot heckle the broadcaster, and it is no use whatever to throw rotten eggs at a voice. This new development has come to stay, but it will never be a substitute for the excitement and enthusiasm of a packed hall, cheering a great leader. You can't even cheer a loud-speaker.

Royalty and Music.

Rumour has always suggested that the King and Queen are not particularly interested in music, while the younger members of the Royal Family frankly prefer the dance to the symphony. It was, therefore, a particularly kindly act on the part of the King and Queen to attend a Queen's Hall concert last week, the more particularly as there is a political crisis on. The great audience of Promenaders, who know that these concerts have been carried on under great difficulties of late, were enthusiastic at this mark of royal recognition; the hall was uncomfortably crowded, and everybody hoped that this testimonial would smooth the way for future seasons.

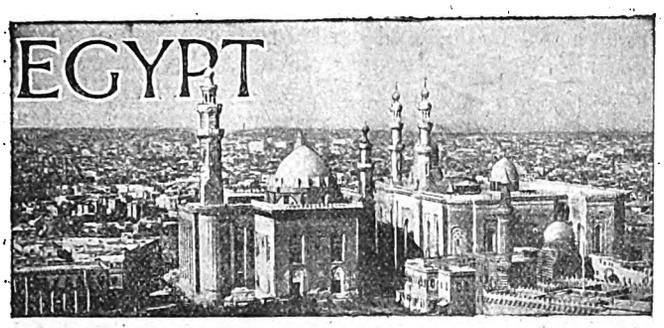
The Near and Middle East.*

From Our Own Correspondents.



Cairo, October 11.

The Anglo-Egyptian Negotiations.

The sudden cessation of the conversations between Mr. MacDonald and Zaghloul Pasha came as a great surprise to Egypt. The latter's telegrams had been couched in such sanguine tone that it certainly looked as if the policy followed out here during the past year was about to receive justification and the latest meeting between British and Egyptian representatives would end in the settlement which everyone, of no matter what political camp, has so ardently desired for some time past. But one has been doomed to bitter disappointment, a disappointment that is strikingly widespread. The White Book, giving details of the discussions that ensued, shows only too plainly that either Zaghloul Pasha was completely misled by his advisers with regard to what the British Government was prepared to concede or that he himself entirely misread the signs. Whatever the explanation may be—and there is little doubt that the extreme members of his party who accompanied him to London stand for a good deal in his attitude—the fact remains that he deliberately disregarded the very excellent advice sent him from influential and reliable quarters here to make every effort to come to an agreement, for the manner in which he put forward his demands was obviously intended to leave no room for compromise. Those who, knowing Zaghloul Pasha's temperament, predicted that he would fail because he does not possess the qualities of a statesman or a negotiator have proved, alas! only too correct in their prognostication. Once again an admirable opportunity has been lost—the first was in 1920—owing to Zaghloul's fear for his own popularity with the students and the more extreme members of his party and his inability to take his courage in both hands and tell his fellow-countrymen what is really for their good.

The Failure of Zaghloul Pasha.

What makes this failure all the more tragic is the undeniable fact that the country was, with but very few exceptions, ready and eager to accept whatever he might bring back to it, and that if he had come to an agreement he could have got it ratified by Parliament with the greatest ease. His subservience to his extreme *entourage*, whose fanaticism leads them entirely to ignore facts and to strain after an ideal which the geographical situation of their country renders impossible of attainment, has merely resulted in Egypt's losing a tactical position without any compensating advantage, and in the indefinite postponement of the day of settlement.

The Political Outlook.

Zaghloul Pasha returns to Egypt on the 20th inst., and he will have a reception which we can be certain will equal in warmth the farewell he received on his departure in July last. It is expected that he will submit the results of his conversations to Parliament, which reassembles on November 15, and that he will seek a vote of confidence. That he will secure this vote may be taken as a foregone conclusion, for, as things are at present, no matter what they may feel, no one would dare to utter a contrary voice. As to what will follow after that it is quite impossible to foresee. The unreasoning and more hot-headed of his followers call for a forward policy and organised opposition and hostility to Great Britain, convinced that thereby they can force acceptance of their extreme demands. (There is a persistent idea that if the Labour Party are returned with a strong majority it will be possible to secure a reversal of the present decision next spring.) On the other hand, the more instructed and thinking element realise only too well the dangers of such an attitude, but as yet they are not in a position to make their influence felt, and perforce are compelled by the present condition of things to continue to do lip-service to the views of the more articulate extremists. The outlook is far from brilliant, for there are many questions looming on the horizon which, unless carefully treated, may easily bring about a serious and far-reaching crisis in the affairs of the nation, and the indications at the present moment are by no means for political peace and a reasonable attitude towards these vital matters.

GREECE.

Athens, October 14.

The Political Situation.

After protracted negotiations, the political crisis which resulted from M. Sofoulis' resignation culminated in the formation of a Cabinet by M. Michalakopoulos, member for Patras. Greece today can boast of no more able politician than M. Michalakopoulos, but it is probably a pity that he opposed M. Kafandaris' proposal for a coalition Cabinet comprising all the party leaders in the National Assembly. It is true that M. Kafan-

daris' scheme was also rejected by M. Papanastassiou, who will never forgive the other political leaders for having joined hands to overthrow his Cabinet. M. Michalakopoulos had not the same reasons as M. Papanastassiou had for opposing the formation of a wide coalition Cabinet, and it is barely conceivable that it is his personal ambitions which impelled him to assume the attitude he assumed, an attitude which came rather as a disappointment to the political world in general. M. Michalakopoulos has, however, announced his intention to pave the way as soon as possible for a general election, and that was also the line M. Kafandaris proposed to follow. All Greek politicians have by this time realised that no good can come to the country from one-sided Parliaments, and that the sooner an appeal to the people is made and the Royalist leaders stand for election the better. Party strife amongst the masses has practically disappeared, in spite of the efforts of certain politicians and their Press organs to maintain it. At the present juncture neither the Republicans nor the Royalists feel very sure of their ground, and it is characteristic of the situation that there are Republican and Royalist principals at the head of all newly instituted business ventures. This precaution is certainly taken in view of political possibilities In this country it is always useful to have one iron on the political anvil, as the support of political friends is a valuable asset to business concerns.

The Democratic Union and the Government.

The Democratic Union, M. Papanastassiou's party, has announced its decision to wage war on the Government, and, indeed, has begun operations even before the meeting of the National Assembly. Its first grievance is the nomination of General Guillaumat as head of the new military mission to Greece when the Papanastassiou Government had invited General Franchet d'Esperey to come to Greece for the reorganisation of the Army. General Pangalos, who was Minister of War in the Papanastassiou Cabinet, actually visited M. Michalakopoulos for the sole purpose of demanding explanations on the subject. The Premier replied that his immediate predecessor, M. Sofoulis, had asked the French Government whether it would send a General to Greece for the reorganisation of the Army, and that that mission had been entrusted to General Guillaumat. Talking to Press representatives on the subject, M. Michalakopoulos said that if General Pangalos had any objections to the nomination of General Guillaumat he could formulate them in the National Assembly. General Guillaumat will make only a short stay in Greece in order to study the military situation. He will then return to Paris, and will form a mission to be composed of some twenty officers, who will come to Greece as military instructors. General Guillaumat will subsequently take up his new appointment as Commander-in-Chief of the French forces on the Rhine.

The Campaign Against Mr. Morgenthau.

Certain organs of the Athens Yellow Press have for some time past been casting aspersions at Mr. Henry Morgenthau, chairman of the Refugee Settlement Commission, in connection with orders placed with German firms for sectional cottages to be used for housing refugees. The campaign started against Mr. Morgenthau by Greek papers was taken up by an Athens sheet printed in the English language, which inferred that preference was given to German firms for orders to be paid with English money (read the sums advanced by the Bank of England on the refugee loan). Mr. J. Campbell, acting chairman of the Refugee Commission in the absence of Mr. Morgenthau, addressed to the Ministry for Foreign Affairs, for communication to the Athens Press, a vehement denial of the insinuations levelled at Mr. Morgenthau. Mr. Campbell explains first, that the contracts in question were signed during Mr. Morgenthau's absence, and that consequently he has no responsibility whatever in the matter, and, secondly, that the orders were placed with German firms because they offered much more favourable terms than British or other firms. The German tenders were carefully examined by both British and Greek technical experts, and, adds Mr. Campbell, it is the duty of the Refugee Settlement Commission to get the most it can for the limited funds at its disposal. Concluding, Mr. Campbell declares that there is no ground for the apprehensions expressed as to the stability of the German cottages. The Greek Press in general has given prominence to Mr. Campbell's denial.

Constantinople, October 13.

The Crisis.

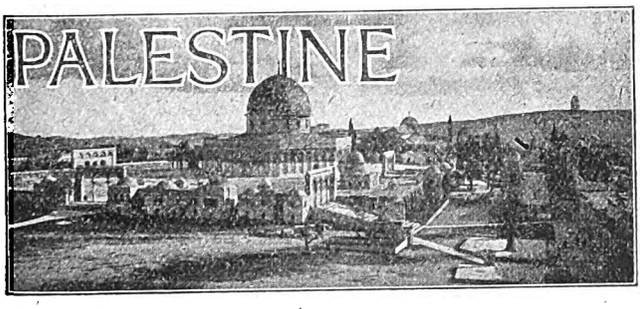
Turkey is in the middle of a crisis of the first magnitude. The last Note of the British Government to Angora on the subject of the events on the Iraq Frontier is regarded as an ultimatum worthy of the most reactionary of the capitalist Western Powers, and the papers are lashing themselves into a righteous fury. The Turkish Government's attitude is not clear at the time of writing. Unquestionably the word has gone forth to the Press to modify its transports and to represent the attitude of the British as capable of reasonable modification as soon as the Turkish responsive Note to the "Ultimatum" has been received, but at the same time the Grand National Assembly has been

Digitized by Google

urgently convoked earlier than was originally intended. Opinions differ as to the significance of this move; some say that it is merely a prelude to the adoption of a "strong" policy against British aggression, while others affirm that the opposition to the Government has grown so strong during the past six months that the convocation of the Assembly will do nothing but unchain the internal political passions and divisions, and throw the country into the cockpit of internal dissension, thus rendering it impossible to adopt any precise line of conduct towards any foreign Power.

Constantinople Rumours.

Many rumours are circulating in Constantinople. One is assured on all hands that several classes of recruits are being called up, that a complete census of all means of transport is being carried out, that large reinforcements of troops have been sent to the Mosul front, and so on *ad infinitum*. There may be a grain of truth in all these tales. In any case they are normal measures to take, even if there is only the most shadowy risk of hostilities. It must not be forgotten, however, that in the present state of the administration of this country it will take many months before any of these measures will have been sufficiently realised in practice to make any real difference to the balance of power as between Britain and Turkey. The state of what public opinion there is is such that any Government which launches Turkey into even the most insignificant war will have short shrift: if Mustapha Kemal and Ismet are so short-sighted as to bank upon the traditional discipline of the Turkish civil and military elements, they are likely to find that the institution of a democratic republican régime has its disadvantages.



Jerusalem, October 11.

Dr. Weizmann's Impressions.

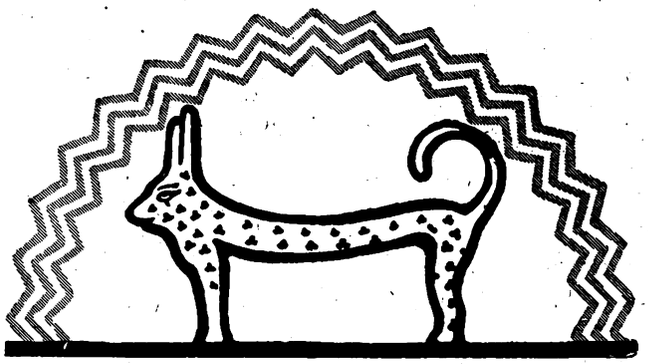
Dr. Weizmann leaves Palestine next Wednesday after about three weeks in the country. Yesterday he met the "Association of Press Correspondents in Palestine," and summarised his impressions. These impressions were uniformly good, and he expressed himself as quite satisfied with the way things were shaping. What pleased him most was that the new Jewish Palestinian life had become—in the medical sense—normal. Three years ago there was no lack of immigrants, and they faced the unaccustomed and difficult work before them with tremendous avidity; but this keenness was the direct consequence of a lofty idealism, quite admirable in itself—but Dr. Weizmann and the other leaders occasionally had fears lest, with the inevitable dulling of the idealism, the enthusiastic taste for hard labour fade away, too. Three years have now gone, and with them has gone virtually all of the more feverish pursuit of Zionistic ideals for the sake of the ideals alone; yet the taste and enthusiasm for the drabber forms of labour has persisted. Thus, to take Dr. Weizmann's illustration, whereas the immigrant in his earlier stages looked upon a cow as a cog in the wheel which was to grind into shape the Jewish National Home, he now looked upon it as just a cow, a thing to be cultivated for its useful contribution to daily life.

"Normal" again were the personal relations between Jew and Arab wherever and whenever they lived together as neighbours. They invited each other to their family festivals; the Jew would tell the Arab cultivator all he knew of scientific gardening and lend his implements, while the Arab would disclose the mysteries of goat-herding and camel-driving (three years ago there was not a single Jewish camel-driver; now there are two hundred).

"Normal" yet again, or rapidly becoming so, was the type of immigrant: the penniless, heavily subsidised, and supported immigrant was giving place to the family group with its small capital and ability to support itself by some trade or handicraft. The Zionist Organisation, whose primary duty aforetime had been to instil into an apathetic Jewry the ideals of Zionism, was now finding itself conscientiously bound to issue occasional warnings of the danger of overtaxing Palestine's powers of absorption in certain industrial activities.

Still more normal—and nobody interested in Palestine can help noticing the fact—is the whole atmosphere of public and political affairs. Three years ago the air was electric with the possibility of explosions; the smallest act of unwisdom, especially by the Jew, was liable to be followed by the most serious consequences. But the air is now clearer, though not entirely clear; and all alike had learned the lessons of moderation and tact. And it is certainly most true that Palestine has ceased to be a centre of "sensations" from the newspaper point of view: the last half-year has been more destitute of "reportable" matters than at any time within the last six years.

In reference to the growing absence of acts of



THE CALL OF EGYPT

LISTEN to the Call of Egypt, where romance and mystery were born and are deathless still to-day. Pay your homage of wonder to her mighty river and her stately temples. Explore the purple-shadowed streets of her fantastic cities; tread the gilded carpets of her deserts where silence falls supreme and absolute. Dream amid the glories of Thebes and Luxor in the lands of haunting vision. The Egyptian State Railways, the International Sleeping Car Company and the Hotels offer special cheap facilities for tourists visiting Egypt during November, December and January.

Particulars of fares, tariffs, etc., of all principal Travel Bureaux and Tourist Agencies. Write for "Egypt and the Sudan," a copiously illustrated brochure, free on application to Egypt Promotion Association, 9, Quality Court, Chancery Lane, London, W.C.2, or Post Box 990, Cairo.

EGYPT—THE ETERNAL WONDERLAND

Digitized by Google

unwisdom on the part of the Jews, Dr. Weizmann used this opportunity to make public his regret, and the regret of all responsibly minded Zionists, at the offence given by the Jerusalem Hebrew daily paper, *Doar ha-Yom*, to all sections of the Palestine public. This paper, about a month ago, in the course of some facetious comment on the conversion of Dr. Herzl's son, quoted a well-known anecdote, containing an epithet which has laid them open to a charge of blaspheming Jesus. Morally, it may be, the sum-total of guilt on the part of the paper is a violation of good taste on the part of the writer of the offending passage and excessively stupid carelessness on the part of the editors. But, politically, the results have been deplorable. Christians and Moslems alike have placed the worst interpretation on the passage, and the present indignation, among Europeans, Arabs, and Jews as well, is intense. The Government have hesitated to bring the matter before the courts lest feelings be made worse; but the agitation against the Hebrew paper has grown rapidly and seriously, and action will certainly be taken before long. Almost inevitably Latins and Arabs have done their best to make political capital out of the affair, even asserting that this is only a part of a deliberate campaign directed against Christianity in Palestine and a foretaste of what a growth of Jewish influence in Palestine involves.

The Arab Executive.

The Arab Executive is showing increased signs of life. Its secretary, Jamal Effendi el-Husseini announces a meeting of the Executive to make arrangements for the prompt summoning of the "Seventh Arab Congress" in order to meet the present evil conditions raised by "the bad economic situation, and the haste of the Zionist Associations to buy large tracts of the most fertile lands in Palestine from rich men of Beyrout and Damascus, and the bad political situation in the Arab Peninsula." The Congress will be asked to agree to the following three points: (1) To consider the establishment of a general Arab Association for buying the lands which are being sold to-day to the Jews for small sums (!). After the establishment of this Association, a delegation will proceed to America in order to sell a part of the shares to the emigrants of Palestine and Syria there. (2) To compose rules in order to organise branch associations, and to establish them in the different towns of Palestine. (3) To deal with the political situation in the country and its connection with the struggle now waging in the Hejaz.

IRAQ.

Baghdad, October 1.

Turkish Violation of Northern Frontier.

No fresh developments have been reported in connection with the Turkish incursion into Iraq territory. The Turks have burned a number of Assyrian villages well within the Iraq frontier, but as all the Assyrian tribesmen, to the number of about five thousand, have fled to Iraq for safety, there has been no general massacre. Once again, after infinite trouble has been taken to repatriate them, the Assyrians are on the hands of the British and Iraq Governments.

The Turks are being continually harassed by aerial action, and the Iraqi police posts, which were evacuated, have, with a single exception, been reoccupied.

Visit of Lord Thomson.

The British Air Minister arrived in Baghdad by air on September 25. He was received at the Hinaidi landing ground by H.E. the High Commissioner, the Air Vice-Marshal, and prominent Iraqi officials. After inspecting the guard of honour, he proceeded to the Residency, where he was the guest of His Excellency.

After a round of dinners and inspections, Lord Thomson left by air for Mosul. Thence he went on to Kirkuk and Suleimaniyeh, where he was accorded a great reception by a large concourse of tribal sheikhs, religious heads, and prominent merchants. All expressed their gratitude at the reoccupation of their town and their emancipation from the tyranny of Sheikh Mahmud. It is noteworthy that since its reoccupation two months ago the population of Suleimaniyeh has increased from 700 to 12,000.

On his last evening in Baghdad Lord Thomson dined with King Faisal, leaving the following morning for Egypt by air.

As a sign of the increasing modernity of Baghdad, it may be mentioned that two days after the Air Minister's arrival the cinemas were showing on the screen pictures of his reception.

Iraq Railways.

The railways, though the property of H.B.M.G., were provisionally handed over early last year to the Iraq Government, which became responsible for their administration and for any deficit which might occur on their working. Thanks to the efforts of the British officials on the railway directorate, there has been a marked improvement in the running of the railways, and a profit of seven lakhs is shown. Other relevant figures are:—

Number of passengers carried	498,522
Mileage travelled by passengers ...	51,373,931
Tons of goods carried	400,525
Ton-miles of goods	77,963,905

Only one serious accident took place last year. This, which occurred on the Baghdad-Basra line, and resulted in three persons being killed and twenty-seven injured, was due to a storm. Excessive rainwater and floods comprise the chief natural difficulties against which the Railway Staff has to contend; wash-outs are a frequent cause of delay, and would be of accidents were not special precautions taken during the winter, when heavy rains may be expected.

Though the grain traffic was good last year, the amount carried being increased from 91,000 tons in 1922-23 to 127,000 in 1923-24, of which no less than 85,000 tons was railed to Magil for export, the net results are not as good as might have been expected, owing to a falling-off in the passenger traffic. During last year, in addition to having to face the usual road and river competition, the railways were handicapped by a cholera epidemic, which not only curtailed movement within the country, but restricted to a very large extent the entry of Persian pilgrims into Iraq. As the pilgrim traffic during certain Mohammedan feasts amounts to over 1,500 passengers a day, the loss was a serious one. Competition in this country is severe. On the river the various shipping companies undercut one another, a practice which reacts adversely on the railway receipts, as it entails a reduction in fares. Cheap motor transport affects the railways more perhaps in this than in other countries, for six, even seven or eight, Arabs are content to crowd into the oldest, most dilapidated of Fords, caring nothing, apparently, for noise, discomfort, and the possibility of breakdown.

During last year the Kerbela branch line was completed, and was formally opened on December 12, 1923, by King Faisal. Other works chiefly took the form of substituting better bridges for the temporary structures erected during the War; in

Digitized by Google

particular, the Imam Abdulla Bridge, crossing the Euphrates between Rumaitha and Samawah, has been completed. Basra City has been connected with Makina Station, thereby removing the inconvenience of the terminus at Basra, being some three or four miles away from the city. The wagon ferry across the river at Baghdad has also been improved.

The chief work undertaken this year is the extension of the line from Kingerban to Kirkuk, a distance of eighty miles. Difficult bridges and the shortage of labour are hampering progress. Other proposed new works consist of further new bridges, and the concentration of all the workshops on a site near Baghdad—a change which will combine increased efficiency with greater economy.

Suleimaniyeh.

A small punitive column, composed of cavalry and infantry of the Iraq Army, assisted by aeroplanes, has been engaged in minor operations in the neighbourhood of Suleimaniyeh. Two villages which had been used as bases for Sheikh Mahmud's forces, were burned, and a number of suspected persons arrested. The Iraq Army overcame the opposition and inflicted casualties, suffering none in return.

General News.

The Prime Minister, Yassin Pasha, has been touring the Mosul vilayet. During his absence, Sassoon Effendi, Minister of Finance, has been acting for him, as well as for the Minister of Interior, who has gone to Amman to meet the Crown Prince of Iraq.

His Royal Highness the Emir Zaid, younger brother of the King, left Baghdad last week for England. For the next four years he will be a member of the University of Oxford.

Saiyid Talib will not be returning to Iraq as soon as was expected. He is returning to Egypt from Damascus, until such time as the Organic Law, a clause of which prohibits the banishment of any Iraqi, has been ratified by King Faisal.

CYPRUS.

Nicosia, Delayed.

The Late M. Spyro Araousos.

Not the Greek community alone, but the whole island has suffered a greatly deplored loss in the death of M. Spyro Araousos, of Limassol, who was for many years one of the most esteemed and respected of the Cypriots who have taken a leading part in local affairs. Of well-balanced mind, of a cautious, but sympathetic disposition, he had always shown himself worthy of the confidence that was placed in him by all classes. In the Legislative Council, as President of the Municipal Council of Limassol, and in other offices, he rendered great services. For many years he was the trusted agent in Cyprus of the Austrian Lloyd S.S. Company. Not only was he held in honour by his own community. His many friends among the British always recognised his undoubted sincerity, both in public and private life, and found him not only a straightforward, honourable, and able exponent of Greek views and aims, but one who could be relied upon to give valuable and unbiased advice on any matter of local importance. His independence of judgment sometimes placed him in opposition to his eight Greek colleagues in the Legislative Council. The Government showed their appreciation of his character, ability, and sound judgment by appointing him a member of the Executive Council. Last year, at the unanimous request of his countrymen, he undertook—though suffering from a grave malady, to which he has succumbed—to be the bearer of a memorial submitted by those who advocate the union of Cyprus with Greece; and in interviews at the Colonial Office, when, according to medical advice, he should have been at complete rest, he carried out what was a hopeless task with zeal and ability.

Hundreds of telegrams from Egypt, Paris, London, Athens, and other places have been evidence of the high esteem and affection in which he was held by numerous friends; while representatives of the Greek Church and all public bodies in Cyprus have rendered homage. At a memorial service two bishops, a large body of clergy, the Commissioner, Commandant of Police, the Hellenic Consul, and many thousands of leading persons in towns and villages paid their respects. A street in Limassol is to bear M. Araousos' name.

The High Commissioner's Report.

The Annual Report for 1923 is, as usual, subjected to considerable criticism. The principal complaints relate to the money still taken from Cyprus in continuation of the "Turkish Tribute," to the cost of administration, which, it is said, could be carried out efficiently at far lower expense by native officials, to the neglect of agriculture, the need of more public works, including the maintenance of roads, which—although it is boasted that over 800 miles have been made since the British occupation—are lamentably in need of repairs. It has always been argued that the Turkish Tribute, which is regarded as having been fixed at an unfairly high rate, should be borne by the Imperial Government, since the island was taken over for Imperial purposes. It must be said that general opinion endorses some of the complaints made by the Greek Press. A body calling itself the "Executive Agricultural Council," which has passed resolutions condemning the alleged "apathy" of the Government in matters relating to agriculture, has resolved to send its complaints direct to the Colonial Office, after a meeting fixed for October 5 at Nicosia. The total amount of island revenue from 1878 to 1923 has amounted to £14,377,723 (including grants in aid of £1,697,085). The cost of administration has been £9,963,611, which, added to the amount paid on account of Turkish Tribute (£4,211,334), raises the total expenditure to £14,174,945.

General News.

The High Commissioner, Sir Malcolm Stevenson, returned to Cyprus on September 24. Mr. Fenn, the Chief Secretary, has left on a long leave. Mr. Ellis will act during his absence. The Government officers have returned to Nicosia from summer quarters on Mt. Troodos. The Greek Archbishop is sending a preacher of his staff, as exhibitioner, to Oxford to pursue higher theological studies. Warnings are again given to intending emigrants to New York and Chicago not to go to America, owing to the serious state of unemployment there.

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.

Founded in 1911 to study all questions of common interest to Great Britain and Persia.

Subscription £1 per annum. Further particulars may be obtained of the Honorary Secretary, 74, Grosvenor St., W.1.

SCHOOL OF ORIENTAL STUDIES, LONDON INSTITUTION
(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and in Oriental and African History, Religions and Customs.

Tishri 25, 5685, of the Jewish Calendar.

Sir Herbert Dering arrived last week in Paris from Bucharest.

Prince and Princess Paul of Serbia left London last week for Paris.

Mr. and Mrs. Philip S. Taylor left London yesterday for Cairo.

General Sir Claud Jacob had the honour of being received by the King at Buckingham Palace last Friday.

Princess Ileana of Roumania visited Their Majesties at Buckingham Palace last Thursday afternoon.

Lord Olivier, Secretary of State for India, had an audience of the King at Buckingham Palace on October 14.

The Albanian Minister has removed to 137, Beaufort Street, Chelsea, S.W.3. (Telephone, Kensington 1094.)

Colonel von Antonesco, Military Attaché at the Roumanian Legation, returned to London last evening from Brussels.

Mr. Ray Atherton, formerly Secretary at the United States Legation at Athens, has been transferred to the Embassy in London.

Sir Herbert Samuel, High Commissioner in Palestine, left Jerusalem last week for Geneva, to attend the meeting of the Mandates Commission.

The King has granted authority to Lieut.-Colonel Benjamin Biggar, M.B., R.A.M.C., for the wearing of the insignia of the Order of the Nile, 3rd Class.

Field-Marshal Viscount Allenby, British High Commissioner in Egypt, and Viscountess Allenby, left London last Thursday for Vienna, where they are making a short stay before proceeding to Cairo.

Aziz Izzet Pasha, Egyptian Minister in London, who accompanied the Egyptian Premier to Paris, returned to London on October 20. Mohamed Fehmy Hussein Bey, Counsellor, acted as Chargé d'Affaires during his absence.

Sir George and Lady Elliot, Sir Stuart Montagu Samuel, and Sir R. Drummond Hay were among the passengers in the P. and O. liner Naldera, which left London on October 17 for Bombay.

Under the auspices of the Central Asian Society, Lieut.-Colonel H. F. Jacob is lecturing to-morrow (Friday) on "The Yemen," at 5 p.m. The lecture will be given, with lantern illustrations, at the Royal United Service Institution.

The marriage took place on October 15, at St. Matthew's, Bayswater, of Maurice Turner, younger son of Sir Montagu and Lady Turner, 9, Palace Court, W.2, and Hilda Helen, daughter of Mr. and Mrs. George Findlay, of Glasslaw, Stonehaven, Kincardineshire.

On October 26, at 3 p.m., the sixth anniversary of the Republic of Czecho-Slovakia will be celebrated in an Anglo-Czech Service, which will be held in Christ Church, Westminster Bridge Road, S.E.1. The Anniversary preacher is to be the Rev. Thos. Nightingale, D.D.

The marriage arranged between Sir Percy Lyham Loraine, Bt., of Styford Hall, Stocksfield-on-Tyne, British Minister to Persia, and Louise, elder daughter of Major-General the Hon. Edward and Mrs. Stuart-Wortley, of Highcliffe Castle, Hampshire, will take place to-day at St. Mark's, North Audley Street.

Major-General George Swinley, C.B., Royal Artillery (retired), of Fauconberg Villas, Cheltenham, Gloucs., who saw much service on the Indian Frontier before the Afghan War, when he took part in Roberts's famous march to Kabul, and died on July 26, left estate of the gross value of £2,319, with net personalty £2,156.

The marriage of Lieut.-Colonel Neil Graham Stewart-Richardson, D.S.O., late Seaforth Highlanders and North Irish Horse, son of the late Sir James Stewart-Richardson, Bt., and the Dowager Lady Stewart-Richardson, with Alexandra, daughter of Mr. and Mrs. Peter Ralli, of 11, Hyde Park Gardens, W.2, will take place to-day at St. Margaret's, Westminster.

The King received in audience at Buckingham Palace last Thursday morning His Excellency M. Pantcho Haji-Misheff, to present his Letter of Credence as Envoy Extraordinary and Minister Plenipotentiary from the Kingdom of Bulgaria, and His Excellency Zekiai Bey, to present his Letter of Credence as Envoy Extraordinary and Minister Plenipotentiary from the Republic of Turkey.

CORRECTION.

We regret that a mistake was made in last week's "Personal and General" in regard to the Persian Consulate in London. Mirza Morteza Gazvini is the Consul for Persia in London, and not the Acting Consul-General as previously stated.

Mlle. Diddie Vlasto, the tennis champion of France, is to be married at the Greek Church in Paris on October 25. The bridegroom to be is M. Stephy Lagonico, to whom Mlle. Vlasto became engaged last summer. The daughter of a Greek, Mlle. Vlasto was born in Marseilles.

THURSDAY, OCTOBER 23, 1924.

ENGLAND AND INDIA.

We referred briefly last week to the widely accepted view that the present political situation in India is dominated by the dream of a change in the attitude of England, and by the belief that a new Constitution can be dictated successfully if only the demand is put forward with sufficient vehemence by a temporary union of discordant elements. India has already suffered so much from dreams and unfounded beliefs of this description that it will be worth while to examine this matter in somewhat greater detail, to recall the essential facts, and to restate the position as it stands to-day. A study of what is called, rather loosely, the literature of the General Election now in progress ought to convince any reasonable Indian that the assumed change in the attitude of England has no foundation in fact. We have before us the official programmes of the three great parties. Neither Labour men nor Liberals offer any hint of such a change, while the Conservative leaders take their stand definitely on the Constitution of 1919, as laying down a policy to be carried out in the letter and in the spirit, without yielding to the demands of factions or misguided agitation. The silence of the other two parties is perhaps even more significant than the outspoken declaration of the Conservatives. Their manifestos are designed to attract votes, and we may be quite sure that the astute gentlemen who framed them recognise that no considerable body of voters could be attracted by any promise of a change in Indian policy. For the time, at least, India is out of politics, the existing Constitution is a settled fact, and Englishmen in the mass ask only that it shall be given a fair chance.

At the same time, there is undoubtedly a change of feeling, though not of attitude, among Englishmen—a change which may be described as disappointment and growing uneasiness. Five years ago, practically everyone agreed that the offer of a gradual advance towards responsible government was the right thing to do; but in some circles there was doubt of its practicability in the conditions which existed. To-day, as the direct result of India's response to the offer, that doubt is more widespread. The man in the street has been impressed, first by the preaching of the doctrine of hate, more recently and more deeply by the accumulated evidence that the preachers have succeeded in their self-imposed task. He has witnessed recurring displays of puerility where he hoped for signs of adolescence. He has heard ugly stories of intimidation or corruption, not merely in the constituencies, but in the legislatures themselves. He has noted a widening gap between words and acts, a conspicuous lack of political courage, a conspicuous fluidity of political creed, and, speaking generally, he finds it difficult to detect in the young plant the promise of that healthy growth of self-government for which he hoped. Observers who are in a position to look more deeply into the facts, find a common origin of these varied symptoms. In their view, India has not as yet set seriously to work to produce the conditions necessary for self-government. She is still obsessed with the old ideas of despotism and oligarchy, and the declared readiness of Parliament to abdicate has operated mainly as a signal to sections and interests and factions, to endeavour to grasp the sceptre for themselves. It is well, therefore, to say plainly, what is universally taken for granted in this country—that Parliament is not aiming at a new oligarchy, be it of Brahmans or Bolshevists, of Moslems or mill-owners, of sweepers or Sikhs. What England is looking for is some sign of the beginnings of a nation organised on democratic lines, with more rights for the little men, and heavier duties for the big. If and when such a nation comes into view, Parliament will not be slow to recognise it: but, whatever it may do, it will not throw down the sceptre to be scrambled for among contesting factions.

It must not, however, be inferred that the last five years have brought only disappointment. It is freely recognised in this country that Indians have demonstrated their capacity for parliamentary business, and, what is of greater practical importance, for committee work, which is politics with the fireworks left outside. It is being recognised, also, that the area of political interest has extended, and, in particular, that in some localities the masses of the people are beginning to concern themselves with questions which hitherto have been decided over their heads. The future depends largely on the progress of this movement, for when the masses claim their new rights, the classes will quickly learn to take up the burden of their new duties, and then the conditions will become favourable for further constitutional advance; but at the moment the most important thing is that the political machinery already created should be made to work, and the way thus opened for the speedy assimilation of these new elements as they come forward in their turn. It is in the working of this machinery that the failure of the political classes has been most conspicuous. As yet, even a beginning has scarcely been made in devising a system of relations between Ministers and their supporters in the legislatures, or between legislators and their minute constituencies, nor has there been any real attempt to organise and instruct public opinion outside the charmed circle, though organised attempts to delude it may unhappily have obtained a momentary success. It would, of course, be unreasonable to expect that these tasks should have been accomplished in the short time which has elapsed since the Constitution was promulgated; the disappointment which exists results not from the lack of concrete achievement, but from the absence of signs of progress, and still more of the will to go steadily forward. It is still permissible to hope that these unfavourable symptoms arise from temporary causes, some of which are already losing their importance: but the fact remains that time has been lost, and if Parliament were to make an immediate investigation of the position, the verdict would inevitably be that India has fallen behind the schedule, not, as her politicians now insist, that she is far ahead. That is the essential point for Indians to realise. In the words of the Constitution, the future action of Parliament must be guided by the co-operation received from those on whom new opportunities of service have been conferred. The response has so far been disappointing, and England is now watching, with an anxiety which tends to increase, for such a development of practical effort as will afford a justification for the action already taken, and a reasonable guarantee for greater progress in the future.

EGYPT UNDER THE TURKS AND BEYS, 1517-1811.

By F. W. BUCKLER.

(*Continued from page* 404.)

[*The following lecture was delivered on August 19 at the Cambridge University Summer School, and was preceded by lectures on the history of Egypt under Muslim rule down to 1517, given by Mrs. R. L. Devonshire, and on the history of Egypt from the time of Mohammed Ali to the eve of the Great War, given by Sir John Marriot. Between these two periods, as Mr. Buckler pointed out, lie three centuries of Egyptian history—a dismal record of oppression and tyranny. "There was," he said in the introduction to his lecture, "no hope of peace and good rule in Egypt until Mohammed Ali made good the neglect of Salim the Grim and exterminated the Mamluk Beys in 1811. That was his crowning triumph and greatest service to Egypt."*—Ed.]

I have dwelt at length upon the settlement of Salim and his successor, Sulaiman the Magnificent, because that settlement endured until it was overthrown by Mohammed Ali, who succeeded in replacing the precarious tenure of the old *Pasha's* office with a more stable hereditary *Pashalik*, whose holder was ultimately known as *Khadiv*. It may be worth while to notice here that *Khadiv* only means "deputy," as does *Khalifat*, *nayat*, and *nawat*, but it is usually applied to the office when a full delegation of royal authority has been made.

From 1566—the death of Sulaiman the Great—down to 1758, when we find the beginning of the rise of Ali Bey, Egypt was, on the whole, left alone to enjoy the pleasures of Mamluk rule. The Turk was far too intent on the development of his European policy to interfere in Egyptian affairs save at the expense of viceregal authority. Further, he was beginning to feel the pressure of Russia and a war with Nadir, Shah of Persia, and though the latter menace was fleeting, the former proved to be a constant factor in Turkish policy. Under these circumstances Egypt was called upon for tribute and occasionally to supply the force of 12,000 men, a duty imposed from the first. But a more important feature began to appear in the separatist tendency which marked the next century. The Russian menace of Turkey provided any *pasha* or other ruler who saw its value with a counterbalance to the Mamluk check on supreme authority, and so the entry of the Great Powers in the domestic policy of Egypt began under Catherine the Great of Russia, it was continued by Napoleon, and has lasted down to the present day. This revolution, by which Egypt was gradually to pass from the imperial to the foreign policy of Turkey was mainly the work of two men—Ali Bey and Mohammed Ali. With the Western aspect of their foreign policy we are not to-day primarily concerned. Our task is rather to watch the effect on Egypt, both internally and as part of the Ottoman Empire.

The link between Egypt and Constantinople was Syria and Palestine, and in this region there was much discontent with the management of affairs by the Porte, particularly among the ruling *pashas*, whose insecurity of tenure, combined with their distance from Constantinople, led them to strengthen their positions so that they could resist attacks. They were in communication, too, with one or other of the parties in Egypt, and on Egyptian support those who were inclined to rebellion tended to rely. They, moreover, provided places of refuge for deposed officials in Egypt. The beauty of the orders of an absolute government lies in the fact that they must be obeyed *absolutely*. For instance, if A is ordered to execute B in a certain place C, and B can escape to D before the order arrives, then B is not in C, and therefore cannot be executed. A fresh order is necessary, and by the time it is ready it is, as often as not, an order revoking the former order and confirming B in his office. The career of Ali Bey brings out almost all of these points.

Before proceeding to an account of his life, it may be worth while to compare his position with that of Mohammed Ali half a century later. Both aimed at the establishment in Egypt of a government far from the interference of the Porte; both, to achieve this end, relied on the Great Powers of Europe to a greater or less degree; both relied on Mamluk support for a time; both regarded Syria as the key to their positions in Egypt. But there was an essential difference in the position of each. Ali Bey was a Mamluk, and looked to the restoration of the glories of the Circassian Dynasty—as Professor Margoliouth has pointed out, his cry was not "Egypt for the Egyptians," but "Egypt for the Mamluks." But for the treason of his son-in-law—Abu Dahab—he might have succeeded in his object. But the revival would have been reactionary—Ali Bey was Oriental, and regarded the infidel West merely as an instrument to achieve his end. Not so Mohammed Ali. He, too, was Oriental—a Turk—but he had gained a great affection for the French, owing to the kindness of M. Lion, a French merchant at Kavalla, and from his intercourse with him Mohammed saw some of the possibilities of Western organisation. He was proud of his birth being in the same year as Napoleon, and it was as a second Napoleon that Mohammed Ali went to Egypt, and his rise was rendered possible by precisely the same causes as had rendered possible the rise of Napoleon—namely, the unwillingness of the central government to pay for warfare as long as the victims of war could be made to pay for the privilege of being conquered. If Ali Bey's cry was "Egypt for the Mamluks," Mohammed Ali's cry was "Egypt for Mohammed Ali," and it was only European pressure that restored his allegiance to the Ottoman Sultan. To read into either movement any element of "nationality" is to misinterpret entirely the underlying historical motive—unless, of course, one's interpretation of nationality is sufficiently cynical to deprive it of its most popular illusions! Mohammed Ali suffered under no delu-

sions—of that his treatment of the Greek revolts in 1825 are sufficient proof. His object was personal—to be a great king, and as he himself said, "A great king recognises only his sword and his purse; he draws the one to fill the other." An honest enough statement, far removed from the accepted ideas of nationality!

Ali Bey was born probably in Abazan, in the Caucasus, about 1728. Little is known for certain about his early life, but there is a tradition that he was the son of a Greek priest named Daud (David), and that his baptismal name was Yusuf (Joseph). This gives us the warning, for the rest of the story resembles that of another Joseph who also went to Egypt, and the mythopoeic element in the history of Ali Bey may have arisen from his later precautions in the matter of corn in times of plenty. Only a Joseph *could* do such things in Egypt! So at thirteen years of age the young Yusuf went a-hunting, was captured by robbers, who brought him to Cairo, where he was sold to Ibrahim, the Aga of the Janissaries. Ibrahim promptly initiated him into the Muslim faith and clothed him in Mamluk dress. He was placed under instructors in the Faith in Turkish and Arabic, and though the loss of his parents and home troubled him for a time, he soon settled down under the kind treatment he received from his new master. He performed the usual services of the Mamluk, and was trained in the arts of war and horsemanship, in which his keenness and prowess soon earned for him the title of "the Madman." He was promoted in the household of his master, until he attained the rank of Sword-bearer and Treasurer. His ability in the latter capacity ultimately obtained for him the promotion to the governorship of a town in his master's *Sanjak* at the age of (about) twenty-two. As a Governor his conduct met with such approval that he was elected Bey a few years later. Now there was another who had expected promotion from the Aga Ibrahim: he was Ibrahim the Circassian, who became the sworn enemy of Ali Bey, and rewarded his master with the supreme penalty in 1757. The next six years were occupied by Ali Bey in his attempt to become *Sheik ul-Balad*, or Mayor of Cairo, which he achieved in 1763, and that step placed him at the head of the Beys. He was now in a position to avenge his master's death and remove a dangerous rival. The motive which prevailed is difficult to ascertain, but the cynic may well be wrong, for friendship in the East is a very close bond, and the relations of a Mamluk with his chief were of the closest.

(To be concluded.)

RELIGIONS WITHIN THE EMPIRE.

The Conference on Living Religions Within the Empire, organised, under the presidency of Sir E. Denison Ross, by the School of Oriental Studies and the Sociological Society, was held at the Imperial Institute, South Kensington, from September 22 to October 23. The papers read at this conference are to be published in full in book form, but our readers may welcome brief *résumés* of those which dealt with Islam and Bahaism.

ISLAM.

The session devoted to Islam was presided over by Dr. Margoliouth, and during it three discourses by eminent Muslims were delivered.

"The Basic Principles of Islam" was the subject of the paper written by Al Haj Khwaja Kamal-ud-Din, and was read by Mr. Yusif Ali. It consisted of a careful exegesis of the teaching of the Koran. Opening with the Muslim Theory of Religion, the writer explained that man enters the world pure and untainted, with the highest capacities before him, but capable of declension. Religion is, therefore, a guidance and a discipline to lead man aright. There are seven evolutionary stages, each one of which was explained in turn, beginning with the lowest, The Commanding (*Ammarah*), passing to The Self-Accusing (*Lawwana*), on to The Inspired (*Mulhima*). Then comes At Rest (*Mutaima*), Pleased with God (*Radiah*), Pleasing to God (*Mardiah*), and, finally, Perfected (*Kamilah*). Islam uplifts from the first to the last; that is its function. It controls every action, illuminates every aspect of life—personal, domestic, civic, and spiritual. There are five pillars of Islam: (1) The Formula of Faith in God and acceptance of Muhammad as His Messenger; (2) Prayer, Fasting, Charity, and Pilgrimage to Mecca. Similarly, the vices which obscure our progress were analysed and refuted from Koranic authority. The social influence of Islam was set forth in eloquent passages, and the moral qualities that are generated in man by obedience to the faith—chastity, honesty, meekness, politeness, forgiveness, goodness, courage, truthfulness, patience, sympathy, and kindness. The position of woman, said the lecturer, was elevated by Islam to equality with man, and the meaning of Paradise was aptly explained. Material progress was the closing subject of an admirable, stimulating, and lucid exposition of the basic principles of Islam, which, apart from a few details, may be considered characteristic of all schools of thought that have arisen within the system.

A paper of a different character by Sheikh Kadhim Dojaily came next. The Sheikh is a learned Arab of Baghdad, and had undertaken to describe something of the Shiah branch of Islam. The audience listened to a historical statement of the origin and development of the Shiah movement with the greatest interest. Forming about one-third of the Moslems, they are chiefly found in Persia, Mesopotamia, Bahrain, and India, and are now divided into three main groups, according as they adhere to "The Principles," "The Reports," or to "Revelation." The first group maintain that man can make original contributions both to the principles and the derivative matter in religion; the second do not admit of "following," but stand by the Koran; the third group show great reverence to their Imams, and allow their great claims to spiritual power on earth.

The Sheikh then dealt with opinions common to all Shii, the one which differentiates them from other Moslems being the special belief as to the proper succession from Mohammed. As to the Khalifate, they hold that the Khalif is invisible, and has appointed no deputy.

Digitized by Google

Then came the paper by Al Haj, the Khalifat al Mirza Massiah Bashir ud Din, head of the Ahmadiyya movement, which has its headquarters at Qadian, in the Punjab. Supported by a band of green-turbaned scholars, the Khalifat al Massiah made a fine, impressive picture. His movement is about thirty-four years old, being founded by Hazrat Mirza Ghulam Ahmad hence the name Ahmadiyya) in 1890. He claimed to be the Madhi and the Messiah of ancient prophecy. He met great opposition, but with increasing success. The speaker is the third in succession to the founder. Missions have been sent to many countries. Ahmadiyyah claims to be the outcome of Islam, just as Christianity was of Judaism, an inevitable and necessary development, not to be as a new law, but to expound anew the teachings of Islam. The claim to be the Messiah was not a claim to be identical with Jesus, but to have received His power and spirit. The speaker gave great attention to showing that this age is one destined for the fulfilment of the promises of the ancient prophecy, and a long argument followed to prove that God still guides and inspires men as in the olden days. The speaker then gave a doctrinal discourse on what he described as regenerated Islam, beginning with the belief in the unity of God, upon which all other excellencies of belief and conduct depend. Finally, the speaker concluded by affirming the necessity of applying the moral qualities generated by religion to sociological and political problems.

BAHAISM.

First a paper was read by Mr. Mountford Mills, Bahai delegate from Canada. The paper began by referring to an address given by Abdul Baha in the City Temple, London, on September 10, 1911, in which he said: "There is one God; mankind is one; the foundations of religions are one. Let us worship Him, and give praise for *all* His great prophets and messengers who have manifested His brightness and glory." Thus there is no need to assert the fact that the Baha's cause seeks no competitive victory among the world's religions, and lays no additional frontiers among the boundaries already dividing mankind into different creeds, but rather its ideal is unity consciously binding the hearts of men. The origin of the cause coincided in point of time with the beginnings of what is considered the opening of a new era in human development. In Persia, between May 23, 1844, and July 9, 1850, occurred that remarkable series of events known to history as the "Episode of the Bab," though prior to this period the teaching had already spread in that country that a new spiritual leader would arise. Mirza Ali Muhammad, who took the title of the Gate (Bab), was this new leader, and within the short six years which elapsed between his declaration and his martyrdom he had succeeded in shattering the age-long inertia of Persia and in enlisting a large following. But he always asserted that he was but the forerunner of a greater than himself. This greater messenger of truth was Mirza Husayn Ali, a scion of a noble and wealthy Persian family, who was one of the foremost supporters of the Bab, and after suffering much in person and possessions at the hands of the priests of the established religion, was exiled to Baghdad and subsequently to Akka. It was just previous to his departure from Baghdad that Baha'ullah, as he had come to be known, declared that he was the one foretold by the Bab. His teachings were largely by letters, as all direct communication with his adherents was cut off during his forty years' imprisonment. These teachings reflected no acquired learning, but were the immediate experience in the soul of one who turned wholly and directly to God. According to them, religion is not one of life's aspects, but the predominant spirit expressing itself through all aspects; and again he teaches that all the founders of religion are successive, co-related expressions of the Will of God, identical as to purpose and function, diverse only in that each founder adapted the one divine teaching to the particular needs of his time. A brief summary of these teachings is that they comprise almost equally an interpretation of the fundamentally true in all religions, and encouragement and exhortation to respond with spirit, mind, and soul to the newer and greater possibilities of this age.

After the passing of Baha'ullah, May 28, 1892, his eldest son, Abdul Baha Abbas, succeeded as executive head of the cause and ex-founder of the teachings. These two duties Sir Abdul Baha Abbas, K.B.E., carried out with such success that the Bahai cause not only continued to progress in the land of its origin, but was carried far and wide over the earth, notably in the United States of America; and it has been through the words and writings of Abdul Baha that the essential principles of the cause received their direct applications to problems peculiar to Western civilisation. These essential principles are twelve, viz.: The oneness of the world of humanity; independent investigation of truth; the foundation of all religions is one; religion must be the cause of unity among mankind; religion must be in accord with science and reason; equality of men and women; abandonment of all prejudices; universal peace; universal education; solution of the economic question; a universal language; and international tribunal.

Next a paper was read by Mr. Ruhi Afnan, grandson of Abdul Baha. This dealt more particularly with the profound changes wrought by the Bahai principles in the lives of their followers. Baha'ullah, to reconcile the religions, laid it down as a guiding principle that the purpose of religion is to provide a social bond, to create a new force in man's life, to infuse in him the love of all his fellow-creatures. In order to eliminate the root cause of all forms of class hatred he proclaimed, "Do ye know why we have created you from one clay? That no one should exalt himself over another." Critics unable to deny the beauty and the force of Baha'ullah's teachings have yet maintained that they were but lofty ideals incapable of practical application to man's everyday life. This has, however, been abundantly proved not to be the case, as is evidenced by the progress which has been made in many directions in the amelioration of social conditions and the increasing tendency to consider many questions from an international rather than from the narrower national point of view. In the East, especially in Persia, the achievements of the Bahai cause have been great. In all Bahai communities where the means could be found schools have been opened for the education not only of boys, but more especially of girls, since Baha'ullah has stated that the latter must receive preferential treatment in the matter of education, being the prospective mothers of future generations, and thus the first teachers of

their offspring. In the West, where more progress had already been made by legislation, its influence has been mainly to create the spirit of international brotherhood and to wipe out religious, social and economic prejudices. The evidence from all countries where the Bahai cause has gained followers, and they are many, goes to prove the realisation of Abdul Baha's words, "The spirit of the cause is pulsating in the arteries of mankind."

"THE MOSLEM WORLD."

The October issue of *The Moslem World* contains extremely interesting matter, and, indeed, all its articles are well worth reading. They include "Latest Developments on the Khalifate Question," by Professor D. S. Margoliouth, "The Khalifate," by "Alun Yale," "Four Months in Nejd," by Dr. L. P. Dame, "Islam the Religion of Peace," by Muhammed Din, "A New Day in Persia," by Abraham Moorhatch, and "The New Mesopotamia," by H. A. Bilkert.

Of these we may single out, as especially valuable, Professor Margoliouth's article, Dr. Dame's, and Mr. Bilkert's. Professor Margoliouth takes what may now be described as the orthodox Arabist's view of Turkey's treatment of the Khalifate—it was "much more the frank recognition of a *fait accompli* than the infliction of a blow on Islam." Further, in view of the Wahhabi advance upon the Hejaz, Turkey is well out of the former obligation to provide liberty to all Moslems to perform the *haj*, for the probability is that, as happened last century, the Wahhabis will refuse all but the orthodox access to the Holy Places. It was not, he says, the Assembly of Angora which lost the Khalifate to the Ottomans, but a disastrous war for Turkey which involved the loss of Arabia.

Dr. Dame's story of his four months' stay in Nejd, begun in November of last year, has a very definite topical value. He personally paid medical attention to Ibn Saoud at Riyadh, and was able to gain first-class impressions of the Wahhabis. He is of the opinion that the Ikhwan movement is on the wane, and that Nejd is getting used to the ways of the foreigner. He further visited such places as Shukra, Aneyza, and Boreida, which previously no doctor had ever been to. Altogether, an unusually "full" article.

Mr. Bilkert's article on Mesopotamia notes the growth, apart from the tribesmen, of national feeling, the intellectual awakening and the thirst for Western education. Papers are very widely produced and read. Young Iraqis are turning their backs on Mohammedanism, Christianity, and Judaism for the softer paths of agnosticism and atheism. Finally, the whole country is now in a state of flux, so that the present is the time to introduce improvements, before Mesopotamian society becomes, as it inevitably must, once more fixed.

INDIAN ART REVIVAL IN BOMBAY.

The India Society has organised a lecture for to-day (Thursday), at 8.15 p.m., at 21, Cromwell Road. Captain Gladstone Solomon, the Director of the Bombay School of Art, will lecture on the above subject, and will illustrate his remarks with examples of the work of his students, lent by courtesy of Sir George Lloyd (late Governor of Bombay), who during his tenure of office did so much to encourage the movement. The India Society intends this to be the first of a series of lectures to illustrate the progress of modern Indian art in the various provinces. The chair will be taken by Sir Francis Younghusband. Capt. Gladstone Solomon will deliver a similar lecture in Paris at the beginning of November under the auspices of the "Association Francaise des Amis de l'Orient," with which the India Society is in co-operation.

A LONDON MOSQUE.

On October 19, under the auspices of the Ahmadiyya Islamic community, the ceremony of laying the foundation-stone of the first London Mosque was performed at 63, Melrose Road, Southfields, S.W.18. His Holiness the Khalifatul Masih presided over the function. This is the first Mosque in London erected by Moslems themselves. The building, when completed, will, it is estimated, have cost about £10,000.

Father Raphael Roditch, a Franciscan Friar, has been appointed Catholic Archbishop of Belgrade.

The appointment is gazetted of Sir Stanley Fisher (Chief Justice, Cyprus) to be the Chief Justice of Trinidad and Tobago.

Kemel Pasha, who has been appointed Turkish Ambassador in Berlin, arrived there last week, and has taken up his duties.

The Ottoman Prince Seif-ed-Din Effendi arrived last week from Beyrout, in Marseilles, on his way to join his brother, the Khalif Abdul Mejid, on the Riviera.

Albania, Bulgaria, Greece, and Yugoslavia are among the countries which have signed the Arbitration Protocol passed by the recent Assembly of the League of Nations.

Mgr. Damianos, the Orthodox Patriarch of Jerusalem, has sent a delegation to Belgrade, which on October 17 invested King Alexander with the decoration of the Order of the Guardians of the Holy Sepulchre.

Georgian insurgents stopped an express train recently between Kutais and Rion, and after robbing the passengers of their money and valuables, shot three Communist members of the Kutais' Executive Committee and one Communist newspaper correspondent.

NOTES AND NEWS.

167, Strand, London, W.C.2,
Tuesday Morning.

The German Loan.

As anticipated, the German Loan was an overwhelming success. The amount required was £12,000,000, and the applications amounted to between £150,000,000 and £160,000,000. In this over-subscription the "stags" undoubtedly played their part, probably, indeed, a very important rôle. Obviously, the allotment to applicants will represent only a small percentage of their applications. It was inevitable, of course, that all people should not see eye to eye in the matter of this loan, and one can well understand that a very large number of individuals would be unable to support it in any circumstances. But it has to be regarded as a disagreeable necessity. The ultimate result may or may not be disastrous—as to that time alone can prove—but it is very certain that there can be no real revival of world trade with Germany, so to speak, out of the market, and it is only by taking a risk that the world can have a real chance to recover from the effects of the war.

The Cotton Situation.

The position with regard to the supply of raw cotton is very interesting. At a time when trade is definitely reviving it would have been deplorable if the shortage of the commodity which has so long been foreseen as a probability were to become a *fait accompli*, for if there is one thing that would check business it is dear cotton. However, as fate would have it, crops all round promise to be particularly good this year, and it appears certain now, provided there is not an abnormal demand for cotton goods, that we may see cotton at a relatively cheap price. It has been expected that the American crop will be in the neighbourhood of 13,000,000 bales, but the forecasts are improving, and it may well turn out that the yield will be well in advance of that figure. As regards the Egyptian crop, the expectation is that it will be over seven million kantars, so that the position generally, if these figures are borne out, will be most favourable. It must be emphasised, however, that, because the crop this year may be sufficient to meet the modified requirements of the world, there must still be no slackening in the work of developing cotton growing within the Empire. There can be no real security from Lancashire's point of view until the supplies of cotton grown within the Empire are sufficient to make us practically independent of the changes and chances of crops in other parts of the world. And that, unfortunately, will take a long time to accomplish.

Prospects for Wembley in 1925.

A factor of considerable importance in weighing the prospects of the Wembley Exhibition next year (should it be decided to continue it) is the International Exhibition that is to be opened in Paris in April. Visitors from abroad to Wembley have been far below expectations, and this has been due to two things—the prevailing economic situation, and inadequate publicity. By next spring conditions in general will have greatly improved, if present indications are to be relied upon, and it may be taken for granted that the Paris Exhibition will attract very large numbers of visitors from all parts of the Continent, and not least from the Near East. Once they are in Paris, and relatively so near Wembley, it is extremely probable that they will take the opportunity of visiting the Exhibition here also, provided, of course, that its attractions are adequately brought before their notice.

A Bank for Iraq.

It was inevitable that sooner or later the suggestion should be made that a national bank should be established in Iraq. Recently the banks with branches in the country were invited to give their views on the subject, and I understand that the Imperial Ottoman Bank has made certain proposals to the authorities. There for the moment the matter stands, but while the anticipation of any rapid development would perhaps be unwise, it may be expected that in a not distant future something may be done on the lines indicated.

The Burmah Dividend.

The announcement of an interim dividend of 12½ per cent., less tax, by the Burmah Oil Company, as against 10 per cent., was in accordance with expectations. It came, nevertheless, as a welcome fillip to the market, which has been none too cheerful for some time, as a result of a variety of reasons, chief among them being the fall in oil prices. We shall shortly be having the report of the Phœnix Oil and Transport Company, which is, needless to say, being eagerly awaited on account of the report of the excellent progress that is being made by this concern.

Rubber Still Rising.

Since I last wrote the price of rubber has continued to creep up, very slowly, it is true, but none the less steadily, and at the time of writing the raw commodity now stands at about 1s. 4½d. It is now all but certain that there will be a further restriction of 5 per cent. at the end of this month, and that brings us within sight of a much higher price for rubber, for the existing stocks are rapidly decreasing, and we are approaching a point when

Digitized by Google

there will be a very definite shortage of the commodity. In my opinion the next three months will see rubber reach a price considerably above that at which it now stands, and in the circumstances the prospects for holders of rubber shares must be reckoned as extremely good. So far the share market has scarcely reflected the movement of the commodity, but it will certainly do so after the next restriction.

COMMENTATOR.

BULGARIA'S SUNFLOWER OIL SEED CRUSHING INDUSTRY.

(*From a Correspondent.*)

Though this industry has not yet assumed a place in the forefront of Bulgarian exports, it is forging its way ahead slowly but surely. It was found last year that Paris was a large consumer of this oil, which was required to replace Chinese wood oil and also Kauri gum from New Zealand. The former had risen in price to £112 per ton, and for the latter the demand is much greater than the supply. This oil and gum are used in the manufacture of varnishes, linoleums, etc.

There was, therefore, a large export from Bulgaria, who could place her sunflower seed oil in France at about £80 a ton. This had a serious effect in Bulgaria, where this oil is used for cooking purposes, for the country is quite able to consume the whole of the present production. Sunflower seed oil had to be imported from Roumania and South Russia to meet the requirements of the country, and prices rose to 48 levas per kilo, whereas the sales to France were made on a basis of 40 levas per kilo. The result of this has been that this year there is nearly three times the area planted with sunflower seed, and it is calculated that there will now be sufficient oil for the requirements of the country and also several thousand tons for export.

As with most other industries of this country, this industry is suffering from want of capital. The peasant will not sow until he is assured that whatever crop he produces will be taken over by the mills, and he requires and receives from the mill-owners advances from the day the plant breaks its way through the soil. The mill-owners who can crush, say, 3 tons of seed per day (this is the present average crushing of the mills here) have not got the capital to be able to advance 50 per cent. of the value of the seed before they receive it, the ruling price now being 6 levas per kilo: therefore, they in their turn approach interested parties and endeavour to sell ahead not only the oil, but also the residue, known as sunflower oil seed cake, which is a very valuable cattle food, and finds a very ready market in Germany and other countries. It depends entirely upon the success of the mill-owners in finding buyers who are willing to give advances on the potential output of the mills as to how many months in the year the mills can work.

Both the quality of the oil and the cake depend, not only on the quality of the seed crop, but also on the method of crushing; and each district appears to produce a cake and an oil of different quality and, therefore, value. The newer mills with up-to-date crushing plant produce a cake of very low quality, the old peasant mills producing an article rich in both oil and protein. The analysis of a sample taken from a peasant mill last year showed 55 per cent. of oil and protein, whereas an up-to-date mill run by an experienced man showed only 43 per cent. of oil and protein. The harvest this year, though satisfactory as regards quantity, is not of good quality; the seeds are smaller and thinner.

Owing to the bad forage harvesting season in Europe this year there is at present a large demand for oil cake. In May of this year cake of good quality could be purchased for 1.50 to 1.80 levas per kilo. This price has gradually advanced, and cake is to-day quoted at 3.50 to 3.60 levas per kilo franco mill.

CHESS.

BY "CARO-KANN."

The season's activities have still to commence, and so news is at a discount. The League matches will be beginning in a few days, and the end of the month will see many of the tournaments in progress. Next week I shall be in a position to give the competitors in some of the principal tournaments.

The following game was played in the British Championship at Southport between Mr. H. E. Price (White) and Mr. F. D. Yates (Black):—1, P—K4, P—K4; 2, Kt—KB3, Kt—QB3; 3, B—Kt5, P—QR3; 4, B—R4, Kt—B3; 5, Castles, P—Q3; 6, R—K1, B—K2; 7, P—B3, Castles; 8, P—Q4, P—QKt4; 9, B—Kt3, B—Kt5; 10, B—K3, QKt—R4; 11, B—B2, Kt—B5; 12, P—QKt3, Kt x B; 13, R x Kt, Kt—Q2; 14, P—KR3, B—R4; 15, P—KKt4, B—Kt3; 16, QKt—Q2, P—QB3; 17, Kt—B1, Q—B2; 18, Kt—Kt3 (a), B—B3; 19, K—Kt2, KR—K1; 20, P—KR4, P—Q4 (b); 21, P—Kt5, P x P; 22, Kt—R2, P x P; 23, P x P, B—K2; 24, P—R5, KB x P; 25, P x B, B x R; 26, P x BP ch, K x P; 27, P x B, Kt—B3; 28, Kt—Kt4, K—Kt1; 29, Kt x Kt ch, P x Kt; 30, Q—R5, K—R1; 31, R—R1, R—K2; 32, Q—B5, R—Kt2; 33, R—R3, Q—R4; 34, B x P, Q—Q7 ch; 35, K—B1, QR—R2; 36, Kt—K2, QR—KB2; 37, Q—B8 ch, R—Kt1; 38, Q—K6, KR—B1; 39, Q—B5, K—Kt1; 40, R x RP, Resigns.

THE MOTOR SHOW.

It is the fashion to-day to make any occasion a pretext for superlatives, but one will certainly not be incurring the danger of being charged with undue exuberance in describing this year's Motor Show at Olympia as a wonderful exhibition. That it undoubtedly is. At each succeeding Motor Show since the War it has been possible to record an advance in the quality and variety of cars, and the present show is no exception; indeed, if anything, the progress that has been made in the industry is more notable on the present occasion. The Show affords overwhelming evidence of the progress made by British motor manufacturers, and I wish it were possible to say that, as a whole, they show the same enterprise and initiative in the export markets in which the foreigner is at present supreme that they do in turning out new models. It is possible at the Show to compare the British products with those of our foreign competitors, and it is perfectly evident that in this industry we have little to learn from abroad, that British cars of all varieties are fully capable of holding their own against foreign competition—that is, of course, under anything approaching equal conditions—and that if this country is not leading the way in the development of the motor it is not far from doing so. It is very evident indeed that British cars ought to be playing a much greater part in the export trade than they do, and it is to be hoped that with the generally improving political outlook abroad, which will mean the gradual development of trade, British manufacturers will endeavour to take advantage of the openings that exist in external markets, such as the Near East, and that it will be possible to look back on the Motor Show of 1924 as a landmark in the development of the trade.

The outstanding feature of the Show is value. There has been a further reduction in prices, while the quality is higher than ever. It is really amazing to learn what is now included in a moderately priced car. But a few years ago the same type of car would have been possible only for the rich. It just shows the advance that has been made that to-day the expenditure of relatively a few pounds will provide one with quite a serviceable car. Motoring is, in fact, in process of being democratised, and, considering to-day's prices, it would seem that the time when motoring can be almost anyone's pursuit has arrived. Certainly it is doubtful if cars will ever be very much cheaper than they are to-day. £90 is a small amount to pay for a motor, and at that figure a very useful car can be obtained, and while the moderate purse is thus catered for, there is an endless variety of makes and sizes to suit all tastes and all purses, ranging from modest two-seaters to the splendid luxury cars which have won a unique reputation for themselves throughout the world, and in regard to which there is not the slightest fear of foreign competition.

As usual, two of the outstanding attractions of the Show are the exhibits of Rolls-Royce and the Napier Company. Three cars are shown on the Rolls-Royce stand, all of them exquisite models, two being examples of the firm's 40-50 h.p. 6-cylinder car and the third being a 20 h.p. 6-cylinder car. Of the 40-50 h.p. models, one has an enclosed-drive cabriolet de ville body by Barker and Co., and is painted in silver grey and black, while the other has an enclosed-drive limousine body by Hooper and Co., and is painted in black with a white line. These are both six-seaters, while the 20 h.p. car seats two inside and has two seats in the dickey. The engine of this car is 3 bore by 4½ stroke, the Treasury rating being 21.6 h.p., and there are overhead valves, pump-water circulation, battery ignition, and a Rolls-Royce carburettor. The car has three forward speeds and brakes on the rear-wheel drums, and has a coupé cabriolet body by Windovers, painted blue and black. The Napier Company also shows three models of the 40-50 h.p. 6-cylinder—a saloon, a seven-seater limousine, and a coupé de ville seating six, the bodies in each case being by Cunard. I have dealt at length on previous occasions with the supreme excellence of the cars of these famous companies, and I do not propose to say more now than that their exhibits this year are fully in keeping with the reputation of these companies.

The stand of the Austin Motor Company is, as always, full of interest. There are two examples of the "Austin Twenty," an enclosed landaulette and a saloon, two of the "Austin Twelve," a saloon and a tourer, and an "Austin Seven" four-seater and an "Austin Seven" chassis. A feature of the cars is that they all have four-wheel brakes. The Crossley stand is also very interesting. Three types of cars are shown—the 14 h.p., the 19.6 h.p., and the 20-70 h.p.—and of the first-named there are on view a tourer, a saloon, and the chassis. Four wheel brakes are provided for all the models at a slight increase in the cost. The 14 h.p. model is an eminently workmanlike car, which can be thoroughly depended upon, and is just the type of motor to appeal to the ordinary motorist. The 19.6 car is too well known to need much recommendation. This car, it may be recalled, broke all R.A.C. certified trial car mileage records in 1923. The 20-70 h.p. car, which may be regarded as the perfect motor for rapid touring, has a guaranteed speed of 75 miles per hour, but withal is perfectly easy to handle.

The Rover Company show the "Rover Eight," their 9.20 h.p. car, and their 14.45 h.p. car and chassis. The "Rover Eight" is specially interesting. It has an engine 85 by 100 mm., single dry disc plate clutch, a three-speed gear box with central control and final worm drive. Without a self-starter, clock, or speedometer, the car is priced at £160, at which it is certain to be in great demand. The 9.20 h.p. is provided in two forms

either as a single-door four-seater or as a four-seater with three doors, and complete equipment. The latter car has a ground clearance of 7 in. The 14.45 h.p., which is a new model, has an engine 75 bore by 120 stroke, with a single-plate clutch, four-speed gear box, and spiral bevel final drive, and has internal expanding brakes on all four wheels. The car has most graceful outlines, and should prove very popular. The Leyland Motors show the 10 h.p. Trojan with a four-seater body. The chassis has a two-pair two-stroke engine, 2½ bore by 4¾ stroke, water-cooled. It is primed and started from the driver's seat. Epicyclic gears are fitted, and there are two independent brakes, one acting on transmission and the other on the rear axle. There is petroil lubrication, with a special hot-spot separator. The design of the mudguards and hubs is such that pneumatic tyres can be fitted instead of solids, if that be desired. The four-seater has a two-piece windscreen, and is fitted with a folding hood and side curtains, and is an eminently serviceable car, and at the moderate price of £148 should be in great request.

The stand of Morris Motors is inevitably a centre of attraction. This firm are showing the 11.9 h.p. Morris Cowley model in two-seater and four-seater type, and also the chassis alone, while the 14.28 h.p. Morris-Oxford is shown as a four-five-seater and as a saloon. The 11.9 h.p. car has an engine 69 bore by 102 stroke, with thermo-syphon water circulation. There is a three forward speed gear-box and spiral bevel final drive, and the car is fitted with internal expanding brakes on the rear wheels. The wheelbase is 8 ft. 6 in., and there is a clearance of 8½ in. The two-seater takes two persons inside and two in a large dickey. The four-seater has side curtains, which form a rear windscreen when the car is open. The 14.28 h.p. model has an engine 75 bore by 102 stroke, with three forward speeds, the engine, clutch, and gear box being built as a unit. Internal expanding brakes are fitted on all four wheels, and the price of £285 includes an all-weather hood, speedometer, Boyce motometer, petrol gauge, a mixture regulator on the steering column, windscreen wiper, driving mirror, etc., and is one of the most admirably equipped cars ever put on the market at the price.

The stand of A.C. Cars shows two 16 h.p. cars and two 12 h.p. cars. One of the 16 h.p. cars is a four-seater. It has an engine 65 bore by 100 stroke, with overhead valves, pump-water circulation, and three forward speeds. The car has shock absorbers on both axles, and there is a ground clearance of 9 in. The body has four doors, and is painted in blue, and is a very admirable production. The other 16 h.p. model seats three people inside and two in the dickey, and has been designed to give the comfort of a closed or open car as desired. The 12 h.p. cars have an engine 69 bore by 100 stroke, with side by side valves, thermo syphon water circulation, pump lubrication, three forward speeds, and worm final drive. The ground clearance is 9 in. One of the cars is a Royal two-seater, which has provision for two persons also in a dickey. The other is a Sovereign model two-seater, which also accommodates four persons.

(To be concluded.)

INDIA'S TRADE IN AUGUST.

Increase in Imports.

H.M. Trade Commissioner in Calcutta, in a report on the foreign sea-borne trade of India during August, states :—

The trade returns of British India for the month of August, 1924, showed, as compared with the preceding month, an increase in the values of imports, coupled with decreases in exports and re-exports. The imports of private merchandise totalled Rs.20.65 lakhs in August, 1924, and showed an increase of Rs.67 lakhs as compared with the preceding month. The value of the exports of Indian produce and manufactures fell from Rs.24,19 laks in July, 1924, to Rs.24,02 lakhs in August, 1924, and re-exports also decreased to Rs.1.13 lakhs.

Measured by the statistics of merchandise and treasure, the visible balance of trade was against India to the extent of Rs. 83 lakhs in August, 1924, as compared with a favourable balance of Rs. 3,20 lakhs in July, 1924, and of Rs. 3,80 lakhs a year ago. During the five months ending August, 1924, the visible balance of trade in merchandise and treasure was Rs. 18,57 lakhs in favour of India, as compared with Rs. 29,80 lakhs in the corresponding period of the preceding year. The balance of the remittances of funds in August, 1924, was minus Rs. 1,76 lakhs.

As compared with August, 1923, the imports of food, drink and tobacco increased by Rs. 56 lakhs to Rs. 3,48 lakhs, raw materials by Rs. 5 lakhs to Rs. 1,81 lakhs, and manufactured articles by Rs. 3,11 lakhs to Rs. 15,08 lakhs. Under food, drink and tobacco, sugar 16 D.S. and above including beet sugar showed an increase of 22,000 tons in quantity and Rs. 45 lakhs in value. Imports of provisions and oilman's stores also accounted for an increase of Rs. 15 lakhs in value. Under raw materials, raw cotton showed an increase of Rs. 13 lakhs, and kerosene oil of Rs. 11 lakhs, while

there were decreases of Rs. 12 and Rs. 9 lakhs under precious stones and pearls unset, and raw silk, respectively. Of manufactured articles, the imports of cotton yarn and piecegoods showed a considerable increase. Grey goods rose in quantity from 35 million yards to 69 million yards, and in value by Rs. 1,10 lakhs to Rs. 2,27 lakhs. White goods rose by 8 million yards in quantity and by Rs. 36 lakhs in value, and coloured goods by 6 million yards in quantity, and Rs. 33 lakhs in value. Increases were also noticeable under cotton yarn (+Rs. 42 lakhs), iron and steel (+Rs. 20 lakhs), other metals (+Rs. 22 lakhs) and woollen piecegoods (+Rs. 19 lakhs), while railway plant and rolling stock showed a decrease of Rs. 26 lakhs.

As regards exports of Indian merchandise, food, drink, and tobacco, as compared with August, 1923, increased by Rs. 93 lakhs to Rs. 9,10 lakhs, owing mainly to an increase in the exports of foodgrains (+Rs. 85 lakhs). Raw materials and produce exported decreased by Rs. 35 lakhs to Rs. 7,52 lakhs. Under this group oilseeds decreased by Rs. 49 lakhs, lac by Rs. 41 lakhs, raw jute by Rs. 27 lakhs, and raw hides and skins by Rs. 20 lakhs, set off by an increase of Rs. 85 lakhs under raw cotton. Of the total shipment of 20,000 tons of raw cotton, Japan took 11,400 tons, or 57 per cent.; Italy 2,700 tons, or 13 per cent.; China 1,300 tons: Belgium 1,200 tons; the United Kingdom 900 tons; and France 400 tons. Exports of raw jute decreased in quantity from 25,300 tons to 15,200 tons, and in value from Rs. 83 to Rs. 56 lakhs. Manufactured goods rose by Rs. 83 lakhs to Rs. 7,16 lakhs. The shipments of gunny bags in August, 1924, increased in number from 40 millions to 41 millions, and in value by Rs. 38 lakhs to Rs. 2,22 lakhs. The yardage of gunny cloth exported also rose from 126 millions, valued at Rs. 2,12 lakhs to 135 millions, valued at Rs. 2,52 lakhs.

ARTS OF PALESTINE.

A sale of the arts of Palestine is proceeding at the Palestine Pavilion, Wembley, and will continue until November 1. The sale includes many beautiful and interesting objects representing the ancient crafts of the Holy Land, which have been collected with a view to interesting the British public in these industries and helping the native workers, who are in a distressed condition. Fabrics, laces, jewellery, and pottery are among many beautiful and decorative objects offered at reduced prices.

NEWS FROM ALL SOURCES.

The traffic receipts of the South Indian Railway Company for the week ended September 13 amounted to Rs. 9,93,984, making the total from April 1 Rs. 2,25,23,395.

The London offices of the Sudan Government Railways and Steamers have been removed from 5, Northumberland Avenue, to Wellington House, Buckingham Gate, S.W.1.

The Bank of England are prepared to receive the coupons due November 1 on Egyptian Unified Bonds. The necessary lists can be procured on application at the dividend pay office, 5-6, Lombard Street, E.C.

The whole of the goods exhibited in the Cyprus Pavilion at the British Empire Exhibition have been reduced very considerably in price, and will be sold retail for the remainder of the exhibition. Consequently, bargains are offered in carpets, curtains, silks, woollens, fur skins, rugs, pottery, wines, and other articles.

The London Chamber of Commerce, which has been actively engaged in pressing for the speeding-up—and cheapening—of postal communications, has sent a letter to the Cunard Steamship Company congratulating them upon their action in again making Plymouth a port of call before Cherbourg. One result of that step has been to reduce, by twelve hours, the time taken in delivering the mails carried by the company's ships—an important consideration to traders having business relations with the United States and Canada

Cotton and Cotton Goods.

THE EGYPTIAN MARKET.

Futures Steady.

The Alexandria Commercial Company, in their report for the week ended October 7, state :—

Since our last report the futures market has been very steady; the net changes on the week are :—Sakellaridis : $0.50 up for November, $0.60 up for January, $0.75 up for March. Ashmouni : $0.65 down for October, $0.42 down for December, $0.45 down for February. The demand from abroad has been moderate, and prices have again been more maintained by speculative purchases than by genuine trade demand. Sakel November has been largely dealt in, and has shown quite exceptional strength, its premium over October Ashmouni touching $11.40 at Tuesday's close; we consider this premium rather big, and one that might restrict the use of Sakel. We are inclined to expect that this difference will narrow as the season advances and the weight of Sakel arrivals becomes more felt; as we have said in our recent reports, the Sakel crop has this year been rather successful, and, despite the reduction in acreage, the production will be bigger than anticipated. The Government has not been in the market during the week. We consider to-day's prices, both for Sakel and Ashmouni, rather too high in comparison with other markets, and we expect that the heavy arrivals of the next two months will tend to reduce the present differences. The week's receipts amount to 235,717 krs., against exports 98,703 krs.; the stock stands at 890,774 krs.

Spot :—Minet-el-Bassal has only been open four days this week, but a good business has been done, and sales amount to about 19,700 bales, of which we estimate 9,000 bales Sakel, 5,200 bales Uppers, 4,600 bales Zagora, 700 bales Pilion, 200 bales White, and a few bales of Brown.

Sakellaridis.—There has been business in all grades from Fully Fair upwards, but the bulk has been done in Fully Good Fair and better. Prices of spot against contracts are without much change, but are inclined to ease. High prices have been paid for Fully Good and Extra.

Uppers.—The demand has been mainly for the medium and better qualities. Prices of spot against contracts are without much change, except Good Fair, which is a little easier.

Lower Egypt Zagora has attracted rather more attention this week, owing to the relatively cheap premiums at which it can be bought as compared with Uppers.

Pilion.—A fair business has been done chiefly in the better grades, which are rather dearer, in comparison with contracts, than last week.

White.—A moderate business has been done in Fully Good Fair and better. Prices of spot against contracts are inclined to ease.

Crop 1924.—Our agricultural expert has now completed his tour in Upper and Lower Egypt, and we give as this year's preliminary crop estimate 7¼ to 7½ million kantars. We base this estimate on an acreage of about 1,950,000 feddans, which we consider to be nearer the mark than that of 1,787,843 given by the Government. We estimate the production of the various varieties as follows: Sakel about 3¼ million kantars, Ashmouni Zagora about 3½ million, Pilion about ¼ million, White about ¼ million, and other varieties about ⅛ million kantars.

The report of the Alexandria General Produce Association for September reads :—

Lower Egypt.—The temperature during the month of September has been, on the whole, high and rather favourable to the crop. There have been some morning mists and heavy dews, which have caused some damage. The attacks of pink worm have increased the damage reported in our last report. We estimate the percentage of bolls which have been damaged by worm at 25 to 30 per cent. The first picking has commenced fifteen days earlier than last year; the results are superior in quantity, not only because in many cases the bolls of the second picking have been picked simultaneously with the first, but also because the varieties Zagora and Pilion (which have a larger yield) have been planted in larger proportions. Advices regarding the second picking are unfavourable, and lead us to foresee much smaller results than last year. The ginning yield is inferior to that of last season.

Upper Egypt and Fayoum.—It now appears that the great heat experienced this summer, followed by much damp, has caused a certain amount of damage, and consequently the results of the first picking are, on the whole, less than those of last year, and prospects for the second picking are rather bad; it is thought that the increase in the acreage planted with cotton compensates the deficit in quantity. The ginning yield is irregular, and generally inferior to that of last year.

COTTON TRADE REVIEW.

A Dull Week.

The Manchester Cotton Trade Review of the Imperial Ottoman Bank for the week ended October 18 states :—

This market has experienced a dull week. Raw cotton has exhibited a falling tendency, and buyers seem to be holding off until they think the bottom has been reached. A further inducement to them to do so is to be found in the expectation that at an early date spinners will resume full time, and that, in consequence, yarn and cloth will then be available on cheaper terms.

Yarn.—Operations have been restricted to urgent requirements, and the turnover has not been so large as in recent weeks. Nevertheless, the re-

stricted output of American counts has been fairly well absorbed, and spinners maintain their firmer attitude, quotations being reduced only to the extent of the fall in raw cotton prices or even a little less. The high price of Egyptian cotton seems to be acting as a deterrent to operations in those counts, and business has been very quiet. Good order books, however, enable spinners to maintain quotations firmly. Exports of yarn last month amounted to 11,316,200 lbs., as compared with 11.851,900 lbs. in August and 11,987,180 lbs. in September last year.

Cloth.—Numerous offers have been received from abroad at prices which allow for the full drop in raw cotton, but these manufacturers are by no means prepared to entertain. India has taken moderate quantities, but very little has been done for China, whilst contracts for Egypt and the Near East have been fewer than recently. Shipments of cloth in September amounted to 359,971,300 sq. yds., as compared with 373,643,900 sq. yds. in August and 344,318,800 sq. yds. in September last year.

Raw Cotton.—The feeling in this market inclines towards still lower prices, and the tendency has been downward almost daily. The weather reports from America have been exceptionally good, and give rise in some quarters to hopes that the crop will even yet turn out much better than is to be expected, judging from the bureau reports. Closing quotations yesterday were as follows:—American Middling 13.53, Egyptian Fully Good Fair 24.85.

LIVERPOOL COTTON REPORT.

Inquiry on Small Scale.

Messrs. Reynolds and Gibson report as follows for the week ended October 15:—

Egyptian Futures.—In spite of a substantial drop in the American markets, our contract has maintained a comparatively firm undertone throughout the week, the heavy discount at which we are running below Alexandria, scarciey of local offerings, and the heavy premium of spot cotton over contract values, effectively checking any declining tendency. The present position of our market is quite abnormal owing to the discrepancy in values ruling between here and Alexandria. The strength of the latter market is surprising, in view of the fact that the crop should now be marketing freely; no doubt heavy sales of early shipment cotton are now in process of being covered, and with these filled the weight of the crop must surely bring the markets into line again. A strike of carters in Alexandria during the past two days has had the effect of holding up supplies and delaying shipments; if prolonged, the dispute would be a serious matter for those dependent on "immediate" or prompt shipment cotton, but we are informed that a settlement is expected during the next day or so. A further widening out in the Egyptian and American straddle difference has taken place during the week, the November options in the respective markets now standing at 785 points, a wide margin and one at which, if maintained for any length of time, will probably drive a certain section of Egyptian users to other spinning qualities. Manchester reports continue to be satisfactory, with the bulk of the business for immediate or near deliveries; spinners still show little disposition to cover further than their bare commitments in actual at the present level. Taking a long view of the market, we consider prices on the high side, but. in view of the fact that Liverpool is the cheaper market, certainly recommend those who are prepared to work on the short side to put out their sales in the Alexandria Sakel contract.

Egyptian Spot.—The indication towards lower prices furnished by last week's Bureau Report has had the effect of encouraging spinners to hold out in the hope of seeing still lower rates. Consequently, although a fair inquiry has continued, the majority have contented themselves with merely keeping posted as to the trend of prices, and what business has taken place has been strictly of a hand-to-mouth character. In Sakellaridis, cotton about Strictly Fully Good Fair has been frequently asked for, but no cotton of this description has been forthcoming, the nearest supply apparently being on the s.s. "Hatasu," due here about the end of this week. A considerable proportion of this vessel's Sakel cargo has probably been sold afloat, and it is difficult to foresee from what quarter the present scarcity here can be relieved during the next few weeks. Good prices are being asked and obtained for this style of cotton, 425 to 450 on November (say 25d.) being a fair quotation to-day. This time last year, the same cotton was changing hands at approximately 18.75d.

Rather more business has been done in the better cotton at about 550 to 600 on. but the high prices asked are preventing this inquiry from broadening. During the next few weeks, when more cotton will be available, the basis should ease considerably, and it is for this, of course, that spinners are waiting anxiously. During the week, the difference between the official spot quotations and futures has narrowed considerably, and the general opinion is that there is plenty of margin still for a further movement in the same direction. In Uppers, a good inquiry has been witnessed, and with a plentiful supply now available, either on the spot or close at hand, the basis has again eased. The official quotation for Good Uppers is to-day quoted as 18.10d., but the cotton can actually be bought at a penny less. It is generally expected that prices for Upper Cotton will be reduced still further in the near future. In Alexandria itself, a considerable widening in the difference between Uppers and Sakel is confidently expected. Incidentally, Alexandria is, at the moment, the chief impediment in the way of lower prices, and exporters, in the face of a series of strong and steady markets, have not been inclined to give anything away.

Good Pilion has been sold this week at 20.75d. The inquiry for this cotton has not been maintained up to last week's level. Business in Sudan cotton has been on a moderate scale only. Brown and White have come in for a small share of attention. Low cottons are still pressed for sale with poor results. C.i.f. business showed some signs of activity at the commencement of the week, but during the last few days has rather tailed off. Forwardings to spinners for the week ending 10th inst. were returned as 8,214 bales. A carters' strike has been reported in Alexandria, but as exporters are still offering for "immediate shipment" it is evident that no great importance is attached to it. Estimated sales, 1,100 bales Egyptians and 500 bales Sudan. Quotations of Sakel are 20 points lower for Extra Fine; 40 points lower for Fine to Good Fair, and 5 points lower for Fair. Uppers and Brown are reduced 95 points, with Fair exceptionally 70 points lower. F.G.F. Sakel to-day 25.05d.

Reuter's Bucharest correspondent, in a message dated October 14, states:—"An agreement is announced here between the London Stock Exchange and the Roumanian Government relating to the acceptance of certain Roumanian bonds now held by British subjects, which formerly had belonged to enemy subjects. As a result of the visit to London of M. Vintila Bratiano, the Minister of Finance, the Government has accepted the bonds which formed part of the British share. Consequently, the Stock Exchange has resumed the quotation of Roumanian loan bonds which had been suspended.

Near East Markets.

LONDON PRODUCE REPORT.

Further Rise in Coffee.

(From Our Own Correspondent.)

London, Tuesday Morning.

Coffee.—The market has remained very firm, and prices have advanced all along the line. Costa Rica is 5s. up at 170s., East Indian at 150s. is 8s. up, Kenya has advanced 6s. at 144s., while Santos at 112s. is 4s. up.

Sugar.—Home refined has continued in fair request at unchanged prices. Tate's cubes are 42s. 9d., London granulated is 37s. 10½d., while Lyle's granulated is 38s. 1½d. Foreign descriptions have been dull. West Indian crystallised is 6d. down at 35s., White Java at 35s. is 1½d. lower, while Czech granulated is unchanged at 22s. 6d. Futures are firm: November, 20s. 3d.; December, 20s. 1½d.; March, 19s. 10½d.; May, 20s.

Maize.—A fair business has taken place. La Plata has been done at 49s. 3d. for November-December, which is well in advance of last week's rates.

Currants.—Business in this commodity has continued to be brisk. Vostizzas have been in special request, and supplies of this variety are somewhat restricted at the moment. Gulf and Amalias have also been moving off freely. Prices remain roughly at last week's levels.

Sultanas.—A very firm tone has been in evidence in the market, and prices have risen sharply. This is due to the continuance of the heavy demand for the continent, and to the shortage of supplies. Cretans have now been very largely absorbed, while it looks as if the supply of really fine Smyrna sultanas this season will be very small.

Figs.—A steady business has been done, and the excellence of the fruit has done much to stimulate the demand. Here also there is a distinct prospect of a fruit shortage, so high prices must be looked for.

Plums.—There has been a fair demand for this commodity.

Dates.—There is nothing of special interest to report. Good supplies will shortly be forthcoming, and no doubt business will then expand.

Oilcakes.—The market has been quite firm. Linseed cake is unchanged at 280s., cottonseed cake is the same at 180s., while coconut cake is unaltered at 240s.

Oilseeds.—Linseed has been very firm, Indian being 9d. up at 24s. 10½d., while La Plata is 9d. up at 22s. 7½d. Rapeseed has been firm. Toria is 3d. up at 24s. 7½d., while real bold Ferozepore is 3d. up at 24s. 1½d. Cottonseed has been strong. Indian is 1½d. up at 12s., Egyptian black is 9d. up at 14s., while Sakellaridis is 6d. up at 14s.

Seed Oils.—Linseed oil has been firm, closing 1s. 6d. up at 46s. 9d. Rape oil has been firm, with crude 1s. up at 51s., and technical refined 2s. up at 55s. Cotton oil has been steady. Refined common edible is 1s. up at 51s. Egyptian crude is 6d. up at 45s., while deodorised is 1s. up at 53s.

The directors of the Midland Bank, Ltd., announce that they have elected Lord Kylsant, G.C.M.G., to a seat on their board.

For their Harworth Main Colliery Messrs. Barber, Walker have ordered from Vickers, Ltd., Barrow-in-Furness, a complete and exactly duplicate set of winding engine mechanical parts. The main contractors are the Metropolitan Vickers Electrical Co., Ltd., and the winding engine is said to be the largest electrically driven winder in this country.

ABYSSINIAN CURRENCY SHORTAGE.

The following is taken from an article in the current issue of the *Journal* of the Sudan Chamber of Commerce on the Sudan's trade with Abyssinia:—

The greatest hindrance to trade with Abyssinia is the present scarcity of the Maria Theresa dollar. This coin is made in Vienna, and is current in Abyssinia in much the same way as the Mexican dollar in Eastern Asia. Its high proportion of silver, about 90 per cent., makes it of greater intrinsic value than ordinary silver token money, and this is, of course, a deterrent to stabilisation. It is more a commodity of facile use in barter than a medium of exchange. Before 1914 traders imported these coins direct from Austria, but manufacture and export were, of course, stopped on the outbreak of war. The factory has now been restarted, the terms, we understand, being that the buyer supplies the silver and pays 10 per cent. of its value to cover costs and profit. After the wild rise in the value of silver during the war, the Abyssinian Government started exporting dollars to Aden, and large quantities were also smuggled out by private traders. The Sudan Government also sold large quantities in England up to 1919, and from the normal rate of 12 dollars to the pound sterling pre-war a rise has taken place to the present quotation of 7¼. The price is not controlled by the Abyssinian Government, but by the Bank of Abyssinia and the richer Indian merchants of Addis Abeba, who sell according to demand at the best price obtainable, an obviously most unsatisfactory arrangement for trade of any description. Some dollars with the Menelik head are in circulation, but these, in spite of Royal Decrees to the contrary, are not generally accepted in the Western districts. The latest quotation for silver on the London market was 34½d. per ounce, a rise of about 10 per cent. in four months, and whether the cause may be attributed to restricted production alone or to speculation, the fact remains that fluctuations of this nature give cause of grave concern to those seriously interested in this trade.

At one time the Sudan Government kept an ample supply of dollars in the Government chest at Gallabat for issue to traders in exchange for Sudan currency, but the supply for some time past has been inadequate, and the consequence has been that the prices of merchandise have depended greatly on whether sufficient dollars were available or not. The Government, our correspondent suggests, should either keep a supply of at least 150,000 dollars in this chest at all times, or stop the supply altogether and let trade revert to the old methods of barter. This suggestion appears feasible so far as this frontier trade is concerned, as imports more closely approximate the value of exports than is the case at Gambeila. Another suggestion is the gradual adoption of Sudan currency in place of the dollar by making it generally known to the Abyssinian that he may exchange his Sudan currency at the Government chest for dollars whenever he desires to do so. The question is of great importance and worthy of special investigation.

The natural wealth of the country is very considerable, the soil in many districts being exceptionally fertile, but Abyssinia is a backward State, with a bad system of currency, primitive laws, and faulty methods of administration. The wages of an ordinary labourer in the interior average about

Digitized by Google

15 dollars a year—that is, about 12 P.T. per month—and it is not surprising therefore that employment is being sought in the Sudan. There should be no difficulty in obtaining labour for cotton picking in the Kassala district once the working conditions there become more generally known and confidence grows, as it is now doing very rapidly.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.)

Egypt.

Semi-Diesel Engines, etc.—The Director-General, State Domains Administration (Commercial Service), Savoy House, Cairo, invites tenders for the supply of four semi-Diesel engines and four centrifugal pumps. November 1.

Paint.—The Main Roads and Bridges Department of the Egyptian Ministry of Communications invites tenders for the supply of 45 metric tons of paint for the Cairo bridges.—November 10.

Diesel Motor.—The Egyptian Government invite tenders for the supply of a Diesel or Semi-Diesel motor of 30 h.p.—November 12.

Looms, etc —The Director of Stores, Ministry of Education, Sharia Qasr el Aini, Cairo, invites tenders for the supply of (1) Looms and preparatory machines required for the Trades School at Mansûra. (2) Machines for rug factory at Assiout. November 15.

Leather.—The Egyptian Ministry of Education invites tenders for the supply of leather required for the model workshops and trades schools of the Ministry. November 15. (D.O.T.)

Soap. — The Financial Secretary, Egyptian Army, War Office, Cairo, invites tenders for the supply of 110 tons of hard soap to Egyptian Army Supply Stores, Tura. December 2.

Railway Sleepers.—The General Manager, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply of wooden railway sleepers. December 16.

Turkey.

Galvanometers.—The Turkish Posts and Telegraphs Administration invite tenders for the supply of thirty galvanometers.—November 1.

Yugoslavia.

X-Ray Apparatus—A firm of dealers in scientific instruments and electro-medical apparatus in Novi Sad are desirous of receiving catalogues and prices of X-ray apparatus from British manufacturers. (D.O.T.)

SHIPPING INTELLIGENCE

A MOTOR-LAUNCH FOR EGYPT.

Light craft for rivers in African and Egyptian waters appear to be in continuous demand. The latest order has been received by the Steel Barrel Co., Ltd., Uxbridge, who are building a steel motor cabin launch for service in Egypt.

The launch should prove a very serviceable type of craft. The length on the waterline is 32 ft., the beam 7 ft., and the extreme draught 2 ft. 9 in. The hull is constructed entirely of galvanised steel with closely spaced angle frames. The launch has a large cockpit slightly forward of midships, where is arranged the power plant. Abaft this is a roomy cabin, and also a small passenger cockpit. Forward, under a teak deck, sleeping accommodation is provided for two natives. The propelling machinery consists of a two-cylinder Gardner semi-Diesel motor of 24 c.h.p. The engine is of the latest design, having the flywheel at the forward end and the reverse gear accommodated in the bedplate extension. The cylinders have a bore of 7 in., with 8 in. stroke.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. California for Bombay (Liverpool, October 24). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Somersetshire for Port Said, Colombo, Madras, and Calcutta (London, November 8).

Bibby Line.—S.s. Yorkshire for Port Said, Colombo, and Rangoon (Birkenhead, November 5).

British India Line.—S.s. Margha for Bombay and Karachi (London, October 24); s.s. Dumana for Colombo, Madras, and Calcutta (London, October 25).

Ellerman "City" Line.—S.s. City of Poona for Calcutta (Birkenhead, October 30).

Ellerman's Westcott and Laurance Line.—S.s. Trentino for Gibraltar, Malta, Piræus, Salonika, Smyrna, Constantinople, Galatz, and Braila (London, November 15).

Johnston Line.—S.s. Sycamore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, November 5). (The last steamer of the season to Galatz and Braila.) S.s. Kenmore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, November 22).

P. and O. Line.—S.s. Margha for Bombay (London, October 24); s.s. Dumana for Colombo, Madras, and Calcutta (London, October 25).

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar & Egypt.

LARGE STEAMSHIPS. UPPER DECK CABINS.
MODERATE FARES.

THE BRITISH INDIA CORPORATION LTD. CAWNPORE :: INDIA

The British India Corporation, Ltd., comprises an extensive group of industrial concerns including the Cawnpore Woollen Mills, The New Egerton Woollen Mills, Cawnpore Cotton Mills, Cooper, Allen and Co., The North-West Tannery, The Empire Engineering Co. and the Naini Tal M.T. Co. These firms, by pooling their resources and centralising control, form a Corporation which is able to supply Government Depts., Railways, Police and Armies, with every form of woollen and cotton clothing, boots, and all kinds of equipment of a quality and price which would not be possible for an individual undertaking.

Reference to the particulars below will give an idea of the Corporation's activities. Correspondence is invited from wholesale merchants, and may be addressed to the Corporation or direct to the Branches. Inquiries and applications for samples will receive immediate attention.

LAL-IMLI PURE WOOL

Makers of the famous Lal-Imli Pure Wool Products. Manufactures include: Rugs, Blankets, Lohis (shawls), all classes of Knit goods, Flannels, Tweeds, Serges, Worsteds, Broadcloths and Greatcoat Cloths. All requirements in Wool at lowest prices consistent with quality.

CAWNPOREWOOLLEN MILLS CO.,
CAWNPORE

Kakomi Cawnpore

These Mills produce the well-known Kakomi Cotton Goods.
The following articles are among their manufactures: Cotton Yarns, Twills, Table and Bed Linen of all kinds, Tents, Durries, etc.

CAWNPORE COTTON MILLS CO.,
CAWNPORE.

COOPER, ALLEN AND COMPANY.

This Company is one of the world's largest manufacturers of Army Boots, supplying the armies not only of India, but the world. Makers of all types of Boots, and every kind of Saddlery and Leather Equipment.
Everything in Leather.

COOPER, ALLEN & CO.,
CAWNPORE.

Dhariwal

Manufacturers of Dhariwal "Long Life Wool Wear."

Productions include: Serges, Tweeds, Broadcloths, Blankets, Rugs, Worsteds, and Woollen goods of all kinds.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

Egyptian Intentions.

For such as were waiting for Zaghloul Pasha's return to Egypt as a sign of how matters were to be governed or to be allowed to drift this winter, a certain disappointment was in store. It is possible, indeed, to put two interpretations upon the speeches of the Egyptian Premier. His tone was certainly militant, but one feels that his mental background was conciliatoriness, or at least caution. His actions have so far been confined to the strengthening of his personal influence in the reconstructed Cabinet. Prophets of trouble abound, admittedly, but it is preferable to hope that Zaghloul Pasha may this time be able to control the students, who, domestically speaking, are the masters of Egypt. Appreciation of the position will be easier when the results of the British elections become known in Egypt. The idea that more would be extractable with a Labour Government in power in Britain appears to be very widely held in Egypt.

Exchange of Populations.

In the month when the exchange of the populations as between Greece and Turkey ought to have been finally effected a storm has arisen in a tea-cup, has simmered over, and finally, we hope, has cooled down again. Once more the Turks appear to have grown impatient with the ambiguities contained in the Treaty of Lausanne, and in so forcibly taking the matter into their hands as to arrest hundreds of Greeks in Constantinople, they have again shown that contempt for international sentiment the outward regard for which is the first essential of the civilised State. Doubtless there is something to be said for the Turkish point of view, but while understanding the urgent desire of Angora to expel from Constantinople all Greeks established there after October 18 1918, one must deprecate the method in which attempt has been made to realise the desire. There are, happily, now signs that the matter will be settled without further truculent and sensational talk: it is profoundly to be hoped, indeed, that the last, from the international side, of this exchange of populations question has been heard.

The Frontiers of Iraq.

The Commission of the League of Nations which is to decide the question of the *status quo* in regard to the Northern frontier of Iraq met at Brussels on Monday, but as yet nothing is known of their findings. Meanwhile, there is slight trouble elsewhere on the frontier of Iraq. Spasmodic fighting appears to be still raging round Suleimaniyeh, which is yet bothered by the very offensive designs of the notorious Sheikh Mahmoud. Without venturing in any way to criticise the actions of the British command in Iraq, we may point out that clemency towards this particular Sheikh has been repaid with the most woeful ingratitude. It is difficult enough now to capture him among the fastnesses of the mountains of Kurdistan, and there can be little question that it is at Turkish instigation that he is now keeping engaged a very large proportion of Iraq's available land forces. With his like on the borders of Iraq, an increase in the Army becomes essential—a fact which Iraq's Premier is doing his best to demonstrate. But conscription in Iraq is still an unrealised dream. In the meantime, the reported intention of ex-King Hussein to reside at Basra cannot make more remote the possibility of a clash between the border tribes of Iraq and Nejd.

The Emirate of Mecca.

News from the Hejaz is still scanty and uncertain. The situation is quiet, but it would be premature to call it stabilised. Various explanations of the present crisis have been put into the mouth of Ibn Saoud, but so far there appears little more motive-force for this Wahhabi victory than intense hatred of ex-King Hussein. Of Ibn Saoud's actions there are few to record. The most notable is his reported appointment of Shereef Ali S (? H.) aidar Pasha of Constantinople to the Emirate of Mecca. If this appointment is confirmed—there have been statements made in the Press that it merely means that there actually exists an individual named Ali Saidir, and that he has been made not Emir, but Commander-in-Chief at Mecca—it will certainly be proof of the astuteness of Ibn Saoud. It will be remembered that ever since the appointment, in 1908, of Hussein to Mecca Ali Haidar was possessed of a sense of injustice, and

Digitized by Google

that when, in 1915, the Turks appointed him to Mecca as against the then rebellious Hussein, he regarded the appointment as the fulfilment of his rightful due. Consequent upon the defeat of the Turks, his claims to the Emirate of Mecca naturally became overlooked, and his seclusion at Constantinople has been uninterrupted except for the brief interval in 1920 and 1921, during which his pretensions to the throne of Iraq were vainly advanced. There is, however, no question of the eminence of his position among Moslems—although chiefly, of course, among Shiahs—and if the event finds him, at the instance of the Wahhabis, at Mecca, a great step will, we imagine, have been taken in the interests of peace in the troubled peninsula. This country, at any rate, for whose culture he has profound admiration, would look with no unkindly eye upon his appointment.

Britain and the Yemen.

Those who are insisting that the present is an unrivalled time for smoothing out relations between Britain and Arabia have certainly a good deal of reason. Not only with the Hejaz and the Nejd is there opportunity for reorientation of our policy, but also, as Colonel Harold Jacob pointed out forcibly and convincingly in his lecture to the Central Asian Society the other day (summarised elsewhere in this issue), there is urgent necessity for revising our conceptions of the ruler of the Yemen. It has been commonly but erroneously assumed that the Imam Yehia has been Turkophil and opposed to British influence, and that in confirming the Idrisi in possession of Hodeida this country had been curbing the potentialities of an unfriendly chieftain. This, however, is far from being the case. The Imam badly wants a Treaty with Great Britain, and there are, so far as we know, no impossible demands on his part similar to those which inhibited the signing of such an Anglo-Hejazi Treaty as ex-King Hussein would have desired. Is it too much to hope that, with the establishment of a moderately stable Government at home, the Colonial Office may review the whole relationship between Britain and Arabia, or, rather, between Britain and the various rulers in Arabia?

INDIA.

Action in Bengal.

The news of numerous arrests in connection with the Anarchist conspiracy in Bengal has not come as a surprise in this country, where the prevalent feeling has perhaps been anxiety lest action might be delayed until the authorities' hands were forced by another of the atrocious crimes for which Calcutta has become notorious. The gravity of the local situation is sufficiently evidenced by the fact that the Viceroy, who has not yet allowed himself to be hustled, has found it necessary to issue an Ordinance, in the exercise of his emergency powers, to strengthen the hands of the provincial authorities. The need for such support arises, as we pointed out recently in these columns, from the diffidence of the decent people in Bengal, who abhor violence, but will give no help towards its prevention. The burden thus falls wholly on the officials, and particularly on the police. Its weight may be measured to some extent by the provision of the Ordinance regarding the admissibility in evidence of statements made by deceased persons; in plain words, it becomes bad policy to murder an officer or a witness, because the defence gains nothing and loses the chance of cross-examination—a gruesome provision, but one which experience proves to be necessary in Bengal.

The Moslem Standpoint.

In passing from crime to politics, the most important development to record is the obvious hardening of Moslem opposition to the demand for a new Constitution, which has been pressed so strongly of late by Hindus, liberals and extremists alike. We take it that the community has now definitely liquidated the commitments in the Khilafat agitation, into which it was rushed by an active and malignant clique, and under which it was for a time forced to support the extremists in internal politics. The men who are now putting the Moslem case forward, whether before the Reforms Committee or in the Press and on the platform, are taking a clear line of their own. They do not, of course, repudiate the ultimate ideal of complete self-government, but they are insisting that the country is not ready for anything of the kind, or even of any further step in that direction, and they are concentrating on the wise policy of working the existing Constitution, and retaining its safeguards until the time comes if it ever does, when they shall be no longer necessary. In substance, that is the attitude of this country, as well as of the lower classes among the Hindus, and the conditions appear to be becoming favourable for a new *bloc*, offering for the first time a fair chance to the much-abused dyarchy.

Unity or Harmony?

The detailed reports of the "Unity" Conference at Delhi which have now reached this country, make rather depressing reading. An improvement in the relations between Hindus and Moslems is so urgently needed that no means of attaining it should be neglected, but the Conference was altogether the wrong sort of thing. It was managed throughout by politicians of the type which so recently propagated the gospel of hate. The effects of that preaching are now felt to be inconvenient in practice, and so the politicians have striven to bury them under a heap of formulas of the kind which already disfigure so much of the Indian landscape. Among the protagonists at the Conference it is hard to find the names of any real religious leaders. There were pandits and maulvis in plenty, but not the men to whom Indians instinctively turn for counsel or guidance in religious matters, and if there were any qualified representatives of Benares and Hardwar, they succeeded in escaping the notice of the reporters. The truth is that "unity" is a mere political device—a thing unattainable in present conditions, but considered to be worth talking about for temporary ends. What India needs is harmony, not unity, and when she sets to work in earnest to secure it she will put her ardent politicians into the back seats instead of on the platform.

The Rehabilitation of Caste.

An interesting example of the workings of one school of Hindu thought has reached us in the prospectus of the "Universal Welfare Association," recently founded in the State of Travancore. Stated

TO READERS OF "THE NEAR EAST."

If you find any merit in "The Near East," if you hold with us that British interests in the Near and Middle East call for a Paper devoted exclusively to the affairs of that part of the world; if you consider it a worthy cause that Britain and the British should be sanely interpreted to the people of the East, and those people in their turn be made better known to Britons, support "The Near East" by becoming a subscriber yourself if you are not already, and by securing for us new subscribers. Specimen copies will be forwarded gratis. A subscription form will be found on page 468 of this issue.

Digitized by Google

shortly, the object of the Association is to rehabilitate and perpetuate the caste system, and thereby attain the ideal of a co-operative polity, consisting of groups organised on strict hereditary lines, and exchanging services for mutual benefit, the competition of individuals being altogether eliminated. The promoters desire to begin in the villages, build up gradually an Indian nation, and eventually organise the whole world on these lines. It is an ambitious programme, and we doubt whether it will prove attractive to the people forming the lower groups, but at least it possesses the merit, somewhat rare in India, of beginning with the foundations, and not with the roof. As a practical question, we wish the promoters would supply rather more definite information as to how their plans will square with the great religious systems which rest on the theory of individual equality and freedom. There are not many Moslems in Travancore, but they are important in other parts of India, while, seeing that about one-quarter of the population of the State consists of Christians, the question will have to be faced almost from the outset.

THE WEEK AT HOME.

London, Tuesday Morning.

The Red Plot.

Engrossed as the political world is with a General Election in which the Russian Treaty, the Campbell case, and the Communists are leading issues, we had not expected the sensational disclosures of a Red Plot from the Foreign Office precisely at this moment. Although the authenticity of the document has been denied by the Russians, it seems extremely difficult to accept that denial; the Foreign Office is very careful, and would take every precaution before making itself ridiculous in the eyes of the whole world.

The general feeling is that this disclosure finally kills the Russian Treaty. The Bolshevists have once again shown themselves impossible people to do a deal with, since one cannot trust a word they say. Publication of the offending document and of the Foreign Office protest has made Mr. MacDonald's own position very difficult; as head of the Foreign Office he has assured us that there is nothing in these stories of Red propaganda and Communist influence, and now he gives himself the lie. Even *The Times*, which is generally very cautious in its prophecies, admits that he can hardly retain his position at the head of the Government. The immediate effect will be to damage his own party at the elections on Wednesday; the ultimate effect on British policy will be profound and lasting. It is many years since we have had so sensational a week-end, and most politicians have been so taken by surprise that they have preferred to remain silent until further details have been published.

A Week of Speeches.

The election fever has caught the country badly, and there is more excitement than at any contest since 1910, when the People's Budget and the House of Lords veto were the issues. Meetings are well attended, and people are anxious to hear the rival candidates, and in most cases to give them a fair hearing. But there have been a good many unhappy exceptions, in London and Glasgow particularly, where interruptions have been so continuous that the disorder seems clearly to have been organised.

The interruptions are mostly directed against Conservative and Liberal meetings, which gives colour to the suggestion that the Labour Party has encouraged this kind of hooliganism. This suspicion has been frankly expressed by Sir Alfred Mond and others who have suffered at their meetings, and their irritation is natural; but personally I doubt whether the Labour Party is any more responsible for the trouble than the Liberal Party was for a similar outburst in 1910, when Conservative meetings were broken up by the "Land Song."

The fact is that a small band of dissentients who intend to break up a meeting can usually do so against the wishes of the majority of respectable citizens who want to hear an argument, even if they are opposed to the speaker's politics. The dissentients are generally young fellows of a destructive turn of mind, who are out for trouble or even for a lark, and rather enjoy making a nuisance of themselves. They may or may not be Communists or terrorists, as some sorely-tried politicians have stated; if they are, the Communist Party will not get very far. Politics, after all, is a constructive art as well as a game that can only be played (in England, at least) according to certain well-understood rules, and these people are merely demonstrating their unfitness for the vote.

The Tendency of Parties.

There is no need to say much about the speeches, which will all be forgotten by this time next week. Mr. Asquith has maintained his dignity and his mastery of style and argument, even in the rather rough conditions at Paisley. Mr. Baldwin has distinctly improved in method, and the country is beginning to respect him. Mr. Snowden and Mr. Thomas have both kept their tempers and put forward arguments which are consistent and well constructed. Mr. Ramsay MacDonald, on the other hand, has become very shrill, and has been alternately vindictive and cajoling. He is obviously feeling the strain, and has more than once been very unhappy in his epithets. He has certainly not increased his reputation in his recent motor tours.

How far all these speeches make any difference to the voting is a very doubtful problem. I am rather sceptical whether politicians, like parsons, succeed in doing more than preach to their own converted. However that may be, cool onlookers are agreed that the swing of public opinion at the moment seems to be in favour of the Conservatives, and the prophets are disputing whether Mr. Baldwin will just get, or just fail to get, an independent majority. Predictions of this kind, of course, may look ridiculous a week hence; I merely give them for what they are worth, as the forecast of trained observers, who are not carried away by any personal interest in the contest.

Travellers to India

WHEN your ship makes port at Bombay or Calcutta, look out for the American Express uniformed interpreter. He represents the Company's well equipped offices and comprehensive services for journeys throughout the peninsula. Booklet "India" free upon request.

Men of this kind discount entirely the professions of optimism which come from each of the parties. They argue that the Liberal vote is bound to diminish, that the Conservative vote will show a fairly large increase in most parts of the country, and that the Labour vote may show a slight, probably a very slight, increase. It is thought that it will increase less in the North, where it polled practically full strength a year ago, than in the South, where Labour is putting up more candidates.

Against this, however, has to be set the fact that the Nonconformist vote, once Liberal and recently favourable to Labour, is said to be increasingly doubtful of the soundness of the Labour policy. Nonconformity, of course, is by no means Socialist; indeed, the ordinary Nonconformist is rather aggressively individualist, and proud of the fact. It is true, however, that Nonconformity is a decaying force in the great cities, but in the smaller towns and country villages it still counts, and its social influence survives its intellectual death.

The Anglican Church is naturally taking no part in the elections, but a good many of the younger clergy are rather favourable to Labour—at least, on its more idealist side. The growing strength of the Anglo-Catholics is probably inimical to Liberalism—the Tractarian hatred of Liberalism and all its works is historic—but the Church as a whole is not concerned with politics. It has its own troubles in the revision of the Prayer Book, and the quarrels of Socialists and anti-Socialists do not at the moment concern it.

Wembley.

The future of Wembley is still uncertain. New Zealand has refused to continue its exhibition next year, and, therefore, Australia has agreed to go on. Canada still remains undecided, but South Africa has returned a negative answer; the Crown Colonies will probably await the final decision of the Dominions.

Business men, I fancy, are rather favourable to the idea of a second season. At first they were frankly dubious whether the Exhibition would be of any use to them, but a long and well-documented article by Mr. Salmon, an authority on Empire affairs, in *United Empire*, shows that it has resulted in a large amount of new business being done. There is no reason to suppose that the potentialities of Wembley have been exhausted in this respect, and a continuance in 1925 would probably enable the Exhibition to pay off its capital account entirely.

As to the hotel and boarding-house keepers in London, they, of course, pray day and night for its continuance. It has proved a veritable gold-mine to them; the shopkeepers, I gather, are rather less enthusiastic. The only people, however, who are quite definitely opposed to a continuance of the Exhibition are the seaside landladies; the influx of country cousins into London has been disastrous from their point of view, and the wet summer has, of course, made things still worse.

NEW SECRETARY OF S.P.G.

The Archbishop of Canterbury presided recently at Church House, Westminster, at a meeting of the Society for the Propagation of the Gospel in Foreign Parts, of which he is president, when the Ven. P. Stacy Waddy, Archdeacon of the Church of England in Palestine, was appointed Secretary of the Society.

The Standing Committee had recommended the members to appoint Mr. Waddy, and the Archbishop, in moving a resolution to that effect, said Mr. Waddy was formerly headmaster at Parramatta, and when war broke out he came over as chaplain to the Australian troops and saw service in France, Egypt, and Palestine. He was a man of marked ability, and he asked the meeting to endorse the recommendation. This it did unanimously.

It was announced that the Standing Committee hoped to welcome the advent of Mr. Waddy at their meeting on November 6, and that he would take over the office of Secretary on January 1.

NEWS IN BRIEF.

During his recent visit to Palestine Dr. Weizmann opened the Goldhizer branch of the Jerusalem University Library.

A banquet was given by the Egyptian Senate and the Chamber of Deputies in honour of Zaghloul Pasha on October 24.

Owing to the illness of M. Michalakopoulos, the Prime Minister, M. Raktivan, the President of the Greek Constituent Assembly, on October 24 moved the adjournment for a fortnight.

Major Forbes-Leith, driving a Wolseley motor-car, has reached Quetta from Leeds. He has covered 8,527 miles, of which 2,850 miles were across open country without roads and 1,550 miles were over desert. In all there were 96 running days.

According to the *Tanin*, Hussein Husni Bey, the Chief of Police, who became Acting Vali of Constantinople on September 10 after the dismissal of Rashid Bey, has resigned his position as Chief of Police, and the Valiship has been offered to Reshad Bey.

An American squadron, under the command of Admiral Philip Andrews, arrived at Spalato on October 25 on an official visit. The freedom of the city was conferred on the Admiral, and an enthusiastic reception was given to the Americans generally by patriotic Yugoslav organisations.

It is stated, says the *Morning Post* Rome correspondent, that before leaving Rome for Tirana after his recent visit, Monsignor Fan Noli, Premier of Albania, exchanged notes with the Soviet Ambassador, declaring reciprocally the *de jure* recognition of the Albanian and Soviet Governments.

Karkalacheff has been sentenced to death for having murdered M. Petko Petkoff, an Agrarian Deputy, who had held office under M. Stamboulisky. M. Petkoff, whose father, then Prime Minister of Bulgaria, had been assassinated in 1907, was shot in the streets of Sofia on June 14.

According to the *Morning Post* a mission from the Patriarch of Jerusalem left Belgrade on October 25 for Trieste on the way to London. They propose to seek an audience of King George for the purpose of explaining to him personally the hard case of Christians of the Orthodox Church in Palestine on the growing influence of Jews in that country.

According to *The Times* Baghdad correspondent, the Iraqi Cabinet, after considering the message from his father sent down to it by King Faisal, has decided that no objection can be raised if King Hussein wishes to take up his residence at Basra, provided that he comes as a private person and makes no attempt to influence political affairs. It is expected that King Hussein will accept these conditions.

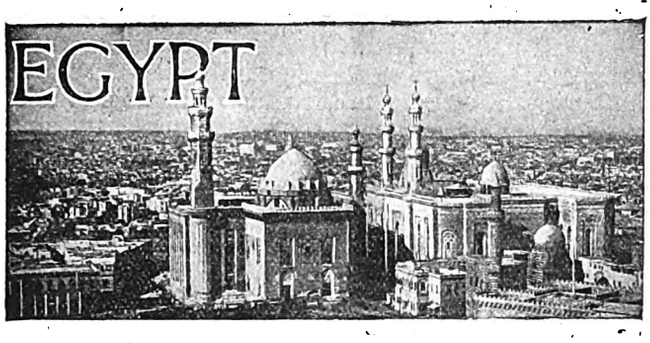
The Near and Middle East.*

From Our Own Correspondents.



Cairo, October 16.

The Position of Zaghloul Pasha.

Nothing else is being thought of at present but the return of Zaghloul Pasha, who is due in Alexandria on Monday next. Considerable anxiety is everywhere expressed—each element has its own personal reason for being anxious—with regard to his retention of office, but the general opinion is that the pressure of his party, who are, in truth, the most interested in his remaining in power, will prove too great for him to resist.

Back to Cairo.

By the end of the month the seat of Government will have been transferred back to Cairo. Already most of the foreign Legations have left Alexandria. The Residency will follow suit as soon as Lord Allenby arrives—he is due on October 27. Tentative arrangements have been made for the closing of the summer offices at Bulkeley on the 23rd, and the King is seriously considering a return to Cairo at the end of the month instead of towards the middle of November. Parliament reassembles on the third Saturday in November—*i.e.*, the 15th, and a session full of interest and activity is anticipated. Certainly the immediate future is pregnant with possibilities, for there are many important questions affecting the *status quo* which will have to be dealt with almost immediately. Whether any serious crisis will result will depend on Zaghloul Pasha's mood and the control he is able to exercise over the more hot-headed and aggressively inclined element in his party.

The State Railways.

One of the largest schemes proposed of late years by any Government Department has been submitted by the State Railways to the Ministry of Finance, and is now being very carefully considered. The scheme is intended to restore the State Railways to the condition of efficiency which they enjoyed up to and during the War. For more than five years now no renewal work has been carried out, and the condition of the service has deteriorated very considerably. The scheme will involve an outlay of over three million pounds during the next three years, and entails the acceptance by the Government of a scale of annual renewals so as to keep up the efficiency of the service and meet the growing needs of the country in future years.

The Hejaz and Iraq.

Events in the Hejaz are arousing a fair amount of interest here. No sympathy is felt for King Hussein or any members of the House of Hashem, but the occupation of the Hejaz and the Holy Places by the Wahhabis is regarded with some anxiety from the point of view of its effect on the pilgrimage. Interest as regards Iraq is not so keen. No brief is held here for the Turks, and the only reason that sympathy is felt towards them in the Mosul question is that they are resisting Great Britain.

***Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Palestine, Iraq, and Persia.**

THE SUDAN.

Khartoum, October 7.

Court-Martial Sentences.

During the last decade of September a special Army Order was published in which were promulgated the sentences passed on seven ranker Cadets of the Military School, who participated in a demonstration of a political nature contrary to the regulations of the Army in which they serve. Five were sentenced to five years' imprisonment each, and two to two years' imprisonment each with twenty lashes, this latter sentence being later commuted to two years' imprisonment only by Sir Lee Stack, Sirdar of the Egyptian Army.

It should be remembered that the Cadets under instruction at the Military School, Khartoum, are selected from two distinct sources, from the rank and file of serving soldiers, and what might be termed "gentlemen Cadets," or those selected from civilian posts who would eventually qualify as officers of the Egyptian Army. These "gentlemen Cadets" during the period of training, although under military discipline, are actually civilians, and the six individuals now under arrest for demonstrating are awaiting trial by a civilian court.

Following the promulgation of this special order, all the accused were transferred from the gunboat on which they had been confined to the Central Prison, Khartoum North. The transfer was affected by motor-lorry, and during the run of perhaps one mile the Cadets maintained a continuous cry of "Long live Zaghloul Pasha," "Long live King Fuad, King of Egypt and the Sudan."

Political Situation.

The political situation at the end of September may be summed up as satisfactory. With the exception of a little trouble at Malakal as detailed later, no activities on the part of anti-Government agitators were visible.

The promulgation of the Military School Court

Martial sentences, contrary to general belief, was accepted without comment. At the time it was difficult to say whether or not the inactivity was according to plan, and the agitators were waiting for the result of the MacDonald-Zaghloul conversations (and a cue) before once again settling down to intensive propaganda activity. The result of these conversations has now been broadcasted throughout the three towns, and still there does not appear to be any forward movement on the part of any section or society of pro-Egyptian enthusiasts. This cannot but influence the general belief that no plan of inactivity has been arranged—the only reasons for the present lack of initiative are the fear of Government action and the fact that the majority of the more adventurous spirits have been placed inside the gates of the Central Prison. The civil court trial of these individuals has yet to take place. It is also worthy of note that since the arrest of the Egyptian Army clerk who was believed to be the chief writer and distributor of anti-British proclamations and seditious circulars Khartoum and Omdurman have, for the first time for many months, been free from this obnoxious mode of propaganda.

Attempted Demonstrations at Malakal.

According to an official *communiqué* issued on October 1 to the local Press representatives, two unsuccessful attempts were made at Malakal, the Provincial Headquarters of the Upper Nile Province, situated some 500 miles south of Khartoum on the White Nile. The first attempt was made on September 22, when a soldier of the 12th Sudanese Battalion stationed at Malakal endeavoured to incite his comrades to demonstrate in favour of Egypt and against the present régime. Except for the fact that he certainly created a little mild excitement before being arrested, his efforts were unsuccessful. On the morning of the 25th, another soldier, aided by four battalion clerks, attempted to hold a demonstration within the lines, but before any harm could be done they were all arrested and court-martialled without delay, each receiving a sentence of eighteen months' imprisonment. Although with these arrests the situation was reported satisfactory, the authorities at Khartoum thought it advisable to take precautions in safeguarding public property, and with this in view a company of British troops embarked on a river steamer for Malakal on the evening of the 25th. Reports subsequently received from that station state that the situation remains normal and entirely satisfactory.

These two attempts at demonstrations among certain disaffected elements were the first to occur in the Southern areas of this vast Sudan, and their distinct failure, coupled with the unprecedented arrival of British troops, must have an excellent moral effect on the negroid peoples living at, and in the vicinity of Malakal, who were perforce acquainted with the disloyal behaviour of the soldiers and of those anti-Government activities of pro-Egyptian enthusiasts. It is understood that the Southern Post boat which arrived at Khartoum on the 18th inst. brought with it a number of individuals whose sympathies towards the convicted demonstrators were most marked, and whose continued presence in such a station was considered undesirable as constituting the possible nucleus of a local society for furthering the designs of the agitators.

An Egyptian Night

NIGHT has fallen on Cairo. The streets of the Mousky are crowded—look closely, for the scene carries with it the glamour of the Arabian nights. Above the tric-trac of the dominoes in the cafes will be heard the sound of cymbals where the houris lead the dance—weird Salome dances which hold the senses spellbound. Across the desert, where the Sphinx and the Pyramids keep their eternal watch, silence and the miracle of stars enthral with mystery and imagination.

The Egyptian State Railways, the International Sleeping Car Company and the Hotels offer special cheap facilities for tourists visiting Egypt during November, December and January.

Particulars of fares, tariffs, etc., of all Travel Bureaux and Tourist Agencies. Write for "Egypt" special tourist number, free on application to Egypt Promotion Association, 9, Quality Court, Chancery Lane, London, W.C.2, or Post Box 990, Cairo.

EGYPT—THE ETERNAL WONDERLAND

YUGOSLAVIA.

Zagreb, October 21.

The Internal Situation.

The great struggle over the internal Constitution of Yugoslavia has been in full swing, and even after the extreme tension of the last two days no settlement has been arrived at. It is highly probable that the country will have to wait some time for a definite solution. The fact is that the point at issue in the present crisis is not merely the solution of a Government crisis, but that the vital question of the future Constitution and development of Yugoslavia is closely bound up with the Government problem; hence the difficulties with which the decision is beset.

Whether Yugoslavia is to be ruled in accordance with centralist or with autonomist principles; whether the Croats are to be met half way and their demands conceded, or whether all resistance on their part is to be crushed by the "strong hand"; whether pure parliamentarism is to prevail, or to be respected only when and in so far as it may suit the purposes of certain circles in Belgrade—these are the main questions involved; but with these main issues there are linked numerous side issues, such as the question of the Republic, the unity or triplicity of the Yugoslav nation—an awkward phrase for an awkward problem, viz., whether the nation is to be regarded as one single, reasonably homogeneous nation, or as one compound of three separate, though closely kindred, nations—and, finally, the campaign against corruption.

The Party Struggle.

The struggle between the parties is determined by the conflict between Democrats and Radicals, both of them centred in Belgrade; for Belgrade still wields the decision in Yugoslav politics, and for a long time to come Zagreb's attempts to step into her shoes will be in vain.

Before the War the Radicals had a bare majority

Digitized by Google

in the Skupshtina, but after the War their position improved very considerably. They succeeded in spreading the opinion among the Serbs that the credit for victory in the War was due mainly to the Radical Party, and as the party could in this way represent itself as being of all parties the most essentially Serbian, it gained ground increasingly among the Serbs, and after the general election of 1923 became the leading Serbian party, well justified in claiming to be the representative of the Serbian people.

The development of the Democratic Party was widely different. It did not come into being until after the War, by the union of all Serbian Opposition parties with the Croatian and Slovene Liberals, and, above all, with the Serbo-Croat Coalition, which had been the leading party in Croatia before the War. At its birth the Democrat Party, at that time still distinguished by the predicate *Yugoslav*, was the strongest party in the country, as was also evident from the great number of its deputies in the first — non-elected — national representative body, the Constituent Assembly. But the Democrat Party proved itself unable to maintain its position. On the one hand, it was too heterogeneous; on the other hand, it made a mistake over its fundamental idea. The founders of the Democrat Party believed that they could win to national leadership by a programme of national unity, of immediate and energetic realisation of the Yugoslav idea, which in 1918 undoubtedly commanded a great majority of adherents in the country. Had the Yugoslav Administration been a model, this programme might also have been practical. But in actual circumstances this far-reaching scheme was doomed. Local patriotism and tribal consciousness awoke, and reaction grew in proportion to pressure from Belgrade. Croat and Slovene particularism refused to merge in a new Yugoslavdom, more especially as the Serbs would have nothing to say to it. The result was that in Croatia increase of strength went to the party which agitated the most strongly against Belgrade, and that in Slovenia the Autonomists, under Dr. Koroshets, gained almost every mandate. In short, the consequences of the Democrat point of view proved disastrous to the party. In Serbia it was ousted by the Radicals, in Croatia by M. Raditch's adherents, and in Slovenia by the Clericals.

Then the Democrats realised that they would be lost if they adhered to their original idea, and so it was quietly dropped. The predicate *Yugoslav* was eliminated in Serbia, and a *rapprochement* with the Croats set on foot. At the Zagreb Conference of 1922 the Democrat leaders declared in favour of a Yugoslav Union (*Zajednica*).

At that time M. Davidovitch might easily have possessed himself of the leadership of Yugoslavia; but he hesitated at the opportune moment, and the Radicals took the chance he missed. On the strength of the *rapprochement* between the Democrats and the Revisionists—as, indeed, the Croats were—the Radicals broke up the Coalition with the Democrats. The result was the all-Radical Election Government. From the general election in March, 1923, the Radical Party emerged greatly strengthened, but without having obtained an absolute majority. It was compelled, therefore, to seek allies, and in due course secured them. Already under M. Stoyan Protitch, the view was widely held among the Radicals that their party was a purely Serbian one, and ought to ally itself to the other particularist parties in the country. True to this principle, which had repeatedly been put into practice before, the Radicals concluded the so-called Marcus Protocol with MM. Raditch Koroshets, and Spaho. By this means the Radicals succeeded in keeping the Raditch deputies away from the Skupshtina, and so could rule securely.

But the Radicals' failure to fulfil their obligations evoked the struggle to bring about the fall of the Radical Government. After great trouble, the opposition was successful in persuading M. Raditch to allow his deputies to enter the Skupshtina, and the downfall of the Pashitch Government was rendered inevitable.

M. Raditch, however, blundered repeatedly, and this made it possible for M. Pashitch, by means of the secession of the Pribitchevitch group from the Democrat Club, to seize the reins of power once more and establish the Pashitch-Pribitchevitch Government. But the latter was short-lived, and a new Government crisis followed hard upon the passing of the State Budget.

Defeat of M. Pashitch.

This crisis was acute and nerve-racking, and ended most surprisingly in a total defeat for M. Pashitch. The astounding thing happened. A frankly and definitely anti-Pasbitch Government came into office in Yugoslavia, and the leading part in it fell to the Democrats, although they mustered only thirty-three deputies. Such were the consequences of the new orientation of the party.

Owing to the conflict between Radicals and Democrats, only that Government might hope to command a majority in the Skupshtina which could come to a working agreement with a non-Serbian party. As the Radicals were in favour of the "strong hand" policy, which was strongly deprecated by all non-Serbian parties, it was out of the question—especially after the experience in connection with the Marcus Protocol—that any non-Serbian party should wish to conclude an alliance with them. On the other hand, the non-Serbian parties had come to realise that an alliance with a Serbian party was absolutely necessary to them in order to compass the defeat of the Pashitch Government and obtain a majority in the Skupshtina.

Opposition to the Radicals was indeed the strongest motive in forming the Opposition *bloc*. At first the *bloc* gave but little promise of success, owing to the divergencies prevailing among the parties in it. But gradually its position improved, unity within its ranks increasing in face of Radical attacks. When finally M. Raditch declared in favour of the Opposition *bloc*, it was certain that it

had a great majority at its command, and was, therefore, bound to come into office, all the more so as a fresh general election could only make the position worse. Beyond doubt only M. Raditch and the Radicals—i.e., the extremist parties—stood to profit by an election, and this would make an agreement with the Croats—and this is the cardinal demand of the Yugoslav policy—more difficult after an election than before. For these reasons the King was limited to a decision which would preclude a general election, and in remaining true to this standpoint in despite of everything he rendered a signal service to the cause of democracy. Incidentally, there was also this important fact to be considered: that any other solution would have been contrary to the principles of Parliamentary Government. The Opposition *bloc* had the majority in Parliament, and the composition of that majority was of quite secondary importance.

The Davidovitch Administration.

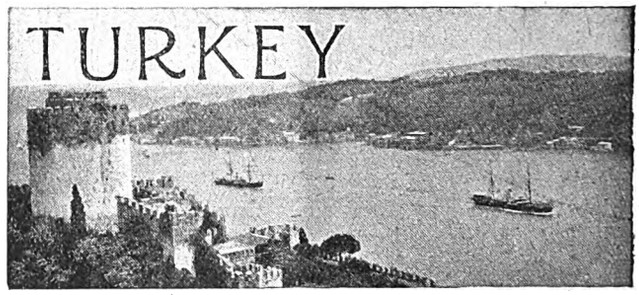
The Davidovitch Government took its task vigorously in hand, and successfully, too, as was soon apparent, especially in foreign politics. Similarly in internal politics, the new course made itself felt, and was warmly welcomed by many, especially over the campaign against corruption. It is perfectly obvious that a campaign against this evil is futile unless it is directed against those in high places. This the new Government was duly prepared to do, and its deputies lodged indictments against several former Radical Ministers. It now became clear that the Radical Party as a whole must suffer if corruption were brought home to its leaders, and so the Radicals began to assail the Government in every possible way. At first they confined themselves to attacking the alliance with M. Raditch, whose demagogic methods remain unchanged. When these assaults failed, there followed intrigues in Court circles and among the Generals of the Army, and the Minister for War was persuaded to hand in his resignation for political reasons because of Raditch's anti-dynastic propaganda.

What finally decided the next turn of events was that Pashitch suddenly declared himself for a compromise with the Croats. In this way it was made possible for Pashitch's friends at court to raise the question why the strongest of the Serbian parties should be excluded from the Government, seeing that it, too, was in favour of an agreement. Hereby the King was compelled to render possible the formation of a Concentration Government which would include the Radicals, and this again led to the resignation of the Davidovitch Cabinet.

Deadlock.

The next step was a conference of the leaders of all important parties in Parliament, the King himself presiding. At this conference the Radicals submitted the following conditions:—(1) The Prime Minister must be a Radical. (2) The Pribitchevitch party must not be excluded. (3) The Radical Club to enter the Government integrally, with all its 107 deputies. Ministerial appointments to be allotted to the various party clubs in proportion to their numerical strength. (4) M. Raditch must renounce his republicanism and his pacifist propaganda in the Army. He must come to Belgrade in person, and his party may come into the Government after giving guarantees for a new orientation in the sense of this condition.

Regarding the first point, the decision was unanimously left to the King. The second was dropped by the Radicals. But no agreement was reached over points (3) and (4), although the King himself put it that a politician could not be expected to change his views overnight. Then followed numerous and interminable conferences and discussions, which have so far yielded no definite result. The crux of the issue lies here:—The Democrats are committed to insisting upon the unconditional entry of the Raditch Party into the Government, because otherwise it might return to the old Croatian policy of boycott. The Radicals might see their way to accepting this point of view if the Democrats on their part would give way over their second main demand and admit all Radical Deputies, even those who stand accused of corrupt practices. But this the Democrats cannot concede, as it would compromise their whole campaign against corruption. Negotiations have reached a deadlock. With much trouble Parliament was constituted without recourse to unconstitutional procedure, and so one may say that a settlement of sorts has been arrived at. But as the new Cabinet has not yet been appointed, Parliament cannot meet, and the country is still waiting impatiently for the decision. What this decision will be it is at the moment not possible to say; yet those may be right who maintain that in no case can there be a return of the Pashitch-Pribitchevitch Government.



Constantinople, October 20.

The Exchange of Populations.

Considerable progress has been made by the Turkish executive authorities during the past two days in settling the controversy as to the meaning of the term "established" as applied to Greeks in the Exchange of Populations Convention. The divergence between the points of view of the Greek and Turkish delegates on the Mixed Commission has threatened to rend the commission in twain, but on Saturday last the local police took command of the situation and commenced rounding up all the Greeks they could find, beginning with the servant girls, and transferring them to concentration camps in preparation for imminent departure. The *razzia* was continued on Sunday throughout the streets of Pera, where the inhabitants were taking their Sunday promenade, and columns of supposedly exchangeable Greeks of all grades of society were to be seen wending their way in mournful procession to a concentra-

tion camp somewhere in the wilds of Stamboul, under the escort of police and gendarmerie. It has thus been brought home to us what the exchange of populations really means. The shopkeeper has been dragged away in his apron from his shop; the young man disappears in the course of his Sunday afternoon walk; the maidservant goes to the market to do the morning's shopping and nothing more is heard of her. According to the latest news, the Commission is making the best of a bad job by acquiescing in this vigorous course of action, and stipulating only that members of the Commission shall go to the concentration camp and separate the wheat from the chaff—in other words, the exchangeables from the unexchangeables. Meanwhile, all are suffering acute discomfort, and their friends and relatives much anxiety. Wherever the fault may lie, it all seems so hopelessly unnecessary.

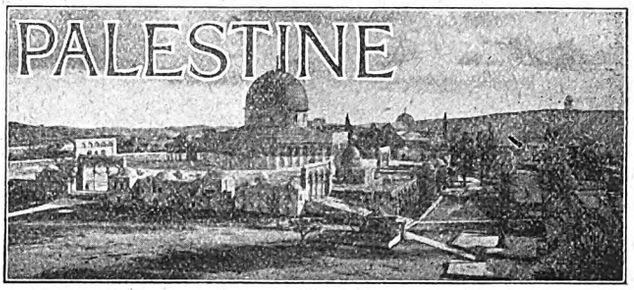
The Position of the Government.

The opening of the Grand National Assembly has sprung no surprises upon us as yet. The state of the Mosul conflict provided the Premier with the text for his disquisition on foreign affairs, and it is gratifying to see that his tone was studiously moderate, and that he considered that the immediate aim of the Government was the reference of this latest phase of the dispute to the League of Nations. His speech was an implied rebuke to the alarmists and chauvinists among his own countrymen, and the attitude of the House appears to show that the Government is still in control of a submissive majority, as far as foreign affairs are concerned. Various rumours are current concerning the possibilities when internal affairs come under the microscope. The Ministries of Reconstruction and Public Instruction are in bad odour, and a reshuffling of portfolios is likely, but notwithstanding recent attempts to direct the point of attack against the Cabinet as a whole and the Prime Minister in particular, it now seems fairly clear that the Opposition's bark is worse than its bite. One would not be in the least surprised to learn that the constitution of an official opposition had been sanctioned and "arranged" by the Government itself in order to infuse a little life into the dullness of the one-party system, which has been in vogue for so long.

Futility of Constitutionalism.

It is necessary to repeat to the point of nausea that this country has no conception whatever of constitutional Government as the West understands it. For all practical purposes the Government is an autocracy of two persons, Ismet and Mustapha Kemel Pashas, backed by a small and efficient army and police. There is no liberty of the individual either as a private citizen or as a politician, simply because the Executive does not understand the meaning of the term. It is, therefore, necessary to take with a grain of salt all the plans and promises of the Opposition, for they are to all intents and purposes powerless until they can gain sufficient control of the executive to take forcible measures; and there is very little sign of such violence at present. The personality and prestige of the President stand too high to be affected by puny constitutional agitation, and the Mosul crisis is most opportune for its effect in closing up the ranks at this trying moment for the Government, when a vociferous Parliament is just meeting again after a six months' recess.

BOURNEMOUTH.—COURT COTTAGE, COURT ROAD.—Mrs. Keating offers home to children or infants whose parents are abroad; every care; home life; doctor recommends. Terms reasonable.



Jerusalem, October 18.

The High Commissioner's Interview.

This week the High Commissioner, for the first time since he has been in office, allowed himself to be interviewed by a body of Press correspondents. He divulged nothing of a startling nature, and was mainly at pains to correct a few wrong impressions. The following points are taken from the report of the interview which was passed for publication.

The "Citizenship Order-in-Council" (*i.e.*, the Nationality Law) might be published now at any time. The Order provided, among other things, that all residents, Jews and others, who have been in the country two years out of the previous three, and who intend to reside permanently in Palestine, may claim naturalisation.

The Jewish Community Law (permitting certain measures of autonomy among the Jewish inhabitants) would probably be delayed. A question of principle was involved—the recognition of a separate community within a Mandated area—which a new Government might wish to scrutinise before sanctioning.

While in London the High Commissioner discussed with the Chancellor of the Exchequer all outstanding points relating to the proposed Government loan, a Bill with regard to which Sir Herbert had hoped would be introduced this autumn; all such loans, if carrying a British Government guarantee, required an Act of Parliament. Here, too, Sir Herbert feared the General Election might upset all calculations. Borrowings in advance on this loan had been made by the Palestinian Government, which had to be repaid from the loan when obtained; the remainder, a not very considerable sum, being left for further necessary capital expenditures by the Palestine Government.

The position in Transjordan was unchanged. Press reports that the Administration intended to "annex" to Palestine the territory east of the Jordan being quite unfounded. The British Government has no intention of effecting any change in the status. This status was effected by promises made during the War, which have to be observed. The only change in this connection was that the British officials attached to the Transjordan Government were being borne on the cadre of the Palestine Government, it having been found inconvenient to have three or four officials not belonging to any regular service. Transjordan was part of the British mandatory area, and was being administered by the Emir Abdullah on condition that nothing was done to impair the fulfilment of obligations undertaken by the mandatory Power. An agreement covering those matters was to be entered into, but negotiations were not yet concluded. His Excellency said that he had had no information that the Emir Ali, on ascending the Hejaz throne, promised to sign the Anglo-Hejaz Treaty, or that the signing of this Treaty was a condition of his succeeding to the throne.

Government Appointments.

Asked as to administrative changes in the Palestine Government, the High Commissioner said: "Sir Gilbert Clayton, very much to my regret,

Digitized by Google

desires to retire in a few months' time. He came to Palestine only for two years, and I am sorry to say that my efforts to persuade him to remain have not been successful. In the spring another appointment of Chief Secretary will have to be made.

"With regard to my own appointment, it was not definite at the outset whether it was for four or five years, but last spring the Government invited me to continue for the fifth year, which I consented to do; this period terminates at the end of June next. I have observed for several years past paragraphs in the Press, some to the effect that I was about to resign owing to disagreements with the Colonial Office on one question or another; some, again, to the contrary, that it was contemplated that my term of office would be extended. All these statements are without foundation; on no occasion was resignation in question, and there has never been any question of my serving an additional term."

Palestine and Geneva.

His visit to Geneva, Sir Herbert stated, was in response to a request from the Mandates Commission of the Council of the League of Nations that he attend the session where the administration of the British Mandate for Palestine would be considered. He said that this would be a routine meeting, at which the Commission would consider the report already submitted by the British Government with respect to Palestine some months ago, consisting mainly of references to the Annual Reports of the Palestine Administration, in answer to questions by the League of Nations.

IRAQ.

Baghdad, October 15.

Northern Frontier.

Until a few days ago, when a retirement of the Turkish forces was reported, matters were stationary on the northern frontier. Whether this presages a complete withdrawal or only a modification of the present line is at present unknown. There is reason for believing that the incursion of the Turks was not so much intentional as due to a misunderstanding, possibly to a clerical blunder. The Mosul vilayet possesses two distinct frontiers. The first is that claimed by the British during the early days of the peace negotiations with Turkey. While these protracted *pourparlers* were taking place the Assyrian refugees were being repatriated across the frontier into country which, while nominally under Turkish suzerainty, was actually "no man's land." As these tribes were Christian, and as they had been repatriated by the British authorities in Iraq, they continued to look towards the British for guidance, and thus there grew up a loose form of Iraqi-British control over the area in which they had settled. Consequently the British authorities in Iraq informed the home Government of the necessity of extending the original boundary to include the territory occupied by the repatriated Assyrians. It is this revised boundary which the Turks have violated, not the original one claimed by the British; this has been respected *in toto*. The occupation of this area by the Turks may thus have been made in perfect good faith, the fact that they respected the original frontier seeming to indicate that they were unaware of Iraq's extended claims. If the Turkish authorities were never informed of these, their vigorous denials of having violated any frontier may be explained.

The prompt action of the R.A.F. on the Mosul frontier has been very favourably commented upon in Iraq, and most of the vernacular papers have seized the opportunity to contrast British concern for the integrity of Iraq's frontiers with the lethargy shown by the general public, and the lack of martial ardour distinguishing the youth of this country. The *Istaqal*, however, states that it is impossible for any national feeling to be engendered in a country which is under the heel of the foreigner!

Lord Thomson's Message.

Lord Thomson, Secretary of State for Air, addressed the following message to the Air Vice-Marshal on the completion of his tour of inspection in Iraq:—"Before leaving Baghdad I desire to express my entire satisfaction with all the arrangements made throughout my visit, and to congratulate you personally on the very high standard of efficiency displayed by the officers under your command. Will you please inform your officers and other ranks that I greatly appreciate the good work they have done and are doing in Iraq. I have found the keenness and spirit shown by them in the performance of their duties up to the highest traditions of the fighting services, and my only regret is that force of circumstances has prevented me from making a longer stay and becoming personally acquainted with a larger number of units."

The Emir Ghazi.

The twelve-year-old Crown Prince of Iraq, who has at last been permitted by his grandfather to visit Baghdad, was met at Amman by a special deputation, including the Minister of Interior. After the long motor run across the desert he was met at Ramadi by the Prime Minister, and proceeded to Baghdad, where he was given a public reception, the High Commissioner and the members of the Cabinet being present. A remarkable feature was the number of Boy Scouts present, each troop with its own bugle band. The streets of Baghdad were more crowded than for many years past, and the people stood patiently for hours to catch a sight of their young prince, who, dressed simply in a grey Norfolk jacket and knickers, with headdress of *kafiyah* and *agal*, drove slowly down the main street of Baghdad to his father's residence.

The Ikhwan.

It has now been learned that a large army of Ikhwan, under the command of Faisal al Darwish, was recently encamped near Hafr, some four days' march from Basra. Scouts from the Wahhabi force were endeavouring, it is said, to locate Iraqi tribes with a view to raiding them. Probably the severe lesson inflicted on those who raided Transjordania caused this force to abandon its project, for no attacks have been reported up to date.

King Hussein.

The news of King Hussein's abdication was favourably received in Baghdad. It is generally recognised that his foolish behaviour has met with the reward which it deserved.

Ex-King George of Greece and Queen Elizabeth arrived at Bucharest a few days ago en route for Sinaia, where they propose to take up their residence.

Sir Maung Kin, K.C.I.E., a member of the Burma Executive Council and the first Burman knight, died at Rangoon on October 22 in his fifty-third year.

The following changes are announced in the Egyptian Cabinet:—Zaghloul Pasha takes over Foreign Affairs; Barakat Pasha, formerly Minister for Agriculture, becomes Minister for the Interior; Ahmad Mahar, previously an unknown deputy, becomes Minister of Education; and M. Mazlum will be Minister for Agriculture.

It is announced from New York that the State Department has despatched a sharp note of protest to the Persian Government on the failure to execute Seyed Hussein, who was convicted as the ringleader of the mob which murdered Major Imbrie. This action follows a personal report from the United States Minister, Mr. Kornfeld, who recently arrived from Persia.

October 17, 1924 (Old Style).
Rabia 'II, 1, 1343 A.H. of the Moslem Calendar.
Marheshvan 2, 5685, of the Jewish Calendar.

Sir Alfred Chatterton left London on October 25 in the s.s. Dumana for Madras.

Mme. Zekiai Bey, wife of the Turkish Minister, has recovered from her recent illness.

Colonel Ion Antonesco, the Roumanian Military Attaché, returned to London last week from Geneva.

Fathollah Khan Noury, First Secretary at the Persian Legation, left London last Thursday for Teheran.

Sir Francis Couchman left London last Friday in the British India Company's steamer Margha for Bombay.

Lady Barker is giving an "At Home" at Lowndes House, Lowndes Square, on Thursday, November 6.

M. Y. Yovanovitch, Yugoslav Consul-General, and Mme. Yovanovitch left London on October 23 for Belgrade.

M. Titulesco, Roumanian Minister in London, and Mme. Titulesco arrived last week in Monte Carlo from Geneva.

The Egyptian Minister, with Mme. Aziz Izzet Pasha and their son, returned to London by aeroplane last Saturday from Paris.

Mme. Blanche Vesnitch, widow of M. Milanko Vesnitch, formerly Serbian Prime Minister, left London on October 24 for Paris.

The Hon. Mrs. Herbert Pease and the Hon. Elizabeth Chaloner have left Liverpool in the City of Genoa for Port Sudan and Khartoum.

Mme. Grouitch, wife of M. Grouitch, who was Serbian Minister in London during the War, arrived in London last week from Belgrade.

Mr. and Mrs. Philip Boxwell, accompanied by Mrs. Basil Hodgson, left Marseilles on October 22 by the steamship Cordillère, en route for Egypt.

Mr. D. T. Chadwick, Secretary to the Government of India in the Commerce Department, has left London to return to Delhi on expiry of his leave.

M. Michel Majaroff, Bulgarian Minister in London from 1912 to 1914, last Friday concluded his visit to England, and left London for Paris on his way to Sofia.

Dr. Georges V. Todorovitch, Counsellor at the Legation of the Kingdom of Serbs, Croats, and Slovenes in London, has taken up his residence at the South Kensington Hotel.

Dr. Chairn Weizmann, President of the Zionist Organisation, will deliver an address on "Palestine as it is To-day" at the Kingsway Hall, Kingsway, W.C.2, next Monday (November 3) at 8.30 p.m.

M. Grégoire Michaesco, Commercial Attaché at the Roumanian Legation, left London on October 24 for Lausanne. He has gone away for the benefit of his health, and will be absent several weeks.

General Lord Rawlinson, Commander-in-Chief in India, presided at the Queen's Hall on October 22, when the first lantern lecture, open to the general public, on the Mount Everest Expedition, was given by Mr. N. E. Odell.

Mr. A. C. Chatterjee, member of the Government of India for Labour and Industries, has arranged to come to London to take up his new appointment as High Commissioner for India in January. Meanwhile Mr. Drake will continue to act as High Commissioner.

The engagement is announced between John Collmann Wharry, elder son of the late Henry Gordon Wharry, M.R.C.S., and of Mrs. Wharry, of 105, Cadogan Gardens, S.W., and Esmé, second daughter of Mr. and Mrs. Reginald Whittall, of Rosalind House, Moda, Constantinople.

The Maharaja of Bikanir, who was one of India's delegates at the League of Nations Assembly, left London on October 21 for Marseilles to join the P. and O. s.s. Naldera for India. Sir Malcolm Seton and Colonel Bannerman, representing the India Office, Lord Hardinge of Penshurst, Sir Stanley Reed, Sir Philip Grey-Egerton, Sir Muhammad Rafique, Mr. N. C. Sen, and Mr. M. Ezra were among those at Victoria Station to take leave of the Maharaja.

Among the passengers on the P. and O. Bombay express which left London last Thursday to connect with the steamship Naldera at Marseilles, were Major-General Sir Henry Freeland, General Sir Claud and Lady Jacob, Sir Stuart Montagu Samuel, Sir Lancelot and Lady Sanderson, Sir Thomas and Lady Smith, Major-General Sir Lee Stack, Major-General Sir William Thomson, and Sir Seymour Tritton. The Maharaja of Kapurthala, Major-General Sir H. C. and Lady Holman, Lady Ratan Tata, Sir Murray Trotter, and Sir Hugh and Lady Walmsley embarked in the Naldera at Marseilles.

THE POLITICAL DEADLOCK IN YUGO-SLAVIA.

Political crises are so much the order of the day in Yugoslavia that it is difficult to say whether they result from political incapacity or represent a clash of forces of which the real significance is still imperfectly understood. Only a few weeks ago it seemed as if definite progress were being made towards political stability. M. Davidovitch's Government commanded a majority in the Skupshtina, relations between Serbia and Croatia were manifestly improving, and there was some hope that M. Raditch's party would co-operate with the Ministry. The resignation of the Minister for War came upon this scene as a bolt from the blue. The reasons given for the step were dissatisfaction with the leniency of the Government's attitude towards Communism and a violent speech by M. Raditch, with whom M. Davidovitch was nominally in negotiation. The Government might possibly have weathered the shock, if King Alexander had not decided that the general situation was unsatisfactory and that the moment was opportune for placing the Government of the country on a broader basis. Although M. Davidovitch commanded a majority in the Skupshtina, his following included a very small proportion of the Serbian Deputies, and the fear was genuinely felt in some quarters that the future of Yugoslavia was in danger of being settled without reference to Serbian views. The Constitution provides that the Government of the day must enjoy the confidence of Parliament and of the King, and as soon as the Minister for War resigned the double stipulation ceased to be fulfilled. In handing in the resignation of the Cabinet, M. Davidovitch mentioned that he did not so at the express wish of the King and left it to be inferred that he was not himself convinced of the necessity of the step. That the country should have had to remain for more than two weeks without any Government at all must have caused King Alexander to wonder whether he was well advised in adopting the course that he took at that particular moment. Except in Radical circles, there was a general consensus of opinion that M. Davidovitch was doing as well as could be expected, and certainly well enough to justify his being given more time to prove himself. Communism could hardly be described as an immediate danger; as for M. Raditch's speeches, he was well enough known to make it evident that the only thing that mattered was what he did, not what he said.

Yugoslavia's troubles at the present time turn on the circumstance that the second largest political party gives unquestioning allegiance to a man who if he has ever had a practical idea in his head has carefully disguised the fact. M. Raditch's hold on the Croatian peasantry can easily be understood; that the educated and business classes of Croatia should also range themselves without the least misgiving under his banner is evidence either of a general indifference towards politics or of a deep-seated misgiving towards their Serbian fellow-countrymen. For the Serb the situation presents itself in very few words; the iron has entered once into his soul, he risked and endured all for love of country, and he cannot bring himself to stand tamely by while others proceed, as he conceives their policy to be, to make ducks and drakes of what is dearer to him than life. A dispassionate observer can point out several things that wholly escape the Yugoslavs themselves. In the first place, that M. Raditch is regarded as the saviour of Croatia in having rescued it from the over-zeal of the Serbian centralisation is no reason why he should permanently prevent the country from enjoying the benefits of decentralisation. The Croats stood to obtain from the Davidovitch Government, if not all that they desired, at least a generous instalment by way of a start, but the irresponsible tactics of M. Raditch, against which no Croat appears to raise his voice in challenge, prevent Croatia from obtaining any concessions, and are surely pushing her along a road that can end only in civil war for Yugoslavia. The Serbs, on the other hand, would lose nothing by taking their political courage in both hands. Neither the unification that they desire nor the strength that is to result from it can be procured by force, for an unwilling ally must necessarily be an element of weakness. They can afford to wait, in order to see just what Crotian aspirations entail, and only when they have actually overstepped the border line need they become alarmed for the safety of the commonwealth.

Students of psychology must find difficulty in explaining how a race of valiant fighters, as dogged and self-confident as the Serbs, can take such alarm at the bogeys of their own political imagination. When M. Raditch realises that he has only to mention the word Republic in the course of a speech in order to secure the resignation of a War Minister, he must feel tempted to ring the changes on his political vocabulary to discover what word or combination of words is required to bring down a whole Ministry. A sense of humour in Belgrade, if statesmanship is not available, would have produced a personal invitation to the Croatian leader to attend the meeting of party chiefs held under the auspices of the King, whereas his exclusion on that occasion has probably intensified the difficulty of finding a solution of the crisis. As soon as he had declared that he accepted the Monarchy there was nothing to prevent M. Raditch from being called to Belgrade for consultation, when, no doubt, it would have been found that the Republican tiger was much less fierce at close quarters than when left in his Croatian lair. This common-sense policy seems so obvious that the onlooker is left to wonder with the Yugoslav public what can be behind all the mystifications of the politicians. Is the parliamentary system really in danger, or is the so-called "White Hand" merely a gathering of patriotic but narrow-minded and unintelligent people unable to understand that there are more ways than one to most goals? In the meantime the country becomes more and more penalised by the political instability, and the onlooker is left wondering when the Yugoslav politician will forget his own petty personal interests and concentrate his whole attention on the interests of Yugoslavia.

THE YEMEN.

Before the Central Asian Society on October 24 Colonel Harold Jacob, C.S.I., lectured on the Yemen, with Major-General Sir Edmund Barrow in the chair. In the course of his lecture Colonel Jacob said :—

After the exit of the Turks from Arabia each Arab "king" seeks to realise his own proper ideal. There can, however, be no close combination. That cuts clean against the Arab genius, is contrary to the spirit of the Koran, and could scarcely be effected even by the Prophet himself. Nor will these "kings" bow the knee to any Arab Khalif. The *spiritual* Khalifate ended with the fourth Khalif Ali, and thenceforward we see *temporal* rulers in various places. Even the Turks in Arabia, where they were strongly *in situ*, were too wise to attempt an amalgamation of the different rulers.

The lecturer was speaking mainly of the Yemen, where he had spent fifteen years, but he said that the other provinces could not be left undiscussed, since all were of the warp and woof of Arab hegemony.

Colonel Jacob placed the Yemen broadly in S.W. Arabia, and detailed what, before 1918, were the three political divisions there, viz. :—The Turkish Yemen, the British zone at Aden and vicinity, and, lastly, the Aden Protectorate. The genesis of the Protectorate started with Capt. Haines, of the old Indian Navy, the captor of Aden in January, 1839, and its ruler for fifteen years. The still-existing scheme is the payment to a great many Sultans and Sheikhs of varying stipends to ensure peace on the trade routes. The greater number of these pacts are the result, directly or indirectly, of Turkish encroachments since 1873. The lecturer believed that with the obliteration of the old Anglo-Turkish boundary line as drawn in 1902-04 it was irrational to divide Arab and Arab, and the gifts of the stipends and doles actually caused this division. The Arab loved not us, but our doles, which were made without our obtaining any adequate consideration. Reserving a buffer State between ourselves and the Imam, it would be a vast saving to our Exchequer if we "cut the painter" and let the majority of the territories lapse to the Yemen's Strong Man, who, like Mussolini of modern Italy, is an ardent Irredentist.

Colonel Jacob said the line of cleavage between the Sunni and Shiah sects was far less marked than was the case in India. In Arabia the sects would intermarry, pray in the same mosque, and even change from one persuasion to another, as suited the occasion.

Hussein of the Hejaz, the Idrisi Saiyid of Sabia in Asir (really an integral part of the Yemen), and Imam Yahya of Sanaa were all descended from Al Hasan, the eldest son of the Khalif Ali and his wife Fatima, though the Zeidi house originally emanated from Zeid, the near descendant of Al Hussein, Ali's second son. The Idrisi family had early migrated to Fez, and the present-day family gained temporal power in Sabia, and Abu Arish, and the coastal towns of Asir so late as 1907.

Colonel Jacob detailed the daily life of Imam Yahya in his capital of Sanaa, and portrayed his popularity, easy accessibility, his *bonhomie* and ready insight into every detail of the administration. He had invited Colonel Jacob and his friends, Major A. D. Spiers and Dr. J. K. Reid, to Sanaa, where, at the close of 1923, they were for three months his honoured guests, and living in one of his palaces. The Imam had for years been anxious to open his country to trade, and this was the express reason for the invitation he had given them. The stumbling-block to development was, however, the failure up to date to conclude a Treaty with the Imam, whose main wish was to secure to himself the rendition of his old-time port of Hodeida, "the key to Sanaa." Were a Treaty concluded, the whole of the Yemen and its sectaries would revert to the Imam Yahya, whose friendship it was important that we should secure. This result attained, there would follow the expansion of trade, which would be advantageous to both contracting parties.

The lecturer took pains to discount the oft-alleged friendship of the Imam to the Turkish régime. The reverse was the fact. The house of the Imam since 1873 had been markedly hostile to that régime, and the Yemen chronicles would amply attest the undying enmity of Imam Yahya and his forbears. Prior to the outbreak of the Italo-Turkish War of 1911-12, the Imam had been induced, as a true Moslem, to join the Turkish cause against the Infidel. He made a pact with them for ten years, and this term expired only in 1921. Even had the Imam, whose friendship to us was barely disguised, attempted to side with with us in 1914-18 the attempt could not have succeeded, for Sanaa was beset before and behind by a cordon of Turkish troops. The Imam's neutrality during the Great War was testified to by no less an authority than General Ali Said Pasha, the Circassian General who opposed us for over three years from his headquarters at Lahej. It would appear that history was repeating itself to-day, when we had allowed the Idrisi ruler of Sabia and Abu Arish to come south to Hodeida. The Yemen could not hold two rival potentates. In 1840 we had encouraged the Pasha to displace the Egyptians of Mohammed Ali Pasha's régime, and the Porte, in its weakness, and because of a heavy bribe paid to its Commissioner, Ashraf Bey, by the then Shereef of Abu Arish, had confirmed this turbulent swashbuckler in control of the lowland ports. The Shereef practised every sort of cruelty and exaction, even to cutting down the British flag at Mokha, and he was ultimately ousted from all his ports by the Porte. Now again, in 1919, we had suffered the present-day and upstart ruler of Abu Arish once more to poach in the Imam's preserves, and confusion was rampant, and trade in the meantime had gone by the board.

Coming to the vexed question of King Hussein's style of "King of the Arabs," the lecturer said that *all* the Arab rulers were "Kings of the Arabs," and the claim of one to this style caused no offence to any of the others; in fact, the Yemen's history provided a precedent for the assumption of this title.

It was deplorable that we had dropped King Hussein, our whilom friend, whatever his idiosyncrasies and puerilities from time to time. This change of front would nonplus our Arab friends. It was, of course, impracticable to have aided him against Ibn Saoud of Nejd, but a *via media* had been possible, and the inroad of the Wahabis into Mecca would give rise to a legitimate charge against us, the successors to the Turks as the arbiters of Arab national life, of being the cause of civil war in the sacred precincts of Mecca

When we look at our Arab programme in execution we must note its non-realisation. We must feel, as did the 18th century Mme. Geoffrin, who, speaking of her daughter, said, "When I look at her I feel like a hen that has hatched a duck's egg." We should espouse the Arab cause. All are Moslems; all seek our friendship; all craned their necks to welcome the Turkish dissolution, so that they might inaugurate their new life under our star. Let us recognise their individuality and help each "to cultivate his own garden."

Digitized by Google

Finally, in citing our assets in the Yemen *in esse* and *in posse*, Colonel Jacob instanced the pre-eminently successful labours of that veteran leader Dr. John Cameron Young and his associates of the Keith-Falconer Medical Mission of Sheikh Othman, itself our prime political asset; then, too, our own strictly impartial rule in Aden—the admiration of the entire countryside– along with the invaluable assistance given us indirectly by "Tommy Atkins," who, by his sporting proclivities, had done so much to bring together white and brown. The officers and men of the 1st Yemen Infantry were an additional asset. Each British officer was a potential political officer, and the influence exerted to-day by this corps was all the more valuable to us since our unfortunate retreat in 1907 from the Aden Hinterland, since when we had lost that close personal touch with the folk which was so important an item in all dealings with Oriental peoples.

Among assets still to be was the commercialisation of the Aden Railway, a strategic line of the War that had since been extended to eight miles beyond Lahej, but which, because of its non-continuance, due to a lack of friendly intercourse with the Imam, was to-day a "white elephant," and did not pay construction. The advisability of introducing the Boy Scout movement was also touched upon, but a greater asset would be the creation—as in India—of a college for the training of the scions of the Sultans and the big Sheikhs, who were running to seed owing to neglect, early marriages, and their unchecked passion for the pernicious Kat-leaf. In short, our policy should be intensive rather than extensive, so that, in the words of the immortal Lao-Tzu, we might arrive at "Production with possession; action without self-assertion; development without domination."

Colonel Jacob subsequently showed several lantern slides of the Yemen, notably of Sanaa and of Mokha.

Commodore Crawford spoke of the Yemen's need of a port, of the undesirability of Britain's interference in the making of boundaries between the various Arab rulers, and, finally, of the "sirens" of Socotra.

Major Spiers emphasised the modesty of the lecturer, which forbade him to mention the extraordinary nature of the journey from Mokha to Sanaa, which, owing to Colonel Jacob's enormous prestige with the men of the Yemen, was made without personal danger. To the Yemen the British Empire was personified in Colonel Jacob.

CORRESPONDENCE.

The columns of The Near East *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* The Near East.

ENGLAND AND EGYPT.

To the Editor of The Near East.

Sir,—The eve of the General Election is certainly not a favourable moment to discuss the situation which has arisen owing to the breakdown of the Zaghloul conversations. But I cannot allow your article of October 15 to pass without comment, in that you practically accuse the Egyptian Prime Minister of a lack of honour in accepting our offer of independence, but failing to meet our wishes as regards the subjects reserved for discussion. Surely Zaghloul Pasha has repeatedly made it clear that he was in no way a party to that understanding, and in coming to London to hear Mr. Ramsay MacDonald's views he fully reserved his liberty of action in connection with these reserved subjects. Is it, too, not rather dangerous for us to make any mention of an *honourable understanding*, seeing that the British Government has repeatedly informed the world (through both Lord Cromer and Sir Eldon Gorst) that our occupation was temporary, and not to be prolonged? Looking at it from the Egyptian point of view, it is certainly reasonable to ask whether forty years is not a longish period for any occupation which is not permanent? Moreover, it can also be pleaded that this fear for our communications is not a danger of recent growth, and be asked why was Lord Salisbury so unmindful of it as to approve the Drummond Wolfe Convention of 1887, which only required the Sultan's signature at Constantinople, and our army would long ere this have quitted the shores of Egypt?

If the truth be told, our promises were intended for *Europe* rather than for the *Egyptians*, as in those early days there was a danger of raising the whole Near Eastern Question were it thought that our occupation was permanent. The War has changed all these considerations, but even now we are more mindful of Europe than Egypt, as is apparent from our fearing to transfer the Army to the Canal Zone on account of European susceptibilities, whilst entirely ignoring the Egyptians' very natural wishes for their capital to be free. But what a farce it makes of the League of Nations when a small nation's aspirations conflict in any way with a Great Power's interests! I have purposely made use of the word aspirations, as were we merely consulting Egyptian interests I should advise my friends in Egypt thus: "Accept our protection, and be thankful that you are, at all events, saved from the occupation of a more exacting Power, who might deprive you of the self-determination which you enjoy at our hands. Further, it is in your interests (not ours) that the Capitulations be abolished and that all foreigners dwelling in Egypt be subjected to one jurisdiction, a Mixed Tribunal though it be. Moreover, you must not for a single moment imagine that you can without our assistance free yourselves from this annoying and often very unjust supervision. Again, situated as you are, with the Suez Canal the highway to the East, you may be thankful that your country escaped as it did during the recent war. It was owing to our protection you have come out of the War with your Treasury overflowing and monetary system unimpaired. Can any other nation, great or small, boast of such immunity? It is true that we have in a measure not kept our word as regards evacuation, but remember that we came out of the War victors, and the Near Eastern Question has entirely changed since the promise was made. In short, the letter of our bond may have been broken, but seeing the enormous benefits you have enjoyed

you must trust us still further. Co-operate with us is all we ask."

We cannot expect such advice, however good, to be palatable to the Egyptian Nationalists, but possibly it may be less resented than accusing them of a lack of honour in failing to respond to our advances under the changed conditions brought about by the War. Many of us, like the writer, may also feel that as long as our Fleet is unchallenged at either end of the Canal our line of communications cannot be cut. With the Fleet defeated, our occupation of Egypt will avail us nothing. With Egypt friendly, we, in fact, need never fear the Canal being blocked even. With the Egyptians against us, who can say what will happen? To recreate and confirm this friendship it is worth our while to meet their wishes, and find some spot other than Cairo for our Canal protecting Army.

But let us be honest, whatever we are. You cannot expect either large or small nations to believe in extracts from the Sermon on the Mount at Geneva if at the same time we give out in Cairo that what we took with the sword we keep by the sword.—I am, etc.,

British Club, Biarritz. COLES PASHA.

THE MOSUL QUESTION.

To the Editor of THE NEAR EAST.

Sir,—As one who has been for two years in the Sanjak of Suleimaniyeh and has known the country and its inhabitants, I venture to suggest a solution of the Mosul question which may strike you as singular, but which, nevertheless, is reasonable on ethnographical and geographical grounds.

Forty miles east of Kirkuk begins the range of Kara-Dagh hills, which separates the Sanjak of Suleimaniyeh from the rest of Mosul Vilayet. It is inhabited purely and entirely by the Kurds, who gravitate neither towards the Turks nor towards the Arabs, and who would remain a perpetual thorn to Turkish or Arab Government, under whichever they might be placed. The Kurds of this country, which is called South Kurdistan, are so much inter-related with their kinsmen on the other side of the border in Persian Kurdistan, and that country is so congenial to them, that nearly all the nomadic tribes of this country emigrate to Persia for the summer. The language of these Kurds is more akin to Persian than any of the Kurds living in the northern part of Turkey, and the written language is, of course, pure Persian. If the Kurds of this country gravitate anywhere they gravitate towards Persia, from which they are separated by an entirely unnatural boundary.

In the South-West corner of Persia, which comprises the territory of the Sheikh of Mohammerah, and is known as Persian Arabistan, the conditions are exactly *vice versa*. Here is an Arab population entirely alien to Persia which naturally gravitates towards Mesopotamia. Cannot the League of Nations redraw the boundary of Mesopotamia so as to include Persian Arabistan in the territory of Mesopotamia, and South Kurdistan in the territory of Persia?

The rest of Mosul Vilayet should, of course, remain with the Arabs. There are more historical, traditional, strategical, and sentimental reasons in favour of the Arabs than the Turks can claim, and the only possible solution with the Turks is to exchange the small Turkish population (which, by the way, is not of pure Turkish descent, but is an hybrid breed, and can be classed neither as Turk, nor Kurd, nor Arab; a man of Kirkuk, Khamkin, and Kifri speaks all three languages, Kurdish, Turkish, Arabic, as his mother tongue) with the Arabs that still remain in Turkey.—I am, etc.,

Allahabad, October 4. SYED M. AHMED.

NEAR EAST BOOKSHELF.

TRANSJORDAN.

"TRANSJORDAN: SOME IMPRESSIONS." By Mrs. Steuart Erskine. (London: Ernest Benn, Ltd. 12s. 6d. net.)

The authoritative book on Transjordan, containing the story of its conception, its formation, and its functioning, has yet to be written, although rumour has it that Mr. St. John Philby has some such compilation in keeping. Meanwhile, our knowledge of the place has from time to time to be refreshed with the comments, often pleasing, but necessarily superficial, of occasional travellers, who, from various motives, stray across the Jordan from Palestine.

Mrs. Steuart Erskine is the latest in the field, and it can at once be said, in agreement with Lord Raglan, who contributes an Introduction, that hers is a very readable book. She left Jerusalem in March of this year, went to Es Salt, and within a month had seen such places as Amman, Jerash, Petra (Wadi Musa), Kerak, Madeba, and Irbid. These parts she saw well, and with wise restraint. Realising the shortness of her time there, she concentrated on the observance of a few things, and, through this complete avoidance of any desire to "do" Transjordan, she has succeeded in investing with value everything she sets down.

These impressions are certainly alive, and made with a sense of fun. (A sense of humour she found a great asset in her journeyings in a Ford.) We like her story, for instance, of the mosque at Es Salt, which is near the hospital:—

It is so close to the hospital that a former Muadhdhin, who happened to be also a baker, once ended his call to prayer by leaning from his balcony and addressing these words to the matron, who was also out at an early hour:

"Sister, how many loaves do you want for the hospital to-day?"

It so happened that she was at Amman when King Hussein was there. Here is her portrait of this unfortunate monarch:—

King Hussein is small and spare, and age has set its mark upon him; but his eyes have a penetrating look, and he has an air of authority that becomes him. He reminded me, curiously enough, of an early impression of Queen Victoria; there was something quietly autocratic about him. As head of a family and a man who has long occupied a position of importance, his new dignities sit lightly on him.

When it was necessary to make arrangements for this addition to his retinue (he had offered the authoress the use of his royal train as far as Qatrani), the King resolved to consult the Emir, or rather to tell him what he wished done. He turned to one of his followers and said simply:

"Send for Abdulla!"

Again he reminded me of Queen Victoria, who never could realise that her children had grown up.

A shrewd enough comment, this. It need scarcely be added that the royal train did not convey Mrs. Erskine.

There are other passages that we should like to quote, but space forbids. Mrs. Erskine allows herself a little history, a little description, and, most charming of all, a little musing. Her book is illustrated with many photographs, mostly excellent; and it cannot be said that it does not possess a map.

ARABIC (SYRIAN) SELF-TAUGHT

(In Arabic and Roman Characters.)

By A. HASSAM and REV. N. ODEH.

CONTAINING:

The Alphabet.
Pronunciation of Arabic Letters.

MOSLEM LEADER'S DEPARTURE.

Moslems of the Ahmadia Movement gathered at Waterloo Station last Friday afternoon to bid farewell to their head, the Khalifat-ul-Massih, whose father, Hazrat Mirza Ghulam Ahmad, founded the movement in 1890. The Khalifat-ul-Massih, with a delegation of about twenty, came from India two months ago on a mission to Europe, and particularly to attend the Conference on Living Religions of the Empire.

Before departing, his Holiness said: "There is, in my opinion, a great responsibility on the shoulders of the English people. They are the nucleus and bond of the British Empire, which I hope will be strengthened more and more and never be shaken. For myself and my community I can assure my fellow-subjects of the British Isles and other parts of the Empire that we will do our best to strengthen the movement of co-operation and unity in the British Empire, and with all the world."

THE RIF.

The Near and Middle East Association met, under the presidency of Major-General Lord Edward Gleichen, on October 15, to hear a lecture on the Rif, by Captain R. Gordon Canning. Those present included Count Raczynski (Polish Legation), Lady Downes, Muhammad Yunus Khan (Afghan Legation), Mr. Yusuf Ali, Sir John Foster Fraser, Mrs. Margaret Hasluck, Squadron Leader W. H. L. O'Neill, Mr. and Mrs. Leland Buxton, Mrs. Gordon Ponsonby, Captain H. Goad, Mrs. Roy Devereux, Sir Harry Lamb, Sir Henry and Lady Burt, Colonel St. John Cooke, Sir William Clark, Mr. W. E. D. Allen, Colonel and Mrs. Percy Bramley, Mr. H. Vaughan Morgan, Prebendary Gordon Ponsonby, Dr. E. H. Griffin, Mrs. Arthur Laye, Captain H. Mander, and the Lord Headley.

Captain Canning (whose paper was read by Miss Edith Place) said that the Rifis, as a whole, could be considered Berbers, and that they came probably from the Iberian stock. In religion, 90 per cent. of them belonged to the Malekite sect, a sect that, from the strict Muslim point of view, savoured of anthropomorphism. Physically they were a finely-built people.

Turning to the causes of the present war in the Rif, he sketched the reactions between Spain and Morocco from 1499. In the years 1900-1924 Spain's attitude towards the Rif was government by greed and fear. Since 1909 Spain has been engaged in a ruinous war on the Rif, employing between 50,000 and 150,000 men in attempting to subjugate her portion of Morocco. The description of the Rifis as "rebels" was absurd, and he claimed for Abdul Kerim that he was one of the most enlightened rulers of the day. Abdul Kerim's demands were: (1) Independence of his country; he would be willing to leave Ceuta and a small area to Spain, and also Melilla; (2) to develop the riches of his country in conjunction with European capital and science; and (3) not to interfere with the French zone, but to owe no allegiance to the Sultan while that ruler is under foreign domination. His immediate requisites were a medical mission and the presentation of his representative before the League of Nations.

Mr. Ameer Ali subsequently emphasised that the present war in Morocco is but a continuation of the struggle which commenced thirteen centuries ago, and pleaded for the British public to intervene, in the interests of humanitarianism, to end the futile slaughter now being indulged in.

Mr. J. A. Bevan, who had recently visited the Rif for geological purposes, said that when first he went, in 1921, life in the Rif was primitive, but during the next two years Abdul Kerim consolidated the tribes and reformed the government of the country. He proceeded to sketch the characteristics of the Rif, and concluded that Spain was not so much to blame for this war as were the signatories to the Treaty of Algeciras (1906), which gave France and Spain a free hand in the subjugation of Morocco.

LAND SURVEY OF PALESTINE.

The Government of Palestine has engaged the services of Sir Ernest Dowson, K.B.E., for a period of four months, to advise on the completion of the Land Survey of Palestine and on the best method of undertaking a land settlement. The agricultural progress of the country is greatly hampered by the existence of many disputed land titles, and undetermined boundaries, as well as by other defects in the land system inherited from the former régime, and it is of importance that such hindrances should be removed once for all, as they have been in Egypt, by a complete cadastral survey and land settlement.

Sir Ernest Dowson was lately Adviser to the Egyptian Ministry of Finance, and previously Inspector-General of the Survey Department of Egypt. The Palestine Government has been fortunate to secure the services of a recognised expert in the matters upon which he is to advise.

Sir Ernest Dowson will arrive in Palestine about the middle of November.

Bands of armed Communist and Agrarian refugees are reported to be trying to return to Bulgaria from Serbia, and there have been skirmishes with Bulgarian frontier guards along the Macedonian frontier.

NOTES AND NEWS.

167, Strand, London, W.C.2,
Tuesday Morning.

The Election.

By the time these Notes appear the election will be over and sufficient results will be known to indicate the outcome. While it is the fault of the Government alone that for a third year in succession trade should be handicapped by the disturbing influence of an election, the business community has some cause to be grateful to Mr. MacDonald for curtailing the campaign into less than three weeks and thus minimising the effect on commerce. One can only hope that the issue of the election will mean stable politics and no more elections for five years. The country has had quite enough of alarums and excursions in the last few years, and especially since the tenure of office of the present Administration, which, if it is entitled to the fullest praise for its part in what everyone hopes will be a lasting European settlement, is equally entitled to the most unmitigated criticism for its other activities, such as the negotiations with Russia and the removal of the McKenna Duties, the effect of which has been painfully evident in the enormous increase in the imports of a variety of commodities from abroad, with the natural consequence that work that could have been done in this country is no longer available for the improvement of the employment situation. I have known too many surprising elections to feel any certainty as to the issue on the present occasion. That the Conservatives will win seats is absolutely certain; the point in doubt is whether their gains will be sufficient to enable them to form an independent Administration. If that be the outcome, then we can view the immediate future without misgiving, for we shall have the stable Government which is so vitally essential for the development of commerce. If, however, there is a stalemate we shall be left in a state of uncertainty, and must be prepared to face another election within a few months.

Yugoslavia's Trade and the Exchange.

I have on many occasions emphasised the point that the one essential for trade development is that the exchanges should be stabilised. An illuminating example of the kind of thing that happens when they are not is forthcoming in the case of Yugoslavia. As I indicated recently, there has been evidence during this year of the development of a state of stabilisation as regards some, at any rate, of the Near Eastern exchanges. Recently, however, the Yugoslav dinar has improved somewhat, and the effect of this has been to bring trade between Great Britain and that country practically to a standstill for the time being; not, be it emphasised, because of the improvement of the exchange, but because in Yugoslavia itself the course of values has not followed the movement of the dinar. Freight rates have remained unchanged, with the result that it has not been worth while for traders to import goods. As from now onwards the Near Eastern exchanges, speaking broadly, may be expected in most cases gradually to improve, it is essential that the countries concerned should take steps to see that such hindrances to trade as exist are removed; otherwise, until the final stabilisation of the exchanges is accomplished, we shall be faced with the constant interruption of trade. It is not a difficult matter, and a solution should indeed be easy to find. All that is necessary is to see that railway freights and other charges affecting trade keep a more or less definite relation to the exchanges. If that is arranged, trade will be able to continue without interruption whether the exchanges are steady or are improving.

Roumania's Finances.

Nothing could better illustrate the great improvement in Roumania's economic position than the figures of the country's finances for the first nine months of the current year. For that period the revenue amounted to 18,992,000,000 lei, and, making allowance for the natural increase in receipts in the closing three months of the year, it is estimated that Roumania will have a Budget surplus of 3,600,000,000 lei. That would be a very remarkable result; and if it is realised the present year will very evidently be a landmark in the history of the country's recovery from the effects of the war. The trade figures, too, are eminently satisfactory. In 1923 Roumania's imports amounted to 703,274 tons, of the value of 19,713,000,000 lei, but her exports were 4,878,210 tons of the value of 24,373,000,000 lei. In the circumstances it is a matter for no little surprise that the Roumanian exchange should have remained for so long at a figure which obviously quite misrepresents the country's position. It was inevitable that the recovery, when it came, should be sharp, and until recently the leu has been improving. It now stands at 810, which compares very favourably with the figure at which it was a few months ago, but, in view of the vast improvement in the general economic situation in Roumania, it is not too much to expect that before long there will be a much more pronounced appreciation of the leu. British trade with Roumania, it may be added, has shown a very steady tendency to improve for some time past, but it is quite essential that British traders

as a whole should pay much more attention to the requirements of the country, for Roumania promises to be in the future one of the most important markets in the Near East, and the people prefer British goods if they can get them.

Empire Cotton Growing.

Elsewhere in this issue will be found extracts from the annual report of the Council of the Empire Cotton Growing Corporation. It is most encouraging, and shows very clearly the steady progress that is being made towards making this country more or less independent of external sources for the requisite supplies of cotton. Chief interest centres, of course, in development in the Sudan, but, as the report shows, a great advance is being made in many other parts of the Empire. For the time being, as I pointed out last week, we have been saved from a cotton shortage resulting from an increased demand for cotton goods by the improvement of the American crop. But we do not want to be dependent on chances of that kind. Next year the American crop may be relatively poor, in which case, if trade improves, as it may be expected to do, we shall be placed in a very difficult position. By that time, it is true, we shall have a great increase in cotton production in the Empire, but it must be some years before the yield of cotton grown in the Empire can be a vital factor in the world's production. Until that happens Lancashire's supplies must remain uncertain, and the situation demands unceasing efforts, so that in the shortest possible space of time the position may become one of relative safety.

COMMENTATOR.

NEW COMPANY.

Anglo-Abyssinian Trading and Mining.

The Anglo-Abyssinian Trading and Mining Company has been registered as a private company with a capital of £1,000 (£1 shares). The objects are to carry on in Abyssinia and elsewhere the business of manufacturers and dealers in leather, carpets, soap, candles, and Eastern products, workers of mines, etc. The first directors are: Hagop Baghdassarian; Hagop Kenyalan, 14, New Street, Bishopsgate, E.C.2, general merchant; Ezepos Benlian, 3 and 4, New Street, Bishopsgate, E.C.2, carpet importer.

5, PHILPOT LANE, LONDON, E.C.

COMPANY MEETING.

South Indian Railway.

The ordinary general meeting of the South Indian Railway Company, Ltd., was held on October 22 at the offices, 91, Petty France, Westminster, S.W. Mr. Alex. Muirhead, C.I.E. (chairman and managing director), presided.

The Secretary (Mr. W. B. Reynolds) having read the notice convening the meeting,

The Chairman, in the course of his speech in moving the adoption of the report, said that the revenue account showed an increase in gross earnings of 18 lakhs of rupees, or 3.69 per cent. The board recommended a final dividend for the year of the same amount as last year—namely, 4¼ per cent. —making the total for the year 8 per cent., of which 3½ per cent. represented guaranteed interest and 4½ per cent. the contribution from surplus profits, the latter having been fully earned in the period covered by the report. The agent's cable giving the approximate results of working for the first half of the current year showed that while the earnings were down by 11½ lakhs, working expenses were also lower by 24½ lakhs, and the company's estimated share of the surplus profits for that period was Rs.3,65,000 compared with Rs.3,02,175 in the corresponding period of last year.

The Government's proposals for giving effect to the recommendation of the Acworth Committee for the establishment of a Rates Tribunal were receiving the careful attention of the board and of the company's officers with a desire, having due regard to the interests of the railway, to meet all reasonable requirements of its customers. It would be remembered that the Acworth Indian Railway Committee of 1920-21 recommended the separation of the railway finances from the general finances of the Government of India, and it was reported that the Budget proposals of that Government for giving effect to the scheme had been accepted. The actual operations and their effects on the finances and administration of individual railways remained to be seen. It was, however, understood to be the intention that for prosperous lines money should be made more freely available than in the past, and on that basis the South Indian Railway undertaking might look forward hopefully.

Another matter of interest was that under the revised contract between the company and the Secretary of State the company's capital in the undertaking on January 1, 1911, was £1,000,000 and that of Government £13,000,000 sterling, and a clause was embodied under which in the provision of any further moneys which might be required the Secretary of State should, unless it were otherwise agreed, allow the company from time to time to increase its ordinary capital to the extent required to maintain the ratio of one to thirteen, in all other respects the contract giving the Secretary of State the option of deciding by what methods the capital requirements should be met. By the year 1914 these requirements had amounted to a considerable sum, which had been provided by advances made by Government, and these advances were then repaid out of an issue of 4 per cent. debenture stock which the Secretary of State called upon the company to raise. The balance of that issue had since been expended, and the further capital requirements had again been met by sums advanced by the Secretary of State. By the end of March, 1924, these advances totalled up to about 3¾ crores of rupees, or say £2,500,000 sterling, and had thus lowered the ratio of company's to Secretary of State's capital to 1 to about 15½. The board had made representations to the Secretary of State for a readjustment of this ratio, and they awaited his decision as to the method of financing by which that adjustment was to be affected.

The report was unanimously adopted.

A section of railway nineteen miles long was opened on October 22 between Veles and Shtip, in Serbian Macedonia.

The Chartered Bank of India, Australia, and China announces that an agency of the bank has been opened at Kuching, Sarawak.

The traffic receipts of the South Indian Railway for the week ended September 20 amounted to Rs. 9,65,237, making the total from April 1 Rs. 2,34,88,632.

The Greek revenue returns for the first six months of the financial year 1924-25 show an increase of 180,000,000 drachmæ as compared with the corresponding period of the year 1923-24, says a Reuter message from Athens.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended September 30 amounted to £E12,510, making the total from April 1 £E142,778. The totals for the corresponding periods of 1923 were £E8,713 and £E123,011.

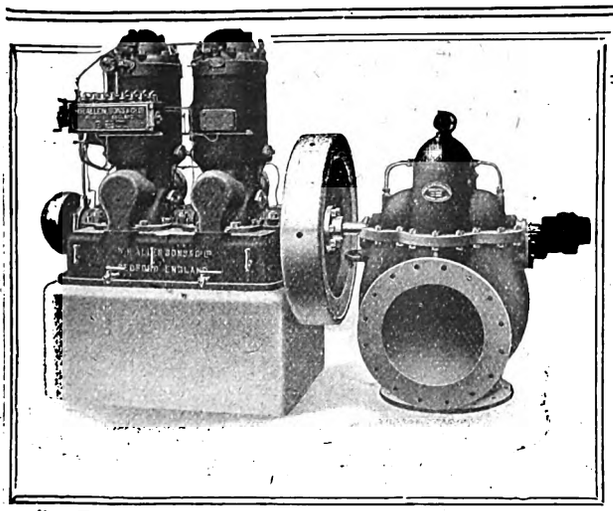
THE MOTOR SHOW.—II.

Four cars were shown at the Clyno stand, an 11 h.p. two-seater, an 11 h.p. four-seater, an 11 h.p. Royal four-seater, and an 11 h.p. four-door saloon. The chassis details of all the cars are the same. The engine is 66 bore by 100 stroke, water-cooled, with side-by-side valves. Lubrication is by plunger pump. The gear-box is of Clyno special design, and gives three forward speeds, and there is spiral bevel final drive. The wheelbase is of 8 ft. 9 in., and there is a ground clearance of 9 in. The two-seater also has accommodation for two persons in a dickey, and is an admirable car, and at £175 should be assured of a good demand. The four-seater, which costs £195, is a very fine production, while the other two models are excellent cars.

An interesting stand was that of Arnott and Harrison, who showed three cars—a 7 h.p. two-cylinder New Carden two-seater light car, a 7 h.p. two-cylinder New Carden family model de luxe light car, and a 7 h.p. two-cylinder Sheret family model de luxe light car. The engine of the two New Cardens is 75 bore by 80 stroke, and has two forward speeds and reverse, transmission by multiple disc-clutch running in oil, and hand and foot brakes operating on the back wheel, working independently. The two-seater has a 7 ft. wheelbase, and the overall length is 9 ft. 6 in. It is a workmanlike production, and a most comfortable car, being fitted with specially designed springs, while the seats are deep and roomy. Graceful to look at, it is an ideal car for the owner-driver, and at the very moderate price of £90 it is assured of a large demand. The family tourer has an overall length of 10 ft. 5 in., and is painted in saxe blue with black wings. It is fitted with a dynamo lighting set, a hood, a hood cover, side curtains, a screen, etc., and at £125 must be regarded as a very attractive proposition. It will seat three adults or two adults and three children, and the rear compartment can be used for luggage or traveller's samples. The 7 h.p. Sheret is another very useful car. The engine is 75 bore by 80 stroke, there are three forward speeds and reverse, all-chain transmission, single plate Ferodo-lined dry clutch, and hand and foot brakes operating independently on the rear wheels. The car is fitted with a dynamo lighting set, side curtains, a screen, etc., and is painted maroon, with black wings.

At the stand of Brooks Steam Motors there was shown a 24 h.p. two-cylinder double-acting steam car. The engine is 4 bore by 4½ stroke, and there is a simple slide valve developing 50 brake h.p., and a fire tube type boiler, with 71 sq. ft. heating surface. The car has a five passenger Sedan body, and is painted black, with a polished metal line. Its overall length is 15 ft. 10 in., and it has a minimum ground clearance of 9½ in. It is maintained that there are many advantages in a steam car, such as greater tire mileage, ease and economy of repairs, simplicity of operation, longer life and less depreciation, a minimum liability to freeze, etc. It is the view of the company that steam alone provides the smoothness of action, flexibility, power, ease of control, reliability, and durability demanded in the modern automobile. The company has under way the development of a steam-powered bus embodying the advantages of the present Brooks' pleasure car chassis. It would seem probable that the steam car would be very suitable for regions such as the Near East, and the same would apply also to the bus. In many important centres of the Near East the development of the use of the bus is proceeding apace, and as the conditions generally are no longer favourable for the development on a great scale of railway lines it follows that where it is possible the tendency in the future must be to rely to an ever-increasing extent on motors in their various forms as a means of linking up different places, and I am confident that companies like Brooks Steam Motors should find the Near East as a whole an important field for trade development.

McKenzie Motors showed three of their 11 h.p. four-cylinder cars, a two-seater, a four-seater, and a two-seater with a coupé body, and a 9 h.p. four-cylinder car. The engine of the 11 h.p. cars is 66 bore by 109.5 stroke, and has side valves, thermo-syphon water circulation, forced lubrication, magneto ignition, three forward speeds, spiral bevel final drive, and internal expanding brakes on the rear wheels. The wheel-base is 8 ft. 6 in., and there is a ground clearance of 8 in. The 9 h.p. car has an engine 60 bore by 95 stroke, with overhead valves, thermo-syphon water circulation, forced lubrication, magneto ignition, three forward



THE 'ALLEN' HEAVY FUEL OIL ENGINE

speeds, spiral bevel final drive, and internal expanding brakes on the rear wheels. The wheel-base is 8 ft. 3 in.. and the track is 3 ft. 10 in. The cars are admirable productions, and are certain to prove very popular.

In these notes I have not been able to touch on more than a few of the multitude of the exhibits at the Motor Show. To do full justice to the wonderful exhibition would demand far more space than is at my disposal. The show has proved, if proof were needed, that British motor manufacturers are second to none in enterprise and initiative, and I trust that they will now devote these qualities to seeking out new markets for their products. The Near and Middle East is now beginning to absorb cars rapidly. It is a vast region, and its extent is an indication of its potentialities as a market for motors. When it is remembered that it includes, besides the Balkan countries—Greece, Yugoslavia, Roumania, and Bulgaria—and Turkey, Egypt, the Sudan, Syria, Palestine, Mesopotamia, and Persia—when it is borne in mind that even sheikhs are now taking to the car, and that foreign firms are contemplating the establishment of factories in that region, it is unthinkable that British firms should refrain from making every effort to secure part of the future trade in motors. Everything is in their favour, given a little enterprise, adequate attention to the special needs of the Near East—the car that will do for one region would be unsuitable for another—and care that publicity is sufficient, for there is nothing to be gained by waiting for orders from the Near East. Those who have anything to sell must bring it forcibly to the attention of prospective purchasers. There is no other way to success.

CHESS.

BY "CARO-KANN."

There is an exceptionally strong entry for the City of London Chess Club Championship this year. The competitors include the holder, Sir G. A. Thomas, Bart., who has won it on several occasions, Mr. J. H. Blake, Mr. H. Jacobs, Mr. R. C. J. Walker, Dr. S. F. Smith, and Mr .E. G. Sergeant (all of whom have held it on one or two occasions), and such strong players as Mr. R. P. Michell, Mr. V. L. Walhtuch, and Mr. H. Saunders.

Next year's British Chess Championship is to be held at Stratford-on-Avon. A referendum is to be taken to decide which Monday in August is preferred by chess players for the commencement of the annual congress.

The following game was played in the British Championship at Southport between Mr. R. H. V. Scott (White) and Mr. H. Saunders (Black):—1, P—Q4, Kt—KB3; 2, Kt—KB3, P—KKt3; 3, P—B4, P—Q4; 4, Kt—B3, B—Kt2; 5, B—B4, P—B3; 6, P—K3, Kt—R4; 7, B—K5, P—KB3; 8, B x Kt, R x B; 9, B—K2, Castles; 10, P x P, P x P; 11, Kt—KR4, P—K4; 12, P—KKt4, P—B4; 13, Kt x KtP, P x Kt; 14, P x Kt, P x QP; 15, P x QP, P—KKt4(a); 16, R—KKt1, P—Kt4; 17, R—QB1, R—K1; 18, K—B1, P—B5; 19, B—B3, B—R6ch; 20, B—Kt2, B x Bch; 21, R x B, P—QKt5; 22, Kt—R4, Q—B3; 23, Kt—B5, P—B6; 24, R—Kt3, QR—B1; 25, P—R6, Q x QP; 26, Q x Q, B x Q; 27, R x Pch, K—R2; 28, R x QP, R x Kt; 29, R x R, B x R; 30, R x B, R—K7(b); 31, R—KB5, R x P; 32, R x P, R x P; 33, R—B7ch, K x P; 34, R—QKt7, P—R4; 35, R—Kt5, R—R6; 36, K—K2, P—Kt6; 37, K—Q2, P—R5; 38, R—Kt4, R—R7ch; 39, K—B1, Drawn.

(a) A most curious position. Black has come out of the exchanges with a game which offers fair prospects, though his King's position is almost as open to attack as White's.

(b) Though White is two pawns to the good, it is a difficult matter to find a win.

Monsieur Diomedes, governor of the National Bank of Greece, left Athens last Friday for London in connection with the Refugee Loan.

The Oriental Telephone and Electric Company has declared interim dividends of 3½ per cent. on the old and new Seven per Cent. Cumulative Preference shares, less tax. An interim dividend of 4 per cent. will be paid on the old Ordinary shares, and at the rate of 4 per cent. per annum on the new Ordinary shares, both free of tax.

Near East Markets.

LONDON PRODUCE REPORT.

(From Our Own Correspondent.)

London, Tuesday Morning.

Coffee.—The market has been steady. Costa Rica is unchanged at 170s., East Indian remains at 150s., Kenya is the same at 144s., while Santos is 2s. up at 114s.

Sugar.—Home refined has continued in fair demand. Tate's cubes are 42s. 3d., London granulated is 37s. 4½d., while Lyle's granulated is 37s. 7½d. Foreign descriptions have been fairly steady. West Indian crystallised is 6d. up at 35s. 6d., White Java is 3d. down at 34s. 9d., while Czech granulated is 3d. up at 22s. 9d. Futures are firm: November, 20s. 3d.; December, 20s. 1½d.; March, 19s. 10½d.; May, 20s.

Maize.—The market has been rather weak. La Plata, afloat, has been done at 44s., and for December-January at 47s. 9d.

Currants.—A brisk business has been done in this commodity. Shade-dried Vostizzas have been in special request, while there has also been a good demand for Gulf, Panariti, and cleaned Amalias. Prices are now at a satisfactory level for the development of business.

Sultanas.—The firm tone that was in evidence the previous week has become more pronounced owing to the decided scarcity of fruit. Prices are dearer, except for Australians, and it looks as if they would go still higher.

Figs.—A fair business has been transacted, but a marked shortage of stocks has had a restrictive influence.

Plums.—This commodity has been moving off very freely. Supplies of the fruit are none too plentiful, and there may be something approaching scarcity later on.

Dates.—Supplies of dates have now arrived, and it is to be expected that business will develop.

Oilcakes.—The market has been quite firm. Linseed cake is unchanged at 280s., cottonseed cake is the same at 180s., while coconut cake is unaltered at 240s.

Oilseeds.—Linseed has been fairly steady, Indian being unchanged at 24s. 10½d., while La Plata is 9d. lower at 21s. 10½d. Rapeseed has been firm. Toria is 7½d. up at 25s. 3d., while real bold Ferozepore is unchanged at 24s. 1½d. Cottonseed has been strong. Indian is unchanged at 12s., Egyptian black is 1s. 3d. up at 15s. 3d., while Sakellaridis is 7½d. up at 14s. 7½d.

Seed Oils.—Linseed oil has been weak, closing 1s. 9d. down at 45s. Rape oil has been firm, with crude 1s. 6d. up at 52s. 6d., and technical refined 6d. up at 55s. 6d. Cotton oil has been steady. Refined common edible is unchanged at 51s. Egyptian crude is 6d. up at 45s. 6d., while deodorised is unaltered at 53s.

SMYRNA FRUIT MARKET.

Messrs. C. J. Giraud and Co. report as follows for the week ended October 4:—The arrivals of sultanas on the Smyrna market since the opening of the season are estimated at 25,000 tons, while the sales are put at 23,330 tons. Closing prices per cwt., c.i.f. London/Liverpool, are: Type 12, 45s.; 13, 49s.; 14, 52s.; 15, 56s.; 16, 64s.; 17, 75s. The sultana market is very firm. The fig market is firm.

In a report for the week ended October 11 Messrs. C. J. Giraud and Co. state:—The arrivals of sultanas are estimated at 26,500 tons, and the sales are put at 24,800 tons.

The market is strong for all grades of sultanas. Inferior fruit is in demand against forward sales, and lowest qualities are finding a market locally for distilling purposes. Medium qualities are very scarce and consequently show a firmer tendency. The very best grades are scarce and command a ready sale at full prices. Further comment on the situation is superfluous. Conclusions can be drawn by a glance at comparative figures between this and last year of sales and shipments to date. Total sales to date amount to 24,800 tons. Admitting of a crop of 40/42,000 tons (present estimate), the quantity still available for sale is about 15/17,000 tons, of which about 5,000 tons are likely to be absorbed by local distilleries.

It is extremely difficult to arrive at a correct figure of the extent of the yield of figs. Up to date the sales are 176,500 sacks, against 111,150 sacks at the corresponding period last year. Last year's yield amounted to 260,000 sacks. The crop this year is unquestionably short. About a month ago the estimate was 200,000 sacks. A fortnight ago more optimistic views prevailed, and the estimate was raised to 220,000 sacks and over. Latterly the tendency is to reduce the estimate to 220,000 sacks and under.

YUGOSLAVIA'S ECONOMIC SITUATION.

The British Commercial Secretary at Belgrade, in a recent report, states that M. K. P. Mirosavljevic, the President of the Novi Sad Chamber of Commerce, is reported in the *Belgrader Zeitung* as having made the following statement regarding the present economic situation, which, the Commercial Secretary is of opinion, applies not only in the Vojvodina, but throughout Yugoslavia.

"After the end of the war the prospects for commerce and industry in the Vojvodina were exceptionally good. As a result, many new businesses and industrial undertakings were founded, often by persons lacking the requisite experience. Many of these new concerns did not show, even in the beginning, any likelihood of being successful. In spite of this, prices rose so greatly that all could make a living.

"Now, however, the situation has changed. The newly founded concerns which had insufficient capital and lacked good technical direction must go under. Insolvencies are increasing, and from day to day the number of businesses which close down is larger. The old-established and solid concerns, however, in spite of their difficulties, manage to survive . . . . The general shortage of money is causing great difficulties. It is curious that up to now it has always been said that the peasants had the money. This idea is wrong, as the peasant has, in the literal sense, also no money. All the money the peasant has he uses to buy land or live stock, but he buys very little else excepting the most necessary articles. The raising of the gold agio (on Customs dues) to 900 per cent. has had a hampering effect on commerce. One must, however, put up with this, as it is necessary in the interests of protecting the country's industries. One must look on the present as a transition period which must be passed through.

"The very bad weather has also had a bad influence on trade, but the worst of all is the shortage of money with its logical result, the enormously high rates of interest. On the other hand, Yugoslavia will this year have a very good maize harvest, and the resultant exportation will help our balance of trade. I hope to see the good results of this during the next few weeks."

Shipping Intelligence.

WINTER CRUISING.

Round the world in luxury for £2 a day and to the Mediterranean or the West Indies for the same cost! This winter some 4,000 people, English and American, will be seeking rest, recreation and education in special cruises in seven of the finest Cunard-Anchor ships. These ships, during the winter months, are covering a distance of some 110,000 miles, and their cruises will last from one to four and a-half months. There is, therefore, according to the time at the disposal of the passenger a cruise that will suit his or her convenience. He will have the choice of voyages to the West Indies, up and down the Mediterranean, or round the world. He will travel without trouble, will be able to see all that is to be seen in the countries of call, and will voyage in wonderful luxury throughout; and—for so these cruises have been planned—he will practically follow the Path of Springtime from land to land.

Passengers are already booking in large numbers, and although during past years—certainly from 1909 or 1910—passengers have in the majority been Americans, there is every sign this year that more English people than ever are taking part in them, hopeful of finding the sun that they have missed during the recent unseasonable summer. Although most of these cruises start from New York, European passengers can, in most cases, join the ship in a Mediterranean port. The Mauretania, for example, sails from New York for a month's Mediterranean cruise in the middle of February, but special arrangements have been made by which English passengers, wishing to join the Mauretania on her return from Egypt to Southampton, may do so by sailing from London to Port Said in February by either of the new Orient liners Oronsay and Ormuz. Those travelling by the Ormuz have six days in Egypt and by the Oronsay they have time for a more extensive tour, including a visit to the Holy Land. The return fare from London is from £70 upwards. Other ships engaged in Mediterranean cruises are the Scythia and Laconia.

World cruises last about four and a-half months, Mediterranean, with the exception of the Mauretania, about two months, and the West Indies cruises about a month. But for each a rate of about £2 a day may be taken as the basis of cost. On the world cruises some twenty-five different ports are touched at, and time is afforded at the most interesting places for journeys of varying length into the interior. The efficiency of modern travel takes the voyager safely and luxuriously in twenty thousand-ton cruising liners right into the heart of the romantic East. In the Mediterranean some seventeen or eighteen calls are made at ports on both northern and southern shores.

All the ships concerned are amongst the biggest Cunard-Anchor liners. Practically all have been built since the war, and nearly all during the past year or two have been engaged in similar cruises. As an example of the special arrangements that have been made for the benefit of travellers, with one or two exceptions they will all carry their own laundries, staffed by experienced hands, a facility which is not to be under-estimated in the case of lengthy cruises. In addition to carrying large quantities of ice, each ship can make its own supplies, an advantage of the greatest value in hot climates. Each ship carries a motor-launch which will be used for excursions at out-of-the-way ports. Although in the ordinary way carrying anything up to 2,000 passengers, parties are limited to from four to six hundred passengers, thus avoiding any suggestion of over-crowding. In each case a lengthy programme, to include deck sports, dances, whist drives, lectures, and other social events, is arranged, and the passenger, in most cases, to avoid trouble, is content to leave most matters in the hands of those directing the cruises.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Circassia for Bombay (Liverpool, November 4). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Somersetshire for Port Said, Colombo, Madras, and Calcutta (London, November 8).

Bibby Line.—S.s. Yorkshire for Port Said, Colombo, and Rangoon (Birkenhead, November 5).

British India Line.—S.s. Boyne for Bombay and Karachi (London, November 15); s.s. Malda for Colombo, Madras, and Calcutta (London, November 22).

Ellerman "City" Line.—S.s. City of Poona for Calcutta (Birkenhead, October 31).

Ellerman's Westcott and Laurance Line.—S.s. Trentino for Gibraltar, Malta, Piræus, Salonika, Smyrna, Constantinople, Galatz, and Braila (London, November 15).

Johnston Line.—S.s. Sycamore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, November 5). (The last steamer of the season to Galatz and Braila.) S.s. Kenmore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, November 22).

P. and O. Line.—S.s. Nore for Colombo, Madras, and Calcutta (London, November 5); s.s. China for Bombay (London, November 14).

BASRAH DATES SHIPMENTS.

A report received by the Imperial Ottoman Bank from Basrah, dated September 20, states:—Further shipments of dates for New York are reported this week. According to information received, the price of these shipments works out at about 17s. 6d. per cwt c.i.f. New York. Local prices have fallen about 12½ per cent. since the beginning of the month.

Cotton and Cotton Goods.

THE EGYPTIAN MARKET.

Futures Variable.

The Alexandria Commercial Company, in their report for the week ended October 16, state :—

Since our last report the futures market has shown a very firm tone for Sakellaridis, whilst Uppers have reacted somewhat. The net changes on the week are :—Sakellaridis : Unchanged for November, $0.90 down for January, $1.70 down for March. Ashmouni : $1.75 down for October, $1.88 down for December, $1.60 down for February. In spite of a drop of 2.57 cents in New York, our Ashmouni contracts have only dropped about $1.75, and Sakels remain unchanged ; this exceptional strength is due more to speculative support and the carters' strike than to a commercial demand. The speculative purchases have been principally induced by the high premiums over futures paid on the spot market, the carters' strike has delayed the movement of the crop, and holders of cotton naturally take advantage of the shortage of stocks to obtain high prices from whoever requires cotton for immediate shipment. The premium of November over January is due to the same reason. We consider the situation rather exceptional, and are inclined to think that as soon as the bulk of the crop will be on the market more normal conditions will prevail. The demand from abroad has been again moderate ; in view of the high prices of our market in comparison to those of the other cotton markets it is quite natural that spinners should adopt a reserved policy. The Government has this week operated in the spot market, but has bought only a negligible quantity. The week's receipts amount to 363,642 krs., against exports 172,515 krs. ; the stock stands at 1,081,901 krs.

Spot.—We have had a fairly busy week at Minet el Bassal, and sales for the five business days amount to about 22,200 B/s, of which we estimate 12,450 B/s Sakel, 4,000 B/s Uppers, 5,200 B/s Zagora, 400 B/s Pilion, 100 B/s White, and 50 B/s Brown. The Government entered the spot market on October 16 and bought 185 B/s Uppers and Zagora, mainly high grades. There has been a carters' strike for the last few days, which, by preventing any movement of cotton in Alexandria, has rather disturbed business by creating an artificial scarcity of offerings, with a consequent rise in spot premiums. Arrivals have been heavy, and there is great congestion at the railways. It will be a few days before the movement of cotton can become normal.

Sakellarides.—The bulk of the business has been in cotton from good fair to fully good, though a small demand has also appeared for fully fair. Prices of spot against contracts are generally rather dearer, with the exception of fully fair, and below which are without change.

Uppers.—Cotton from good fair upwards has been in most request, and only a small business has been done in grades below good fair. Prices of spot against contracts are rather dearer for cotton above fully good fair, and unchanged for other grades. All upper cotton is firmly held, and holders are very difficult to deal with at present.

Lower Egypt Zagora has been in much better demand, and as a consequence spot premiums are appreciably dearer than last week.

Pilion has been in fair request for the medium and good grades. Prices of spot against contracts are rather dearer.

Brown has been in limited request at rather dearer spot premiums.

White.—A small business has been done without much change in prices.

Crop 1924.—The top crop in the Northern and Central districts of the Delta is quite satisfactory ; picking is now almost completed in all districts. There are still some plantations with green top bolls, but, owing to the advanced period of the season, the quantity of cotton which may be produced from them cannot but be negligible.

The report of the Ministry of Agriculture for September reads :—During the greater part of the month under review day and night temperatures were above normal. In Lower Egypt humidity was high during the second week of the month ; with this exception, low relative humidity prevailed everywhere. The weather, generally speaking, was favourable to maturation of the crop. Progress of picking is well advanced, being at least fifteen days earlier than last year and seven days earlier than in 1923. In basin lands picking is practically completed. The earliness in ripening of the crop has been accompanied by a corresponding earliness in development of the boll-worm infestation, with consequent tendency to equilibrium of these influences on crop prospects.

COTTON TRADE REVIEW.

Near East Demand for Cloth.

The Manchester Cotton Trade Review of the Imperial Ottoman Bank for the week ended October 25 states :—

The all-round condition of the markets during the past week can best be described as steady, without fluctuations of much importance either one way or the other. The main item of interest has been the proposal of the Master Cotton Spinners' Federation to increase the working hours of the mills spinning American cotton from 26¼ hours to 32 hours per week. The alteration is to take effect in a week's time. There is little doubt that pressure was exerted in this matter by the general body of cloth manufacturers in order to bring about an increase of production.

Yarn.—Spinners have maintained the firmer attitude reported last week. Had it not been for this, a bigger turnover would probably have taken place, as many users anticipate that the increased supply which will result from longer working hours can

Digitized by Google

hardly fail to bring about some reduction in price. On the other hand, it is contended that the larger output will do no more than keep pace with increased requirements, and that the one factor will balance the other. In the meantime there are no grounds for complaining of the actual amount of business being transacted, and spinners appear willing to stand firm and let the future take care of itself.

Cloth.—Rather less business has been done during the past week than in the preceding one, probably due, as in the case of yarn, to the waiting attitude which buyers are adopting. China has been in the market to a fair extent, in spite of the continuance of unsettled political conditions, and in certain lines of goods India has placed some very acceptable orders. Egypt and the Near East have both been active, particularly in standard lines. South America has picked up certain styles of goods, but the home trade houses are reported to buy nothing beyond their immediate requirements.

Raw Cotton.--Day-to-day price fluctuations, although sometimes exceeding 30 points, have resulted in little alteration on the week. On balance there is a slight decline in American and a slight increase in Egyptian. The market is now waiting for the official Bureau Report, which is due to-day, and is acting cautiously in the meanwhile. Closing quotations yesterday were as follows:—American middling, 13.45; Egyptian fully good fair, 25.45.

LIVERPOOL COTTON REPORT.

Conditions Practically Unchanged.

Messrs. Reynolds and Gibson report as follows for the week ended October 22:—

Egyptian Spot.—Conditions on the spot are practically identical with those maintaining during the previous week, and, with the exception of to-day, when a certain stiffening has occurred following the stronger futures markets, the trend of prices has again been in a downward direction. The arrival of two cotton ships (the Algerian Prince and the Hatasu) has made little appreciable difference in the situation, and the bulk of Egyptian spinners still give the appearance of being woefully short of cotton for their immediate requirements. Without exception, they all regard present prices as too high, and as being entirely unwarranted for this time of the year, and the recent action of the Egyptian Government in attempting to support the Alexandria market has only served to confirm this belief. One and all, they continue to defer buying in quantity, and persist in the hand-to-mouth policy which has been such a feature of the trade buying for the past two months. Apart from this expectation of a drop in prices, the impending General Election is not calculated to induce confidence amongst would-be buyers, and this fact should not be lost sight of in calculating the future course of events. A fair general inquiry has been in evidence, and spot sales, which have averaged only 200 Egyptian per diem, have proved somewhat disappointing.

A request for cotton "landing or near" has accompanied a large proportion of the Sakel inquiries, a fact which speaks for itself. Fully Good Fair to Good Sakel at from 23½d. to 25d. has been a very popular order, and has probably been responsible for the bulk of the business transacted. The supply available is small, and prices are somewhat irregular, but, generally speaking, there is a disposition amongst sellers to meet buyers, and so make the most of the current rate of values before succeeding shipments force the basis to ease. In Sudan Sakel, the inquiry has been only moderate, but on one day at the commencement of the week a line of 500 bales changed hands at 23.50d. The market is now flooded with high grade Uppers and Zagoras, and prices vary considerably; as much as a penny per lb. in some cases has been noted as the difference between sellers of the same style of cotton. During the past week several shippers, actuated no doubt by the recent reports of damage to the Upper Egyptian crop, have raised the basis for Uppers from ¼d. to ½d. per lb. The lower grades of Upper have this week come in for an increased share of attention, both for spot and shipment. On the spot, there is practically nothing available in these grades except "re-cleaned" Upper, which does not meet with much favour amongst Lancashire spinners.

Pilion, Brown, and White have all been inquired for on a moderate scale, but with little tangible result. A fairly good inquiry for c.i.f. cotton has been noticeable, but on only one occasion has a line of any weight been reported. The majority of the sales have been done in twenty-fives and fifties. Forwardings to spinners for the week ending 17th inst. were returned as 6,625 bales. Estimated sales, 1,200 bales Egyptian and 650 bales Sudan. Quotations are reduced 35 points, Extra Fine Sakel exceptionally being 20 points lower, and Extra Fine Uppers and Brown 25 points lower. Fully Good Fair Sakellaridis to-day 24.70d.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.)

Egypt.

Diesel Motor.—The Egyptian Government invite tenders for the supply of a Diesel or Semi-Diesel motor of 30 h.p.—November 12.

Looms, etc.—The Director of Stores, Ministry of Education, Sharia Qasr el Aini, Cairo, invites tenders for the supply of (1) Looms and preparatory machines required for the Trades School at Mansûra. (2) Machines for rug factory at Assiout. November 15.

Leather.—The Egyptian Ministry of Education invites tenders for the supply of leather required for the model workshops and trades schools of the Ministry. November 15. (D.O.T.)

Water Tower.—The Ministry of the Interior in Egypt invites tenders for the supply and erection of a water tower at Mit Ghamr. December 1. (D.O.T.)

Soap. — The Financial Secretary, Egyptian Army, War Office, Cairo, invites tenders for the supply of 110 tons of hard soap to Egyptian Army Supply Stores, Tura. December 2.

Railway Sleepers.—The General Manager, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply of wooden railway sleepers. December 16.

Bulgaria.

Fishplates, etc.—The Bulgarian Direction of State Railways, Posts, and Telegraphs invites tenders for the supply of 409 tons of fishplates and chairs, and 846 tons of bolts, clips, and washers. A deposit equal to 5 per cent. of the value of the order is required. November 10. (D.O.T.)

Turkey.

Wagons.—The Ministry of Public Works invites tenders for the supply of 40 wagons for rails and ballast, of which 25 are for the Angora-Moussakeuy line and 15 for the Samsoun-Siva line. November 21. (D.O.T.)

Bridges.—The Commissariat of Public Works invites tenders for the supply and erection of five metal bridges on the Samsoun-Sivas line. November 22 (D.O.T.)

National Insurance Companies.

EMPIRE COTTON GROWING.

Increasing Production.

The third annual general meeting of the Empire Cotton-Growing Corporation was held on October 23, at Millbank House, Westminster. Lord Derby, President of the Corporation, presided, while those present included Sir James Currie, Sir E. Bartley-Denniss, Mr. W. H. Himbury, Colonel Shute, Mr J. S. Addison, and Mr. A. Foster.

The report presented at the meeting gave a detailed account of the activities of the Corporation. We give the following extracts :—

The Indian Sub-Committee of the Corporation had under consideration the question of the steps that might be taken in order to bring further under the immediate notice of spinners the merits of those Indian cottons that are suitable for use in Lancashire, and especially of new types. As a first step, the Oldham Master Cotton Spinners' Association were kind enough to arrange that spinning tests should be carried out on certain typical Indian cottons already well known in this country on bales which were purchased on the market in the ordinary way on behalf of the Corporation. The Indian Central Cotton Committee is now sending home a further supply of improved cottons. Spinning tests will similarly be carried out upon them, so that their properties may be compared with those already tested. The Secretary of the Indian Central Cotton Committee has undertaken to supply information as to the quantities available of each of the improved types that are being sent. On the publication of the Report of Lord Lee's Commission on the Indian Services the chairman and the director sought an interview with the Secretary of State, and communicated to him the apprehension felt by the Corporation that the adoption of the Commission's recommendations would render impossible the recruitment of the best kind of European technical officers for agricultural service in India, and laid stress on the consequent deterioration which they feared would follow in the quality of the India cotton crop. Lord Olivier heard the Corporation's views with the greatest courtesy, but it is feared that the political situation in India will render inevitable the adoption of, at all events, the main findings of Lord Lee's Commission.

At the request of the Sudan Government, the Corporation arranged that Sir John Russell and Dr. H. M. Leake should pay a visit to that territory, in order to report to the Government and to the Corporation regarding the organisation of scientific work bearing on agriculture in the Sudan, and agreed to bear a part of the cost. A report of their tour has been received by the Corporation, and is under the joint consideration of the Executive Committee and the Sudan Government. The Reports calls attention to the need for research work on the soil in order to deal with the problems that are likely to arise from salting, a source of trouble which is inherent in all irrigation schemes where natural drainage is deficient. It also advocates that steps should be taken to safeguard the supply of pure seed, and makes suggestions as to the organisation by means of which the work indicated can best be carried out. When the Sudan Government and the Sudan Plantations Syndicate have agreed as to the share which each should take in the work that is proposed, the Corporation's Sudan Sub-Committee will be asked to advise as to how effect can best be given to the recommendations contained in the Report. In the meantime the Corporation propose to lend their aid by supplying a soil chemist and a plant breeder, if suitably qualified men can be found. The decision of Parliament to guarantee the balance of the loan required for the Makwar Dam and canalisation project should enable the work to be completed next year if the present rate of construction is continued. The completion of the canalisation now being carried out will enable an area of 300,000 feddans to be developed, of which one-third will be under cotton each year.

The Kassala Railway was opened for traffic so as to transport the current season's crop, though it was suspended again during the rains. Experience of the flood conditions is necessary, in order that information may be obtained as to the strength required for some of the bridges and culverts, but it is anticipated that all such work will be finally completed and the line in regular working order in time for the next crop.

Advantage was taken of Dr. Leake's visit to the Sudan to ask him to pay a visit to the Upper Nile and Nuba Mountains country, in order that the Corporation might be in possession of authoritative information as to its possibilities as a source of rain-grown cotton. Dr. Leake has reported that, so far as climate and soil are concerned, this area, and, in fact, the greater part of the Southern Sudan, should be capable of producing large quantities of cotton, the chief difficulties in its immediate development being lack of transport and sparseness of population. Development in the cultivation of rain-grown cotton south of the line at which the annual rainfall becames adequate is now being actively pushed by the Sudan Government, which has recently appointed five extra agricultural inspectors so as to increase the personnel available for such work. The Sudan Government consulted the Corporation in the selection of these Inspectors. The recent high prices for cotton have stimulated considerable interest among native cultivators, and the demands for seed for next year's crop show a remarkable advance.

In moving the adoption of the report Lord Derby said that since last year there had been some slight improvement in the cotton trade. The American crop was larger than it had been for some years past, and, though it would be rash to predict a continuation of the increase, it might be said to have eased the situation at a moment when there were signs of increased purchases of the manufactured material from the Continent. The increase of Empire grown cotton had been small compared with the world's crop, but there had been a most satisfactory proportionate improvement over last year's output, and there was every indication that this increase would be relatively larger this year.

In the Sudan the past year had seen steady and continuous progress with the Makwar Dam, the completion of which would make it possible to put a large additional area under cotton.

The Corporation had during the past twelve months co-operated with the Indian Central Cotton Committee in bringing to the notice of Lancashire those Indian-grown cottons that were believed likely to be of value to the trade. This was a particularly useful form of activity, because not only would it stimulate interest in these types of cottons, but it would encourage Indian growers to improve the quality of their cotton. In Mesopotamia the good work of the Department of Agriculture and the British Cotton-Growing Association was beginning to bear fruit, and last year 1,000 bales of good cotton were grown in that territory. There was every prospect of increased production during the coming year.

The report was unanimously adopted.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

The General Election.

Upon an election in which questions of foreign policy, with the exception of that of Russia, played but little part, it is not for us to make much comment. But we can at least congratulate the country, without in any way disparaging past Administrations, in that the overwhelming victory of the Conservatives gives them an unrivalled opportunity to pursue in foreign matters a policy at once strong and continuous. Certainly they will never be allowed to forget—one may reasonably hope that they will never be prompted to forget—the five and a-half million votes that were cast on behalf of the Labour Party; and this fact alone may perhaps remove anxiety from countries which go in fear of the old bogey of a "Tory iron-hand." The major party has within it most diverse elements, and, while one is inclined to pause a minute in lament, from the point of view of the conduct of foreign affairs, of the anticipated eclipse of the Liberal Party, it is to be trusted that an adequate opposition, by which we mean the exercise of vigilant and informal criticism and inquiry, will be provided by the Conservatives themselves. The party has in this respect an immense responsibility, for it is not fair to expect from so young a group as the Labour Party any abundance of intelligent questioning on foreign affairs. This said, we hasten to congratulate the country on the Government it deserves.

Agreement in Yugoslavia?

The crisis in Yugoslavia which arose out of the enforced resignation of M. Davidovitch still lingers on, but there are at last signs that agreement will be reached. Last week the King entrusted to M. Timotievitch the task of forming a Cabinet, but so far his mandatory has been unsuccessful. There appears now, however, to be a widespread feeling that this prolonged Ministerial crisis is intolerable, and M. Timotievitch is continuing negotiations with the Radical Party, who have agreed to join the Coalition Cabinet. To such a Cabinet the Davidovitch *bloc* has also given its consent, although it has laid down certain conditions. Among them, happily, no demand for the entry of the Raditch Party is to be found, for M. Raditch's last eccentric acts seem to have been too much even for the Democrats. There is more than the possibility, therefore, that in a few days the long overdue solution of the Ministerial crisis will be imposed on Yugoslavia.

Iraq's Provisional Frontier.

The vexing question concerning the *status quo* of Iraq's northern boundary was last week answered by the Council of the League of Nations at Brussels, and, like all academic solutions of practical problems, the answer has not been wholly approved by practical men. But in the main the League, and especially Great Britain and Turkey, are to be congratulated; evacuation of territory now being administered contrary to the resolutions concerning the delimitation of the provisional frontier is to be carried out by November 15, and the matter is thus, for a few months at any rate, raised out of the zone of danger. Manifestly, both Britain and Turkey—and they both had a case—were sincere in their professions before the League of desire for peace; and it is not extravagant to hope that some show of tranquillity will descend upon the villages of the disputed "No Man's Land" during the next five months, at the end of which we may look for the report of the Commission of three which is finally delimiting the frontier. There is little doubt that the provisional line is a workable line; and the fact that both Britain and Turkey were at pains to explain to the League that this line does not engage the future will but make closer our scrutiny of the way in which the League's latest finding is obeyed.

Palestine and the League.

The examination which the High Commissioner of Palestine underwent last week before the Permanent Mandates Commission of the League of Nations was exhaustive, and, in the detailed aspect, complete. In face, therefore, of the brief summary of the Commission's remarks to the effect that "they realised the difficulties inherent to the administration of Palestine," one is left to draw one's own conclusions. Perhaps it would not be far wrong to suppose that, since all the figures that Sir Herbert Samuel supplied, whether they referred to the military Budget, the rate of Jewish immigration, public health, and so on, were, so to speak, improving figures, the Commission were thinking mainly of the larger internal political and economic

Digitized by Google

situation. In this connection their desire to have next year a special report upon the administration of Trans-Jordan is to be noted, for its fulfilment may cause a certain flutter in the dovecotes of Amman (that is, assuming, of course, that the birds by that time will not have flown). But, as the Commission stated in reply to a report sent to them by the Executive Committee of the Arab Congress in Palestine, their sole duty is to watch over the application of the terms of the mandate. The rights and the wrongs of Palestine are for Great Britain to expose. At present she is, it must be confessed, still groping or befoggedly holding straight on in Palestine; and neither the construction of a Jewish National Home nor of an homogeneous Palestinian nation is yet in sight. It is possible to hope, however, that with the decline of the fortunes of the ex-King of the Hejaz, the Arabs of Palestine may be found less intransigent, and may be induced to take a wider part in the governing of the country. As to the Jews, although, as Sir Herbert demonstrated, about 40,000 have entered the country during the last five years, and although it has been calculated that in thirty years' time the scale, from the aspect of numbers, will be turning in favour of the Jews, it is now fully recognised that the National Home must in the main be a spiritual home. Manifestly, we have still a long row to hoe in the Holy Land, and our political husbandmen will have to be as apt and unwearying as the Jewish agricultural immigrants themselves.

Hodeida and the Yemen.

The fact that Britain's eyes need more close direction than ever upon the Yemen, upon which we commented last week, has been very quickly exemplified. Hodeida, the port which is the main point at issue between this country and the Imam Yehia, has once more changed hands. This place has had a most interesting history in the last few years. After it was evacuated by the British in February, 1921, it was taken over by the late Mohammed ibn Ali el-Idrisi, Emir of Asir. This man, whose family came from the Sudan, was pro-British, and it was in part, presumably, because during the War he availed himself of the chance to renew the old feud between Asir and Sanaa, that the idea has gained currency that the Imam Yehia is no friend of this country. However that may be, it is certain that he reduced the merchants of Hodeida to despair by his system of taxation, and upon his death, in March, 1923, it was hoped that his son succeeding him, the Idrisi Emir Seyyid Ali of Sabia and Abu Arish, might improve matters. But it was not to be. The present claimant to the Emirate of Asir has proved to be both reactionary and anti-British (it seems necessary to point out that there is a distinction), and it was with some considerable show of reason that his kinsman the Seyyid Mustapha allied himself, after having vainly tried to depose him in favour of the late Emir's brother, the Seyyid Hassan, with the Seyyid Abdel Kadir and with Mahmud Nadim Bey (the latter, incidentally and significantly, by way of being *persona grata* with the Imam of the Yemen). In April of this year he succeeded in getting hold of Hodeida.

The Future of the Port.

His tenure of the port was not to endure long. For it is now reported, from Aden, that the ruler at Sabia has defeated the Seyyid Mustapha, and that Hodeida is once more in the hands of the Imam's rivals. Obviously there is little finality in this. Another struggle for possession of this wilted port will almost surely occur. Colonel Jacob has, indeed, already hinted in *The Times* that Seyyid Mustapha may act in concert with Imam Yehia, who cannot be expected indefinitely to see the development of his country retarded for lack of a port. It is a delicate matter, admittedly, for Britain at this stage to interfere and to judge upon the respective merits of Arabian rulers, but there appears to be little doubt that if this country does not step in, other countries will. Italy, for example, has a deep knowledge of and ulterior friendship with the Emir Ali of Sabia, and both she and France are closely interested in the future of the whole Yemen. France, in fact, appears to be ready to step in where she imagines that Britain and Italy will not be allowed to tread. In short, there would seem to be every reason for this country, by assenting to the possession by the Imam of Hodeida—and it is futile to suggest that we are not concerned with the boundaries of the different Arab rulers—to get for once and for at least some time on a reasonable footing with the master of the Yemen. Sanaa, just as Sofia to the Ægean, must have an outlet to the Red Sea. The warning that the Hejaz has given Great Britain is certainly a fearful one, but it cannot be said to be wholly applicable. There there were no foreign rivals to our policy; here the present opportunity may not reoccur for years.

INDIA.

India in the New Parliament.

The House of Commons elected last week contains, like its immediate predecessor, a body of Indian experience which should suffice to keep it from going seriously wrong, most of the old authorities having returned, and having been joined by valuable recruits. The most conspicuous loss is Mr. Hope Simpson, who shared the common fate of Liberals in the Western Counties. On the other hand, the election of Sir George Lloyd brings a combination of experience and driving power which will prove of the utmost value when Indian questions come before Parliament, while Mr. George Pilcher, recently of the *Statesman*, ought to make an effective representative not merely of the Calcutta point of view, but also of the peasantry, whose interests he championed whole-heartedly in the recent discussions on the tariff. To speak frankly, we cannot welcome the return of Mr. Saklatvala, for, while there are obvious advantages in having at least one Indian in the House, the peculiar brand of Communism which has won the

approval of Battersea is as un-Indian as anything it is possible to conceive, and the rowdiness which characterised his campaign has led stay-at-home people to suppose, quite wrongly, that Indian elections are normally conducted on similar lines.

The Attitude of Bengal.

The reaction of Bengal to the action taken by Government against the anarchist conspiracy has followed the lines which must unfortunately be regarded as normal. The quiet people, who are pleased, are with very rare exceptions concerned only to keep their satisfaction to themselves, while the politicians are raging furiously, and the various sections appear to be united for the moment in the view that there can be no possible justification for the arrests. A more advanced community would hold its judgment in suspense until it knew something about the evidence on which action was taken, but Bengal is very backward in political matters, and prefers to commit itself in advance, trusting to its ingenuity or its luck to escape from a position which may prove to be untenable. Meanwhile we see that the Corporation of Calcutta has decided to put the citizens to a certain amount of inconvenience by suspending its business for a day as a protest. We can conceive something of the same kind occurring in Poplar, or even in Battersea, but to ask whether it would be possible in cities like Birmingham or Manchester, where civic life is a reality, is to furnish a measure of the distance which Calcutta has still to traverse on the road to civilisation.

Politics versus Economics.

It is, we hope, significant that even in election week *The Times* was able to provide large type for a letter from an Indian gentleman suggesting that what India really needs is economics rather than politics. The idea is, of course, not new, but its recent progress beneath the surface of Indian thought is, in our judgment, one of the most encouraging factors in the present situation. The gist of the letter in question lies in the phrase "We need another Curzon," a slogan which would drive the politicians to fury, but makes a powerful appeal to the students, who are now gradually realising that the foundations of a new India were being quietly but truly laid amidst the violent controversies of twenty years ago. The question these students are asking is why the building proceeds so slowly. They see capital and labour diverted to edifices of greater architectural pretensions, but less urgently required; they feel that valuable time is being lost, and they want to see another master-builder appointed to carry on Lord Curzon's work. We sympathise strongly with this point of view, but perhaps we may suggest to those who hold it that the times have changed, and that their task must be to organise opinion in India itself, rather than seek a lead from England. Each province has, or might have, its own Ministers responsible for agricultural and industrial development. They are the people to carry on Lord Curzon's work, and the reason why they are going so slowly is that effective popular pressure is not yet operating. When the cart is stuck in the mud it is better to lend a hand than to pray for help from a Hercules, or even from a Curzon.

The Neutral Commission to investigate on the spot and to report to the League of Nations on the line to be adopted as the permanent frontier between Turkey and Iraq has been appointed. It consists of Count Paul Telecky, who has twice been Prime Minister of Hungary (July-December, 1920, and December, 1920, to April, 1921), M. C. E. T. af Wirsen, who was appointed Swedish Minister to Bucharest and Belgrade in March, 1922, and Colonel Paulis, late of the Belgian artillery.

THE WEEK AT HOME.

London, Tuesday Morning.

The Election Landslide.

Not even the most optimistic Conservative expected the landslide of last Wednesday and Thursday. It was known, of course, that seats would be won, but, at best, it was hoped that the Tories would just get a majority, and, at worst, it was feared that they would just fail to get a clear majority over both parties. Actually, they have obtained 409 seats out of 615; Labour has lost nearly 50, and the party is reduced to 152; the Liberals were nearly extinguished between the upper and the nether millstone, and count only 41; while there are four Independents, of whom the famous Mr. Scrymgeour, the Prohibitionist from Dundee, is one.

This, as one enthusiastic Tory remarked to me in the small hours of Thursday morning, when the loud speaker was broadcasting victories at the rate of one a minute, is "good enough." It is, indeed, almost too good, for every practical politician recognises that a strong Opposition is almost as essential to the proper working of Parliamentary institutions as a strong Government. We have secured the latter, but the former has disappeared. For the time being, however, we are bearing the minor misfortune with proper equanimity.

The commentators are all preaching from the text that the election was a straight fight between Socialism and anti-Socialism in which the country delivered a decisive verdict. That is true, but it is not the whole truth. The ordinary Englishman does not think on abstract lines, and he is impatient of "-isms" and sovereign remedies. There may possibly be nine million anti-Socialists in the country—that is, roughly, the total of the Conservative and Liberal vote; but there are certainly not five and a-half million Socialists—yet that is the total Labour vote.

What really happened was that the country tired of minority Government and decided that the Government was not equal to its task. This conviction has been growing slowly for several months. Last January the first Labour Government was given a cordial, if rather embarrassed, welcome by its dispossessed rivals and the country generally, and the national instinct of fair play determined that it should have a good run for its money—and a still better run, one may add, for our money. On the whole, the timid were speedily reassured; there

were no signs of revolution in the offing, mistakes could be quite reasonably credited to inexperience, and by July the Cabinet could boast of a successful Budget and a reasonably successful foreign policy.

That was their high-water mark. Then came the Campbell case, with its suspicion of the hidden hand interfering with justice. Then came the Russian Treaty, with its suggestion of the hidden hand interfering with finance. Then came the unpleasant revelation about Mr. MacDonald's motor-car, which showed the Prime Minister lacking in candour and delicacy. And, finally, the Zinovieff letter, which showed the Cabinet at cross-purposes. The cumulative effect of all these things made the country feel that the Government was not efficient and not quite to be trusted.

For that reason it voted Conservative, as the only certain alternative, but it is to be noted that the total Labour vote has gone up. It is true, of course, that Labour ran more candidates, but their vote has, as was expected, increased in many of the Southern constituencies. Unless, therefore, there is a revival of Liberalism during the next few years, Labour will remain the alternative Government—and in 1929 it will try for power again.

The Future of Liberalism.

Exultant Tories are already saying that the Liberal Party is dead, and the one consolation of the Labour men is that they killed it. The conclusion is premature. Liberalism had cruel luck; an unkind fate defeated Mr. Asquith at Paisley, and two of its most brilliant younger men in Mr. Jowett and Mr. E. D. Simon. Mr. Runciman returns, like Rip Van Winkle, to a world that has forgotten him; Wales is still faithful to that typical Welshman Sir Alfred Mond; and Mr. Lloyd George and Sir John Simon both increased their majorities. But the average Liberal is less happy than would be expected under the leadership of this brilliant solicitor and not less brilliant barrister.

My own impression is that Liberalism will revive in a few years. The taunt that it has no new recruits is no longer true, for the young blood at Oxford and Cambridge is beginning to favour Liberalism rather than Labour in these days; and it is untrue to say that it has no policy. The new Manchester school has thought out a complete social and economic policy with which one may agree or not, but which is at least an original contribution to politics. The difficulty is that it is rather academic and forbidding in its present enunciation, and is not yet understood by the people.

The Government's Resignation.

For the next five years, then, we shall have a stable Government, and a real majority Government with a solid public opinion behind it. This will be good for British prestige and good for British trade, and—what is perhaps not less important—the freedom from political uncertainty will be good for British nerves.

The Government has wisely decided not to meet Parliament; it will present its collective resignations to the King this week, and Mr. Baldwin will be sent for to form his new Government. The political clubs are humming with personal gossip about place-hunters, but a great deal of this may be discounted, for the simple reason that Mr. Baldwin is in a stronger position now than when he last took office.

Labour in Opposition.

In the next few months Labour will face its real crisis. Its resounding defeat, the certainty that it will be a minority for several years, and the possibility that it will never be anything more than a minority, will tend to discourage its constitutionalists and to encourage its more extreme members, who talk darkly of the revolution that they dare not openly support. This in turn will exacerbate the difference between the more patriotic section and those who believe in a class war *à la Russe* at home, and a difficult situation may develop within the party. The country has dealt so thoroughly with the extremists who have discredited the party that its only chance of rehabilitating its credit lies in purging itself of its anti-patriotic element; but it has yet to prove that it can do this. On its action depend great issues in the future of English politics.

The Labour Party differs from its two elder brethren in politics in electing its leader every year, and not once for all. There may, therefore, be some significance in the fact that rumour is already busy with the report that Mr. MacDonald will be superseded after a decent interval, and that Mr. Thomas will be asked to replace him.

It is admitted on all sides that Mr. Thomas has increased his reputation at the Colonial Office; and the fact that he has leanings towards Imperialism, whereas his chief is a pacifist, has done him no harm with the general public.

Mr. Snowden has also increased his reputation as Chancellor of the Exchequer. The City liked and respected him, and he is admittedly a bigger man than Mr. Thomas. But the physical disability of his lameness debars him from the leadership, and it is this same trouble, probably, which makes him lack the *bonhomie* which is an asset to Mr. Thomas, who prides himself that he calls everybody except the King, the Prince of Wales, and possibly the Archbishop of Canterbury, by their Christian names.

The Closing of Wembley.

Wembley closed on Saturday in a downpour of rain. The final ceremony, which the Prince of Wales attended—the very day after his return from Canada—was as impressive as anything can be under a forest of umbrellas; but it was being whispered that the return of a new Government was likely to be favourable to the chance of its reopening next year.

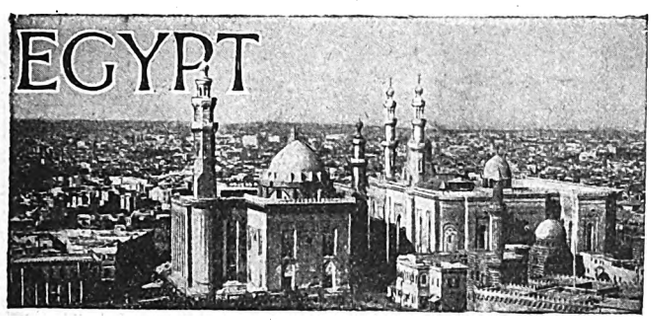
The Near and Middle East.*

From Our Own Correspondents.



Cairo, October 24.

Return of Zaghloul Pasha.

The great preparations made for the return of Saad Zaghloul Pasha from his trip to Europe and London resulted in his receiving a very warm welcome. The harbour was crowded with small craft, which, together with the bedecked quays, made a quite picturesque scene, and he was given an ovation as he drove through Alexandria to San Stefano Casino. After a long audience with King Fuad at Montaza Palace, he attended a tea party given in his honour, and his speech—the first since his return—roused his audience—composed to a great extent of students—to a high pitch of enthusiasm. The next morning, accompanied by the Ministers and a large number of members of Parliament, he came up to Cairo by special train, and, both on the journey to the capital and along the route to his house, he had a warm ovation. That same evening he attended a reception in a marquee pitched quite close to his house, where he made another speech, which, for all practical purposes, was a duplicate of the one delivered at San Stefano the previous afternoon.

Beyond a banquet this evening at the Continental Hotel given in his honour by the Senators and Deputies, no other entertainments are to take place, Zaghloul Pasha having expressed a wish that neither receptions nor demonstrations should be held, as he wanted to get on with the work of government, from which he had been so long absent.

It is now certain—the Premier left, indeed, little doubt in his first speech—that Zaghloul Pasha intends to retain office. In regard to this everyone is relieved, for, while each wants, for his own object, to see Saad Pasha continue as responsible head of the Government, there is general agreement that his presence at the head of affairs is, under existing conditions, the sole guarantee for the preservation of public peace, which everyone recognises is essential.

The Premier's Task.

He has, however, an exceedingly difficult task before him, and there is little doubt that he fully realises this. No matter how the Egyptian Press —and, from their own point of view, very rightly—try to make out that Egypt, far from losing anything, has gained as a result of the London conversations, the fact remains that at the bottom of their hearts everyone realises that Zaghloul Pasha's mission to London, however unofficial and private it may have been, has proved a fiasco which cannot fail to have its consequences for Egypt in the near future.

There is, indeed, an atmosphere of depression everywhere. Saad Pasha's reception, although enthusiastic, cannot be said to have been on the whole as warm or as spontaneous as on the occasion of his departure. His speeches, although marked with all his habitual eloquence, lacked snap. They were the utterances of a man who, realising that he has failed, is seeking to justify that failure and reassure himself of the allegiance of his fellow countrymen. On both occasions he had a triumph, but it was a triumph due entirely to his personal magnetism.

Loyalty to him is still expressed by all who have followed him in the recent past, but murmurs are beginning to be heard in the ranks at the abuses committed since the present Cabinet came to office. The more moderate are, moreover, calling for immediate action to remedy the evil and give an impetus to internal development, which they say has been sorely neglected. Zaghloul Pasha recognises the justice of their demands, and is much inclined to act in accordance therewith. But the extremists in his party are pressing for the adoption of a policy of passive resistance and persistent hostility to Great Britain, and he is finding it difficult to resist them.

Added to this, Zaghloul Pasha knows full well that there are certain questions affecting the *status quo* that will have to be dealt with in the very near future. Action in this respect was suspended in view of the conversations in London—a fact which shows how confident all the authorities were that some amicable agreement would be come to; but it cannot be delayed much longer, and the nature of such action will depend on the policy which the Egyptian Government adopts from now onward.

Parliament reassembles on November 15, and by then Zaghloul Pasha will have to make a decision as to his future policy.

ALBANIA.

Tirana, October 28.

Ministers' Return from Italy.

The Prime Minister, Mon. Fan Noli, accompanied by M. Gurakuqi, Minister of Finance, has returned to Albania from attending the Assembly of the League after a fortnight's stay in Rome, where

he had a number of conversations with Signor Mussolini. The question of a loan to Albania by the Italian Government was discussed. An exchange of Notes was also made with the Russian Ambassador with regard to the mutual *de jure* recognition of their respective Governments.

Albania and the League.

The chief matters raised at the League by Albania regarded the evacuation by the Greeks of the fourteen villages allotted to Albania by the Frontier Commission in the disputed districts near Koritza; and the treatment of Albanian minorities in the Chimaria (the coastal region on the mainland opposite Corfu). It was decided to refer the first question to the Council of Ambassadors with the recommendation that the latter should request the Greeks to evacuate the villages with the least possible delay. The second question was concerned with the alleged deportation of Mohammedan Albanians on the plea of their being Turks under the terms of the Treaty of Lausanne dealing with the exchange of minorities. It was agreed that the *status quo* should be maintained pending the dispatch of a League representative to the spot to investigate the question. This representative will also visit certain Greek villages in Southern Albania to inquire into the treatment of Greek minorities about which Greece lodged a counter complaint.

The statesmanlike and conciliatory attitude adopted by the Greek representative at the League, M. Politis, has been warmly appreciated in Government circles here.

The Government.

Monsignor Fan Noli's Government appears to be well established, and there are no signs of any attempt to upset the result of the May revolution. In August some trouble was reported near Premeti among the more forward elements of the Nationalist Party, but it has since died down. Likewise, an attempted outbreak at Himara, the isolated Greek township in the Acroceraunian Mts., was easily dealt with.

Preparations are now being made for new elections. It has been decided to hold them under the existing electoral system of double elections, and to leave the question of reform to the new Assembly, which it is expected will meet in March.

The present Government is anxious to maintain the Regency of four members as the most suitable form of Constitution under existing conditions, the Regents to be appointed for a term of years by Parliament, and to have their prerogatives strengthened. At the moment there is only one Regent in office, M. Petsi, representative of the Orthodox persuasion. It is further suggested that the number of members of Parliament should be reduced. The Government programme contains, besides these points, a project of land reform, entailing the breaking up of the large estates (not without compensation) and radical reforms of taxation. It is expected that the oil and tobacco concessions will come up for discussion again about May. The Government is particularly anxious to prevent these questions dragging on beyond the coming year.

The Budget.

Meantime, the chief task of the Government has been the balancing of the Budget. This has been accomplished by dint of a rigorous cutting down of administrative expenses. A number of officials were dispensed with, and a successful appeal was made to the remainder to forgo from 5 per cent. to 25 per cent. of their salaries during the three summer months of this year. The prospects of the coming year are better, moreover, owing to the excellent harvest in Indian corn. The famine of last year, which necessitated an appeal to the League for help and proved a severe burden on the Government, is not likely to be repeated this winter, in spite of the fears still entertained in some quarters.

Foreign Advisers.

The British Adviser to the Ministry of the Interior, Col. Stirling, has been retained by the Nationalist Government; so has also the Italian Adviser to the Ministry of Justice. An Hungarian expert agriculturist has been secured to take charge of the agricultural school at Lushnia. The services of foreign advisers has otherwise been dispensed with at present.

Constantinople, October 28.

The Assembly.

The Assembly has met and the Premier has faced the critical eyes of the People's Party in semi-secret session. Nothing has yet happened. In talking to the People's Party, Ismet Pasha preferred all the old shibboleths about the state of agriculture as the staple industry of the country, about the reduction of brigandage, about the satisfactory and improving condition of the relations of the State with foreign Powers, and so on, and all the members of the party said, "Behold, it is good," and went home to tea. It was the most perfect example of the King's Speech that it is possible to compose, and nobody is any the wiser. Another meeting of the party is due in a few days, and it is understood that things are bound to warm up at this meeting, but the fact is that the feeling about the British Mosul ultimatum has knit the factions so closely together that nobody is sufficiently bold to do more than press for the abolition

Digitized by Google

of the Ministry of Reconstruction and Exchange. It now looks as if even the Minister of Public Instruction would survive.

Exchange of Populations.

The local excitement on the exchange of populations question has somewhat calmed down. A large number of the Constantinople Greeks who were unceremoniously swept by the police into the concentration camp at Baloukli have found it so uncomfortable that they have taken the first available steamer off to Greece. The Commission has been doing its best to sort out the internees and provide them with the necessary papers to enable them to go or stay, according to their deserts. There have been much inconvenience, cruelty, and confusion, but the Mixed Commission has maintained a detached diplomatic calm and official good relations among themselves, although M. Exindaris, the chief Greek delegate, has gone off to Athens, presumably with the object of reporting all the disgraceful incidents of the past fortnight and trying to get something "done about it."

The Alleged Armenian Conspiracy.

For the past few days another Christian community in Turkey has been thrown into a state of uneasiness on account of voluminous Press reports concerning an alleged conspiracy formed on Greek soil by the so-called "Armenian Committees" to assassinate the President of the Turkish Republic. The journalists have reproduced circumstantial stories concerning the arrest and confessions of an Armenian who appears to have been roaming about between Constantinople and Eskisgehir, and one of a party of six Armenians sent to murder Mustapha Kemal. The police have been consistently and futilely denying the existence of any such *affaire*, but have been finally forced to admit that such a case is being investigated, and that such an individual is under lock and key. The leader-writers of the Stamboul papers have gone up in the air at once, and warned the Armenians of the terrible consequences of a recrudescence of the activities of the terrible Armenian Committees, and there is uneasiness all round. Some people see in this Press campaign the beginnings of an attempt to exterminate or deport the Armenian Christians in order to keep this territory as an unalloyed preserve for Moslems. It is improbable that such is the case, especially as the authorities appear to have carefully avoided lending any encouragement to the hysteria of the local journalist.

The Mosul Crisis.

The Mosul crisis has calmed down for the moment pending the examination of the matter by the Council of the League of Nations yesterday. The Turks have gained their immediate point—namely, to get the dispute referred to the League of Nations in order not to be forced to yield to the British; they appear to be confident that the League will find an innocuous formula which will more or less displease everybody, and then everybody will be satisfied for the time being, except, perhaps, the Nestorians.

A Turkish Sociologist.

The death of Zia Gueuk Alp Bey on Saturday last deprives Turkey of a notable, clever man, and a patriot. He had attained a considerable reputation in the Orient as a sociologist who was a fervent propagandist for the idea of the Union of the Turanian peoples, of whom the Turks were to be the natural leaders. During and since the Great War he had put his scientific knowledge at the disposal of the Government for the organisation of the so-called *Foyers turcs*, which were to foster the development of a special Turkish and Turanian civilisation, naturally in opposition to the Aryan civilisation of the Occident, and to bind the Asiatic races together in an indissoluble intellectual union. Since the institution of the Republic he has been a prophet crying in the wilderness, for the Turk has been shamelessly devoting all his energies to copying from the West, and the *Foyers turcs* have fallen on evil days financially and in every other respect. Now that Zia Bey is dead, the obituary notices have been most flattering, the telegrams of condolence have been most tactfully and generously worded, and the official obsequies last Sunday were most grandiose.

PERSIA.

October 3.

Persian Olympic Games.

The Military Officers' Sports Club are this year ambitiously organising a series of "Olympic Games," open to Persians and foreigners alike, and their endeavour to imbue a sporting spirit in the youth of the country and encourage manly games and contests is much to be commended, and deserves general support. The swimming competitions, the first on the list, took place last Friday in the large open-air "tank" in the garden of Jemshidabad outside the town, and the four events were all won easily by Germans, some of the numerous colony which has sprung up here during the last two years, and is steadily increasing. The inaccessibility of the sea to the majority of Persians, and the total absence of swimming-baths, make the latter anything but a race of swimmers, and, indeed, a good native swimmer is a rare exception, so in these contests the Persians did not stand much chance of competing successfully with the superior prowess of the Germans. The other contests, which include tennis, football, jumping, flat-racing, boxing, fencing, and so on, will take place in the course of the next two or three weeks, finishing up with the usual autumn race meeting, lasting this year three days.

The Imbrie Murder.

A few days ago the first execution in connection with the recent outrage in which the American Consul was brutally murdered took place, a young non-commissioned officer in the Transport Service being shot, after being convicted of complicity in the attack. The American Legation is still pursuing the matter relentlessly, and it is understood that several more executions are likely to take place shortly. The amount of the indemnity to be paid to Mrs. Imbrie has been fixed at 60,000 dollars, and this amount has accordingly

been placed by the Persian Government at her disposal through the American Legation.

General News.

The new Italian Minister, Signor Galli, arrived here a week ago, and presented his credentials to the Crown Prince last Wednesday.

Dr. Millspaugh, the Administrator-General of the Finances, left for Ispahan a few days ago, on a short visit of inspection. His seventh quarterly report, which has just been published, is not very favourably received in the local Press, which finds in his complaints of opposition from the Cabinet and the Mejliss and lack of assistance to him in his work, an excuse for his not too successful quarter's working, and an attempt to shift the responsibility for this on to the shoulders of the Parliament and the Government.

The paper *Iran*, in a leading article, rails at those responsible for the breakdown of negotiations in connection with the loan of ten million dollars dependent on the granting of the Northern Oil Concession to the Sinclair Company. The latter's representative recently left the country to endeavour to float the loan, and has now had to wire the Persian Government, in reply to their inquiry, that he has not been successful. The question of this concession would, therefore, appear to be definitely shelved for the present.

THE FRENCH IN SYRIA.

(From an Occasional Correspondent.)

The occasion of Moulad Annabi, i.e., Birthday of the Prophet, was observed by the whole town of Beyrout as a holiday. General Weygand went to the Mosque of Sayed Yehya, i.e., St. John, with a detachment of Algerian Spahis. There were also present the Governor of Great Lebanon with a detachment of mounted troops, many Christians, and a few of the Maronite clergy.

General Weygand made a speech which was well received. Further, he gave about 3,000 francs to the poor, and also handed the Imperial College to the Moslems for their sole use. The Lebanon Governor also gave 1,000 francs to the the poor.

While it is a pleasure to record this, one regrets to find in the *Echo* of Beyrout of September 11 a severe indictment of the British-Arabian policy, signed with the initial "Sh." This may mean "Shawish," the notorious Anglophobe! Such an article was hardly expected from a Syrian paper.

THE BOMBAY ART REVIVAL.

Captain Gladstone Solomon, Director of the Bombay School of Art, lectured on October 23 before the India Society on the work of his school. After describing the beauty of that "Second City of the Empire," he declared that the leadership of art on that side of India was Bombay's natural function, and the School of Art was the centre of the movement. The system of tuition followed in the School of Art had its source in that of the Royal Academy; there was also the class of mural painting, which, when founded, had no Western analogy.

Speaking of the life class, he pointed out that the study of form was not "de-orientalising the students," but was placing in their way facilities for acquiring knowledge. It was the lack of these facilities for training which had led to the partial stagnation of Indian art. The old Indian painters had founded their beautiful work upon Nature.

How could they in England help these deserving artists? The existence of such a learned society as the India Society was in itself a recognition of the importance of this question and an encouragement to Indian artists; but recently Sir George Lloyd had answered that question at the Wembley Conference on Indian Art, held under the auspices of the India Society, in his own way. "The more excellent way," he almost said the *only* way. The proposals of that distinguished champion of Indian artists were that the students should be employed upon the mural paintings for the new buildings at Delhi, working under their own masters, and that a central institution should be founded there—a "Villa Medici"—for the selected students from the Indian Art Schools all over India. This meant a measure of Government patronage for Indian art which had seemed to sound an alarm in some quarters.

The meaning of Sir George Lloyd's proposals was the rescuing of Indian art from her niche in the *museum* and the restoring of her to the *studio* with palette and brush in her hands. That was the aim and end of all their efforts in Bombay, where he hoped that Sir Leslie Wilson would continue to receive the warm support of the public in his zealous work on behalf of Indian art.

In moving a vote of thanks to the lecturer, Sir Herbert Holmwood said: "There is also another reason why we owe a debt of gratitude to the lecturer, for I understand that he is about to start for Paris, on his way back to India, and that while in that city he will give a lecture on the Indian Modern Art movement before that very distinguished society the *Association Française des Amis de l'Orient*, with which we are on terms of great friendship. I feel it is most important that our French friends should also learn what is going on in art circles in India, and what is being done to encourage the young Indian artist."

THE ANCIENT WORLD AND RECENT EXCAVATIONS.

A course of lectures on the comparative archæology of the ancient world will be given by Claire Gaudet at the British Museum (by kind permission of the trustees) on Thursday afternoons, beginning November 6, at 4.30 p.m., and also an evening course at the Chelsea Polytechnic on Fridays, beginning November 7, at 8 p.m. The object is to link together the more important archæological discoveries of recent years in Mesopotamia, Egypt, and the Mediterranean. The subject will be treated contemporaneously as nearly as possible, comparing the civilisations and architectural forms as they travelled and evolved westward.

CORRESPONDENCE.

The columns of The Near East *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* The Near East.

RAILWAYS IN EGYPT.

To the Editor of The Near East.

Sir,—May I crave the hospitality of your columns to correct a statement appearing in your number of to-day, which, if allowed to pass without comment, would convey a false impression as to the present state of efficiency of the Egyptian State Railways? Your Cairo Correspondent says: "For more than five years now no renewal work has been carried out, and the condition of the service has deteriorated very considerably."

As a matter of fact, very large sums have been spent under this heading since 1919. For example, when the present order for thirty tank locomotives has been completed, approximately one-sixth of the total stock of engines on the books of the E.S.R. will have been replaced, as follows:—1920-21, 30 express passenger, 20 heavy goods; 1922-23, 20 tank engines; 1923-24, 30 tank engines. Total, 100 engines out of a total stock of just over 600.

Over thirty new first-class coaches will have been turned out at Boulac shops, besides heavy renewals, practically amounting to rebuilding of a considerable number of existing coaching stock.

Some hundreds of goods wagons, tank wagons, etc., have been added since 1919.

So far as the permanent way is concerned, if my memory serves me aright, it will be found that the normal rate of renewal—viz., 80 kilometres of main line track—has been more than maintained.

The new double line bridge at Embaba is almost complete, and the replacement of the Nile bridge at Dessouk is in hand. The programme of bridge renewals has, in fact, never suffered serious check.

If the present state of the permanent way is such as to call for the immediate expenditure of large sums of money, this is due to the enforced parsimony of the latter decades of the last century, from which the Egyptian State Railways have never recovered, and if the rolling stock is in a bad way the reason lies in political considerations.

The Egyptian Government is getting rid of the experienced European supervisors before their Egyptian pupils have been sufficiently trained. The latter are clever, without doubt, but lack initiative and thoroughness, qualities which can only be acquired by long and patient education. In the meantime maintenance suffers.—I am, etc.,

R. B. D. Blakeney.

(Formerly General Manager, Egyptian State Railways.)

The Athenæum, October 30.

THE EMIRATE OF MECCA.

To the Editor of The Near East.

Sir,—The reported appointment by Ibn Saoud of the Shereef Ali Haider Pasha to the throne of Mecca is one which should give profound satisfaction both in this country and in Arabia. During the winter of 1920-21 you were kind enough to allow me to make use of your columns to set forth the reasons why Ali Haider's claims to the throne of Iraq should be considered, and I would esteem it a great favour if you would allow me once again to trespass upon your space and explain why his appointment to Mecca should be regarded in a favourable light.

The Shereef Ali Haider is no reckless gambler with his own destiny, or with those of people over whom he has control, for his career shows him to be a man who not only values peace and security, but who also possesses great qualities of statesmanship. When the Turks appointed him Shereef of Mecca in 1915 he never attempted to use the forces at his disposal against the Allies, and thereby incurred the displeasure of the Turkish authorities. His activities during this period consisted in relieving the lot of the unhappy Syrians, and it was then also that he established friendly relations with Ibn Saoud and Ibn Raschid.

The Shereef's sympathies have always been with Great Britain, for whose culture he has great admiration. All his sons, who speak English fluently, have been educated at an English school, and one son has recently completed three years at St. Andrews University. I should like to call attention to a letter which appeared in your issue of August 14 last recording the musical achievements of another son in the United States.

With Shereef Ali Haider in Mecca we need never fear for the boundaries of Transjordan, while his friendly relationship with Ibn Saoud would make Iraq more secure from any hostile incursions. If the dream of a United Arabia is dead the vision of a peaceful association of Arabian peoples would arise with the advent of Ali Haider, the head living representative of the House of the Prophet, to the throne of the Hejaz.—I am, etc.,

"Champion."

[Reference was made to the report of Shereef Ali Haider's appointment in our "Notes of the Week" of October 30.—Ed.]

THE YUGOSLAV MINISTER.

We much regret to have to record the death of Dr. Michael Gavrilovitch, Minister since 1920 of the Kingdom of the Serbs, Croats, and Slovenes. His end came with unexpected suddenness, as the result of heart failure consequent upon influenza.

His success as representative of Yugoslavia in London has been acknowledged on all sides. His scholarliness, which was of such extent as to earn him a Continental reputation, stood him in the most excellent stead when the passionate claims of his country had to be preferred, and it gave him a wise and comprehensive grasp of essentials when internal discussions in Yugoslavia would have prompted a lesser man to take sides. Personal sufferings in the various wars in which his country had been recently engaged made him but the more determined to follow the path—if the phrase be applicable to the Balkans—of sweetness and light; and the fact that Yugoslavia stands in British esteem where it does to-day must be attributed largely to his tireless and persuasive representations.

Before his appointment to London Dr. Gavrilovitch had been for the greater part of his life a scholar, particularly an historian. It was not until he was forty that he turned diplomatist, becoming Serbian Minister to the Holy See, and Minister to Montenegro. He was born in 1869 at Alexinatz, in Central Serbia.

The Roumanian Government has endowed a lecturership at King's College in Central European History (with especial reference to Roumania and the Near East), and a part-time lecturership in Roumanian Language and Literature, both tenable for three years. Mr. H. Wickham Steed has been appointed by the Delegacy to the former and M. M. Beza to the latter.

PERSONAL AND GENERAL.

TO-DAY.

November 6, 1924 (New Style).
November 24, 1924 (Old Style).
Rabia 'II, 8, 1343 A.H. of the Moslem Calendar.
Marheshvan 9, 5685, of the Jewish Calendar.

The Bulgarian Minister left London on October 31 for Paris.

Sir John and Lady Stavridi left London on October 29 for Algiers.

The Countess of Shannon has given birth to a son at Ootacamund, Madras.

Lady Emily Lutyens left London on October 28 for Venice, *en route* to India.

Prince and Princess Nicolas of Greece left London last Thursday for Paris.

Sir Dhunjibhoy and Lady Bomanji last week left the Ritz Hotel, London, for Paris.

M. Nicolas Youlovitch has been appointed Secretary at the Yugoslav Legation in London.

Sir Percy Loraine, British Minister to Persia, and Lady Loraine, have left London for Teheran.

M. Slavko Koitch, Secretary at the Yugoslav Legation, left London last Friday for Paris on leave.

Rosamond Viscountess Ridley and the Hon. Vivien Ridley left London on October 31 for India.

Viscount and Viscountess Milner sailed last Friday in the Walmer Castle for South Africa. They expect to be away about four months.

Viscount and Viscountess Portman sailed last Friday in the Kaisar-i-Hind for Marseilles. They have taken a villa at Cannes, and are going later to Egypt.

Mr. Peter Augustus Jay, United States Minister at Bucharest, and his family arrived on October 31 at Cherbourg in the U.S. liner Leviathan from New York.

Prince and Princess Danilo of Montenegro arrived last week at the Hotel de Paris, Monte Carlo. Their villa at Cap Martin has been purchased by Sir Pomeroy Burton.

Lord Rawlinson, Commander-in-Chief in India, accompanied by Major J. R. C. Gannon and Major L. M. Gibbs, leaves London to-day by the P. and O. Special for India *via* Marseilles.

Among the passengers who sailed from London last Friday in the Kaisar-i-Hind were Sir Francis and Lady Dent and Lady Arundell of Wardour for Gibraltar; and Sir Stanley and Lady Reid, Sir Henry and Lady Macnaghten, and Lady Marten for Bombay.

Major-General Sir Charles Benjamin Knowles, K.C.B., of Eastfields, Camberley, Surrey, a Crimean veteran who also saw service in the Afghan War, 1878-80, and in Egypt, and colonel of Hampshire Regiment, who died on July 29, aged 88, left unsettled property in his own disposition of the gross value of £15,494, with net personalty £14,824.

The King has given Lieutenant-Colonel Sir Ronald Dockray Waterhouse, K.C.B., C.M.G., C.V.O., authority to wear the Grand Cordon of the Order of the Coroana Romaniei, conferred on him by the King of Roumania.

Mr. St. John Philby was reported on November 3 to have arrived at Jeddah. He is in the Hejaz on an unofficial mission, the purpose of which is to bring about an amicable arrangement between King Ali and Ibn Saoud of Nejd.

Captain Hamdi Bey, Deputy for Constantinople in the Grand National Assembly of Turkey, who had been visiting London in connection with purchasing steamers for the Turkish Steam Navigation Company, left Victoria on October 29 for Angora.

The King has given authority to Mr. Arthur Ferguson MacCallan, C.B.E., M.D., F.R.C.S., formerly Director of Ophthalmic Hospitals, Egyptian Department of Public Health, to wear the insignia of the Order of the Nile, Second Class.

In celebration of the first anniversary of the Turkish Republic, the Turkish Minister in London, on October 29, held a reception at the Legation, at which were present members of the Turkish colony. During the evening the Minister sent a congratulatory message to Mustapha Kemal, the President.

By command of the King, the Earl of Cromer (Lord Chamberlain) called at the Legation of the kingdom of the Serbs, Croats, and Slovenes on November 3 to convey His Majesty's condolences upon the death of His Excellency M. Michael Gavrilovitch (Envoy-Extraordinary and Minister Plenipotentiary from the kingdom of the Serbs, Croats, and Slovenes).

APPOINTMENTS, PROMOTIONS, ETC.

The following Consular appointments are notified in the *London Gazette*:—

Mr. Cecil Allan Walter Were, Vice-Consul at Marrakesh.

Mr. Gerald Holgate Selous, M.B.E., Consul for the Towns and Provinces of South-West Morocco, extending northwards to and including the Chaouia and the territory of Tadla.

Major James Hugh Hamilton Dodds, C.M.G., Consul for Tripoli.

ANGLO-FRENCH CO-OPERATION IN THE MIDDLE EAST.

During the past week the League of Nations at Geneva has listened, among other things, to reports upon the present situation in Palestine and in Syria and the Lebanon respectively. Those accounts have, on the whole, been satisfactory. The position in both the mandated territories is now practically devoid of internal danger; military garrisons have been reduced; and the attempt to inculcate the senses of British and of French justice seems to have met with a certain, if slow, success. So far as is reported from Geneva, there appear to have been no confessed shortcomings on the part of the administrators in these countries, and one would not be unjustified in assuming that all is well from Alexandretta to Akaba. This, however, would be but a superficial view. It is true that the political situation in both countries—we should, perhaps, say in the whole country—has gratifyingly eased, but the main factor of the whole problem—the economic factor—is still far from good. Reports still abound of commercial stagnation and depression in both Syria and Palestine, and they will, it must be feared, so abound until a wider view of the question is entertained. Economic discontent, of course, breeds political agitation; and political agitation, unlike the goods of commerce, does not stop short at political boundaries. In this way both Syria and Palestine have continually to be looking North, South, and East: to the West they gaze, respectively, with but a sigh at the Customs duties and at the lack of harbours. It is in the main, we repeat, a common ill from which Syria and Palestine are suffering. True, the policy and the ambition of the mandatory Powers are different, but there is still ample room for economic co-ordination. Whatever the ultimate intentions of the Mandatory Powers in Palestine and Syria may be, they can be achieved on one foundation only—the economic prosperity and content of the people.

Let us for a moment look particularly at two of the Arab "Trinity" States which the Western Powers formed out of one. The behaviour of these two unruly children of Allied conception, Palestine and Syria, said the mandatories before the League, is now really improving; parental authority is being complemented by filial devotion. But is that satisfactory statement shared at all widely by any but the mandatories themselves? Is there any considerable body of Continental opinion which is, for example, now persuaded that the Zionist experiment can be a success, or that France has acted in Syria in accordance with the spirit of the famous Anglo-French Declaration of 1918? We fear not. Let us turn, however, from these questions, which have been prompted by events in which the mandatories were in large part forced to partake by the exigencies of circumstances, and look from a doubtful past to the more hopeful future. The rivalry which showed up so badly in the past between Palestine and Syria, or, rather, between the officials in those countries, is now dying down, even though the tendency of France to regard any sign of brigandage which had its source in Transjordan as the work of the British, and of Britain to regard Turkish intentions upon Iraq as winked at by France, still obtains a futile currency. In Palestine the relations between Arabs and the British are becoming more cordial—British sympathy with the Arab *fellah* could not make things otherwise—and with the politically minded Palestinian Arab now in active and optimistic collaboration but with his brothers in Syria—his support in the Hejaz having apparently been suspended—there is good reason to suppose that he will become more tractable, or, as we should better say, more creative. In Syria, as in Palestine, the economic problem is still acute, but it is undoubtedly improving. There, in fact, the situation is far more promising in many ways than it is in Palestine, where the delay in raising the Government Loan has held back almost everything. It is true, incidentally, that the Loan is opposed by certain Palestinian merchants, but it is obvious at any rate that without harbours the Holy Land can never gain an adequate prosperity.

The time seems to us peculiarly ripe for a reconsideration of this whole problem of the Middle East. M. Herriot has repeatedly made expressions of goodwill towards Britain in the Middle East, and it is now for the actual exponents and agents of the Allied policies in the Middle Eastern countries to get together and form a concerted plan to ensure the common prosperity of their respective charges. France surely need fear no more our Arabian policy, for she must see clearly enough that if Iraq, for instance, or Trans-jordan are to stand, they must stand on their own feet, and not in virtue of the fact that their rulers are there because they are the sons of an abdicated monarch. There is little cause to suppose, indeed, that the French have, after Meisalun, feared the Arabs. Nor have they any reason to suppose that Britain would at any time work with the Arabs as against Syria. What Britain's eye, in these regions, is chiefly upon is Turkey, the Turkey with which, although she has recently been successful in regulating the difficult issue of her religious schools, France is still at variance on more than one point: the Turkey which, in spite of professions to the contrary, is in many quarters assumed still to have designs upon Alexandretta and Aleppo; and, finally, the Turkey which, if real trouble were to arise with Iraq, would have to run its troops along the Baghdad railway, which passes through French-administered territory. It would be foolish and quite unjustifiable to make a bogey of Turkey's possible intentions to recover any of its lost provinces, but it is patent that it alone could cause serious trouble in these parts. The reason that its threats have so closely to be considered is due almost entirely to the fact that Britain and France have not since the War attained to a really working arrangement, for the more this country courted or ingratiated the Arabs, the more France turned against them and towards Turkey. If the new Government in Great Britain were to attack this vital problem, and to lay themselves out to secure French co-operation in the defence and fiscal systems of the countries which are under Allied supervision, a great and essential step would have been taken. Past history may be left to take care of itself: if old sores were raised, the withered arm of the Middle East would never be healed. There is, finally, no need to wait for the delimitation of the Iraq frontier next year: a word from London and Paris would ensure immediate benefit.

Near East Bookshelf.

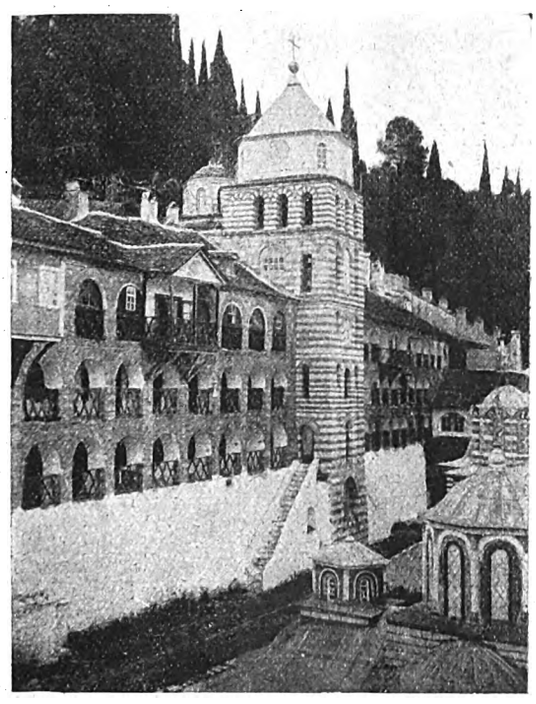
THE HOLY MOUNTAIN OF ATHOS.

"ATHOS AND ITS MONASTERIES." By the late F. W. Hasluck. (London: Kegan Paul, Trench, Trubner and Co., Ltd. 12s. 6d. net.)

I suppose that the names of few places in the world call up more sense of mystery than that of Mount Athos, the holy peninsula on the Macedonian coast, peopled entirely by monks and other holy men and their dependents, within the confines of which no woman nor even any female animal may enter. Most of us have had our own imaginations of it since childhood, and but few of us have ever seen the actual place or are likely ever to see it. What we have read concerning it has mostly been of a very scrappy and inaccurate nature, and it was high time that a book should be published in English summarising the researches made from time to time by scholars of various nationalities into its history, giving the results of personal studies on the spot, and making more easy the way of future visitors.

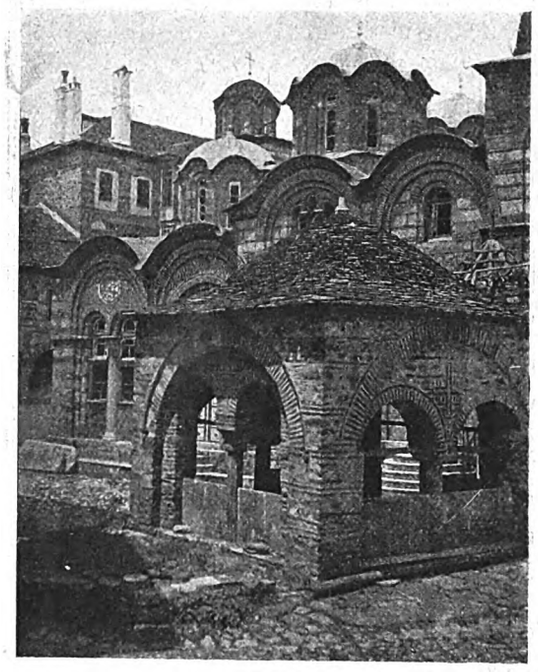
Mr. F. W. Hasluck, who had spent much of his precarious life in the study of ancient civilisation in the Levant, and had been for some years Librarian and Assistant-Director of the British School of Athos, felt that need, and had by 1912 written the book now before us. He kept it back in order to revise it in the light of events following on the Balkan War. But the great European War followed too closely. His state of health made it impossible for him to join the Army, so he devoted himself entirely to laborious and very useful work in the Intelligence Bureau of our Athens Legation till consumption took such a hold on him that he had to leave for Switzerland to die. The book has been brought out by his widow, herself a scholar, but it has to be borne in mind that it is twelve years old and that it suffers from the loss of his finishing work on it. By this I do not mean in any way to depreciate the book, which is an excellent one in all respects, full of ripe scholarship, careful research and the observation of the skilled student.

From the moment you land at the little port of Daphne, you are in a very old world, unlike any world that exists now elsewhere or, indeed, ever existed, with queer anachronisms such as passports and picture postcards to remind you that there is another world outside. The lovely scenery, the monastic seclusion, the ancient ways, the old-world hospitality, the air of suppression of everything except worship, and the utter absence of modernism are with you constantly till your departure to our own work-a-day world.



ZOGRAPHOU: CLOCK TOWER.

It was, I must confess, a shock to me to find that there is no historical covenant of early religious settlement in the Mount before the middle of the ninth century. However, that is quite a long time ago, and in two or three centuries there was clearly a considerable monastic community there. Very few of the existing monasteries were founded after the twelfth century. But again I was disappointed. Attacks in war, piratical raids, and fires have destroyed very much, so that comparatively little of the very ancient buildings is left. However, here again we may take comfort. Quite enough has been left to show us what these beautiful buildings were like, and their successors are intensely picturesque and well suited to their surroundings. I fear that my dreams of rich ancient stores of books must go the way of other delusions. Mr. Hasluck nowhere speaks of the contents of the libraries of the monasteries, and his account of the primitive kitchen fire leads us to suppose that nothing so inflammable as manuscripts was likely to last there very long.

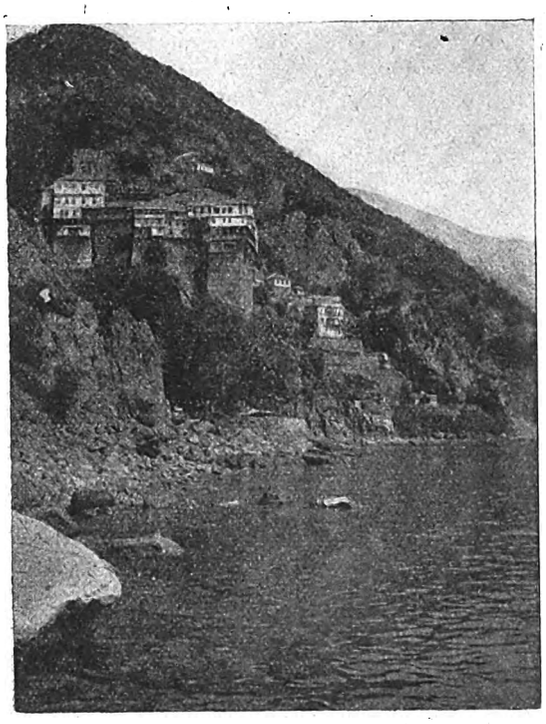


CHILANDHARI: CHURCH.

Mr. Hasluck takes us through the history of the Mount from century to century, chronicling its internal events and development of its government and administration. He gives us glimpses of the occasions when its inhabitants were perforce brought into collision, generally disagreeable, with the outside world. He tells us of their origin, their prosperity, their bad times, the growth and waning of their population, and he leaves them still under the mild rule of the Turks. He points out how like the administration of Athos is to that of our own older Universities. Indeed, he points out that the very "word *Koinotes*, not the modern barbarism *Panepistemiom*, is obviously the Greek equivalent of 'University,' and the Central Council coincides aptly enough with the University Senate with its extra-territoriality and separate police powers. The twenty sovereign monasteries represent the Colleges, the *Skctai*, the Halls, and the cells the groups of out-college men. The

Digitized by Google

grouping of juniors and seniors in the idioryythmic houses and cells recalls our mediæval association



DIONYSIOU.

of undergraduates with Masters of Arts, while the endowment of elderly members corresponds to the old system of college livings. Curiously, also, smoking in the courts is forbidden!"

The second part of the book is more of the nature of a guide-book to the twenty monasteries still existing. Each in turn is treated from the historical and architectural point of view.

The whole work has its value greatly enhanced by 40 or 50 excellent illustrations, some being reproductions of old prints, others more natural reproductions of what must have been very beautiful water-colour sketches by the author, while others are photographs by the author. Of the last we are, by the courtesy of the publishers, able to show our readers some specimens.

A bibliography, a glossary, and an adequate index complete the work. The only fault I can find with this book is that its method of production, i.e., size of page, weight of paper, etc., will militate against its usefulness as a guide-book to visitors to Athos. The transposition of the titles of the two photographs on Pl. 15 is clearly due to a printer's oversight. C. S.-W.

THE EX-KHEDIVE AND EGYPT.

The following article, written by a well-known Zaghloulist Egyptian, is extracted from a recent issue of *Le Soleil*, a Marseilles paper:—

The ex-Khedive Abbas Hilmy II. has recently published a strange statement on the Turkish Bank of Commerce and Industry, on the political reorganisation of Turkey and the recognition of its old debts, on the building of barrages in Upper Egypt, on events in the Sudan, on the Egyptian question, on the attempted assassination of Zaghloul Pasha, on the culture of Egypt and the track of the line from Mariout, on the independence of Egypt, on his future, and so on.

If one is to believe him, Egypt, "always a Turkish subject," still belongs to the Ottoman Republic, since his statement ends with a long litany of the ills which must befall her now that he has left her soil.

It is not difficult to understand the sorrow of this ambitious and evicted farmer, who to-day sees Egypt claiming complete independence—and doubtless obtaining it—when the intrigues of this experienced plotter envisaged (as witness his negotiations with Bolo and his fellows) her liberation from Great Britain only that she might be thrown under the heel of Germany. That is perhaps what he means by "working for more than twenty years to lead the country towards progress."

He deceives first one side, then the other. After having lied to England and to Egypt, he is lying to-day at Geneva, just as to-morrow he will lie at Angora. And this is what he calls service in the cause of independence and of justice!

Who is willing to believe that he, out of his own pocket, constructed the 200 kilometres of railway track from Mariout? Does he not remember that the necessary materials had been taken by the Railway Administration, which had to give them to him at a quarter of their real value, and that the manual labour was provided exclusively by the guard, soldiers, and officers? And when the track was laid and the stations were built, was it not the opportune intervention of Lord Kitchener which alone prevented the selling of the whole thing to a foreign company at a high price? Has he so quickly forgotten his depredations on the revenue of the Wakfs, which he wrongfully appropriated to himself? And the title of farmer which he claims, and the love of the fellah which he professes—do these comprise the rent deeds which the cult of decorations brought him (decorations of which he had the monopoly) and the blows with which he crushed the fellah? Certainly he loves the land and the fellah; but he forgets to say that it was often the land of others, and that if he loves the fellah, the fellah certainly never loved him.

"I considered," he said, "that I could but withdraw from the struggle the unfortunate consequences of which could be foreseen; since that time I have had to content myself with being a patriotic spectator of events as they unrolled themselves."

It was probably to gain a better view of these events which so ravaged his tender heart that the ex-Khedive, not being able to visit London, which refused to see him, sojourned in Paris, in Italy (notably Rome), in Belgium (where he changed his name), and in Constantinople, where his inexhaustible activity was concentrated on keeping quiet the voice of Captain Recke, which was reaching his ears from Berlin. It was to gain a better view of these events that, without paying them, he harried the German sailors out of his yacht, and that he sent secret agents to Egypt.

EGYPT UNDER THE TURKS AND BEYS, 1517-1811. *

By F. W. BUCKLER.

(*Continued from page* 430.)

This last act produced a reaction. Ibrahim Bey, the Circassian, had almost as much influence as Ali Bey and his followers, and he had to flee the country, first to Jerusalem and then to Acre. The reason for his departure from Jerusalem was the fact that the governor was a Turk, and Ali Bey had learnt that a messenger was on his way from Constantinople to Jerusalem, armed with orders to take off the head of Ali Bey. As the orders were addressed to the Governor of Jerusalem, they did not affect the Governor of Acre, and Ali was well aware that a reaction in his favour was taking place in Egypt. If it were his destiny to elude the fate-bearing decree of the Sultan, then he would be spared to take advantage of that reaction—and even so it was. The Sheikh Dahar proved to be a very real friend; gave the sound advice of patience and resignation which every Muslim gives in hours of distress, and, as Saadi says, "The fruits of resignation are sweet." The fruits in this case consisted in the surprise return of Ali Bey to Cairo, the execution of the four ringleaders of the opposition; the ejection of all the nominees of the Porte from the ranks of the Beys, and in their place Ali Bey appointed eighteen of his own followers. His position now seemed secure. But the sound rule in all Eastern courts is, "Let him that thinketh he standeth beware lest he fall."

It was not at all likely that the Porte would acquiesce mildly in the annihilation of his influence in Cairo. He could afford to wait. In 1768 war broke out between Turkey and Russia, and Egypt was ordered to provide its draft of 12,000 men, which Ali Bey began to raise. But the doubt arose as to the objective against which they would be directed, and orders were sent to the Pasha to put Ali Bey to death. Ali Bey had his agents at Constantinople, and the news arrived before the fate-decreeing *firman*, so that Ali Bey was able to defeat the plot. He sent a trusted friend with sufficient forces to waylay the unfortunate messenger, who was slain with his following and buried in the sand about twenty miles from Cairo. Armed with the *firman*, Ali Bey was able to use it with effect against the Ottoman. He assembled the Beys, whom he addressed with considerable vigour on the subject of Ottoman tyranny, proposed independence and alliance with Russia. He carried with him the majority of the Beys, expelled the Pasha, and struck coin in his own name.

An interesting tale is told by Volney of the attempt to discredit this coinage after the fall of Ali Bey. It was alleged that his silver piastres were debased to the extent of 20 per cent. But a merchant sent 10,000 of them—purchased at this rate—to Marseilles and made a handsome profit.

The Turk was not likely to submit to this final action, and a constant stream of executioners bearing *firmans* made their way to Cairo, which they never reached, thanks to the mediatorial influence of poison and daggers. Ali Bey set out to secure his position. He was assured of the support of the Governor of Acre, his old friend, and to reduce Syria he dispatched his son-in-law, Abu'l-Dhahat, the "father of gold," so called, according to one version, because he gave alms only in gold pieces: according to another version, because he "fathered his gold." Now in sending Abu'l-Dhahat Ali Bey made his greatest mistake. He felt sure of the fidelity of his son-in-law, and would listen to nothing against him, although there were well-authenticated accounts of attempts made on his life by this favourite.

Abu'l-Dhahat had already entered into an arrangement with the Porte for the reversion of Ali Bey's possessions, and after a successful campaign in Syria he suddenly turned back, marched to the Upper Nile, seized Asiout, and took Cairo in the rear. Ali Bey escaped, reconquered Syria, and left garrisons in the forts, thereby weakening his forces, so that in 1772, when he turned towards Egypt, he had only a diminished force with which to face Abu'l-Dhahat; he was defeated, and wounded so severely that he was taken prisoner. He was received with overwhelming kindness by the victor, who took him to his own house to die of his wounds—some say with the help of the poison of Abu'l-Dhahat, who succeeded him, but only for two years, at the end of which he died, probably of apoplexy, for he was a hardened drunkard.

There is something to be said for Ali Bey—Egyptian chroniclers accord him the title of "the Great"—and it must be admitted that he handled the Mamluk position well. He was foolish perhaps in his trust of mankind, particularly of those who were in a position to become rivals. He attempted to reduce extortion with some success—as the mythology which grew around his name shows. But he is the justification alike of Salim the Grim's experiment to retain Egypt in vassaldom—for Ali Bey was overthrown by a rival Mamluk faction—and of Mohammed Ali's remedy—the slaughter of the Mamluks. He realised alike the importance of Syria and the potential value of European support—though in this he was badly served by Russia and Venice. His campaigns, however, tended to defeat the measures he took for the alleviation of the taxpayers' sufferings, and his failure gave place to a new period of divided government in which the central authority had ceased to exist.

Between 1772 and 1805, when Mohammed Ali was created Pasha of Egypt, there is little more to be said than that disorder and extortion continued. The tribute to Constantinople was paid with fair regularity, and the Mamluks continued to prosper—for all levies and taxes demanded from them were ultimately passed on to the *fellahin* and shopkeepers. They continued to groan under the burden of oppression, although some attempts were occasionally made to check rapacity.

Then came Napoleon—but of his activities you

have already heard from Professor Holland Rose. His part in the history of Egypt *itself* is practically negligible, except that he changed its outlook from being a pawn in Ottoman Imperialism to being a pawn in Western diplomacy. Napoleon's greatest contribution to Egyptian history was the inspiration he gave to Mohammed Ali.

In the Muslim world as a whole affairs had not gone well. Russia was advancing against Persia and Turkey alternately. The Moghal Empire was challenged by both Haidar Ali and Tipu Sultan, who claimed Qureish descent, and seem to have aimed at establishing themselves in the Khalifate, for Tipu Sultan was in close alliance with all the leading Sunni rulers from Egypt to Afghanistan and Rohilkhand. The Porte denounced him on account of his alliance with the French, but had it not been for the activity of Mahdaji Sindia, who ultimately forced the English to support him, Tipu might have brought his Sunni alliance into very effective operation. It is an aspect of Tipu's activities which is usually neglected by historians of India. In Arabia, too, the Wahhabi movement began to arouse Muslims to the purity of their early faith, and, like all Puritan movements, ended in sedition and rebellion.

But Europe was fully engaged with Napoleonic wars, and this fact enabled the Sultan to dispatch forces to Egypt to restore order in 1801. Among the junior officers was a young tobacco merchant and condottière of Kavalla—Mohammed Ali. In 1805 he was appointed *pasha*, and proceeded, by means of bribes or massacres, to rid Egypt of all that stood in his way. First of all went the agents of the Sultan in 1806, then he turned to deal with the Mamluks, but England and France had taken sides on the question. The French supported the young pasha, but they were not supreme. The English supported the Mamluks, who were the cause, as we have seen, of the whole trouble, so Mohammed Ali got rid of the English in the following year. Now his coast was clear. He awaited his opportunity; he was sure of his Albanian troops, and on the eve of his expedition to Arabia he invited all the Mamluks to the citadel, moved off their troops, closed the doors, and his Albanians massacred all save one, who succeeded in escaping. This massacre took place in 1811, and rendered possible the orderly government of Egypt. The next year he established his authority in Arabia, having gained the assent of the Sultan; he suppressed the Wahhabi rebellion and cleared the region of fortified villages. The Albanians became restive, so Mohammed Ali turned to the Arabs, and they officiated for the Albanians as the Albanians had officiated for the Mamluks.

Of his work in Egypt we have the impartial verdict of E. W. Lane, who visited Egypt at this time. It was disappointing. Much was regularised, but monopolies and the heavy taxation which his wars necessitated still ground down the unfortunate *fellahin*. Egyptian population declined, and its wealth once more accumulated in the hands of a minority. Further, Mohammed Ali was no more able than any other Oriental (or Western) conqueror to dispense entirely with the old official classes. He introduced European superintendence extensively, but, like the Ministers of an English Cabinet, they found themselves of necessity limited and controlled by the experience—and perversity!—of the permanent officialdom.

But Lane probably expected too much. Ten centuries of misrule could not be cured in ten years, nor was Mohammed Ali the man to cure it for himself. His object was to create an efficient State and army: his ideas were Napoleonic—and therefore extravagant in the realm of economics. Of his activities in European politics you have heard from others, and so, with the recognition of Mohammed Ali and his family as hereditary Pashas in Egypt in the year 1841, we take our leave of him.

NEWS IN BRIEF.

Sir Herbert Samuel left Geneva on November 2 on his return to Palestine.

Mr. Frederick Woodhouse recently gave his second lecture-recital of British songs at Belgrade.

Ezekiel Sassoon Effendi, Iraq Minister of Finance, has been appointed Acting Premier in the temporary absence of the Prime Minister.

In compliance with the demands of the United States Government, the two Persian murderers of Major Imbrie, whose execution had been delayed, were put to death at Teheran on November 2.

In response to an appeal by King Fuad to the Egyptian Red Crescent to succour the suffering inhabitants of the Hejaz, a subscription list has been opened in Cairo. King Fuad himself has subscribed £E1,000.

According to *The Times* Constantinople correspondent, Sidi Ahmed Ibn Mohamed es Sherif, who was Grand Sheikh of the Senussi until his deposition in 1918, and a leading figure in Pan-Islamic circles, left Mersina last week for Mecca.

At Angora on October 26 the meeting of the Popular Party was suspended for five minutes as a mark of respect for Zia Geuk Alp, the protagonist of the doctrines of Yeni Turan and intimate adviser of the late Grand Vizier Talaat Pasha, who died the previous day.

King Boris opened the Bulgarian Sobranye on October 29. In his speech from the Throne he stated that Bulgaria's relations with her neighbours were good, and that the Government was anxious to apply the Minorities Agreement concluded with Greece at Geneva during the recent League of Nations Assembly.

The Prefect of Police at Jassy, Roumania, was shot dead on October 27 by a student, who had already, on several occasions, appeared in the police courts.

NOTES AND NEWS.

167, Strand, London, W.C.2,
Tuesday Morning.

The Election—and After.

If I contented myself last week with saying merely that the Conservatives were absolutely certain to win seats it must not be thought that the *fait accompli* has left me unduly humble. In my opinion no one could have foreseen what happened, and to have forecasted anything of the kind would have been on a par with supporting the outsider in the Derby. But if the majority is almost of unwieldy dimensions, what really matters is that at last we have a really stable Administration with all that that implies. Already the first-fruits are seen in the general revival of confidence which finds expression in buoyancy on the Stock Exchange and in the improvement of the New York exchange rate. There is absolute conviction that under the Conservative Government there will be a real prospect of an all-round trade expansion, and that whatever can be done to assist a commercial revival will be done, and the confidence that exists is due to the belief that in all probability these efforts will be successful.

The British Empire Exhibition.

The Exhibition has now come to an end without a decision as to its reopening in 1925, but in view of political developments, it may be taken for granted that its continuance is certain. So far it cannot be said that Wembley has been unduly favoured by conditions generally. Almost from the beginning to the end, the weather has been uniformly unfavourable, and it is a matter for surprise not that the attendance has fallen so far below the estimates, but that it has reached the total it has. Day after day there have been prolonged downpours, and those who have visited Wembley under these conditions deserve to be complimented on their courage. If there is anything in the law of averages, next year should be relatively dry, and if the Exhibition contains new attractions, as will undoubtedly be the case, it is reasonable to anticipate that the figures of this year may well be surpassed.

Satisfactory Results.

On the whole, the results of the Exhibition have been distinctly good. It is true that some of the firms represented are not satisfied with the outcome, but they constitute a small section only of the exhibitors, and it is perfectly clear that the value of a great Exhibition lies not in the immediate gain, but in its influence over a long series of years. From the point of view of its effect on the development of economic relations between Great Britain and the other parts of the Empire, Wembley has been an undoubted success. It has been the means of introducing to the British market many new commodities which will henceforth have a permanent place here, to say nothing of enlarging the demand for products which already had an outlet in this country, while its value as a means of illustrating the potentialities of the Empire has been literally beyond praise.

Trade with Yugoslavia.

On another page in this issue will be found details of an organisation which has been established for the development of trade relations between Great Britain and Yugoslavia. The unwillingness of British firms to grant extended credits has hitherto been one of the great handicaps to the extension of British trade with Yugoslavia and in other parts of the Near East, and it is the purpose of the new organisation—the British-Yugoslav Syndicate—to endeavour to provide a solution by guaranteeing credits. It is a promising enterprise, and the organisation should be able to play a useful part in the development of economic relations between the two countries.

Bengal-Dooars Railway.

At the meeting of the Bengal Dooars Railway the Chairman, Mr. Robert Miller, said that the results of the year's working were again satisfactory. With a few exceptions, there was an improvement under all heads, which was to be attributed to a good tea and tobacco season and to an increase in the population of the Dooars. The gross earnings amounted to Rs. 20,53,379, as against Rs. 18,13,192, while the aggregate expenditure was Rs. 10,91,748, as compared with Rs. 8,85,885. The net earnings for the year amounted to Rs. 9,61,631, an increase of Rs. 34,324 on the figures for the previous year. It is anticipated that the earnings for the current year will at least equal those of last year, and this is fully borne out by the traffic figures in recent months. At September 27 the approximate traffic receipts amounted to Rs. 10,09,442, as compared with Rs. 9,37,589 for the corresponding period of the previous year, an improvement of Rs. 71,853.

Bengal-Nagpur Railway.

At the meeting of the Bengal-Nagpur Railway the Chairman, Mr. Robert Miller, was able to give a very satisfactory review of the company's progress during the past year. The gross earnings amounted to Rs. 779 lakhs, an advance of Rs. 18 lakhs on the figures of the previous year, which were the highest on record. Mr. Miller pointed out that during the five years ended March, 1924, the gross earnings had increased by nearly Rs. 121.5 lakhs, or 18.45 per cent., while there had been an increase in the mean mileage worked of 63.88 miles, or 2.37 per cent. The gross earnings for the past year would have been considerably larger but for the unprecedented cyclone in November, which practically wrecked a length

of about 175 miles of the East Coast line. Working expenses during the year increased by Rs. 21½ lakhs, or 4.41 per cent. Dealing with the prospects of the current year, Mr. Miller said that, so far the gross earnings showed a marked improvement on the corresponding figures of the previous year. Up to September 20 the total increase amounted to Rs. 34.25 lakhs. This improvement, he added, has been brought about in large measure by the introduction of up-to-date methods of operating traffic.

COMMENTATOR.

REFUGEES IN GREECE.

We have received the following communication from the Secretary of the Imperial War Relief Fund :—

The recent rise in the world price of flour has compelled the British Relief Societies to reduce the numbers of refugees in Greece who have been fed by them by about 18 per cent. The need, however, among these people continues to increase, as is shown by the following telegrams received during the past ten days from the Chief British Relief Administrator, Dr. W. A. Kennedy :—

"Athens, October 23.

"Owing to overcrowded conditions in Salonika the authorities are refusing to disembark refugees. Severe cold is reported from Western Macedonia. With increasing numbers shelterless, malaria and dysentery are very prevalent. The recent arrivals are practically all women and children, emaciated and miserably clad. Large numbers without ration cards crowd round our kitchens hoping for food. Owing to heavy rains and cold I have been forced to begin distribution of winter clothing in Western Macedonia."

"Athens, October 31.

"Ten thousand refugees arrived in Salonika during October from Pontus. In Salonika alone, apart from scattered refugees, 15,000 are in tents and 45,000 in barracks. The approaching winter prevents further movement of refugees to the interior. I have been compelled to refuse appeal from the Governor of Larissa to commence feeding 1,000 new arrivals. 7,000 recently landed in Volo district."

Donations of money for the relief of these refugees are earnestly solicited, and should be addressed to Sir Maurice Benham Carter, K.C.B., Hon. Treasurer, All-British Appeal, 26, Gordon Street, Gordon Square, W.C.1.

Gifts of clothing, blankets, etc., should be sent to the All-British Appeal, New Hibernia Wharf, London Bridge, S.E.1.

GUARDIAN EASTERN INSURANCE COMPANY, LIMITED.

CHESS.

BY "CARO-KANN."

The following game was played in the British Championship at Southport between Mr. F. D. Yates (White) and Sir G. A. Thomas (Black) :— 1, P—K4, P—K4; 2, Kt—KB3, Kt—QB3; 3, B—Kt5, P—QR3; 4, B—R4, Kt—B3; 5, Castles, B—K2; 6, R—K, P—QKt4; 7, B—Kt3, P—Q3; 8, P—QB3, Kt—QR4; 9, B—B2, P—B4; 10, P—Q4, Q—B2; 11, QKt—Q2, Kt—QB3; 12, P—Q5, Kt—Kt; 13, P—QP4, P—Kt5; 14, P—B5, Castles; 15, Kt—B4, QKt—Q2; 16, Q—K2, R—Kt; 17, B—Q3, R—K (a); 18, B—Q2, P x P; 19, P x P, B—B; 20, KR—QKt, R x R; 21, R x R, B—Kt2; 22, Kt—Kt6, Kt—Kt; 23, B—KKt5, B—K2; 24, Q—Kt2, P—KR3; 25, B x Kt, B x B; 26, Kt—B4, R—K2; 27, Q—Kt6, Resigns.

(a) This does not turn out satisfactorily. Kt—K followed by P—B4 would have been better.

SALE OF PERSIAN WORKS OF ART.

Messrs. Sotheby's began last Thursday their season of book and art sales with a collection of Persian and Indian manuscripts, books, and works of art, the property of an Indian gentleman, the total amounting to £3,954 14s. for 198 lots. A fine 16th century manuscript, Khamsah of Nizami, on 374 leaves with numerous miniatures, realised £500 (Hoosein); another manuscript of Jami, 1537, with several miniatures of the Bokhara School—£390 (Garabed); a Mosque Koran, undated—£200 (Hoosein). An Indian carpet of the early 17th century, 13 ft. by 6 ft., realised £600 (Tours); and a Persian silk carpet of the Shah Abbas period, 1588-1629, £600 (Carami).

A LECTURE ON BULGARIA.

At Dunblane (Perthshire), on October 21, Lady Muir delivered an address on Bulgaria. Having given a general survey of Bulgaria's past history, Lady Muir explained how the ambitions of her German ruler had driven her into the European War against her will and her traditions and the advice of her wisest Ministers. Turning to present conditions in Bulgaria, the lecturer insisted upon the danger of Bolshevism, owing to inadequate means of defence, the country's need for an outlet on the Ægean, and the urgency of the League of Nations' intervention in regard to the treatment of Bulgarian minorities in Macedonia.

CHRISTMAS AND THE NEW YEAR.

Election or no election, Christmas comes on apace, and one is pleasantly reminded of its approach by Messrs. Raphael Tuck and Sons, some samples of whose preparations for the festive season have reached us. Nobody who visited the "Temple of Art" at the British Empire Exhibition need be reminded how elegantly and artistically this firm does its work, and this year its noted excellence has been well maintained. The various cards for Christmas and the New Year, the auto-stationery, calendars, painting books, paper doyleys, children's books, and so on, which it has made a speciality, are as delightful as ever. Ladies, for instance, will be charmed with the paperware for the table, and there is no child who will not gasp with joy at the illustrations to such books as Kingsley's "Waterbabies" and "Madame Tussaud's." Less pretension, perhaps, has been made this year to high colours, but in the very reticence with which these gifts are invested there is pleasure. Possibly the famous "Royal Christmas Cards" are the most artistic of all these productions, but there is the stamp at once of craftsmanship and of suitability on them all.

A further moratorium of three months has been sanctioned in Roumania in regard to foreign debts.

Near East Markets.

LONDON PRODUCE REPORT.

(From Our Own Correspondent.)

Coffee.—The market has been very variable. Costa Rica is 6s. lower at 164s., East India is 2s. down at 148s., Kenya is 2s. up at 146s., while Santos is 4s. up at 118s.

Sugar.—Home refined has continued in fair request. Tate's cubes are 42s. 3d., London granulated is 37s. 4½d., while Lyle's granulated is 37s. 7½d. Foreign descriptions have been rather weak. West Indian crystallised is 6d. down at 35s. White Java is 9d. down at 34s., while Czech granulated is 2s. lower at 20s. 9d. Futures have been easy:—November, 19s. 7½d.; December, 19s. 3d.; March, 19s.; May, 19s.

Maize.—The market has been rather dull. La Plata afloat has been done at 44s. 3d., while November-December has been done at 46s., and December-January at 47s. 9d.

Currants.—The market has been very firm. Business has continued to be very brisk. The best grade of Vostizzas are rather scarce. Gulf and cleaned Patras have been in good request, also Amalias and Pyrgos.

Sultanas.—The market is stronger than in the previous week and prices have risen all along the line. Supplies of Smyrna are very small, while Cretans are very dear. Australians have benefited by the prevailing situation, and prices have advanced somewhat in this case also.

Figs.—Business in figs has not yet properly commenced, though the demand up to the present has reached a very fair level.

Plums.—The market has been exceptionally firm, and prices have generally advanced. The demand for the Continent is extensive, and it is extremely probable that prices will rise still further. Futures are very hard.

Dates.—The supplies of dates that have arrived are of good quality, and a fair business has been done in Persians.

Oilcakes.—The market has been quite steady. Linseed cake is unchanged at 280s., cottonseed cake is unaltered at 180s., while coconut cake is the same at 240s.

Oilseeds.—Linseed has been dull, Indian being 7½d. down at 24s. 3d., while La Plata is unchanged at 21s. 10½d. Rapeseed has been weak. Toria is 3d. lower at 25s., while real bold Ferozepore is also weaker at 23s. 10½d. Cottonseed has been fairly steady. Indian is unchanged at 12s. Egyptian black at 14s. 4½d. is 10½d. down, while Sakellarides is 1s. down at 13s. 7½d.

Seed Oils.—Linseed oil has been strong, and at 45s. 9d. is 9d. up. Rape oil has been steady, with crude unchanged at 52s. 6d., and technical refined unaltered at 55s. 6d. Cotton oil has been firm. Refined common edible is 1s. up at 52s., Egyptian crude is 1s. up at 46s. 6d., while deodorised is 1s. up at 51s.

SMYRNA FRUIT MARKET.

Messrs. C. J. Giraud and Co. report as follows for the week ended October 18:—The arrivals of sultanas on the Smyrna market since the opening of the season are estimated at 29,550 tons, and the sales to date are put at 27,550 tons. Closing prices, per cwt. c.i.f., London-Liverpool, Type 12, 45s.; 13, 49s.; 14, 52s.; 15, 56s.; 16, 64s.; 17, 75s. The sultana market is very firm, with an advancing tendency. The indications point to a higher level of prices being attained next week.

The total sales of figs to date are 195,900 sacks, against last year to date 131,000 sacks. Supplies are visibly diminishing. A steady demands prevails, and prices show a slight improvement on last week's level.

GOOD DEMAND FOR IVORY.

Messrs. Hale and Son in their report on the recent quarterly ivory sales state that the sales comprised 44½ tons (against 52¾ tons same time last year), viz.:—11½ tons Zanzibar, Bombay, Mozambique, East African, and Siam, 4 tons Abyssinian, 15½ tons Egyptian (14 tons Alexandrian, 1½ tons Malta description), 9½ tons Congo, West Coast Africa and Lisbon, and 2¼ tons land carriage; also 1 ton mammoth tusks, ¼ ton walrus tusks, a few rhinoceros horns and sea horse teeth, and ½ ton waste ivory. Total 44½ tons. Of the above quantities 6¾ tons consisted of lots previously offered or indirect import, viz.: 1 ton East Indian, 2½ tons Abyssinian, ½ ton Egyptian, ½ ton Congo, and 2¼ tons land carriage. The following was the assortment of the East Indian description: 7½ tons soft tusks, ¾ ton hard ditto, ½ ton billiard ball pieces and few bagatelle pieces, ¼ ton billiard ball and bagatelle scrivelloes, ¼ ton cut points for balls, ¾ ton cut points off large tusks, ¼ ton under-size and defective points, etc., ¾ ton cut hollows, and ½ ton scrivelloes. Only about 1½ tons were bought in, viz.: ½ ton Abyssinian and 1 ton land carriage. There was a good attendance of buyers and a good demand throughout. The quantity catalogued was much less than that offered at the preceding auctions, all kinds with the exception of Egyptian being in small supply. American buyers as well as Continental and the Home trade competed, which with the smaller quantity available caused prices to advance for both hard and soft tusks. Billiard ball ivory exceptionally sold in buyers' favour. Abyssinian sold well. Large and medium tusks were £8 to £12 per cwt. higher. Bail scrivelloes lower. Scrivelloes £3 to £6 per cwt. dearer. Bangle tusks £3 to £5 per cwt. higher for the larger sizes, soft steady. Egyptian.—There was a good assortment of this description. Soft

large and medium tusks were £8 to £12 per cwt. higher, and hard £4 to £6 per cwt. dearer. Ball scrivelloes rather lower. Scrivelloes, soft were £3 to £6 per cwt. higher, and soft bangle tusks £3 to £5 per cwt. dearer for the larger sizes, small steady.

DRIED FRUIT MARKET.

Messrs. J. C. Houghton and Co., of Liverpool, in their report dated November 1, state :—

Currants.—There has been no influence during the month calculated to stimulate activity, and we have also had to contend with the disturbing effect of a general election during the height of the season. Taking these factors into consideration, the trading which has taken place may be termed fairly satisfactory. Undoubtedly the strength of the Greek market has dominated the position and helped to sustain prices.

Liverpool has been well supplied during the month. The Maronian, Tyria, Amarna, Fabian, and Lesbian, totalling 5,000 tons, afforded a good selection for buyers to work upon. Owing to a scarcity in the early days, we witnessed a keen demand for fine shade dried Vostizza, and all parcels were quickly lifted off the market, up to 72s. being paid, but towards the end of the month, with more liberal supplies available, the inquiry slackened: evidently the demand for the time being has been satisfied. Gulf and Panariti at 52s. to 58s. attracted attention, and, stocks being limited, they found a ready outlet. The lower grades at 44s. to 45s. are firmly held. Cleaned varieties at 45s. to 46s. sold fairly well, but in better qualities progress has been disappointing, which is surprising considering the good value offering. Zante bags, small fruit, sold freely at 46s., but bold fruit in wood is difficult to move. Quotations :—Pyrgos, 44s. to 45s.; Pyrgos, cleaned, 45s. to 46s.; Patras, 47s. to 50s.: Zante, 46s. to 48s.; Gulf and Panariti, 52s. to 57s.; Vostizza, 58s. to 72s.

Australian.- The Ulysses and Medic arrived with 12,000 boxes, and as quality showed a great improvement, both in colour and condition, fair progress was made, and sales were completed at 48s. to 50s.

Sultanas.—A steady upward movement has been in progress, and, with strong advices from Smyrna and the poor selection offering, each arrival met a ready sale for good quality—this grade selling at 60s. to 70s., showing an advance of many shillings during the period under review. The scarcity of fine fruit is now being severely felt, and up to 95s. has been paid for Smyrna oil-bleached Carabournu, common and medium fruit difficult of sale, 52s. to 56s. Cretans have benefited by the absence of fine Smyrna fruit, and have sold readily at 82s. 6d. to 95s. Greeks have found a ready outlet, latest prices being 65s to 72s. Australians.—The Ulysses and Medic, with 20,000 boxes, renewed stocks, and full advantage was taken of the strong demand for Smyrna fruit, and the whole arrival was disposed of at 45s. to 50s. Afghans neglected, and no business passing.

Figs have met a steady inquiry, and the arrivals of Tyria, Karnak, and Fabian are being quietly disposed of, large boxes in most request, 65s. to 85s.; small boxes slow, 70s. to 85s.; packets difficult to move; Locoums, 115s. to 125s.; pulled, 48s. to 52s.; naturals, good, 31s. to 33s.; gennine, 35s.

A Provincial Flood Relief Fund has been opened at Allahabad. The Chief Justice, who presided, in stating the need for action, said that in the Meerut division alone 600 persons had been drowned, 40,000 cattle destroyed, and 700 villages swept away. The Provincial Government had already distributed as a gift £35,000.

Cotton and Cotton Goods.

THE EGYPTIAN MARKET.

Futures Firm.

The Alexandria Commercial Company in their report for the week ended October 23 state :—

Since our last report the futures market has remained firm, but only small changes on the week are to be registered; the net changes are :— Sakellaridis, $0.03 down for November, $0.17 down for January, $0.02 up for March, $0.17 down for May; Ashmouni, $0.05 down for December, $0.33 down for February. The general position remains about unchanged. The firmness of the futures market must be mainly attributed to the high prices paid on the spot market, the latter being due to the hurried execution of old sales to spinners, sold, we understand, on a very cheap basis and left open till the last moment in the hope that, by a general break in prices, the sellers might recuperate their loss in part. The carters' strike which we experienced last week, although of small duration, nevertheless delayed the movement of the crop for about a week, and thus deprived the local spot market of probably 300,000 to 400,000 kantars of arrivals from the interior. The exporters caught short, therefore, have to fulfil their engagements from small stocks, and the holders take advantage of this situation to obtain from them the highest possible prices. The premium of Fully Good Fair spot over futures is to-day about $2½ for Sakellaridis and $1¼ for Ashmouni, and this fact produces a shortage of contracts, as it makes merchants and speculators rather reluctant to sell futures on such a cheap basis. The position is naturally rather abnormal and cannot last very long; a substantial replenishment of supplies by fresh arrivals is bound to take place during the next two months, the weight of which will sooner or later influence the market. There has been a fair business with spinners; our market is undoubtedly too dear compared with the other cotton markets. The Government has not been in the market this week. At the third October tender 5,500 kantars dockets were issued. The week's receipts amount to 303,779 kantars, against exports 168,900 kantars; the stock stands at 1,216,790 kantars.

Spot.—We have had a busy week at Minet-el-Bassal, and sales amount to about 29,600 bales, of which we estimate 15,000 bales Sakel, 6,800 bales Uppers, 6,300 bales Zagora, 200 bales Brown, 1,100 bales Pilion, and 200 bales White. The crop movement from Lower Egypt continues freely, and although there is great congestion at the railway stations due to the recent carters' strike in Alexandria, arrivals are heavy. The movement in Upper Egypt has been considerably restricted, as many cultivators are holding back their crops and refusing to market cotton at present. This attitude is probably due in some degree to newspaper propaganda for higher prices, and also to the fact that some growers are in a rather good financial position; there is also the fact that, when prices fall below a certain level, the Government supports the spot market by buying. We question if this state of things will last long, especially should we get a drop in the American market.

Sakellaridis.—Business has been done in all styles, though the lower grades have not received much attention as yet. Good and better continue in good request. Prices of spot against contracts are dearer for all grades from Good Fair upwards. Below Good Fair they are unchanged. Spot premiums are generally very high, in our opinion; but holders are firm, and the demand has been sufficient to maintain these premiums.

Uppers.—There has been business in all grades from Fully Fair upwards. There is not very much cotton for sale at present, and as a consequence spot premiums are generally considerably dearer than last week.

Lower Egypt Zagora has been in good demand, and a good business has been done. Prices of spot against contracts are appreciably dearer than last week.

Pilion.—A good business has been done in the medium and good qualities. Prices of spot against contracts are considerably dearer.

Brown.—A fair business has been done. Spot prices are a little dearer than last week.

White.—A fair business is reported in medium and good qualities. Spot prices are generally dearer.

LIVERPOOL COTTON REPORT.

Improved Inquiry.

Messrs. Reynolds and Gibson report as follows for the week ended October 29 :—

Egyptian Spot.—An improved inquiry has been in evidence during the past week, and more business has resulted from it. The feature of the week has been the strength displayed in Alexandria and the widening of the difference between the Sakel and Upper prices. Spinners are still working from hand-to-mouth, and although large forwardings were registered last week-end no diminution in the inquiry has been noticeable. Prices have again hardened, and spinners appear to be betwixt the devil and the deep sea. They say that at present prices they cannot afford to buy Egyptian cotton, and that a break *must* come. In the meantime, they have to keep their machinery running. The Egyptian growers are fully alive to the situation, and reports from that country indicate that they are deliberately withholding cotton from the market, and that their financial position is strong enough to enable them to maintain this policy for some time to come. Opinions amongst the trade as to what course to pursue differ widely at the moment There have been many indications during the past week that certain spinners were disposed to fulfil at least a portion of their requirements, and undoubtedly an improved business in cotton for forward delivery has taken place.

This year's Sakel crop, although smaller than last year's, appears to be of very good quality, but most advices agree that much of it is being adulterated before shipment with Pilion and other inferior growths. The prospects for Upper indicate a substantial yield, but, owing to the damage from various causes which has been sustained at the latter end of the season, it is probable that we have already seen the pick of the good grades, and that the lower qualities will predominate in the market during 1925. The bulk of the inquiry here has been for F.G.F Sakel, but the response has been of a most meagre description. The

finer qualities of Sakel have also attracted a fair share of attention, and it is in the top grades that the basis has stiffened most. Off cotton is extremely hard to place, but more business has been found in the very low and "inferior" qualities. Cotton "near at hand," "afloat," and for "immediate shipment" still continues to bulk largely in the inquiry.

In Uppers, good cotton at about 17d. to 17¼d. is eagerly bought, but the majority of holders expect to get more than this, and the supply of the so-called "cheap" cotton is strictly limited. A fair business has been done in Sudan Sakel at about 23¼d. to 23¾d. Many spinners have been experimenting with Pilion cotton, to eke out the Sakel supply, and a small forward business has been done in this cotton. A few weeks ago some very attractive types of Pilion cotton were being offered round the market at prices which looked very tempting. A few spinners took the plunge, but in most cases the cotton that arrived appeared to be too closely related to Zagora cotton to encourage much further business in this direction.

Quite a large inquiry for White Sudan from pass to 300 on American contracts has been in evidence, and a moderate business has resulted. Brown and White cotton have been neglected. Forwardings to spinners for the week ending 25th inst. were returned as 12,024 bales. Estimated sales 2,300 Egyptians, and 900 bales Sudan. Quotations of Sakellaridis were raised 90 points (Extra Fine exceptionally 130 points). Brown and Upper are 25 points higher. F.G.F. Sakel to-day 25.60d.

BRITISH TRADE WITH YUGOSLAVIA.

An Important Enterprise.

Yugoslavia promises in the future to be one of the most extensive outlets for British trade in the Near East, and the formation of an organisation with the title the British-Yugoslav Syndicate, whose objects are the development of trade between Great Britain and Yugoslavia, is, therefore, of special interest. The syndicate—the directors of which are M. Chedo Miyatovich, director of the Royal Privileged Commercial Agency of the Kingdom of the Serbs, Croats, and Slovenes in London, now merged in the syndicate, Mr. F. Morgan Williams, M. Ljuba Jankovic, and Mr. F. J. Nash—will take the responsibility for credits given by British manufacturers to Yugoslav importers, and this will, it is thought, play a most useful rôle in stimulating trade between the two countries.

Discussing the prospects for commercial expansion with a representative of The Near East, the secretary of the syndicate pointed out that so far trade had been carried on to a certain extent, but the export of British goods on any great scale had been rendered practically impossible by the too conservative policy of the average exporter, especially with regard to the grant of credit. "Thus," the secretary added, "however welcome and favoured British goods are in Yugoslavia, people there have been unable to satisfy their requirements from this country. Now the majority of British exporters realise that it will only be by the grant of short credits that they can compete with the German and Czecho-Slovakian exporters, who have for so long had the market in their hands, while for those who still adhere to the policy of selling for cash the syndicate has found a solution, for it is prepared to guarantee payment and even to finance commercial transactions completely. The names of the members of the syndicate are a sufficient guarantee that the syndicate is in a position to give practical aid in regard to imports into Great Britain from Yugoslavia and exports from Great Britain to that country.

"The Yugoslav people are perfectly aware that buying cheap goods is a very false economy, and they are quite willing to buy high-grade British goods although the price is somewhat higher. The development of mutual trade is naturally a matter of great consequence, and there is not likely to be much difficulty in this direction, for the commodities that Yugoslavia can send to this country are very varied. They include eggs, walnuts, haricot beans, wheat, maize, and other cereals, hemp of a quality superior to the average Italian product, and live stock. Yugoslavia requires at the present time, in particular, agricultural machinery —ploughs and threshers, etc.—locomotives, ironware, and similar commodities."

Further raids by Communist and Agrarian bands on the Macedonian frontier of Bulgaria have recently been reported from Sofia.

The Bulgarian Government has issued a decree prohibiting the export of wheat flour and other cereals. This measure is of a preventive character in order to avoid a famine in these commodities.

The Postmaster-General announces the resumption of the money-order service with Bulgaria, which was suspended on the outbreak of war, as from November 3, so far as ordinary money orders are concerned.

The Persian Mejliss has passed a vote providing for the re-purchase for nearly £80,000 of the thirty years' concession for navigation on Lake Urumiah granted ten years ago to a British subject named Stevens and a Russian named Boughdiantz.

A research studentship of £200, on the Ratan Tata Foundation, tenable at the London School of Economics and Political Science for one year, has been awarded to Sealey Patrick Dobbs (Marlborough College and St. John's, Cambridge).

SHIPPING INTELLIGENCE

NEW P. AND O. STEAMERS.

Fortnightly Sailings to Australia.

Two steamers were launched by Messrs. Barclay, Curle, and Co. on the Clyde on October 31 for the P. and O. Company's Australia service. These are the Cathay and Comorin. The former was christened by Viscountess Inchcape and the latter by her daughter, the Hon. Mrs. Alexander Shaw. Viscount Inchcape, chairman of the P. and O. Company, was present at the launching.

The Cathay and Comorin are two of three sister ships, each of 15,000 tons, with comfortable passenger accommodation and good speed. The third of these vessels, to be called the Chitral, is being built by Messrs. Alexander Stephen and Son, at Linthouse, Glasgow. The company's losses in ships sunk by enemy action during the war were heavy, and its larger passenger steamers were particularly singled out for destruction, so that for the past four years the Australia service via Suez has had to be limited to four-weekly departures. When the three new ships are in commission the P. and O. Company's pre-war fortnightly service to Australia will be re-established. The Cathay will sail on her maiden voyage on February 27 next; the Comorin a month later.

The principal dimensions of the new vessels are: Length, 525 ft.; breadth, 70 ft.; depth amidships, 46 ft. They will have two funnels and two pole masts, and will be driven by steam, raised by oil fuel, from three double-ended and four single-ended cylindrical boilers, actuating two sets of quadruple expansion engines, balanced, to ensure smooth running, on the Yarrow-Schlick-Tweedy system. Cabin accommodation and public saloons for 203 first-class and 103 second-class passengers will be provided on three decks, all the accommodation being on or above the upper deck. The vessels are expected to be ready for their sea trials early in February.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Olympia for Bombay (Liverpool, November 21). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Somersetshire for Port Said, Colombo, Madras, and Calcutta (London, November 8).

Bibby Line.—S.s. Warwickshire for Port Said, Colombo, and Rangoon (Birkenhead, November 19).

British India Line.—S.s. Boyne for Bombay and Karachi (London, November 15); s.s. Malda for Colombo, Madras, and Calcutta (London, November 22).

Ellerman "City" Line.—S.s. City of Valencia for Calcutta (Birkenhead, November 11).

Ellerman's Westcott and Laurance Line.—S.s. Trentino for Gibraltar, Malta, Piræus, Salonika, Smyrna, Constantinople, Galatz, and Braila (London, November 15).

Johnston Line.—S.s. Kenmore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, November 22); s.s. Quernmore for Piræus, Volo, Salonika, Bourgas, Varna, and Constantza (Liverpool, December 6).

P. and O. Line.—S.s. China for Bombay (London, November 14); s.s. Nellore for Colombo, Madras and Calcutta (London, November 15).

NEWS FROM ALL SOURCES.

The quantity of gold extracted from the mines in India during the month of July amounted to 35,201 oz., valued at Rs. 20.66,518.

Lord Meston has been elected to the vacancy on the board of the Bengal and North-Western Railway Company caused by the death of Sir Thomas Holderness.

During the first six months of 1924 Roumania's exports amounted to 6,760,481,000 lei, as compared with 5,277,029,000 lei during the corresponding period of 1923.

Bondholders of the Kingdom of Roumania Four per Cent. External Loan of 1922 are informed that the half-yearly drawing took place in Bucharest on October 30.

A notice has been issued by the Egyptian Customs Department stating that a freight charge of 180 millièmes will be added to the value of each imported postal parcel, as declared to and accepted by that Department, for the purpose of arriving at the dutiable value of such parcels, except in the case of postal parcels containing tobacco, tombac, cigars, or cigarettes, or any goods in respect of which tariff valuations are fixed from time to time.

As Mr. A. C. Chatterjee, who has recently been appointed High Commissioner for India, will not be in a position to take charge of his office until the middle of January next, the Government of India, with the approval of the Secretary of State for India in Council have appointed Sir Bhupendra Nath Mitra, K.C.I.E., C.B.E., to act as High Commissioner meanwhile. Sir B. N. Mitra, who has been Financial Adviser to the Government of India (Military Finance) and has recently acted as Member of the Governor-General's Executive Council, will assume charge as High Commissioner on November 6.

H.M. Consul-General at Beyrout reports that an agreement has recently been concluded between Syria and Turkey regarding the simplification of Customs formalities, etc., in the case of goods passing over the Cilicie-Nord Syrie Railway between Alexandretta and Nisibin. Instead of opening the goods on departure and at each crossing of the frontier, the Syrian and Turkish Customs will in future simply verify the packings, seal the trucks, and control the seals at the different frontiers. Only at the final destination will the goods be examined. Prohibited articles will be allowed to pass through Turkey in transit if destined for consumption in Syria, provided that their real nature is declared.

Company Meetings.

BENGAL DOOARS RAILWAY.

Large Increase in Gross Earnings.

The thirty-fourth ordinary general meeting of the Bengal Dooars Railway Company, Ltd., was held on October 28 at the offices of the company, Gresham House, Old Broad Street, E.C., Mr. Robert Miller (the Chairman) presiding.

The Chairman, in the course of his speech, in moving the adoption of the report, said: The results of the year's working are again satisfactory, showing, with few exceptions, an improvement under all heads, attributable to a good tea and tobacco season and to an increase in the population of the Dooars. The aggregate gross earnings were Rs. 20,53,379, as compared with Rs. 18,13,192, an increase of Rs. 2,40,187, or 11.69 per cent. Coaching traffic increased by Rs. 41,670, the number of third and inter class passengers being 106,419 in excess of the previous year. The earnings from parcels and luggage were also greater. Goods traffic shows a substantial improvement, the gross receipts being Rs. 15,10,790, an increase of Rs. 1,95,605. This is principally accounted for by the carriage of tea, the receipts from which increased by Rs. 1,09,552, the weather having been favourable and the crop showing a welcome increase. There were also increases in metals, coal, wood, grain, tobacco, oils, provisions, limestone, and lime, and other articles of merchandise. The only falling-off of any importance was in jute, where there was a decrease of Rs. 34,536, the crop being a small one and not being particularly good in quality. Another reason for this decrease was that because of the good prices of tobacco a considerable area of jute land was put under tobacco cultivation. Other decreases were shown in stone, salt, and oil seeds.

The aggregate expenditure for the year was Rs. 10,91,748, or 53.17 per cent. of the gross earnings, as compared with Rs. 8,85,885, or 48.86 per cent., for the previous year. The main cause for this increase, amounting to Rs. 2,05,863, was greater expenditure on renewals of sleepers and relaying work, and more extensive repairs to bridges, earthworks, and station buildings, etc., which, under the head "Maintenance of way, works, and stations," shows an increase of Rs. 1,73,269. The result is that the net earnings for the year ended March 31, 1924, amount to Rs. 9,61,631, an increase of Rs. 34,324 over the previous year's figure. Capital expenditure over the whole system during the year under review amounted to £9,117, of which £6,678 was on rolling stock, £1,211 on stations and buildings, the balance being accounted for in ballast and permanent way, etc.

After deducting Indian taxation, amounting to Rs. 1,27,793, from the net earnings, the sum of Rs. 8,33,838 remains, which, at exchange 1s. 4d., equals in sterling £55,589 4s. To this must be added exchange differences and interest earned and the balance brought into the accounts from the previous year, which makes a total of £100,856 11s. 2d. From this total provision has been made for the payment of a year's dividend on the preference stock, £14,400, and for income and corporation profits tax £1,500, which leaves a balance of £84,956 on net revenue account. An interim dividend of 3 per cent. was paid on the ordinary stock on April 16, 1924, absorbing £12,000, and £3,000 has been carried to reserve, leaving £69,956 to be dealt with.

Our manager, Mr. Polwhele, sees no reason why our earnings for the current year should not equal those of the previous year, and this view is supported by the good traffics we have already experienced. At September 27, 1924, the approximate traffic receipts amounted to Rs. 10,09,442, as compared with Rs. 9,37,589 for the corresponding period of the previous year, an improvement of Rs. 71,853.

After careful consideration, we have decided to recommend the payment of a final dividend of 4 per cent. and a bonus of 3 per cent., making a total distribution of 10 per cent. for the year, and leaving a balance of £41,956 to be carried forward, or £1,462 more than the amount brought in from the previous year.

I have again much pleasure in recording the Board's appreciation of the valuable services rendered to this company for so many years by our manager in India and his assistants, and in this I should like to include the members of the London office staff.

The report and accounts were unanimously adopted.

BENGAL-NAGPUR RAILWAY.

Record Gross Earnings.

The sixty-sixth ordinary general meeting of the Bengal-Nagpur Railway Company, Ltd., was held on October 30, at the company's offices, 132, Gresham House, Old Broad Street, E.C., Mr. Robert Miller (the Chairman) presiding.

The Secretary (Mr. R. C. F. Volkers, C.I.E.) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report, said: The gross earnings for the year were Rs. 779 lakhs, which gives an average of Rs. 543 per mile per week, and Rs. 6.37 per train mile. This figure of gross earnings exceeds the corresponding figure of the previous year by Rs. 18 lakhs and is the highest on record. You will see from the results given on page five of the report that during the five years ended March, 1923-24, the gross earnings have increased by nearly Rs. 121.5 lakhs, or 18.45 per cent., against an increase in the mean mileage worked of 63.88 miles, or 2.37 per cent. That is a very satisfactory result in face of the tardy recovery of universal trade. Although, as I have said, the gross earnings of the year 1923-24 are the highest on record, they are to some extent a disappointment. We had been in expectation of attaining gross earnings of about Rs. 800 lakhs; but, as you are doubtless aware, the East Coast line for a length of some 175 miles was practically wrecked by the unprecedented cyclone of November 17 and 18, 1923. The line has now been completely restored and fortified.

Passenger traffic shows an increase for the year of 467,000 in total numbers carried and of Rs. 11¼ lakhs in fares received. Goods traffic, too, shows an increase both in total tonnage carried and in freights received, the former being 911,000 tons and the latter Rs. 6 lakhs. The improvement in total gross earnings during the year amounts to Rs. 18¼ lakhs, or 2.40 per cent. This increase, though relatively small, is hopeful, as indicating the gradual, if tardy, recovery of trade.

Working expenses during the year show an increase of Rs. 21½ lakhs, or 4.41 per cent. To some extent the restoration of the East Coast line accounts for the increase, as a substantial portion of the expenditure incurred on that account had to be met from the revenue of the year. I would, however, remind you of the warning I gave last year as to the impossibility of retaining for long, without detriment to the efficient upkeep and working of the railway, the reduction, more or less arbitrarily made, in the legitimate requirements for ordinary working expenses, in order to compensate, as far as possible, for the slow revival of trade and at the same time to make provision for carrying out the arrears of renewals and replacements that had, perforce, to be postponed during the period of the Great War. You will recognise, I am sure, that there is a claim—I may even say a first claim—on any increase in gross earnings to ease the existing strain on the curtailed provision for working expenses of keeping the line up to a standard of safety and providing for the efficient working of the traffic till such time as equilibrium is restored.

As regards the prospects of the railway during the current year 1924-25, I am glad to be able to tell you that, so far, the gross earnings show a marked improvement on the corresponding figures of the previous year. The total increase up to September 20, 1924, amounts to the very satisfactory figure of Rs. 34.25 lakhs. This improvement has been brought about in large measure through the introduction of up-to-date methods of operating traffic.

In the matter of new construction, substantial progress has been made in the construction of the lines leading to the South Karanpura coalfield. The Talchir coalfield railway is also progressing satisfactorily. We confidently expect, as soon as these lines have been carried through to completion, a very considerable increase in the coal traffic. The Amda Jamda Railway is expected to be completed throughout in a month or two, and is already carrying a fair volume of traffic, principally iron ore. It has also made possible the mining of manganese in the vicinity of Jamda, and a traffic in that mineral is springing up. I believe the time has now come when we may look for the early commencement of work on the Raipur Parbatipur Chord from the Central Provinces to Vizagapatam and on

Digitized by Google

the harbour to the latter port. These two schemes I might aptly describe as the coping stones of the work represented by the Bengal-Nagpur Railway system. They will add materially to the prosperity of the railway, the former by opening out a new country of very great area, which at the present moment is stagnant for the want of efficient means of transportation, and the latter by providing a convenient port for the exportation of the produce which will be forthcoming when the Chord line is built.

The report and accounts were unanimously adopted.

COMPANY NOTES AND REPORTS.

Sudan Plantations Syndicate.

The report of the Sudan Plantations Syndicate, Ltd., for the year ended June 30, 1924, states that the operations of the Kassala Cotton Company, Ltd., in which the syndicate retains a substantial interest, are making satisfactory progress; the company's first crop is due to be harvested and shipped during the first half of 1925.

The subjoined, which includes the production from the area irrigated by the new pumping installation at Wad el Nau, shows the cotton crops dealt with during the season:—Zeidab, 3,088 bales. Gezira.—Tayiba, 1,025 bales: Barakat, 1,887 bales; Hosh, 4,507 bales; Wad el Nau, 7,172 bales—17,679 bales. The whole of the Zeidab cotton was disposed of prior to June 30 last, but only about one-third of the Gezira cotton, which is a later maturing crop, had been sold at that date. The remainder of the Gezira cotton is entered in the balance-sheet at a valuation made by the directors, which they are pleased to inform shareholders has been proved to be conservative by subsequent realisations. The work at the Makwar Dam has proceeded satisfactorily during the year, and the directors have been notified by the Sudan Government that there is no reasonable doubt that both the dam and the canalisation will be completed in time for gravitation water to be available in 1925. The profit and loss account for the twelve months, after deduction of all outgoings, shows a net profit of £112,934 3s. 4d., which, added to the balance brought forward from last year, viz., £168,631 10s. 8d., brings the total credit to £281,565 14s. The interim dividend of 2s. per share (10 per cent.) paid in July last (less income-tax) on 450,000 shares absorbed the sum of £45,000. The directors now recommend the declaration of a final dividend of 2s. per share (10 per cent.) on the issued capital of 600,000 shares, less income-tax, £60,000, leaving a balance to be carried forward of £176,565 14s.

Assam-Bengal Railway.

The report of the Assam-Bengal Railway for the year to March 31 states that the gross receipts, including the Mymensingh-Bhairab-Bazar, Chaparmukh-Silghat and Katakhal-Lalabazar Railways, were Rs. 1,44,84,265, against Rs. 1,32,42,278, and the working expenses were Rs. 98,11,305, compared with Rs. 99,08,129 in the previous year, with the result that the ratio of working expenses to receipts has fallen from 74.82 to 67.74. The usual half-yearly dividends at the guaranteed rate of 3 per cent. per annum were paid on January 1 and July 1 last.

P. and O.

At the 84th ordinary general meeting of the Peninsular and Oriental Steam Navigation Company, to be held at the company's offices on December 10, at 11 a.m., the directors, after providing for the usual dividend at the rate of 5 per cent. per annum on the preferred stock, less income-tax, will recommend a dividend on the deferred stock of 6 per cent. for the six months, free of income-tax, making, with the interim dividend of 6 per cent. paid in May, a total distribution on the deferred stock of 12 per cent. for the year.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.)

Egypt.

Diesel Motor.—The Egyptian Government invite tenders for the supply of a Diesel or Semi-Diesel motor of 30 h.p.—November 12.

Looms, etc —The Director of Stores, Ministry of Education, Sharia Qasr el Aini, Cairo, invites tenders for the supply of (1) Looms and preparatory machines required for the Trades School at Mansûra. (2) Machines for rug factory at Assiout. November 15.

Leather.—The Egyptian Ministry of Education invites tenders for the supply of leather required for the model workshops and trades schools of the Ministry. November 15. (D.O.T.)

Water Tower.—The Ministry of the Interior in Egypt invites tenders for the supply and erection of a water tower at Mit Ghamr. December 1. (D.O.T.)

Soap. — The Financial Secretary, Egyptian Army, War Office, Cairo, invites tenders for the supply of 110 tons of hard soap to Egyptian Army Supply Stores, Tura. December 2.

Cloth.—The Administration of the Egyptian State Railways invites tenders for the supply of cloth for clothing for the summer of 1925 and the winter season 1925-26. The cloth required is:—Cloth, blue, for uniforms and overcoats; cloth, dark grey, for uniforms and overcoats; cloth, light grey, for uniforms and overcoats; khaki serge, khaki drill, blue jean. The total cost, estimated on last supply prices, is approximately £9,300, delivered Egypt. Copy of specification may be obtained on application, against payment in advance of 250 mills., at the Inspecting Engineer's Office, Egyptian and Sudan Government, Queen Anne's Chambers, London, S.W.1, where standard samples are on exhibition. December 9.

Axlebox Pads.—The Egyptian State Railways invite tenders for the supply of lubricating axlebox pads. Tender forms and specifications can be obtained from the Inspecting Engineer, Egyptian and Sudan Governments, Queen Anne's Chambers, London, S.W.1. December 15.

Railway Sleepers.—The General Manager, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply of wooden railway sleepers. December 16.

Steel Reservoir.—The Ministry of the Interior invites tenders for the supply and erection of a steel reservoir of 300 m^3 capacity, with all steel work, etc. December 20. (D.O.T.)

Turkey.

Wagons.—The Ministry of Public Works invites tenders for the supply of 40 wagons for rails and ballast, of which 25 are for the Angora-Moussakeuy line and 15 for the Samsoun-Siva line. November 21. (D.O.T.)

Bridges.—The Commissariat of Public Works invites tenders for the supply and erection of five metal bridges on the Samsoun-Sivas line. November 22 (D.O.T.)

Lieutenant-General J. E. Scott, the Political Resident, in the presence of H.H. Sir Abdul Kerim, the Abdali Sultan of Lahej, laid the foundation-stone of the Aden electrical power-house at Hejaf on October 6.

THE BRITISH INDIA CORPORATION LTD. CAWNPORE :: INDIA

The British India Corporation, Ltd., comprises an extensive group of industrial concerns including the Cawnpore Woollen Mills, The New Egerton Woollen Mills, Cawnpore Cotton Mills, Cooper, Allen and Co., The North-West Tannery, The Empire Engineering Co. and the Naini Tal M.T. Co. These firms, by pooling their resources and centralising control, form a Corporation which is able to supply Government Depts., Railways, Police and Armies, with every form of woollen and cotton clothing, boots, and all kinds of equipment of a quality and price which would not be possible for an individual undertaking.

Reference to the particulars below will give an idea of the Corporation's activities. Correspondence is invited from wholesale merchants, and may be addressed to the Corporation or direct to the Branches. Inquiries and applications for samples will receive immediate attention.

LAL-IMLI PURE WOOL

Makers of the famous Lal-Imli Pure Wool Products. Manufactures include: Rugs, Blankets, Lohis (shawls), all classes of Knit goods, Flannels, Tweeds, Serges, Worsteds, Broadcloths and Greatcoat Cloths. All requirements in Wool at lowest prices consistent with quality.

CAWNPOREWOOLLEN MILLS CO., CAWNPORE

Kakomi Cawnpore

These Mills produce the well-known Kakomi Cotton Goods.
The following articles are among their manufactures: Cotton Yarns, Twills, Table and Bed Linen of all kinds, Tents, Durries, etc.

CAWNPORE COTTON MILLS CO., CAWNPORE.

COOPER, ALLEN AND COMPANY.

This Company is one of the world's largest manufacturers of Army Boots, supplying the armies not only of India, but the world. Makers of all types of Boots, and every kind of Saddlery and Leather Equipment.
Evcrything in Leather.

COOPER, ALLEN & CO., CAWNPORE.

Dhariwal

Manufacturers of Dhariwal "Long Life Wool Wear."

Productions include: Serges, Tweeds, Broadcloths, Blankets, Rugs, Worsteds, and Woollen goods of all kinds.

The New Egerton Woollen Mills Co., DHARIWAL.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

Ministerial Appointments.

We cannot let the occasion pass without congratulating the Prime Minister and the country on the selection of two such men as Mr. Austen Chamberlain and Mr. L. S. Amery for the Foreign Office and the Colonial Office respectively. The eminent soundness of these two Secretaries is universally recognised, their ability and knowledge no less; and last, but not least, it is extremely comforting to think that, after some periods of untraditional practice, the two Offices, upon the efficiency and constancy of which Great Britain has for long and rightly prided herself, will have surely restored to them their proper functions. To particularise upon these two selections, it will at once be recalled, from our own point of view, that Mr. Austen Chamberlain is a convinced believer in the necessity of Anglo-French co-operation, in the Near East and in Central Europe no less than nearer home; and upon Mr. Amery's profound interest in British mandated territory in the Middle East it is unnecessary to comment. We look forward with some confidence to a new attempt to approach the problems of the Near and Middle East in a firm and comprehensive spirit.

Yugoslav Constancy.

That which was least expected in Yugoslavia has happened. The wheel has wearily turned full circle, and M. Pashitch is once more Prime Minister. What is perhaps even more than that, he has with him, as his Minister of Education, M. Pribitchevitch. Two things have probably facilitated this event, which it is difficult enough to hail with any enthusiasm: the extraordinarily foolish behaviour of M. Raditch, who has been prattling unceasingly of late of his determination to found Peasant Republican parties in those parts of Yugoslavia in which he has clearly no mandate, Serbia and Slovenia; and the result of the British election, which conceivably had some influence upon the King in asking the well-tried Premier once more to hold the reins. It is said that the health of M. Pashitch will not permit him to take a very active place in the governing of Yugoslavia, and that the main task will devolve upon the Minister of War and Marine, General Trifkovitch. Whether this new Cabinet, which we are glad to see contains M. Nintchitch and M. Stoyadinovitch as Ministers of Foreign Affairs and Finance respectively, will set about its work in that spirit of friendship and compromise which is happily evident in some parts of the Triune Kingdom to-day, or will but endeavour to show the Croats "what Belgrade thinks of them" remains to be seen. Our surprise in perceiving the re-summoning of a man who, if anyone in Yugoslavia has had his chance, has already had his, will be soon forgotten in gratification if stability for Yugoslavia is its sequel. But the fact that this is merely an "election Cabinet," designed to hold office only until the General Election in February, and the obvious inference that the election will be held, so to speak, under Pashitch auspices, may prepare one for the nature of its functioning.

Politics in Greece.

Greece politically has a way of driving foreign observers almost to despair. At the very moment when the Governor of the National Bank is abroad arranging the collecting of a loan for the benefit of Greek refugees, politicians in Greece avail themselves of the opportunity for raking up all or many of their old sores. This time is it not so much M. Papanastassiou's extremists, but the Royalists who appear resolved to show the unity of Greece in the worst possible light. In the last few weeks there has been a distinct revival of Royalist sentiment, if the attempts of the various Royalist cliques to unite may be construed in this sense. What good they can do by opposing M. Michalopopoulos at this serious juncture, when Greece is simply crying out for a cessation of all politics, is not easy to imagine. The Assembly met on Monday to discuss the change of régime, but the form of government is of small import compared with the sovereign necessity of work and development and provision for the refugees.

Opposition to Angora.

As in some Balkan countries, so in Republican Turkey: though there may be a good showing of intellectual opposition to the actual Government of the day, the probabilities are all in favour of the

Digitized by Google

powers that be remaining where they have installed themselves. In the Angora Assembly, indeed, the Government of General Ismet has not so far been exhibited in any very bad light, although the Opposition includes some extremely able men, and although part of the Constantinople Press still clamours for the removal of the whole Cabinet. The chief points of criticism appeared to concern the judicial machinery, the problem of the Moslem refugees, and internal questions such as public instruction, but none of these either in themselves or collectively, were enough to bring discredit on the Government. Angora, indeed, seems to have a short way with dissenters. It is naturally taking some time to grow up, and it still seems sufficient to destroy a man's case if suspicion be thrown, however unjustifiably, upon his republicanism

A Cairo Olive Branch.

There is a phrase in one of Mr. H. G. Wells' novels, if we remember it aright, about "the deliberate contemplation of nothingness." It would seem not altogether inapplicable to the mood which Cairo has for the last month indulged. With whatever glory the Egyptian Premier may have returned from London, the fact remains that he went back in but a barren triumph. Negatives are at best cold comfort, and, since his return, brains have been racked to see whether something more than a mere negative cannot be arranged between Egypt and Great Britain. From this chastened condition of Cairo opinion has been produced a welcome, if vague, proposal for a renewal of negotiations. It emanates from the editor of *La Liberté*, an able man, who has never, so far as we know, made any attempt to discriminate between his own views and those of Zaghloul Pasha. Despite official denials, therefore, his proposal may be taken as having the sanction of the Egyptian Government. Briefly put, his suggestion amounts to a proposal that, seeing that the means of revolution and of a long diplomatic fight with the British Government are out of the question, what he calls a new *modus vivendi* should be arrived at. This might last for perhaps three or four years, during which Egypt should be admitted to the League of Nations, might so train her Army as eventually to fit it to take over the guardianship of the Suez Canal alone, and might secure immediate effective co-administration of the Sudan.

Its Content and Practicability.

What does all this amount to? Certainly it would at first sight seem to imply a very welcome psychological development in responsible Nationalist opinion, even if Cairo's mental processes still remain in the same intractable state. It is a profound relief to know that assassination as a political method is no longer countenanced as a possible means of attaining Egypt's desires, and that it is recognised that a popular outburst as a result of friction between Britain and Egypt could benefit no one. But it is difficult to read into this proposal much more than this. What is a *modus vivendi* if the present relations between Britain are not such? It is something reached or found or operated that is either *faute de mieux* or *faute de pire*. Presumably, it is now perceived in Cairo that the recent action of the Premier stultified the whole position of the Egyptian Government, and that, apart from domestic organisation, it has now no cards to play. If that is the case, and Cairo fears that worse may befall her, she can always remember that Britain is ready at any time to reopen negotiations. It is not to be expected that the Egyptian Premier would himself again endure the rigours of the English climate, but the way is still free to anyone else whom he chooses to nominate. A little longer contemplation—the while the much-needed works of internal reconstruction are being attended to—and there is no reason to suppose that Cairo would not be able to send a delegate possessed of some sense of the British attitude on the four points reserved in the Declaration of February, 1922. Our cards are all on the table: it is for Egypt to say when she wishes the deal to begin.

Uncertainty in Persia.

Persia at the moment appears to be in a most unhappy state, by no means unknown in her former history, in which no very definite authority prevails, everybody is open to suspicion, and a vague kind of disintegration threatens to occur. Without much doubt the writ of the Sardar Sipah does not run as far or as swiftly as it did before the collapse of the Republican agitation. Notable events have recently marred the rule of this strong man. There was the murder of the American Consul, Major Imbrie; then came the revolt of the Sheikh of Mohammerah, which is not yet at an end; and now comes the news of the murder of the Englishman, ex-Sergeant Cox. Upon this last incident it is impossible in the absence of reliable information to make any useful comment, but it would seem to show either that Xenophobia in Persia is on the increase, or that the gendarmes are not in sufficient fear of the law of the land. Little doubt can be entertained that for the time being Russia and Germany have the highest place in the esteem of Persia; and the hopes that were set upon the introduction of the American finance advisers are being blighted by the Persians themselves. One would scarcely be surprised if another big political movement were in the near future to overtake the land of the Shahs, directed not from Teheran or Tabriz, but from the more conservative parts.

INDIA.

The Reign of Law.

With an ex-Lord Chancellor at Whitehall and an ex-Lord Chief Justice at Delhi, it may fairly be said that the Reign of Law, which is not exactly the same as the proverbial *vakil raj*, has been formally inaugurated in India, and we should like to think that Lord Birkenhead's appointment could be accepted as an omen for its effective establishment. Our contemporaries are obviously puzzled to account for the selection, and some of them have even been moved to indulge in archæological research as to the events of the distant year 1920, but its value is a topic of greater interest than its origin, and on this point we are hopeful, but not altogether confident. The ideal Secretary of State for India would be a blend of steadiness, tact, and vision. Lord Birkenhead is known to the public as a man of outstanding ability, a great advocate in the law courts, and an ardent fighter in politics. The two orbits do not coincide, and we must rely mainly on the quickness of apprehension, which he undoubtedly possesses, to enable him to keep a prudent course in unfamiliar waters. The course is set, we take it, by the passage in Mr. Baldwin's election address which accepted the existing Constitution as embodying a settled policy to be carried out in the letter and the spirit; the new Secretary of State can do that, and his acceptance of the office must be presumed to show that he means to do it.

The New Pact.

The compromise formula which has been arrived at by the Hindu extremist leaders appears to carry matters just a little further. Several of the clauses are obviously common form, and the definite arrangement that the Swaraj party is to work for

Digitized by Google

the Congress programme in the Legislatures means very little until we know the programme which the Congress adopts at its next meeting, for the one claim which that body can make to political ability lies in the readiness of its response to the environment. The actual advance lies rather in the approach to practical politics. The formula must, we think, be read as one more ceremony in the prolonged obsequies of the policy of non-co-operation, which has done so much to sterilise Indian activities, and which people of greater practical experience would have strangled at its birth, or, at any rate, buried long ago. One point which strikes us is that the cables do not mention any Moslem leader as signatory to the pact. In these days of "unity," one would have expected to see a Maulana beside the Mahatma, but until the text of the agreement reaches this country we must remain in doubt whether the Moslem extremists have decided to stand aside.

The Progress of "Religious" Unity.

We can trace very few signs of an immediate response to the efforts of the recent Conference for the promotion of religious "unity," and a glance over the newspapers brought by the last mail suggests that for the moment it has operated as an irritant. We find ardent Hindu missionaries indignantly denying that their propaganda is to be suspended. We find gentlemen insisting that they are Moslems first and Indians afterwards. We find Hindu journals reminding the Moslems that they are in India only on sufferance, and must mend their manners if they want to stay. Such straws as these may serve to show how the wind is setting. Assuming the missionaries to be sincere, they could adopt no other attitude, however inconvenient it may be. The view that religion transcends nationality could, we think, find ample support among Moslem authorities, though it is a complete negation of the "unity" which politicians seek. The doctrine that the weak must submit to the strong is supported by the whole history of India, though it is not quite certain that the Hindus are the stronger. We are then in touch with facts, which have to be taken into account; that they are unpleasant facts we agree, but that is no reason for shutting our eyes to their existence.

THE WEEK AT HOME.

London, Tuesday Morning.

The New Cabinet.

The new Conservative Government made its bow to the public last Friday, after the inevitable two or three days of rumours, hopes, and agonised fears on the part of expectant Ministers. Mr. Baldwin's majority, of course, gave him a free hand, but he was not able to persuade Sir Robert Horne to come in—he has considerable City interests which he found himself unable to resign—and the new Cabinet, with two significant exceptions, is very much the same in personnel as the last Conservative Government.

It is mainly the places that have been shifted—thus Mr. Bridgeman goes from the Home Office to the Admiralty, Mr. Amery from the Admiralty to the Colonies, and Mr. Wood from Education to Agriculture. On the other hand, Sir L. Worthington Evans retains his old post, the War Office: but Mr. Austen Chamberlain goes to the Foreign Office, instead of Lord Curzon, who becomes Lord President – a position of *otium cum dignitate* without the burden of heavy administrative work, to which Lord Curzon's health would probably be unequal. Mr. Chamberlain will probably do very well at the Foreign Office; he is a hard worker, and he is tactful and straightforward.

The surprise appointment is Mr. Churchill, who becomes Chancellor of the Exchequer a fortnight after his return to the Conservative fold. The Treasury is practically the only department Mr. Churchill has not held, and his appointment is regarded as implementing Mr. Baldwin's pledge not to introduce Protection. It may be also a gesture of revolt from the Die Hards.

Lord Birkenhead goes to the India Office—a good appointment. He does not lack courage should an emergency arise, but he has a profound belief in equal justice, and the way in which he trounced the House of Lords a few months ago for the approval which some of its members expressed for the Dyer methods in Amritsar will not soon be forgotten. The implications of that speech will not be unrecognised in India, and this is likely to prove the most important appointment in the new Cabinet.

On the whole, the new Cabinet team is both competent and strong. It should last its full five years.

The Exit of Labour.

The Labour Government made a not very impressive exit, its last act being a *communiqué* on the notorious Zinovieff letter, which seemed to say nothing at all. It had to be read very carefully before it revealed that the Cabinet could not demonstrate the document to be a forgery, but at the same time would not admit it to be genuine. Altogether, a hopeless muddle, seeing that Mr. MacDonald had already accepted it as genuine in his protest to Russia.

Meanwhile the ex-Cabinet Ministers are bidding farewell according to their lights—and temperaments. Mr. Wheatley hints at wrecking tactics towards the new Government; Mr. Thomas, in a very noble speech, remarked that he hated class warfare, and expressed the hope that nobody would be able to say that the presence of a working man at the Colonial Office had damaged the British Empire.

These two speeches correctly summarise the two courses open to the Opposition. If Labour loses its temper and resorts to wrecking tactics, it is bound to lose support in the country, and the tendency will be for the Liberals to gain ground at the expense of Labour. If, on the other hand, it adopts the rôle of a constitutional and patriotic Opposition, it may oust the Liberals altogether and make itself quite definitely the alternative Government about the year 1928.

But not, I think, with Mr. MacDonald at the head. The faults of character and faults of temper of the late Prime Minister render him a liability rather than an asset of the Labour movement. For the present he remains as leader of his party, but it would not be surprising if another leader were selected at the annual election next year.

A Railway Disaster.

A terrible railway accident occurred last week near Blackpool, in which a train ran off the metals, and several people were killed, while others have since died in hospital. British railways since the War have once again reached so high a standard of speed and security that we are apt to think of them as absolutely immune from disaster, but there have been two or three awkward accidents this year, and the public uneasiness has been reflected in some criticism in the Press.

George Eliot's Husband.

A few days ago there died, quite obscurely, at the age of 84, Mr. J. W. Cross, the husband of George Eliot. Probably few people were aware of his existence; he was 40 when he married Miss

Digitized by Google

Evans, and she died a few months later. At that time she was considered one of the immortals, and a greater figure in literature than the author of "Jane Eyre," but the Brontës' fame has risen with the years, whereas that of George Eliot has sunk. The truth is that the divine Charlotte had passion, whereas George Eliot had only intellect. Her only chance of salvation is to be completely forgotten; when that happens, the literary critics will rediscover her, and attempt to revive her work

The American President.

Not a great deal of interest was taken in England in the result of the American Presidential election. Mr. Coolidge is a perfectly safe man, and his continuance in office was not unexpected. It means, according to the American Press, that there will be neither excursions nor alarums from Washington, and that the United States will "cultivate its garden" and not interfere in European affairs more than necessary. In particular, it is taken for granted that there will be no great "moral gestures," and no scaling down of debts.

Americans accepted the verdict of the polls as one of stability and conservatism, as in England; indeed, it was an American who remarked to me that the result was part of the swing to the Right which was noticeable all over the world, and—referring to the British elections—said that "When father says turn, we all turn."

A British Airship.

Are we to see a revival of the airship? It looks like it. The failure of the Zeppelins during the War, and the disaster to our own airship shortly afterwards, seemed to have ended the experimental stage with a final negative; but the successful flight of the German airship to the United States recently, and the evident belief of the Americans in this form of transit, have obviously stirred interest in England once more.

It is announced that a new British airship, twice as large as the German, is to be built by Messrs. Vickers for the Government; and a director of the company concerned has stated that "the commercial success of airships depends very much on obtaining a satisfactory engine which will enable people to visit the United States for a week-end. When we have finished, we expect to do the journey within two days and to come back in perhaps quicker time."

All this sounds hopeful, but some figures recently given in *Nature* suggest that we have a long way to go before we reach success. The trouble is that the airship, unlike the steamer, soons wears out. Not only is it expensive to build, but it is very fragile. Unless it can be made both more safe and more durable, its commercial future remains obscure.

The Penny Post?

The Labour Government missed a great opportunity when it failed to restore the penny post. It was pointed out at the time that the loss of revenue from the abolition of the McKenna duties would have more than covered any deficit on the restoration of penny postage. Now, however, the *Glasgow Herald* makes itself responsible for the suggestion that one of the early acts of the new Government will be the reintroduction of the old charge. It points out that there is a surplus on the telephone working, and that it would be better to reduce postage, which everybody uses, rather than the telephone, which nobody uses unless he is compelled. If Mr. Baldwin is really thinking on these lines, all of us, irrespective of party, will rise up and call him blessed.

The New London.

General Elections make no difference to the rebuilding of London, which proceeds apace. Housebreakers are at work in Fleet Street as well as the Strand—both of them thoroughfares which could do with improvements; but the new Regent Street is steadily progressing, and I am barbarian enough (or honest enough) to prefer the new style to the old—at any rate for draper's shops. But the greatest shock is the news that the Bank of England is to be rebuilt. The Old Lady of Threadneedle Street has already removed, gold and all, to other premises, and the new bank will shortly be under construction. After this, one would not be very surprised to hear that St. Paul's Cathedral was to be modernised.

The loss of the old Bank will be a shock, but there is really a great deal to be said for the rebuilding of the City. Many of the old offices which house world-famous firms are little better than slums, and their demolition has long been overdue. We may not succeed in getting a new heaven and a new earth, but it is something to achieve a new City and a new West End.

A Faith-Healing Storm.

It did not require a prophet to foresee that Dean Inge would denounce the recent revival of faith-healing in the Church as a piece of miracle-mongering and "a recrudescence of superstition among the half-educated"—in which category, I suppose, a Dean naturally includes the Bishops. The Dean makes the sound point that medicine only advanced when it won its freedom from magic and superstition, but he is obviously annoyed that this near relation of Christian Science should invade the Establishment.

Actually, one hears that the results of faith-healing have been rather exaggerated by the popular Press, which loves a sensation. There have been interesting cases of the relief, or it may be the cure, of muscular paralysis, but the blind have not seen, nor the deaf heard, and many have gone empty away.

A Modern Bible.

Perhaps the Dean will now proceed to castigate the Scottish professor who has just produced a translation of the Bible into modern English—very modern English, in fact. From a first glance at this production I was interested to discover that Adam and Eve lived in a park, not a Garden of Eden, and that Noah and his family occupied a barge—somehow the conception of the Patriarch as a bargee is a little comic. The Song of Solomon is rendered into free verse—very free verse.

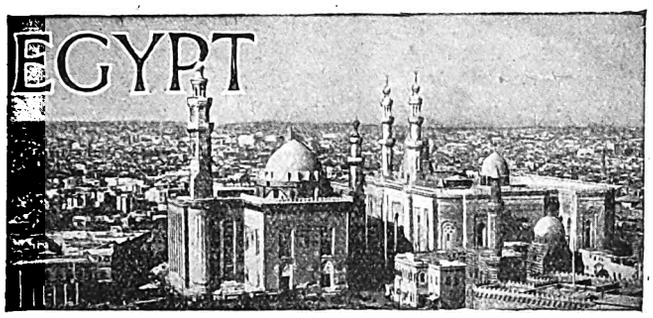
The professor has not yet got to the Prophets, but I fear the worst when he arrives at the Book of Daniel. The lions' den will probably become a Zoological Gardens.

Tertium Quid.

Digitized by Google

The Near and Middle East.*

From Our Own Correspondents.



Cairo, November 1.

The Tense Atmosphere.

During the past week the High Commissioner and the Governor-General of the Sudan both returned from England. In spite of the appearance of calm and indifference which the Zaghloulist Press and the leading Zaghloulists display, their arrival has accentuated the atmosphere of anxious expectation that has existed ever since it became known that the conversations in London had broken down.

Zaghloul Pasha has announced that internal matters must receive attention, and at the dinner given him by the Senate and the Chamber of Deputies he made an eloquent appeal for union. But whatever reassurance may have been created by his declarations and his silence on the higher political questions—the only exception in the latter respect has so far been the unfortunate lapse in regard to the position of the British representative at the San Stefano tea party, which even his close adherents deplore—has been completely dispelled by the ministerial and administrative nominations he saw fit to make on the very morrow of the Parliamentary banquet.

Governmental Changes.

His defence of these appointments has been that he wanted to remedy the abuses perpetrated of late, repair the injustice committed against men whose only offence was devotion to the Egyptian cause, and call to the Administration those who are capable and devoted to the good of the country. No one disputes the existence of the abuses to which he refers, or that his nominees have ability, but his selection seems to have been dictated more by consideration of "the injustice committed against them" and the service they can render his cause, than of the fact that they are the men most capable of serving the real interests of the country at the present critical juncture, and it is this aspect that has increased rather than diminished the general feeling of uneasiness with regard to the future.

Perhaps one of the most distressing features of these changes has been the manner in which they were brought to the notice of those whom it was intended to supersede. In the case of the Under Secretary of State for the Interior, admittedy one of the most competent and experienced Egyptians that that Administration has had at its head for many years, the official advice that he had been superseded was deposited on his table, together with other papers, but the first intimation he received was from his own Secretary, who informed him that a telephone message had been received requesting that he should vacate his office forthwith as the newly appointed Under Secretary would be arriving to take over in a quarter of an hour.

Another glaring instance of lack of consideration was the Procureur-General. He was approaching the age-limit, but there was every hope that the extension that has been customary in the case of most of these high positions would be granted him; but the Government refused to give him any idea of its intentions, and it was not until the thirteenth hour, so to speak, that he learned that his services had been dispensed with.

These are illustrations of the present attitude in Egypt, where a man's tenure of office and the treatment he is entitled to depend more on his political creed than on his mental or intellectual capacity for his work.

Effect of British Elections.

The unexpected turn taken by the elections at home—unexpected because at the worst the Zaghloulists anticipated that Labour, in whom they still had hopes, would at least be sufficiently strong to influence the new Government—has visibly disconcerted the Wafd and its supporters. The effect which this change in the political situation in England will have on the attitude towards the Egyptian question of the British Government, and the tenor of the King's Speech at the opening of the Egyptian Parliament on the 15th instant, the preparation of which is giving the Cabinet—or, more strictly speaking, the Wafd—much food for anxious thought, are, apart from the question of the above-mentioned nominations, the main topic of conversations at the moment of writing. Nowhere is there to be found anyone capable of giving a confident forecast on either question, and it is not surprising that uncertainty and uneasiness reign everywhere.

Khartoum, October 21.

The Political Situation.

Contrary to general expectations, the last few days of the Mohammedan Mulid el Nebi festival passed off very quietly, and without the slightest outward display of political feelings. In commenting upon this, the *Sudan Herald* put forward the opinion that the complete breakdown of the MacDonald-Zaghloul "conversations" followed by Mr. MacDonald's White Paper, in which the British attitude was clearly set forth, laid bare the utter foolishness of those recent disturbances, with the natural result that not one pro-Egyptian enthusiast was at all keen to stir up strife which would only redound on his own head.

Police Magisterial Inquiry.

The police magistrate, Mr. Hamilton-Grierson, is at present conducting a court of inquiry into the case of forty-one Egyptian and Sudanese prisoners who were arrested in connection with the recent political disturbances. They are not, however, political prisoners, but are liable to be charged under the Sudan Penal Code for committing offences against the Public Order Ordinance, and particularly the proclamation under the Ordinance which forbade any individual or individuals participating in demonstrations, public assemblies, and so on. The Government had also considered the White Flag Society as one constituting a conspiracy against the Administration, and had therefore caused the arrest of many prominent members and influential abettors of it.

Mr. Wedd, Advocate General, Sudan Government, is acting as prosecution, while Mr. Fry and Mohammed Bey Shadid, an Egyptian, both well-known advocates practising in Khartoum, have been selected to act as prisoners' counsel.

In all probability this inquiry will last a full month, as the Court has a tremendous amount of literature, comprising society news and instructions, proclamations and circulars, to deal with, in addition to which there are the statements of witnesses to be taken, prisoners to be interrogated, and many other things uncommon to the English Court. The prosecution, in the address to the Court, stated that sufficient evidence had been collected to prove that the greater portion of the prisoners had taken an active part in the conspiracy against the Government. He also intimated that a great deal of propaganda of a similar nature had been indulged in since 1919, but nothing in any way open or active had taken place until Midsummer of the present year. If the police magistrate considers the prosecution has proved his case, he will formally charge all, or some, of the prisoners, and commit them for trial by a Governor's Court, over which the Governor of the Province, or a first-class magistrate appointed by him, will preside.

Sudanese Merchants in England.

Six Sudanese merchants who left Port Sudan for England in August have returned to Khartoum greatly impressed by all they have seen, and full of gratitude to those who helped to make their visit a success. Their sightseeing was not confined to London, but extended to Manchester and Liverpool. They visited, among other places, the British Empire Exhibition, the Woking Mohammedan Mosque, the Houses of Parliament, the Tower of London, the Bank of England, Kew Gardens, Hampton Court, Windsor Palace, the *Daily Mail* offices, Liverpool Docks, the Cotton Exchange warehouses, cotton spinning and weaving factories, and one of the Ford Motor Works. Should this visit prove of lasting educational and commercial value, the European business people would be decidedly pleased to hear of others availing themselves of like opportunities next year, particularly if the Government can see their way to assist such an enterprise, thus limiting the drain on private resources, and ultimately strengthening the already firm bond between the two countries.

Death of the Grand Mufti.

The death of Sheikh Ahmed El Tayib Hashim, Grand Mufti of the Sudan, which occurred on September 27, is recorded with much regret, for the loss sustained will be long felt in the Sudan. His father was Sheikh Ahmed Hashim, who himself conducted the preliminary part of his studies, later sending him to Sheikh Mih El Kheir in Berber to finish his religious education, where he was afterwards appointed Kadi of the Berber Court. Sheikh Ahmed was chosen by the Khalifa Abdullhi as a tutor for his son, Sheikh El Din, and he continued in this capacity during the whole of the Khalifa's rule. Following the reoccupation and the institution of government, he held the appointment of Grand Mufti of the Sudan, being the first Sudanese to hold such a high position. This he retained till his death.

ROUMANIA.

Bucharest, November 3.

The Political Situation.

The formal reopening of Parliament took place on October 15 with the customary ceremony, and evoked the public interest that inevitably attaches in this country to every incident of a political character. The Speech from the Throne—a long document—emphasised the importance of the

results achieved in the previous session and the considerable amount of work that yet remained to be done, in order to complete the task of the Legislature. In general terms His Majesty expressed the desire of Roumania for peace with her neighbours; he pointed out that since January 1, 1924, the service of the Roumanian Public Debt, both internal and foreign, had been resumed as before the War, and outlined the legislative programme that would be submitted to the Assembly. A noticeable feature in the Speech, and the one that has given rise to much comment, was the Royal silence on the most urgent of all problems exercising the public mind—the economic crisis, which is stifling the country and is growing without apparently engaging such earnest attention as it should on the part of the powers-that-be. This studied blindness places a serviceable weapon in the hands of the Opposition, and worries the Roumanian public, which is intimately concerned in, and disturbed by, the situation.

Everything accordingly points to an agitated Parliamentary session and to the prospect of activity on the part of the Opposition in an attempt to unite its scattered fragments more or less within the time necessary to evolve an elementary programme comprising the fall of the Liberal Ministry and the advent to power, for the purposes of an electoral appeal, of a neutral Government that will be able to guarantee scrupulously fair elections; thereafter, and according to the results obtained, the formation of a Cabinet of a definite political complexion, based on the principle of the representation as far as possible of the wishes of the Roumanian people as shown by a free vote.

The Bratianu Ministry.

The Liberal Party, which came into power two and a-half years ago, has been weakened, according to the view of the Opposition, by internal dissensions. In any case it has no longer been able to preserve that discipline and authority which formerly characterised it. Its chiefs, and, above all, its less important members, display, however, profound confidence in themselves, and proclaim that all is for the best in the best of all possible worlds, and that they will carry out to the end the complete realisation of their legislative reforms.

It will be remembered that the Parliament was made last year a Constituent Assembly, and that the Opposition energetically challenges this status on the ground that it has been illegally accorded. Nevertheless, and in spite of the protests, at first vigorous, of the Opposition, the new Constituent Assembly began to carry out its programme, which includes questions of supreme importance for Roumania, vital domestic problems with a bearing on her international relations. Thus, among others, have been voted laws regulating the exploitation of the sub-soil, which have stirred public opinion abroad, especially in Belgium and Great Britain, both countries with important petroleum interests here. Parliament has now to deal with the application of these economic laws—and this will not be its lightest task—as well as with the investigation of the whole series of laws regulating the commercialisation of certain State enterprises, the organisation of professional guilds, the most lucrative and commercial administration of the railways, river ports and sea ports, and the creation of a free zone in the ports.

In this connection attention may be called to the fact that Poland is insisting on a free zone at Galatz.

An interesting project for the standardisation of cereals is also being discussed—a project put forward by an Englishman based on the Argentine and Canadian systems. The legislative programme also includes the elaboration of a Labour code, in particular the delimitation of the rights of professional associations, the unification of pensions, the reorganisation of indirect taxes (stamps and spirituous liquors), a Press law, the creation of a State Council, and the completion of the reorganisation of education.

Opposition Parties.

Can the Government in power carry out such a formidable programme, or will the Opposition allow effect to be given to it? It is certain that, if the different parties of the Opposition succeed in coming together with sufficient cohesion, the attack on the Ministry will be facilitated by interpellations on the regrettable frauds which have recently been denounced in the Press—the passport scandal, the railway frauds, and the State Fisheries affair. So far, however, M. Jorga's party, the followers of General Avarescu, the National Party, and the Tsaranist (Peasant) Party have not succeeded in making the necessary mutual concessions for the adoption of a common plan of action. It is unfortunate for Roumanian public life that the heads of these groups do not appear as yet to have shown themselves, by the breadth of their ideas, as real leaders, conscious of representing, in the event of honest elections, a majority that might well be formidable. Proceedings in Parliament in the course of the next few days will prove whether, in a desire to attain their end, they are capable of subordinating their personal aspirations, and in order to arrive at a formula of mutual agreement, against which the Liberal Government might well find itself unable to hold its ground.

BULGARIA.

Sofia, November 6.

Reopening of the Sobranye.

Last week the Sobranye began its autumn session, and King Boris performed the opening ceremony in a speech which dealt briefly with the internal and external position of the country. Reference was made to the recently concluded Græco-Bulgarian Convention regarding minorities, while His Majesty touched on the programme of reconstruction which is being slowly though surely pushed forward.

The present session of the Sobranye will be devoted to economic rather than political problems.

This is somewhat noteworthy, as for the last few years politics have absorbed practically the entire attention of Bulgarian Parliaments. It is, however, high time that the economic and financial questions are tackled, and the present Government are to be congratulated on their decision. First and foremost comes the question of taxation. Under Stambolisky's Agrarian régime the peasantry were barely taxed, and for obvious reasons the present Government has not insisted on any great increase. But in the towns taxation has keen kept up to a fairly high level, and the small shopkeepers, artisans, and especially the professional classes, are feeling the pinch. As M. Tsankoff's Government is commonly, though perhaps erroneously, supposed to represent the townspeople, the above situation is somewhat anomalous. Many protests have been made, and the Government desires keenly to take a part of the burden off the townsfolk. But it is not at all easy to do this, as the State revenue is hardly equal to expenditure. Rather naturally, the first expenditure which the Government had in mind to reduce was charges consequent on the War. These charges include reparation payments, costs of occupation, delivery in kind, and upkeep of Commissions. The first two have been fixed by formal agreements made in March, 1923, and March, 1924; the third is well on its way to completion, while the fourth has been considerably reduced. But, around this fourth question —namely, the upkeep of Commissions—an unfortunate and regrettable situation has arisen. Some people seem to have imagined that the Inter-Allied Commission had so much won the hearts of the Bulgarian nation that it was to be asked to remain for several years! Such an idea was, on the face of it, quite fantastic; but it hardly warranted the attacks which have been recently made on the Commission. To begin with, these attacks, as far as the writer can see, can serve no useful end. They will serve only to put up the backs of the Commission and the respective Governments represented therein. Still, the attacks and criticisms have been made, and one is now waiting to see what line the Commission will adopt. It is composed of approximately four members of each nationality—English, French, and Italian. Its cost, as far as is known, amounts to about £20,000 a year. Presumably the Conference of Ambassadors will shortly take a decision in regard to its future composition. Until then it will be advisable in everyone's interests that the attacks cease.

The English Elections.

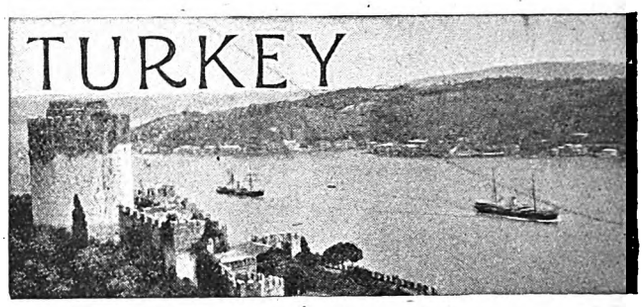
Exceptional interest has been taken in Bulgaria in the English elections, and, on the whole, public opinion rejoices in the Conservatives' victory. The reasons are twofold; first, that England will have a stable Government for the next four years; and, secondly, that the new Government is strongly anti-Bolshevist. As Bulgaria has been in constant collision with the Third International and has met with many intrigues and calumnies, the seizure of the Zenovieff letter has not come as a great surprise. In general, it is considered that England was on the point of going through a course of Soviet propaganda similar to that practised in this country.

News in Brief.

M. Lacroix, the French Minister appointed to Sofia to replace M. Georges Picot, has received another post, and it is not yet known who will succeed M. Picot.

The Bishop of Gibraltar has paid a visit to Sofia.

Sir Edward Boyle, President of the Balkan Committee, and Lady Boyle have left Sofia for Belgrade.



Constantinople, November 3.

Opposition in the Assembly.

The Grand National Assembly has not provided the flare-up that the prognostications of the Press had led one to anticipate. The offensive against the Minister of Exchange and Reconstruction has, up to the moment of writing, resolved itself into a feeble personal attack by the Hoja-deputy of Menteché, which was not pressed to the point of a division on the question of confidence either in the individual Minister or in the Cabinet as a whole. It is true that the People's Party is to meet again in semi-secret session, and that may produce unexpected developments, but it is improbable.

The formation of an official Opposition is proceeding more or less openly. A group, consisting of a few prominent figures like Reouf, Refet Adnan, Janboulat, has ostentatiously ranged itself in a little compact body, and the three Army inspectors, Kiazim Kara Bekir Pasha, Ali Fuad Pasha, and Jevad Pasha have resigned their posts in order to exercise their rights as deputies of the G.N.A. At least two of them are expected to attach themselves to the above-mentioned group. Nevertheless there is every sign that the incipient Opposition group has not made any effort to test its strength against the Government majority, for in the elections for the President and the Vice-Presidents of the Assembly the Government nominees, including the much-harassed Refet Bey, Minister of Reconstruction, were elected by impressive majorities.

The President's Speech.

On November 1 the formal opening of the Assembly was inaugurated by a speech from Mustapha Kemal Pasha, which dealt in a summary manner with the progress achieved during the past year, the present state and needs of the country, and the

prospects for the future. Apart from the usual general remarks, which are bound to be included in such speeches, the President laid stress upon three points in the following order of importance: the development of railway and road construction, the development of education, and the unsatisfactory arrangements for the reception of the immigrants under the Exchange of Populations scheme. He used very emphatic language concerning the necessity of concentrating upon the extension of the railway and road system, as the principal means of promoting the prosperity of the State, and he hinted very strongly that his policy was to avoid any action which might in the slightest degree hinder the execution of urgent measures for the improvement of communications. He made a hopeful picture of the Republic's foreign relations, and drew special attention to the improvement in their relations with France; he studiously avoided any reference to the Mosul question, except to mention the "well-merited chastisement" of the Nestorians in "our vilayet of Hakkiari."

The speech, taken in its entirety, must be regarded as a statesmanlike utterance, which has hit the nail well and truly on the head as regards several matters of primary importance, and which should give sound, practical guidance to the Assembly.

Arbitrariness in Football.

If the administration of the Republic came within speaking distance of the high-sounding principles on which it professes to be working, all would be well, but, unfortunately, it is not so. The following story will illustrate the kind of thing that is possible in this paradise of republican freedom.

The whole of Constantinople has been looking forward for weeks to *the* football match of the season between the two best clubs, Galata Serai and Fener Bagtche, whose members have been training very hard, as the rivalry of the two clubs is desperately keen. They were to play last Friday for a special challenge cup presented by the Ministry of Public Instruction. Thousands of tickets at high prices had been sold, a banquet after the match had been arranged, and everything, in fact, had been done to make the match an event in Turkish football annals. On the day before the match a telegram from the Government is received by the president of the Turkish Football Federation ordering him to send the Turkish National team to Moscow the following morning—*i.e.*, the morning of the famous match. The National team is composed almost exclusively of players from these two *amateur* teams, so that if the national team went to Moscow, the famous match would have to be scratched at the last moment. Tremendous feeling was caused, especially as the players rightly protested that they were amateurs, and were not to be ordered about in this peremptory fashion; that the match in Constantinople, moreover, was under the direct patronage of the Government, which had offered the cup; that the players were private persons, with their living to earn, and could not go off for weeks on end at twelve hours' notice without risking the loss of their jobs. Nothing availed them; a national team of sorts did actually leave last Friday morning, and the great match was scratched without notice. The inner history of the incident is that the Poles have had an exhibition here and have sent down a football team, and therefore the political balance must be redressed by sending a team to Moscow. It is comforting to see that since this affair the newspapers have not mentioned the word "football" in their columns.

IRAQ.

Baghdad, October 30.

The Ex-King Hussein.

The Council of Ministers has discussed the question of extending to King Hussein an invitation to take up his residence in Iraq. They were not averse from his living in the country, provided that he came as a private individual, not as a monarch, and that he gave an undertaking to refrain from any political activities, especially from such as might react on the internal affairs or status of Iraq. The Ministers wished that he should take up his residence in Basra rather than in the capital. If King Hussein agrees to these conditions it is probable that he may be expected in Basra very shortly.

Kurdistan.

Desultory fighting is still taking place in Kurdistan, and during the course of last week a small force of Sheikh Mahmud's followers succeeded in penetrating into the town of Suleimaniyeh, but were ejected before they had time to inflict any casualties or do any damage. The operations in Kurdistan are being carried out chiefly by the Iraq Army, though it is assisted by the Royal Air Force, of whose efficient and ever-ready co-operation the officers of the Iraq Army speak very highly.

Northern Frontier.

Quietness continues to prevail on the northern frontier. No further hostilities between British and Turkish forces have been reported.

Arabistan.

The Council of Ministers has ordered that in the event of hostilities between the Persian Government and the Sheikh of Mohammerah, Iraq is to adopt an attitude of complete neutrality.

General.

A serious fire occurred last week in the principal street of Baghdad, adjacent to the most congested part of the city. Thanks to the prompt action of the Fire Brigade—one of the most efficient of the public or municipal services of Baghdad—the fire was confined to the one building, though damage amounting to about Rs. 70,000 could not be prevented; this might have been less had not the water supply failed at a critical moment.

Eight hundred officers and men of the Royal Air Force left Baghdad for England on October 16, embarking at Basra in the s.s. Glengorm Castle. Their reliefs have already arrived in the country. It is probably this which gave rise to the rumour that fresh drafts were being sent out from home as

a result of the disturbances on the northern frontier.

During aerial practices last week at Shaibah, an aeroplane crashed, causing the death of Flying Officer Franklin, and serious injuries to Air Officer Williams.

CYPRUS.

Nicosia, October 7.

Communications with Cyprus.

That the island should continue to be deprived of a weekly mail service seems a legitimate ground for complaints which are again making themselves heard. With few interruptions, Cyprus enjoyed weekly steam communication with Egypt and the outer world, and was not long ago hoping for a bi-weekly service. When the War came, communications were dislocated, and an irregular service could cause no grievance. But for many years now there have been but three mails a month. Now that there is some awakening to the need of reviving backward industries, and strong efforts are being made (not unconnected with work at Wembley) to improve both the quality and quantity of island products, and to find—if possible—fresh and expanded markets, it appears to be mistaken parsimony to handicap progress any longer by what is decidedly retrograde policy. If satisfactory arrangements cannot be made with the Khedivial S.S. Company, there are other companies that might be approached.

The Forests.

The outcome of the inquiry into forest fires and means for their prevention by the committee which sat at Mt. Troodos is awaited with no little interest. The Principal Forest Officer, Dr. Unwin, has organised an interesting exhibit of samples of the island timbers and a great variety of articles for agricultural and other uses, manufactured out of the most serviceable of these, which will be on view at his office at Nicosia until November 4. Inquiries were made at Wembley regarding some of these, and, indeed, orders were given for certain articles exhibited there, as to which doubt may exist whether they can be executed on a sufficiently large scale.

The Proposed Bank.

It is hoped that the proposed Agricultural Bank may be opened early in 1925. It is said that the capital will be £300,000, of which the Imperial Ottoman Bank will provide two-thirds and the Government one-third; the bank to be under Government supervision. Advances are to be made at 8 to 9 per cent. to village co-operative societies and individuals.

General News.

The self-styled "National Council" continues to hold meetings. The new memorial to the Houses of Parliament in London is said to be of considerable length, but it can hardly contain any arguments or claims which have not been submitted many times already. To despatch another petition at the present moment seems not only a waste of time and money, but a very injudicious proceeding, and also to indicate, in spite of professions to the contrary, a want of proper co-operation with the Government, which is needed. Twenty years ago *The Times*, in an article which summed up the situation in Cyprus, concluded with these words:—"It is to be hoped that native members [of Council] will not be led by local prejudices or untimely petulance into any line of action which would alienate in any degree that cordial sympathy which animates all British officials in dealing with the various problems confronting them. . . . It is essential that the leaders of public [*i.e.*, Greek] opinion should co-operate loyally in the work of reconstruction." It cannot be said that hitherto these hopes have been realised, and a want of co-operation is just as harmful now as it was then.

MODERN INDIAN ART FOR BRITISH GALLERIES.

To the Editor of The Near East.

Sir,—It has been thought that the gathering together for the first time in this country, at the British Empire Exhibition, of a collection of modern Indian paintings provides a fortunate opportunity of acquiring works representative of the leading schools of modern Indian art for permanent exhibition here in the principal Art Institutions. This step would also serve to reflect the growing interest in Indian art which is being shown in England.

It is estimated that a suitable representative collection of these paintings can be secured at an outlay of about £200. The selection of the paintings will be in the hands of a sub-committee of the India Society, which would include Sir Thomas Arnold, Mr. Laurence Binyon, Mr. E. B. Havell, and Professor Rothenstein.

An appeal for the requisite funds is necessary, and subscriptions would be gratefully received by the Hon Treasurer at the office of the India Society, 3, Victoria Street, London, S.W.1.

If desired, any subscription can be applied for the purchase of one or more paintings to bear an inscription indicating the name of the donor.—We are, etc.,

Hercules Read, President.
Carmichael, Chairman of Committee.

PERSONAL AND GENERAL.

TO-DAY.

November 13, 1924 (New Style).
October 31, 1924 (Old Style).
Rabia' II, 15, 1343 A.H. of the Moslem Calendar.
Marheshvan 16, 5685, of the Jewish Calendar.

Prince Nicholas of Roumania, who was recently gazetted sub-lieutenant, has rejoined H.M.S. Benbow at Malta.

The Hon. Alice Douglas Pennant left London on November 6 to visit General Lord Rawlinson and Lady Rawlinson in India.

The Roumanian Minister and Madame Titulesco are staying at Cap Ferrat. They have arranged to return to London next Saturday (November 15).

Yesterday Dr. M. D. Eder addressed the West London Zionist Association at Unity Hall, Quex Road, Kilburn, N.W.6, on "Labour Conditions in Palestine."

Sir Reginald Mant, upon his appointment as a member of the Council of India, had the honour of being received by the King at Buckingham Palace on November 8.

General Sir Edmund Barrow had the honour of being received by the King at Buckingham Palace last Thursday upon relinquishing his appointment as a member of the Council of India.

The Chief of the C.I.D. Assam Police, India, Mr. W. J. H. Ballentine, who is in England in order to study the administration of justice in the various courts of law, was present on November 5 at London Sessions.

The Roumanian Consul-General in London and Madame Beza held a reception at 49, Roland Gardens, last Thursday evening, for M. Jules Romains, the French writer, to meet the members of the P.E.N. Club.

The second of a series of lectures on the art and science of ancient Egypt was given last Tuesday evening at the Royal Society, Burlington House, by Mr. A. M. Blackman, D.Litt., entitled, "Temple Ceremonial."

Mme. Gavrilovitch, who left London last Saturday for Serbia, desires to express her warm thanks for the numerous messages of sympathy which have reached her. She hopes to answer them individually at a later date.

General the Lord Rawlinson (Commander-in-Chief, India), who had the honour of being received by the King at Buckingham Palace on November 4, left Marseilles last Thursday for Bombay in the P. and O. steamer Kaisar-i-Hind.

Among the passengers by the P. and O. special train which left London on November 6 to connect at Marseilles with the steamship Kaisar-i-Hind were Sir Dinshaw and Lady Petit, Sir Thomas Catto, Sir Trevredyn Wynne, Sir John and Lady Cargill, Lady Burnett, Sir David Yule, Lady Miller, Sir Edgar Holberton, the Hon. Kenneth Mackay, and Sir Alexander Murray. General Sir Charles and Lady Magniac, Sir Dhunjibhoy and Lady Bomanji, Sir Dorab and Lady Tata, and Sir Logie Watson joined the Kaisar-i-Hind at Marseilles, and the Maharaja and Maharani Rajendra Bahadur of Jind, and Sir R. Waley Cohen at Port Said.

General Sir Havelock Hudson (upon his appointment as a member of the Council of India) and Brigadier-General the Hon. Charles Bruce (upon his return from the Mount Everest Expedition) had the honour of being received by His Majesty on November 5.

The marriage has been arranged, and will take place in London in the early spring, of M. Ivan Stancioff, only son of M. Dimitri Stancioff, formerly Bulgarian Minister in London, and of Mme. Stancioff, *née* Comtesse de Grenaud, to Miss Marion Mitchell, only daughter of Mrs. James Mitchell, of 46, Mount Street, London.

The next meeting of the Near and Middle East Association will take place, by kind permission of Mrs. James Conchie, on November 18, at 8.30 p.m., at 27, Great Cumberland Place, W.1, when the subject, "The Problem of Georgia," will be discussed. The speakers are to include Prince Michel Soumbatoff, Mr. W. E. D. Allen, and Mr. A. Safrastian.

HONOURS, APPOINTMENTS, PROMOTIONS, ETC.

Sir Hugh Clifford's appointment as Governor of Ceylon is gazetted under date November 3.

The Bhaonagar Medal at Cambridge University has been awarded to P. Rajagopalan (Queens'), who is placed fourth among the Indian Civil probationers in the final list.

Sir Elliot Graham Colvin, K.C.S.I., formerly head of the Inter-Allied Commission at Sofia, has been appointed a Governor of the Charterhouse, in place of the late Bishop Gibson.

A supplement to the *London Gazette* announces that the King has been pleased to confer the following honours:—

PRIVY COUNCILLOR.

Mr. BEN SPOOR (Chief Labour Whip).

K.C.M.G.

Sir CECIL JAMES BARRINGTON HURST (Foreign Office).

C.V.O.

Mr. WALFORD HARMOOD MONTAGUE SELBY.

PEACEMAKERS IN ARABIA.

Despite the obscurity that still enshrouds the general situation in Arabia, one thing emerges as a practical certainty: the rule of the Hashimite family in the Hejaz approaches its end. The artificial nature of Hussein's sway has been proved up to the hilt, and the pillars of his edifice, so expensively constructed by Great Britain, have been ruthlessly swept away by Ibn Saoud and his Ikhwan. Nor was any Samson's strength needed to oust this greedy hoarder. With Hussein's career, however, which appears likely to peter out in Basra, we are not now concerned. He can be written down finally as one of the mistakes of British Middle Eastern policy, and has served to prove to us unforgettably, as we may hope, how futile it is in Arabia to put all one's money on one horse. But it is impossible at this moment to withhold sympathy from King Ali, a fine Arab, according to all estimates, who is at this juncture in the direst straits on account only of his father's misdeeds. There is no mistaking Ibn Saoud's intention to drive the Hashimite family, root and branch, from the Hejaz, and, although it has been recently reported that a portion of the great Harb tribe, whose allegiance, incidentally, has never been very constant, is willing to help the King to defend Jeddah, the welcome which this Wahhabi intention has been received by the inhabitants of the Hejaz in general is manifest. It is at once a noble and an ignoble story, for it may be that the heights of Taif, where Ali fought his bravest battle, will appear in the history of Arabia as the river Sakharia appeared in Turkish history, and as far as can be foreseen the defeated in each case will suffer the same fate—dispersion or impulsion into the sea. Ibn Saoud virtually holds the peninsula in his hands; he has but to say "Come," and, whether it is from Egypt, or the Yemen, or Koweit, or Bahrain, or Muscat, or Iraq, or Persia, he cometh. And similarly with those to whom he says "Go." King Ali is almost without a friend to-day, and his demission must be taken for granted. It is a pity, for there is undoubtedly work for this able man (now in weak health) to do in the Arab world; but whither he will go and his place in the Arab polity of the future are secrets in the keeping of to-morrow. Arabia, however, never provided any exception to the rule that the sins of the fathers shall be visited on the children.

Now it might be said that this internecine strife between King Ali and Ibn Saoud is the Arabs' own affair, that such things have occurred before without the heavens' falling, and that, therefore, the less interest that Europe takes in the matter the better proof of its discretion and sense of values. This, however, would be only a partially correct judgment. In the peculiar circumstances in which the Moslem world is placed to-day, thanks to the action of Angora in ridding Turkey of the responsibilities of the Khalifate, the administration of the Holy Places concerns Mohammedans all over the globe very closely. Upon the terms of the strife between the Nejd and the Hejaz depend the governance of the Holy City and the future welfare of the *hajis*. And that is why attempts are being made from outside Arabia to intervene in this quarrel. With such attempts, which have, in fact, a religious or spiritual reason, it is, of course, not for us to involve ourselves, except in the rôle of impassive spectators who will accept whatever the world of Islam in its wisdom shall decide. It is, therefore, remotely, so to speak, that we observe the application by the Central Khilafat Committee to the Government of India for a permit to visit the Nejd and the Hejaz with the object of establishing peace between the two Arab States. With the same dispassionate gaze we watch the proposed visit to Mecca of Sidi Ahmed es-Senussi, remembering the while the essential connection between the Wahhabites and the Senussi brotherhoods. The representatives of these two bodies of Moslem thought are on a legitimate purpose, and may in a true sense turn out to be peacemakers. But it is in a different category that we must place the extravaganza of Mr. St. John Philby, who is said to have received a message from King Ali—at whose prompting we are left to guess—to go over to Jeddah and save whatever there is to be saved. What the late Adviser to the Government of Transjordan can possibly accomplish without any kind of British mandate is not very clear. In our view, the only aspect of this Arabian imbroglio that now concerns this country is the religious aspect; with the political formations consequent upon it we can rightly play no constructive part. Such non-interference with Arab affairs, nevertheless, does not appeal to Mr. St. John Philby, who was lately in favour of leaving, except from a purely advisory point of view, the Arabs all to themselves. He has betaken himself, like an heroic *deus ex machinâ*, and with the secrecy that provides excellent copy for the sensational Press, even if it serves no other purpose, to Jeddah. How much farther than that undesirable spot he will be able to get remains to be seen, but the whole adventure appears to us to smack of peacemongering rather than of peacemaking.

It will be noted that all the Moslem visitors to Mecca, actual or proposed, after the Wahhabi occupation of the Holy City, are touched with an anti-British leaning. (We do not include in these Shereef Ali Haidar, of whose appointment to the Emirate of Mecca no confirmation has yet been received.) This was, perhaps, inevitable. But we may take the opportunity of pointing out one or two things, about which misapprehensions have been entertained both in our own Press and abroad. The Wahhabite invasion was not connived at by the British Government, true as it may be that Ibn Saoud, before giving the order for the submergence of Hussein's pretensions, had sounded the opinion of India. Just as the 70,000,000 of Indian Moslems helped the Kemalist movement, they assisted with all moral support the demission of the British-subsidised Guardian of the Holy Places, who not only robbed the pilgrims shamefully, but even omitted to protect them. And it is probably an error to imagine, as some have done, that Turkey, which has been harbouring Sheikh Ahmed of the Senussi, is still interested in the ownership of the Holy Places. Nationalist Turkey has washed her hands for good and all of her old Arab provinces, and there can be little doubt that the administration of the Hejaz, whatever form it take, will be under Arab supervision. Lastly, it is not to be feared that Ibn Saoud, great and statesmanlike ruler though he undoubtedly is, is another Tamerlane. He may succeed in extending his effective sway from sea to sea, but he will go no further than the Peninsula. If he chooses to become Khalif, or, at least, overlord of the Holy

Digitized by Google

Places, there is no reason to suppose that the *hajis* will return to their homes any richer than Hussein left them, although it is very probable that he would protect them. Against British mandated territory he could do nothing, and any sympathy between his fanatical tribesmen and the inhabitants of Syria, Palestine, Transjordan, or Iraq it is difficult to conceive. In his own peninsula he may erect a mighty kingdom, but outside his personal dominions repercussions are scarcely to be expected. It is known that for long he has wanted peace and a settled boundary to the lands under his control, but how he chooses to achieve this is now more than ever his own affair. At the moment he is acting in a most cautious and praiseworthy way, and unless he is prevented by interfering persons from his large purpose of the consolidation of an Arab Confederation, he may make for himself one of the greatest names in all the history of Islam. But it will be a glory of Islam confined to the land of its birth: there cannot conceivably come again any Ommeyads or Abbasids. For our time, at any rate, Damascus and Baghdad are to shine rather with Western than with Eastern splendour.

NEAR EAST BOOKSHELF.

THE GATEWAY OF PALESTINE.

"THE GATEWAY OF PALESTINE: A HISTORY OF JAFFA." By S. Tolkowsky. With numerous Illustrations. (London: George Routledge. 10s. 6d. net.)

(By Vice-Admiral PHILIP DUMAS, C.B., C.V.O.)

This is not only a very readable but extraordinarily instructive book, which can be highly recommended to all students of the Holy Land and its problems. It shows a most amazing industry and erudition, and the great pity is that the materials for a more actual history of the vicissitudes of Jaffa in particular are, apparently, not forthcoming, so that the book becomes, in fact, largely a history of the Holy Land and of its relations with foreign powers and extraneous peoples.

From this it follows that almost the only fault that can be found is that a more adequate map has not been provided, for the real inwardness of the eventful history of Jaffa, its occasional prosperity, constant destruction and as frequent rebuilding, lies in the fact that it lay at a salient point of one of the great trade routes of the ancient world, while in early days, when coasting was largely perforce followed, other equally if not more important trade routes necessarily passed within but a few miles. Consequently, it is the demarcation of these trade routes which are required, and a map, showing them, to such places as Italy, the Dardanelles, Crete, Cyprus, Jerusalem, and Egypt, may, it is hoped, be provided in subsequent editions.

In this connection it is to be regretted that more attention has not been paid to the facts of ancient sea-borne trade and the salient points on the trade routes of the ancient world. Take Troy, for instance, which covered the trade routes to the Black Sea, and so commanded the supply of copper, tin and bronze. Is it really credible to any but a poet that the whole of the great local fighting forces of the day should have collected at one of the stormiest and most detestable places in the world, and there by land and sea have attacked the probably most strongly defended cities of the world for over ten years to re-capture a grandmother? The matter has only to be stated in this form to make it clear why some seven or more superimposed cities are to be found on this site, why all were strongly defended, and all were destroyed.

In dealing with the history of Jaffa, then, it will be found that it entails somewhat of a running commentary on that of Egypt and of the Hittite, Sumerian, and Assyrian Empires, although the author would appear to be unconscious of the reason.

Superimposed were, of course, the special and unhappy attentions paid to Jaffa by all those potentates and powers whose selfish interests lay in the possession of an easy and convenient access to Jerusalem and the closing scenes of the life and death of our Lord. It is almost a pity that a chronological table has not been provided showing the additional vicissitudes of the unfortunate city due to the jealousies and greed of its various momentary owners, and it is certain that a very fascinating book could be written on the activities of the Courts of Jaffa in particular.

One of the most interesting points brought out is the frequent and rapid rise of the city to great prosperity (as to-day and in the early days of the Philistines). This rise has coincided with local conditions of peace, which always implied that a strong and capable power was in the ascendancy. By the way, what is the author's authority for speaking of "the native legends of the Philistines in their Cretan and Carian homes" on page 27? Surely this is pure supposition!

Equally horrifying but interesting are the frequent accounts of shocking massacres when no one strong power was in possession, as it is plain that few places are less desirable for residence than the terminal ports of a trade or pilgrim route unless adequate sea and land power exists to protect them. Therefore, when considering the future of such ports as Jaffa and Jeddah, it is highly desirable to bear this fact in mind, for it cannot be too clearly realised that now, as at any time during the past five thousand years, every possible element for discord and its dreadful *sequelæ* exists within the near neighbourhoods. If these facts are not taken into consideration, and these ports are allowed to fall into the weak and uncertain hands of Turkey, Egypt or Arabia, nothing can be more certain than that frightful massacres and horrible cruelties, as in the days of Richard Cœur de Lion and Napoleon, will recur in the future.

In connection with Cœur de Lion, perhaps the most delightful, and certainly the most unexpected, fact brought out within the pages of this book is that King Richard was inspired to issue an order that no one on the Crusade was to be permitted to take any female with him except a washerwoman, against whom there could be no suspicion! Oh, happy, halcyon days of yore, when washerwomen were above suspicion! Surely the White Knight requires to be re-armed with a washing-tub and clothes-line and a bundle of pegs. There may be, however, some connection with the fact, as stated on p. 125, that Jaffa exported soap to Europe, and possibly King Richard's knights may have from that cause alone extended such marked favour to laundresses.

That the German has hardly changed his spots is shown on p. 115, where it is stated that the Teuton crusaders, while celebrating the Feast of St. Martin with an orgy of drunkenness and debauchery, were surprised by the Moslems, and massacred. The book is, however, full of isolated facts which call for comment, and one can only recommend that it be read, and deductions drawn. On the whole, it is a sad history of the appalling wickedness, jealousies and cruelties of mankind, and the main deduction is the frightful danger to which the inhabitants of a desirable port of entry are exposed unless properly defended by a really capable power. That is the lesson of

Digitized by Google

its history, and it cannot be too strongly impressed upon the small powers and interests who may be or are intriguing to hold Jaffa the beautiful—and it is beautiful—in the future.

Mr. Tolkowski, who has, unfortunately, drawn no inferences himself except by implication, has written a really interesting book, and is to be sincerely congratulated upon it. So much knowledge and erudition are shown in it that one can only hope that he may extend his energies and powers of research in the early future to a history of the Holy Land in general and of Jerusalem in particular. Here, again, lessons of moment are to be deduced as to the future of this smiling land, and to save a deluge of tears it would be well if all the countries interested were to study them.

TRUTH AND BEAUTY.

"THE PAGEANT OF GREECE." By R. W. Livingstone. (Oxford University Press. 6s. 6d. net.)

Mr. Livingstone, from the fullness of his knowledge and love of ancient Greece, has compiled this anthology to add to the happiness of those of us who are not Greek scholars. We are grateful for the care and skill with which he has chosen his extracts. He gives examples of many writers of different periods, and his headings include, amongst others, History, Philosophy, Comedy, Tragedy, Lyric Poetry, and Science. It is a great thing to have gathered so much beauty into one little book. When we have read it we cannot fail to have that clearer understanding of the Greek spirit, which Mr. Livingstone hopes to give; and we understand the words of his introduction: "I have laid special stress on Greek 'truthfulness.' It is the parent, not only of Greek science and philosophy, which are the children of a desire to see things in themselves as they are, and not as the seer wishes them to be, but also, in part, of Greek literature, where truth is never sacrificed to beauty or sentiment or emotion, and where neither the light nor the shade on the canvas of life is ignored, but both are depicted with an even-handed justice. It is the lesson which Europe began at the Renaissance to relearn from Greece, and which she has been perfecting ever since."

J. B. Ainslie.

THE JUNGLE BOOKS.

"THE TWO JUNGLE BOOKS." By Rudyard Kipling. (London: Macmillan and Co. 10s. 6d. net.)

We can imagine no more delightful present, at the price, than this new edition of Mr. Rudyard Kipling's two "Jungle Books" in one volume. It has been very pleasingly produced, printed beautifully and on good paper; and it retains the illustrations of J. Lockwood Kipling and W. H. Drake. There is little need here to expatiate on the fact that all the tales, from "Mowghli's Brothers" to "Her Majesty's Servants," are of the finest stuff, but to have all under one cover, so to speak, Bagheera and Baloo and Akela and Hathi and Rikki-Tikki-Tavi and Kala Nag and the baggage-camel of the 39th Native Infantry and the rest, is something to be sought eagerly this Christmas by all intelligent children and adults not yet become olympian.

EGYPTIAN (ARABIC) SELF-TAUGHT

A most useful book for visitors to Egypt.

Containing:

Travel Talk.	Classified Vocabularies.	Aviation.
Railway.	Conversations.	Photography.
Steamboat.	Simple and Practical Phrases.	Pronunciation.
Motoring.	Naval and Military Terms.	Grammar.
Cycling.	Officials' Ranks and Titles.	Money, etc.
Hotel.	Correspondence.	Illustration of Coinage
	Amusements.	

Red Cloth, 4s. net; Blue Wrapper, 3s. net. Postage, 3d. extra.

Sold by all BOOKSELLERS. Write for Prospectus and Catalogue No. 25.

London: E. MARLBOROUGH & CO., LTD., 51, Old Bailey, E.C.4

THE "BOMBAY LABOUR GAZETTE."

The new issue of the Bombay *Labour Gazette*, the organ of the provincial Labour office, appears in a greatly improved form. The *Gazette* has always been indispensable to serious students of industrial questions, but hitherto it has been decidedly cumbrous, and not too attractive to readers, with inconveniently large pages, over-displayed statistics, and too much waste space in the diagrams. These defects have now been remedied, and in its new form the *Gazette* is as pleasant as it is useful.

BOOKS RECEIVED.

"Eva Chenholm." By H. Gascoigne Hart. (London: Heath Cranton. 7s. 6d. net.)

"The War Effort of New Zealand." Edited by Lt. H. T. B. Drew. (New Zealand: Whitcombe and Toms, Ltd.)

"The Comitadji Question in Southern Serbia." By R. A. Reiss, D.Sc. (London: Hazell, Watson, and Viney, Ltd.)

"Songs of a Desert Optimist: Poems of Burma." By J. M. Symns. (London: Nisbet and Co., Ltd. 4s. 6d. net.)

ZIONIST MOVEMENT APPEAL.

A meeting last week was arranged at the Kingsway Hall, under the auspices of the English Zionist Federation, for the purpose of hearing an address by Dr. Weizmann, who has just returned from Palestine, and of promoting the Palestine Foundation Fund. It was a crowded and very enthusiastic audience over which Mr. Philip Guedalla presided. Messages of good will were first read from various people, notably Lord Balfour, Viscount Cecil, and Sir Alfred Mond.

With the general situation in Palestine Dr. Weizmann declared himself well satisfied, and that, given the necessary sacrifice by Jews themselves, the Jewish National Home could be taken as established. What was mainly required to this end was a concerted and well-directed effort, and he appealed particularly to the Jews of England to do their share in the work of reconstruction.

It has since been announced that Dr. Weizmann's encouraging report on the progress being made in Palestine has given a great fillip to the campaign on behalf of the Palestine Foundation Fund now being conducted in this country. Several thousand pounds have already been raised in London, and arrangements are in progress for active propaganda among the Jewish communities throughout the country. A large number of meetings are being arranged. Sir Alfred Mond, M.P., is President of the Committee organising the campaign, which is under the direction of Dr. Alexander Goldstein, who recently raised £75,000 in South Africa and Rhodesia.

BRITISH SCHOOL AT ATHENS.

The annual meeting of the British School at Athens was held in London on October 28 at Burlington House. Mr. V. W. Yorke, the treasurer, drew attention to a serious financial position, due to reduced income, increased expenditure, and the immediate need of £1,000 for building.

The Provost of Eton, the Chairman, said the little land of Greece was the ultimate source of all that was of most value in the achievements of man. He indicated directions for research, particularly in respect of monastic manuscripts, throwing light on Greek influence on modern civilisation.

Mr. A. M. Woodward, the Director, described the interesting results of excavations in Sparta, mainly on the site of the theatre and Acropolis. He pointed out that the Byzantines had used the masonry of the theatre for building a settlement on its site. Much of the stage and details of the Roman theatre had been disclosed, and it was hoped to find remains of the Greek theatre beneath the Roman work.

THE PALESTINE EXPLORATION FUND.

We read with dismay in the *Quarterly Statement* (October) of the Palestine Exploration Fund that there is serious danger that the work of excavation now proceeding on the Eastern Hill of Jerusalem may have shortly to cease owing to lack of funds. Another £2,500, and the work, which promises already most interesting results, could continue. The risk of the undertaking falling into other hands ought to be as widely known as possible; how fascinating the excavation is and what progress has been made can be seen in an article in this *Statement* by the Rev. J. Garrow Duncan.

The Paris *Journal Officiel* announces the appointment of M. de Ledoux, second-class Consul at Fiume, to be French Consul-General at Liverpool and Manchester, vice M. Goiran, who has been made Consul-General at Johannesburg.

NEWS IN BRIEF.

The death is announced from Warsaw of M. Vitold Jodko, formerly Polish Minister at Constantinople.

Mr. Augustus Jay, the United States Minister to Roumania, and Mrs. Jay arrived in Bucharest last Sunday.

Lord Goschen, Governor of Madras, and Lady Goschen, left last week on a visit to the Viceroy and Lady Reading at Delhi.

The work of tracing the frontier between Roumania and Czechoslovakia, states a message from Bucharest, has been finally concluded.

M. Fauquel, Counsellor at the Brussels Court of Appeal, is proceeding to Turkey to take up the post of legal adviser to the Angora Government.

Mr. C. F. J. Galloway, B.Sc., F.R.G.S., delivered an illustrated lecture on "A Trip in North-West Persia" at the Jewish Institute, Mulberry Street, E.1, on November 1.

Mr. F. J. Devar, a Bombay scoutmaster, who is making a world tour on his bicycle, and who left Bombay last January, expects to reach London at the beginning of January.

The Viceroy, as Chief Scout in India, has received from Lieut.-General Sir Robert Baden-Powell a warm appreciation of the behaviour of the Indian Contingent at the Imperial Jamboree at Wembley.

Thirteen persons were wounded, states the *Morning Post* Athens correspondent, in a conflict which occurred near Seres between local peasants and refugees. Similar affrays have taken place near Athens.

A rare unused stamp of Roumania, the 81 parale, was sold recently for £470 in Mr. H. R. Harmer's sale rooms in Bond Street. This is the highest price ever obtained for a copy of this stamp in London.

Sir William Godsell, of Grosvenor Avenue, Carshalton, Surrey, formerly auditor of the India Office, who died on September 27, aged eighty-six, left estate of the gross value of £2,604, with net personalty £2,417.

According to *The Times* Cairo correspondent, important changes in the Egyptian Legations abroad are under consideration, but will not be announced until after the return from Paris of Wassif Pasha Ghali, Minister for Foreign Affairs.

King Boris was present on October 29 at the funeral in Sofia of General Tocheff, who commanded the 1st Sofia Division in the Bulgarian Third Army during the First Balkan War at the victory of Kirk Kilisse on October 23 and 24, 1912.

It is reported that King Ali has refused to permit Sheikh Sidi-es-Senussi to proceed through Jeddah or Medina to Mecca on the ground that the Sheikh is an agent of the Angora Government and the permission would be detrimental to Hashimite interests.

Sir William Goodenough Hayter, of the Ministry of Justice, Cairo, Egypt, and of Kingsgate Street, Winchester, barrister-at-law, legal adviser to the Egyptian Government and to the British Residency in Cairo, left estate of the gross value of £11,282, with net personalty £11,127.

The Civil Service Commissioners announce that it has been decided that the age limits of twenty-one to twenty-four on August 1 of the year in which thecompetition is held will be retained for the open competitive examinations to be held in London in 1925 and 1926 for appointment to the India Civil Service.

A report on the use of opium in India, prepared by the National Christian Council of India, has been issued as a small book. The evidence has been given by members of the I.M.S., missionary doctors, and Indian private practitioners. It may be obtained from the International Missionary Council, 2, Eaton Gate, S.W.1.

The Queen of Rumania was godmother to the infant daughter of Mr. and the Hon. Mrs. Millington Drake, who was christened recently in the Church of the Resurrection, Brussels, by the Bishop of Kensington, and the Rev. C. R. Hughes, Chaplain to the British Embassy. The child was named Marie Regina, and the other sponsors were the Hon. Elsie Mackay, Mrs. Roderick Ponsonby, and Sir Reginald Tower.

When visiting the Maharaja of Patiala during his Indian tour the Prince of Wales speared a fine boar, which was mounted by the taxidermy department of the State, and has been one of the outstanding features of the exhibition of the sporting trophies in the Patiala Court of the Indian Pavilion at Wembley. The Prince of Wales has accepted the Maharaja's gift of the boar, and last Friday afternoon the officer in charge of the Patiala Court, Sirdar Wazir Chand, attended at St. James's Palace to make the presentation.

MEMORIAL SERVICE FOR M. MICHEL GAVRILOVITCH.

Requiem Mass was sung at the Russian Church of St. Philip, Buckingham Palace Road, last Thursday, for M. Michel Gavrilovitch, Minister for the Kingdom of Serbs, Croats, and Slovenes. Fathers J. Lelinkhin, B. Timotheieff, and C. Vesselovsky officiated at the service, the Vedroff Quartette rendering the musical portions, unaccompanied. The King was represented at the service by Earl de la Warr, and the Duke of York by Lieutenant Colin Buist, R.N., while Sir William Tyrrell represented the Foreign Office. Members of the late Minister's family present included Mme. Gavrilovitch (widow), M. Dmitri Gavrilovitch (son), and Mlle. Anka Gavrilovitch (daughter).

Those who attended the service included:—M. Todorovitch, Chargé d'Affaires at the Legation of the Kingdom of Serbs, Croats, and Slovenes, the Greek, Bulgarian, Persian, Turkish, Albanian, and Egyptian Ministers, Miss Gertrude Holt (representing the Serbian Red Cross Society), the Roumanian Chargé d'Affaires with the Military Attaché, Colonel Antonesco, Mr. Athelstan Johnston (former British Chargé d'Affaires in Belgrade), Sir Charles des Graz, Admiral Sir Ernest Troubridge, Miss Hanbury-Williams (representing Lady Hanbury-Williams), Mahmoud Sabet Bey, the Afghan Chargé d'Affaires, General Sir George Milnes, M. Stoyanovitch, the Turkish Consul-General, M. J. Pavlovitch, M. C. Banat, Mrs. St. Clair Stobart and Mr. Stobart Greenhalgh, and Mr. Featherstone Witty (President of the Consular Corps at Bristol).

Professor and Mrs. Seton Watson, Mr. and Mrs. James Berry, M. Petroff-Tchomakoff, Mrs. B. Tufnell, Mlle. Damianovitch, M. and Mme. Myatovitch, M. Collas, Mrs. Robert Frank (Serbian Red Cross), Mr. and Mrs. Harold Williams, Captain E. F. Harvey, Mr. O. Pelly Dick (Department of Overseas Trade, Foreign Office), M. A. Lissevitch, Mr. Neville Mayman, the Serbian Consul in Sydney, the Rev. R. M. French (general secretary, Anglican and Eastern Churches Association), and Mr. Wickham Steed.

M. and Mme. V. Andjekovitch, Colonel G. Ostovitch, Dr. Subotitch, M. and Mme. Smodlaka, Dr. Tanascovitch, M. and Mme. Yertitch, M. Marmovitch (secretary of the Serbian Legation in Paris), Mr. F. E. F. Adam, Mr. J. B. Monck, Mr. Jeffery (representing Sir Edward Boyle), the Dowager Lady Boyle, Mr. H. Charles Woods, Mme. Slavka Grouitch (wife of the former Serbian Minister), the Hon. Harold Nicolson, Mr. Lampson, Mr. E. A. Walker, and Mr. J. H. F. McEwen (the Foreign Office). The coffin remained in St. Philip's Church until last Saturday, when it was conveyed to Belgrade for interment.

OBITUARY.

We regret to learn of the death, on October 23, at Sofia, of M. M. I. Momtchiloff, the greatly respected head of the Balkan Insurance Co. and other important Bulgarian commercial enterprises. He was only 62 years old, but had secured a high place among the most enlightened and progressive men of his country. He will be hard to replace.

Major-General Sir Robert Findlay Henderson, K.C.M.G., C.B., formerly of the Army Medical Service, and an old Rugby International, died recently at the Queen Alexandra Military Hospital, Millbank, aged 65. He saw much service, including campaigns in the Sudan, in Burma, and on the North-West Frontier.

The death occurred in Chicago on October 28 of Mr. James Berwick Forgan, aged 72. Mr. Forgan, who was chairman of the board of directors of the First National Bank and the First Trust and Savings Bank of Chicago, was decorated with the Order of St. Sava in recognition of his activities on behalf of the Serbians during the War.

Mr. Edward Bell, Chargé d'Affaires of the American Legation at Peking, died there on October 28. After several years of foreign travel Mr. Bell, who was born in New York on August 9, 1882, joined the American Consular Service in Egypt in 1909. Among other consular appointments, Mr. Bell held the Secretaryship of the Legation at Teheran in 1911 for a short period.

Mr. Harry Lionel Churchill, C.M.G., F.R.G.S., British Consul-General at Genoa, whose death occurred on November 5, held Consular appointments at, among other places, Teheran and Resht. Mr. Churchill married, in 1892, a daughter of the late Sir Joseph Tholozau, K.C.B., Physician-in-Chief for forty years to the Shah, Nasr-ed-Din.

The death occurred on November 7 of Sir Thomas Graham Jackson, R.A. Gaining most of his renown as an architect of scholastic institutions, he nevertheless made a name for himself as a lettered traveller. Among his publications were: "Dalmatia, the Quarnero, and Istria," "Byzantine and Romanesque Architecture," and "Memories of Travel," the last of which was reviewed in The Near East last year.

NOTES AND NEWS.

167, Strand, London, W.C.2,
Tuesday Morning.

The Empire Exhibition.

As I anticipated, it is now practically certain that the British Empire Exhibition will be in progress again next year. Speaking at the Lord Mayor's banquet at the Guildhall last night, Mr. Baldwin, after paying a tribute to the invaluable part played by the Exhibition in stimulating inter-Imperial trade and in expanding knowledge of the British Empire among all classes, said that the Government did not intend that this great enterprise should come to an untimely end. He declared that, provided the Dominions and the great industries of this country are prepared to do their share, Parliament would be asked for a guarantee to enable the Exhibition to continue. As in the changed conditions there is not likely to be any doubt as to the support of the Dominions and the leading industries here, we may therefore take it for granted that those who developed the Wembley habit this summer will be able to indulge it again in 1925.

Lack of Enterprise.

Last month an international motor exhibition was held in Zagreb, but while Italian, French, Austrian, German, American, Czecho-Slovak, and Belgian cars were exhibited, Great Britain was only represented by one or two firms in the motor-cycle and accessories sections. It is true that Yugoslavia at the moment can provide only a small market for motors, but as the figures given in these columns recently show, the Balkan markets for motors are steadily growing, and, while in present circumstances the prospects of immediate business must naturally be the main consideration of British firms, it is not less incumbent on them on that account to keep an eye on the future, and if they are to develop satisfactory relations with Yugoslavia, it is obviously essential that no undue advantage should be given to foreign competitors.

Turkish Finances.

The Turkish Budget, which has now been presented to the deputies, makes a very unsatisfactory showing, as it has been clear for some time was certain to be the case. The receipts are estimated at £T145,000,000, while the expenditure totals £T162,000,000, there being thus a deficit of £T17,000,000, which is really more than it appears to be, as no provision is made for the service of the public debt. It will be interesting to see what steps will be taken to meet this deficit, and while no doubt the Administration will find means to solve the problem, it is obvious that no country can face an unending series of deficits, and the only real solution is the economic development of Turkey, which, as I have emphasised frequently, demands a different attitude on the part of the authorities to foreign co-operation, whether in the shape of individual trade or otherwise.

A New Sudan Loan.

This week has seen the issue of a new Sudan Government Loan for an amount of £1,500,000, the principal and interest of which are guaranteed by the Imperial Government. The loan is in the form of Four per Cent. stock, and is issued at 86 per cent., which gives a yield of just over 4⅝ per cent. without making allowance for the premium on redemption. The issue forms part of a total authorised issue sufficient to raise a sum of £3,500,000 to complete the expenditure upon the works now under construction for the irrigation of the Gezira Plain. It is secured on the general revenues and assets of the Sudan Government, with priority over any existing charges except those in respect of the existing £3,763,400 Sudan Government 4½ per Cent. Guaranteed Stock.

The Outlook in the Sudan.

An interesting feature of the prospectus was a statement signed by Lieut.-Col. George Schuster, Financial Secretary to the Sudan Government, describing the trade and financial position of the Sudan. It is pointed out that it is expected that the Gezira Irrigation Works will be completed by July, 1925, which will enable irrigation to be commenced in time to produce a cotton crop for the season 1925-6, when the Sudan Government should begin to derive revenue from an expenditure which has hitherto been unproductive. The area to be placed under cotton under the scheme will be 100,000 acres, which should produce upwards of 75,000 bales of cotton, of the receipts from which the Government will be entitled to 35 per cent.

Improving Finances.

The trade and resources of the country, it is pointed out, are meanwhile developing in a satisfactory manner. Exports and re-exports for the first eight months of the year amounted in value to £E2,941,498, or nearly £E200,000 in advance of the total for the whole of 1923. The exports for the period in question include £E1,387,919 for cotton. The total cotton exports for this year are expected to amount to about 50,000 bales, as compared with 28,000 bales for 1923. There has also been a steady expansion of the shipping at Port Sudan, the tonnage of vessels visiting the port in 1923 being 2,265,375, as compared with 1,499,935 for 1922. The Budget statistics also make a very good showing. There was an average surplus from 1913 to 1917 of £E96,904, and for the five years ended

Digitized by Google

1922 this had risen to £E348,347, while for 1923 the surplus was £E373,663. It is pointed out that the expenditure for 1923 is actually considerably less than for the three preceding years, though it includes, moreover, for the first time, a proper provision for a renewals fund for the Government Railways and an allocation of £E72,000 to reserve for service of the Gezira loans.

Anglo-Persian Dividend.

The directors of the Anglo-Persian Oil Company have decided to recommend a dividend of 10 per cent. less tax on the ordinary shares for the year ended March 31, and to carry forward, subject to excess profits duty and corporation tax, £1,746,643. The distribution, which is the same as before, is in accordance with expectations.

Ottoman Debt Distribution.

The decision of the Commission for the allocation of the old Ottoman debt is now announced. £T17,500,000 is allocated to Greece, £T5,000,000 to Palestine, £T12,500,000 to Mesopotamia, and £T15,000,000 to Syria. The effect of this will be to reduce the charge falling on Turkey from £T9,500,000 to £T6,000,000. The States interested have a period of three months for the submission of protests against the allocation.

Growing Demand for Cotton Goods.

Among the earliest signs that are to be expected as an indication of a general trade revival is a growing demand for cotton goods from all parts, and it is satisfactory to be able to state that this is now in progress. For India and for some of the outlets of the Near East there has in recent weeks been quite an encouraging development of inquiry, which, if general conditions continue to improve, as they certainly will, ought before long to expand to an extent which will give Lancashire all the work required to keep the mills going on full time. There is, however, one necessity for the adequate expansion of the cotton trade, and that is cheap cotton. Provided that the raw commodity can be obtained round about 1s., it is possible for the manufacturers to offer goods at prices at which it is possible for the various markets to absorb them, but should cotton be dear trade would undoubtedly be checked for the world has not yet recovered sufficiently from the effects of the War to pay high prices for its requirements. Fortunately, as I have indicated on previous occasions, the crop outlook this year is very favourable, and rather tends to improve than otherwise. The American crop will almost certainly be well over 13,000,000 bales, while the latest reports of the Egyptian crop are very hopeful. The latest official estimate is a crop of 6,169,538 kantars, but the market expects the yield to be in the neighbourhood of 7,000,000 kantars, which should be fully adequate for requirements.

Commentator.

NOTICE.

TO COUPON HOLDERS OF THE

OTTOMAN 4 PER CENT. UNIFIED CONVERTED DEBT, 1903/1906.

In accordance with the provisions of Article 57 of the Lausanne Treaty, which came into force on the 6th August, 1924, the Council of Administration of the Ottoman Public Debt beg to notify the holders of coupons of bonds of the Ottoman 4 per Cent. Unified Converted Debt, 1903/1906, that the prescription period of six years for coupons which fell due before the 29th October, 1914, and which have not been presented for payment, is suspended from that date, to the 6th November, 1924, and that the remaining portion of the said period of prescription for these coupons will again become operative from the 6th November, 1924.

With regard to the coupons falling due during the period beginning on the 29th October, 1914, and ending on the 6th November, 1924, which have not been presented for payment, the prescription period will only operate from the latter date.

THE INDIAN TRADE OUTLOOK.

More Promising Conditions.

The adverse conditions in the Indian market since the war, resulting from a variety of causes, have had the effect of greatly accentuating the trade depression in this country. In recent months, however, there has been steadily accumulating evidence of the development of the Indian market, and Lancashire, which has been the principal sufferer through the absence of buying, has been quick to feel the stimulating effect of the swing of the trade pendulum. Naturally the question will be asked whether the present movement marks a definite turn in the Indian trade position; and it is interesting to note that H.M. Senior Trade Commissioner in India and Ceylon, Mr. T. M. Ainscough, O.B.E., in a review of British trade in India for the year ended March 31, which has been revised up to June, strikes a hopeful note.

The year 1923 is the first year since the depression set in at the close of 1920 during which it is possible, he points out, to record a distinct improvement in trade. Conditions, on the whole, have been favourable. For the third year in succession the south-west monsoon was a good one, and well-distributed rains brought prosperity to the countryside and considerable surplus crops for export. Political conditions were slightly more settled during the year, and the trade recovery was not handicapped to any extent by extremist agitation. The Indian Budget was balanced for the first time since 1917-18, and a halt was called to the increase of Customs duties which had been going on from year to year and had resulted in a considerable advance in the cost of living, particularly in that of the European in India. Exchange fluctuated considerably, but the general tendency was upwards. The year opened with a rupee rate of 1s. 4 1-32d., and closed with a rate of 1s. 5¼d., the intermediate highest and lowest points touched being 1s. 5 9-32d. and 1s. 3 29-32d.

The exports of Indian produce and manufactures showed an increase on the previous year of Rs. 47 crores, or 16 per cent., and reached a total of over Rs. 348 crores. The figures were swollen by the very high prices realised for the raw cotton exports, Italy and Japan each taking approximately 10 crores more of Indian produce (mainly cotton) than they did in the previous year. On the other hand, total imports were reduced by 5 crores, or 2 per cent., to a total of Rs. 227 crores. The high prices of cotton piece goods prevented that revival in the trade which had been hoped for in view of the low stocks, considerable demand, and latent purchasing power in the country. The balance of trade in merchandise reached the record total of 144 crores of rupees in India's favour, and although this was to some extent counterbalanced by a net import of 48 crores of specie and 34 crores of Government remittances, the net visible balance amounted to no less than 61 crores of rupees.

The process of liquidation of the heavy stocks of imports which accumulated during the short-lived boom of 1919-20 is now practically completed, and the large quantities of Government surplus stores

Digitized by Google

have also been absorbed, so that it may be stated with confidence that the market at the close of 1923 was in a healthier state than it had been at any time since the War.

The Outlook in the Import Trade.

For the first time after four years of unprecedented depression it is possible, he states, to sound a note of guarded optimism. Stocks of imported goods throughout the country, both in importers' and dealers' godowns and also in upcountry hands, are very light. Purchases, notably of piece goods, during the past four years have been on a very small scale, and he is convinced that there is an immense amount of latent purchasing power in the country, which will be translated into actual buying if only manufacturers' prices can be reduced and, more important still, if only some degree of stability in cotton goods prices could be reached which would engender confidence. During the past year the demand for cotton goods has been insistent, and the relative meagreness of the actual transactions put through is solely due to the high and fluctuating prices caused by the constant variations in the price of raw cotton. Clear evidence of the accumulated purchasing power of the country is provided by the fact that during the past three years there has been a net import into India of Rs. 67,58 lakhs worth of gold and Rs. 51,50 lakhs worth of silver. These were years of good monsoons and considerable prosperity in the country districts. Had it not been for the high prices of imported goods and a feeling of distrust in their stability, there is little doubt that a very considerable portion of these sums would have been invested in piece goods, yarn, and other imports. As it is, the bulk of these amounts have been hoarded until such time as purchases can no longer be postponed.

For the fouth year in succession, India is likely to be favoured with good crops. Importers and dealers have realised good profits on recent arrivals of goods, which have been cleared into consumption fairly promptly, and this is giving buyers more courage to enter into forward transactions than they have hitherto had. The business so far transacted in Bombay, Karachi, Delhi, and Amritsar has been far below the normal scale in volume, but Calcutta and Madras, which were not so badly hit by the slump in 1920-21, have purchased slightly more freely. Business in the upcountry markets, particularly in Delhi and Amritsar, has so far been on a very limited scale, owing to the fact that, in the first place, British shippers are somewhat reluctant—after their disastrous experiences of the past few years—to commit themselves too heavily at present high prices, and are, in many cases, confining themselves to maintaining their old markets. Secondly, the attitude of the banks is a cautious one, and in many instances the opening of a credit by the importer is insisted upon. Moreover, the Indian importers and dealers have sustained such heavy losses that in most cases their present capital resources are limited, and it is satisfactory to note that they are not inclined to speculate. It would appear, therefore, that in these markets we may look forward to a period of slow but steady recovery, and the cautious attitude of all parties is contributing to this end.

A most hopeful factor, he adds, is the subsidence of that political and racial feeling which was such a marked feature in many markets during the crisis of 1920-21. In the past the relations subsisting between the European and Indian mercantile communities have always been most cordial and friendly. After the brief interregnum of 1921 and 1922, it is most satisfactory to note that the amicable relations between European importers and representatives and their Indian clients are once more restored. The opinion is frequently expressed by Indian dealers that they are tired of politics and agitation, and desire nothing more than a period of tranquility, during which they may once more extend their business and make good the heavy losses which most of them sustained during the last few years.

The one uncertain element which might delay or prevent that recovery in trade which seems to be inevitable would be a recrudescence of political agitation. The political situation in India is still somewhat obscure, and it would be somewhat rash to venture any forecast of the future. When one contrasts, however, the present attitude of the Swarajist members of the Legislature with that of only six months ago, there is ground for hope that in time they may settle down to acceptance of the position of a more or less responsible opposition. The political as well as the economic horizon in India would appear to be distinctly clearer than it was in 1921 and 1922.

Indian political and national feeling, which has steadily increased in intensity and influence since the reformed Legislatures were opened in 1921, Mr. Ainscough continues, is affecting British economic interests in a variety of ways. In the first place, both the Indian and also the non-official European members of the Legislature are determined that, in future, all purchases of stores for Government requirements shall be made in India, and that all tenders shall be called for in India and in rupees. These claims have been met by the Government of India to some extent. The revised Stores Rules permit the newly organised Indian Stores Department at Delhi/Simla to purchase almost unlimited quantities from stocks held in India or in the course of shipment. They also sanction purchases of machinery and plant from the Indian branches of British manufacturers, or from their technical agents. There seems to be little doubt that the new Indian Stores Department will rapidly increase in importance, and that the centre of purchasing influence, so far as imported stores are concerned, will be transferred from London to India. It is probable that some form of organisation in London will always be required, as it will be necessary for India to be in touch with the latest world practice in engineering and railway working, and such a connection can

best be maintained through the consulting engineers in London. Events are moving very quickly, however, and as the new system of purchase will call for a complete re-orientation of policy on the part of those British suppliers who have hitherto confined their attentions to the India Store Department, London, and are not represented in this country, he has deemed it advisable, in Chapter II., to deal with every aspect of the question. He would commend this chapter to the attention of all firms who are interested in supplying stores of all kinds to the Government of India, as the importance of the changes now being made in the system of purchase cannot be over-estimated.

Demand for Protection.

The granting of fiscal autonomy to India has resulted in an insistent demand for a protective tariff. The various events leading up to the acceptance by the Government of India in 1923 of a policy of discriminating protection and the creation of a Tariff Board are dealt with at some length in Chapter III., while in Chapter IV. will be found an analysis of the Indian steel industry (Protection) Act, 1924, and a forecast of its probable effect on British steel exports. The Tariff Board are at present engaged upon an inquiry into the claims of the paper and cement industries, and there seems little doubt that we shall see a procession of Indian industries seeking favours at their hands. It must always be borne in mind, however, that the Tariff Board scrupulously followed their terms of reference in the first inquiry into the steel industry, and made it perfectly clear that they would not recommend any increase of duties on articles which could not economically be manufactured in India. Moreover, they stated unequivocally that the degree of protection which they were prepared to recommend would not exceed the difference between the cost at which they were satisfied that it is possible to manufacture in India and the normal cost of imported articles of the same kind. The ability and thoroughness which characterised their first inquiry gives ground for confidence that subsequent investigations will be conducted with scrupulous fairness, and with due regard to all the interests involved, and particularly to the well-being of the community.

Moreover, even though the Tariff Board recommend protection for an industry and the Government of India are prepared to embody their recommendations in a Bill, this Bill must always be passed by the Indian Legislature before it can become operative. The recent debates on the Steel Industry (Protection) Act clearly showed that the Assembly is by no means unanimously protectionist in sympathies. The interests of the predominantly agriculturist provinces were voiced by several members and the small but vocal Labour group in the House lost no opportunity of presenting the case of the poor man, whether he be a cultivator or an employee in industry. The Steel Bill was passed with little difficulty, as the Tata Iron and Steel Works are regarded with pride as the largest purely national industrial effort which India has made. This sentiment, however, will not be so strong in the case of minor industries, particularly those which are mainly owned and managed by Europeans. It is likely that the applications of those industries with perhaps lesser claim to protection will meet with much keener opposition.

The imposition of increased duties in order to protect certain Indian industries will, without doubt, adversely affect our trade with India in the articles concerned, and will probably cause some readjustment in our trade. For instance, it is quite conceivable that, as a result of the recent steel tariff, British exports of steel bars, sections, rails, etc., will decline while exports of fabricated steel such as bridgework and parts of steel buildings may increase. There does not seem to be any ground for immediate alarm. The number of industries which would satisfy the three conditions enumerated is limited, while—on the other hand—important industries such as cotton, jute, and tea do not require protection. The Government of India are not likely to sanction any extreme measure of protection, relying as they do on import, export and excise duties for a large part of their revenue. Furthermore, the responsibility of protecting the interests of the vast body of agriculturists, who are the backbone of the country, but whose greatest need is for cheap clothing and other necessities, still rests with Government. The interests of the cultivator are directly opposed to those of the industrialist in this matter, and when one considers that over 70 per cent. of the people depend upon agriculture for their livelihood, these interests must tell in the end. It is quite likely that after a few years of protectionist agitation the representatives of the Indian people will come to the conclusion that their best interests lie rather with an increased application of science to agriculture than with the artificial stimulus of industries, which drain their labour into large towns, and whose claims for protection raise the cost of living throughout the country.

Latent Purchasing Power.

With the exception of the year of abnormally high exchange, 1920-21, and its aftermath in the following year, there has consistently been a heavy net balance of exports of merchandise in favour of India. This has hitherto been adjusted by a net import balance of Government funds, as the result mainly of the sale of Council Bills in London, and also by a considerable net import of the precious metals. The heavy imports of gold and silver during the past two years are noteworthy, as they tend to show that the agricultural prosperity of the past

two years, as a result of good monsoons, has led to hoarding rather than to purchases of imports. A latent purchasing power is therefore being accumulated until such time as greater confidence is felt in the stability of home prices. The balance of trade in merchandise during the past year has surpassed all records, and amounts to no less than 145 crores of rupees (say, £100 millions sterling). This has been largely due to the high prices obtained for the exports of raw cotton, and brought in its train acute financial stringency during the last months of 1923 and the first quarter of 1924. Not only were exceptionally large amounts of money required to finance the purchases of cotton and other produce for export, but it was found that a longer time than usual elapsed before this money returned into circulation and back to the banks. Consequently, the Imperial Bank was forced to raise its rate to 9 per cent, at which it remained for several months. Even after allowing for the heavy net imports of treasure and considerable Government purchases of sterling in India—the method adopted last year in lieu of the sale of Council drafts by the India Office in London—there remains a net visible balance of trade of no less than 62 crores (roughly, £40 millions). It is little wonder, therefore, that exchange has remained firm, and even in July, 1924, which is during the slack export season, stood at 1s. 5d. T.T.

REFRIGERATOR FACILITIES AT BUCHAREST.

The British Vice-Consul at Bucharest (in a recent report) states that the refrigerating storehouses of the "Frigul" Company, of Calea Serban Voda 186/188, are now functioning as the Wholesale Market and the Communal Refrigerating storehouses for perishable goods. This firm state that they can store up to 10,000 tons of supplies annually, and claim to be the only firm in the country using the most recent processes. A copy of the regulations for the use of this company's refrigerating storehouses may be consulted by British companies interested at the City Office of the Department of Overseas Trade (Shipping and Transport Section), 73, Basinghall Street, London, E.C.2.

It is stated from Bucharest that Mr. Lawrence E. Rutherford has been appointed Roumanian Consul in Liverpool.

M. Majareff, Minister of Justice, has become Minister of Railways in the Bulgarian Cabinet. M. Bobocheffski, Minister of Commerce, has become Minister of Justice, and M. Dimitri Christoff has been appointed Minister of Commerce.

SHIPPING INTELLIGENCE

P. & O. AND BRITISH INDIA COMPANIES.

Calls at Algiers and Port Sudan.

During January, February, and March a direct passenger service between London and Algiers will be carried on by the P. and O. and British India Companies; there will be five departures: January 16 (Mandala), January 30 (Khyber), February 13 (Modasa). The Cathay and Comorin on their maiden voyages from London on February 27 and March 27 respectively will also take passengers for Algiers.

The Khyber, from London on January 30, will also call at Port Sudan, and thereafter alternate Australia steamers will maintain direct communication between London and Port Sudan at intervals of four weeks, the first homeward sailing from the latter port being by the Khyber on April 24. The voyage between London and Algiers will occupy five days; between London and Port Sudan thirteen days.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Olympia for Bombay (Liverpool, November 22). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Matheran for Port Said, Colombo, Madras, and Calcutta (London, November 15).

Bibby Line.—S.s. Warwickshire for Port Said, Colombo, and Rangoon (Birkenhead, November 19).

British India Line.—S.s. Boyne for Bombay and Karachi (London, November 15); s.s. Malda for Colombo, Madras, and Calcutta (London, November 22).

Ellerman "City" Line.—S.s. City of Sparta for Calcutta (Birkenhead, November 24).

Ellerman's Westcott and Laurance Line.—S.s. Trentino for Gibraltar, Malta, Piræus, Salonika, Smyrna, Constantinople, Galatz, and Braila (London, November 15).

Johnston Line.—S.s. Kenmore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, November 22); s.s. Quernmore for Piræus, Volo, Salonika, Bourgas, Varna, and Constantza (Liverpool, Dec. 6).

P. and O. Line.—S.s. China for Bombay (London, November 14); s.s. Nellore for Colombo, Madras and Calcutta (London, November 15).

LONDON PRODUCE REPORT.

Rise in Dried Fruit.

(From Our Own Correspondent.)

London, Tuesday Morning.

Coffee.—The market has been very firm. Costa Rica is unchanged at 164s., East India is the same at 148s., Kenya is unaltered at 146s., while Santos remains at 118s.

Sugar.—Home refined has continued in fair request. Tate's cubes are 41s. 3d., London granulated is 36s. 7½d., while Lyle's granulated is 36s. 10½d. Foreign descriptions have been variable. West Indian crystallised is 3d. up at 35s. 3d., White Java is 1s. down at 33s., while Czech granulated is 9d. lower at 20s. Futures have been easy: —December, 18s. 4½d.; March, 18s. 1½d.; May, 18s. 3d.

Maize.—The market has been rather harder. La Plata afloat has been done at 44s. 6d., while November-December has been done at 45s. 6d., December-January at 47s. 6d., and January-February at 48s.

Currants.—A rather variable tendency has prevailed, and business has been somewhat irregular. Gulf and Panariti have again been in fair request. The demand for Australian currants has again been a feature. Prices generally are very firm, and no change is to be expected in this connection until the Christmas trade is over.

Sultanas.—Smyrnas have again been in strong request, and prices have again advanced. Cretans are now so dear that business has been rather restricted in this quality. Australians have again moved off very freely. In view of the market position generally it would seem evident that before very long there must be a sharp advance in prices.

Figs.—A very extensive business has been done, particularly in Naturals, and, as supplies are relatively small, the tendency is for prices to advance.

Dates.—The demand is so far only moderate, and supplies are more than sufficient to meet it, and transactions are now being effected at lower prices.

Plums.—The demand has continued. Purchases for the Continent have been particularly large, and prices generally have sharply advanced. As supplies are poor this season, it looks as if we are in for a period of high values, which will tend to benefit other varieties of dried fruits.

Oilcakes.—The market has been rather variable. Linseed cake is 5s. down at 275s., cottonseed cake is 7s. 6d. lower at 172s. 6d., while coconut cake is 12s. 6d. up at 252s. 6d.

Oilseeds.—Linseed has been dull, Indian being 6d. down at 23s. 9d., while La Plata is 4½d. down at 21s. 6d. Rapeseed has been variable. Toria is 1½d. lower at 24s. 10½d., while real bold Ferozepore is 4½d. up at 24s. 3d. Cottonseed has been fairly steady. Indian is 6d. down at 11s. 6d. Egyptian black at 14s. 3½d. is 1½d. down, while Sakellarides is 3d down at 13s. 4½d.

Seed Oils.—Linseed oil has been weak, and at 44s. 6d. is 1s. 3d. down. Rape oil has been steady, with crude unchanged at 52s. 6d., and technical refined unaltered at 55s. 6d. Cotton oil has been weak. Refined common edible is 1s. down at 51s., Egyptian crude is 6d. down at 46s., while deodorised is 2s. lower at 52s.

SPECIAL MARKET REPORTS.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank:—

Jaffa, October 26.

The tendency of the prices of cereals is still to rise. All articles of food have increased in price proportionally. Rain fell during the week.

Haifa, October 18.

The cereal market is quiet. Offers and demands are numerous, but there are more demands than offers. The rise in exchange continues uninterrupted.

Teheran, September 6.

There is no improvement to report for the past week. Exchange keeps at the same level, with the exception of the rupee.

The following report is taken from the monthly circular of the bank:—

Mesopotamia.

Piece-Goods.—Since the despatch of our last report, the market improved slightly and an appreciable revival in the piece-goods market ensued. But unfortunately this revival lasted only a fortnight—from August 25 till September 10—and from this latter date business has been at a complete standstill. This stagnation is consequent on the sudden fall in the prices of cotton in Manchester. Buyers have refrained from effecting any purchases anticipating a further fall. Practically no sales are taking place. Present prices are nominal, and no business is being transacted. Persia is not a buyer at present, but it is expected that huge orders will reach this side about the middle of October.

The present stocks are not large, but if a further fall in prices takes place in Manchester, a panic will spread amongst buyers, with the inevitable result that stocks will accumulate and their disposal will become difficult. Merchants will then find themselves in an embarrassing position.

Review of the Economic and Commercial Situation.—No improvement has taken place, and the crisis through which the country is passing is even worse than it has ever been. It is now realised in responsible quarters that the only hope of improving the economic situation is by the exploitation of the natural resources of the country. The Government is willing to consider proposals for the development of the country's national wealth. It is confirmed that the Asfar concession will work shortly.

We understand also that negotiations are proceeding for the granting of a concession of oil to a company already established in Baghdad. The result of the negotiations hitherto made are not known, but it is believed that the issue will be favourable.

Egyptian Hotels.—Talons at the side of the preference share warrants to bearer must now be surrendered to the company at 11, Ironmonger Lane, E.C.2, the Anglo-Egyptian Bank, London, Cairo, or Alexandria, or the Banque Commerciale de Bale, Basle, Switzerland. They must be listed on forms which can be obtained upon application from the company or from the banks above mentioned.

The Turkish Government has appointed Sefa Bey, Under-Secretary of State for Agriculture, as its representative at the next session of the Opium Conference, which will meet at Geneva on November 17, in order to study the question of the limitation of the manufacture of the various products of opium (says a Reuter message). This will be the first time that Turkey has participated in an international meeting held under the auspices of the League of Nations.

Cotton and Cotton Goods.

THE EGYPTIAN MARKET.

Futures Firm.

The Alexandria Commercial Company, in their report for the week ended October 30, state :—

Since our last report the futures market has shown great firmness, especially for Sakellarides; the net changes on the week are the following :— Sakellaridis, $1.91 up for November, $1.95 up for January, $1.58 up for March, $1.22 up for May; Ashmouni, $0.45 up for December, $0.18 up for February, $0.25 up for April. This week's firmness must be again attributed to the intensive demand and the high premiums paid for spot cotton. There is no doubt that spinners' purchases during the summer and the beginning of the season must have been larger than was generally thought: although October shipment commitments have now been covered, exporters continue to be keen buyers of spot cotton on the local and up-country markets, and in many cases pay rather exaggerated premiums. Another factor which is contributing to the firmness of the futures market is that so far not much hedging has taken place; this is due to the fact that, apart from rare exceptions, the native, while the market is rising or keeps steady, will not hedge his holdings, and this is precisely what has happened this season. New York fluctuations have so far influenced our market very little, and the premiums of Egyptian cotton over American have now increased to $19.40 for Sakel and $6.47 for Ashmouni, the exchange difference not being taken into account. This week's demand from abroad has been good. It is generally believed that the crushing victory of the Conservative Party in England will do much towards an improvement in trade conditions. The week's receipts amount to 448,536 krs., against exports 212,525 krs.; the stock stands at 1,452,801 krs.

Spot.—We have had an active week at Minet el Bassal, and sales amount to about 35,000 B/s, of which we estimate 16,500 B/s Sakellarides, 9.500 B/s Uppers, 7,400 B/s Zagora, 1,100 B/s Pilion, 300 B/s White, and 200 B/s Brown. In spite of the heavy crop movement and large arrivals, there is as yet no tendency on the part of holders to press sales, and there has again been sufficient demand to maintain the present abnormal spot premiums.

Sakellaridis.—There has been business in all styles, cotton from Fully Good Fair upwards receiving most attention. Prices of spot against contracts are generally without much change.

Uppers.—All styles, except the very low grades, have been dealt in. Spot premiums are unchanged.

Lower-Egypt Zagora has again been in good request, mainly in the grades above Fully Good Fair. Last week's spot premiums are maintained.

Pilion has been in good demand, especially the higher grades. Spot premiums are considerably dearer and are very irregular. There has been keen competition for really good grade lots, and high premiums have been paid.

Brown.—A fair business has been done. Spot premiums are unchanged except for good and better, which are rather dearer.

White.—A moderate business has been done. Spot premiums are somewhat easier than last week.

Reuter's Jerusalem Correspondent states that 1,140 tons of tobacco are available for export this season, and the Department of Agriculture is forwarding samples of leaves to British and Continental markets. Packing will begin in a month's time.

COTTON TRADE REVIEW.

The Price of Cotton.

The Manchester Cotton Trade Review of the Imperial Ottoman Bank for the week ended November 8 states :—

Nothing of special interest has transpired during the past week. Trading has continued on the more subdued lines recently noted, but the amount of business passing appears sufficient to maintain spinners and manufacturers in the stronger attitude they have lately adopted. Probably a much larger volume of business could be transacted if there were more confidence that prices will not be lower in the near future, both through a reduction in raw cotton quotations and also in the cost of making yarn owing to an extension of working hours.

Yarn.—Spinners of American yarns commenced this week to run 32 hours instead of the 26¼ which have been in force for so long. Moreover, the Federation has decided to take a ballot of its members on the question of a further extension of working hours commencing in December, although itself recommending no increase. As regards the mills themselves, many of them are well booked up for some time ahead, and the prospective larger output has had no influence on the tone of the market. Manufacturers requiring early delivery find difficulty in discovering spinners in a position to accommodate them. Margins in general are said to be bigger to-day than for a considerable time past, and spinners appear determined to take the fullest advantage of the better position in which they now find themselves. In Egyptian spinnings the position has become somewhat irregular owing to the difficulties of raw cotton supplies and the high prices thereof.

Cloth.—There is nothing of special interest to report as regards the cloth section. A moderate business has been done with India, which has been, as usual, by far the largest buyer. Egypt and the Near East have given good support, and, in fact, proportionate to size, have been perhaps the best of the foreign markets. Little business transpires for China, and the high price of Egyptian yarns seems to be restricting business in the finer cloths which the United States usually take.

Raw Cotton.—In American cotton a quiet week has been experienced, with a tendency towards slightly lower prices. Another Bureau report is due to be published in New York this afternoon, and, in view of the very favourable weather recently, it is expected to show an improved position. In Egyptian the market has fluctuated much more and at times in quite an excited manner. Whilst the total crop is expected to be up to the average of recent years, it appears to be thought that the supply of Sakellaridis will be very short and, in consequence, prices have moved upwards.

Closing quotations yesterday were as follows :— American Middling, 13.25; Egyptian Fully Good Fair, 26.00.

TEXTILES.

IF you wish to obtain your Textile goods from England at the lowest possible prices, communicate with K. JEBARA, 25, Princess Street, Manchester. (Established 1887).

LIVERPOOL COTTON REPORT.

Business Quieter.

Messrs. Reynolds and Gibson report as follows for the week ended November 5 :—

Egyptian Spot.—Business has been much quieter during the past week, and price fluctuations have kept within narrow limits, and on balance show but little change. The general inquiry has shown a considerable falling off, which can probably be attributed to the large amount of cotton taken by spinners last week, and, partly no doubt, to the high prices asked for certain qualities. In Sakel, Good Fair and Fully Good Fair have been in good request, but these qualities continue to be very scarce, as is also any really good staple lot amongst the better grades. Prices are irregular; F.G.F. Sakel was sold to-day at 25.25d. and various lots of rather wasty "Good" cotton are on offer round about 26.50d. There is a growing reluctance amongst spinners to pay current prices, but although many of them still persist in the "big break" theory, there are signs that others are gradually altering their opinions, and are more disposed to accept the situation as it stands. Judging by what we have lately seen in the Sakel market, staple cotton is not going to be easy to find this season.

In Uppers, the same difficulty is beginning to present itself, and already spinners are complaining about the difficulty in finding staple cotton. Only a moderate business has been done in this growth. Pilion has been in improved request, and the basis for this cotton has hardened considerably during the past ten days; prices are somewhat irregular, and it is obvious that this growth has not yet found its proper level. Actual business has been only on a small scale. Only a small business has taken place in Sudan Sakel, but a fairly good inquiry still persists for the better staple lots in White Sudan, with little or no material result however. Other growths have been neglected. A fair business has taken place in cotton for shipment, and Alexandria prices have remained very steady. Forwardings to spinners for the week ending 31st ult. were returned as 14,614 bales. Estimated sales 1,300 bales Egyptian, and 150 bales Sudan. Quotations of Brown and Upper are reduced 5 points, those of Sakel are reduced 5 points for Fair, Good, and Fine, whilst Good Fair is 5 points lower, Fully Good Fair 20 points lower, and Extra Fine 20 points *higher*. Fully Good Fair Sakel to-day 25.40d.

Egyptian Futures.—Taken throughout, the tone in this department since we last wrote has been very steady. At periods considerable liquidation has been in evidence, but the resultant reactions have only been of a minor character, and generally followed by the gradual re-establishment of previous levels. Near positions continue to show the greater strength, November to-day being traded in at 200 points over January. With the standard quality still running roughly 200 points over the contract value, a further widening would appear inevitable as the present month progresses. So far there are no evidences of the anticipated break in values at the other side, and, whilst judging from the daily receipts, cotton is moving with greater freedom, it would appear as if the demand from exporters is sufficiently active to encourage growers to hold out for full premiums, as in this market contract values in Alexandria are considerably below the actual spot basis. This particularly applies to the Sakel options there. Uppers are on quite a different basis, being more under the influence of the American market. The Alexandria General Produce Association have just published their crop estimate, the figure given being about seven million kantars; this has been the generally accepted out-turn for some time, and has had little effect on the course of the market. Trade reports continue to be satisfactory, and in some quarters spinners have covered their commitments by substantial purchases of actual. Probably, on the whole, consumers are in a more comfortable position as regards supplies than they have been for some weeks, and, even granting that holders in Egypt are in a fairly strong position, should a slackening off in the local demand coincide with weakness in the American markets, some cheapening from the present level might be induced. Even with considerably reduced consumption, it would appear that there is insufficient Sakel cotton this season to go round.

SMYRNA FRUIT MARKET.

Messrs. C. J. Giraud and Co. report as follows for the week ended October 25 :—

The arrivals of sultanas on the Smyrna market since the opening of the season are estimated at 32,000 tons, and the sales to date are put at 30,200 tons. Closing prices: Per cwt., c.i.f. London—Type 12, 46s.; 13, 50s.; 14, 53s.; 15, 57s.; 16, 65s.; 17, 75s. The sultana market is strong. Prices show a small advance on last week's level. Indications point to the advance continuing.

The production of the Dacia Romano Petroleum Syndicate for October was 370 tons.

Eleven hundred and forty tons of tobacco are available for export from Palestine this season. Samples of leaves are being forwarded to British and Continental markets.

The production of the Indo-Burma Oilfields (1920), Ltd., for September was 4,572.4 barrels, being 3,243.8 barrels from Yenanma field and 1,328.6 barrels from Padaukpin field.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended October 20 amounted to £E14,109, making the total from April 1 £E172,001. In the corresponding periods of 1923 the figures were £E11,545 and £E145,503.

CHESS.

By "CARO-KANN."

Owing to the election, the season can scarcely be said to have properly begun yet. This week, however, will see most of the tournaments in full swing. I understand that the championship of the Metropolitan Club will commence on Saturday. While I have not yet seen the entries, I have reason to believe that they will be much stronger than in recent years, though there is unfortunately no prospect of their being up to the high standard reached a few years ago.

The development of tournaments and leagues in recent years has been most pronounced, and the lot of the player who is in demand for these competitions is not to be envied. I know one individual who expects to average between four and five games per week until the season ends. Possibly that is an exceptional case, but there is no doubt that the enlarged season is now beginning to tell on many of the players.

The following game was played in the British Championship at Southport between Mr. R. H. V. Scott (White) and Mr. R. P. Michell (Black):—1 Kt—KB3, P—Q4; 2 P—B4, P—QB3; 3 P—Q Kt3, B—B4; 4 B—Kt2, P—K3; 5 P—KR3, Kt—B3; 6 P—KKt4(a) B—Kt3; 7 B—Kt2, QKt—Q2; 8 P—Q3, B—Q3; 9 QKt—Q2, Q—K2; 10 P—R3, PKR3; 11 P—Kt4, P—QR4; 12 P—QKt5, BP x P; 13 P x KtP, 0—0; 14 Kt—B, P—K4; 15 Kt—R4, Kt—Kt3; 16 Kt—K3, KR—K; 17 KKt—B5, B x Kt; 18 Kt x B, Q—Q2; 19 Kt x B, Q x Kt; 20 0—0, QR—B; 21 Q—Kt3, P—R5; 22 Q—Q, B—B4(b); 23 B x KP, Q—Q2; 24 P—B4, R x P; 25 R—B, R—QB; 26 R x R ch, Q x R; 27 B—Q4, KKt—Q2; 28 P—Kt5, Q—B3; 29 Q—R, QKt3; 30 P—R4, P—B4; 31 Q—B3, K—R2; 32Q—B7, Q—QB3; 33 Q—Q8, Q—K3; 34 P—R5, QKt; 35 Q—K7, Q—KB; 36 Q—K6, 36 Resigns.

(a) In the best style of the ultra-modern school.

(b) An oversight. KKt—Q2 should have been played.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.)

Egypt.

Water Tower.—The Ministry of the Interior in Egypt invites tenders for the supply and erection of a water tower at Mit Ghamr. December 1. (D.O.T.)

Incandescent Metallic Filament.—The Superintendent of Stores, Egyptian State Railways, Telegraphs and Telephones, Bulâq, Cairo, invites tenders for the supply of incandescent metallic filament and half-watt lamps. December 2.

Soap. — The Financial Secretary, Egyptian Army, War Office, Cairo, invites tenders for the supply of 110 tons of hard soap to Egyptian Army Supply Stores, Tura. December 2.

Coal.—The General Manager, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply of 200,000 metric tons of colliery-screened Welsh steam coal. December 3.

Cloth.—The Administration of the Egyptian State Railways invites tenders for the supply of cloth for clothing for the summer of 1925 and the winter season 1925-26. The cloth required is:—Cloth, blue, for uniforms and overcoats; cloth, dark grey, for uniforms and overcoats; cloth, light grey, for uniforms and overcoats; khaki serge, khaki drill, blue jean. The total cost, estimated on last supply prices, is approximately £9,300, delivered Egypt. Copy of specification may be obtained on application, against payment in advance of 250 mills., at the Inspecting Engineer's Office, Egyptian and Sudan Government, Queen Anne's Chambers, London, S.W.1, where standard samples are on exhibition. December 9.

Axlebox Pads.—The Egyptian State Railways invite tenders for the supply of lubricating axlebox pads. Tender forms and specifications can be obtained from the Inspecting Engineer, Egyptian and Sudan Governments, Queen Anne's Chambers, London, S.W.1. December 15.

Railway Sleepers.—The General Manager, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply of wooden railway sleepers. December 16.

Steel Reservoir.—The Ministry of the Interior invites tenders for the supply and erection of a steel reservoir of 300 m^3 capacity, with all steel work, etc. December 20. (D.O.T.)

Turkey.

Wagons.—The Ministry of Public Works invites tenders for the supply of 40 wagons for rails and ballast, of which 25 are for the Angora-Moussakeuy line and 15 for the Samsoun-Siva line. November 21. (D.O.T.)

Bridges.—The Commissariat of Public Works invites tenders for the supply and erection of five metal bridges on the Samsoun-Sivas line. November 22 (D.O.T.)

Greece.

Theatre, etc.—Tenders will shortly be invited for the building of a theatre, restaurant, and other works in Salonika and the demolition of certain old buildings there. (D.O.T.)

NEWS FROM ALL SOURCES.

The output of the Anglo-Egyptian Oilfields for the week ended October 31 was:—Gemsah, 14 tons; Hurghada, 3,248 tons.

Egypt imported locks and fittings in the first six months of 1924 to the value of about £36,000. Germany secured the bulk of the trade.

The Madras Electric Supply Corporation announces an interim dividend of 2½ per cent., free of tax, payable to ordinary shareholders registered on November 11.

A Reuter message from Bucharest states that the Minister of Finance has made arrangements for the payment of all outstanding domestic Treasury bonds.

Reports from the Algerian property—in which the Algerian Oilfields, Ltd., is interested—state that the production for the month of October was 192 tons.

With the departure of the General Metzinger on November 5, the Compagnie des Messageries Maritimes resumed its weekly service between Marseilles and Alexandria.

Steaua Romana (British), Ltd., are advised that the production of the Steaua Romana Co., Bucharest, for October was 24,420 tons, as compared with 24,120 tons during September.

A conference of Indian Princes will be opened at Delhi on November 17; and on the same day the Finance Members from all the Provinces will meet in conference under the chairmanship of Sir Basil Blackett.

The registered offices of the Anglo-Persian Oil Company were transferred this week from Great Winchester Street to Britannic House, Finsbury Circus, but the transfer and accounts departments will continue in the old offices until next month.

The numbers are announced of 381 bonds, amounting to £43,930, of the Kingdom of Roumania Four per Cent. External Loan of 1922, which have been drawn by lot in Bucharest for payment on December 1 by Messrs. Helbert, Wagg, and Co., 37, Threadneedle Street, E.C.

The importation into Roumania is prohibited of carpets of wool of any form, with or without warp of other material, with cut or uncut pile, classified under No. 108 of the Roumanian Customs Tariff. Carpets shipped to Roumania before October 9 may be imported.

A Bulgarian Royal decree announces the appointment of M. Dimitrie Cristoff to be Minister of Commerce and Industry, in the place of M. Bobochevski, who has been appointed Minister of Justice. M. Madjaroff, the former Minister of Justice, has been appointed to the vacant Ministry of Railways and Posts.

In accordance with the provisions of Article 57 of the Lausanne Treaty, which came into force on August 6, 1924, the Council of Administration of the Ottoman Public Debt notify holders of coupons of bonds of the Ottoman Four per Cent. Unified Converted Debt 1903-1906 that the prescription period of six years for coupons which fell due before October 29, 1914, and which have not been presented for payment, is suspended from that date to November 6, 1924, and that the remaining portion of the said period of prescription for these coupons will again become operative from November 6, 1924. With regard to the coupons falling due during the period beginning October 29, 1914, and ending November 6, 1924, which have not been presented for payment, the prescription period will only operate from the latter date.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

The Fate of Zaghloul Pasha.

It is difficult at the moment to take very seriously the swift resignation of Zaghloul Pasha and his return to power, for, in the absence of further details, the affair bears the aspect of jig-saw work, the hitch being rather due to grit in the machinery than to the over-riding of any great human principle. No doubt there has of late been an increasing attempt to get in between the Egyptian Premier and the exercise of his full constitutional power—everyone knew that the real power in Egypt lay in other hands than those of the aged Nationalist. But it would perhaps be unjust to attribute all the "intrigues," of which so much has been made, to one side. In essence, the matter concerns Egypt alone, and it is not for any other country to endeavour to deal with the forces, either inside or outside Egypt, that have been endeavouring, and will doubtless, in spite of the re-installation of the Premier, continue to endeavour to take the real control of Egyptian affairs from Zaghloul Pasha. Yet it is curious to note the very un-Western manner in which Zaghloul Pasha tried to get out of his predicament—the act of resigning when one knows that one's resignation will not be accepted may be a manœuvre that will stir a crowd, but it will probably fail to impress more trained observers. The remainder of the Egyptian Premier's stormy career is bound to contain valuable lessons for those responsible for future relations between his country and Great Britain.

The Ubiquity of M. Raditch.

A question which, it appears, M. Raditch has periodically to ask himself is, "What does he know of Belgrade who only Belgrade knows?"; certainly, if wide experience (in the geographical sense) were any qualification in Yugoslavia for statesmanship, M. Raditch's reputation would stand high. For he is a much-travelled man. Without warning, but on a very definite negative purpose, one finds him in Russia, in England, in France; at this moment he is enjoying a rapidly-sought refuge in Switzerland. For if London can produce a "Zinovieff letter," shall Belgrade lag behind? The Pashitch Government, it seems, are satisfied that M. Raditch contemplated, or actually effected, treasonable arrangements with the Soviet Government of Moscow, and intend (if they can catch him) to bring him to trial. On the whole, however, it is an unimportant matter. What is much more important is that so great a number of Croats have so profound a distrust of Serbian centralisation as to continue to look upon M. Raditch as their leader.

Party Activity in Roumania.

From time to time in Roumania the parties opposed to the Liberal régime of the Bratianus are moved by their different bitternesses to coalesce in an endeavour to overthrow the Government, but little ever seems to come of it, for, as so often happens in Roumania, the virtue of persistence and of driving-power prevails not against the vice of individual rivalry. The report that the opponents of the Government are urging the King to dismiss it and call for a new one would appear to indicate the poverty of their reserves. At the moment, however, it really seems that some attempt at compromise between the National, the People's, and the Peasant parties is being made; if this becomes an actuality, the Government may well be doomed. Certainly there is valid enough ground for criticism of the present Roumanian Government, but the Opposition must be sorely perplexed and conscious of its weakness if it seeks to solve the problem by calling in royal assistance.

The Two-Party System in Turkey.

What has been called the "revolt of the Generals" in Turkey can as yet be said to have only a negative significance: that the one-party system inaugurated by Mustapha Kemal Pasha is at an end. Whether there exists among the members of the Angora Assembly in opposition to the Government sufficient coherence and constructive ability to form something approaching an "Opposition" as we know it it is too early to say. Conceivably, the revolt against the powers of the President may rest on individual rather than on national grounds, and it would be indulging in the

Digitized by Google

extremest prematurity to read into this anti-Government partlet a real dissatisfaction with the methods of Angora. There is, moreover, much to be said from Mustapha Kemal's point of view, for one has but to recall the malevolent power that the military in Greece periodically assert as against the political Government to perceive how baneful the rise to power of Generals in Turkey might be. It is wiser, therefore, to regard the advent of this second party rather as an anticipation of what may come when Turkey's internal life becomes more normal, for with things without and within Turkey as they are, the centralisation of Angora must, it would seem, command the field. That such poor hearing should be given by the Angora Assembly to genuine opponents of the President's methods is obviously a pity, but it does not in itself imply that the Republican Party contains more wisdom than has the Popular Party. And it would be foolish to imagine that Turkey, for all its fervour in the adopting of Western political devices, will allow that passion to interfere with the efficient functioning of a Government, however rudely elected.

The Fighting for Mecca.

It was not to be expected that King Ali, as one must yet call him, the most competent soldier of all Hussein's sons, would renounce his right without a struggle, and his reported advance from Jeddah towards Mecca must be understood rather as a sign of his personal valour and example than as a belated rising of the Hejazis against the hosts of Ibn Saoud. Those who foresee success for this advance have apparently as grounds for estimating their own wishes, for although King Ali may have at his disposal an odd aeroplane or two, the reports that have been spread of his receiving tanks and ammunition from Europe are scarcely credible. (It was asserted, quite wrongly, that tanks were used against the Wahhabis who attacked Transjordan in the autumn.) Little is certain in desert fighting, however, and one must await details. Meanwhile, it is not extravagant to assume that Ibn Saoud will, as he all the time intended, convene his Islamic Congress at Mecca—a Congress that to us has always appeared more probable than the Cairo one of 1925. But what, with King Ali advancing against (or, as may be the case by the time that these Notes appear in print, again retiring from) the Wahhabis, alas, what has become of the plans of Mr. St. John Philby? He will now indeed be able a tale to unfold.

The Khalifate.

The fact that there is at the moment no Khalif does not appear to oppress unduly the millions of Sunnis, to whom, it was once said, the removal by Angora of this august institution from Ottoman shoulders would come as a cruel shock. Islam has, in fact, got along very well since Turkey betook to herself Western institutions in place of Oriental ones, for even if it were the assumption by Hussein that finally enraged Ibn Saoud and impelled him and his followers to capture Mecca, it is certainly not for any mere titular power that King Ali is trying to galvanise into action a sufficient opposition to the ruler of Nejd. This interregnum provides us with a lesson which will not soon be forgotten. It has, indeed, been taught us by students of Islam ever since the fall of the Ottoman Khalifate, but ocular demonstration of its content is likely to be of more lasting benefit to this country, which, generally speaking, distrusts what history has to teach it of the East. Reason lies with those scholars, doubted at the time, who said that Angora's action would cause but the faintest ripples in the ocean of Islam, for at the moment the Moslem world stands neither higher nor lower, nor is it more nor less settled, than it stood and was a year ago.

Anglo-French Co-operation.

A fortnight ago we devoted a general article to the subject of Anglo-French co-operation in the Middle East, and though in some quarters we were met with the scoff concerning its non-existence, we are able now to return to the matter more particularly. For the French High Commissioner for Syria, General Weygand, has just left Palestine, which he has been visiting with a view to mollifying certain difficulties that have arisen and still exist in the minds of French and British officials in the Middle East. As we said before, the most prominent points concern the economic and the strategic situation, and it is mainly these which General Weygand discussed at Jerusalem. One may hope, in anticipating his pronouncements or actions, that it was commonly found in the last few days at Jerusalem that the whole (of Syria) is greater than the sum of its parts; in other words, that the conservation as separate economic units of the political creations of Syria, Palestine, and Transjordan is an impossibility. Commercial rivalry between French and British mandated territory there must and should rightly be, and it is not surprising that Beyrout fears as much as does Jaffa the construction of a harbour at Haifa; but that is in the nature of things, and certainly does not involve the mutual strangling of the two countries.

The Strategic Situation.

In a consideration of the defence system of the Middle East it cannot be too often stated that a strong Syria is essential to Britain's position in Iraq, Transjordan, and Palestine. The northern frontiers of Syria are unsatisfactory enough as it is; all the more reason, therefore, for our suppressing with the firmest hand any trouble coming from her southern Transjordanian frontier. The dependency of Iraq's northern frontier on French good will is obvious, for part of the Baghdad railway to Nisibin, along which, in the event of an Anglo-Turkish dispute concerning Mosul, Turkey would wish to run her troops, is still in French hands. It was, incidentally, unworthily suggested a week or so ago that refusal on the part of the French in Syria to grant to the Turkish military authorities permission to repair a certain bridge

THE ESSENCE OF INSURANCE IS SECURITY.

Digitized by Google

on the Baghdad line, and to use the line between Maidan-Ekbes and Chobanbey was not certain. For ever since the British authorities in Iraq asked France, in February, 1923, whether she would co-operate, if necessary, against Turkey, the matter has never been in doubt. Not only, then, in the comparatively smaller matter of public security, but in the larger one of the preserving of the integrity of the frontiers, should the post-War divisions of the pre-War Syria work hand in hand with Iraq.

Different National Attitudes.

Yet it is true that, even given co-ordination in economic and strategic questions, there remains what appears to be a fundamental difference between the respective attitudes of France and Britain towards the Middle East. France is still convinced that Britain is pushing the Arab ideal to the detriment of French interests in Syria; and she is, further, aggrieved that Britain prefers, for the grand scheme of guarding the route to India, reliance on the Zionist movement to reliance on a Palestine guided, as it was to some extent before the War, by French culture. And what Britain thinks of the way in which France has lived up to the Declaration of November, 1918, is, of course, well enough known. There are errors in both attitudes, but it is difficult to foresee their removal until some large common pronouncement of future policy is made. The time, as it seems to us, is convenient for such a pronouncement. Our new Government can wash the slate clean, and, starting out on the broad policy of Anglo-French accord, state plainly and honestly their reasons, where they exist, for inability to share the French point of view. Such a statement would, we are convinced, be of infinite value in the securing not only of tranquillity, but of the more hardly gained prosperity for which these countries during the last six years have been patiently hoping. This is not the place to take sides in the matter: the great thing is to realise that the futile separatist policy of Britain and France should have been the last, instead of the first policy, to be tried.

THE WEEK AT HOME.

London, Tuesday Morning.

Speeches and Forecasts.

Most of the leading members of the new Government have now made a speech, either returning thanks to their constituents or in fulfilment of some old engagement, and Mr. Baldwin and several others have also spoken, of course, at the Guildhall banquet.

Nothing very startling was expected or said, but the new Government has impressed people by its workmanlike character, and the way in which it has settled down to a long stay. Most of the Cabinet have had some previous experience of Government, which is, of course, an advantage; and what comes as a pleasant surprise about the new political eleven is that it has no tail. Indeed, one candid critic, who shall be nameless, gave it as his opinion that the Under-Secretaries and junior members of the team were on the whole an even abler lot than the heads.

Some of these young men will go far, and Mr. Baldwin has done wisely to include them. In ten years' time both Mr. Ormsby Gore and Mr. Wood will rank as recognised Tory leaders; the only cloud on the horizon of these two brilliant young men being that they are sons of peers, who must in the course of nature be eventually immured in the House of Lords. Their abilities would make them likely Prime Ministers, but no more Premiers will sit in the Upper House.

Mr. E. D. Morel.

There is already a vacancy in the new Parliament, Mr. E. D. Morel having fallen down dead in Devonshire last week. This man, who was Labour member for Dundee, exercised a generally mischievous influence both before and during the War. His activities were numerous, but they were all connected with foreign policy, and all in some odd fashion tended to the advantage of Germany.

The deceased man was the tutor and for many years the leader of Mr. Ramsay MacDonald in foreign affairs, and here again his influence was unfortunate, as was seen when the two founded that pretentious piece of nonsense, the Union of Democratic Control, in 1914.

The late Prime Minister, however, began to dispense with his tutor as he got nearer to Downing Street. Mr. Morel expected that he would be given the post of Foreign Secretary, and was bitterly disappointed when Mr. MacDonald took that post himself and recommended Mr. Morel for the Nobel Peace Prize as a consolation. Nothing came of the recommendation, the Nobel authorities probably realising that to offer it to Mr. Morel would be an affront to British and French opinion.

The Silence.

The Armistice Day ceremony grows in solemnity year by year, and it is now easily the most impressive national festival. At five minutes to eleven last Tuesday London was its usual busy self; at eleven all traffic stopped, all heads were bared, and the silence was almost uncanny in its message and memory of the past. Even the flight of the City pigeons overhead, disturbed by the sound of the time signal, did not detract from the solemnity of the proceedings.

Better Trade Ahead.

There is no longer any doubt that trade is improving. Several big contracts have been placed this last week, the new issues have been well taken up, and there is an air of confidence about. All this is to the good; the other side of the shield, of course, is that prices are rising, and with increased prices comes the inevitable demand for increased wages and the possibility of strikes. Nothing very serious threatens at the moment, but some grave industrial difficulties are ahead for next year, which it will need all the tact of the Government to surmount. Luckily, the new Minister of

Labour has a breathing space in which to familiarise himself with the work of his department.

The Next Budget?

The prospect of better trade has, of course, set tongues wagging about the possibility of reduced taxation in the next Budget, and Mr. Winston Churchill is already receiving advice (entirely unsolicited) from individuals and newspapers and commercial organisations. Let us hope he preserves a grave face under these admonitions, which are often a little wide of the mark.

One thing is certain: there will be no surplus, for Mr. Snowden's reductions of taxation left nothing over. The taxpayer has not benefited by these reductions—except through the abolition of the very small Inhabited House Duty—as the reductions were in indirect taxation, and the increase of food prices has easily swallowed up the diminution of the duty. There will, however, be the usual annual reduction of some millions in the Pensions Account, on which every Chancellor of the Exchequer can reckon; apart from this, no immediate economies can be anticipated. Indeed, it is rumoured that there are considerable increases in the Education Account to be met, which will more than counterbalance any reduction on this score.

There can hardly be any reduction in the fighting services votes, as Mr. Snowden has already made a heavy cut this year; but the Chambers of Commerce (and the *Daily Mail*) are already showing signs of agitating for the Geddes Axe again in the Civil Service. But little can be expected on this score. The Civil Service has been cut until howls of anguish have been heard from every department, from the Home Office to the Board of Trade; and it must be said that if any further reductions are made, it will be difficult to get first class men to enter the service. No Cabinet Minister could make himself responsible, even on the score of economy, for lowering the future personnel of the bureaucracy.

The best prospect of reducing taxation lies in the generally improved condition of the country as a whole, which should make it possible at no distant date to fund the War Debt. Consolidation will effect automatically considerable economies in the service of that debt, which is in fact the great dead load that constitutes half the load which every Chancellor has to carry. If Mr. Churchill, during his period of office, can carry this through, he will have deserved a colossal statue (Hindenburg size) from the income-tax payer.

Two New Judges.

It is accepted that there will be no difficulty in getting the new Parliament to sanction the appointment of two additional judges of the High Court. Indeed, the late Parliament was pledged to make this addition to the judiciary; it is urgently required, for the increase of litigation of late years has often led to an unavoidable delay in the trial of cases which is tantamount to a denial of justice. Something is being said, too, as to the need of increasing the salaries of judges—who, like Cabinet Ministers, have had no war bonus—but although a strong case can be made out for raising the salary from £5,000 to £8,000 a year, this is likely to be less favourably received. But with the present swollen fees of great counsel, and the comparative pittance paid to judges, it is whispered at the bar that it is more and more difficult to get the best men on the bench.

There is, of course, a great deal of speculation on the new appointments, and the name of Sir Leslie Scott has inevitably been mentioned once more—this with some show of verisimilitude, as he does not appear in the new Government. There is reason, however, for saying that these speculations are premature. The addition has first to be sanctioned by Parliament before any new appointments are made, and probably six months may elapse before the names are published.

A Nursing Problem.

A grave controversy has broken out in the hospital world, and it is being debated with the usual heat that surrounds medical politics. The question, in brief, is: Shall nurses bob? The nurses say Yes, the authorities No. The nurses say their hair is their own, to wear or not as they choose; the authorities counterclaim that it is undignified to bob, and that bobbed hair annoys the patients—to which the nurses in turn have made the devastating reply that bobbed hair is more hygienic in hospital work. That certainly seems a deadly shot, but the authorities stand firm, and a thousand heads are now reported to be anticipating that dreadful stage between bobbed and long hair, "when it will neither stand up nor sit down."

Tertium Quid.

NEWS IN BRIEF.

British officials visited King Hussein at Akaba last week before his departure for Basra.

The Persian Government is negotiating an Agreement with Russia for an air mail service.

Bibi Ama, mother of the Ali brothers, the Indian politicians, died at Delhi on November 14.

The Comte de Chambrun left Paris last week to take up his appointment as French Minister at Athens.

The Foreign Service Students' Committee of Cambridge University have appointed Abdul Ala Afifi lecturer in Arabic and Abdul Qadir Zafir lecturer in Turkish.

Marquis Cavalcanti has terminated his study of the military questions in the Balkans, and is about to return to Spain to take up his command in the Balearic Islands.

The *Morning Post* Athens correspondent states that the school erected by the Refugee Settlement Commission at Byron Colony, near Athens, was inaugurated on November 16.

The Bishop of Gibraltar, continuing the tour of his diocese, will visit Yugoslavia, whence he will go to Roumania. After a brief stay at Sofia he will visit Constantinople, Smyrna, Athens, Patras, and Malta.

M. Alexis Blank, the Roumanian Consul in Cairo, was found dead on November 14 in the Nuzha Garden at Alexandria. A letter which was found in his pocket stated that he had committed suicide for personal reasons.

The funeral of M. Gavrilovitch, the late Yugoslav Minister in London, which took place in Belgrade on November 12, was attended by a representative of King Alexander, by the whole Diplomatic Corps, and many notables. The funeral orations were delivered by M. Pashitch, the Prime Minister, Dr. Nintchitch, the Minister for Foreign Affairs, and Professor Stanoyevitch, of Belgrade University.

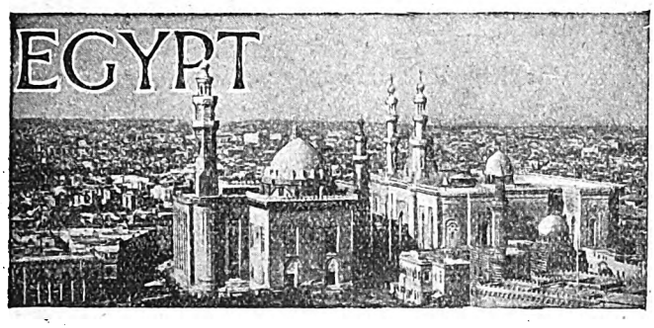
The Near and Middle East.*

From Our Own Correspondents.



Cairo, November 8.

King Fuad's Return.

Egypt is now settling down for the winter season. The Court returned to Cairo last Monday, and Parliament will reassemble next Wednesday. King Fuad had a very fine reception on his return. He came up as usual by special train accompanied by his Ministers and drove with his picturesque escort in semi-state to Abdin Palace. The route was profusely decorated with bunting and triumphal arches, and in the evening the city was magnificently illuminated. The police arrangements were perfect, and not a single untoward incident marred the occasion.

The notables assembled at the station to greet His Majesty included Viscount Allenby. This is the first occasion that the High Commissioner has attended a ceremony of this nature. Usually he has confined himself to calling on the King immediately after his arrival, and the vernacular Press has shown an inclination to attach political significance to what was merely an act of courtesy towards and a sign of his personal respect for the King on the part of H.B.M.'s representative.

El Azhar.

Trouble has broken out at El Azhar, where the students have gone out on strike. The ostensible cause is a long-standing grievance—viz., an improvement in rations, an amelioration in educational facilities, and better prospects of Government appointments. These demands were put forward last spring, and the present Cabinet appointed a special committee to investigate the question. Their report has been for some time in the hands of the Government, but the latter suspended action thereon during the absence of Zaghloul Pasha. Nothing having happened since Zaghloul Pasha's return, the Azharites, together with the students in the religious seminaries in the provinces, went on strike in order to call attention to their grievances.

The Government's reply was to the effect that the report had received attention, and an early opportunity would be taken to obtain the approval of Parliament to the necessary change in the law, but that so long as they remained on strike no action would be taken; and an order was issued that they must return within forty-eight hours—otherwise the disciplinary measures provided by the law would be taken against them. The King also sent a message counselling the Azharites to resume their studies. The students in the provinces have returned to work, and at the moment of writing the Azharites are showing distinct signs of wavering, so that by the time this reaches you the strike will possibly have come to an end. There is reason to believe that the Azharites were encouraged in their action by certain political elements whose interest lay in creating difficulties for Zaghloul Pasha and his colleagues, and this knowledge has undoubtedly increased the Government's determination to repress this movement from the very start.

A "Modus Vivendi."

The journal in European language which belongs to the phalanx of Government organs on Thursday evening published an interesting article in which it asked why, if no agreement is possible, a *modus vivendi* should not be come to between Britain and Egypt? Its argument is that the requirements of Egypt render close political relations with Great Britain a daily necessity, and there is risk that the absence of an agreement may lead to the frequent occurrence of incidents of a more or less grave character. Since the British Government adheres to the Declaration of February 28, 1922, which the Zaghloulist Ministry refuses in any circumstances to recognise, why not substitute for this declaration another diplomatic instrument, a *modus vivendi*, which, after putting on record the impossibility of arriving at a general agreement, would establish for a period of, say, three to four years, the political and diplomatic relations between the two countries?

The paper goes on to explain that from this new diplomatic instrument Egypt could obtain much more advantageous provisional conditions than those of the February 28 Declaration. She could compel the British Government to agree to her admission to the League of Nations without prejudice to her rights; she could obtain immediate admission to an effective participation in the co-administration of the Sudan. And as regards the Canal, the idea of co-operation enunciated by Mr. Ramsay MacDonald could be put into operation, and the Egyptian Army could be permitted to share in the protection of the Suez Canal until such time as it might be in a position to undertake alone this common duty. It considers that this *modus vivendi*, while preserving all Egypt's rights, would materially improve the present situation. In presenting this remarkable proposal the organ is careful to declare that what it says should in no way be regarded as representing the official view,

but, knowing as one does its close relations with Zaghloul Pasha, who inspires every political article that it publishes, one cannot help regarding the publication of this article on the eve of the reassembly of Parliament as an official *ballon d'essai*.

YUGOSLAVIA.

Zagreb, November 13.

The New Government.

The Pashitch-Pribitchevitch Government was established in a surprising manner, and in itself it came as a surprise. For until the very last moment the opinion prevailed that any solution was better than a General Election, and a "P.P." Government would spell a General Election.

The Croatian Question.

The crux of Yugoslav internal policy is the Croatian question. It was to solve that question that the thing happened which was preposterous in the eyes of so many in Belgrade—to wit, that a Pashitch Government should have to give place to a Davidovitch Ministry, in which the Serbians were in a decided minority. But the preposterous proved to be the thing needful, and the Davidovitch Government was attended with considerable success. Almost all the Croatian deputies put in appearance in the Skupshtina, took the prescribed oath of allegiance to the King and Constitution, and voted on the side of a Government which efficiently safeguarded Serbian interests. And still more important was the altered mood which grew up everywhere in the Croatian towns.

The Croat opposition sprang originally from resentment caused by bad administration, and as all protest, even the most justified, was rendered fruitless by Pashitch's *entourage*, the Croats at length began to hate the veteran Premier and his adherents. At the same time it was impossible to get the better of them, as they always remained masters of the situation. Gradually the Croats came to regard bad administration, Pashitch and Pribitchevitch Government, Serbian State and all as practically synonymous. At this point an Opposition which had hitherto been only tactical developed into one of principle, and Croatian policy became almost hostile to the State.

With the appearance of Davidovitch's Government the whole situation changed at one stroke. The Croats realised that Pashitch and Yugoslavia were not indissoluble; that among the Serbs also there were respected and powerful politicians, able and willing to fight corruption in all its forms, and likewise sincerely desirous of agreement with the Croats on the basis of equality. Then a new idea began to take root in the Croatian people, and this idea was useful to the State but fraught with peril for the Pashitch and Pribitchevitch circle, and no less dangerous to M. Raditch.

The Pashitch-Raditch Interaction.

The above may be taken as a brief summary of the psychological state of public opinion in Yugoslavia, when the resignation of the Minister for War brought about the recent Ministerial crisis. Neither for M. Pashitch nor for M. Raditch could it be desirable that the frame of mind just described should gain ground. For as soon as it spread from the towns to the villages—and that would inevitably happen—there would be an end to M. Raditch's magnificence, and therewith also to that of M. Pashitch. For M. Pashitch's strength lay in M. Raditch and *vice versâ*. So long as M. Pashitch could terrify the Serbian electorate with the Raditch bogey, so long would he be accounted the saviour of Serbia. With M. Raditch's fall, M. Pashitch would lose his political *raison d'être*, and therefore he and the Croatian peasant leader, as regards their tactics, pursued the same goal. To destroy the spirit of conciliation, to prevent the realisation of brotherhood, was the plan of both alike, and for this reason they were both agreed that nothing short of a General Election could bring about a solution of the Government crisis. Political passions are to be inflamed afresh by an electoral campaign; passion will blind the electors, and the struggle intensify all differences. But since MM. Pashitch and Raditch willed a fresh election, an election Government had to materialise, and that this Government should be headed by MM. Pashitch and Pribitchevitch is perfectly intelligible, if one considers Yugoslavia's history up to the present.

The will of the two parties aforementioned, the two strongest in Yugoslavia, was also determining the course of the recent Government crisis. MM. Pashitch and Raditch had the same object in view, differing only as to method. M. Pashitch wanted to have the mandate for the election entrusted to himself. M. Raditch would rather anyone else had it than M. Pashitch. However, a General Election mattered more to him than the Parliamentary Session, and perhaps he also thought that even terror might help to swell his ranks.

An Attempted Way Out.

The King, no less than all political men not yet affected by party hatred, realised that general elections could only be harmful in their effect; that they would only render the existing differences between Serbs and Croats more acute. Painstaking and persevering efforts, therefore, were made to find a solution by compromise in the shape of a Cencentration or Coalition Government. But this proved impossible. M. Davidovitch could command a majority in the Skupshtina only on condition that he had the support of M. Raditch. And the Radicals, on their part, could not form a majority save by help of some group won over from the Opposition *bloc*. But the *bloc* remained united, and could not afford to do otherwise. Hence the key of the whole situation lay with the Radicals and M. Raditch.

The Radicals were prepared to come into a Concentration Government on condition of a split in the ranks of the extended Opposition *Bloc*. This would give them the majority in the Concentration Government, and place them in the position to ex-

tort an electoral mandate for themselves at any given moment. In this way they would gain their object by a roundabout way, but with increased forces. To this the Opposition *Bloc* could not consent, and therefore was prepared to come into a Concentration Government solely on condition of a split in the Nationalist *Bloc*, as the followers of MM. Pashitch and Pribitchevitch jointly style themselves. All deputies indicted for corrupt practices were to retire, and the Pribitchevitch group was to be excluded altogether. To this the Radicals could not consent.

The Folly of M. Raditch.

The Opposition *Bloc* contended, moreover, that it ought to be entrusted with the construction of the Government, in virtue of the fact that it still commanded a majority in Parliament. As this was a fact, the Opposition *Bloc* was very near the point of gaining the day, when M. Raditch prevented this victory. He made a speech in which he insulted the King in most unparliamentary fashion, and fiercely attacked even the leaders of the Opposition *Bloc*. And when the leaders of the *Bloc* nevertheless succeeded in slurring over the painful impression produced by this harangue, M. Raditch spoke again and again, and yet more and more aggressively, until it came to be generally accepted that co-operation with M. Raditch was impossible—and with that all was prepared for a Pashitch victory.

One last effort was made to form a Concentration Government. The mandate to construct a Cabinet was entrusted to M. Timotivevitch, a Democrat. The Opposition *Bloc* believed this to be the last effort but one, and therefore refused even the moderated conditions of the Radicals. But it was the very last attempt, and the power of office passed into the hands of the less unyielding party.

The Pashitch Victory.

The new Government is now established; the Skupshtina is dissolved, and the new General Election is to take place on February 8, 1925. The Election Government is bent on making the most of its mandate, and for this reason the date of the elections has been fixed full three months ahead, the extreme delay permitted by the Constitution.

The electoral campaign has already been opened by a proclamation issued by the leaders of the late Government. It is sharply worded, but M. Davidovitch is one of the signatories, and so it is loyal and correct. The Slovene People's Party (Dr. Koroshets) followed suit with its own electoral appeal. But this, one regrets to say, bears the stamp of racial agitation, and shows only too plainly on what lines the campaign is to be waged. Yet all this is only preliminary skirmishing. Meanwhile in both camps preparations for the decisive encounter are being conducted with zeal and vigour.

The Nationalist *bloc* is to present a united front throughout Yugoslavia, in order to make the most of the electoral law, which favours the formation of large parties. The Opposition *bloc* is making serious efforts to ensure a similarly unified procedure, but without much prospect of success. All the same, it is clear that the main issue will be fought out between two groups alone. The *Zemlyoradnitchi* (Agrarians) will appear as a third group, and are almost sure to add to their number of mandates. With luck they may even quadruple them. It seems, by the way, as if the *Zemlyoradnitchi* were in a position to play the part of a Yugoslav Labour Party, so to speak.

The electoral campaign bids fair to be waged with exceeding bitterness, and bloody encounters are not improbable. What is not probable, however, is that either party will score an absolute victory. The upshot of the General Election will, in all probability, prove that for these years of foundation-laying in Yugoslavia a policy of compromise is the right one—the very opposite, in fact, of what the forthcoming elections are intended to show.

GREECE.

Athens, November 5.

Growth of Royalist Feeling.

For some days past some of the extra-parliamentary parties have been holding meetings to discuss the formation of a "common anti-Venizelist front." Since, however, there is no Venizelist party in Greece to-day, the term "anti-Venizelist" is altogether a misnomer. "Royalist" would have been more to the point. In a *communiqué* which they have addressed to the Press, the extra-parliamentarians state: "Anti-Venizelism represents the unanimous desire of all Greeks for an immediate return to normal political conditions and the integral re-establishment of the sovereignty of the people."

The committee which has been named to "re-establish the sovereignty of the people" includes M. Georges Streit, the late Grand Chancellor of Constantinism, but, strange to say, General Metaxas, who has a bigger following than any other Royalist leader, has been excluded from the committee. Obviously, there is a split in the Royalist ranks, and the new movement set on foot need not be taken seriously, for the time being at any rate.

General Kondilis, Minister of the Interior, is reported by the Athens papers to have said in connection with the doings of the Royalists: "The extra-parliamentarians can do as they please. They must, however, bear in mind that we will not allow anybody to shake the foundations of the Republic that we have established. The question of the régime has been definitely settled, and anti-Republican propaganda will find no echo amongst the people, which is thirsting for the end of internal troubles and a quiet life. In any case the State will not tolerate any movement intended to bring about a change of régime.

The Story of 1922.

General Papoulas, who was Commander-in-Chief of the Greek forces in Anatolia before General Hadjianesti (who was executed with the members of the Gounaris Cabinet) was appointed to that post, has just published a narrative of the events which led up to the Anatolian debacle. The General has also published a number of

official documents which are highly damning to the then (Constantinian) Government, and also to the High Commissioner in Smyrna. General Papoulas, who is a ranker, is a Royalist, and the purpose of the disclosures he makes is obviously to prove to the nation that he never allowed his political views to interfere with his duties as a soldier. The General's narrative is very long, and it is not possible to condense it into a few hundred words. The General's conversations with the late King Constantine and the then Crown Prince, later King George II., are characteristic. General Papoulas says that the day after his return from Smyrna in June, 1922, he called at the Palace and was immediately received by King Constantine. He reported to the King very fully on the situation at the front. Constantine seemed very interested, says the General, but he ventured no remark whatever. General Papoulas next called upon the Crown Prince, to whom he explained at length his views upon the military situation in Anatolia. The General quotes Prince, later King, George as having said: "General, I know everything, but what can I do? Imagine that the Minister (presumably the Minister of War) comes here and tries to get information from me. But what do you expect from a man who has no more brains here"—the Prince pointed to his head—"than here"—the Prince pointed to his stomach. Concluding, the Prince said: "General, in view of the latest developments, how much time do you think will elapse before the Army revolts?"

It has often been said that the deposed King on many occasions disagreed with the doings of the late King Constantine and his camarilla.

November 12.

The Exchange of Populations.

It is difficult to explain the indulgence of the European Press, or at least some sections of it, for the Turks in the matter of the exchange of populations. At the Lausanne Conference the Turkish delegates began, as is their wont, by bargaining. They first demanded that all the Greeks of Constantinople, without distinction of nationality, should be subjected to exchange. This demand was naturally rejected, and the Turks then proposed to make an exception only for the Greeks born in Constantinople, but this proposal was also set aside. After innumerable discussions, it was decided that of the Greek inhabitants of Constantinople only those who established themselves in the Turkish capital after October 30, 1918 (date of the Mudros Armistice), would be subjected to exchange. This decision appears in the official minutes of the sitting of the Lausanne Conference of January 10, 1923, where are quoted the speeches on the subject of Lord Curzon, Signor Montagna, and M. Barrère. In the course of the same sitting Ismet Pasha agreed that only the Greek inhabitants of Constantinople, who arrived in that city after October 30, 1918, would be subjected to exchange. It is in virtue of this accord that Article 2 of the Convention regarding the exchange of Greek and Turkish populations was drawn up, and according to which are exempted from exchange all Greeks established (*établis*) in the district of the Prefecture of Constantinople, of which the boundaries are fixed by the law of 1912, before October 30, 1918. It is not by chance that the term *établis* was used in the Convention. In the drafting of laws and treaties the term habitually used in cases such as that at issue is *domiciliés* (domiciled), but the legal meaning of this latter term is liable to misinterpretation. In order to avoid ambiguities the term *établis* was used. And now what has been the attitude of the Turks with regard to the *établis*? They have practically ignored the Mixed Commission instituted in accordance with Article II. of the Exchange Convention. They endeavoured, by dilatory means, by intimidation, and by creating a *fait accompli*, to impose upon the Mixed Commission an interpretation of the term *établis*—an interpretation altogether different from that accepted at Lausanne by Ismet Pasha, and also by Shukri Bey. It may here be added that, at Shukri Bey's request, M. Fromageot, French delegate, explained to him the difference between the terms *établis* and *domiciliés*. This happened at a meeting of the third sub-commission of the Lausanne Conference, held on December 23, 1922. The Turkish Government's treatment of the Greeks of Constantinople constitutes a flagrant violation of the rights of minorities, and, in the circumstances, the only course left open to the Greek Government was to demand the intervention of the League of Nations. Latest arrivals in Athens from Constantinople draw a very sombre picture of the situation in the ex-Turkish capital. The general opinion is that the Turks are digging their own grave. It is feared that the upshot of the Brussels Conference with regard to the *établis* will probably encourage the Turks to place more difficulties in the way of the Mixed Commission. The Turks, in their present frame of mind, it is thought here, will submit only to coercion, and they will continue to ignore Treaties till coercion comes. But whence will coercion come and when? This is the question which all the victims of Turkish bad faith are asking themselves.

The Refugees.

As was to have been expected, it is not all plain sailing with the settlement of the refugees in Greece, and particularly of those to whom land for cultivation has been allotted. It is more or less natural that the natives should look upon the refugees as intruders. Such has been the lesson hitherto taught the peasantry by Royalist propaganda. To-day, it is true, the Royalist Press is flirting with the refugees with a view to securing their votes at the next election, but this sudden *volte face* has not counteracted the effects of Royalist campaign against the refugees whose influx into this country was represented as the result of M. Venizelos' political mistakes. It is characteristic of Royalist manœuvres that the responsibility for all the political mistakes made in the Near East during the Great War is laid on the shoulders of M. Venizelos. During the past few days there have occurred collisions, happily not very serious, between peasants and refugees

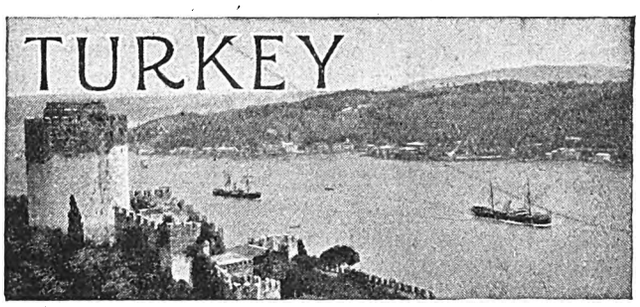
in different parts of the country. The refugee Deputies in the National Assembly have made capital out of these regrettable incidents to level absurd accusations against the Refugee Settlement Commission. The Premier, highly irritated at the tactlessness of the refugee Deputies, has taken up arms for the Commission, both in the Assembly and in the Press. The papers publish a statement of M. Michalakopoulos to the effect that if it pleases the refugee Deputies to talk wildly in the Assembly, he refuses to assume any responsibility for the effect their attitude may have on the refugee question. The refugee problem is certainly the most difficult problem any Greek Government has ever had to tackle, and it is to be feared many a Government will break its neck over it. The Refugee Settlement Commission has so far done everything it was humanly possible for it to do with the meagre resources it had at its disposal. The Commission is, so to say, an autonomous administration. It has at its head men of spotless character, and it would have nothing to gain by the interference in its affairs of the representatives of the refugees in the National Assembly. The Refugee Settlement Commission has so far been kept free of politics, and if any good is to come of it it must continue to keep aloof from politics, and to this end it is essential to keep Deputies at a distance.



Constantinople, November 10.

The Opposition in the Assembly.

The anticipated pother in the Assembly has come, but it has been a feeble affair. A number of incoherent discussions upon the shortcomings of the Government have led to the question of confidence being put to the vote, on which the Government has secured a majority of about 110 in a house numbering about 148 all told. There were 18 stalwarts who took their courage in both hands and filed into the opposition lobby, while another 20 odd refused to vote either way. A local paper has produced a cartoon which accurately sums up the situation. The cartoon represents the backs of three miserable-looking specimens of deputies listening meekly to the provocative harangue of an exquisite Effendi in the Speaker's tribune, while a gigantic figure of the President of the Republic is glowering upon the unfortunates from a box just above them.

The resignation of the three Army inspectors all in a bunch has produced a sensation, and the circumstances in which Kiazim Kara Bekir Pasha was sent back to hand over personally to his successor before presuming to sit in the Assembly have been the cause of some acid comments in the Press about the fallen greatness of the idolised military leaders of yester year.

The recent debates in the Assembly and the subsequent voting have produced in the minds of the public an impression of absolute futility. The criticisms levelled against the Government might have been really telling, had they been restricted to the things that mattered, and had the critics known how to marshal their damning facts instead of dissipating their eloquence in vain trivialities and personalities. The only result of the much-advertised offensive is that the Government has slipped through the crisis with a solid though formal majority of a vote of confidence, and every thing will go on as before. It is rumoured that the present attack is merely a curtain-raiser to test the feelings of the audience, and that the real soul-stirring drama will inevitably follow; all one can say is that if the drama is not more dramatically effective than the curtain-raiser, it is not worth playing. The claque will drown the cat-calls of the "gods" every time.

The Life of Constantinople.

There is little else of serious import to relate. One might recount for columns the serio-comic stories of the doings of the junior bureaucracy who are trying to grapple with financial, commercial, and administrative problems which are entirely beyond their comprehension. If one talks to the merchant who has to deal with the customs administration, or to the schoolmaster who deals with the department of public instruction, or to the shipping agent who deals with the Captain of the Port, one will hear the same story of crass stupidity from each and all of them. The cream of the joke, however, lies in the fact that these ingrained bureaucrats are not confining their attentions to the unfortunate foreigner now, but are beginning to worry their own people; there is a first-class war being waged at the present moment between the Customs and the rest of the Government, because the former insists upon detaining in the Custom House some official documents from the League of Nations, addressed to the Government, until certain obscure Customs dues have been paid, and not all the thunders of Jove will make them disgorge.

INDIAN ART IN PARIS.

Under the auspices of the India Society, the Association Française des Amis de l'Orient held a meeting at the Musée Guimet last week to hear a lecture by Capt. Gladstone Solomon, Director of the Bombay School of Art, on the revival of art in Bombay. The chair was taken by M. Philippe Stern, of the Musée Guimet, who said that Parisians were conversant with the new art movement in Bengal, but were anxious to hear what was being done on the Bombay side. The lecturer, after describing the methods that he employed in his school, and paying a tribute to the enthusiasm of his pupils, without whose co-operation, he said, the success achieved would have been not half so great, made reference to the encouragement he had received from Sir George Lloyd when Governor of Bombay, and to the latter's recommendations at the Wembley Conference organised by the India Society last May. These included the establishment of a Delhi prize somewhat on the lines of the Prix de Rome. This suggestion naturally interested the French audience, which included many students for India and the Far East. The lecturer also paid a tribute to the methods adopted by the French Government in their own colonies to preserve the native arts and crafts, particularly in Morocco and Indo-China.

The Hon. Secretary of the India Society, in moving a vote of thanks to the chairman, referred to the valuable co operation of the Association Française des Amis de l'Orient in arranging India Society lectures in Paris, and thus spreading a knowledge of Indian art.

PERSONAL AND GENERAL.

TO-DAY.

November 20, 1924 (New Style).
November 7, 1924 (Old Style).
Rabia' II, 22, 1343, A.H. of the Moslem Calendar.
Marheshvan 23, 5685, of the Jewish Calendar.

Sir Philip Grey-Egerton left last Friday in the P. and O. s.s. China for Bombay.

Sir Edward and Lady Boyle returned to 63, Queen's Gate, last Saturday from the Balkans.

Mr. and Mrs. L. S. Amery are in residence at 112, Eaton Square, which is now their permanent address.

The wife of Mr. Charles T. Allen, C.I.E., gave birth to a son on November 13 at Free Chase, Warninglid, Sussex.

M. Grégoire Michaesco, Commercial Attaché at the Roumanian Legation, on November 15, underwent an operation, and is making satisfactory progress.

Prince Bibesco, the Roumanian Ambassador to the United States, arrived at Plymouth in the Mauretania last Monday. Princess Bibesco has been in England some time.

Prince and Princess Arthur of Connaught will leave London on December 4 for India. The visit is to be of a purely private character, and they will be the guests, for a time, of the Viceroy.

Colonel C. N. French, Assistant Director of the Empire Cotton Growing Corporation, left London by the R.M.S. Norman last Thursday for a tour in East Africa and India. He will be away for about five months.

The King has given authority to Mr. Edgar Felice, divisional engineer in the Egyptian Port and Lights Administration at Suez, to wear the insignia of the Fourth Class of the Order of the Nile.

Among wills recently proved is that of Mr. George Gordon, of Karachi, India, manager of the Karachi Branch of the Chartered Bank of India, Australia, and China, which has been proved at £22,223.

The King has approved the appointment of Mr. Alfred James Chotzner, Indian Civil Service, to be a Puisne Judge of the High Court of Judicature at Calcutta, in succession to Sir Thomas William Richardson, Indian Civil Service, who is retiring from the service.

A marriage has been arranged between Major A. G. Biggam, O.B.E., R.A.M.C., son of the late Mr. J. Biggam and Mrs. Biggam, and Miss Margaret Frances Patch, eldest daughter of Major B. G. Patch, R.A.M.C., and Mrs. Patch, and will take place in December at Rawalpindi, Punjab, India.

The marriage arranged between Mr. Richard Henry Parker, Indian Civil Service (late Coldstream Guards), son of Mr. R. W. England Parker, of Oxford, and Mary, daughter of the Hon. Mr. H. E. A. Cotton and Mrs. Cotton, of 19, Theatre Road, Calcutta, will take place on December 8 in Calcutta.

The marriage arranged between Captain George Younghusband, 11th Hussars, only son of Sir George Younghusband, K.C.M.G., K.C.I.E., C.B., and Lady Younghusband, of St. Thomas's Tower, Tower of London, and Barbara, eldest daughter of Mr. and Mrs. Kenneth Foster, of Egton Manor, Egton Bridge, Yorkshire, and 49, Pont Street, S.W., will take place at 2.30 p.m. on December 17 at St. Peter's, Eaton Square.

APPOINTMENTS, PROMOTIONS, ETC.

M. Nikola Vulovitch has been appointed Secretary at the Legation of the Kingdom of Serbs, Croats, and Slovenes.

Vice-Admiral Sir Richard Webb, K.C.M.G., C.B., has been lent by the British Admiralty, at the request of the Greek Government, to reorganise the naval forces of Greece, the appointment to date from November 11.

The King has approved the appointment of Sir Montagu Sherard Dawes Butler, C.B., C.I.E., C.V.O., C.B.E., to be Governor of the Central Provinces and Berar, in succession to Sir Frank George Sly, K.C.S.I., whose tenure of office will expire in January, 1925.

The Secretary of State for India (the Earl of Birkenhead) has offered to Sir Muhammad Rafique a seat on the Council of India, in succession to Sahibzada Afmb Ahmed Khan, whose tenure of office has expired. Sir Muhammad Rafique, who is now in this country, proposes, with Lord Birkenhead's concurrence, to leave for India at once and to join the Council in March on his return to England.

Lieutenant-Colonel Claud J. Torrie, D.S.O., O.B.E., has been appointed Signal Officer-in-Chief for the Indian Forces. He is a Royal Warwickshire Regiment officer, who was transferred to the 30th Punjabis during the South African campaign, and served as adjutant to the regiment, and continued in the 10th Baluch Regiment. He was Inspector of Army Signalling in 1912 with the Northern Army, under Lieutenant-General Sir James Willcocks, and more recently was Assistant Director of Signals and Chief Signal Officer under Field-Marshal Sir Arthur Barrett and General Sir William Birdwood in Northern India.

THURSDAY, NOVEMBER 20, 1924.

HOW THE INDIAN PEASANT STANDS.

In his speech at the Guildhall last week, the Prime Minister defined accurately the attitude of the country, and not merely of his party, towards India, when he insisted that our object is the welfare of the peoples, and their peaceful progress in the paths of economic and constitutional development. Now that phrase, "the peoples of India," has a precise meaning of its own. The population can, indeed, be subdivided indefinitely on racial, cultural, or religious lines, but to the economist three-quarters of the whole form a single class, and to him India means primarily the mass of peasant-producers, the many millions of families who make some sort of a living on holdings ranging in size from three to thirty acres, and whose collective interests far exceed those of all other classes taken together. Mr. Baldwin holds out the welcome prospect of a regime of steadfastness combined with insight, and its inception is a suitable occasion for examining the peasant's position in the India of to-day. How does the peasant stand? What does he want? How can his needs be met? The answers given to such questions as these must form the basis of any stable policy directed to the economic progress which the Prime Minister promises. It must, we think, be admitted that the peasant has lost ground in the period of transition through which India is passing. Twenty years ago Lord Curzon could justly describe him as the first and final object of every Viceroy's regard: as a measure of the recent change, it is enough to refer to the attitude of the Central Government in the debates on the tariff question, when their spokesmen lightly brushed aside the peasant interest in favour of the urban majority which dominates the legislature. The first and final object of Lord Curzon's regard is scarcely worth mentioning in the Delhi of to-day.

Under the existing Constitution, however, the real guardians of the peasant's interests are ministers in the provincial governments, and so far the record of these ministers is, speaking broadly, a record of inefficiency in administration, and of failure in leadership. One obvious result has been the loss of skilled experience; men who have learned their work in India, and who should now be giving her their best, are to be found scattered over the world, in Australia and South Africa, in Europe and America, where they have obtained more congenial employment under masters quick to recognise their worth. Some such result was perhaps inevitable when administration was first entrusted to inexpert hands, but to set against it there was the hope that Ministers of Agriculture would put themselves at the head of the peasants, and thereby acquire such a hold over the country-vote as to make rural interests predominate in the provincial Councils. So far that hope has been disappointed. Ministers have as a rule failed to escape from the obsessions of their urban environment, their attitude has been that of the townsman who would like to do something for the peasant, but who does not ask what the peasant wants, they have not cared to put their ears to the ground, and consequently they have not acquired a following in the country, or produced even programmes, let alone results, which could make a popular appeal. In this respect failure was not inevitable; the chance was there, but the men failed to take it; and as yet there is no ground for pessimism, because, though valuable time has been lost, the chance is open still, and in one province or another we may at any time witness the emergence of a peasants' tribune, who from the nature of the case would enjoy the position of practical Dictator.

For it must not be forgotten that the Constitution has offered to the peasants power such as they have never held throughout the historical period. Even with the restricted franchise now in force, they are in a position to return, if not an absolute majority, at any rate by far the strongest group in each provincial Council, and united effort in the constituencies would enable them quickly to choose their tribune from among their disciplined representatives. But to expect them to do this at once would be asking too much of human nature. The centuries of economic servitude have left their inevitable mark, and while Indian peasants know that things have changed, they have not yet realised that their destinies are now in their own hands. It is hard for servants to learn to be masters, and so far they have been offered little help. In the existing environment they can hope to find very few effective representatives within their own class, and even were more of them available, they could not at first hold their own among the quicker urban wits. It is among the latter that the peasants must for the time being find their representatives, and the men whom they have chosen have hitherto, with very few exceptions, done little to justify the confidence reposed in them, accepting their votes but offering promises only in return, promises which quickly evaporate in the atmosphere of the provincial capitals. It would, however, be a great mistake to draw pessimistic influences from the actual position without taking account of the tendencies at work. The momentary evil is likely to work its own remedy in time. Even now, we suspect, the villages are weighing in their deliberate fashion the promises of an immediate millennium, which were scattered so lightly by extremist candidates in the election of a year ago. In Indian villages the outlook on life is narrow, hard, and realistic: credit, when it is given at all, runs only for a short term; promises are expected to be promptly fulfilled; and it would be by no means surprising if, even at the next election, representatives who bring only overdue obligations should find themselves subjected to the stern and summary discipline which the village expects from others, and which it is accustomed to execute in its own affairs. It is in this direction that we must look for progress, whether economic or constitutional. When urban politicians realise by experience that they have duties to their rural constituents, duties which can be enforced at the polling booths, we shall be at the beginning of that union of urban insight with rural steadfastness, which is even more needed in India itself than among its distant rulers. Development on these lines may be slow, but it is the greatest hope for the future, and it is not too much to ask that true Indian patriots, who are still seeking for the most effective ways of rendering service to their motherland, may be led to concentrate their energies on the task of its acceleration.

AL MAGHRIB.

By F. W. CHARDIN.

Bang! The sunset gun at last!

Allahu Akbar! Allahu Akbar! Allahu Akbar! Allahu Akbar! God is Greatest!

The cry of the muezzin swells out loudly, the last syllable of each invocation trembling in the hot June air, a cry exultant, joyous, compelling, almost eerie. It rises from the domed roof of the little mosque up the by-street on my right.

Thousands of souls have been waiting the last half-hour, prepared and expectant, for that sound, and as I pass up the narrow street in the bazaar, the shopkeeper brings out from the recesses of his lock-up cavernous store a pitcher of water and some flat cakes of bread, and after washing his parched mouth, takes a slow, deep, ecstatic drink. All the other Muslim shopkeepers are doing the same thing, and the street is almost deserted, for the world and his wife are in their houses or with their friends performing the same rite.

And so the first thought that that call to evening prayer brings to the generality of Muslim minds is that of food and drink, and small wonder, too!

Doubtless, there are many pious souls assembling in the mosque, or preparing on their housetops to perform "Salat al Maghrib," the sunset prayer; but the Nasrani cannot see them, and to his limited vision the whole world appears to be preparing to satisfy the demands of the inner man.

Ashadu an la ilaha illa Allah! Ashadu an la ilaha illa Allah! Ashadu anna Muhammad ar rasul Ullah! Ashadu anna Muhammad ar rasul Ullah! I testify that there is no god but Allah! I testify that Muhammad is the Apostle of Allah!

Again the voice rings out confident and certain, breathing the soul and spirit of Islam, the creed of the Believer, the declaration of the Divine Unity, and of the high mission of his last and greatest Apostle, his final Prophet bearing a revelation to the sons of men.

The shopkeeper crosses the narrow street to the soot-stained, noisome-looking cavern of the kabab roaster, and, buying skewers of these succulent morsels of roast meat, straight from where they have been frizzling over the continuously fanned charcoal embers, bears them wrapped in a page of the *Tatler* to his shop, produces from an inner recess some cucumbers and a piece of white cheese containing chopped celery-like morsels, and makes ready the meal of which he will shortly partake.

This city on the western bank of the Tigris has sprung to life. During the daylight hours of this day in Ramazan the streets have been unusually silent, for many have been sleeping off the effects of last night's feasting, the better to pass the hot hours of the day of fasting in oblivion. And now! The coffee shops will soon be crowded with a throng, chatting, smoking cigarettes, and drinking tea and coffee; the *chalghiji* in café and theatre will be strumming on his lute or tapping his drum, the streets will be thronged, and life and bustle will last almost until morning light.

It is the time of Al Maghrib, the hour most fraught with relief and joy in the whole Ramazan day; here in the farthest north-east of the Arabic-speaking world, it is a time of mirth, and of laughter, and of awakening out of sleep.

* * * *

Bang! The same sound, the same cry, rises and floats over the city.

"Say! What's that?" in an unmistakable accent.

It is about eleven months later. I am sitting in the reading-room of a European hotel in a seaport town in Morocco, perusing a Spanish journal. I look up and behold a young American lady tourist, complete with horn-rimmed spectacles. She is addressing a similarly equipped lady friend who is just outside the door.

I volunteer my explanations of the sounds that she has heard. She is voluble in her interest and thanks at the information I have given her about something she has never even heard of before. When I tell her that she will have plenty of chances of hearing and seeing it before she goes, she informs me that she only arrived this afternoon and is off again to-morrow afternoon.

And so I tell her that unless she is up and about at daybreak to-morrow, the best course for her is to go on to the roof of the hotel about noon, whence she will be able to see the muezzin and hear the azan without fail.

It is Al Maghrib in Bilad ul Maghrib, the hour of sunset in the Sunset Land, the farthest west where the sacred Arabic tongue is common speech, and the faithful are settling down to break their fast in the name of Allah. The same sights and sounds will take place as hereinbefore described; the faithful will eat, drink, and be merry, for to-morrow they must fast; and the fair American will perhaps remark how quiet are to-day's streets compared to last night's, as she rides round the town with her party each mounted on a donkey.

The same report which, only a few hours ago, rose from the old Turkish cannon by the Tigris, rolled over the ruins of ancient Assyrian might, to be lost among the bleak mountains of northern Kurdistan, now rises from the Kasbah, rolls over the narrow Straits, perhaps strikes that great monument of modern British might, the Pillar of Hercules, to be lost amongst the hills of Spain. The same exultant *Allahu Akbar!* which greets the traveller by the ship of the desert coming in from his journey from the city of the Khalifs across the desert wastes, strikes the ear of the mariner entering the Straits in his great ship of the deep on his voyage over the great wastes of the ocean from the new lands of the West, maybe from the country of the young lady with horn-rimmed spectacles.

From the land where the memory of one of the greatest of the "Successors" is enshrined in the Arabian Nights to the land where "Success" is the guiding principle of life may seem a far cry, but the land of Al Maghrib, with the adjacent regions of Western Africa, is the nearest point of the Old World to that New World of boundless possibilities, and at the time of Al Maghrib, east and west of the Muslim world meet under the setting sun and the rising crescent moon to proclaim with one voice *Allahu Akbar!*

Lieut.-Colonel Sir Percy Sykes, who commanded in Southern Persia during the last three years of the War, has been granted the honorary rank of brigadier-general on his retirement from the Army.

The Wahhabi Sultan of Nejd has invited the Moslem Supreme Council in Palestine to send a depuation to the Moslem Congress which he has summoned to meet in Mecca to make regulations for the Pilgrimage.

Official news has been received in London of a fatal air crash in Iraq on November 12. A Sopwith two-seater Snipe, No. F 2,499, belonging to No. 1 Fighter Squadron, crashed at Hinaidi aerodrome near Baghdad, resulting in the death of the pilot, Flying Officer Ellis Reid, and serious injuries to Lieutenant W. H. E. Cotter, of the Royal Inniskilling Fusiliers.

The War Cross erected by the Imperial War Graves Commission in Basra Cemetery was unveiled by Air Commodore Dowding on November 11 (Armistice Day), the service being held at a parade of Royal Navy, Army, and Royal Air Force units. Basra War Cemetery is one of the four permanent cemeteries in Mesopotamia, and contains about 2,500 graves, and the cross erected there is similar to those erected in the British War Cemeteries in France and Belgium.

Near East Bookshelf.

A FRENCH GIRL IN THE CAUCASUS.

"IN THE LAND OF THE GOLDEN FLEECE." By Odette Keun. (London: The Bodley Head. 7s. 6d. net.)

This is a very curious, unusual, and fascinating book. It is the most subjective book of travel that we have ever met. The author tells us herself that her idea of a book of travel is one "composed of one-fifth personal aesthetic emotion, two-fifths facts that the traveller has learned and wants to teach others, and that all the rest is pure endurance and fury." Take the first as two-fifths and the second as one-fifth, and a good enough idea of her book is obtained. Only the "personal æsthetic emotion" is generally so real and geniune that it becomes a medium through which one sees the queer, lonely, and picturesque Georgia and its (usually) very lovable but hopelessly impractical inhabitants far more clearly than would be the case if she had devoted more space to the ordinary descriptions and facts which one usually meets. The subject of her book is the northern provinces of Georgia, and one sees them through her eyes and across her moods. Now she is fresh and well; now she is tired, cross, and worn out for want of sleep; now she is full of her own vague socialistic and theological ideas; now she is (and she often is) in a furious rage. And every mood brings out new views of places and people, and in the end the reader feels that he has been with her and actually sees what she sees, and knows the people as if he had been living with them. It is not easy to find a short quotation which does her justice, but perhaps this one of her experiences in the houses of the inhabitants of Khevsouretia (which must indeed be a province exceedingly difficult to move about in, and inhabited by singularly unpleasant people):

But to know the quintessence of a Khevsour house one must spend a night shut up there, when it is raining among the mountains and the dogs are howling outside; when the damp draws a pungent, poisonous odour from the earth and dung walls; when the smoke from the fire and from the resinous torches stings one's blinded eyes like a thousand darts; when from sheepskins, blankets, and the clothing of the hosts runs an unfailing stream of vermin, and legions of fleas jump from the cracks of chairs; when the effluvium of the cattle rises through the trap-doors and mingles with the exhalations of human dirt and sweat; when one cannot rise without knocking one's head against the rafters, nor move about the floor without falling through a hole; and when, to crown all, the Khevsourebi smoke in this dark and narrow space, spitting in all directions, and the rigorous etiquette of Georgia forbids you to request them to abstain from this sociable manifestation.

Every evening I made the same prayer: "Dodi, for pity, for justice, for love! Tell them that I am a barbarian, that I have no idea of good manners, that in my savage country I was so badly brought up that I cannot even understand the supreme propriety of expectoration. Dodi! I shall faint! I feel that from my head to my toes I am clothed in saliva. Dodi! in the name of all the saints of Sakarthvelo, tell them, tell them, tell them to stop spitting on me for one minute!"

And Dodi would turn his tortured, obstinate face to my bench and I would know before he uttered it the melancholy and final word that he was going to say, against which, when a Georgian pronounces it, nothing may prevail, neither reason, nor justice, nor peril, nor love—*Neoudobno* ("It is not seemly; it is not done.").

"Dodi" was Lieutenant Prince David Chavanavadzy, who had been detailed by the Georgian Government to look after the comforts and facilities (?) for travel of this young French lady of thirty-two who insisted on visiting dangerous and inaccessible places. He seems to have been a young gentleman of singular charms and engaging uselessness, knowing no fear, loyal to his charge, but finding the lady (specially in her—frequent—tantrums) difficult to understand, lazy and yet almost perfectly tireless, resourceful by fits and starts, but usually incredibly unpractical. Her own story makes it clear how she bullied the poor lad and how bitterly he resented it, though far too much of a gentleman to betray his real feelings. Near the end of the first trip recounted in this book she, with some justification, lost her temper with him. But she did more. She actually struck him across the face. The poor boy went straight out of the room and shot himself. Fortunately, his life was saved. She seems to have gone into hysterics and to have felt that it was unkind and unpleasant for Dodi to have acted as he did.

Dodi's successor was Captain Prince George Tsereteli, known as "Grisha," a splendidly handsome cavalry officer of twenty-eight. Poor Dodi's history was by then known to everyone in Tiflis, Mlle. Keun's name being unpleasantly connected with it, so that Grisha undertook his task with much distaste. He appears to have done his duty nobly, if not very cheerfully, but her frequent rudeness to him must have been very trying. However, as in Stanley Weyman's stories, the final result of the constant propinquity of the two young people was a kindling of ardent love on the part of Grisha, which explains the curious dedication of the book to him "in token of my admiration for the high national qualities which, revealed by him during our union, have made me love still more the admirable and virile race he so admirably represents."

And a fine race the Georgians evidently are. It is their tragic fate, however, to be entirely devoid of discipline or cohesion. The results of this terrible defect are being seen to-day in their vain undisciplined efforts to free themselves from the Bolshevist yoke. A perusal of this work makes one wonder whether the awful anguish they are undergoing will lead them to adapt themselves to habits better suited for the task of self-preservation. Mlle. Keun's account of them refers to a period only four years back.

Not the least interesting parts of the book are those which throw light on the curiously pagan beliefs and rites of the tribes living in the mountains, where Christianity provides only the thinnest of veneers.

The almost riotous use of simile and metaphor by the author in her descriptions has made the task of the translators very difficult. The use of French forms of words perfectly well known in English, such as "Strabon" for "Strabo," ought to have been avoided. The map given is in French, and gives the names of hardly more than two of the places mentioned in the book.

But there is no mistake that anyone who desires to know what manner of a country Georgia is, and what the Georgians are like, *must* read this vivid and almost overwhelmingly truthful book. There is no trace of any kind of propaganda about it.

readers of The Near East, in which, incidentally, some of these verses first appeared.

Mr. Black, who seems to have modelled himself as a craftsman on Kipling and W. S. Gilbert, has a facile flow of language, a pretty eye for form, but not so fine an ear for rhyme, and, best of all, a marked ability in the construction of narrative poems. He really gets on with his stories—mostly military—of the East with excellent gusto, and with any luck such tales as "Binting," "The Shah's Highway," or "Cholera" should be popular soon in peace-time messes. It is this form of versifying in which Mr. Black should, we think, persevere, for in others he has lapses either of manner or of matter which exclude him finally from any claim to distinction.

Undoubtedly these verses must have been good fun in the writing, but one's estimate of them as they appeared in magazines and as they appear together in permanent book form must differ. Some of them, to put it frankly, do not deserve republication.

One word on Mr. Black's taste. It is, e.g., the inclusion of "Eve's Daughters," hardly impeccable. And of his ear, let us say, as Scotsmen, that "armour" does not rhyme with "drama," nor "moor" with "war," nor "lawn" with "sworn."

On the whole, with the exception of the narrative poems, the very jolly verses concerning the Romney Marsh at the end of the book are to be liked the best.

As an example of Mr. Black's descriptive ability may be given three stanzas from his "Thumbnail Impressions of Mespot":—

A colourless expanse of shifting sand,
A river that does nothing else but twist,
A clammy, sweaty, sticky, steamy mist
Enveloping this God-forsaken land.

A kingfisher nose-diving from the blue,
A P-boat, churning up the angry silt,
A house that Jacko (wisely) never built,
In regions Cæsar (wisely) never knew.

An Arab maiden, busy straſing fleas,
A brass hat on a charger passing by,
A painted hussy giving the glad eye:
A thirsty Tommy drinking Japanese.

CORRESPONDENCE.

THE HOLY MOUNTAIN OF ATHOS.

To the Editor of The Near East.

Sir,—I plead guilty to a very unsatisfactory "hand of write," and have some sympathy with the compositor who calls the *monochrome* reproductions of Mr. Hasluck's water-colours in his book on Mount Athos *many more;* but surely he should not have converted my regret for the want of historical *record* of conventual settlements on the Mount to the longing for a *covenant*"? I write with all humility, and shall try to present fewer puzzles next time.—I am, etc., C. S.-W.

[Although having sympathised with the compositor, we offer our bewildered apologies to the writer, whose review appeared in The Near East of November 6.—Ed.]

OBITUARY.

The death occurred on November 15 at Ashburnham Lodge, Hellingly, Sussex, of Mr. Frederick T. Murdoch, for thirty-six years H.M. British Consular Agent at Mansourah, Egypt.

Miss Ruth Salisbury, aged 39, who had long been engaged as a missionary in India, died during the homeward voyage of the Indian mail steamer Caledonia. She was ill when she embarked at Bombay, and died when the steamer was in the Red Sea. She was buried at Port Said.

A correspondent writes:—

By the death of Mr. William McDouall, who passed away peacefully in his sleep at Khanikin in Iraq on November 2, at the age of sixty-nine, the British community in Iraq and the Persian Gulf have lost one of their oldest members. He was the son of the Rev. W. S. McDouall, rector of Owsden, Suffolk, and Grace Maria Dalrymple Hay his wife, and descended on both sides from old Galloway families—McDouall of Freugh and Dalrymple Hay of Dunragit Park, Wigtonshire. He was educated at Uppingham under Dr. Thring, and in 1875 went to the Persian Gulf on appointment to the Indo-European Telegraph Department. He served at Jask, Charbar, and Fao among other stations until his appointment in 1889 to Mohammerah, where he was the first incumbent of the Vice Consulate established there in 1891 in connection with the opening of the Karun to ships of all nations. He held this post, which was subsequently raised to the status of a Consulate, till 1909, when he was transferred to Karmanshah in a similar capacity. On his retirement in 1917 from the Consular Service he served in Mesopotamia as Assistant Political Officer at Badrah near the Persian frontier till 1921, when, after a short visit to England, he took up his residence at Khanikin, where, until the date of his death, he acted as adviser on local affairs to the Anglo-Persian Oil Company, Limited.

His kindly, though retiring disposition, and his intimate acquaintance and sympathy with Oriental ways and thought endeared him to a wide circle of Arab and Persian, as well as of British residents, at Mohammerah, where he spent the best part of his life, and enabled him to do valuable pioneer work in connection with the first beginnings of British trade in Arabistan. He was for nearly forty years a Fellow of the Royal Asiatic Society, and during his long residence in the Gulf had amassed a curiously varied stock of information on local topics, and on local languages, to the study of which he devoted in early days much of his spare time.

THE BEYROUT-BAGHDAD ROUTE.

On November 14, at the Royal United Services Institution, Whitehall, Major D. McCallum, late British liaison officer in Syria, lectured to the Central Asian Society upon "The Discovery and Development of the New Land Route to the East," Sir Charles Yate being in the chair.

Major McCallum began by showing how the idea of traversing the Syrian Desert by motor-car came to Mr. Palmer, British Consul in Damascus, and to himself, and how, in April, 1923, they, in company with Mohammed Ibn Bassam, a wealthy Baghdadi, who had been carrying on trade in contraband between Syria and Iraq, first made the journey between Beyrout and Baghdad. Directed by one of Ibn Bassam's guides, they started out, a convoy of three cars, one Lancia, one Buick, and an Oldsmobile (the last two being borrowed from the Nairn Brothers). But for the fact that the Lancia, owing to its not having as much clearance between the chassis and the ground as had the other two American cars, got stuck on a rock, the journey there and back was uneventful. It was obvious from this preliminary trip (which, incidentally, and incredible to the Baghdad ears, included British ladies) that the route could be made a commercial success.

Mr. Norman Nairn immediately saw the possibilities of the route. He soon collected round him, not only his brother Gerald, the finest motorist the lecturer had ever seen, and one whose prowess was a Middle Eastern by-word, but such men as Lovell, Ash, and so on, all of them ex-Service men, who had come from all parts of the Empire. Major McCallum paid a striking tribute to the hard work that the Nairn Transport Company had put in, and suggested that, although the mail-service had rightly been given to this company, that was not enough. In view of the fact that rival native companies, which could employ men who could live "on a handful of olives or dates a day," were undercutting the Nairn, and because Syrian companies, working with French capital, could run their services more cheaply than the purely British concern, he suggested that the Nairn should be granted a subsidy. In spite of these things, however, the Nairn Transport Company remained the sole example of successful ex-Service enterprise in the Middle East.

This trans-desert service—the lecturer denoted its stages from the Beyrout hotel through the Damascus bazaar on to Rutba Wells, Ramadi, Felluja, and so to Baghdad—was being extended to Teheran, a three days' journey. It brought Baghdad within nine days of London, and, consequently, India within fifteen or sixteen days. He pointed out that a route through British mandated territory alone was impracticable, owing to the presence, for about sixty miles east of Amman, of lava on the soil. But the authorities in Syria gave the Nairn company every assistance: General Weygand well understood that its development brought good money to French hotels in Syria!

The motor service was cheaper and more efficient and as quick as the air route to Baghdad (which, moreover, was but fortnightly); and with the sea route there was, of course, no comparison. Finally, he lamented the unwillingness of British motor manufacturers to enter the Middle Eastern markets. There was, he said, no British car built for desert work—the chassis being always too low—and meanwhile American and Continental cars ruled the roost. He had been unable to dissuade British manufacturers from the idea that this was unremunerative "stunt" work.

The lecturer illustrated his talk both with some excellent stories (e.g., that of the Americans who jumped in a Ford in Jerusalem and gave the simple but fatal instruction "To Baghdad"; and that of Major Holt's twelve days' tour across the desert in a Trojan) and with lantern slides. These showed clearly the character of the desert and the few though serious difficulties presented by it.

Subsequently questions were asked concerning the possibility of extending this new route on to India through Baluchistan, of lowering the rates of the Nairn Company to meet the competition of the native services, and of macadamising the trans-desert route. The chairman concluded the meeting with a reiteration of the lecturer's praise of the Nairn Company, and suggested that from the spirit in which employers and employed in it worked, a valuable lesson for the whole Empire might be drawn.

MR. EDWIN MONTAGU.

The death occurred on November 15 of Mr. Edwin Montagu, ex-Secretary of State for India. He was born in 1879, and, having entered politics in the Liberal interest, was appointed by Mr. Asquith in 1910 Under-Secretary for India. From that date onward his connection with India remained more or less unbroken, the climax of his career being reached with the publication, in 1918, of the Montagu-Chelmsford Report. The events of the latter part of his life, dealing with Amritsar, the place of Indian Moslem opinion in general of British polity, his dismissal from office, and so on, are too well known and excite too painful memories to be recapitulated here. Controversy still rages over his real position in the history of Anglo-Indian relations.

NOTES AND NEWS.

167, Strand, London, W.C.2,
Tuesday Morning.

India and the Exhibition.

According to reports from India, it appears extremely probable that India will not participate in the Exhibition if it is decided to continue it for a second year. Needless to say, the absence of India would be most regrettable, for an Exhibition purporting to be an Empire Exhibition would be lamentably incomplete in the circumstances. It is true that India's exhibits this year were an inadequate presentation of the great resources of the country, but that very fact, and the knowledge that particularly good business was done in the Indian pavilion would, one would think, inspire India to emulate the example of Mr. Britling, and see it through.

The Fate of the Fair.

It would seem probable that the continuance of the Exhibition may mean that there will be no British Industries Fair next year. A decision on the matter is not yet forthcoming, but the fact that the necessary publicity work has not been begun speaks for itself. In a sense, of course, the Fair is unnecessary if there is an Exhibition, but it would all the same be a pity to spoil the continuity of this annual event. Why not hold the Fair at Wembley as a part of the Exhibition in the same way that the various towns have a week to show their characteristics?

A Yugoslav Banking Development.

I learn with interest that the foreign department of the Slavenska Banka of Zagreb has been reorganised and enlarged. An Anglo-American section has now been established with a view to meeting the demand for increased facilities on behalf of the bank's clientèle in the United States, Great Britain, and the Dominions.

Sudan Plantations' Progress.

The work that is being done by the Sudan Plantations Syndicate in the rapid development of cotton growing in the Sudan was the subject of a most interesting review by Mr. Eckstein in his speech at the general meeting of the company. In view of the fact that, as he pointed out, the company is still in the stage of development, and that in the Gezira the past season was a bad cotton year, the statement of the company's position can only be regarded as highly satisfactory. Next year will see the completion of the Makwar Dam, and Mr. Eckstein stated that he hoped to be able to announce in 1926-27 that the company had 100,000 acres under cotton in the Gezira.

The 300,000 Acres Area.

Mr. Eckstein went on to state that they had remodelled to some extent their previous scheme for twenty stations on the 300,000 acres area. This acreage has been divided into nineteen stations to facilitate the necessary water control. Ploughing has been commenced on the extended areas, and out of the 300,000 acres the development of 225,000 has been completed and the canalisation of 200,000. Two-thirds of the housing programme for the nineteen stations has been finished, and the remainder will be finished by July. The requirements in ploughing engines, etc., are mostly on the spot, while of the syndicate's four new big ginning factories the first one will be completed by the end of this month, the second by the end of December, and the two remaining will be finished some time next year. This brief summary of the progress of this immense undertaking speaks for itself.

Anglo-Persian Report.

Special interest always attaches to the report of the Anglo-Persian Oil Company. The report now presented, which is given elsewhere, is of a very satisfactory nature. The net profit at £2,507,867 is not very different from that of the previous year, and the dividend paid is again 10 per cent., which absorbs this time £895,000, as compared with £777,764, while the carry-forward, subject to taxation, is £1,746,643, as against £1,777,788. The report with regard to developments is satisfactory. Further drilling in the Persian main fields has led to a large increase in the extent of proved oil-bearing territory. Drilling operations have been continued outside the main fields, and at Kishm oil of very high quality has been found in small quantities, but it is too early as yet to form any definite idea of the value of this field. In addition, in the Argentine several good oil and gas wells have been struck, and the receipts from the sales of oil and gas are now more than sufficient to meet all current expenditure.

Cotton and Cotton Goods.

THE EGYPTIAN MARKET.

Activity in Futures.

The Alexandria Commercial Company, in their report for the week ended November 6, state :—

Since our last report the futures market has continued to show great firmness and activity; the net changes on the week are the following :—Sakellaridis : $1.12 up for November, $0.40 up for January, $0.15 up for March, $0.05 up for May, $1.30 down for November, 1925. Ashmouni : $0.15 up for December, $0.10 down for February, $0.70 down for April. Despite a distinct falling off in the demand from abroad, our market has remained as firm as ever. The causes of this strength are those referred to in our previous reports, very little hedge selling, and the high prices paid on the spot, the latter being due to the fact that the local supplies are not yet sufficient to meet the covering of the sales made during the summer and early months of the season. Holders of stocks are, moreover, in general in a fairly good financial situation, and seeing the market rising almost daily, naturally do not press the sale of their cotton. New York fluctuations have been altogether ignored here, and the result is that the premiums of Egyptian cotton over American have further widened, and now stand at $20.41 for Sakel and $7.13 for Ashmouni, the difference in exchange not being taken into account. At the first November tender no dockets were issued. The week's receipts amount to 399,991 krs., against exports 351,236 krs.; the stock stands at 1,501,556 krs.

Spot.—A good business has been done at Minet el Bassal this week, and sales amount to about 31,400 B/s, of which we estimate 17,200 B/s Sakel, 5,800 B/s Uppers, 7,000 B/s Zagora, 1,000 B/s Pilion, 250 B/s Brown, and 150 B/s White. Arrivals continue heavy, but the movement is much freer in Lower Egypt than in Upper Egypt where many growers still refuse either to sell or gin their crops.

Sakellaridis : All styles have been dealt in, though the grades below good fair have met with only a poor inquiry. Spot premiums are slightly easier for fully good fair and good; for good fair and below they are distinctly cheaper, but for the qualities above good they are well maintained and inclined to harden. The spot position is generally a little easier, but sellers are still difficult to deal with. We think the high prices demanded at present for Sakel are making business very difficult and cutting down the demand from spinners.

Uppers.—There has been business in all grades. Spot premiums are steady and inclined to harden, the grades above good especially so.

Lower Egypt Zagora has again been in good request, mainly in the medium and good qualities. Spot premiums are steady, and for the good grades are inclined to harden.

Pilion has been in active request, and there has been keen competition for the few available lots of good cotton offered. Spot premiums all round are very much dearer and extremely irregular.

Brown.—A moderate business has been done. Spot premiums are generally much dearer, especially for the better qualities.

White.—A fair business has been done. Spot premiums are rather easier for fully good fair and below, but a little dearer for good.

COTTON TRADE REVIEW.

Business Still Quiet.

The Manchester Cotton Trade Review of the Imperial Ottoman Bank for the week ended November 15 states :—

The quieter conditions reported during the last two or three weeks have continued during that under review. It is still believed that foreign markets are in need of much larger supplies than they are actually taking, and the conclusion generally arrived at is that there is not sufficient confidence that current prices will be maintained. Whether the reduction is expected to be brought about by lower costs of yarn and cloth production or cheaper raw cotton are matters on which there is much divergence of opinion.

Yarn.—Further details are now available with regard to the ballot of spinners of American yarns referred to last week. The question to be put to spinners is whether they are in favour of restricting working hours by $8\frac{3}{4}$ hours per week as from December 1. If this were carried, the working hours would then be $39\frac{1}{4}$, as compared with 32 at present. The volume of operations has been smaller during the past week, and the position of spinners has, if anything, weakened. Egyptian spinnings remain steady, in spite of heavy fluctuations in the raw material, and only a modest turnover. Shipments of yarn last month were 13,454,100 lb., compared with 11,316,200 lb. in September and 14,733,500 lb. in October last year.

Cloth.—Business booked for India during the past week has been of comparatively small dimensions, and, consequently, the tone in this section has suffered, since minor outlets, however good, cannot compensate for slackness in the Indian department. For Egypt and the Near East quite an encouraging business has again transpired and other smaller markets have also been fairly active. Shipments of cloth last month amounted to 364,293,900 sq. yds., against 359,971,300 sq. yds. in September and 371,289,700 sq. yds. in October last year.

Raw Cotton.—The Bureau Report published on Saturday last was quite favourable, the condition being given at 55.9 per cent. and the indicated yield 12,816,000 bales, of which 9,695,000 had already been ginned. Although these figures were considered satisfactory quotations have increased during the past week. In Egyptian there have again been wide fluctuations in "futures," and this section does not appear to have yet settled down to a stable level of values. Closing quotations yesterday were as follows :—American middling, 13.87; Egyptian fully good fair, 25.50.

Engineering Topics.

A New Tractor.

All who are familiar with conditions in regions such as the Near East realise that one of the great needs in regard to agriculture and for other purposes is for a tractor which can operate, however rough the roads are, and, most important of all, where there are no roads at all. In regions such as the Sudan, Mesopotamia, Palestine, and Turkey its utility is particularly obvious; it is no less an essential in regions like the Balkans, where, speaking generally, the conditions of transit leave a good deal to be desired.

A tractor specially suitable for work in regions such as those enumerated has now been constructed, and on November 12 demonstrations of its potentialities were given before a large gathering which included official representatives at the Sentinel Waggon Works at Shrewsbury. The tests were very varied in character, and the way in which the tractor overcame difficulties such as deep mud, steep gradients, etc., was most impressive. The tractor, which is the combined production of the Sentinel Waggon Works and the Roadless Traction, Limited, of Hounslow, has a number of notable features, a brief description of which may be of interest. The outstanding characteristic of the tractor is its chain track. The boiler is of the super-Sentinel vertical water-tube type, and it is stated to be equal to evaporating 1,800 lb. of water per hour. It has been tested hydraulically to a pressure of over 1,100 lb. per square inch without showing any structural weakness, and can be operated with any head of water. The power unit is a horizontal engine entirely enclosed and self lubricated, and will develop between 60-65 h.p. As regards the weight distribution of these units, it is to be noted that over the front wheels there is practically no weight at all. The boiler is well back, the engine is close to it, and over the top of the engine is the water tank which carries the necessary feed-water for the boiler. That means that the main weights of the vehicle are concentrated almost directly over the weight-carrying bogeys of the roadless track. The disposition of the weight-carrying axle of the track unit is such that the weight on the front wheels is only sufficient to enable the machine to steer, and therefore the wheels do not impose any serious limitation when crossing rough or soft ground.

The "track" (the endless chain of metal shoes) has its plates made of steel castings. The links are of forged steel suitably heat-treated. The joints consist of a hardened and ground steel pin working in a hardened and ground steel bush. The links are so machined that after the bush, which is spherical on the outside, is inserted in the bore of the male end of the link, the metal can be pressed over the spherical portion, so forming a simple and efficient form of universal joint. This pressing operation, which necessitates approximately 75 tons, has the effect of consolidating the metal and providing a highly polished surface in contact with the bush. A chamber is provided in each link for holding lubricating oil, which is fed to the joint through the hollow pin. To prevent the loss of oil and the intrusion of mud and water a cork seal enclosed in a stainless steel ring is fitted. A driving tooth is formed on the top of each link, its position being such that it is practically impossible for stones to lodge between the track and sprocket. The link is rivetted and welded to the shoe plate as a final operation, the welding serving the dual purpose of joining the two parts and making an oil-tight closure of the oil chamber. The universal movement between adjacent plates is limited in every dimension to the maximum required in actual operation by the interlocking stops at the outside edges of the plate. The effect of this construction is that, in addition to being able to bend round the sprocket and idler, the track can flex laterally, and each shoe-plate can adapt itself to the general lie of the ground it rests on. When bending round sprocket and idler the working joint is the pin in the bush; when flexing laterally or rocking transversely the working joint is the spherical outer portion of the bush in the pressed over link.

The bogie (the assembly of rubber-tyred rollers in the centre of the track unit) carries four rubber-tyred cast-steel rollers mounted on Hyatt roller bearings. The rollers have flanges which, by contact with the sides of the track links, keep the bogie in correct alignment with that portion of the track which is on the ground. The bogie is universally mounted in a bracket carried by the axle, and is, therefore, free to work in a fore and aft or transverse direction to accommodate itself to the angles assumed by the track plates on uneven ground. In addition, the universal mounting permits the bogie to turn as about a vertical pivot, which is necessary when the vehicle is steering. The weight of the vehicle is transmitted to the bogies through semi-elliptic springs and an axle which carries the brackets in which the bogies are mounted. The bearings and spindles used in the rollers and idlers are identical, as also are the special asbestos seals which protect these bearings from mud and water. This simplifies the supply of spare parts. In steering, the track is actually laid in a curve without any slip or skid over the ground surface. As the track is picked up at the rear by the sprocket, correct alignment and true meshing of the teeth is ensured by making the sprocket sufficiently wide to allow the track to float over sideways. The bogie, being universally mounted, is free to turn at the slight angle to adapt itself to the curve of the track.

GREECE AS A CHEMICAL MARKET.

Greece can scarcely be considered an industrial nation, and, therefore, the demand for a complete line of industrial chemicals is non-existent (says an American Consular report). The country does, however, make large quantities of soap, which creates a need for such chemicals as are required in its manufacture. There are, of course, other manufacturing establishments using chemicals, but factories such as textile plants and leather works are, relatively speaking, small both in number and in capacity.

The output of the chemical industry had a valuation of approximately 161,000,000 drachmæ in 1921 and 454,300,000 drachmæ in 1923. These figures, however, include the important Greek olive oil, soap and glass industries, and are, therefore, not primarily chemicals and not treated in this article.

The total imports of industrial chemicals for the years 1922 and 1923 are not available at this time as the preliminary statistics record only the more important commodities. Because of adverse conditions, political and otherwise, the imports of chemicals as specified in 1923 showed a rather marked falling off—43 per cent.—from the total importation of 32,600 tons in 1922.

Sulphur is by far the largest single item imported, and is supplied almost entirely by the near-at-hand source, Italy. Copper sulphate, the next in importance, has been coming chiefly from Great Britain, as the British brands are very well known on the Greek market. This article is used most extensively as a spray, particularly for currant bushes.

Next in volume comes the item recorded as "sodas," which probably includes sodium bicarbonate, carbonate, sulphate, and silicate. Undoubtedly, most of the caustic soda imported is utilised by the soap establishments. The total production of soap in 1923 amounted to 20,000,000 kilos, a reduction of one-quarter from the previous years. Lesser quantities are consumed by cotton factories and bleacheries. The United States has not entered this market to any extent.

Ammonia anhydrous and carbonic acid gas find extensive sale throughout Greece for refrigerating purposes. Both of these commodities are manufactured to a limited extent locally, but the imported is usually preferred to the domestic.

Carbonic acid gas is received chiefly from Germany and Great Britain, the imported product being used for refrigeration and the domestic largely for carbonating water and soft drinks.

Outside of copper sulphate, there is little call for insecticides, in spite of the prevalence of pests of all kinds. The 1923 importation, 2,704 kilos, comprised mostly of French brands, evidenced a decrease of one-third from 1922. The Greek Government has been so busily engaged with its colonisation of the refugees that such vitally important activities as fumigation and disinfection have been forced to one side. However, the need, always existing, is growing, with the result that the longer neglected the greater the amounts of chemicals required in the end. At the present time, so far as is known, there is only one concern engaged in industrial fumigation work. This confines its activities to the extermination of rats, vermin, and similar pests in warehouses and other buildings.

Primarily an agricultural country, Greece is not as yet a large consumer of chemical fertilisers. The ten years since the introduction of chemical fertilisers have not been conducive to the growth and development of the industry. The consumption in 1923 reached a total of 20,000 tons, and with the elimination of adverse factors, the use of chemical fertilisers is expected to increase greatly. The great bulk of the consumption is covered by one local factory, which has a capacity of 50,000 tons. The actual production in 1923, however, amounted to but 18,218 tons, of which 9,683 tons consisted of superphosphates, and 8,535 tons, mixed fertilisers. In addition to the receipts of raw phosphates about 1,200 tons of ammonium sulphate, 800 to 1,000 tons of sodium nitrate, and 500 tons of potassium sulphate are imported annually to be manufactured into mixed fertilisers.

Quinine, one of the Greek Government monopolies, is the item of leading importance in the drug, medicinal, and pharmaceutical group, large amounts being required for the treatment of malaria and similar diseases which are so prevalent throughout the country. In 1923 the United States supplied 12 per cent. of the total imports of 26,240 kilos; Germany, 41 per cent.; and the Netherlands and Netherlands East Indies, 32 per cent.

There is also considerable demand for other drugs and medicinal specialities, of both foreign and domestic manufacture. Those in special use are iodides, bismuths, bromides, fluid extracts, glycerophosphates, essences, and alkaloids. Although the domestic industry is young, its development has reached such a stage as to offer keen competition in certain lines, but separate figures covering the production are not available. Of the imported goods, Germany and France supply the bulk for most lines, while Italy finds favour when it is a question of quick delivery. Most of the serums come from Switzerland.

The Greeks run rather true to type in the use of toilet preparations, and are especially addicted to perfumes. Men as well as women of the so-called middle and upper classes are large users of these articles. With the exception of the manufacture of small quantities of eau de cologne and other inferior grades of perfumes, such as musk, rose, and lavender, the domestic industry has not assumed the importance it might have done—especially considering the fact that alcohol and orange and lemon extracts, which are the principal ingredients of the Greek eau de cologne, are obtainable locally. Athough accurate statistics are not available, it is estimated that there are upward of 20 small plants throughout the country producing low grades of eau de cologne. The output is limited, however, and serves exclusively local demands. A number of small druggists also make eau de cologne for sale in their own shops, while perfumes are made in the home, for home use only and not for sale. The individuals gather the flowers, place the petals in hermetically sealed bottles containing pure water, and set these bottles in the sun. After a couple of weeks the product is ready for use.

COMPANY NOTES AND REPORTS.

Anglo-Persian Oil.

The report of the Anglo-Persian Oil Co., Limited, for the year ended March 31, 1924, states that the profit for the year, after allowing for depreciation, debenture interest, home charges, and royalty, amounts to £2,507,866 15s. 9d., to which has to be added the balance brought forward from 1923, £1,777,788 3s. 2d., less corporation profits tax for 1923, £104,011 9s.—£1,673,776 14s. 2d., making a total of £4,181,643 9s. 11d., from which the following appropriations have been made:—Extra depreciation, £415,000; debenture stock redemption reserve, £100,000; preference share reserve, £150,000—£665,000. The following dividends, less income tax, have already been paid:—For the half-year ended September 30, 1923—1st pref. shares at 8 per cent. per annum, £280,000; 2nd pref. shares at 9 per cent. per annum, £157,500; for the half-year ended March 31, 1924—1st pref. shares at 8 per cent. per annum, £280,000; 2nd pref. shares at 9 per cent. per annum, £157,500; and the directors now recommend the payment on December 31 next of a dividend on the ordinary shares of 10 per cent. per annum, less income tax, absorbing £895,000—£1,770,000, leaving a balance of £1,746,643 9s. 11d. to be carried forward, subject to excess profits duty, if any, for the year ended March 31, 1921, and the corporation profits tax for the year ended March 31, 1924. An issue was made privately in March of this year of £2,000,000 6½ per cent. five-year secured notes at 99 per cent., secured by deposit of £2,500,000 debenture stock as collateral security.

The subsidiary producing companies, the Bakhtiari Oil Co., Limited, and the First Exploitation Co., Limited, have continued to show very satisfactory results. Further drilling in the Persian main fields has led to a large increase in the extent of proved oil-bearing territory. The output of crude was steadily increased during the year to meet the expanding capacity of the company's refineries. Outside the main fields drilling operations have been continued, and at Kishm oil of very high quality has been found in small quantities, but it is too early as yet to form any definite idea of the value of this field. In the Argentine several good oil and gas wells have been struck, and receipts from sales of oil and gas are now more than sufficient to meet all current expenditure.

The throughput of the refinery at Abadan, in Persia, was disappointing during the year under review, work being impeded by the outbreaks of cholera and plague referred to in the last report. Since the close of the financial year the throughput has steadily increased, and has now reached the maximum figure for which the plant was designed. At the refinery at Llandarcy in South Wales a considerably increased throughput has been dealt with, and a steady improvement has been effected both in working costs and in refining results. The new plant to deal with light distillates is now in full working order, and the results are entirely satisfactory. All the refineries erected by the associated companies are now in operation.

The fleet of tank steamers owned by the companies' subsidiary, the British Tanker Co., Limited, has continued to work satisfactorily during the period under review, and has been kept fully employed. The sales of products through the company's distributing organisations show a continuous and satisfactory increase.

Assam Railways.

The report of the Assam Railways and Trading Company for the year ended March 31, 1924, shows that the gross earnings increased by Rs.98,395, and the expenditure by Rs.1,73,588. The directors have decided that the present year provides a suitable opportunity to alter the previous system, and to include in the revenue account all dividends declared and received on account of the period covered by the accounts, instead of only those actually received before the date of the balance-sheet. The present accounts therefore include in some cases more than twelve months' dividend. The general revenue account shows a profit of £137,778. After payment of debenture interest and allowing for all preference dividends, there remained £81,833. The directors, after providing £50,400 for service on the "A" stock, recommend a final dividend of 6 per cent. on the "B" stock, making 8 per cent., writing £5,000 off discount on debentures, leaving £2,433 to be carried forward.

PROTECTION OF INDIAN STEEL INDUSTRY.

H.M. Senior Trade Commissioner in India reports that urgent representations have been made to the Indian Tariff Board for the further protection of the Indian steel industry, in order to compensate that industry for the low prices which have been obtained in India for steel manufactured locally, owing, firstly, to a rise of over 12½ per cent. in the rate of exchange, and, secondly, to the fact that Continental steel exporters have not raised the c.i.f. prices of their goods since the recent imposition in India of protective duties on steel goods.

In this connection the following two points have been specifically referred to the Tariff Board for their consideration:—1. To what extent, if any, and in respect of what articles or classes of articles, the import duty should be increased, and (2) whether the duty should be increased generally or in respect of such articles when imported from or manufactured in any country or countries specified.

It is understood that the representations to the Tariff Board refer particularly to common bars, light rails (under 30 lb.), and structural sections, and that competition in these articles is keenest from Germany, Luxemburg, and Belgium.

H.M. Vice-Consul at Sofia reports that the surtax leviable when Bulgarian Customs duties are paid in paper currency will continue to be levied at the existing rate until December 31 next—i.e., 15 paper leva must be paid for each gold leu of the Tariff.

The Secretary in Charge of Commercial Affairs at H.M. Legation, Teheran, Persia, is anxious to receive United Kingdom periodicals and journals dealing with agriculture and technical subjects, such as carpentry, engineering, and the motor-car industry, as well as sports magazines. These are required for display in a recently established club in Persia, and it is anticipated that a perusal of such periodicals by members of the club will stimulate local interest in British manufactures.

Company Meeting.

SUDAN PLANTATIONS SYNDICATE.

Continued Progress.

Further Capital Requirements.

The seventeenth ordinary general meeting of the Sudan Plantations Syndicate, Limited, was held on November 12 at Winchester House, Old Broad Street, E.C.

Mr. F. Eckstein (the chairman of the company) presided.

The Secretary, having read the notice convening the meeting and the report of the auditors,

The Chairman said: Ladies and gentlemen,—As the directors' report and the accounts have been in your hands for some days, I suggest we adopt the usual practice and take them as read.

This is our seventeenth annual meeting, and for the seventeenth time I have the privilege of addressing you and putting before you a statement which I trust you will find not wholly unsatisfactory, in spite of the fact that we are still in the stage of development, and that in the Gezira, through no fault of ours, the 1923-24 season has been a bad cotton year.

On the other hand, at Zeidab, our most northerly plantation, we had a good cotton year, and this, combined with the ruling high cotton prices, enabled this station to give us a fair return for the money invested there.

In the Gezira we suffered from three misfortunes. The first adverse factor was "blackarm," which is a bacterial disease. The second was "thrips," which is an insect pest, and No. 3, our ginning factory at Wad Medani was completely gutted by fire in the middle of our picking season. Our headquarters staff in the Sudan, however, rose to the occasion, and within four weeks we had more than half of the gins running again, and two weeks later the remainder. When you consider how remote Wad Medani is from the resources of civilisation you will, I think, agree with me that this was a notable achievement.

As regards the blackarm, we were hopeful at the beginning of the season of having found a way to stamp out this disease by a special treatment of our cotton seed, but I regret to say blackarm has again made its appearance this year, and we have to try some other expedient.

For the thrips we have likewise so far found no remedy.

The Balance-Sheet.

If you will turn now to the balance-sheet you will see that our capital has been raised from £450,000 to £600,000, and to-day the whole of the 150,000 new shares have been issued and paid for, with the result that the share premium account stands to-day at £1,013,000, as against £805,883 on June 30, the end of our financial year.

When your board decided in May this year to raise fresh working capital, I noticed in the Press remarks to the effect that shareholders would be well advised if they would find out why all this money was required, considering that our concession had nearly run out. Well, ladies and gentlemen, our concession has not yet begun, and for the rest I can assure you that this additional money is not required for a joy ride.

When raising the capital of our syndicate in March, 1920, from £300,000 to £750,000, I stated that in all probability the whole of this increase would in time have to be issued.

This is exactly what is going to happen, and in time I shall have to come to you again for more money by the issue of the remaining 150,000 shares. May I say at once that when this takes place we hope to put before you a scheme for the rearrangement of our capital, which I have no doubt will gain your full approval, and which will do away with our share premium account?

Whilst on this subject, I can tell you that we have now all the money in hand for the completion of the development and equipment necessary for the 300,000 acres area. We have, however, still to provide for a sufficient working capital, and, to give you an idea of our requirements in this respect, I want to mention just one or two items.

Advances to tenants during a full working year will amount to roughly £400,000.

Railway carriage and steamer freights to bring our cotton home (leaving cotton seed out of my calculation), £400,000.

Ginning expenses, including sacks, bags, salaries, and other incidental expenses, will likewise run into several hundred thousand pounds.

These figures need not frighten you; they do not alarm us, because the more we have to pay in this respect the better we shall be pleased, as big expenditure under these headings can only mean big cotton crops.

The Hosh reserve account has been increased from £80,000 to £140,000.

To the Wad Nau reserve account we have put down—being the first year in operation—the sum of £70,000.

Staff Provident Fund.

Our staff provident fund stands now at £22,500, provided you again sanction this year's contribution of £7,500 towards this most necessary item.

Your board is now engaged in working out a scheme by which we intend to change the present basis into a mutually contributory scheme.

Roughly, the idea is as follows:—

Approved members of our Sudan staff will be allowed to become members of a provident fund to be invested in trustee securities in the names of trustees. To this fund equal contributions on the basis of a percentage of salary will be made by the employee and the company, and, on leaving the service of the company, a member of the fund will receive a capital sum representing his own accumulated contributions, *plus*, subject to good conduct and length of service, a proportion or the whole of the accumulated contributions made on his behalf by the company.

If we succeed in establishing this basis, and if our staff agrees to these conditions, the present fund will disappear, and we shall use the whole of this money by granting paid-up policies to some of our older employees, who have borne the burden and the heat and ups and downs of the leaner times during which we were learning our experience.

It is hardly necessary for me to commend this action to your favourable consideration, as we have and always have had an excellent and loyal staff, for whom we cannot do too much.

Creditors total £207,000, against £129,000 last year. Most of this has been settled since we closed our books.

Installation Expenditure.

On the credit side you find an increase of about £5,000 in the Zeidab Pumping Installation Account, due to the completion of the new Diesel engine.

Heavy additions had to be made to the general development account as well as to canalisation, buildings, and furniture, agricultural implements, and light railway accounts, all due to the progress made with the big scheme.

Stock of cotton figures at £337,000, against £123,000 the year before.

Our total shipments of cotton came to 17,679 bales, of which we had only disposed of 8,221 bales on June 30. Our valuations for the unsold stock were naturally based on conservative lines. Within the last few days we have sold the balance of our stock, so that we are now starting with a clean sheet for the coming crop.

Stocks of stores and materials are about the same as last year.

Kassala Cotton Company.

You will notice that our shareholding in the Kassala Cotton Company is unchanged.

At the annual meeting of this company, held in May this year, the chairman explained to the shareholders that the board had some uneasiness regarding possible activities on the part of the Italian Government in Eritrea.

These difficulties still exist, but negotiations are in progress on the subject, and we still hope for a satisfactory settlement.

Meanwhile, I can inform you that the Kassala Cotton Company have this year—their first year—something like 15,000 feddans under cotton.

One very pleasing feature in connection with our work there is the apparent keen desire of the native population to become tenants under our partnership scheme. As a matter of fact, tenants offered themselves for more than double the area for which water was available.

Cotton Cultivation in Brazil.

A new item under this heading is 15,000 sharess in the Brazil Plantations Syndicate, and, regarding this holding, I would like to say a word or two, as it has been mentioned to me that our taking an active part in this new undertaking showed a feeling of distrust in our Sudan venture. Ladies and gentlemen, nothing could be farther from the truth; we always had, and still have, the greatest confidence in the Sudan as a cotton-producing country, and our work there and the results we have achieved so far speak for themselves.

It is, however, our ambition gradually to make our syndicate into a holding or parent concern.

The prospects for profitable cotton-growing in the world are good. You can pick and choose interests in other parts of the globe, and we have for this purpose the best staff in the world, and why should we not make use of this advantage? In this matter, too, please do not be alarmed, as your board is guided by conservative principles and acts with caution.

Now, ever since I have been connected with cotton-growing, I have made it my business to keep *au courant* with what is going on in other countries in this respect, and for years past I have been convinced that in time to come Brazil will be one of the really big cotton-growing countries in the world.

For the moment the Brazil Plantations Syndicate has acquired two small estates, one the Fazenda Santa Emilia and the other Fazenda Cayua, with an area of 8,500 acres.

The Brazil Plantations Syndicate is fortunate to have our colleague Lord Lovat as its chairman. He hopes to pay his second visit to Brazil early next year, and I hope to accompany him.

Financial Position.

To return to the Sudan Plantations Syndicate, our financial position is good, as the figures in our balance-sheet show.

Now, if you will look for a moment at our profit and loss account, you will see that our total gross profits amount to about £251,000. Against this our general expenses and cultivation expenses are a good deal higher than last year, owing to a largely increased staff and owing to the duplication of our cotton area.

As mentioned before, we have again provided, as we do every year, a bonus to our staff. This item, as well as the addition to the staff provident fund, I warmly recommend to your approval.

The net profit after liberal writing off is therefore £113,000. Against this we paid you in July an interim dividend of 10 per cent., amounting to £45,000, and we now propose to pay a final dividend of 10 per cent., which will amount to £60,000, absorbing £105,000 in all.

From the directors' report you will have seen that the balance carried forward stands now at the splendid figure of £176,500. It has been the policy of your board gradually to build up this reserve with the idea of having a dividend equalisation account, and we shall not hesitate to draw thereon in case of need.

Our business is an agricultural one, which means that we are subject to good and medium crops—we never have had an entire failure—and we therefore consider it wise to take precautions.

Work at the Stations.

Now a word or two about the work done at our stations.

At Zeidab we have completed the new installation of a Diesel oil engine, and the plant is working satisfactorily. We believe that the plant will result in considerable economies in running expenses.

As already mentioned, we have had a very satisfactory year, and, as far as I can judge at present, the coming season promises to be an equally good one, as we have picked already about 11,500 kantars and shipped 1,000 bales, part of which is already sold at a fair price.

In the Gezira, on the other hand, unfortunately, for the reasons already stated, our cotton crop from all stations has not been good, as I saw myself, and it resulted in a yield of just under three kantars per feddan.

This year we have a similar acreage, viz., about 20,000 feddans, under cotton in the Gezira, and the latest reports from our managing director are, I regret to say, not altogether satisfactory, inasmuch as both blackarm and thrips are again general over all our Gezira cotton fields. Luckily, so far, blackarm does not appear to have done much damage, but thrips are on the increase. To summarise, I would call our prospects for this season fair.

The Sudan Government has in June this year given us definite notice that the Makwar Dam should be completed next year, and that gravitation water will be supplied to

us in time for the 1925-26 crop. If this forecast proves correct, it will mean that our concession will date from July, 1925, which is important for you to know and to make a note of.

In these circumstances, we are working to have a very considerable area ready for cultivation in July, 1925, and if all goes well I hope to be in a position to announce to you in 1926-27 that we have achieved what we originally set out to do—viz., to have 100,000 acres under cotton in the Gezira.

The 300,000 Acres Area.

In this connection I may tell you that we had to remodel to some extent our previous scheme for 20 stations on the 300,000 acres area. We have added this year to our report a plan showing a division of this acreage into 19 stations. This was done to facilitate the necessary water control, which is a highly technical matter and on which I need not enlarge.

We have started ploughing on the extended areas, and I feel sure you will be pleased to hear that of the 300,000 acres we have completed so far the development of 225,000 acres and the canalisation of 200,000.

In our housing programme, viz., houses, offices, stores, etc. of the 19 stations we have finished about two-thirds, and the remainder will be finished by July next year.

Our requirements in ploughing engines and other heavy implements are mostly on the spot and in working order.

Of our four new big ginning factories, the first one will be completed by the end of this month, the second by the end of December, and the two remaining will be finished some time next year.

I hope to add next year to our report a picture of this enormous installation.

Our staff had naturally to be largely increased, and it may interest you to hear that we have sent during the last 12 months 36 new inspectors, besides several engineers, and their health has been fairly good. The first year is always the most trying one for a newcomer to the Sudan.

Research Work.

At our last annual meeting I mentioned that a Commission, consisting of Sir John Russell, of Rothamsted, and of Dr. Martin Leake, of India, and now principal of the Trinidad Research Station, had been appointed for the purpose of advising the Sudan Government, the Empire Cotton Growing Corporation, and your syndicate regarding scientific research work relating to cotton planting.

Their valuable report has been handed in, studied, and adopted in most of its recommendations. The three parties mentioned contribute towards the expenses. We, on our part, undertake the running of a seed farm under an expert.

Our relations with the Sudan Government are good, and our work has been unaffected by political conditions.

Cotton Possibilities in the Nuba Mountains.

During my annual trip to the Sudan at the beginning of the year, Mr. MacIntyre, our managing director, and I paid a visit to the Nuba Mountains Province, which is situated between the White Nile and Kordofan, with a view to investigating the possibilities of cotton-growing in that district.

It is our considered opinion that in years to come this province will prove a valuable cotton-growing area, and, whether we have anything to do with it, or not, a large amount of cotton will be grown there.

You have there the three essentials necessary for success in this respect, viz.:—

1. Large tracts of land with good cotton soil.
2. The necessary rainfall for germinating the seed and ripening into cotton.
3. Real cotton climatic conditions.

On the other hand, you have, as in every new country, considerable difficulties to contend with, chiefly the lack of communications. There are also other points which require careful study and investigation. But when all is said and done difficulties are there to be overcome, and, as mentioned before, I hope I shall live to see in the Nuba Mountains a flourishing cotton industry. What the Sudan really wants is money for the construction of lines of communication free of interest for a number of years.

This practically completes my review of the past year's work; it is a work of surpassing interest, and worthy of bringing out the best of any man connected with it.

I have now only to pay my yearly tribute to our entire staff. As in the preceding years, they have done their

very best in the interests of our syndicate, and they all deserve a hearty vote of thanks.

Ladies and gentlemen, I beg to move:—"That the report of the directors and statement of accounts to June 30, 1924, now laid before the meeting, be and that the same hereby are received and adopted."

I will ask Mr. Hutton to second the motion.

Prospects of the Cotton Trade.

Mr. J. A. Hutton.—Ladies and gentlemen,—I think that, after the very excellent and very interesting speech we have had from the chairman, very few words from me are necessary. I am very glad that he reminded you that cotton growing is agriculture, and, as most of you who have had anything to do with agriculture know, there are ups and downs; you will have good and bad seasons. We are, however, making steady and continuous progress. There is another point we must not forget: the buyer always has the last word in these matters. We have to grow the cotton that the spinner wants, and I am glad to say that the cotton we are growing is just what the spinner wants. I come from Lancashire, so that I know what I am talking about, and I have no hesitation in saying that there is an unlimited demand for the class of cotton we are growing. There is always plenty of room at the top, and as long as we continue to grow a good type of cotton we shall have no difficulty whatever in marketing our products.

Perhaps I might tell you something else that possibly some of you know; there is a distinct improvement in the cotton trade, and it is coming from the right direction—demand from the ultimate consumer; I mean the exporter of cotton goods to different parts of the world. I have no hesitation in saying that the prospects of the cotton trade are infinitely better than they have been at any time during the last four years.

There is just one other point. This is not a political meeting, but I think we ought to give praise where praise is due. I think the attitude of the late Government, as shown by Mr. Ramsay MacDonald's letter, on the question of the relations between the Sudan and Egypt was excellent in every way, and I sincerely hope, and have every confidence, that the new Government who have just come into office will follow in the same way. We all want to see a fair agreement with Egypt, but at the same time we have got to look after ourselves and our own interests in the Sudan, and there must be no weak giving way for the sake of getting temporary peace. There is only one way of dealing with Easterns; you must be absolutely fair, you must be absolutely just, but you must be absolutely firm, and I have every hope that that is the attitude which the Government will adopt. I have very great pleasure in seconding the resolution.

The resolution was carried unanimously, and the dividend recommended was declared.

The retiring directors, Sir Lionel Phillips, Bt., and Mr. D. M. Hannay, were re-elected.

In moving the re-election of Captain Bernard Eckstein as a director of the company, the Chairman said that the work had so much increased of late that it had been found necessary to have another whole-time director in the office, and the board had appointed his son to that post. Captain Eckstein was no novice in the business. He had several times accompanied him (the speaker) in his visits to the Sudan, and knew exactly the work that was being done there, and he was known to most of the company's officials. He should therefore prove an acquisition to the board.

Mr. D. M. Hannay seconded the motion, which was passed unanimously.

Messrs. Cooper Brothers and Co. were re-appointed auditors, and a vote of thanks to the chairman, directors, and staff concluded the proceedings.

SHIPPING INTELLIGENCE

SHIPBUILDING BY VICKERS.

The G. W. Humphreys, the second of the two sludge vessels ordered by the London County Council from Vickers, Limited, in March last, was launched from the Naval Construction Works at Barrow-in-Furness on November 13. The first of these two vessels, the J. H. Hunter, which was launched on October 2, will be completed by the end of this month.

The G. W. Humphreys is similar in all respects to the J. H. Hunter, the dimensions of the vessel being as follows:—Length B.P., 260 ft.; breadth moulded, 43 ft. 6 ins.; depth moulded, 16 ft. 10 in. The vessel is built to the requirements of Lloyd's Register to Class 100 A1, and to the Board of Trade requirements.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Olympia for Bombay (Liverpool, November 22). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Masirah for Port Said, Colombo, Madras, and Calcutta (London, November 29).

Bibby Line.—S.s. Leicestershire for Port Said, Colombo, and Rangoon (Birkenhead, December 3).

British India Line.—S.s. Mirzapore for Bombay and Karachi (London, December 6); s.s. Mashobra for Colombo, Madras, and Calcutta (London, December 4).

Ellerman "City" Line.—S.s. City of Sparta for Calcutta (Birkenhead, November 29).

Ellerman's Westcott and Laurance Line.—S.s. Dido for Gibraltar, Malta, Patras, Piræus, Syra, Volo, Salonika, and Smyrna (London, November 29).

Johnston Line.—S.s. Kenmore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, November 22); s.s. Quernmore for Piræus, Volo, Salonika, Bourgas, Varna, and Constantza (Liverpool, December 6); s.s. Aviemore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, December 27).

P. and O. Line.—S.s. Caledonia for Bombay (London, November 29); s.s. Nankin for Colombo, Madras, and Calcutta (London, December 13).

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

The Death of the Sirdar.

If we take a hint from the magnificent character of the late General Sir Lee Stack, who was last week murdered in the most ghastly and foul way in Cairo, we shall not waste time in high and whirling words. Continuity of service might be taken as the key to the Sirdar's career; no panic, no "jumping," but simply the pressure of inexorable and continent justice is what should be applied to the country in which was possible the harbouring of such creatures as assassinated this gallant servant of his country. Great events can only be countered by great measures; and for his own Sudan at least—the Sudan for which he worked so hard and which in turn loved him—it can at once be said that the British Government is doing its best to make good the gap which his loss entails. From what has already been foreshadowed of the Government's intentions, it is possible to say that the Sudan will not grieve for the future. But, in the coming greatness of the Sudan, it is difficult to imagine that the greatness of the Sirdar's rule there will ever be forgotten. The best masons are generally the quietest; and it will surely be found that he built such foundations in the Sudan as will gloriously survive, and, as their superstructure is inevitably added, recall, his untimely death.

British Policy in Egypt.

To the affair which is bringing with it events succeeding each other, in sure, in orderly, and, it may be, in predestined profusion, we devote an examination elsewhere. It may seem therefrom that we are unduly pessimistic, unduly critical of the Government. It is, however, the farthest thing from our thoughts or intentions to make the task of Britain in this grave crisis any more difficult. Yet the conviction obtrudes itself that the Cabinet will have to act with extraordinary *finesse* to regularise the situation; that action has been taken the consequences of which it is impossible to prophesy; that we have, in short, embarked upon a policy which can have no definite end. It may be that no justification of the steps that have been taken in Egypt will be called for at the next meeting of the League of Nations, of which Egypt is not a member, but our relations with the rest of the civilised world will scarcely become easier after so tremendous a grasp of the firm hand has been shown. Certain things, such as an apology, an indemnity (£500,000 was a large sum), a real search for the criminals, were undoubtedly necessary; and, with the exception of the tacking on at this particular moment of the increase of the Gezira irrigation, the alterations in the governing of the Sudan are wholly salutary. But one could wish that the demands had been confined to the Sudan. As things are, a policy is being foreshadowed which is no policy. Darkling, we live in hope that the Government may so act in the immediate future as to ensure both a realisable policy and more Egyptian co-operation than would at the moment appear probable in the administration of a country which was unfortunately given independence before it understood the terms of that grant.

Yugoslavia and Greece.

The superficial depression caused by Yugoslavia's recent denunciation of the Græco-Serbian Treaty of 1913, was quickly dispersed when it became known that the Governments of both countries are eager to negotiate another agreement. Many small events led up to the denunciation, but the chief of them concerned Macedonia. On this point the attitude of Greece has been unexceptional. In protecting Bulgarian minorities in Greece, Greece has merely carried out the obligations of the treaties, and it speaks much, incidentally, for Yugoslav susceptibilities on this matter of Macedonia that the abrogation of the Treaty was due largely to it, and, too, was determined upon, not by the Pashitch Administration, but by the late Davidovitch Cabinet. Another important point concerns the securing by Yugoslavia of exemption from quay dues at Salonika. There is every hope that these matters will be smoothly settled between the two countries; certainly, there is no cause for alarm, for in any case the old Treaty of Alliance

Digitized by Google

has still a year to run. For this odd "out-of-doors" job of negotiating a fresh treaty, M. Venizelos has taken advantage of M. Pashitch's return to power to offer his services, but on condition that the new Constitution Bill in Greece is first passed. Since, however, this would take perhaps three months, and since both countries wish a new Treaty to be framed within a month, it may be found either that it is possible to dispense with the assistance of M. Venizelos, or to persuade him to withdraw his conditions.

The New Turkish Cabinet.

Things are certainly going on behind the Turkish scene which are a little baffling to the foreign observer, keen as he may be, in the present circumstance, to welcome the new event. Why General Ismet, who resigned last Friday in favour of Fethi Bey, should have thought his majority in the Assembly insufficient to combat the comparatively small numbers of the so-called Opposition, it is a little hard to understand, and it may be that in this rare case "ill-health," the reason so often given in the East for more or less compulsory transferring of duty, has played some part in the matter. However that may be, Turkey is to be congratulated on having secured in his place so enlightened a politician as Fethi Bey, who is not only a true Turkish patriot, but is well aware of his country's limitations and of the necessity of its living in comparative harmony with Western nations. For example, it may be taken for granted that the Mosul question will be discreetly handled, and that the Commission of the League of Nations (now in London) will be given a free hand. It appears that Mustapha Kemal has a nice judgment in taking time by the forelock.

The Unrest in Persia.

Out of the obscurity that surrounds the attitude and conduct of the Sheikh of Mohammerah to the Teheran Government have come some very wild and shadowy stories, falsehoods that flash a fierce light in the gloom of non-information and then disappear. The picturesque details that were supplied from Teheran of fighting between the Sardar Sipah's troops and those of the Sheikh's have now, it seems, to be put in the same dustbin as that which holds so many of Teheran's hopes and fears. For the latest intelligence to hand implies that a peaceful arrangement between Teheran and Mohammerah is being made, although the conditions of that settlement have not yet been published. Comment is idle until these conditions are known; nor is it profitable now to speculate upon whose advice the Sheikh of Mohammerah has stayed his hand.

Affairs in Arabia.

Matters are a long time in coming to a head between the forces in the Hejaz of King Ali and those of Ibn Saoud, but, from the military point of view, there would appear to be little chance of the preservation of Jeddah should Ibn Saoud choose to advance upon it. The ruler of Nejd has completely encompassed it by occupying Rabeh on the north and Kunfida on the south. In the meantime, King Ali appears to be doing his best to find a basis of negotiation with the Wahhabis, and it is even reported that in this connection he is asking the assistance of his brother Faisal's rival, Saiyid Talib Pasha. In this move it is not difficult to discern the hand of Mr. St. John Philby. On the other hand, Ibn Saoud is proceeding serenely with his plan of assembling Moslem opinion to discuss the future of the Holy Places, and it is gratifying to learn that, on the whole, he is enlisting rather the religious than the political leaders of Islam to this purpose.

INDIA.

What is Truth?

The last mail makes rather depressing reading for those of us who hope to see Indian opinion gradually finding an assured basis in objective fact, for it presents an orgy of misrepresentation of a kind which by this time ought to be entirely obsolete. We read the calm, judicial pronouncement of a Viceroy forced reluctantly to the conclusion that in Bengal "preparations for criminal outrages are now so dangerously developed that it is necessary to provide immediate safeguards"; and we find most of the remaining space filled with denunciation of these safeguards as a deliberate attack on honest liberty of opinion. The outcry is not indeed universal, and we are glad to notice signs of a more reasonable attitude in Madras, which is politically advanced, and in Bombay, which is usually ready to differ from Calcutta; but, speaking generally, what we find is an entire ignorance of facts, combined with a deliberate refusal to weigh probabilities. Lord Reading says he has been convinced by the evidence; his critics reply that he has lost, or deliberately abandoned, his exceptional judicial acumen: the evidence will come before the Courts in due time; and people gifted with any sort of political capacity would wait for it before deciding that Lord Reading has suddenly gone mad, or bad. It is, as we have said, a depressing exhibition, and it makes things very hard for the friends of Indian progress in this country.

Mendacity in the Press.

It is not only in regard to the new Ordinance that this indifference to facts and probabilities prevails. In a recent speech in the Punjab Sir Malcolm Hailey gave concrete instances sufficient to justify his contention that among the journalists of that province there are as hardy liars as any to be read of in history, men who are ready to assert the death from torture of prisoners who, in fact, are in excellent health, and probably putting on weight on the liberal gaol diet, and men who ask people to believe that prison-cells are deliberately filled with snakes. It is curious to find Sir Malcolm's view confirmed, quite independently, by a Bengali journalist, whose avocation has led him to the Punjab, and who declares himself shocked by the crude mendacity of the local Press. It must not, however, be inferred that the cult of truth has made very much progress in Bengal: indeed, it was a popular journal of that province which complained recently of the attitude of the law courts in libel cases which makes it positively dangerous to criticise an official's conduct without having first ascertained the facts on which the criticism is based.

The Courts and the Press.

Judging by experience elsewhere, it is, in fact, largely to the law courts that we must look for the improvement of the Indian Press in this matter. We wish the Indian advocates of liberty would take the trouble to study the legal side of their subject with rather greater care. They would find two parallel lines of development. On the one hand a long series of decisions has gradually established and defined the right of free comment, while on the other the duty of making sure of the facts has been steadily enforced by the award of heavy, and occasionally ferocious, damages against journals which have fallen below the standard of accuracy required by judges and juries. We believe that one reason why the Indian Press has lagged behind is to be found in the elaboration of procedure characteristic of the civil courts. It has been much easier to prosecute for defamation than sue for

Digitized by Google

libel, and consequently aggrieved persons have until recently avoided the courts most competent to deal with questions of the kind. Of late there have been signs of a change in this respect, and if the deliberations of the Civil Justice Committee should happily result in the courts being opened to the ordinary man, the Press will come under the sort of discipline which has secured a reasonable standard of accuracy in some other countries.

THE WEEK AT HOME.

London, Tuesday Morning.

The Sirdar.

London was horrified by the news of the Sirdar's assassination, and there was general approval of the King's indignant telegram and the British Government's stern message to Egypt. The dangers of the situation were fully admitted, and it is recognised that, unless matters are firmly handled, an entirely new position may develop.

Relations with Russia.

The Government's reply to Soviet Russia was in the terms that had been generally expected. The despatch published last week possesses interest as the first substantive act of Mr. Chamberlain, and his quiet dignity and firmness have been much appreciated; but otherwise the action taken had been so thoroughly discounted that it caused not a ripple of excitement. The preposterous Treaty was doomed, of course, even before the election, and nobody expected it to be brought before Parliament. The Zinovieff letter, however, seemed a more awkward affair, thanks to Mr. MacDonald's curious way of handling that affair.

However, the new Cabinet, after examining the whole business, and no doubt also examining the evidence upon which the Foreign Office decided it to be genuine, has been convinced that the Soviet denial was a mere *façon de parler;* and the public, remembering that a Committee of the late Government also could not make up their minds to reject it as a forgery, will rest content that the experts have established their proofs of the document. There was at first, of course, a good deal of scepticism, for the letter ("very secret") contained nothing that everybody did not know, and its political effect was indirect rather than direct—it was not so much the letter itself as the contradictions of the late Government concerning it which influenced the voter at the polls. Once again, however, it seems that truth is stranger than fiction.

It is certain that the matter cannot rest where it is. Even if nothing more is heard of the letter—and a further exchange of notes on that subject would not be profitable to either disputant—the problem of British relations with Russia remains. Recognition of the Soviet, accomplished by the late Government, stands, but there will be no loan and no guarantee on our side—and, on the other side, I suppose, no cessation of propaganda either in this country or on the Asiatic borders of the Empire. We are likely to hear a great deal more of this business before we are through with it, but at least the Baldwin Government knows its own mind, and is not to be influenced by subterranean influences like its predecessor.

Food Adulteration.

The annual report of the Ministry of Health is always an interesting document, and the present volume has been rendered rather gruesomely attractive by a detailed account of various forms of food adulteration which have been discovered by officials of the Ministry. Arsenic in cocoa, sand in tea and sugar, water in milk—sometimes dirty water—margarine and water in butter, and "preservatives" in cream are some of the delights that the retail tradesmen offer us.

It is admitted that the penalties are totally inadequate, and are paid for out of the profits. Some strengthening of the law seems required; if the local grocer (too often a pious humbug) were sent to prison he would hardly be able to trade on the fact that he poisons his customers all the week and officiates as churchwarden, handing them the bag on Sunday.

Food Prices, Strikes, and Wages.

So far as the actual "Week at Home" is concerned, it has been one of the dullest and least eventful times one can remember; indeed, had it not been for an astonishing case in the courts, which involves a bank, an Oriental potentate, a white woman, and an alleged plot in which blackmail has been freely mentioned, there would have been nothing in the papers except food prices.

The cost of living, however, has gone up by seven points this last month, and this means trouble. It is true that the economists, those serene souls who swim in a sea of statistics, are not unduly disturbed by the rise; it means a certain shortage of foodstuffs, but also it means more consumption, which in effect means more employment and better trade. It is one of the elementary axioms of political economy that prices fall in bad and rise in good times.

But when prices rise wages must rise, too, and we are already seeing a number of applications for increased wages, and this, of course, means labour troubles and possibly strikes and stoppages in 1925. Although trade union leaders are increasingly doubtful of the wisdom of strikes, they cannot afford to dispense with this weapon any more than the employer can afford to dispense with the lock-out. And, in any event, the old trade union strategy will again apply—that you sit tight on a falling market and strike on a rising market. There is always the danger, of course, that strikes may kill an improvement of trade, but the Labour leaders are quite as well aware of this as the employers—bar that small section which has lost its temper as the result of defeat at the polls, and which will turn to industrial action as an alternative to the political success which was denied them.

None of the disputes which are threatening are likely to mature before the New Year, and it is the business of the Ministry of Labour to settle them amicably if it can. In the meantime the Government, true to its pledges, has appointed a Royal Commission to inquire into the price of food.

The Royal Commission.

It may be pessimism induced by a dull November day, but personally I am doubtful of any results from this inquiry. The profiteer is a shy bird, and it is difficult to put salt on his tail; while the middleman has been hated and denounced through the ages, but he still survives—indeed, the trouble is that, like Abraham, he increases and multiplies.

There seems very little doubt, however, that we do pay an indirect tax on food that is wholly unjustifiable. The Linlithgow Committee thought there was too great an increase in prices between the producer and consumer; and there are some curious and relevant facts contained in a book called "Food," published by Sir Charles Fielding, the Director-General of Food Production during the War. He remarks that "the unaccounted part of the price paid by the householder (for bread) amounts to the enormous figure of £50

Digitized by Google

millions per annum, seemingly in excess of what it actually costs to produce under reasonable conditions."

It is the same with milk—an industry which badly needs investigation—and as regards meat, the same authority declares that "the British farmer is now getting about 56s. per cwt. live weight, or 6d. per lb. for his fat cattle. Allowing for the loss of weight, offals, etc., when the ox is killed, this makes the cost to the butcher about 9d. per lb. of beef. The ordinary retail butcher charges about 1s. 6d. on the average of all joints for the English meat he sells.

"The difference to cover butcher's costs and profits and the meat middleman's profit is, therefore, about 9d. per lb. The actual costs incurred by a well-managed butcher for slaughter-house and shop do not exceed 2d. per lb., including a reasonable profit, leaving 7d. per lb. surplus.

"Taking the United Kingdom's consumption of meat of all kinds at 2,400,000 tons a year, there is at 7d. a pound a total surplus of £156 millions per annum for middlemen's profits, wasteful distribution, bad management, and excess profit."

Even if we cut down these figures considerably, there seems far too great a margin for middlemen's profits, and it will be interesting to see what evidence in rebuttal Smithfield and Mark Lane can bring against this indictment.

There is no disposition among the public to blame the producer—the farmer is notoriously not profiteering—but a very great desire to get at the facts. The ordinary retail tradesman is inclined to throw all the blame on the trusts, and some of the more anti-capitalist papers have rather ridden off on that famous American horse. The food trusts are not precisely angels of innocence, but they certainly cannot bear all the blame. The small shopkeeper, as is shown by the report of the Ministry of Health already referred to, is not above adulterating the food he sells, and a man who can do that will certainly not be averse from illicit profit.

But, on the whole, while I am afraid it may be easy to diagnose the disease, I remain doubtful of the cure. Restrictive laws are easily passed, but less easily enforced; and one of the troubles is that the maxim of "Small profits, quick returns" is no longer fashionable in commercial circles. Indeed, the fault of the Dutch, "in giving too little and asking too much" seems to have become rather characteristic of the British butcher, baker, and candlestick-maker. The great manufacturer keeps his prices down because he has to meet foreign competition, but the food retailer has no such troubles to fear.

The New Parliament.

The House of Commons assembles early next month, but it will take some time to swear in all the members. Then the Speaker has to be elected —Mr. Whitley, by universal consent—and after that comes the King's Speech, which is expected to be practically a repetition of Mr. Baldwin's outgoing King's Speech in January last. After that the debate on the Address is expected to last about a week, and Parliament will rise in good time for Christmas. It is not expected to meet again till February; by that time the new Ministers will be quite at home in their several departments, and the business of next year will probably be concerned mainly with finance.

Mr. Churchill's first Budget will be eagerly awaited, but it is understood that one of the first things to be done will be to reintroduce the Imperial Conference resolutions, and it is being hopefully whispered that a return of the penny post may be expected. Business men would like to see a reduction of cheque stamps from twopence to a penny as well, but that may be too much to hope for.

Tertium Quid.

OBITUARY.

Sir Maurice Fitzmaurice, C.M.G., F.R.S., whose death, at the age of 63, occurred on November 17 at his residence in Onslow Square, in 1898 was entrusted with one of his greatest tasks, when he was made chief engineer to the Egyptian Government for the building of the Assuan Dam on the Nile, designed by Sir W. Willcocks. This work was completed towards the end of 1901. Later Sir Maurice joined the firm of Coode, Fitzmaurice, Wilson, and Mitchell, consulting engineers for harbours to the Crown Agents for the Colonies and to the Sudan Government for the Blue Nile irrigation works, and chief engineers of the national harbours at Dover and Peterhead. For his services to the Egyptian Government Sir Maurice was given the Order of the Medjidieh of the Second Class in 1901, and he received the C.M.G. in the following year.

The new Grand Vizier of the Spanish zone of Morocco, Bena Zuz, was installed in office on November 17 by the Spanish High Commissioner.

Raiding on the Meshed-Teheran Road has been resumed by the local Turkomans, in spite of the recent "pacification" announced by the Persian Government.

Operations are in progress for the disarming of those villages in the Anti-Lebanon, in Syria, which are known to harbour brigands. Several thousand stand of arms have been seized by the French.

Passports have been issued by the Indian Government for a deputation of the Central Khalifate Committee, consisting of four *maulvis* (Moslem divines) and two lay Moslems, to proceed to the Hejaz and to Nejd.

The *Morning Post* Belgrade correspondent states that Ahmed Zogu, ex-Premier of Albania, left Belgrade on November 18 to spend the winter at Paris. He expressed gratitude for the kindness shown to him in Yugoslavia.

A supplement to the *London Gazette* contains the final dispatch of General Lord Rawlinson on the operations (chiefly consisting of road-making) of the Waziristan Force covering the period April 21, 1923, to March 31, 1924.

The Director of Civil Aviation, Air Vice-Marshal Sir Sefton Brancker, left Stag Lane Aerodrome last Thursday for Paris on the first stage of his flight to India, where in January he is to confer with the Indian Government on the situation and construction of an airship base for the use of the new airships of 5,000,000 cubic feet capacity. The machine, a D.H.50, is piloted by Mr. Alan J. Cobham.

In connection with the unveiling of the memorial to the dead of the Salonika Army, negotiations are now in progress whereby, at Easter, a party can be taken to an Italian port by rail and thence by sea to Salonika. The tour will be extended to the Dardanelles, returning to the port of embarkation and home by rail. Major Elliot Bell, 1, Regent Street, London, S.W.1, will supply particulars on request.

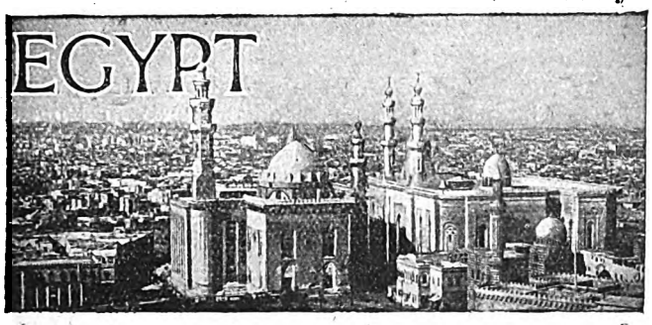
The Near and Middle East.*

From Our Own Correspondents.



Cairo, November 15.

The Second Parliamentary Session.

The great event of the week has, of course, been the opening of the second session of Parliament, which was performed on Wednesday last by King Fuad. The text of the Speech from the Throne was colourless, but, after all, anything else would have been out of place in the present difficult circumstances, and would, indeed, have tended to aggravate matters.

There had, of course, to be a reference to the London conversations and to the events in the Sudan, but they were skilfully handled, and were, so to speak, overshadowed by the internal reforms recommended to the consideration of Parliament, to which the bulk of the speech was devoted. The tenour confirmed the impression one had already obtained that Zaghloul Pasha intends during the coming season to discourage discussion of the bigger political issues and to concentrate attention as much as possible on a consideration of what by contrast are questions of purely internal interest. Whether he will be able to carry out this exceedingly wise intention will largely depend on the attitude he adopts towards the various matters affecting the *status quo* that will have to be dealt with in the near future and the extent to which he can restrain the more extremist of his immediate *entourage*, who repeatedly, by their speeches and their actions, show signs of restlessness and even of opposition.

As at the inauguration of the first session, the representatives of the various newspapers were excluded from Wednesday's ceremony. The ban was inspired as before because of the dissatisfaction felt by the Wafd at the bitter criticism which had been directed towards its activities and the policy of the Government. On this occasion, however, it was not extended to members of the foreign Press, but was restricted to the Constitutional Liberal and Hisb El Watani organs, who represent the main opposition. This action has been very adversely commented upon. Even the Government organs criticise it as an undignified proceeding and as a tactical blunder, and it is all the more inexcusable in view of the recent decision in the libel action brought by the Government against one of those organs, in which the Native Cassation Court quashed the sentence passed on the Editor in first instance.

Armistice Day.

Armistice Day was celebrated in Cairo and Alexandria in traditional style. In the capital a memorial service took place in the morning at All Saints' Church, followed in the afternoon by an impressive ceremony at the British cemetery. Detachments were sent by all the regiments stationed in Cairo, and there was a very big attendance of the British and foreign communities, those present including the High Commissioner and Lady Allenby; M. Gaillard, the French Minister; Air Vice-Marshal Sir Oliver Swann and Lady Swann. After the Last Post wreaths were laid on the Cross of Sacrifice by Viscount Allenby on behalf of the British troops in Egypt, by M. Gaillard on behalf of the *Société Mutuelle des Poilus du Caire*, and by Sir Oliver Swann on behalf of the men of the Royal Air Force in Egypt.

In Alexandria there was a memorial service at Hadra cemetery, which was conducted by the R.R. Bishop Gwynne. A large number of British residents were present, and a guard of honour was formed by detachments from each of the battalions forming the Alexandria garrison. At Aboukir a separate service was held by the Air Force in front of the Cenotaph, and at Minia a similar service was held at the military cemetery.

An account of the ceremonies by which Armistice Day was celebrated would be incomplete without a reference to the cemeteries in which some of the services were held. They presented a most pleasing and peaceful picture, and everyone who attended remarked on their excellent condition and the successful manner in which their horticultural embellishment has been carried out. Indeed, the local committee of the Imperial War Graves Commission deserve well of their fellow-countrymen, and the various cemeteries, for which they are responsible all over Egypt, stand as an eloquent tribute to the devotion and thoroughness with which they have carried out their task.

Khartoum, November 7.

The Political Situation.

The distribution of one or two circulars, written by members of the Society of Sudan Union, Branch of Vengeance, apart, nothing has happened during the fortnight under review regarding the activities of the anti-Government or pro-Egyptian elements in the Sudan.

The Magisterial Inquiry into the case of forty-one Egyptian and Sudanese previously referred to in these columns has been concluded, though the result has not been, up to the moment, made public. A second Inquiry is now being conducted into the case of the Civilian Cadets of the Military School who took part in the demonstration of August 9. In connection with the former Inquiry, the sudden departure of Mohammed Amin Bey Shadid, advocate of Khartoum, has created considerable surprise. He, together with Mr. Fry, had watched the proceedings of the Inquiry on behalf of the prisoners. The Inquiry had been concluded, but, instead of waiting for the actual trial to take place, he suddenly left for Cairo with his family. A rumour gained certain credence that Mohammed Amin had been ordered to leave the country by the Sudan Government, but this is incorrect. What actually happened was that for some purely personal reasons he decided to leave for Cairo, and to that end interviewed Mr. W. Sterry, Legal Secretary and Acting Governor-General, to whom he submitted his apologies on departure, which were accepted. Mohammed Amin accordingly left Khartoum by the next day's mail train.

Since his return to Cairo he has been extremely busy in condemning the Inquiry. He has repeatedly stated that the whole of the proceedings were farcical from beginning to end, and that witnesses were paid and evidence manufactured.

The Egyptian Arabic Press were not slow in giving publicity to such views, and, with the addition of the usual Egyptian journalistic rhetoric, the statements were received with acclamation by the Extremist Party.

The popular belief in Khartoum is that Mohammed Amin Bey Shadid was but a paid employee of Zaghloul Pasha, and that he was purposely recalled to Egypt for particular reasons. One's own contention is that he had already discovered that an advocate's profession in the Sudan, at least for one of his nationality, was not at all lucrative, and subsequent to the outbreak of political disorders he had been kept busy defending prisoners to the detriment of his normal Court business. This had to be done without the least hope of future payment. His pecuniary condition at last forced him to throw up his practice in the Sudan and turn to Egypt, where he at once gathered both notoriety and affluence through his anti-British activities.

Authority over Children.

At the instigation of the Legal Secretary, a circular (quoted below) has been prepared in English and Arabic and distributed to parents and guardians and to all those others who are in authority over children. The humane policy of the Sudan Government has apparently led the native population to believe that it disliked to witness the chastisement of erring children; in fact, that the administration of corporal punishment was strictly against the law. This erroneous belief obviously permitted a laxity of control over children, particularly male children, and it is to this that the recent disturbances, at least in part, may be attributed. It is understood that certain of the more youthful of the Gordon College *Intelligentsia* who had committed offences punishable by the Government were handed over to their parents for chastisement, an action which will be decidedly more fruitful, or rather corrective, than a period of imprisonment. Undoubtedly this timely warning and these words of wisdom, couched in terms which can be appreciated to the full by all those of Moslem tenets, will have the desired effect.

"Spare the rod and spoil the child" is a very old English adage, the fundamental principle of which is understood and applied throughout the whole world.

The Circular.

As there appears to be a widespread idea in this country that the laws now in force forbid parents to give corporal punishment to their children, the Legal Secretary desires to make it known that this idea is quite erroneous.

A parent is not forbidden to beat his child, provided that it is done for a good cause and in a reasonable—that is, not excessive—manner. He must, of course, not do so in such a way as to cause serious or permanent injury nor in a cruel manner.

Said the prophet Solomon, son of David:

"The rod and reproof give wisdom. Chasten the son while there is hope, and let not thy soul spare for his crying."

"He that spareth his rod hateth his son, but he that loveth him chastises him betimes."

Parents may rest assured that not only will they not be interfered with for giving reasonable chastisement to their children, but that the Government, considering that respect to parents is one of the strongest foundations of States, will firmly uphold the authority of parents. No amount of discipline in schools can take the place of wise discipline in the father's house. And parents should not consider if they sent a child to the school that they have handed over all their duties to the master. On the contrary, each state of life has its own temptations to wrong and the discipline of the parents is still needed to supply the deficiencies and meet the temptations of school life.

Boys are apt to get conceited from new knowledge acquired at school. Now knowledge is very good, but it does not supply the place of the much more important principles of virtue and morality, of good manners and respect to parents. These are things which do not grow old, nor are replaced by things new, and it is to parents and guardians that the Government must look to inculcate them.

BULGARIA.

Sofia, November 18.

Bulgaria and Greece.

The Protocol concerning Bulgarian minorities in Greece and Greek minorities in Bulgaria, which was drawn up at Geneva last September, was one of the most important events which have occurred in inter-Balkan relations. This Protocol gave extended powers to two delegates of the League of Nations—namely, Colonel Corfe and Commandant De Roover. The duty of these two men will be to act as watch-dogs in all questions that pertain to the minorities in question. They will spend their time between Sofia and Athens, and as they already enjoy the confidence of both Governments, it is to be hoped that their presence and advice may serve gradually to ameliorate the situation of the unhappy minorities.

The position of the minorities is, indeed, lamentable, as Bulgarians continue to be forced out of Greece into Bulgaria, while Greeks are leaving Bulgaria for their own country. The reasons which cause this wholesale emigration are hard to ascertain, but there seems little doubt that in Greece the huge influx of Anatolian refugees is largely responsible for the attitude which the local Greek authorities are taking up towards Bulgarians. Space to install these refugees is lacking, and the Bulgarians have thus been politely, and in some cases impolitely, asked to quit. Very naturally this has caused great discontentment in Bulgaria, and Greeks in Bulgaria who, especially along the sea coast, have been peaceably pursuing their normal occupations have in some cases become the target for persecution. Only last week four Greeks were killed at the village of Stanimaka in circumstances which have not yet become clear. The Greek Government is reported to have made a vigorous protest regarding this matter, and the Bulgarian Government, who have ordered an inquiry, are somewhat anxious as to possibilities of further anti-Greek outbreaks. The two League Delegates and the Mixed Commission for Voluntary Emigration have, therefore, a most important and delicate rôle to play. Winter has now set in, and it is essential that everything possible is done in order to prevent continued emigration unless it is absolutely voluntary. Otherwise, relations between Bulgaria and Greece will grow steadily worse, and fresh incidents similar to that at Tarlis last July, when 17 Bulgarians were killed, and that at Stanimaka last week are bound to occur.

The Sobranye.

The Sobranye continues to discuss the reply to the King's address. The leaders of all the political parties have made speeches, and there has, indeed, been a wealth of oratory over a subject which would seem to offer little occasion for discussion. But what is really happening is that a great deal of political manœuvring is carried out by Government supporters amongst certain Opposition groups.

The most salient fact which stands out to the present is the tendency, so far only slightly expressed, of M. Malinoff and some of his dissident Democrat Party to come into line with the ruling party, namely, the Democratic Entente. Hitherto a strong critic of the Government's policy, both at home and abroad, M. Malinoff, in a recent speech, showed himself remarkably well disposed to M. Tsankoff. His action has given rise to much speculation as to the future of the dissident Democrats. Some people believe M. Malinoff is aiming at a full *rapprochement* with M. Tsankoff owing to the fact that the loyal Democrats, led by M. Liaptcheff, are getting too much control in the Government. Another view is that M. Malinoff and his followers still cling to the hope that they may succeed in forming a united Opposition, consisting of themselves, the Socialists, a wing of the Radical Party, and the moderate Agrarians. As yet it is too early to say which, if either, of these two views is correct, but popular opinion seems to incline to the former.

The Agrarians.

There are still no indications that the Agrarian Party, which was thrown into confusion in June, 1923, when Stambolisky was killed, is reorganising itself. The party still consists of three distinct groups—the idealistic followers of M. Draguieff, the hermit of Stara Zagora; the "Moderates," who follow MM. Thomoff and Tourlakoff; and the "Extremists," who are practically allied to the Communists. There is even a fourth group, namely, that which is commanded—the word is used intentionally—by MM. Kosto Thodoroff, Oboff, and Athanassoff. This group does not, however, have its headquarters in Bulgaria. It lives at Belgrade, and consists of Agrarians and in some cases Communist political refugees, who hope to overthrow the Tsankoff Administration by violent means. In this connection, it is interesting to note that the Agrarian Party in Bulgaria has formally disavowed its brethren in Yugoslavia. The only thing that thus seems to be clear about the Agrarian Party is that until a new and totally uncompromised leader springs up they are not likely to play an important part in Bulgarian politics.

General News.

It is announced that M. Grégoire Bilciurescu has been appointed Roumanian Minister in Sofia.

The Honourable W. A. F. Erskine, British Minister, and Mrs. Erskine have left Sofia on two months' leave. Mr. Barber will act as Chargé d'Affaires during the Minister's absence.

Constantinople, November 18.

The New Party.

The outstanding event of the past week has been the outbreak of revolt against the all-embracing People's Party, as expressed by the constitution of the Progressive Republican Party. The recent resignations of Reouf, Adnan, Ismail Jamboulat, and a number of other beys of the Eastern vilayets provided the kernel of the new party, which numbers only about eighteen members at present, but expects to gain new adherents daily. Good judges estimate that within a very short time a coherent Opposition party sixty strong will be seen, and inspired hints about the possible formation of other Opposition groups, such as the Conservatives and Clericals, are beginning to be bandied about. This is all to the good, although the narrow-minded autocrats of the People's Party cannot see it. The unopposed People's Party has been an incubus, for it has stifled all intelligent inquiry into the affairs of the nation owing to its system of deciding everything *in camera* before it appeared in the Assembly, and the disorganisation of the few declared Opposition has until now stultified all its efforts to bring the Government effectively to task.

Reouf Bey.

The arrival of Reouf Bey in Constantinople, suffering from the prevailing malady in Angora, malignant malaria, has been an event of the first magnitude. He was accompanied by Adnan Bey, and on arrival was given a sincere personal welcome by a large crowd of friends and sympathisers. It would be idle to pretend that his transference here is merely a question of health. As the biggest and most admirable personage in the new party, he will find in the broader outlook and the freer atmosphere of Constantinople the inspiration necessary for the elaboration of a statesmanlike programme for the new party. The question of immediate importance for them is whether the three Army Commanders who have just resigned, Kiazim Karabakir, Ali Fuad, and Jevad Pasha will all throw in their lot with the Opposition. If this happens, the fortunes of the Progressive Republicans is assured, for, as has been frequently pointed out in these letters, the men who gain the support of the Army in Turkey are the men who have gained the country.

Now that the flag of revolt against that anomalous institution the People's Party has been raised, one must expect to see fairly rapid developments. The position of Mustapha Kemal Pasha is not uninteresting, for he has rather too obviously allied himself to the one all-powerful party. It will not surprise us to see his attitude become gradually more "Presidential" in proportion as the strength and influence of the Opposition increase.

Inertia of Administration.

Your Correspondent has not failed to inveigh against the appalling confusion of the Administration and the inertia of the Executive whenever an occasion has presented itself. Another case of lamentable weakness has occurred in the past week. There has been a long-standing quarrel between the Constantinople Tramway Co. and the students of the University, who claim the right to travel at half-fare. There is nothing very revolutionary in the claim itself, and it appears that if the all-powerful authorities had taken it up with the company and exerted a little pressure, the trivial concession might have been granted weeks ago. Nevertheless, nothing has been done, and the result was a regrettable outbreak of violence a few days ago, when the students took matters into their own hands and held up the only means of transport in the city by organising storming attacks upon all the lines and refusing to pay any fares, and also by raising a riot in the tramway company's offices. The obvious retort on the part of the director of the police would have been to disperse the manifestants by means of the hundreds of uniformed police which he has at his disposal. Instead of so doing, he took no effective measures for hours, while he telephoned sweet words to the self-appointed representatives of these undisciplined young men. The only repressive measures that were taken were revolver shots from a panic-stricken police agent in mufti, which wounded four persons and nearly precipitated a serious catastrophe. The conflict has been smoothed over for the next ten days by the temporary concession by the tramway company of the point at issue pending a definite decision by the Ministry of Public Works, but it would surprise no one to find that at the expiry of the agreed period the Ministry had taken no decision, and that the disorders had begun all over again.

IRAQ.

Baghdad, November 12.

The Organic Law.

Affairs in Iraq have been remarkably quiet during the last fortnight. Nothing has disturbed the political calm, except a series of strong articles in the local Press demanding the immediate ratification of the Organic Law, by which Iraq is to obtain a proper Constitution. The Prime Minister issued a somewhat unconvincing manifesto explaining the reasons for delay, the chief being the necessity of passing certain necessary and urgent legislation, in particular the Budget, before Parliament meets. He promised, however, that as soon as the secondary electors had been elected, the King would ratify the Organic Law. As the Electoral Law has not yet been ratified, it would seem that Iraq has still some little time to wait for her Constitution.

have let it be known that they will be pro-Turk during the forthcoming visit of the Commission of the League of Nations—until such time as they are granted certain remissions of revenue!

No fresh news has been received from the Northern frontier, the violation of which seems to have caused very much more comment in London than in Baghdad.

Kirkuk Disturbances.

The trial of three officers and nine men—the only ones who could be identified from the battalion of Assyrian Levies which ran amok in Kirkuk on May 4 last—has recently been completed. The Special Court was composed of one Assyrian and two Iraqi judges, under the presidency of a British judge. Eight men were found guilty of wilful murder in that they fired Lewis guns on the town, but as it could not be conclusively proved that the shots fired by them had actually killed any of the Kirkuklis who lost their lives on that day, a sentence of penal servitude for life was imposed instead of a death sentence. The ninth accused was sentenced to five years' penal servitude for attempting to take part in the Lewis gun firing, while the three officers were released, their defence being that their presence with the men was due entirely to their desire to get them under control and lead them back to their quarters.

The result of the trial provoked great resentment among the people of Kirkuk, who were expecting much severer sentences in view of the number of inhabitants killed by the Assyrians—some fifty in all, including women. The Mutasarrif resigned his post, but was eventually persuaded by the Ministry of Interior to withdraw his resignation.

Armistice Day.

Armistice Day was celebrated at Baghdad by a combined parade service for all British troops, held at the Iraq aircraft depot at Hinaidi. The large numbers present—Royal Air Force, Royal Inniskilling Fusiliers, and Iraq Signal Section, beside a large number of civilians—made an impressive gathering. The band of the Royal Inniskilling Fusiliers accompanied the hymns, and rendered "O Rest in the Lord" before the two minutes' silence, which was notified by the firing of a gun. The Last Post was sounded at the expiration of the two minutes. A verse of Kipling's "Recessional" and the National Anthem ended the service.

Active Service.

The High Commissioner has caused the following notification to appear in the Iraq Government *Gazette*:—

"Whereas the Forces maintained by his Britannic Majesty in Iraq have been recently on active service, it is hereby declared, in accordance with Section 189, Sub-Section 2, of the Army and Air Force Acts, that it is necessary for the public service that such Forces should continue to be temporarily subject to the said Acts as if they were on active service for a further period of three months commencing on the sixth day of November, 1924."

General.

Kurdish notabilities in Baghdad, it is reported in a local paper, intend to form a committee to approach the League of Nations and state in definite terms the wish of the Kurdish people to be separated from Turkey.

The same paper (*Al Mufid*) comments unfavourably on the appearance of girl guides in the streets of Baghdad. It contends, possibly not without justification, that this type of education for girls, in a country as backward as Iraq, is premature and highly undesirable. The Boy Scout movement, it may be remarked, though unpopular at first, is now making great strides in this country, and, judging by the vast number of small boys who are able to provide themselves with uniform and in many cases with bicycles, must be looked upon with favour by Baghdadi parents.

Much interest has been created by the arrival in Baghdad of two Danish travellers who—a novelty in globe-trotters—are touring the world on a motor-cycle. The object of their travels is the study of forestry in various countries. Their adventurous journey, involving an attack by brigands, a meeting with Mustapha Kamal, and a breakdown of the side car, which meant that one of the travellers had to ride pillion fashion from Constantinople to Baghdad, has taken two months, by way of Hamburg, Prague, Vienna, Budapesth, Constantinople, and Anatolia.

Two Dutch airmen have passed through Baghdad in a Fokker aeroplane with British Rolls-Royce engine, on their way from Amsterdam to Java. They have since been reported to have reached Bushire without mishap.

Her Majesty the Queen of Iraq is expected to arrive in Iraq shortly.

Lady Dobbs returned to Baghdad by the Nairn Transport Company's convoy on November 1.

Mrs. Rosita Forbes (Mrs. McGrath) passed through this week on her way to Persia, where she has been commissioned by an American company to assist in the preparation of a film depicting Persian life and customs.

THE PERSIA SOCIETY.

The Persia Society, of which the Rt. Hon. Lord Lamington, G.C.M.G., G.C.I.E., is president, will hold an afternoon reception at the House of Lords to-morrow, November 28, to meet His Excellency the Persian Minister. This society, whose membership comprises both British and Persian subjects, has for its object the mutual dissemination of greater knowledge regarding the respective countries and the promotion of good relations between them.

EGYPT AND THE SUDAN.

The Near and Middle East Association's meeting for next Monday, December 1, when "Anglo-Egyptian Relations and the Sudan Question" were to have been discussed by Senator Fanous and Miss M. M. Farquharson, has been postponed.

SIR LEE STACK.

As all the world now knows, Major-General Sir Lee Stack, Sirdar of the Egyptian Army and Governor-General of the Sudan, died in Cairo on November 20 as the result of wounds. And for him all the world which knows is grieving. There never was a finer servant of his country in Egypt and the Sudan, and there is no higher record of service than that which British officials in the Sudan may boast. A lonely, silent, splendid service, British administration in the Sudan was perfectly mirrored in the late General, and his life was literally given in its interests.

Born in 1868, Lee Oliver Fitzmaurice Stack was educated at Clifton, where he was a curious failure. He entered the Army through the Militia, not through Sandhurst, as has been widely stated. His relationship with Egypt began in 1899, the same year as that in which he was Staff Officer to the G.O.C. in Crete. In 1902 he commanded the Shambe Field Force. In 1908 he became Sudan Agent and Director of Military Intelligence; and in 1913 Civil Secretary to the Sudan Government. On the transference of Sir Reginald Wingate from Khartoum to Cairo he was chosen as Acting Governor-General and also was appointed Sirdar.

His services during the War were unostentatious but extremely valuable, and it was in recognition of them that in 1919 he was confirmed in the two high positions which he held until his death. What he did for the Sudan during the last five years is, perhaps, better known by the humblest Sudanese than by anyone else, for he was the ideal "father of his people."

AN ARAB REPORT ON PALESTINE.

We have received from Palestine a "Report on the State of Palestine during four years of Civil Administration, submitted to the Mandate Commission of the League of Nations through H.E. the High Commissioner for Palestine by the Executive Committee of the Palestine Arab Congress." The report begins by summing up what it calls "the Palestine Arab Case against Zionist Agression" thus:—

> The injustice of creating a National Home for the Jews in Palestine, which is the well-established home of the Palestinian Arabs (Moslems and Christians), and the impracticability of training its inhabitants in self-government and preparing them for independence, which is the principal aim of the mandatory system, as long as the Jewish National Home policy is in progress.

It proceeds to review the last four years of the Civil Administration. A great mistake, it states, was to put political changes before economic improvements, but "unfortunately political changes came in with the speed of lightning, and most of the elements that usually go to relieve and revive a distressed population were all replaced by those that are instituted to enhance trouble."

Constitutionally, the position is equally unsatisfactory, for "the Government now carries on its administration with an advisory council, all the members of which are nominated official foreigners." The reasons, moreover, that are given by the Mandatory for depriving Palestine of a real Constitution rankle with the Arabs who have drawn up this report, and who look to their brethren in Iraq and Transjordan, where (they say) there are such Constitutions. That Palestinian Arabs are capable of self-government is sufficiently proved by the fact that to them the Government of Palestine handed over the administration of Moslem Religious Courts and Wakfs.

On the subject of Jewish immigration the report speaks in unmeasured terms, and it is a pity that the Arab case should be spoiled by extravagance of language. Its conclusion under this heading is: "Cost of living is higher in Palestine than in any country of Europe, and commerce and industry are at a standstill. Not so conditions in the sister neighbouring States of Syria and Egypt, where there is no such mad immigration policy."

Turning to Public Security, the report begins by asserting that "public security is being more endangered year by year. The Government's efforts to hide this fact are shattered by their own statistics."

No criticism is spared in regard to Finance, for in dealing with this the report accuses the Government of having an unnecessarily large staff, of encumbering the Budget with a huge amount that has to be expended on interpreters of Hebrew ("a dead language"), and of deliberately favouring the Jews in connection with custom duties. Further, "the highest financial officers of the Government, for the last four years, have never denied the fact that the country is overtaxed." And on Economic Policy, the Administration, according to this report, "pursues two lines of action, the one pertaining to Arabs and the other to Jews. The latter is progressive, but the former is retrogressive." Economic favouritism was shown in the 1921 concessions known as the Rutenberg and Kabbara.

Here the list of Arab grievances against the Palestine Administration ends. The nature and worth of the whole report can be seen in its conclusion and demand, which we quote:—

> The Palestine Arabs met this oppressive policy with patience. Their opposition has been conducted on constitutional methods. But this attitude of theirs has been both misrepresented by the Government and misunderstood by the Mandatory. The daily slight frictions between Arab and Jew, whose ideas, principles, customs, and modes of life take diametrically divergent lines, cultivate and solidify hatred between communities, and there must be a time when it accumulates to such a degree as to defy all moral and political restraints. It is a gross error to believe that Arab and Jew may come to an understanding if only each of them exchanges his coat of extremism for another of moderation. When the principles underlying two movements do clash, it is futile to expect their meeting halfway. The Zionist policy is best described by Dr. Eder, ex-chairman of the Zionist Executive in Palestine, when he was asked to do so by the Court of Inquiry for the Jaffa disturbances of May, 1921: "There can only be one National Home in Palestine, and that a Jewish one, and no equality in the partnership between Jews and Arabs, but a Jewish predominance as soon as the number of that race are sufficiently increased."
>
> The Arab demand may be summed up in the following words: The establishment in Palestine of a National Constitutional Government in which the two communities, Arab and Jewish, will be represented in proportion to their numbers as they existed before the application of the Zionist policy.

PERSONAL AND GENERAL.

TO-DAY.

November 27, 1924 (New Style).
November 14, 1924 (Old Style).
Rabia' II, 29, 1343, A.H. of the Moslem Calendar.
Marheshvan 30, 5685, of the Jewish Calendar.

The Aga Khan left London on November 19 for Paris.

The Right Hon. H. H. Asquith had an audience of King Fuad in Cairo on November 19.

Mr. G. L. Craik, Chairman of the Commonwealth Trust, left London last Thursday for India.

Sir Archibald and Lady Weigall returned last week to their London residence in Park Lane from Petwood, Woodhall Spa.

Shevky Pasha, Secretary at the Turkish Legation, who has been confined to his room for several weeks, has now recovered.

Princess Marie, of Greece, and Admiral Ioannides left London on November 19 for Sandringham on a visit to Queen Alexandra.

Lieutenant-Colonel the Hon. Henry Bridgeman, D.S.O., left Castle Bromwich last week for India in the P. and O. ss. China.

Mrs. Mahaffy, wife of Mr. R. P. Mahaffy, Legal Adviser to the Governor and Forces of the Malta, gave birth to a son last Thursday at Malta.

Princess Andrew, of Greece, who visited the King and Queen at Buckingham Palace on November 19, left London for Paris on November 22.

The Earl and Countess of Dalkeith will visit India during the winter, and will probably sail shortly after the Buccleuch Hunt Ball, which will be held at Kelso on December 17.

General Lord Rawlinson, Commander-in-Chief of the Army in India, arrived at Bombay last Friday from England, where he has been on leave.

General Sir W. R. Birdwood and Miss Megan Lloyd George were among the passengers returning home on board the Naldera, which sailed from Bombay last Saturday.

M. Gregoire Michaesco, Commercial Attaché at the Roumanian Legation, who underwent a serious operation recently at Geneva, is now making satisfactory progress. He will not return to London for some time.

Dr. George Jouritch, Serbian representative on the Reparations Commission, arrived in London last Saturday from the Continent, on a special mission.

Captain M. Costiesco Ghyka, a former Secretary at the Roumanian Legation, left London on November 18 for Paris. Mme. Ghyka is still in London, and is staying with her mother, Lady (Roderick) O'Conor.

The British Empire Producers' Association gave a luncheon in honour of the Right Hon. L. S. Amery, the Secretary of State for the Colonies, at the Hotel Victoria last Monday. Mr. Ben H. Morgan presided.

Sir Robert Horne is leaving for Burma on a short business visit in connection with the affairs of the Burma Corporation. He expects to return to London before the meeting of Parliament in February.

M. Romanos, formerly Greek Minister for Foreign Affairs, and at one time Minister in London and Paris, arrived in London last Friday from the Continent, and is staying at 14a, Berkeley Street.

Mr. D. G. Hogarth has been appointed to deliver the Schweich Lectures on Biblical Archæology, and will give three lectures on "The Kings of the Hittites," on December 3, 8, and 15, at 5.15 p.m., at the Rooms of the Royal Society, Burlington House, W. These lectures are free, by invitation, for which application should be made in writing to "The Secretary, the British Academy, Burlington House, W.1."

APPOINTMENTS, PROMOTIONS, ETC.

Mr. L. G. Roussin, C.M.G., formerly Financial Secretary to the Egyptian Government, has been appointed British member of the International Financial Commission at Athens.

Major-General Arthur Le Grand Jacob, C.B., C.M.G., C.I.E., D.S.O., has succeeded Major-General Sir T. G. Matheson, in command of the Waziristan District. The new commander served with Force "D" in Mesopotamia, and had the 74th Infantry Brigade.

The King has approved the following appointments in the Diplomatic Service:—Sir Thomas Beaumont Hohler, K.C.M.G., C.B., to be his Majesty's Minister at Santiago, Chile; the Hon. Ernest Stowell Scott, C.M.G., M.V.O., to be his Majesty's Minister at Montevideo, Uruguay.—Sir Thomas Hohler, who had been British High Commissioner in Budapest from January, 1920, to August, 1921, and British Minister from August, 1921, until April, 1924, has held Diplomatic appointments at, among other places, Cairo, Addis Ababa, and Constantinople; Mr. E. S. Scott, the second son of Lord Eldon, has been in the Diplomatic Service since 1895. From March, 1920, until November, 1923, he has been attached to the British High Commissioner in Egypt, with the rank of Minister Plenipotentiary.

THURSDAY, NOVEMBER 27, 1924.

EGYPTIAN INDEPENDENCE: THE FIRST FRUITS.

Horror and indignation at the abominable murder of the Sirdar in Cairo have been swiftly succeeded, as might have been expected from the new Conservative Administration, by the publication of a very firm protest to the Egyptian Government. That resolution for which the situation unquestionably called has been shown in abundance, and no one can reasonably deny that in the main Mr. Baldwin's Government has acted correctly. Moreover, what is really implied by the two Notes which Lord Allenby presented to the Egyptian Government is that this terribly sad and monstrous murder has, in the chief aspect, hastened on a policy which many competent observers had already thought to be inevitable. Upon the tone and form of the British protest, however, we will postpone comment. In support of our Government's action much can be said. It is, we should imagine, plain for all the world to see that the Egyptians cannot decently govern themselves. But in so far as their malgovernance does not vitally affect British or foreign interests it is not for this country to do anything. In considering the moral responsibility of Zaghloul Pasha's Administration in this affair, this at least can be said. It is bitterly obvious now how profound a mistake it was to grant to the Egyptians independence while leaving the "four reserved points" in the void. Had those four points been discussed *before* instead of *after* the granting of independence, other lives might perhaps have been lost, but a more constant and far-seeing policy could have been pursued. As it is, the Egyptians have been crying for the moon, a moon that reflects the sun of Britain's strength, not of their own. Yet, quite indisputably, it is impossible, seeing how often assassins of British men have escaped, not to convict the Egyptian nation of lack of elementary courage, of elementary decency, of elementary good-sense. Certainly there are both wise and good Egyptians in Cairo and elsewhere, but how much more they would be respected if they raised protesting voices before instead of after a crime! That matters should have come to this pass, however, is partly owing to British mistakes. The only possible chance now that we can see which Egypt has of securing, we will not say of regaining, the respect of the world is for such men to come out into the open and to denounce assassination. As things have been, what Zaghloul Pasha has said, or has been forced to say, about Britain and the Sudan has been echoed in thousands of Egyptian bazaars and by-ways, until the eviction of the British by whatsoever means has become to the extreme Egyptians almost a formula. The murder of the Sirdar was an attempt to apply this formula. And on its failure its humaner converse is to be applied to the Egyptians.

The first fruits of Egyptian independence are bitter indeed. For some time Egypt will be obliged sorrowfully and, we hope, ponderingly to eat husks. It is true that the liberties of the Egyptian people, as guaranteed in the Declaration of 1922, will be in no wise interfered with—from this granting there can be no retrogression. There is, and can be, no question of a reoccupation of Egypt; nor will there be any inhibition of the free functioning of Egypt's Constitution. As much opportunity as has been provided in the past two years will be given to a sovereign nation to prove that it knows what sovereignty means and entails. But, without seriously impinging upon any of these things, the British Government has resoundingly communicated its mind to Cairo. The first of the two Notes delivered by Lord Allenby to the Egyptian Government, not disguising the belief that the murder of Sir Lee Stack was the natural outcome of a campaign of hostility fomented by organisations in close contact with the Egyptian Government, demands:—(1) An ample apology; (2) a search, regardless of persons, for the criminals, and their condign punishment; (3) the suppression of all popular political demonstrations; (4) an indemnity of £500,000; (5) the withdrawal from the Sudan within twenty-four hours of all Egyptian officers and the purely Egyptian units of the Egyptian Army; (6) the irrigation area at Gezira to be increased to an unlimited extent; and (7) the withdrawal of all opposition to British official wishes concerning the protection of foreign interests in Egypt. It is an extremely stern document, calling up irresistibly and ominously at least two other Notes which during the last ten and a-half years have threatened the peace of Europe. At present it is a little difficult to perceive what justification there was for connecting with the murder the immediate increase of the irrigation area at Gezira, although there is obvious and complete justification of the other demands relating to the Sudan. The second Note specifies British requirements concerning the Army in the Sudan and the protection of foreign interests in Egypt. It lays down that henceforth the Sudan defence force shall owe allegiance to the Sudan Government alone (the posts of Sirdar and of Governor-General of the Sudan had been already separated), and that, pending agreement between the Governments of Britain and Egypt, the posts of financial and judicial advisers shall be maintained.

Not unexpectedly, and no doubt as was foreseen, the Egyptian Cabinet rejected, with the partial exception of the indemnity clause and that relating to the search for the criminals, the demands of the British Government *in toto*. It is fortunate that such rejection is not perhaps of vital consequence to the fulfilling of the demands. From the point of view of the Sudan, at any rate, the publication of these demands will be received with a sigh of relief, for some such policy as that, of which they are the heads, had for at least a year been seen to be absolutely necessary. The time has come—it is affecting to think that so tragic an event as the murder of the Sirdar should be the occasion of bringing the policy forward but by a few months—for the Sudan to go towards its own independent future unhampered by Egyptian intrigues. For the rest, it is difficult to discover what British policy is to be. Upon the handling of affairs in the next few days the whole question turns; with inspiration and good fortune, for what might have been an extremely dangerous *impasse* there may be provided some clear path. Zaghloul Pasha has resigned, as could be foreseen; and at the time of writing Ziwar Pasha has just succeeded in forming a Ministry. Some Egyptian co-operation is essential to the governing of Egypt. Should it not

Digitized by Google

be procurable, we trust that the Government has further plans that it has not yet disclosed to meet the situation. In the meantime, it is possible to hope that in the dark days of chastening which are to befal Egypt some better sense of British needs and of British character may slowly dawn on the people in whose name Zaghloul Pasha rejected the demands. This country has no intention either of governing or of getting out of Egypt; the future lies open, if not clear, in front of the Egyptians, to make of it what they will; but if they persist in imagining that Britain is not inflexibly resolved to pursue to the end her pledges and promises alike to the Sudanese, to the foreigners in Egypt, and to the Egyptians themselves, not roses but thorns will bestrew their path. More, much more, than mere words are necessary to erase the blot which the murder of the Sirdar has caused. There are, we know, Egyptians who realise this: it is to them that we look for a re-vindication of Egyptian Nationalism and a diverting of its activities from criminal to constructive channels.

AGRICULTURAL DEVELOPMENT IN ITALIAN SOMALILAND.

The Duke of the Abruzzi's Enterprise.

In November, 1920, the Società Agricola Italo-Somala was formed, with a capital of 24,000,000 lire (approximately £240,000), for the purpose of developing the Scilde district in Italian Somaliland, watered by the River Scebeli. The enterprise is due to the personal initiative of the Duke of the Abruzzi, who is chairman of the company, as the result of a number of visits to Somaliland, accompanied by a commission of technical experts, during the course of 1919-1920.

The district was chosen on account of the exceptional fertility of the soil, the equitable climate, the peacefulness and the comparative denseness of the indigenous population, and the facility with which, for a distance up to 7 kilometres on either bank of the River Scebeli, irrigation could be effected. The temperature seldom reaches the maximum of 102-3 degrees, the average daily maximum being about 93 degrees, while at night it almost invariably falls below 70 degrees. The heat is healthy and fairly dry, and is tempered by a constant sea breeze by day. The rainfall amounts to only 18 inches annually, and is distributed in two short rainy seasons (April-May and October-November). The seasons are regulated by the monsoons, and two crops are usual per annum.

The River Scebeli rises in Abyssinia and, after approaching the Indian Ocean, turns north-eastwards parallel to the coast for a distance of over 200 miles, until it is lost in the Balli swamps. It receives no tributary after entering Italian territory, so that its flow diminishes during its course through Somaliland. In the Scilde district during times of flood it has a flow of over 250 cubic metres per second and a depth of 5 metres. During the rest of the year it becomes an extremely sluggish stream, 40 metres wide, navigable by flat-bottomed barges only.

The Scilde district lies not far from the sea after the river has made its bend north-eastwards, about 60 miles by road from the Port of Mogadiscio. The company has obtained a concession by private agreement with the natives, and confirmed by the Government, to develop 25,000 hectares of land, 16,000 on the left bank and 9,000 on the right. Of the total, 10,000 hectares are reserved for the cultivation of crops, 15,000 for cattle raising.

By the spring of 1923 the main irrigation works were completed, consisting of a dam at the head of the concession impounding the waters of the Scebeli, together with a weir, lock gates, and bed-discharge channel, used periodically to prevent the reservoir silting up. The irrigation canal system on the left bank (for the irrigation of 6,000 hectares), consisting of a network of larger and smaller canals, was nearing completion by the autumn of 1923. During the construction of these works the ground was cleared of brushwood, levelled, and made ready for cultivation. The concession is divided into a number of large areas for administrative purposes. These are divided into village areas with various small native holdings of from 1½ to 3 hectares in extent, according to the number of the cultivator's family. Each farm obtains its water gratis, and is divided into the part—the larger part—cultivated for cotton and the part cultivated for cereals and forage. The cultivator keeps the whole of the latter crops for himself, while the company keeps the cotton crop, paying the cultivator a biennial bonus in money according to the size and quality of the cotton harvest.

Transport is by barge and motor-boat to Afgoi, whence a railway runs to Mogodiscio. The company possesses a considerable flotilla of boats, a motor transport park, 12 kilometres of Décauville railway, and a full equipment of motor ploughs and other up-to-date agricultural machinery. The organisation is under the personal direction of the Duke, who only returns to Italy on leave at long intervals. All his enthusiasm and genius for organisation have been thrown into the work, which already promises a triumphant success. Over 500 hectares were already under cultivation in 1923 with cotton of the long-fibred Egyptian variety (Sakalla Ridis), and are giving nearly seven quintals per hectare of the raw material or four of the prepared fibre. These figures are higher than what is usual under the best conditions in Egypt. The quality is judged as first-rate. It is hoped by 1925 to bring the greater part of the left bank under cultivation, while the irrigation system and the preparation of the ground on the right bank has already been initiated. It is proposed to grow tobacco and cane sugar as alternatives to cotton, but this side of the enterprise, together with the cattle-raising projects, has not yet emerged beyond the experimental stage—though, of course, cattle and sheep farming on native lines continue on the company's lands as formerly.

No doubt the success of the Duke of the Abruzzi's scheme will lead to similar undertakings being initiated on the Juba River as soon as the agreement with England has been ratified. The Italian colonies have hitherto not proved greatly paying propositions, but there is every reason to look forward to Italian Somaliland's becoming at least a source of considerable wealth to the mother country in the near future.

ANGLO-CATHOLIC PILGRIMAGE TO PALESTINE.

The second Anglo-Catholic Pilgrimage will leave England for the Holy Land on April 27, 1925. The Bishops of Jerusalem and Gibraltar have sent letters of welcome, and the Bishop of London has written wishing the effort every success. The main objective is Jerusalem. From Palestine they will go to Cyprus, where the Archbishop will receive them. In Constantinople they will be welcomed by the new Œcumenical Patriarch, and at Athens the Metropolitan will await their coming. The Patriarch of Antioch is also to extend a welcome on their arrival. Only 220 can be included in the party. The pilgrims will return to London on May 25.

THE BOULTON LOAN TO MONTENEGRO.

To the Editor of The Near East.

Sir,—The disaster that has overtaken the firm of merchant bankers, Messrs. Boulton Bros., of Old Broad Street, reminds me that this was the firm that floated the Montenegrin Loan some years before the War, the amount of which was £250,000.

When the War broke out, and the insidious campaign against Montenegro and its King on the part of Serbia commenced, imputing disloyalty and perfidy to this gallant little nation, who always were, albeit the smallest, the most loyal of our Allies, I was confronted one day at the Foreign Office with a statement that King Nicholas had behaved shamefully in the matter of the Boulton Loan. This was the first intimation I received as to the existence of this loan, and I was unable to deny, refute, or accept the charge until I had paid a visit to the firm and ascertained the exact state of affairs. I was then informed that Messrs. Boulton were entirely satisfied with the operation and conduct of the Montenegrin State, that there was no foundation for this reflection upon the honour of the State, and that the loan had been effected and its service regularly and honourably met until War broke out, when the Austrians came into possession of the country, and this naturally made further dealings temporarily impossible.

I was very glad to be in a position to return to the Foreign Office and leave a memorandum on the subject, making it quite clear that this charge, like so many on the part of Serbia against Montenegro, was baseless in fact.

What has happened since the Serbians grabbed Montenegro I do not know, but it would be interesting, in view of the fact that most of the bondholders are British, to know whether Serbia, having taken the country, has also taken over the responsibility of this loan.—I am, etc.,

Alex. Devine.

Northwood Park, Winchester,
November 20.

THE NAIRN TRANSPORT COMPANY.

To the Editor of The Near East.

Sir,—It having come to my knowledge that certain people were spreading the rumour that the Nairn Transport Co., of Beyrout, Syria, were proposing to sell their concern to another company, I have cabled Mr. Norman Nairn as to the truth of this, and, in reply, he has authorised me to state that there is not the slightest foundation for this statement.

Mr. Nairn has not the least intention of associating with any other company, native or otherwise, but intends to develop his now flourishing business entirely by himself.

I would add that Mr. Nairn is my son-in-law.—I am, etc.,

J. M. Barclay.

16, Devonshire Square,
Bishopsgate,
November 20.

During the disarmament of the inhabitants of the Baalbek district by the French authorities in Syria, enough abandoned Turkish rifles were collected to equip an entire division. The Nebk district is now being disarmed.

INVESTMENT OR SETTLEMENT

A Permanent Income of £500 per annum after Five Years

THE outlay involved is £125 per annum for 5 years or cash £562 10s. 0d. Actual results obtained by the Company from the sale of its fruit at Covent Garden far exceed figures upon which the above estimate is based. Those who get in now will have seized an opportunity that does not often present itself.

The South African Prudential is developing the finest Citrus Estates in the British Empire. The Government Expert, Mr. Tribolet, has made a very satisfactory report on the progress of these Estates. Dr. Macdonald, the eminent Consulting Agriculturist and Horticulturist, late Director of Agriculture in the Transvaal, states: In the whole range of Modern Agriculture it will be hard to find an investment that offers safer and better returns on capital expenditure than a well-managed

Orange Orchard in South Africa

A rich district, exceptionally fertile soil, and adequate transport facilities, sum up the advantages of a profitable investment.

There is no chance of over-production. This country consumes oranges to the amount of £8,000,000 annually—mostly in winter. In the summer this £8,000,000 market is practically a virgin field for any country that can supply oranges for summer eating. Almost alone among orange sources, South Africa can supply summer oranges—by reason of situation and time of seasons.

The following is an extract from the "Times" of Natal, Pietermaritzburg, June 28th, 1923:—

Judged by the excellent display made by the South African Prudential, Ltd., in the Produce Hall, it is little wonder that at last year's Royal Agricultural Show the Company created a world's record by winning the Society's Gold Medal, 17 First Prizes, 3 Specials, 4 Second Prizes, 1 Third, and 1 Highly Commended.

An Investment A Union Government Pamphlet states: Unlike diamond digging, orange growing is **Not a Gamble**

Over £200,000 has already been invested in the Estates. The Directors are well-known public men in South Africa. Reference—The National Bank of South Africa, Ltd.

IMPRESSIONS OF IRAQ.

On November 21, Lord Thomson, late Secretary of State for Air, lectured to the Central Asian Society, at the Royal United Service Institute, on "Impressions of Iraq." Lord Peel, who presided, invited the lecturer to cast off the mantle of official reticence.

But, for the sake of his successors in office, Lord Thomson was not so derobing himself. He briefly outlined his recent tour by air to and through Iraq. From the aerodrome at Heliopolis he flew to Amman, and thence to Baghdad. This City of the Caliphs he found to be rather a "city of opinions." Thence he went to Mosul and the frontier towns. He mentioned such places as Zahko, Amadiyeh, Rowanduz, and Arbil. Having inspected many troops and having interviewed many people, he was by this time a little fatigued, and wished to return to Baghdad. But he was persuaded to go to Suleimaniyeh, and subsequently, for the conception which he therefrom obtained of what British prestige meant, was very glad he had done so. A little before his arrival Sheikh Mahmoud had, by his activities, reduced this pleasant town of 20,000 inhabitants to one of about 700. The R.A.F. finally decided to bomb him, with the result that already, by the time the lecturer had reached the place, 12,000 had returned to their homes. The reception that the Suleimaniyehites gave him was extraordinarily favourable. Notables fell over each other in the profusion of their thanks to the British; merchants' jaws dropped with anxiety at the mere suggestion that Britain should ultimately evacuate Iraq; and even the sheikhs thought the present arrangement as good as any.

There were three prominent events, Lord Thomson said, that happened about the time of his visit to Arabia. First, there was the Wahhabi invasion of Transjordan. There was no doubt that the repulse of the invaders by aeroplanes and armoured cars had taught the Wahhabis an unforgettable lesson, and he believed that, dreadful as the method of bombing was, it was the cheapest and most efficient and really the most humane way of inculcating respect for frontiers. Secondly, there was the invasion of the Hejaz by Ibn Saoud's men—a move which fluttered considerably the dovecots at Amman and Baghdad. Both Emir Abdullah and King Faisal expressed to the lecturer their anxiety on this point. And lastly, there was the trouble with the Turks on the north-west frontier. The activities of the Turks in this region were, Lord Thomson thought, directed in a purely punitive sense against the Assyrians, and he looked for slow rather than dramatic developments in this part. If Britain exercised unceasing vigilance, probably all would be well. But the slightest sign of wobble and trouble would ensue.

The lecturer then delivered himself of some generalisations upon the various types of Jews whom he had encountered. Of the Arabs he said that it was difficult to place implicit strength in their military capacity. The nomadic trait in their character militated against the sense of discipline, although the Levies under British officers were fine material. The Arab Army under native officers was not reliable. King Faisal himself was alive to this danger. Further, from the air point of view, Arabs might become excellent pilots, but whether they had the driving force and the perseverance to organise work on the ground was very doubtful. The Kurds, said the lecturer, would always be a problem. They had a passion for "spotting the winner," and if they thought that Britain was to be on the losing side they would unhesitatingly go over to the Turks. The reason, incidentally, that a plebiscite was refused for Kurdistan was that, whereas, if the Kurds voted for the British, the Turks would punish them, if they voted for the Turks, the British would take no reprisals! A very difficult question was presented by the Assyrian Christians (Nestorians). The position at the moment was one-sided. Britain had done much for these Nestorians, but there was evidence to show that they had done little for themselves. Vigilance in this matter was extremely necessary. In connection with the Jews, Lord Thomson used the words "insoluble problem," and quoted the story of the Jews being given land and no work was done, of their further being given agricultural implements to till the land, and still no work was done because the accursed Arabs were so lazy!

The great thing for Iraq was, in the lecturer's opinion, the development neither of its oil resources nor of its wheat resources (although more was to be made from the latter), but—security. Security was the first essential, and in obtaining it this country had a great responsibility. In these circumstances he could not advocate a policy of scuttle, which would entail a tremendous fall in British prestige. Further, a settled Iraq was absolutely necessary to the scheme of developing the air route to India. The building up of Iraq was inevitably a long business, but a beginning had been made by opening it up to the outside world. In this connection Lord Thomson instanced the Nairn service of motor-cars.

In the subsequent discussion, to which Sir Michael O'Dwyer, Sir Charles Yate, Colonel Bramley, and Mr. F. H. Skrine contributed, great satisfaction was expressed with the lecturer's view that Britain must fulfil her pledges in Iraq, and that, in certain circumstances, bombing by aeroplanes is justified.

THE PROBLEM OF GEORGIA.

Under the auspices of the Near and Middle East Association, and by the kindness of Mrs. James Conchie, a meeting to discuss "The Problem of Georgia" was held on November 18 at 28, Great Cumberland Place, W.1. Major-General Lord Edward Gleichen presided. After the "orthodox" Georgian view of Georgian history had been given by a native of the country, a view which emphasised the fact that Georgians still long as ever for their independence, Mr. A. Safrastian described the Russian point of view as it at present exists. He asserted that the Georgian peasantry—that is, the main portion of Georgia's inhabitants—were not very averse from the present régime of the Soviets, which, indeed, had done much for them in the way of agrarian reform. What the peasant wanted, above all, was peace, and with that achieved. Georgia, which from its economic and strategic position was the most favourably situated of all the Caucasian States, would assuredly forge ahead. Mr. Safrastian did not approve of Nationalist risings in the Caucasus, which he knew, from his experience in his native Armenia and elsewhere, meant famine and death.

He was followed by Mr. W. E. D. Allen, the main purport of whose speech was to persuade English people to have done with muddle-headed sentimentality—the sentimentality which urged them to sympathise with and encourage small nations in a hopeless revolt—and to tell the Georgian people not to trust in any promises, actual or implied, of British intervention in their cause. Particularly he lamented the effect that the recent visit of Mr. Ramsay MacDonald and other Continental exponents of Socialist doctrine had on Georgia. Great nations intervened on behalf of small nations only when it was to their direct interest, and the worthlessness of paper resolutions in regard to the integrity of Georgia was most striking.

In the subsequent discussion Mr. H. W. Nevinson protested against the views that treaties were of no avail, and that the mass of the Georgian people were content under the Soviet yoke. Dr. E. W. Griffin also protested that what Russia had done for Georgia (in the way of railways, roads, and so on) had been done, not by the Russians, but by means of British gold, repayment of which was now repudiated. It was, moreover, precisely that attitude which permitted Mr. Safrastian to acquiesce in the expropriation of land on behalf of Georgian peasants that showed the moral gulf between Russia and the Western nations.

THE ARAB HORSE SOCIETY.

A Council meeting of the Arab Horse Society was held on November 5, at the Grosvenor Hotel, London, Mr. T. C. Armitage (President) being in the chair. There were also present :—Messrs. E. R. Calthrop, H. V. M. Clark, Capt. T. A. Clarke, Messrs. C. W. Hough, Edward Hurtley, C. W. Laird, Brig.-Gen. F. F. Lance, Major Sydney A. Medcalf, Messrs. G. H. Ruxton, W. F. Saunt, and Lt.-Col. P. D. Stewart.

The following new members were elected :—Guerreros, M., Jerez de la Frontera, Spain; Mitchell, Lieut.-Col. A. J., 3, Clanricarde Gardens, Tunbridge Wells; Norton, Col. C. E. G., C. B., C.S.I., A.D.C., 40, Hyde Park Square, London, W.2.; Reed, A. Curwen, Hailsham, Sussex; Schmidt, Carl R., 634, West Central Avenue, Sierra Madre, California, U.S.A., and Tudor, Maj.-Gen. Sir Hugh, Army and Navy Club, Pall Mall, S.W.1. It was decided to have eight Arab and Arab-bred Classes at the London Show, 1925, and two gold medals, with a Challenge Cup presented by Mrs. Walter Reid for the best stallion or colt (foaled in 1921, 1922, 1923, or 1924).

Entries were received for the Arab Horse Stud Book, Vol. III.

SHAKESPEARE IN INDIA.

Dr. C. Sisson (Reader in English at University College), lecturing at King's College, with Prof. Sir Israel Gollancz in the chair, on November 21, under the auspices of the Shakespeare Association, said that India was the only country in the world where the owners of popular theatres could count on a profit on a Shakespearean production. In the Bombay bazaar was a group of theatres, in the heart of a poor native population, where Shakespeare was acted in Marathi, Gujarati, Hindi, and Urdu. Extreme liberties were taken with text and plot, comic interludes being introduced with no relation to the play, which in itself became an amalgam of opera and ballet. From 1890 onwards, said the lecturer, Shakespeare had been played in the vernacular adaptations and applauded by men of all castes. The fundamental acting quality of Shakespeare was as triumphant in Bombay as it was in Tudor London or at the Old Vic. to-day. In these Bombay theatres there were no actresses, women's parts being played by men and boys.

KURDISTAN MEDAL AND CLASP.

The King has approved of the grant of the General Service Medal with clasp "Kurdistan" instituted in January, 1923, being extended to the military forces employed in the operations in Kurdistan in 1923, under the command of Air-Marshal Sir J. M. Salmond. Subject to claims being approved by the Army Council, the medal and clasp will be granted to the troops who served with the force under Colonel-Commandant B. Vincent between March 19, 1923, and June 18, 1923 (inclusive) or with the force under Colonel-Commandant H. T. Dobbin between March 27, 1923, and April 28, 1923 (inclusive). Individuals already awarded the medal will receive the clasp only.

Mr. Howard Carter is due to arrive in Cairo this week to resume his work on the Tomb of Tutankhamen.

Sir Muhammad Rafique, who was recently appointed a member of the Council of India, left London last week for India.

In order to avoid the possibility of damage to the crops, it has been decided to hold Indian Army manœuvres in the week ending January 17, artillery practice following on the 19th, and the review on the 21st.

The Œcumenical Patriarch, Mgr. Gregorios VII., Zerbondakis, who had been ill for a considerable time, died at Constantinople on November 17. He was elected to the Throne of St. Chrysostom on December 6, 1923.

An earthquake, lasting forty seconds, occurred on November 22, and affected many towns in Anatolia. The newly-constructed railway station at Oushak was destroyed, and considerable damage was caused at Afion Karahissar, Tchaouchdji Tchai, Konia, and Eskishehir.

NOTES AND NEWS.

167, Strand, London, W.C.2,
Tuesday Morning.

The Anglo-Persian.

At the meeting of the Anglo-Persian Oil Company, Sir Charles Greenway, after pointing out that the figures confirmed his anticipation a year ago as to the results of the past twelve months, said that it was more than ever difficult to venture a forecast as regards the current year. The company's anticipations in regard to throughput are being fully realised, but prices recently have shown an appreciable decline as compared with the average of the past year, and abnormal competition still continues in some of the selling markets. Provided there is no further decline in prices, Sir Charles said that they were hopeful that the current year would show a considerable increase in the profits. As regards the probable course of prices, he remarked that it was always dangerous to prophesy. A year ago it seemed as if consumption were overtaking production, and this would have happened but for developments in the United States, the result of which was, temporarily, he thought, again to bring production ahead of consumption. On the other hand, there has been an enormous increase all over the world in the consumption of petroleum products, almost, if not quite, sufficient to counterbalance the increased production, and, in his view, now that the production of crude is again declining, and provided no prolific new fields are discovered in the near future, oil prices have reached their lowest, and any change will be in the other direction.

Sudan Trade Expansion.

The figures for the trade of the Sudan for the first eight months of this year are now available, and show a notable expansion both as regards exports and imports. The total value of trade for the period was £E6,419,729, as compared with £E4,920,264 for the same period of 1923, there being thus an increase of one and a-half millions. The value of the imports was £E3,478,231, as against £E2,851,097, an increase of £E627,134, while the value of exports and re-exports rose from £E1,951,162 to £E2,774,650. The increase in Government imports was largely due to the importation of material for the Sennar Dam and Kassala Railway, while the feature in the export trade has been the great expansion in the exports of cotton. As regards the distribution of the trade. Egypt was first in the list of countries exporting to the Sudan with £E1,185,887, or 34.1 per cent., Great Britain being a close second with £E1,152,110, or 33.1 per cent. Great Britain was easily first among countries importing from the Sudan with £E1,875,957, or 67.6 per cent., Egypt being second with £E320,511, or 11.5 per cent. The figures for the eight months indicate very clearly the progress being made in the Sudan. There is still an adverse trade balance of a considerable nature, but this is in process of disappearing, and when the Gezira scheme is in full operation, the trade figures should make a very different showing.

Lake Copais Company.

The handicap to the development of this company due to the fact that agreements arrived at defining the company's rights under its concession have not been ratified in the Greek Chamber of Deputies owing to political changes, was emphasised at the general meeting in July by the chairman, who pointed out that though the company has rendered a national service to Greece it has not yet earned a dividend on its share capital. It is now announced by the company that the Greek Government has introduced a Bill to the Chamber of Deputies providing for the appointment of arbitrators by the State and the company and, if necessary, of a referee to be nominated by the President of the Swiss Confederation or the President of the International Court at The Hague. The Greek Government, and also the National Bank of Greece, have pledged themselves to see that a final settlement of all matters at issue between the State and the company is arrived at without delay. This satisfactory outcome will go far to establish that degree of confidence on the part of investors which is essential if further capital on a large scale is to be obtained for similar works of development.

The Company's Work.

The company's statement announcing the development briefly summarises the company's position, and it may be of interest if I give the salient facts here. Under a concession the company has reclaimed some 60,000 acres of land and converted what was once a fever-breeding marsh into a tract of arable and pasture land. This yielded during 1923 about 15,000 tons of produce for consumption in Greece, besides providing excellent grazing for the rearing and fattening of about 100,000 head of stock. The company maintains an elaborate drainage and irrigation system, and has spent, and is still spending, large sums on the upkeep and perfecting of this system, without which the area would soon revert to its original state. The company's concession entitles it to the freehold of 20,000 acres of land and the leasehold of the remainder of the area reclaimed, but, as already indicated, the progress of the business has been seriously impeded, owing to uncertainty as to the exact position.

BULGARIAN EXPORT TRADE DIFFICULTIES

(From a Correspondent.)

In recent articles attention has been drawn to some of the industries of Bulgaria, which are slowly but quietly coming to the front and claiming more and more attention from the outside world. In this connection it is of interest to study the question of the present position as regards the export trade of Bulgaria.

It must be borne in mind that the Bulgarian, who is essentially a hard worker, is carrying a heavy load on his shoulders in that he alone is paying the indemnity imposed, and this he does without murmurs. To raise the money necessary for the purchase of gold for these payments, and also for the payment of the army, as conscription no longer exists (for this is forbidden by the Peace Treaty), he requires to put heavy taxes on all imports and exports and also to forbid the importation of luxuries, which include tooth brushes, cigarette lighters, and packets of cigarette papers, etc. The income-tax is also extremely heavy, probably the heaviest in the world, and there is a scarcity of money at all times. The foreign buyer who comes here with plenty of money finds great difficulty in purchasing the goods he requires, for he finds that a system of advances and combinations is almost universally practised throughout the country, and unless he is willing to arrive here several months before the season of the goods he requires, and to give advances to the producer, he will find that all the best quality goods are already mortgaged.

For instance, in the attar of rose industry advances have already been made to the growers of 5 levas per kilo for the flowers, which will not be ready for market until May, 1925. Therefore the buyer of rose oil who arrives from abroad in May next will find that all the rose crop has been mortgaged to the distilleries, who in their turn have made their contracts with the consumers in France, America, etc. For this reason the occasional purchaser will only find a few kilos of oil for sale, and this will probably be of an inferior quality, which the distilleries have refused to advance money on, owing to the unsuitable aspect of the gardens or the presence of the Rosa alba in the plantations.

HILL, SELBY & WOODCOCK, Ltd.

5, PHILPOT LANE, LONDON, E.C.

The fur traders have already advanced money to their hunters and trappers, and the furs that will come on to this market three months hence will be those that the resident expert does not require for his foreign parcels.

Then there is the combination of grower and producer, or grower, producer, and capitalist, such as takes effect in the majority of the mills. The capitalist approaches the oil-seed mill owner and offers to purchase, at market price on the day of delivery, but paying advances up to 50 per cent. of the estimated value of the goods in advance, all the output of the mill, reserving to himself the right to buy the seed and supply the mill. The mill owner, in case this latter clause has not been put in his contract, approaches the head man of one of the communities and informs him that he will guarantee to take so many hundred tons of seed in the coming season, and he advances money to the community up to 30 per cent. of the estimated value of the crop for the purchase of seed and implements, etc.

Lambs casings for making surgical thread and for gut for tennis rackets and strings for musical instruments are also much sought after, and more than 50 per cent. of this year's production was mortgaged before the lambing season commenced!

As will be seen from the above, the exporter of Bulgarian produce must be a resident in the country, for, if he relies on purchasing the goods he requires at the beginning of the season, he will not find that he gets either the quality or the quantity he requires. Customs duties are paid on goods according to the fixed rate percentage which the Government decides at the beginning of the season, and these being high in all cases it does not pay to export anything but the best quality.

TENDERS INVITED.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.)

Egypt.

Electric Power Station and Distribution Lines.—The Municipalities and Local Commissions Section of the Egyptian Ministry of the Interior, Savoy House, Cairo, invite tenders for the supply and installation of the equipment for an electric power station and distribution system for the town of Mellawi. The contract is divided into two sections. The first comprises the construction of the foundations for the generating sets, the supply and installations of two Diesel-driven generating sets of 80 k.v.a. and one set of 160 k.v.a., together with distribution boards, switchboards, etc., and all accessories. The second section comprises the supply and installation of underground cables and of the transformer cabins, poles, insulators, brackets, overhead copper conductors, lamps, etc. The power to be produced is 3-phase alternating current at 3,300 volts of 50 cycles, and is to be transmitted at this pressure by two underground cables to 6 transformer cabins, where the voltage will be reduced to 200. The consumer's voltage is to be 200, and is to be distributed by a 3-phase, 3-wire, overhead copper transmission line. Sixteen transformers are required, two each of 5, 20, 25, and 100 k.v.a. and four each of 10 and 15 k.v.a. December 28. (D.O.T.)

School Materials, etc.—The Director of Stores, Ministry of Education, Sharia Qasr el Aini, Cairo, invites tenders for the supply of large quantities of the following articles:—(1) School materials, such as exercise books, Arabic reed pens, rulers, slates, brass compasses. (2) Linen, such as cotton sheeting, tulle for mosquito nets, towels, Morocco woollen blankets. (3) Table requisites, such as china and enamelled plates, glass tumblers, aluminium cups, spoons, forks, knives. (4) Clothing for girls, such as bleached, unbleached, and printed calico, castor, stockings, shoes. (5) Needlework materials, such as reels of sewing cotton and silk, needles. (6) Cleaning materials, such as brushes, brooms, soap, canvas. January 3.

Drugs.—The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of drugs required for the period of one year from April 1, 1925. January 6.

Cotton and Cotton Goods.

COTTON TRADE REVIEW.

Quiet Conditions.

The Manchester Cotton Trade Review of the Imperial Ottoman Bank for the week ended November 22, states :—

During the past week quiet conditions have again prevailed, although in some quarters traders express themselves as quite satisfied with the amount of business transacted. There would appear to be good grounds for the belief that many buying orders are being held up in anticipation of a lower range of prices in view of the recent satisfactory American crop estimates. Opinions are divided as to the result of the ballot to be announced next week on the subject of increased working hours, and in many quarters doubt is expressed whether sufficient members of the Spinners' Federation will vote in favour of the leaders' recommendation.

Yarn.—Business in this section has been disappointing, and the attitude of spinners shows signs of weakening. On the one hand, certain qualities of yarn spun from American cotton are in keen demand, and early deliveries are required, whilst on the other hand, users who can afford to wait appear quite prepared to back their opinion regarding lower prices a little later on. Export trade has shrunk to some extent, though Continental demand has shown a tendency to broaden, and some important purchases are said to have been made on behalf of Germany.

Cloth.—The market reports regarding the volume of business during the past week vary rather considerably, and the trade may perhaps best be described as patchy. In the aggregate, however, it would appear that rather more orders have been booked than in the preceding week. Indian demand has not come up to expectations, though some important lines in certain classes of cloth are said to have been booked for Bombay and Madras. Orders for China have been scarce and of unimportant dimensions. Buyers for South America have placed some very welcome lines. Egypt and the Levant have bought moderate quantities, but the prices asked have been a hindrance to the development hoped for. Home trade houses have been buying more recently, but there is yet room for considerable improvement.

Raw Cotton.—The official American Bureau report issued yesterday afternoon estimates the crop at 12,992,000 bales, being a slight improvement on the figures published a fortnight ago. The market received the news phlegmatically, and the effect on prices was negligible. There has been little marked change in raw cotton quotations during the week, and the only feature worthy of note is the increase in the stocks of American cotton now held in Liverpool owing to recent large imports. Closing quotations yesterday were as follows :—American middling, 13.63; Egyptian fully good fair, 25.65.

THE EGYPTIAN MARKET.

Futures Variable.

The Alexandria Commercial Company, in their report for the week ended November 13, state :—

Since our last report the futures market has experienced wide fluctuations, and closes slightly higher than last week, as follows: Sakellaridis, $0.05 down for November, $0.22 up for January, $0.40 up for March, $0.30 up for May, $0.10 up for November, 1925; Ashmouni, $0.60 up for December, $0.80 up for February, $0.95 up for April, $0.40 up for October, 1925. At the beginning of the week much excitement prevailed in the Sakel market, and prices, mainly owing to speculative manipulation, were pushed very high. The rise in price, however, had the result of stopping the demand from abroad, depriving the market of commercial support; this and some hedging against cotton coming from up-country have tended to check the bullish feeling of the market and provoke realisations, and all the advance has been lost. The decline has affected Sakel more than Uppers, as New York this week has been firm. Native merchants in the interior, encouraged by the recent rise, have paid in some cases absolutely absurd prices, and it is feared that should the market drop further they may be compelled to hedge their holdings hurriedly, and thus cause a break in prices. Under these circumstances, the future course mainly depends upon the demand from abroad: if the latter does not improve appreciably, prices may be affected by the arrivals from up-country, which are bound to be heavy for some time to come. Reports from textile centres are in general satisfactory, especially in England and America, and it is expected that the result of the recent elections in these two countries will lead to further improvement; however, owing to the fact that the

Digitized by Google

prices of Egyptian cotton have been so high of late compared to other growths, it has only partially benefited from the improved conditions. At the November 2 tender no dockets were issued. The week's receipts amount to 366,715 krs, against exports 258,117 krs.; the stock stands at 1,610,154 krs.

The report of the Ministry of Agriculture for October reads: Weather conditions were favourable to maturation of late crop. The first and much of the second picking has been completed; small areas of second picking remain, and will be gathered early in November. The general quality of cotton, both Sakellaridis and Ashmouni, is good with absence of large proportions of either the very high or very low grades. The quality of seed is reported to be lower than last year, but in some districts, especially in Northern Gharbiya, the quality of seed is reported higher than usual. Ginning outturns have fallen since early ginnings, and are estimated as being about or little above average. Yield results of Ashmouni type cotton in Lower Egypt have, with few exceptions, been below expectations, and cultivators do not seem at the moment inclined towards extensive sowing of Ashmouni in Lower Egypt in the coming season.

Spot.—We have had a week of active markets at Minet el Bassal, and sales amount to about 35,100 bales, of which we estimate 17,800 bales Sakellaridis, 8,900 bales Uppers, 6,800 bales Zagora, 900 bales Pilion, 400 bales Brown, and 300 bales White.

Sakellaridis.—There has been business in all styles except the very low grades. Medium and Good grades have attracted most attention, but the present high prices are having their effect, and the demand from spinners has slackened considerably. This fact, coupled with the weight of arrivals now being offered, has caused a substantial cheapening of spot premiums, which are generally markedly easier. Fair exceptionally maintains its parity with contracts.

Uppers.—There has been a good demand for all grades from Fully Fair upwards. Spot parities are well maintained at last week's rates. There is, however, rather more cotton offering.

Lower Egypt Zagora has continued in good request principally for the medium and good qualities. Prices of spot against contracts are steady and without change from last week.

Pilion.—Continues in active request, and good lots are still readily bought at high premiums. Prices of spot against contracts are very irregular, but generally considerably dearer.

Brown.—A good business has been done. Spot premiums are considerably dearer than last week.

White.—A moderate business has been done mostly in the medium and better grades. Prices of spot against contracts are considerably easier.

LIVERPOOL COTTON REPORT.

Sudan in Good Demand.

Messrs. Reynolds and Gibson report as follows for the week ended November 19:—Egyptian Spot. The inquiry for spot Egyptian has been well maintained, and, although no fresh weight of business has been reported, the general tone has been decidedly "bullish," owing chiefly to the strength of the Alexandria market. The scarcity of Fully Good Fair Sakellaridis has again been most marked, and this cotton changed hands to-day at 26.50d., or 135 points over the official spot quotation of a week ago. The better qualities have not been so much in demand, as the prices now asked are out of the reach of most spinners for the time being. Occasionally an inquiry has been received for Extra or Super Fine Sakel, but in every case the spinners' idea of the value of the cotton has been several pence per lb. different from that of the seller. Thus, for the immediate future, we cannot foresee much broadening in the amount of business being done in this direction. Amongst the lower qualities slightly more interest has been displayed, chiefly in the "shy Good Fair" cotton. Prices are very irregular. In Uppers a fairly good inquiry has been in evidence, particularly for the "best," prices for which have ruled between 18.50d. and 19.50d. per lb. A fair amount of business has been done in good Pillion cotton at about pass price January Egyptian. Brown and White have been neglected, but quite a good trade has been done in White Sudan, which at the moment is in considerable request at about 350 on American. C.i.f. business on the whole has been quiet, but here and there a few small lines have been placed—nearly all for prompt shipment. Forwardings for the week ending 14th inst. were returned as 13,750 bales. Quotations of Upper and Brown have been advanced 70 points, those of Sakel 85 points. Estimated sales, 1,400 bales Egyptian and 1,050 bales Sudan. Fully Good Fair Sakel to-day 26.00d.

AGRICULTURAL CONDITIONS IN IRAQ.

The Agricultural Bulletin of Iraq for the month ended October 15 gives the following particulars:

Reports from Basrah state that the unusual prevalence of north and north-westerly winds has continued to affect the date crop adversely. At this season also the tides are low and the banking up action of a south wind is needed to facilitate irrigation. Usually the south wind prevails at this season, but during the month under report irrigation has been rendered difficult, owing to its absence.

Reports from the Hillah district state that the mild season has been favourable to the rice crop, whilst throughout the country the climatic conditions of September favoured flower and boll formation in the cotton crop. The prices of wheat and barley remained fairly steady, though the local variations continue to be very marked. All districts report a great scarcity of suitable seed for winter sowings. All departmental seed available has been issued, but the quantities are negligible in view of the universal shortage.

A report has been received from the Imperial Institute on seventeen varieties of wheat which have been under experiment at the Government Experimental Farm. It is gratifying to learn that the wheats which had been selected for their agricultural qualities such as yield, earliness, and rust resistance, have also been placed first on the list for baking qualities. It would appear that Iraqi wheats are on the whole "weak," and that imported varieties tend to lose strength after some years of cultivation in this country.

Date packing continued throughout the period under report, and shipping commenced on September 16. "Hallawi" packing is practically completed, and the yield is well above the average, though the quality is impaired by the too rapid ripening caused by the hot winds. "Khadrawis" appear to be a better crop than was anticipated and the quality is good.

Company Meeting.

ANGLO-PERSIAN OIL COMPANY.

Greatly Increased Production.

Prospects for Current Year.

The fifteenth ordinary general meeting of the Anglo-Persian Oil Company, Ltd., was held on November 25 at Winchester House, Old Broad Street. Sir Charles Greenway, Bart. (chairman of the company) presided.

The Secretary (Mr. John Clark) having read the notice convening the meeting and the report of the auditors,

The Chairman said: You have had submitted to you our report and balance-sheet for the past financial year, and I now have the pleasure to amplify these by my usual annual comments upon the position of the company and its progress.

The report and accounts have been submitted a few weeks earlier than on the last occasion, and we hope in future years that we may be able to do still better. But I would ask you to bear in mind that the closing of the accounts of a business with such extensive ramifications as ours takes a good deal of time if complete results are to be shown. Before we can close our accounts we have to wait for the final returns from our various foreign branches after the auditing of their books, and thereafter for the closing and auditing of the books of our various associated companies in this country and for the declarations of their dividends.

Profits.

When last I had the pleasure of meeting you I indicated that I did not anticipate any improvement in results for the past financial year. This anticipation is confirmed by the figures now before you. I explained last year some of the adverse factors which militated against better results being shown, but one other to which I did not then refer was the competition which we have experienced in some of the Continental markets in which we have established ourselves. In some of these markets "rate wars" have been carried on to an insane extent, but we can await the result with perfect equanimity; since for every shilling that we lose our competitors must lose two, or more. Taking into account these conditions and those previously explained, the results shown may, I think, be regarded with satisfaction.

The dividend on the ordinary shares which we have recommended is again 10 per cent. As in the case of the previous year, the profits shown might have justified a higher rate of dividend, but with a view to conserving our financial resources as much as possible—in regard to which point I shall have something more to say later on—we have again deemed it advisable to follow a conservative policy.

Prospects of Current Year.

As regards the current year, it is more than ever difficult to venture a forecast. Last year I indicated the possibility of a considerable improvement, basing this on the further anticipated large increase in our throughput, but subject, of course, to there being no further decline in the prices of products. Our anticipations in regard to throughput are being fully realised, but prices during the past few months have shown an appreciable decline as compared with the average of the past year, and the abnormal competition to which I have referred still continues in some of our selling markets. Provided, however, that there is no further decline in prices we are hopeful that the current year will show a considerable increase in our profits.

Market Prospects.

As to the probable future course of prices for petroleum products it is, as I said last year, always dangerous to prophesy. At that time it looked as if consumption were overtaking production. This would have happened had it not been for the bringing in of some new fields in the United States, and for the reckless system of drilling obtaining in that country, which results from a large number of competing producers being able to operate at the same time in one field, regardless of the life of the field or of market considerations. The combined effect of these causes was—temporarily only I think—again to bring production ahead of consumption. On the other hand, there has been an enormous increase all over the world in the consumption of petroleum products, sufficient nearly, if not quite, to counterbalance the increased production, and now that the production of crude has again begun to decline there is every reason for believing that, subject to no prolific new fields being discovered in the near future, the barometer of oil prices has reached its lowest point, and that any change will be in the "fair weather" direction. The weakness of prices in the United States during the past few months has, I should point out, not been due so much to the growth of production as compared with consumption, as to the want of sufficient storage accommodation, for both crude oil and products, to meet the expanding trade, since stocks in that country, relatively to its increased consumption and exports, show an appreciable decline on the figure at which they stood when prices were on a higher level. This is, however, a difficulty which is being daily overcome, and when the tankage in that country has been sufficiently extended the forced sales which have been so marked a characteristic of the American market for some time past must necessarily cease, and prices be re-established on a basis more consistent with the world's average cost of production. I do not, of course, speak of our cost of production, because in this respect we stand, as I have previously pointed out, in an exceptionally favoured position, owing to the unique productivity and life of our wells, and to the very high quality of our crude.

Balance-sheet.

I will now deal with the items of the balance-sheet which call for explanation. Taking the debit side first of all, the only changes of importance are (1) the amount of issued capital, which shows an increase of £121,233 10s., being the amount of calls on the last issue of capital outstanding at March 31, 1923, but since paid; (2) redemption of debentures to the amount of £125,000; (3) the £2,000,000 five year secured Notes, which were issued during the year and applied to paying off the loan from our bankers which in the previous accounts stood at £2,829,000; (4) employees' provident, pension and insurance fund shows an increase for the year of £273,034 6s. 5d., and now stands at the satisfactory total of £1,089,812 3s. 5d.; and (5) the reserves, which show an increase of £202,940 18s., bringing the total up to £5,283,128 11s. 6d.

The profit and loss account shows, as you will see, after payment of preference dividend up to September 30, a total remaining to be dealt with of £3,079,143 9s. 11d., as compared with £2,993,051 17s. 2d. in the previous year. Out of the former amount we have since paid a further £437,500 in respect of preference dividends for the half-year ended March 31 last, and we now recommend the payment on December 31 next of the dividend of 10 per cent. on the ordinary shares to which I have already referred, absorbing £895,000, leaving a balance of £1,746,643 9s. 11d. to be carried forward. This balance, as before, is subject to such excess profits duty as we may be ultimately called upon to pay, and also to corporation profits tax for the year ended March 31 last. No settlement in respect of the former item has, I am sorry to say, yet been arrived at, but whatever it may be, it and also the liability for corporation profits tax are very amply covered by the balance carried forward.

Dealing now with the credit side, the only items calling for remark are: (1) Purchase price of concessions, shares in and advances to associated companies, etc. The amount appearing under this heading shows an increase on the previous year of £98,457 10s. 5d., but on the other hand, the contingent liability has been reduced by £1,767,906 2s. 9d. (2) Refineries, tank installations, etc., etc. This item shows an increase for the year of £232,640 7s. 7d., being the balance of capital expenditure in excess of the amounts written off for depreciation. (3) Stocks of stores and materials show a reduction of £63,651 10s. 10d. (4) Our cash at bankers and in hand stands at £876,359 5s. 4d., as compared with £561,182 6s. 2d. During the year we disposed of the War Loan stock, which appeared in the last

Digitized by Google

balance-sheet at a cost of £594,427 17s., but our net liquid position shows, as will be seen from the balance-sheet, a satisfactory improvement.

Renewed Attacks on the Company.

Last year I referred to the attacks which had been made upon the company, and the attempts which had been made to depreciate the value of our concern. We had hoped that the information and explanations I then gave would have enabled the public and the Press to have grasped the true position and facts. It is, therefore, a matter of great regret to us to find that there has lately been a very strong recrudescence of these attacks, and, consequently, I feel it necessary, in justice to our shareholders and to the public generally, again to deal with the matter and to give some further particulars of the present position of the company in order that everyone may fully understand its great potentialities and the magnitude of its operations.

In the first place, I will give you some figures in connection with the present state of development of our own and our associated concerns. The production of crude from our main Persian fields is to-day at the rate of 4½ millions of tons per annum—the maximum quantity we are in a position at the moment to dispose of—all of this being produced from flowing wells. In addition to those from which we are producing, we have a large number of others drilled in and capped, and ready to yield their oil in equal abundance, at any time that it may be required. Last year I reported to you that we had proved a valuable field in an entirely new area, and I am pleased to say that the further developments in this field fully confirm what I then said of it. In the Argentine, also, I have to report that the further drilling to which I referred last year led to the striking of oil in considerable quantities, thus further augmenting our sources of supply.

We have now in operation about 700 miles of pipe lines, a large portion of them being of 10 in. or more in diameter; 1,510 storage tanks situated in various parts of the world, and 332 boilers and 31 boiler houses. We have nine separate refineries, situated in different parts of the world. Among our buildings we have 180 workshops and factories, 4,239 dwelling-houses and bungalows, 69 blocks of buildings for the accommodation of our native staff, and over 1,000 other buildings of a miscellaneous description. We have in connection with our distributing organisations 685 bulk oil installations, including 48 ocean installations (i.e., installations erected at various ports in different parts of the world), and 708 subsidiary installations. We provide employment for over 50,000 people, including 20,500 of British nationality. We have 164 miles of railways situated in and outside our works, 71 locomotives, and 3,462 rail tank cars and wagons. We have for road transport 1,847 motor lorries, motor tractors, and tank cars, apart from a large number of horse and mule-drawn vehicles. Our fleet now amounts to a total of 333 vessels of all descriptions, all fully employed, including 67 tankers nearly all built within the past eight years. To accommodate these vessels, and to handle the cargoes they carry, we have built or acquired no less than 89 jetties and wharves at the various ports where they call. For the carrying on of the different operations of our business—producing, refining, storing, and distributing—we have had to purchase tens of thousands of acres of land in the various countries where these operations are being carried on. We have in Persia five hospitals containing 274 beds, 11 British and 2 Indian doctors, and 20 British nurses. I may mention that at these hospitals we last year gave free treatment to no less than 3,866 in-patients and over 34,000 out-patients. A large proportion of these patients were local Persians not in the employment of the company, and it is needless for me to say that this beneficent care of the inhabitants of the country in which we are operating has been greatly appreciated by them, and has been of invaluable assistance to us in our relations with the local tribes. In addition, we are contributing liberally to the principal Persian hospital in Teheran. We are also giving financial aid to several schools in different parts of Persia with the object of educating and training Persians to fill the various capacities for which there are openings in the company's service.

We have also provided in Persia and elsewhere a number of fully equipped clubs for the recreation of our various staffs. I would add that the plant and buildings which we have erected at our fields, refineries, and elsewhere are all of the most improved modern type, and have been designed with a view to securing the maximum of efficiency at the minimum of cost.

The few figures I have quoted will give you some idea of the huge organisation which we have built up in the thirteen years which have elapsed since we first began operations, and it is a record of development which, I am confident, has not been equalled in the same short space of time by any other concern in the commercial history of the world.

As to our financial policy and administration, I claim that in these also we can show a record unequalled by any other company in the same period of time. I told you last year that during the previous three years we had provided out of revenue no less than £12,000,000 for new capital outlay. I will now add to these figures by telling you that since we first became a revenue-producing concern in 1914—only ten years ago—we have provided out of our earnings a total of no less than £19,000,000 for expenditure of a capital nature, in addition to paying out the sum of over 9¼ millions in dividends and debenture interest. These figures are, I think, an ample demonstration of the soundness of our financial policy, inasmuch as by restricting our capital issues to a figure far below the amount of our capital expenditure we have greatly enhanced the intrinsic value of our ordinary shares without at any time straining our financial position. Some financial critic scoffed at the statement I made last year that the assets of the company would, on a modest computation, be valued at two or three times the amount at which they then stood in our balance-sheet. If he will ponder over some of the figures I have given you to-day—and add to the estimate he then arrives at his own estimate of the value of our various concessions on the basis of the information which is available to everyone—he will find that my statement erred much on the side of modesty rather than the reverse.

I hope, gentlemen, that I have not wearied you with this long explanation of the company's position. I am afraid that what I have said savours very much of self-praise. This is extremely distasteful to all of us, and we would have very much preferred to have continued "hiding our light under a bushel"—particularly as in the oil business it is not advisable to let our competitors know too much of what one is doing. But the false atmosphere which has been

created by our detractors renders it necessary that the position of the company should be better understood, and from what I have said you will, I am sure, all be satisfied that the statements which have been recently again put into circulation are entirely devoid of foundation, and that you will share with us the great pride we feel in being associated with a concern which has, notwithstanding the strong opposition it has always had to contend with, achieved such a unique record of development and success.

Before passing from this subject, I would like to mention that our fields and refineries in Persia were visited a few months ago—with our permission, of course—by three American experts of the highest repute, and that their confidential report—which, by the courtesy of their principals, I have been permitted to see—was, I am pleased to say, of a very favourable character, it being admitted that our arrangements were in some respects even in advance of the latest U.S. methods. Independent testimony of this nature is, I think you will all agree, far more reliable and convincing than loose dinner-table talk or whisperings of men who have no actual knowledge of our operations or of our great potentialities.

Success, as we all know, breeds envy. Envy, by itself, we do not object to, for it is a tribute to our success. But we do object to it—and object very strongly indeed—when it is accompanied by damaging attacks on the company for which there is not the slightest foundation, especially when conveyed by verbal statements and innuendoes which we only hear of indirectly and have no opportunity of refuting.

I trust that the information I have given you to-day may have the effect of putting an end once and for all to this underhand mode of attack, but it will in any case enable the persons to whom these statements are made to judge for themselves what credence to give to them.

No Further Capital Issues.

As regards capital issues, we have, as I have already mentioned, made an issue during the year of £2,000,000 short-term notes to enable us to pay off the loan we had from our bankers, and beyond this we do not anticipate having to make any further new issues in the near future. We are, of course, constantly incurring large fresh capital outlay, this being inevitable in connection with a concern which is expanding so largely and rapidly as ours, but, so far as we can see, we shall be able to meet this out of revenue until such time as we may find it advisable to extend our production beyond the 5,000,000 ton per annum limit for which we have so far been building up our organisation.

Production.

With regard to production, I must repeat that I have again nothing but good news to give you. In Persia we have again considerably extended the area of the proved territory in our main fields; at any point of this area we can now put down a bore with the practical certainty of tapping a prolific well, and the wells from which we have so far been obtaining our production still continue to maintain their large yields. I have heard that we have been described as a "one-well company." This is no doubt due to what I have told you from year to year about our now famous F7, which has now given a total yield of about 6,000,000 tons, and is still maintaining the same high rate of production. But this is only typical of the wells we have opened up all over our proved territory, and it has already been far surpassed by other wells—e.g., B17—situated 1¾ miles from F7, which flows at the rate of 18,000 barrels, or, roughly, 1,000,000 tons per annum. These large producing wells are, I may explain, not located in any one particular spot, but are spread all over our proved territory, and as we extend this territory, as we are constantly doing by putting down fresh wells at distances of about half a mile from each other, we continue to strike wells of the same prolific character. In order that you may be better able to follow the course of the development of our production, I will continue the table of figures which I gave you last year, viz.:—

Production in	Tons.
1918-19	1,106,415
1919-20	1,385,301
1920-21	1,743,557
1921-22	2,327,221
1922-23	2,959,028
1923-24	3,714,216

against my estimate of 3,775,000 tons, and in the current financial year it should be between 4¼ and 4½ million tons.

I may add that were we to tap all the wells already opened up we could at once bring our production up to 10,000,000 tons per annum, or more, and that by drilling in the wells which have been carried down to the cap rock we could still further largely augment our production within a few months. But it would be extremely unwise to produce at this high rate until we have ascertained more definitely the extent of our reserves, and in any case it could not be done without a corresponding increase in our pipe lines, refineries, tankers, and distributing organisations—apart from the fact that the sudden producing of this large extra quantity of oil would undoubtedly cause serious disturbance to the world's markets. Therefore, we have come to the conclusion that in this respect our soundest policy is to *festina lente*, and only to provide for this bigger production when we have satisfied ourselves, first, that we have ample reserves of oil to justify producing at this higher rate, and, second, that we can market the additional quantity at remunerative prices. As to the first point we are daily getting nearer to the position where we shall be able to increase our production materially without fear of unduly exhausting our reserves. As to the second, this is largely dependent upon the growth of the world's consumption, and the development of production in other countries.

Outside of the main fields to which I have referred, we have continued our drilling operations in several parts of Persia with a view to discovering new fields, but so far without much success, and several areas which had been favourably reported upon have had to be abandoned. On the island of Kishm, however, where we had been drilling for some years past, and which we had also decided to abandon, we met some months ago with an unexpected flow of oil when the casing was being withdrawn from one of the wells. This oil, which has been continuing to flow ever since at the rate of between 400 and 1,400 gallons daily, is of a very unusual character, being practically nothing but pure petrol and kerosene. Though we do not attach much importance to this "find" we are proceeding with our examination of the territory in the hope of being able to discover the source from which this highly infiltrated product has been derived.

The development of the new area referred to by me in the opening part of my remarks is being actively pursued with a view to proving its maximum extent and productiveness before we can safely embark upon any large scheme of pipeline or refinery development. The further developments in this area are, I am pleased to say, of a satisfactory character, and the oil produced is of an excellent grade, and there is but little doubt that in this area we have proved another valuable field.

As regards the Argentine, I am very pleased to be able to inform you that, notwithstanding my somewhat gloomy predictions of last year, we have had some much more favourable developments recently. Up to date we have produced a total of 28,000 tons of oil, and since August 15 we have produced and sold about 18,000 tons at satisfactory prices. We have a number of wells drilled which are capable of producing on a much larger scale than this, but until we can get some necessary short pipe lines laid and further tankage erected we cannot deal with the whole of the production now available. Although the lives of these wells may not be comparable with those in Persia, there is every reason for anticipating that we shall be able to produce sufficient oil in the Argentine thoroughly to justify our entry into that country.

Refineries.

As regards our refineries, the position is, as you will have seen from the report, entirely satisfactory. At Abadan the difficulties to which I referred last year have all been overcome, and the throughput since the close of the last financial year has been at the rate of over 2,800,000 tons per annum. One drawback which we have been suffering, in the detention which it causes to our vessels, is the inadequacy of the number of our loading berths at Abadan to handle the constantly expanding volume of oil. We are now handling tankers there at the rate of about 1½ vessels per day, and, in addition, we have to find accommodation for loading and unloading a large number of other vessels employed in carrying our packed oil, plant, stores, and other general cargo. To overcome the congestion which we have been recently experiencing in this direction, we are erecting, and have nearly completed, four additional jetties, besides carrying out extensive additions to the existing ones.

To assist further in accelerating the movements of our fleet, we have undertaken to provide the Iraq Government with the finance necessary to enable it to dredge the bar at the mouth of the Shatt-el-Arab. The total cost of the scheme is estimated at £450,000, and payment of interest and repayment of capital is to be covered by dues which are to be levied by the Basra Port Authority. Two powerful dredgers of the latest type and costing £250,000 have already been built for this work. One of these has already arrived at the Persian Gulf, and the other is just about to start from this country. If the scheme is successful, it will result in a very large economy in the direction of less lighterage and a three to four days quicker turn round of our tankers.

Digitized by Google

At Llandarcy a considerably larger throughput has been dealt with, and very gratifying results have been shown both in the quality of the products obtained and in the percentages of yield, and also in the direction of reduced working costs.

At Grangemouth the refinery which was being erected by Scottish Oils, Ltd., for dealing with Persian crude, has been completed, and has for some months past been in full operation. Here also the results have been of a most gratifying character, showing in some respects, owing to the lower average temperature and other causes, an improvement even on those obtained at Llandarcy.

I may mention here that the further experience gained at these refineries more than ever confirms our anticipations in regard to the great advantages of home refining. Apart from the many other advantages which I have previously indicated, the reduction in evaporation and consequent larger yield of the lighter and more valuable products, the gain from which much exceeds our original estimates, alone more than justified us in having taken what was regarded by some of our critics as a novel and dangerous departure. Another important advantage that we gain is that, with the constant care and supervision which our research chemists are in a position to give at close quarters to our refining processes, we are able to produce motor spirit and other products of a much better and more uniform quality than is practicable when the refining is carried on in a bad climate and thousands of miles away from the countries of consumption. We can, in fact, now claim that as a result of this closer and more scientific attention to refining we produce the best and most uniform quality of spirit at present on the market.

The refinery which was being erected in Australia by our Associated company in that country—the Commonwealth Oil Refineries, Ltd.—was completed some months ago, and its products have now been introduced on the Australian markets. The company having now reached a commercial stage, we have, at the request of the Australian board, transferred to that company the services of an experienced member of our staff as managing director.

The refineries belonging to our other associated companies call for no special comment; but they are all working satisfactorily.

The Shale Industry.

As regards Scottish Oils, Ltd., I am pleased to say that the improvement in prices which took place early this year enabled the shale companies embraced in this concern to show a less unsatisfactory position at the close of their financial year than at one time appeared probable. Since then, however, the fresh fall which has taken place in market values has again adversely affected the industry, but strenuous efforts are being made in every direction to meet these unfavourable conditions.

Distributing.

To come to the last stage of our business—i.e., distributing—I am pleased to report that we are making satisfactory progress in every direction. The superior quality and unvarying character of "B.P." are getting better appreciated every day, and as time goes on we get more and more firmly established in all the markets into which we have so far made an entry, and our trade continues to show a steady increase. In the earlier part of my remarks I made a passing reference to the "rate wars" which have been waging in some of these markets in which we are established. These are, unfortunately, characteristic of the oil trade. In view of our favoured position in regard to costs, we can, however, regard them with equanimity—particularly bearing in mind that no one—no matter what the objective may be—can carry on business indefinitely at a loss. The best protection against this form of competition is, of course, to be established in as many markets as possible so that our competitors may not be able to make good in any one or more markets what they may lose in others. This is the policy we have been pursuing, and must, of course, continue to pursue.

12, Waterloo Place, Regent Street (Charing Cross end), (Regent 5694.) LONDON, S.W.1.

Relations with the Persian Government.

Our relations with the Persian Government continue, I am pleased to say, to be quite satisfactory, and there appears to be more disposition generally on the part of leading Persians to re-establish the friendly relations which subsisted for so many years between the two countries. There is at present an unfortunate dispute going on between the Central Government and the Sheikh of Mohammerah, which has led to the gathering of troops on either side, and to one or two unimportant collisions between them. But the scene of these movements is far distant from our fields and works, and we have received assurances from both sides that in any circumstances our operations and property will in no way be interfered with. We have no views in regard to the matter in dispute—nor if we had have we any right to express them, as it is purely a Governmental question—but in view of our large interest in the country, we hope that a solution of the difficulty will soon be found, and that any conflict of a serious character may thereby be averted.

Staff and Offices.

Before concluding my remarks, I will ask you to join with us in thanking the staffs of our various concerns for the unremitting keenness, loyalty, and devotion which they continue to display in the interests of the company. In this connection, I will quote from a telegram which came a few days ago from Sir John Cadman, who is now in Persia. He cables: "The condition of the oilfields is highly satisfactory. I am much impressed with the energy, capacity, and *esprit de corps* of the company's staff throughout all its operations in this country." I would like to add to this, from my knowledge, that we could not be better served than we are. Both on the technical and commercial sides of the business we have a fine set of men full of keenness and pride in the company, and it is to their unfailing energies and capacity more than anything that we owe the fine record of achievement which I have been able to put before you to-day. I am sure, therefore, that you will join heartily with me in this expression of appreciation of their services.

In London, we have, as you are aware from my previous references, for a long time past been carrying on our business under great difficulties owing to the extent to which our heads of departments and office staffs have been scattered all over the City, but I am pleased to say that we are nearly all now gathered under one roof in the new Britannic House in Finsbury Circus, and the advantages of this have already been very forcibly demonstrated. The building will be an expensive one, owing to the present high building costs and delays resulting from strikes, but the difference between the rent of our former buildings and that of the new one will, I am sure, be much more than counterbalanced by the advantages I have indicated. I now beg to move: "That the report, balance-sheet, and profit and loss account for the year ended March 31, 1924, be received, approved, and adopted."

The Government Holding.

I will ask Sir Edward Packe kindly to second the resolution. Before putting the motion to the meeting, I shall be glad to answer, as far as may lay in my power, any questions that shareholders may desire to put. I may mention that I have received from one shareholder a letter containing a number of questions, chiefly on the point of the desirability of nationalisation of the company. (Laughter.) This is a letter which should more properly have been addressed to His Majesty's Government, and I am sorry to say that I cannot lend myself to a discussion on the highly controversial questions raised by him. I would, however, like to point out to him, if he happens to be present, that we, as a Board, have, as I mentioned last year, no right whatever to express any opinion as to how the Government should dispose of their shares any more than we should have to advise him in regard to the disposal of his own shares.

Sir Edward H. Packe, K.B.E., seconded the motion.

Mr. Man.—I should like to ask whether you like the dual control?

The Chairman.—I am not in the witness-box.

Mr. Biggs inquired whether the company still held a large amount of the Scottish-American shares, and, if so, at what price they stood in the books of the company.

Digitized by Google

Mr. Kemp, referring to the question of depreciation, said that, speaking on behalf of the Ordinary shareholders, although no doubt it had been prudent on the part of the Board to adopt a conservative policy, he thought that the dividend had been reduced to an unnecessary extent.

Mr. Morris suggested that the Board should take into consideration the question of the payment of an interim dividend, and urged that the report and accounts should be presented at an earlier date.

Reply to Questions.

The Chairman, in reply, said that they held 850,000 shares in the Scottish-American Co., and those shares stood in their books at the total value of £1. (Cheers and laughter.) As to the amount of depreciation during the last two years, he had no note of the exact figures, but from recollection he would say that they had written off during the year under review and in the previous year over £3,000,000. As to the payment of an interim dividend, this had been constantly in their mind, and they shared the desire that such a payment should be made, but as yet the directors had not thought it advisable to do so. As to the distributing companies, the Board was in constant touch with the British Petroleum Co., they had every confidence in the administration of that company, and he might add that the sales of the companies were not going down, but were constantly on the increase.

The resolution for the adoption of the report and the accounts was carried unanimously.

The Chairman moved:—"That a dividend at the rate of 10 per cent. per annum, less income-tax on the Ordinary shares of the company, be declared in respect of the year ended March 31, 1924, and that such dividend be paid on December 31, 1924."

Sir Edward H. Packe seconded the resolution, which was carried.

The Chairman proposed and Admiral Sir E. J. W. Slade, K.C.I.E., K.C.V.O., seconded the following resolution:—"That Sir H. S. Barnes, K.C.S.I., K.C.V.O., Sir J. T. Cargill, Bt., Messrs. H. B. Heath Eves, F. W. Lund, and J. D. Stewart be and are hereby re-elected to the Board."

The resolution was unanimously approved.

Messrs. Brown, Fleming, and Murray, the auditors, having been reappointed,

Vote of Thanks.

Mr. Thomas F. Dalglish moved a cordial vote of thanks to the chairman, directors, and staff for their excellent services rendered during the past year. They had had from the chairman a most informative and lucid record of the company's affairs which enabled the shareholders to realise, to some extent, the enormous scope of the company's activities, revealing at the same time the great care which was shown in the administration of the concern. (Cheers.) There was only one matter to which he would like to make reference, and it was this, that he thought the shareholders could congratulate themselves on the refusal of the British Government to sell its shares in the company. (Cheers.) They, as shareholders, were thus assured that the company would remain under the British Flag and that it would be conducted purely as a British enterprise.

The resolution was carried with acclamation.

The Chairman, in reply, said:—I have to thank Mr Dalglish, on behalf of the Board and the other officers of the company, for his very appreciative remarks about the company, and you, ladies and gentlemen, for the kind reception you gave to this vote of thanks.

As I said before, we as a board have no concern in the matter of the Government shares, but we all feel intense pride in the company—a feeling which will, I am sure, be more and more justified as time goes on and as the company approaches more nearly to its full development. We are at present still only in the growing stage, but we are now well past the period of childhood, when life is uncertain, and have arrived at that period of vigorous youth which gives certain promise of a sturdy manhood. I therefore look forward with confidence to the future, and again thank you for your kind appreciation of our services.

The proceedings then terminated.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Castalia for Bombay (Liverpool, December 6). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mandasor for Port Said, Colombo, Madras, and Calcutta (London, December 13).

Bibby Line.—S.s. Leicestershire for Port Said, Colombo, and Rangoon (Birkenhead, December 3).

British India Line.—S.s. Mirzapore for Bombay and Karachi (London, December 6); s.s. Mashobra for Colombo, Madras, and Calcutta (London, December 6).

Ellerman "City" Line.—S.s. City of Christiania for Calcutta (Birkenhead, December 9).

Ellerman's Westcott and Laurance Line.—S.s. Dido for Gibraltar, Piræus, Salonika, Constantinople, Bourgas, Varna, and Constantza (London, December 3).

Johnston Line.—S.s. Quernmore for Piræus, Volo, Salonika, Bourgas, Varna, and Constantza (Liverpool, December 6); s.s. Aviemore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, December 27).

P. and O. Line.—S.s. Caledonia for Bombay (London, November 29); s.s. Nankin for Colombo, Madras, and Calcutta (London, December 13).

Mr. Charles J. Hambro has accepted a seat on the Board of the Mercantile Bank of India.

The production of the Phœnix Oil and Transport Company for October was 20,773 tons, and the throughput of the refineries was 25,632 tons.

The Bank of British West Africa has declared an interim dividend at the rate of 4 per cent. per annum, less tax, payable December 1.

It is stated that the locust bean crop in Cyprus has exceeded all expectations, and is estimated at a little over 60,000 tons. The greater part will be shipped to the United Kingdom, and about 8,000 tons to Barcelona.

The traffic receipts of the South Indian Railway Company for the week ended October 25 amounted to Rs.10,13,405.

The traffic receipts of the Egyptian Delta Light Railways for the eleven days ended October 31 amounted to £E17,207, making the total from April 1, £E189,208.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

Smoother Waters in Egypt.

In Egypt, after the anxious feelings raised by the presentation by Lord Allenby, on November 23, of the British demands, and by the occupation of the Custom House at Alexandria on November 24, a period of comparative calm seems happily to be ensuing. The British Government appear to wish, very wisely, to give to the new Ziwar Administration breathing space, and it was a particularly able decision on their part to send out to Cairo Mr. Nevile Henderson, whose handling of the very difficult situation at Constantinople when Sir Horace Rumbold was away at Lausanne will be fresh in the minds of all. This appointment signifies, as it were, the lifting of the affair from a military to a political plane, and one may reasonably hope that the position is now in a way of being regularised. The new Egyptian Government has accepted the British demands, and has certainly, in so far as was possible, acted alike with dignity and with wisdom. The resignation of the Ministers of Education and of Public Works, however, shows how difficult must be its task in fulfilling the demands which Zaghloul Pasha, with his mandate from the Egyptian nation, rejected. It is profoundly to be hoped that before the next meeting of the Chamber of Deputies at Cairo a policy realisable both by the British and by the Egyptians will have been laid down.

The Egyptian Arrests.

It is good that the native courts in Cairo have declared, concerning those arrests of extremely dangerous Nationalists which the British authorities felt themselves obliged to make, in favour of the legality of the proceeding. These arrests were in practically all competent quarters heartily approved and applauded. The bit having been taken between the teeth, so to speak, it would, it was argued, be the wildest folly to allow poison flies to sting the beast. In other words, they were both necessary and salutary. For the moment the seas in Cairo, in Alexandria, and in all the other centres which possess Europeans are calm enough, but it would be rash to assume that there are no breakers ahead. It has been supposed that we are now back to the position of 1922, with, however, the four reserved points more clearly reserved than hitherto. But how far that supposition is correct will depend on the fate of the Ziwar Cabinet when the Egyptian Assembly meets. Everything depends on the continuance of the wise pulling of the wires that actuate the new Egyptian Government, and there is, fortunately, reason to anticipate that tempered determination will guide the steps of the British Government in the direction of political, as apart from military, feasibility.

The Sudan Mutiny.

Only those—too large a number, we regret to say—who were ignorant of the activities during the past twelve months or so of Egyptian Nationalists in the Sudan could have been surprised at the mutiny of two platoons of Sudanese infantry which took place on November 27. If this revolt proves anything, it proves, not that British administration in the Sudan is unpopular, but that the Nationalist intrigues should have been nipped in the bud much sooner. To this handful of mutinous Sudanese it was, we believe, represented by mischievous agents that the Sudan would shortly become Egyptian, and one need only remind oneself of the effect which similar arguments had at times upon the Kurds of Iraq to imagine the effect on a certain type of mind. The wonder is, indeed, that the mutineers were not greater in numbers, so lavish were the promises made to them. At the moment the situation is well in hand, and there need be no fear or alarm even if sporadic outbreaks should occur at places other than Khartoum. In no place more than in the present Sudan is firmness more closely allied to justice, and there can be no conceivable doubt that the British cause there will triumph.

A New Party in Croatia.

After months and months of pursuance in an impossible policy of non-co-operation, the Croats, like the Arabs in Palestine, are looking to themselves for deliverance from their leaders. It is difficult to discover exactly how far the revolt from the futility of M. Raditch has yet gone, but the significant thing is that it has really started. M. Lovrekovitch and some other dissidents—fourteen and thirty are

Digitized by Google

variously reported—have formed a Croatian National Party. In his manifesto M. Lovrekovitch proclaims a desire for national unity, recognises the Monarchy, and condemns the relations of M. Raditch with the Bolshevists of Moscow. If this new party succeeds in obtaining any considerable following in Croatia, the signs for Yugoslavia are brighter than they have been for a long time. Patently, M. Lovrekovitch is a man whom it is possible to work with, and he has already declared that two of his adherents, MM. Drincovitch and Shurmin, will represent the party in the Pashitch Cabinet.

Britain and Turkey.

At the meeting of the Angora Assembly on November 27, Fethi Bey, the new Prime Minister of Turkey, said—and we believe him—that the question of the Iraq boundary was the sole obstacle in the way of a renewal of the traditional friendship between Britain and Turkey. That realisation of this fact is dawning upon the Turkish Republic is one of the most hopeful signs that Anatolia has produced for some time. The times are, in fact, auspicious for Turkey. She has just accomplished a very wise change of Government without any apparent hitch, and if Fethi Bey can secure the services of a sufficient number of men as open-minded as he is himself, the railway construction, the development of agriculture, and all the other things which he put in the forefront of his programme may gradually come about. There are certain signs that the Turkish Republic is slowly adjusting its outlook and conduct in an endeavour to attain to more harmonious co-operation with the Western Powers with whom it will in the future have mainly to deal. Particularly, there is in the speeches of Fethi Bey a business-like quality, the quality at once of firmness and of compromise. More detailed appreciation of the new Government at Angora must be withheld until it is known what, for instance, are the securities that are to be given to foreign capital, but, generally speaking, British opinion will wish well to the Administration of Fethi Bey.

The French Command in Syria.

We cannot let the occasion of General Weygand's resignation from the High Commissionership of Syria pass without lauding the results of his work in general and, in particular, of his unceasing efforts to gain real co-operation in those countries which made up the pre-War Syria. General Weygand deserves well alike of the French, of the British, and of the Syrians. It is to be hoped that the policy of collaboration which he has succeeded in getting on a running basis will be pursued and brought to perfection by his successor, General Sarrail, whose name is familiar in this country, chiefly owing to his having commanded the Salonika Army. There is significance to be found in the fact that one of the last acts of General Weygand as High Commissioner of Syria will have been the expression, as found elsewhere in this issue, of obviously sincere sentiments concerning the co-operation of Syria with Palestine.

A Fracas in Palestine.

The dispute between Arabs and Jews which arose at Afuleh on November 28 may or may not have been political in origin, but the facts that it broke out and that blood was spilled are in themselves sufficient to draw attention to the suspicion with which the Arabs still regard the Zionist organisation. Governmental sanctioning of land purchased by the Zionist Organisation was one of the points incorporated in the protest which the Arab Executive recently made to the League of Nations, so that it appears as if this Executive, in spite of the rise of rival Arab bodies which are keener than it to find an immediate *modus vivendi*, still has considerably more power in the Holy Land than some critics have been disposed to allow. Obviously, there is still little room for complacency or self-satisfaction in the matter of the execution of our Zionist policy.

INDIA.

The All-Party Conference.

The result of the All-Party Conference, the latest step towards the fashionable ideal of Indian unity, is not very impressive, for unity was not achieved, though a committee was appointed to look for it. The terms of the reference to this body are sufficiently wide, covering the reunion of all political elements, the preparation of one more Constitution for the country, and, incidentally, the solution of the religious difficulties between Hindus and Moslems. The time allowed to the committee is certainly not excessive for tasks of such magnitude, but the practical point is that it leaves matters in suspense until the conclusion of the next Budget session, or, shall we say, to the Indian kalends, for April usually gives a fresh shake to the kaleidoscope of politics. It is pleasant to read of Mrs. Besant's courageous stand on the motion condemning the action taken against the Bengal anarchists, but she found very few supporters in the division, and the line taken by the Conference as a whole is that on which we commented last week, facts and probabilities ignored, figments of the imagination treated as realities, and a chorus of cloud-cuckoos which is at once ridiculous and depressing.

The Pathway to Unity.

Unity Conferences have been so frequent of late that it may be worth while to recall their story in a few words. First came the Hindu-Moslem Conference. It solved, on paper, the religious difficulties between the two communities, and its obituary is recorded in the fact that the same difficulties have now been referred to the new committee. Next came the Extremists' Conference. It achieved unity within the party in so far that the practical politicians swallowed the saints and highbrows whole, but the tale of Jonah stands as a warning that unity of that kind is not necessarily permanent. Now we have the All-Party Conference, which may, or may not, result in the absorption by the Extremists of those Liberal leaders who failed to keep their party together, and consequently are at present in the air. To complete the story, there ought now to be a conference between Brahmins and outcasts in order to close the widest and deepest fissure of all, but we cannot find anything to show that this question has been taken up. The practical difficulties would be rather serious, seeing that orthodox Brahmins could not sit in the same room as outcasts, but they are not insuperable in these days of telephones, and it is high time that the political pundits should turn their attention to the evil which, more than any other single cause, retards the growth of a united nation.

How Indians treat Indians.

Those politicians who are so fond of insisting on the indignities inflicted on Indians abroad might study with advantage a document printed in the last number of the Bombay *Labour Gazette*, which throws a lurid light on the treatment of Indians by Indians. It is a complaint by the Labour Office of the Dutch East Indies against the inhuman treatment of the salesmen and servants brought out to Java and Sumatra by Indian firms of shopkeepers. A specimen contract which is appended to the letter shows that the arrangement between master and servant is as nearly as possible a contract of slavery for a term of years, the servant being boarded and lodged, but receiving no wages for himself until he has completed his term to his master's satisfaction, and being placed entirely in his master's power. There is something piquant in the fact that the protest should emanate from the Dutch-Asiatic administration, for, to the historian at least, it is only a short time since the Dutch dominated the export trade in Indian slaves to these regions. The Dutch have moved since those days, but apparently Indian masters have not, and while indentured emigration under proper safeguards is anathema to the politicians, they seem hitherto to have overlooked this system of indentured slavery without any safeguards whatever. Possibly the reason is that the system is purely Indian.

THE WEEK AT HOME.

London, Tuesday Morning.

Cairo and Khartum.

Events in Egypt and the Sudan have been followed anxiously during the past week. It is felt that the Government took the only possible course, but it is felt, too, that the troubles may not yet be over, and that the whole situation will want careful handling for a long time to come.

Mr. Ramsay MacDonald, in a speech in the country last week, suggested that the matter should have been handled by the League of Nations. This is becoming a favourite oratorical device for Opposition speakers—"when in doubt recommend the League of Nations"—but Mr. MacDonald himself, as the late head of the Government, must realise that advice of that kind has little meaning. An Empire cannot shuffle its responsibilities on to Geneva in that fashion: nor could Geneva settle them.

Parliament.

When Parliament meets in a few days' time there will have to be a debate on foreign and Imperial affairs. The Government will state its position, but the Opposition is not likely to oppose very strongly. Labour is, of course, technically committed to the Russian Treaty, but there is hardly a Labour man who does not realise that that Treaty was dead before the dissolution, and that the present Government have buried it rather than killed it. As to the Zinovieff Letter, that is not strategically very strong ground for Mr. MacDonald and his late Cabinet, who were all at sixes and sevens over it.

The other business of the session, which will be a short one, is largely formal, and the only Bill of any public interest is that for appointing two new judges.

"Mr. A."

The most famous man in the world last week was the man whom it was forbidden to mention—the notorious "Mr. A.," whose two cheques for £150,000 each were debated before Lord Darling and a jury, the rest of the population of the British Isles apparently being in the queue that stretched outside the Law Courts every morning until the doors were open.

Although the civil case has been concluded, a criminal case has arisen out of it, and it is therefore impossible to comment on the trial. The evidence was astonishing, and far more amazing than anything I have read in the way of sensational fiction, which must at least have some probability—whereas the proceedings in the present case seemed to have none whatever that I could see, and except for the indubitable evidence of documents and witnesses one simply could not have believed them.

Some comment has been made on the policy of keeping the name of "Mr. A." secret. Lord Darling, the judge, made it clear that he had permitted this to be done, not because "Mr. A." was a rich man, but on account of reasons of State, "Mr. A." being an Eastern potentate. It is said that the actual name once slipped out inadvertently from one of the witnesses in court, but no newspaper has reported it. All the same, the thing is an open secret: matters of this kind simply cannot be kept under lock and key in these days—if ever they were, which is doubtful.

The Ring in Marriage.

In the renewed discussion on the revision of the Prayer Book, which is generally a very decorous debate concerned with nice grammatical or doctrinal points, women have suddenly begun to take an interest. The reason is obvious. It was the turn of the marriage service to be overhauled, and some excellent person, in the interests of equity, suggested that, instead of the man giving the woman the ring, there should be two rings, and the two parties should exchange them.

The jewellery trade, I believe, was unanimously in favour of the proposal, not altogether for symbolic reasons. Some of the feminists rather liked the idea of labelling men at sight—until they reflected that there was no means of compelling a man to wear the wedding ring after the ceremony; while other feminists are inclined to think that the ring should be abolished—or is it marriage that should be abolished?—but the clergy avoided these dangerous waters. In the end it was decided to leave things as they are.

The Communion Service.

A more important, and perhaps more critical, point was raised when a very numerously signed petition was presented to the Archbishop of Canterbury against certain alterations in the Communion Service. This protest disclosed a rather unexpected strength in the evangelical movement, and I imagine that it has impressed even those who are convinced that the Anglo-Catholic revision upwards is right that the Low Churchmen are more powerful than had been generally supposed.

The Archbishop, of course, made no definite pronouncement on the subject, and the matter is likely to be postponed for some time. But so far as I understand the problem at issue—and I have taken pains to get statements of the position from moderate and reasonable men on both sides—the two views are irreconcilable, and it will be difficult to discover a point of compromise on what seems to be a fundamental difference of doctrine.

Signs of Christmas.

There are already indications of Christmas in the offing. The popular magazines, of course, all published their Christmas numbers some weeks ago, and the bookstalls are still groaning under the avoirdupois of alleged jokes and improbable ghost stories; the shops are filling with useless presents, and one's tobacconist has boxes of suspicious cigars prominently displayed on the counter. These things are symptomatic; but in passing through Covent Garden last week I saw the first consignment of Christmas trees—quite miniature affairs, suitable for tiny children in tiny flats. In these days of high rents we live on a miniature scale, and even the Christmas tree is little more than a clothes-line for a few bonbons. But the housekeeper, at least, is happy; for while the cost of living is rising, for some mysterious reason the cost of Christmas pudding, and other formidable luxuries of the approaching festivities, is falling. I cannot quite understand it, but the turkey, that extraordinary bird which formerly only woke up once a year in order to be killed, now appears on the menus of most restaurants and clubs from September onwards, and remains on the lists until March. The decline of the pheasant seems to have made for an increase of turkeys; whether the bird in question appreciates this sudden popularity is another matter.

Medical Etiquette.

A well-known doctor, and a specialist of some repute, has been struck off the medical register for the mortal sin—of having written a single article in a newspaper. According to medical etiquette, this is "infamous conduct," which must be punished by professional ostracism and ruin. Every trade union, of course, must have its rules and its penalties, and I can quite understand that doctors have to take steps against the fraternity's advertising itself individually, and it may be speciously argued that to write an article savours of personal advertisement. All that is admitted, but at the same time the penalty seems rather excessive for the crime of putting pen to paper and making a single visit to Fleet Street. For some reason which I do not quite understand, parsons and barristers are allowed by their superiors to write for the papers, but doctors can only express themselves anonymously.

New Zealand Football.

The All-Blacks continue their conquering career, and Welsh as well as English clubs have now bitten the dust. Curiously enough, nobody seems quite able to explain exactly in what their superiority consists; but of the superiority itself there is no longer any doubt.

On the other hand, in these days when English sport is at a low ebb competitively, it is something to be proud of that the present M.C.C. team in Australia is giving a better account of itself than did its predecessors. But as no Test Matches have been played as yet on the present tour, it is early days to boast of the revival of English cricket.

IRAQ FRONTIER COMMISSION.

Mr. Austen Chamberlain, the Secretary of State for Foreign Affairs, on November 25 received at the Foreign Office M. C. E. T. de Wirsen, Count Paul Teleki, and Colonel Paulis, the League of Nations Commission on the Iraq boundary question. The following day Mr. Chamberlain presided over a luncheon given by the British Government at the Ritz Hotel in honour of the Commission. Others present included Viscount Peel, Mr. Ramsay MacDonald, M.P., Mr. J. H. Thomas, M.P., Viscount Cecil of Chelwood, Sir Wm. G. Tyrrell, Sir John E. Shuckburgh, Major H. W. Young, Mr. Walford H. M. Selby, and Mr. E. E. Beare, Secretary, Government Hospitality. The Commission left London last Sunday for Angora to consult with the Turkish authorities.

The *Morning Post* Belgrade correspondent states that the next Conference of the Little Entente will not be held in that city, as announced, but at Bucharest. The main subject for discussion is the Russian question, after which the attitude of the Little Entente towards Italy and Bulgaria will be considered.

Lord and Lady Jellicoe arrived last week at Sydney on their way home from New Zealand. Lord Jellicoe states that he may stay a month in Egypt, before going on to London.

Es Sayed Taleb en-Naqib, the Hashimite representative in Cairo, sailed for Jeddah on November 28 to confer with King Ali of the Hejaz about the Moslem Conference which is to be held in the Hejaz.

Ahmed Pasha Ziwar, the new Prime Minister of Egypt, held Ministerial office in the Cabinets of Said Pasha, Wabha Pasha, Nessim Pasha, and Adly Pasha. In 1923 he was appointed Minister in Rome, whence he returned last February, on his election as President of the Senate. During the War he was for a time Governor of Alexandria. Ziwar Pasha, who is sixty years old, is of Turkish extraction.

The Greek Assembly on November 29 suspended its sitting for ten minutes as a token of respect to Joannes Sphakianakes, the famous Cretan leader, who has just died. M. Sphakianakes, after participating in the Cretan insurrection of 1886, became President of the Cretan Assembly in 1897, conducted negotiations with the Admirals of the Powers in 1898, and presided over the Commission for compiling the Cretan Constitution. He then retired from politics and joined the directorate of the Cretan Bank, only emerging to support M. Venizelos against Prince George in 1905.

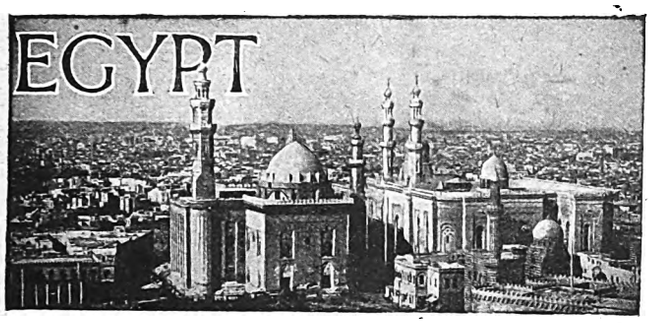
The Near and Middle East.*

From Our Own Correspondents.



Cairo, November 22.

The Murder of the Sirdar.

I had intended to devote this letter to the question of the resignation of Zaghloul Pasha, which occurred just as I closed my last week's letter. It was altogether a most illuminating incident, which promised further interesting developments in the near future. The events that have supervened, however, put that incident completely into the background, and neither the general public nor the principal actors in what was after all nothing but a comedy think any more about it.

The outrage on the Sirdar sent a wave of horror and indignation through the European communities and the more instructed Egyptians, particularly when the deliberate nature of the attack and the brutal conversion of the bullets into dumdum became known. Sir Lee Stack was indeed the last man to merit such an act on the part of the Egyptians. He was gentleness and kindness personified. All who have served with him, be they British or Egyptians, had a deep affection and esteem for him, and the measure of the place he had won for himself was afforded us by the sight of the sincere concern and sorrow shown when the news of the outrage was known and subsequently at the funeral by the many Egyptian Army officers who had served with and under him.

The outrage was committed undoubtedly because Sir Lee Stack was Governor-General of the Sudan, and in the circumstances whoever may prove to be the direct culprits the gravest responsibility rests with Zaghloul Pasha and his colleagues. No one who has followed the development in the situation during the past eight months can have any doubt upon that. The whole Sudan agitation was deliberately encouraged in as many words by Zaghloul Pasha himself in Parliament. He and his colleagues knew what was going on in the committee rooms of the Chamber of Deputies, and how Egyptians on leave in Cairo were being primed with anti-British propaganda, and he it was who endeavoured to cast discredit on Sir Lee Stack and his British subordinates of the Egyptian Army by declaring with all the publicity, and incidentally with all the privilege, that Parliament gave him that it was an indignity for Egypt to have British officers in her Army.

Further, when the incidents created by the Egyptian Railway Battalion and Egyptian officials occurred in the Sudan, and coercive measures had to be adopted for the maintenance of public peace, the Council of Ministers took upon itself to publish a *communiqué* which they knew to be a lie, and the incitative effect of which on the public mind in Egypt they, above all people, could not ignore. And, when given the opportunity by the representative of a leading British paper to withdraw gracefully from their terrible blunder and so prevent the aggravation of the situation which was to be anticipated therefrom, they preferred to persist in their attitude, and instead handed him a statement which merely served to convict them out of their own mouths of intentional *suppressio veri* and *suggestio falsi*.

As if all this was not sufficient to encourage ideas of violence, one has the fact that Zaghloul Pasha has appointed to the staff of Parliament men who have been convicted of attempted assassination of high Egyptian personages. He has favoured the candidature for Parliament and the nomination to the leadership of the Labour movement of the man who was sentenced to be hanged in 1920 for having organised a society for the assassination of British officials and members of the British Army; while his more recent appointments have been made from men who have been implicated in criminal investigations. To crown all, during the crisis caused by his resignation, his Cabinet issued orders that the demonstrations were in no circumstances to be interfered with, but that they were to be allowed to shout the revolutionary cries, which had been taught to them, even under the windows of the Palace. The indictment is long and serious, the responsibility of Zaghloul Pasha and his colleagues of both the Wafd and the Cabinet unescapable.

The Funeral.

The funeral of Sir Lee Stack was one of the most imposing and impressive ceremonies—indeed, one would not be exaggerating if one said the most imposing and impressive ceremony—that Egypt has ever witnessed. The unanimity of feeling among the foreign communities was strikingly emphasised by the manner in which they participated in the sorrow and indignation of the British community. Even those who could not actively join in the funeral itself testified to their sympathy either by flying flags at half mast, lighting funereal lamps, or closing their establishments. There could be no doubt as to what the foreign

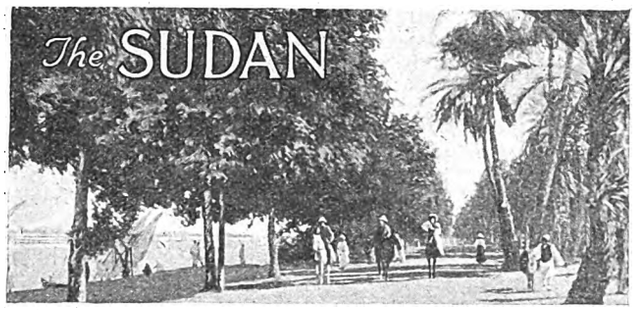
communities thought of the crime and whom they held morally for it.

Lord Allenby's Note.

In the circumstances it is not surprising to find that the British Note which Lord Allenby handed Zaghloul Pasha yesterday has met with the universal approval of the foreign communities. They, in common with the British colony, had feared from certain comments from London published here that the British Government might once again fail to strike, and they are relieved to find that it has decided to set a term once and for all to a situation which has been rapidly becoming intolerable for all non-Egyptians resident in this country and, indeed, for many Egyptians. Parliament late last night voted complete confidence in Zaghloul Pasha and his Cabinet, and left to him the task of replying as he thought fit.



Khartoum, November 21.

Civilian Cadets Sentenced.

An echo of the Military School demonstration of August 9 was heard during the fortnight under review, when the Civil Court Judge sentenced the remaining Civilian Cadets, numbering twenty-eight, to eight years' imprisonment each. Such a severe sentence may have been given in order to give these youths a very severe shock.

It must be remembered, however, that these cadets, when taking part in the demonstration, carried arms and ammunition and openly threatened to shoot any Englishman who attempted to oppose their plans. In this connection it is interesting to record a little incident which occurred and which is not generally known. Colonel MacCowan, a Lewa in the Egyptian Army, on being informed of the concerted movement, approached the party of some sixty cadets. They threatened him with death, and brought their rifles to the ready position, should he ignore their order. Colonel MacCowan thereupon put his hands in his pockets and, whistling a happy refrain, sauntered quietly through the ranks, and not one cadet attempted to bar his progress. He then talked to them for a while, and soothed their somewhat excited feelings. It was undoubtedly because of this fearless and audacious action that an ugly situation was averted, and the cadets were persuaded to march quietly back to barracks, where they handed in their arms.

It was anticipated that the award of such terms of imprisonment would have caused certain disorders among the extremist party of the three towns, and the police were therefore strengthened and stood in readiness for twenty-four hours. Three aeroplanes also operated overhead during the morning, flying very low, and, like hawks, were prepared to swoop down upon the demonstrators should such assistance be required. Fortunately, neither police nor planes were requisitioned as all areas remained quiet.

Mohammed Amin Bey Shahid.

I referred in my last letter to the activities of this Egyptian advocate. Subsequent news received in Khartoum shows a remarkable change in the Egyptian Arabic Press. From an attitude of extreme praise it has wheeled round to one of trenchant criticism of his actions. It does not now give credence to the story that he was expelled from Khartoum, but believes that he left on his own accord, for, as one of the leading papers remarked: "The Sudan Government had expelled a number of Egyptians, and, although criticised severely, they had never denied the act of expulsion, but in the particular instance of Shahid Bey they issued an official denial of the story that he had been forced by the Government to leave the country. Such a denial is appreciated—and believed." Another leading journal says that the only thing that Shahid Bey can do to clear his name is to *endeavour* to return to the Sudan. This, of course, he will not do, as such an act would at once condemn him, for no one in the Sudan would oppose his return.

Police Magistrate's Inquiry.

The Police Magisterial Inquiry into the case of forty-one prisoners arrested during the past few months in connection with the anti-Government and pro-Egyptian movement has ended. The magistrate said that the case presented by the prosecution has been proved and the prisoners have been formally charged and committed for trial by a Mudir's Court. This charge is an unique one in the annals of the Sudan, and is reproduced below. It will be noticed that the notorious agitator and so-called "Martyr" Ali Abdel Latif is among those charged. All of them were ringleaders in the pro-Egyptian movement and were either members or influential abettors of the White Flag Society. The date of the Mudir's Court has not yet been fixed.

By the Police Magistrate:—

I, F. F. Hamilton-Grierson, hereby charge you—all the accused as shown in front of proceedings as follows:—

I. That you on or about the months of February to September, 1924, in the Sudan conspired to overawe the Government by means of criminal force or the show of criminal force, in that having excited or attempted to excite feelings of disaffection to the Government established by law in the Sudan, or abetted such offence, you made preparation for processions, demonstrations, and assemblies by bodies of persons, which anticipated the use of force by the Government for the suppression of disorder. And that you contemplated the use of force in the execution of such purpose, and that you by the acts which you performed or the per-

formance of which you abetted, caused the Government to take measures which it would not otherwise have taken in the apprehension that such acts would cause injury, fear, or annoyance to the Government and the inhabitants of the Sudan or some section or part thereof, and that you caused or abetted the causing of disturbances of the public peace which occurred during said period in Khartoum and elsewhere in the Sudan, in the course of which injury, fear, and annoyance was in fact caused to the Government and inhabitants of the Sudan, and thereby committed an offence punishable under Section 94 of the Sudan Penal Code and within the cognisance of a Mudir's Court:

II. ALTERNATIVE:—

That you (all accused) about same time and place conspired to promote the demonstrations and unlawful assemblies by more than ten persons which occurred during said period in Khartoum and elsewhere in the Sudan, or one or more of them, knowing that such demonstrations and unlawful assemblies were forbidden by law and thereby committed an offence punishable under Section 90 of the Sudan Penal Code:

III. That you (all accused) about same time and place by words spoken or intended to be read, or otherwise, excited or attempted to excite feelings of disaffection to the Government established by law in the Sudan, and thereby committed an offence punishable under Section 96 of the Sudan Penal Code; or about same time and place abetted the above offences and thereby committed an offence under Sections 82 and 92 of the Sudan Penal Code:

IV. That you:—

Ali Abdel Latif, Salih Abdel Gadir, Ebeid Hag el Amin, Hassan Sherif, Hassan Saleh, Ahmed Mudassir Ibrahim, Tuhami Mohammed Osman, Mohammed Sirr el Khatm, Mohammed el Mahdi, Mohammed Idris, Moh. Abdel Mekhit, Abdullah Nur, Nur ol Din Farag, Sheikh Omar Dafallah, Izzeddin Rasikh, about the same time and place were in possession of, or had made or manufactured, books or documents tending to bring into hatred and contempt the Government and Constitution of the Sudan as by law established, or which tended to raise discontent or disaffection among the inhabitants of the Sudan, or to promote feelings of illwill and hostility between different classes of such inhabitants, and thereby committed an offence punishable under Section 1 Contraband Goods Ordinance, 1901—(Order of 1920—Gazette at page 1329.)

I direct you to be tried on above charges by a Mudir's Court.

ROUMANIA.

Bucharest, November 17.

Parliamentary Discussions.

Interesting debates, to which public opinion cannot remain indifferent, are taking place in Parliament. They have been brought about by interpellations on the part sometimes of the majority and sometimes of the Opposition on the subject of some serious frauds which the Government has delayed bringing before the Courts, thus creating a regrettable impression throughout the country. The main facts are already of common knowledge in connection with the organisation which, under the auspices of the Under-Secretary of State for the Interior, issued a large number of illegal passports for America. After the discovery of this semi-official traffic, when the Government had been obliged to place the matter in the hands of Justice, the suicide of the brother of the Minister of Communications gave the matter a wide publicity, and violent comments were published in the Press.

A series of discussions on the misapplication of the funds of the Roumanian State Railways, to the extent, according to the Opposition, of one milliard lei, must also have been extremely unpleasant to the responsible members of the Government.

Anti-Semitism.

Besides these troubles, the Anti-Semitic agitation, encouraged, apparently, by the tolerant attitude of the Government, reappeared in a new form with the attempt by a student on the life of the Prefect of Jessy. Owing to the passions aroused in Roumania by differences of confession, this affair made a considerable stir.

The Government's Position.

Nevertheless, there seems no reason to believe that the Government will feel obliged to resign on any of the above grounds. The composition of Parliament assures to the Government an unquestionable majority, and the Prime Minister, in spite of the animated debates taking place in the Chamber, did not see fit to attend in person, but delegated in his place an Under-Secretary of State, who was not even able to make himself heard. This persistent attitude of M. Ionel Bratiano towards the Parliament provokes bitter criticism from those who adhere to the principles of Parliamentarianism.

Meanwhile, the Opposition proclaims that the last hour of the Liberal Government is about to strike, and that the Government, conscious of this fact, is only seeking a favourable successor and an honourable pretext for retiring. It is suggested that the renewal of the privilege of the Banca Nationala would afford this pretext, but one is inclined to think that there is a sufficient number of points of disagreement to allow of a choice being made at any convenient moment—probably when the Opposition least expect it.

Such a defeat might well be brought about by the failure of the Liberal programme, which was sketched in broad lines at the time of their coming into power, and included the re-establishment of the currency and of the finances of the country, the reconstruction of the railways, and the raising of Roumanian credit abroad. But there can be little doubt that in all these directions the situation has gone from bad to worse during their rule, with the exception of the railway traffic, which, in spite of the frauds above mentioned, is gradually taking on a more normal aspect.

It has been suggested that, in view of its apparent inability to settle these questions satisfactorily, the Liberal Government would do well to quit the field before it is entirely discredited in the eyes of the public, thus retaining for itself an honourable position in the Opposition. It will be interesting to see whether the Opposition will give the Liberals an opportunity of doing this. In the course of the meetings of the various parties violent attacks have, indeed, been made upon the Government, and it is conceivable that, urged by the necessity of combined action, a combination may be made among them, even of a transitory nature, for the purpose of obliging the Cabinet to resign.

So far, it would appear that the King has not taken into serious consideration these various manifestations.

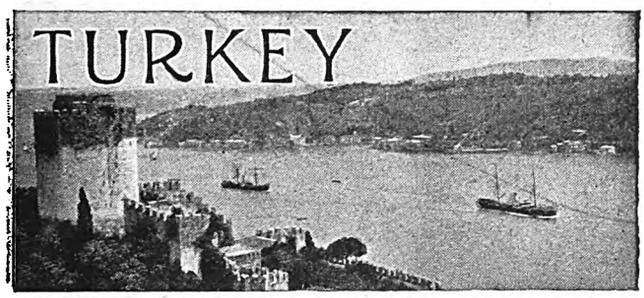
Petroleum.

The Government is busy with the application of the Mining Law, and the new *Société Nationale* for the exploitation and exploration of new petroleum fields held its inaugural meeting a short time ago. Two of the most important petroleum companies—the Romano-Americana (representing American capital) and the Astra Romana (Dutch and British)—have refrained from subscribing to this society. This step is, however, not unfavourably commented upon in expert circles. It is, indeed, justified by the conditions imposed upon the society by the Mining Law, which do not offer sufficient advantages, they argue, in return for the considerable amount of capital they would be obliged to invest. The future will show whether or not this was a prudent decision on their part.



Constantinople, November 24.

The Fall of the Cabinet.

The Government of Ismet Pasha has fallen just when nobody expected that it would fall. A few short weeks ago, when the interpellations in the Assembly, which were intended to shake the position of a few of the ex-Ministers, were converted into a general discussion on a vote of confidence in the whole Cabinet of Ismet Pasha, that Cabinet secured an overwhelming majority. Now it has fallen, and has been replaced by a Cabinet culled from the same party, and containing three Ministers from General Ismet's Cabinet. The new Prime Minister, Fethi Bey, has had a good Press on the whole, and he has declared that he will follow the main lines of the policy of his predecessors.

What is the significance of the change? One thing is clear, namely, that the formation of the new Opposition party of the Progressive Republicans has caused a profound impression in political circles, and that the continued defections from the People's Party have frightened the powers that be. The change of Cabinet must be considered primarily as an attempt to stop the rot that is attacking the People's Party, and much stress is laid upon the fact that certain of the new Ministers have been credited with the intention of allying themselves with the new Opposition. Their inclusion in the new Ministry is naturally interpreted as an attempt to bring them back to their allegiance.

The Opposition.

The official Opposition already numbers some forty odd members, and the adhesion thereto of most of the prominent soldiers who are members of the Assembly has not escaped notice. The formation of the new Cabinet has deprived Kiazim Pasha of his post as Minister of National Defence, which has been assumed by the new Prime Minister, and it will cause no great surprise if that senior officer eventually joins his brother officers in the Opposition.

General Ismet's Régime.

The fall of the Ismet Cabinet is due primarily to its proved incapacity in dealing with the problems of internal administration. The Ministers whose activities have been most severely criticised have all retired into private life, and the *pronunciamento* of Fethi Bey on assuming office appears to indicate that he will depart from the policy of his predecessor only in trying to carry into practical effect the programme which during his régime remained *lettre morte*. No serious changes in foreign policy are probable, for, notwithstanding the rather ungenerous criticisms that have been passed on General Ismet's work during the past few days, no one has been hardy enough to suggest that his direction of foreign policy has failed to secure the best interests of the State.

Party government in this country is in its infancy, and at the risk of offending one's Turkish friends and wounding their perfectly proper pride in their achievements during the past couple of years, it is only fair to point out that, until the other day, when the new Opposition came out with a programme which hints at more than it says, there has been no real conflict of principles in Turkish politics, which alone can lead to a real practical advance in political science. However great one's personal admiration for the sterling character of Ismet Pasha, and one's appreciation of the services which he has rendered to his country both in war and in peace during the last four years, it is impossible not to agree with the general opinion of his compatriots, namely, that his rather autocratic military methods with his colleagues and with the public have alienated sympathies which were his due, and deprived him of the collaboration of capable men who are unwilling to abase themselves to the point of becoming his departmental slaves From that point of view the fall of Ismet, the constitution of a well-knit Opposition, the honeyed words of Fethi Bey on assuming office are all signs of an advance towards the true principles of constitutionalism, which is the alpha and omega of twentieth-century political science. How long the present Cabinet will last is an insoluble mystery, and whether its strictly constitutional origin will sanctify all its doings and consecrate them to the ultimate good of Turkey is a still greater mystery, but one thing is clear, the Turkish Republic can have a change of Government without a sanguinary revolution, wherein it shows itself greatly superior to any previous Turkish Government in modern history. If the new Government lives up to its profession of faith it would be at least graceful to congratulate it.

PALESTINE.

Jerusalem, November 15.

Syria and Palestine.

General Weygand, French High Commissioner for Syria, reached Jerusalem last Wednesday, and he leaves next Tuesday. The first few days he has spent as Sir Herbert Samuel's guest; for the rest of his visit he is staying at the French Consulate. Inevitably, he is having to endure a busy time with official receptions, interviews, and visits to all and sundry; but he is in process of making an excellent impression for friendliness and accessibility. Very great hopes are being pinned on this, the French High Commissioner's first visit to Palestine; though nominally a courtesy visit, a "return call" after the British High Commissioner's call on General Gouraud two or three years ago, everyone expects it to be very much more; pointed references are being made locally to the fact that General Weygand's predecessor never returned Sir Herbert's visit, and, rightly or wrongly, some significance is read into the fact. All Palestine, save only perhaps the political Arabs, are in hopes that this visit implies intended close co-operation between the French and British administrations in Syria and Palestine, though it must be admitted that there seems to be a distinct dearth of ideas or information as to what specific forms such co-operation could or will take. Much has already been done in the way of securing the peace of the border districts, and both Syria and Palestine seem to be as prompt as could be wished in the way of returning each other's strayed criminals. French Syria had a genuine grievance many months ago owing to the outburst of brigandage operating from North Transjordan (for the good conduct of which the French, rightly, considered the British administration to be at least morally responsible). This outbreak was promptly got under through the efforts of the British gendarmerie —some of whom, it would seem, are even now still quartered at Irbid, in North Transjordan. Other minor matters have been adjusted as between Palestine and Syria—a great reduction in visa fees, customs understandings, and a certain freedom to cross the frontiers for those who live near and whose business takes them across. It must, however, be admitted that some mutual distrust is still "in the air." Those irresponsible people are still uncontradicted who charge the British with fostering Arab ambitions to the detriment of French Syrian interests, or with creating Zionist complications to the distress of the Latins, who, in the main, look to France as their guardian and champion; less in evidence, though still vocal, are those who would see the hands, brains, or money of the French in anything that would thwart British efforts in Palestine, Transjordan, or the Iraq. Such ideas will die of themselves, once there is a declared and manifest desire by the two Powers to assist each other; and such a desire is being read into the French High Commissioner's presence in Jerusalem. It will soon become apparent whether more tangible suggestions for the future have been accepted. The possibilities of a Haifa-Beyrout railway are being discussed in this connection, and it is known that a railway binding up the entire Syrian-Palestinian coast is a favourite idea of General Weygand.

Broadcasting.

Not to be overlooked is the most recent step in Palestine's march towards "civilisation." We are now permitted to install wireless receiving sets on payment of a 10s. licence fee. One's imagination fails to grope with the possible results of "listening-in" here in Palestine. It may be possible to pick up odds and ends in Czech or German, Greek or Bulgarian; perhaps there is a broadcasting station in Egypt; or, maybe, someone will develop tri-lingual broadcasting especially for Palestine.

Jaffa Oranges.

The first batch of oranges for the season was despatched from Jaffa last Monday. This was made the occasion for a little ceremony at which Sir Ronald Storrs, as "officer administering the Government," was present. Arab and Jewish growers have combined in a syndicate which was responsible for the present consignment of 25,000 cases. Sir Ronald shipped the first case to the accompaniment of enthusiastic cheers from the onlookers, and appropriate speeches were made in Hebrew and in Arabic.

The "Strike" on Declaration Day.

The "strike" enjoined on Palestinian Arabdom by the Arab Executive on November 2—"Balfour Declaration Day"—received only a feeble response. The truth seems to be that the local Arabs are not proving capable of sustaining indefinitely the necessary intensity of anti-Jewish hate. A few Arab shops were closed, and their owners sat outside resignedly dangling their keys. The day happened to be a Sunday, which made the strike easier for Christian Arab shopkeepers. Otherwise, everything went on as usual. The fact of the strike and its cause were duly cabled off to the Mandates Commission of the League of Nations.

The opportunity was seized at the same time by the Arab Executive of cabling its congratulations to the Conservative Party in England on its success in the General Election. The Arab malcontents have now lived under Coalition, Conservative, and Labour Governments: but they still have hopes that a change in the British Government will mean a change in the British Palestine policy.

According to the *Pioneer's* Teheran correspondent, the Sirdar Sepah and his staff last week left Shiraz for Bushire, *en route* for Mohammerah.

The Persian Government is reported to have purchased another gunboat, the Pehlevi, which was constructed in Germany and armed in Italy for service in the Persian Gulf.

A report, emanating from Jerusalem, has been published that Sir Herbert Samuel will be succeeded at the end of his period of office next year as High Commissioner for Palestine by Major-General Sir George Fletcher MacMunn, Quartermaster-General in India since 1920.

Lady (Arthur) Pearson left London last week for Egypt.

Mr. and Mrs. W. E. Pearson, 179, Queen's Gate, left London last week to winter in India.

Sir Alan and Lady Horne and Lady Bucknill sailed from London on November 28 in the P. and O. s.s. "Caledonia" for Bombay.

Mahmoud Sabet Bey, Secretary at the Egyptian Legation, has given up 24, Cadogan Square, and his new address is 7, Charles Street, Berkeley Square.

Sir Montague Barlow has been advised, owing to ill health, to take a period of complete rest, and is leaving England on a sea voyage to India and the East.

Princess Ileana of Roumania honoured M. Misu, the Roumanian Chargé d'Affaires in London, with her company at luncheon on November 25 at the Ritz Hotel.

Mme. Zekiai, the wife of the Turkish Minister, left London on November 27 with her family for Constantinople. The Minister accompanied her as far as Calais.

The Earl and Countess of Dalkeith and Sir Robert Horne left London last Thursday by the P. and O. Bombay express to join the s.s. Moldavia at Marseilles.

The Hon. Sir Arthur and Lady Lawley and Miss Lawley sailed last Friday in the R.M.S.P. Company's Almanzora for South America, and are not expected to return before the end of March.

U Maung Pu, leader of the Nationalist Party in the Legislative Council of Burma, has been appointed Minister of Agriculture, Excise, and Forests, vice J. A. Maung Gyi, promoted Judge of the High Court.

The following promotions and transfers in the Colonial Service have been made by the Secretary of State for the Colonies:—Sir Stanley Fisher, Chief Justice, Cyprus, to Chief Justice, Trinidad; Mr. E. du Boulay, auditor, Cyprus, to treasurer, Cyprus.

A paper on "Jan Zizka, Warrior of God," will be read next Tuesday (December 9), at 5.30 p.m., at 14, Queensberry Place, S.W.7 (the new address of the Czech Society of Great Britain), before the Czech Society by Mr. Francis P. Marchant, with the Lady Maud Hoare in the chair.

The guests entertained by Mr. L. Graeme Scott at luncheon on November 26 at the Carlton Hotel included the Egyptian Minister and Mme. Izzet Pasha, Mahmoud and Mme. Sabet Bey, Sir William and Lady Robertson, Sir George Armstrong, Sir Edward Lucas, Field-Marshal Sir William and Lady Robertson, Mr. and Mrs. Edward Shortt, and Dr. Griffin.

Two public lectures on "All Soul's Day and Hobby-Horse Dance in Roumania," illustrated with lantern slides, will be delivered by M. Beza at King's College, Strand, W.C.2. The first lecture will be delivered this afternoon (Thursday), at 5.30 p.m., and the second next Thursday (December 11), at the same hour. Admission is to be free without a ticket.

Mr. A. J. B. Wace will deliver a public lecture on "Greek Embroideries," with lantern illustrations, at University College, Gower Street, this afternoon (Thursday), at 5.30, under the auspices of the Anglo-Hellenic League and University College Archæological Society. The Hon. W. Pember Reeves will take the chair, and admission to the lecture will be free and without ticket.

Colonel-Commandant Lewis Henry Close, C.M.G., R.E., died at Quetta on November 11 at the age of 55. Early in the War he was appointed Assistant Director of Works, Mediterranean Expeditionary Force, and served at Mudros and in Egypt, being mentioned in dispatches four times and receiving the C.M.G. and the Order of the Nile of the Third Class. Colonel Close had been since 1920 secretary in the Public Works Department to the A.G.G. in Baluchistan.

The marriage was solemnised in Bombay on November 18 between Major James Strachan, M.C., Directorate of Irrigation, Baghdad, elder son of Major Strachan, Seacliffe, Inverkeithing, and Jeanne Elizabeth, only daughter of the late T. W. Saidler, T.D., Major, Fourth R.G.A., and of Mrs. Saidler, 27, Howard Place, Edinburgh. The bridegroom's uncle, the Rev. J. P. Reid, Chaplain to the Cameron Highlanders, officiated, assisted by the Rev. J. D. Mitchell.

The King has approved the appointment of Mr. E. D. Duckworth, I.C.S., Mr. Parungavur Marasimha Chari, and Mr. Joseph Augustus Maung Gyi to be Puisne Judges of the High Court of Judicature in Burma, the two former to fill the posts created by the recently sanctioned increase of the permanent strength of the High Court from eight to ten judges, and the latter to succeed Mr. Justice May Oung, whose appointment to be a member of the Executive Council of the Governor of Burma, in succession to the late Sir Maung Kin, has also received His Majesty's approval.

THE FUTURE OF THE SUDAN.

Whatever may be said of the Anglo-Egyptian imbroglio, of the Sudan at least it can be said that the parting of the ways has been reached and boldly passed. Actually, the safekeeping of the Sudan had been in Britain's hands for some time, but since the publication of Lord Allenby's recent Notes that fact has been made universally plain. How well the Sudan had been administered under the so-called Condominium is, of course, an international byword; it had no visitor, of whatever nationality, but he marvelled at the content and loyalty of its people, and of their love for the agents of their tutelage. The Sudan Service will easily keep its place in history with the other Imperial services which have given to British administration a world-wide reputation. Latterly, however, grit forced itself in the wheels of Sudan administration; Nationalist intrigue made serious inroads both in the civil and in the military services. Egyptian officials, so far from fulfilling their charge, did all they could to prevent the British from fulfilling theirs; the position had, in fact, become absolutely intolerable and the scheme unworkable. All these facts and tendencies were known and exposed in the proper quarters some months ago. Something, manifestly, had to be done. The British Government, however, bided its time, and officials in the Sudan grew increasingly anxious. Meanwhile, Zaghloul Pasha, far from denouncing the intrigues in the Sudan, of which he was fully cognisant, monotonously and outrageously echoed—or was forced against his better judgment to echo—the demand for complete Egyptian control of the Sudan. Anxiety succeeded to anxiety; in London the Anglo-Egyptian negotiations proved absolutely sterile; and the dark rumblings and plots went on and more ominously on. Finally, as the most tragic climax, came the assassination of General Sir Lee Stack. In itself this was a sufficient signal. This time, and without wasting any words or sparing any feelings, the British Government would act. The office of Sirdarship of the Egyptian Army was separated from that of Governor-General of the Sudan; and Lord Allenby proclaimed the evacuation by Egyptian troops of the Sudan. The fate made inevitable by Egyptian Nationalists has overtaken the land of the Pharaohs, and what is their loss is the Sudan's and Britain's gain. Henceforth, until the time for its independence shall have come, Britain will administer the Sudan alone.

Happily, there is no doubt that little is more to the minds of the Sudanese. It is, we know, a frequent and not always unjustified jibe towards Britain that she professes to know better than do the inhabitants of particular countries their genuine and best desires. But in connection with the Sudan this jibe flattens itself in the air. The Sudanese, we repeat, want us—and we will, for the moment, omit the question of their needing us; two-thirds at least want us for our own sake, and the rest want us for their sake, in the sense that under our tutelage only will they in so many years—perhaps forty or fifty—be fit for their own independence. But, critics of present British policy ask, what becomes of this claim when Sudanese soldiers are found mutinying against the British? The arrow does not get home. For it was well known to the Sudan Government that successful intrigue among the Sudanese Army had been carried on, with the connivance of the Egyptian authorities in the Sudan. In other words, some such revolt as that which broke out from the two platoons on November 27 was certainly foreseen, and it is even possible that other disaffected elements may strive to kick against the kindly pricks. But the sum of the actions of such elements, potential or actual, makes out no case for those who would deny that the Sudan is well content with British administration and well content, too, with the ridding of the mischievous Egyptian plotters. So far, in fact, as can be gleaned of the expressed statements of the vast Nilotic peoples in the Sudan, opinion appears to be in favour of even stricter demands upon Egypt. A little preliminary trouble, and it is not extravagant to say that one can rely to a very large extent upon the loyalty of the Sudan towards Britain.

Not that the future can be foreseen to be without difficulty. An immense task awaits this country in the Sudan, a task that can be performed only with courage and patience equal to those which have so splendidly served us there in the past. For one thing, there is the question of the Sudan's being a burden. Ultimately, the Sudan must be made self-supporting, and in the meantime Britons, both those serving in the Sudan and those paying taxes at home, will feel the burden. It is, however, agreed on all sides that, even allowing for the less direct route of exporting the Sudan's products via the Red Sea, instead of through Egypt, it will in the long run—possibly, we should think, in a dozen years—pay its own way. Again, there is the question of the unity of the Sudan. At the moment it can compare in some aspects with India. Its diverse population is a great problem, for parts of its northern half or third are in education and administrative capacity far ahead of their negroid or Nilotic neighbours, and the Government will have to watch very closely the danger of parts outstripping the whole. Of the negroid peoples, indeed, who, incidentally, already enjoy practical independence, it is difficult to foretell when, if ever, they will be able to rule peoples other than their own kinsmen. For the immediate future, until things are on a more stable basis, the watchword in regard to education must be "Go slow." It is known, in fact, that the authorities are fully alive to the peril of the Gordon College becoming a sort of Al Azhar. The other main problem concerns the future relations between the Sudan and Egypt, although, manifestly, until it is seen of what the future Egypt is to consist speculation here is not very profitable. One thing, however, may be emphasised. Egypt need never fear for her share of the Nile waters. If Egyptians cannot rely upon the word of Britain in this respect, perhaps they can reflect that if their waters were to be tampered with they would have to be tampered with, not in the Sudan, but in Abyssinia and in Uganda. But we will not discuss these things now. For the moment it is sufficient to point out how, largely owing to the folly of the Egyptian Nationalists, once more in the history of the British people a mighty task has fallen to its lot. The suggestion, incidentally, that Britain is in the Sudan only because of its cotton we scout indignantly; Britain is in the Sudan for its cotton no more than she is in Iraq for its oil. Fundamentally, she is there because of her trust. We believe, too, that she will succeed there in founding "a mighty

Digitized by Google

State." The old spirit which created this country's reputation is not yet dead.

We sailed wherever ship could sail;
We founded many a mighty State;
Pray God our greatness may not fail
Thro' craven fears of being great.

THE ELECTORIAL CAMPAIGN IN YUGOSLAVIA.

(From Our Zagreb Correspondent.)

November 25.

The National and the Opposition Blocs.

It is becoming more and more evident that this electoral campaign is going to be, in the main, a tug of war between the two great groups known respectively as the National Bloc and the Opposition Bloc.

The National Bloc defends the existing order; it enters the lists with clear watchwords and a unified command. The Opposition Bloc is fighting for innovation; hence its watchwords are various and its command is lacking in unity. Each group within the Opposition Bloc has its own conception of the desired innovation, and the only thing they all have in common is an objection to the existing order of things. One may therefore say that the National Bloc takes its stand on a positive basis, whereas that of the Opposition Bloc is negative.

Now the positive is always stronger than the negative, and therefore it is only natural that the National Bloc should show far better management, technically, in the campaign than does the Opposition Bloc. Above all, the National Bloc has succeeded in making the electoral agreement between Radicals and Independent Democrats almost everywhere effective. The worst of the differences have been overcome, and, except in Slovenia, the idea of a National Bloc has been successful almost throughout.

As the conflict between the National Bloc and its opponents is becoming sharper, the prospects of the former are improving. For the strongly patriotic educated class in Yugoslavia is numerous, and the cry of "The State is in danger" still serves its turn. The leaders of the National Bloc know how to make the most of this cry; and as it is apparently the chartered privilege of the electorate to lose its judgment amid the clamour of election cries, it is only natural that many should discern danger to the State where no danger is. The National Bloc, moreover, has a great advantage in the fact that the Government is wholly at its service. Officials are relentlessly pensioned off or dismissed if they dare to have a political opinion of their own. In this connection an instructive incident was provided by the case of M. Stankovitch, President of the Teachers' Union, who was summoned by M. Pribitchevitch, as Minister of Education, to exculpate himself for presiding over a Davidovitch party meeting.

The further east a district lies the more noticeable does this Government pressure become. All the same, it is not exerted with all that rigour announced by the more hot-blooded among the Government's adherents. The Radicals are cautious and do not want to burn all their boats in case they should fail to gain the majority of the seats in Parliament. And as this contingency is highly probable, they wish to remain in a position to form a Government, if need be, in conjunction with one of the particularist parties.

Another circumstance frequently noted is that the Pribitchevitch party, despite its complete acceptance of the Radical programme and close co-operation with the Radicals, does not really amalgamate with the latter. The explanation offered is that the Radicals will not shoulder the blame for proceeding against the Croats, and that in case of an adverse result of the elections, they wish to make M. Pribitchevitch alone responsible for everything. This calculation on the part of the Radicals is not only interesting, but very characteristic.

Taking things by and large, the parties are by now rallied in their respective camps, and the election watchwords have been duly given out. Almost everywhere the campaign is being waged under the auspices of "race" (or particularist) agitation. For Serbia, for Serbian predominance in the State, and therefore also in the present State—that is the watchword of the Government parties; and as this watchword is bound to be popular with the Serbs, it is likely, with the help of Government pressure, to prove victorious.

The Growth of a Spirit of Compromise.

Far more precarious is the position of M. Davidovitch and his Democrats. They are championing the idea of compromise, which is of necessity opposed to Serbian predominance, and therefore far more popular in non-Serbian regions. That M. Davidovitch nevertheless dares to champion this idea in Serbia itself is proof of his sterling honesty and of his courage. It would not therefore be in the least surprising if the Democrats were to mark but slight progress in Old Serbia; yet the mere fact that there exists a large body in Serbia which favours the idea of compromise and agreement with the Croats shows that Yugoslavia is entering upon the phase of consolidation, and that the extremist parties will have to give place to the moderate.

The same thing is noticeable among the Croats. Beyond all doubt M. Raditch has reached the zenith of his career. Whether this will show at the elections themselves, or directly afterwards, is irrevalent, because it is becoming increasingly plain that even within the Raditch party there are some of its very founders opposed to his nebulous policy of mere serbophobia, as was recently shown by the expulsion of the deputy Lovrekovitch from the party. To all appearance the Raditch party has greatly increased its strength by the complete endorsement of the Raditch's programme by the party of the Croatian *intelligentsia* known as the Croatian *Zajednica* (bloc). But this reinforcement is only apparent, because even in past elections the Croatian bloc was altogether at one with M. Raditch, and used to return his candidates. Nor can the following be left out of consideration. The Croatian bloc is the Croatian bourgeois party, which neither has, nor can by itself find, a following in the rural districts. Therefore it is quite on the cards that the leaders of the bloc are now joining M. Raditch solely for the purpose of securing his inheritance. The collapse of the Raditch party must come about, at the latest and in any case, at the moment when M. Raditch will find himself compelled to pass from a passive policy to an active one. That will be the opportune time for members of the Croatian bloc who are holding leading positions, and will retain them, too, because M. Raditch will have given them the confidence of the peasants. For this reason the Croatian bloc is

content to forgo the few mandates it might claim, for the sake of the majority to be gained later on.

In Slovenia the Opposition parties are fighting in the sign of Slovene particularism, and the Government parties in that of the idea of State unity. But even in Slovenia the point at issue is not stated squarely. Certainly the great questions of agreement and of the final administrative division of Yugoslavia loom large in the foreground; but Slovenedom is not endangered, nor does it enter into the debate. The Government election cry is no nearer the mark. A decided majority in Slovenia is for Slovenedom as well as for Yugoslavia, and the watchword, in order to touch the spot, would have to spell reconciliation of these two fundamental claims. But the midway attitude offers poor material for agitation, and so it cannot hope to score as vigorously in an election campaign as the extremist parties can. All the same, it is gaining ground steadily.

The struggle is as yet in its initial stages, and unlikely to grow in intensity until after Christmas. But after the New Year it will become acute, and only then will it be possible to prognosticate at all accurately. But even to-day one may venture to assert that the idea of agreement will not suffer, and that the victories of both blocs over other, smaller parties, will only accentuate the need for it. The two-party system, towards which Yugoslavia, too, is moving, is possible only on a basis of ideas, not on one of geographical division, and this applies to the two blocs in the present electoral campaign.

BRITAIN AND EGYPT.

To the Editor of THE NEAR EAST.

Sir,—May I congratulate you on your very discriminating article, "Egyptian Independence: The First Fruits," in your issue of November 27? It was indeed refreshing to read something that was neither a wholesale accusation of Egyptian Nationalism nor a denunciation of "British Imperialism," the two catchwords which seem to have filled most of the British Press. But in attempting to see a way through the present darkness are you not, sir, trying to see the unseeable? Is not the Egyptian problem, however it be handled, really like, say, the unity of Palestine or of Ireland, one of life's "insolubles"? To me, at any rate, it appears that literally no policy in Egypt, whether it be evacuation, or Cromerism, or governance as a Crown Colony, is possible, and that in fifty years' time the problem will re-present itself in a form similar to that which is puzzling the world to-day.—I am, etc.,

"DOUBTING OPTIMIST."

London, November 28

To the Editor of THE NEAR EAST.

Sir,—The readers of THE NEAR EAST cannot, I am sure, accuse me of want of sympathy with the Egyptians' aspirations to govern themselves, so good have you been, Sir, in granting me the hospitality of your columns. But, however much the action of the British Government may have been open to criticism in the past, the civilised world will without doubt endorse the ultimatum which Lord Allenby was instructed to communicate to the Egyptian authorities, severe though it might be. But it may also be inquired: Why was not a similar ultimatum sent to the Irish Free State when a machine-gun opened fire on unarmed soldiers landing at Waterford? Surely the murder of the Sirdar in Cairo was not in any way a more heinous crime; both are equally indefensible. The Egyptian Government has now learned to its cost that Irish and Egyptian crimes are not weighed in the same political scales, and must endeavour by its future conduct to obtain a mitigation of the punishment which has been inflicted.

The want of discipline in the Government schools in Egypt is at the bottom of the whole trouble, and a nation which allows students to dictate the policy of its Government has only itself to thank when its statesmen find themselves confronted with the situation which has now arisen in Egypt. Schoolboy strikers going unpunished soon develop into political agitators, and the next step is the formation of secret societies with ringleaders preaching to these immature youths that political assassination is no murder, but a patriotic action. I refuse to believe that Zaghloul Pasha has connived at these murders, but, like other Egyptian leaders, he has made use of these schoolboy agitations in furtherance of his Home Rule policy.

One of the conditions laid down by the British Government is that all popular political demonstrations shall cease. This certainly is a tall order, and presumably it means demonstrations against our control.

Anyway, if the Egyptian Government is wise, it will endeavour to carry out this injunction by forthwith forbidding any student of a Government school taking part in a political meeting of any kind, or for whatever purpose the meeting is assembled. Further, it is quite useless to lay down a law without prescribing a punishment for the breach thereof. There is only one punishment which will prove effective, and that is whipping. I am not at all sure that all our recent troubles in Egypt have not arisen from the lack of the cane in any Government school (outside the reformatory).

Europeanised Egyptians scoff at the idea of such brutal methods being necessary, and they have got their country into this mess in consequence. It is now for the Egyptian Government to adopt this method or find some other way of getting their orders obeyed. A Government which cannot rule schoolboys will certainly never be able to maintain order in the country.—I am, etc.,

AN EGYPTIAN PROTEST.

We have received the following telegram from the President of the Egyptian Chamber of Deputies :—

"Monsieur le Président,—I have the honour to transmit to you the following protest which the Chamber of Deputies of Egypt decided unanimously in its sitting of November 24, 1924, to address to the League of Nations and to all the Parliaments of the world. In face of the recent aggressions committed by the Britannic Government against the rights of the Egyptian nation, its sovereignty and its Constitution, the Chamber of Deputies of Egypt declares its adhesion to the complete independence of Egypt and of the Sudan, which constitute a single country, one and indivisible.

"Despite the formal disavowal expressed by the nation, its Sovereign, its Government, and its Parliament, of the odious crime committed against the regretted Sir Lee Stack Pasha, Sirdar of the Egyptian Army and Governor-General of the Sudan, and despite the satisfactions furnished by the Government and the efficacious measures which it has taken with a view to the pursuit of the criminals and their delivery to justice, the Chamber deeply regrets that the Britannic Government has considered it necessary to exploit this sad incident to the profit of its imperialist purposes, and to resort to brutal force to wreak vengeance upon an innocent nation which counts solely on the strength of its right and the justice of its cause.

"The Britannic Government has not only formulated excessive demands beyond all proportion to the crime, but, passing all bounds, it has gone so far as to demand the withdrawal of the Egyptian troops from the Sudan, to oblige the Sudanese elements of the Egyptian army to take an oath of allegiance to the Governor of the Sudan, to authorise the extension of the area of the soil cultivated by the British colonial companies in the Sudan, increasing it from the figure of 300,000 feddans up to an indefinite limit, to demand of the Egyptian Government the abandonment of all opposition to the wishes of the Britannic Government with regard to the protection claimed by it for foreign interests in Egypt, and to formulate other claims contained in the British Notes.

"Passing from words to deeds, the Britannic Government has carried its threats into execution, and has, furthermore, occupied the Customs of Alexandria, declaring that this act constituted only the first of the steps which it intended to take. These aggressions, which are an absolute negation of the rights of Egypt and an infringement of her independence, constitute an intrusion into her affairs, a violation of her Constitution, and a menace to her agricultural and economic life. They have no relation to the crime, and have no precedent in history. For these reasons, the Chamber of Deputies of Egypt declares to the whole world its most energetic protest against such acts, inequitable in fact and without basis in law, and calls upon all civilised nations to witness the enormity of such imperialist lusts, irreconcilable with the spirit of this century and with the sacred rights of nations.

"It addresses its protest to all the Parliaments of the world, and appeals to the League of Nations, asking it to intervene to defend against arbitrariness an innocent nation which, profoundly attached to its sacred and imprescriptible rights to life and liberty, demands nothing more than its independence. "AHMED MAZLOUM, President."

THE PERSIA SOCIETY.

The Persia Society held a reception last Friday afternoon at the House of Lords to meet the Persian Minister. Lord Lamington, the President of the Society, received the guests, among whom were :—Mr. and Mrs. Ameer Ali, Sir Thomas Arnold, Sir Hugh and Lady Barnes, Sir Frederick and Lady Black, Sir William and Lady Crundall, Lieutenant-General Sir Raleigh Egerton, Lady Fisher, Sir Harry Foster, M.P., Sir Charles Greenway, Lady Haig, Major-General Beresford Lovett, Sir Charles Marling, Mrs. Emlie Mond, Miss May Mond, Lady Owen-Mackenzie, Sir Michael O'Dwyer, Vice-Admiral N. C. Palmer, Sir Denison and Lady Ross, Admiral Sir Edmond Slade, Rear-Admiral Cecil Staveley, Colonel Sir Charles Yate, and members of the Legation and Consulate with their ladies.

SYRIA AND PALESTINE.

At the banquet given at Government House, Jerusalem, on November 12, in honour of the French High Commissioner for Syria, important speeches were made by Sir Herbert Samuel and by General Weygand. We select certain extracts from them.

In the course of his remarks Sir Herbert Samuel said :—

"In inviting you to toast our distinguished host, General Weygand, I wish to express what pleasure this visit gives to the Palestine Administration. His Excellency, famous as a soldier, is in process of recalling in the field of peace his success in the arena of war.

"The High Commissioner in Syria and the Lebanon, like myself in Palestine, is charged with the administration of a system new in history; these countries are neither colonies nor protectorates, but countries under a Mandate—that is to say, fiduciary charges. This state of things is marked by the acceptance of a responsibility on the part of the Mandatory Powers towards the League of Nations. Although this responsibility is not a thing of precise form, it is a reality, as I have just proved some days ago, when I appeared before the Permanent Mandates Commission of the League of Nations at Geneva. I perceived that the Commission takes a very great interest in the march of events here in Palestine, an interest for which I am very grateful.

"My object has always been, and I am sure that it has also been His Excellency's object, loyally to apply the decisions of the Great Powers towards

Digitized by Google

these countries, trying, without jealousy and without friction, to facilitate the tasks of our neighbours, as we have found them always ready to facilitate ours. It has been our duty, a duty attended with some success, to reduce to a minimum, by arrangements of good-neighbourliness, the inconveniences imposed on the population by the establishment of a frontier across a country which was formerly a unity. Such arrangements are not yet absolutely complete, but each year can be seen improvements in the measures concluded between the two administrations, assisted greatly by the excellent personal relations between our officers on each side of the frontier.

"I preserve the most agreeable recollections of the goodwill and welcome which were accorded me on the occasion of the official visit which I had the honour to make to Syria by the distinguished predecessor of His Excellency General Gouraud. If His Excellency and Mme. Weygand take from Palestine as happy memories we shall be abundantly satisfied."

Replying, General Weygand said:—

"The Mandate, whose unprecise and new character Sir Herbert has explained, France accepts completely, with its charges and obligations; and she intends to apply them loyally.

"In thus pursuing in the same spirit as Britain a work similar to that which is confided to the friendly nation, she will continue to follow in the Near East a general policy of union and of *rapprochement*.

"This policy shows itself in the good understanding between the two High Commissioners, in the collaboration of their functionaries, as soon as circumstances demand it, in the relations of excellent neighbourliness which exist between their officers on each side of the frontiers.

"It has, moreover, produced very important friendly results. . . . These results must lead, first, to the complete security of our frontiers; then they will reduce the obstacles in the way of the economic development of Syria, the Lebanon, and Palestine; then will come facility in exchange; and an increase in traffic will be one of the elements in that prosperity which the Mandatory States must give to those under their care."

The following is an authoritative report of an interview given on November 16 by General Weygand to the "Palestine Press Association":—

General Weygand explained, first of all, the real reasons of his journey to Palestine. His visit had undoubtedly an official character; it was not, however, a visit provoked by the necessity of the two High Commissioners' regulating various questions interesting their respective Administrations, and any statements published to that effect were without foundation.

For a long time General Weygand had intended to accept an invitation renewed by Sir Herbert Samuel and of returning the visit which was made to Syria to his predecessor, and, too, he wished to visit Jerusalem and the Holy Places, there to evoke some of the memories which France had left in the course of the centuries.

This visit gave him the opportunity of showing his sympathy to the representative of His Britannic Majesty and of affirming the policy of friendly collaboration which inspires the administration of the territories confided to the French Mandate. Moreover, he had found in the welcome of Sir Herbert Samuel, in his extreme courtesy, in his hospitality, in his speech of November 12, and in the private conversations that he had had with him, the conviction that such a policy equally inspired the High Commissioner in Palestine.

This community of views, with which he declared himself highly satisfied, must lead to increasingly closer co-operation. It had already produced very appreciable results from the point of view of the security of the frontiers and of economic relations; and General Weygand emphasised, in making special allusions to recent events, which are still fresh in the minds of all, the fact that it is only by common action on the part of England and France that order can be re-established on the frontiers which these two Powers are charged to defend.

For the development of common action, the General declared himself in favour of personal relations, as frequent and as close as possible, first between the two High Commissioners, next between the various official functionaries, and then between the officers under their orders. He believed, in short, that misunderstandings between people of good faith could not exist when they were directly and loyally explained.

For the future General Weygand assigned to this co-operation an even greater importance; to him it offered in particular a vast field of action in the linking up of the various lines of the Palestine Railways with the network of Syria and of the Lebanon. Junction would be effected by a coast line uniting Beyrout and Haifa, and in this connection he had already interviewed representatives of Syrian-Lebanon interests. These had shown themselves extremely favourable; and now that the principal persons in Palestine had declared their adhesion to the project, agreement was assured. On his side the General would energetically incline the States under the French Mandate to the idea; and he hoped that the negotiations on the partitioning of the Ottoman Public Debt would permit a real effort in this direction.

THE
EUPHRATES & TIGRIS
STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

NOTES AND NEWS.

167, Strand, London, W.C.2,
Tuesday Morning.

The Greek Loan.

It is invariably the case as regards loans for the Near East that coming events cast a very considerable shadow before them, and the Greek Refugee Loan, which is being issued under the auspices of the League of Nations, has been on the tapis, so to speak, for a long time. Developments in this country in the last month or so would have made the issue of the loan before this inadvisabie, even if the formalities that had to be settled with the League of Nations had been completed. The terms on which the loan is being raised will undoubtedly prove attractive, while the loan, which will be redeemable within a comparatively short period at par through a sinking fund by half-yearly drawings, will have for security the assignment of special revenues, and will also constitute a first charge on the property and revenues of the Refugee Settlement Commission. The action of the Greek Government in regard to the Lake Copais Company and in respect of part of the claims of the Smyrna-Aidin Railway Company cannot fail to have a good effect on the body of investors generally, whose confidence in investments outside the Empire has been rudely shaken by some recent happenings, and I shall be surprised if the present loan, which must be regarded as an essential part of the work of world reconstruction after the War, does not meet with a very cordial reception.

Greek Government Loans.

It is important to note that throughout the vicissitudes of the past twenty-six years Greece has faithfully carried out her financial obligations. Bearing in mind the various occurrences, it cannot but be admitted that this is no light achievement. This point is emphasised in a leaflet by Mr. P. Freme which has just reached me, in which the writer gives a careful survey of facts and figures regarding Greek Government loans. He points out that by far the greater portion of the existing loans are held by Greek people resident in Greece or abroad, in contrast to what is the case as regards loans of some other Near Eastern countries, and that while the population of Greece is estimated at 7,000,000, the total debt, including the present loan, only amounts to about £105,000,000, the indebtedness being thus no more than £15 per head. Mr. Freme lays stress on the industrious and thrifty character of the Greeks, and draws attention to the mercantile marine, the remittances to Greece from refugees, especially from those in America, the greatly increased production of tobacco, and the eventual reproductive labour of the large refugee population, as factors which cannot fail to give rise to a feeling of confidence in the future of Greece.

Roumania and Foreign Enterprise.

One matter dealt with by Sir Frederick Lewis at the meeting of the Danube Navigation Company calls for comment. The company has been equal to solving many problems with which they have been confronted in their operations on a river which touches so many States and where there are so many restrictions of one kind and another to be overcome. As regards the Anglo-Roumanian Danube Navigation Company, which was formed to link up Roumania with the upper stretches of the Danube, the company has not been so fortunate, and it has been decided that there was no practical alternative but to sell the steamers and wind up the concern. This step, which will probably involve the company in a loss, is due to the policy of Roumania in regard to foreign enterprise. "While we have every sympathy with the Roumanian Government," said Sir Frederick, "in their efforts to bring about stable conditions and develop their resources and industries, and we recognise that they are perfectly free to adopt whatever legitimate measures they consider are best suited to their policy, none the less I feel that it is a great mistake from their own point of view to rebuff foreign enterprise and to interfere with the interests of foreign capital already invested in commercial undertakings in full compliance with the laws of the country as they existed at the time the investments were made."

The Exhibition.

With the Exhibition certain to be held again next year (though a definite announcement to that effect has still to be made), the chief interest now centres in the programme. It is profoundly to be hoped that all the parts of the Empire who took part last time will again be represented, and I imagine that ultimately it will be found that that will be the case. In several instances the converse has been stated, but there is fortunately ample time for a change of view.

Great Britain and the Near East.

There is no question that up to the present time British enterprise has played anything but an important part in works of development in the Balkans. The reconstruction of Salonika is a case in point. It was recently stated that in the work that is now being done at that centre not a penny's-worth of British iron or steel is being used. And it would not be difficult to cite a variety of other cases in which for one reason or another opportunity has passed us by. It behoves us if this country is to establish satisfactory relations with the Near East to find out why British enterprise is so often lacking in that region. It cannot be put down now to the plethora of other outlets.

THE ECONOMIC ADVANCE OF THE SUDAN.

Those who wish to know something of the progress that is being made in the Sudan and to glean some idea of the prospects before that rapidly developing country would do well to peruse the annual report of the Central Economic Board of the Sudan Government for the past year which has recently been issued. It throws a very vivid light on conditions in that part of the Empire of which we have a special reason for being proud, since there British civilisation seems likely to achieve its completest triumph. Nowhere certainly has the work been more arduous, nowhere have the conditions been less promising for rapid progress, and it speaks volumes for the unselfish, untiring work of the little body of British representatives whose lot it has been to assist in furthering the development of the Sudan that in the space of a few years a really wonderful advance has taken place. Lines of communication have been opened up, and the way has been made clear for the growth of a great industry—cotton-growing—which promises to transform the face of the Sudan and to enrich the country in a manner that would not have been dreamt of a few decades ago.

Trade statistics are the barometer of a country's material progress, and the figures for the Sudan, as readers of these columns know well, lay ever increasing emphasis on the country's economic advance. A few figures may be cited to illustrate the position. In 1907 the total value of the external trade of the Sudan was £E2,237,000, and by the year before the war the total had increased to £E3,660,000. The figures for the years immediately following the war are apt to be misleading owing to inflated values, but passing to the year 1922 we find the volume of trade to be £E6,777,000, a total considerably below the figures of the three previous years, but judged by subsequent figures indicative of more stable conditions, and therefore of greater value for comparative purposes. Taking the figures for this year with those for 1913, and making allowances for the considerable alteration in economic conditions, it is evident that the Sudan had continued her advance during these years, and it is reasonable to assume that but for the war the position would have been immeasurably more favourable. For 1923 the figures were £E7,790,000, a very notable advance, while for the first eight months of the present year the figures were £E6,419,729, and if it be assumed, as is reasonable, that the returns for the remaining four months are at least half that total, then it is evident that 1924 will show a further and very great advance; it may well be, indeed, that this year for the first time the value of the Sudan's trade will nearly if not quite reach eight figures. That result will be no small achievement, but its main interest will lie in the promise it will hold out for the future.

The changing relations of imports to exports over the years mentioned is very interesting. For 1907 the value of the imports was £E1,706,000, while that of the exports was £E531,000. The figures for 1913 were respectively £E2,141,000 and £E1,519,000, showing that the export trade was rapidly bridging the gap separating it from the imports. For 1923 we have £E4,701,000 for imports and £E3,089,000 for exports, the increased difference being due, of course, to the extensive purchases of machinery, etc., for works of development. Then for the first eight months of the present year the respective totals are £E3,478,231 and £E2,774,650, there being thus still a substantial but a notably decreasing adverse trade balance. Since 1907 the ratio of exports to imports has varied very considerably, but on the whole the trend has been in favour of the Sudan, and as developments in connection with cotton progress the tendency will necessarily be much more marked. For 1908 the value of the exports was 27.2 per cent. of the value of the imports. The percentage rose to 69.7 per cent. for 1912, and for the following year was 56.1. The War years were, of course, abnormal, and what happened then must be ignored for comparative purposes, but it is interesting to note that from 1915 to 1918 inclusive the percentage was not lower than 85.9, and in 1918 was 97.5. For 1922 the figure was 46.9, and for 1923 54.9, and the present year will see a further decided advance, despite the fact that purchases of machinery are still on a large scale.

One of the most interesting sections of the report is that dealing with cotton. A table is given indicating the area under this crop from 1917 to 1923, which shows considerable fluctuations over the period, due to the difference in the extent of the cotton grown on flood land from year to year. During these seven years there was a steady advance in the irrigated area, and while for 1917 cotton grown under artificial irrigation stood at 8,366 feddans out of a total of 74,745 feddans, it represented in 1923 25,064 feddans out of a total of 61,588 feddans, the decreased total being due to the poor Baraka flood at Tokar. These figures are small compared with the vast areas now being prepared for cultivation, and the relatively small export of cotton from the Sudan up to the present time is no indication of the assistance that the Sudan will be giving Lancashire as regards the supply of cotton in the course of a few years.

Considerations of space prevent detailed comment on all the sections of the report, but some reference must be made to the gum industry of the Sudan, which has always played a very important rôle in the export trade. The export of gum arabic has ranged from 19,615 tons in 1912 to 22,425 tons in 1923. Last year was a phenomenal one in the gum industry, the exports being 53.93 per cent. greater than the figures for the previous year, and constituting a record. The value of the exports in 1923 was £E1,006,623, or 39.29 per cent. of the total exports of the country, a fact which speaks for itself as to the value of the industry, which, be it added, is capable of great development. But this and other items in the Sudan's list of exports, important as they are, and will be, are destined in the near future to play but a small figure as cotton comes to bulk more and more largely in the export list.

Dewan Bahadur T. Vijayaraghavacharya, Indian Exhibition Commissioner, gave a dinner on November 25 at the Trocadero Restaurant to meet Sir Bhupendranath Mitra, the acting High Commissioner for India. The guests included:—Sir Louis Newton, Sir William Clark, Sir Stephen Demetriadi, Sir Arthur Hirtzel, Sir Louis Kershaw, Sir Bourchier Wrey, Sir Edward Cook, Colonel A. D'A. Bannerman, Mr. F. H. Brown, Dr. Majid, Dr. Ahmad, Mr. Kanungs, Dr. Stevens, and Mr. Sundersan.

Shipping Intelligence.

ELLERMAN LINER'S FAST PASSAGE FROM INDIA.

The s.s. City of London, which arrived in Liverpool on November 25, after an exceptionally fast homeward passage, left Karachi on October 31, arrived at Plymouth at 4 a.m. on the 19th ult., landed her passengers at 8.30 a.m., and proceeded an hour later to Dunkirk. Allowing for the usual twelve hours' delay in the transit of the Suez Canal, the City of London has thus accomplished the journey from Karachi to this country in 18½ days. It is not surprising, therefore, that she has been a great favourite with the Anglo-Indian traveller for many years, her reputation for speed being only equalled by the comfortable lines upon which her accommodation for 283 first and second-class passengers is arranged. It is noteworthy that this liner, furthermore, carries over 10,000 tons of cargo, and has now brought to Liverpool 15,000 bales of Indian wool, one of the largest consignments of this commodity that has ever been shipped in a single steamer

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Castalia for Bombay (Liverpool, December 6). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mandasor for Port Said, Colombo, Madras, and Calcutta (London, December 13).

Bibby Line.—S.s. Herefordshire for Port Said, Colombo, and Rangoon (Birkenhead, December 17).

British India Line.—S.s. Mirzapore for Bombay and Karachi (London, December 6); s.s. Mashobra for Colombo, Madras, and Calcutta (London, December 6).

Ellerman "City" Line.—S.s. City of Christiania for Calcutta (Birkenhead, December 9).

Ellerman's Westcott and Laurance Line.—S s. Assyrian for Gibraltar, Malta, and Alexandria (London, December 6); s.s. Grodno for Gibraltar, Piræus, Salonika, Constantinople, and Smyrna (London, December 17).

Johnston Line.—S.s. Quernmore for Piræus, Volo, Salonika, Bourgas, Varna, and Constantza (Liverpool, December 6); s.s. Aviemore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, December 27).

P. and O. Line.—S.s. Narkunda for Bombay (London, December 12); s.s. Nankin for Colombo, Madras, and Calcutta (London, December 13).

Prince Line.—S.s. Soldier Prince for Tunis, Malta, Alexandria, Syrian Coast, and Cyprus (Manchester, December 9); s.s. Korean Prince for Malta, Alexandria, Jaffa, Haifa, and Beyrout (London, December 17).

SHIPMENT OF TINPLATES TO EGYPT.

H.M. Commercial Secretary at Cairo in a recent report states that importers of tinplates have complained that certain United Kingdom firms are now in the habit of shipping their goods by German lines via Hamburg, in order to obtain lower rates, but this system reacts to the disadvantage of the importer, who is compelled to pay very high landing charges to German shipping agents. These amount to as much as 25 piastres per ton for general cargo, whereas British shipping agents only charge 8 piastres per ton. It is also said that the transhipment of cargo at Continental ports is responsible for considerable delay in the execution of orders.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.)

Egypt.

Electric Power Station and Distribution Lines.—The Municipalities and Local Commissions Section of the Egyptian Ministry of the Interior, Savoy House, Cairo, invite tenders for the supply and installation of the equipment for an electric power station and distribution system for the town of Mellawi. The contract is divided into two sections. The first comprises the construction of the foundations for the generating sets, the supply and installations of two Diesel-driven generating sets of 80 k.v.a. and one set of 160 k.v.a., together with distribution boards, switchboards, etc., and all accessories. The second section comprises the supply and installation of underground cables and of the transformer cabins, poles, insulators, brackets, overhead copper conductors, lamps, etc. The power to be produced is 3-phase alternating current at 3,300 volts of 50 cycles, and is to be transmitted at this pressure by two underground cables to 6 transformer cabins, where the voltage will be reduced to 200. The consumer's voltage is to be 200, and is to be distributed by a 3-phase, 3-wire, overhead copper transmission line. Sixteen transformers are required, two each of 5, 20, 25, and 100 k.v.a. and four each of 10 and 15 k.v.a. December 28. (D.O.T.)

Steel Reservoir.—The Ministry of the Interior, Egypt, invites tenders for the supply and erection of a steel reservoir of 300 m³., with all steel work, pipes, and accessories, and electric level indicator. December 28. (D.O.T.)

Drugs.—The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of drugs required for the period of one year from April 1, 1925. January 6.

Locomotives.—The Egyptian State Railways invite tenders for five passenger engines for the Luxor-Assuan Line. The gauge of this line is 3 ft. 6 in. January 13. (D.O.T.)

Clothing, etc.—The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of clothing, equipment, tents, etc., required for the year 1925-1926. January 16.

Candles.—The Financial Secretary, Egyptian Army, War Office, Cairo, invites tenders for the supply of two English tons of candles. February 3.

Calico and Sash.—The Surveyor-General of Egypt, Giza (Mudiriya), invites tenders for the supply of calico and sash required for the next financial year, 1925-1926. February 10.

Turkey

Barbed Wire.—The Commission des achats des chemins de fer d'Anatolie invite tenders for the supply of five tons of galvanised barbed wire. (D.O.T.)

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar & Egypt.

LARGE STEAMSHIPS. UPPER DECK CABINS.
MODERATE FARES.
RECOGNISED BY INDIAN GOVERNMENT.

Passenger sailing dates:—

Company Meetings.

ANGLO-EGYPTIAN BANK.

The Cotton Crop.

The thirty-eighth ordinary general meeting of the Anglo-Egyptian Bank, Limited, was held on November 25 at the bank, 37-39, King William Street, E.C. Mr. Raoul H. Foà, chairman of the bank, presided.

The Secretary (Mr. H. H. Mallet) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report, said:—You will observe in the balance-sheet very little alteration this year in the figures as compared with those of last year. The deposits and current accounts have risen £1,200,000. The investments have been reduced by £452,704, and the acceptances have risen to £428,726, while our bills receivable have risen £1,200,000, roughly representing the increase in deposit account. The gross profit this year amounts to £444,999 9s. 2d., against £417,698 last year, but the expenses in London and the branches have increased some £13,000, with the result that the net profit this year amounts to £157,301, against £156,883 last year. We have paid the usual interim dividend of 5s. per share, and propose to pay the equally usual dividend of 10s. per share on December 1, both free of income-tax. We have this year been able to allocate £10,000 to writing off the premises account, and we are carrying forward £48,755 8s. 10d.

The remarks which I made last year on the subject of our investments, which consist almost entirely of gilt-edged British securities, and stand at cost or market price, whichever is the lower, thereby constituting an inner reserve, hold good this year also.

In the early part of the year our colleague, Mr. Mounsey, made an extended tour through Egypt, the Sudan, and Palestine, and his trip was of much service to the bank, besides giving him personal insight into our business, which cannot be gained elsewhere than on the spot.

The cotton crop of Egypt this year is estimated at 6,970,000 kantars, as compared with 6,411,435 last year, 5,356,934 in 1922, and 6,036,000 in 1921, the highest previous having been 7,684,172 in 1914. As long as these large yields of cotton, combined with high prices, obtain the prosperity of Egypt is assured, given sound and stable Government.

You are aware, no doubt, that the well-being of a bank such as ours depends to a certain extent upon the line of policy laid down for it by the directors, more still upon the efficiency and energy of its managers, and most of all upon the prosperity of the countries in which it works, and under these conditions I think I am not overstating the case in predicting a future for the bank as satisfactory to its shareholders as its past has been, although competition in banking in Egypt is ever on the increase.

We have opened branches this year in Minieh, Upper Egypt, and in Wad Medani, in the Sudan, but have closed our agency at Amman, in Transjordania. We went to this country at the request of the Colonial Office, but the hopes which we formed of profitably working in that country were not realised, and, truth to tell, the development of civilisation there has not gone on as was to be expected.

It must occur to you that I should refer in my speech to the events recently taking place in Egypt and in the Sudan. Now, if there is one thing which I invariably avoid in speaking it is a detailed reference to events in politics in the countries in which we work, and I will content myself by saying that while they have gone by by no means unperceived my colleagues and I have not been dismayed by them, and we hope and trust that a reasonable and honourable *modus vivendi* between England and Egypt will soon be reached.

I revised the few words which I have spoken to you only last Thursday before going abroad, and since then events of the greatest importance have occurred—events which, I feel sure, will ultimately be fraught with the greatest good to that country. The Sirdar of the Egyptian Army and Governor of the Sudan was foully murdered, and I hasten to pay tribute to a good and just man, the whole of whose life had been devoted to the good of the country which he governed, and in which he was beloved by white and coloured races alike. He had extended most gracious hospitality to me when I was in the Sudan, and I shall miss him much. I feel sure that Egypt will retain its prosperity, which is as precious to you, the shareholders of this bank, as it is to the inhabitants of the country.

Sir Marshall F. Reid, C.I.E., seconded the motion, and it was carried unanimously.

ASSAM RAILWAYS AND TRADING.

A Record Profit.

The forty-fourth ordinary general meeting of the Assam Railways and Trading Company, Limited, was held on November 26 at Winchester House, E.C.

Mr. George Turner, M.E. (the chairman), said that, in spite of considerable difficulties, the directors were able to submit a general net revenue account with a profit larger than the company had ever before shown. They had had their troubles and set-backs, which seemed inherent in enterprises in the East, but the efforts they had made to improve the company's position by increasing its earnings had borne fruit.

In the railway accounts the traffics showed very distinct improvement, and the steady increase in general earnings which they had had for years was again maintained. This year the increase was approximately 15 per cent., and the latest returns to hand for the current year showed still higher figures. The railway ran through some of the best tea land in Assam, and with the present prosperity in tea there was every reason to look forward to a steadily increasing revenue for some time to come. The output of the collieries was down, chiefly owing to labour causes, but it was now improving, and he hoped that the current year would show an advance. The development of their new mines continued satisfactorily, and the railway out to them was now through, though a good deal of work was still needed before it could be regarded as consolidated and actually completed.

With regard to their other interests, as a whole he was very pleased with the company's investments in tea. They were an improving asset, and had already made substantial contributions to revenue. The timber department had done well, the sawmills having made a good profit. The veneer mills were making chests, and a number had arrived on this side and had turned out very well. They believed they had a market for all they could produce.

The general net revenue account showed a profit of £137,778, to which £1,955 brought forward had to be added. The directors recommended a final dividend of 6 per cent. on the "B" stock, making 8 per cent. for the year. This was the largest dividend they had paid on that stock, and they hoped from now on at least to maintain it, and possibly to improve on it.

The report and accounts were unanimously adopted.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended November 10 amounted to £E15,571, making the total from April 1 £E204,779.

Near East Markets.

LONDON PRODUCE REPORT.

Rise in Coffee.

(From Our Own Correspondent.)

London, Tuesday Morning.

Oilcakes.—The market has been steady. Linseed cake is unchanged at 280s., coconut cake is the same at 240s., while cottonseed cake is unaltered at 180s.

Sugar.—Home refined has continued in fair request at unchanged prices. Tate's cubes are 40s. 3d., London granulated is 35s. 10½d., while Lyle's granulated is 36s. 1½d. Foreign descriptions have been firm. West Indian crystallised has been done at 34s. 6d., white Java is 33s. 3d., while Czech granulated is 33s. 10½d. Futures are firm. Quotations are:—March, 18s. 8½d.; May, 19s.; August, 19s.

Coffee.—The market has again been very firm, and prices have advanced almost all along the line. Costa Rica, exceptionally, is unchanged at 170s., East Indian is 4s. up at 160s., Kenya is 10s. up at 156s., while Santos has gained 2s. at 120s.

Currants.—A steady tone has prevailed in the market. Demand is still on a poor level, however, and the bulk of the business done has been in Vostizzas and Gulf. It is surprising, in view of the proximity of Christmas, that more trade is not being done, and if the inactivity continues much longer the conclusion will be inevitable that for the time being currants are declining in public favour.

Sultanas.—Nothing of particular interest has transpired in this market. Supplies of Smyrnas are ample to meet requirements, but as the demand is brisk lower values are unlikely.

Figs.—The sharp decline in prices has been the outstanding feature. The effect of the reduced rates has been to stimulate demand, and this commodity has been moving off briskly.

Plums.—This commodity has been the medium of very good business. Supplies are none too plentiful, and the effect of the good demand has been an increase in prices.

Dates.—A very fair business has been transacted. Persians have been in good request.

Oilseeds.—Linseed has been quiet. Indian has been done at 23s. 9d., while La Plata has come to business at 21s. 10½d. Rapeseed has been on the dull side. Toria is 23s. 6d., while real bold Ferozepore is 23s. Cottonseed has been quiet. Indian is 11s., Egyptian black is 13s. 6d., while Sakellarides is 13s.

Seed Oils.—Linseed is quiet at 45s. 9d. spot. Rape oil has shown a tendency to harden, crude being 52s. 6d., while technical refined is 55s. 6d. Cotton oil is steady. Refined common edible is 51s., Bombay crude is 44s. 6d., Egyptian crude is 46s. 6d., technical is 49s., while deodorised is 53s.

SMYRNA FRUIT MARKET.

Messrs. C. J. Giraud and Company report as follows for the week ended November 8:—The arrivals of sultanas on the Smyrna market since the opening of the season are estimated at 36,000 tons, and the sales to date are put at 34,000 tons. Closing Prices: London-Liverpool, per cwt. c.i.f. —Type 12, 48s.; 13, 55s.; 14, 59s.; 15, 63s.; 16, 70s.; 17, 77s.

Activity continues in the sultana market, as will be noted by the list of weekly sales. Prices are slowly but steadily advancing. The strength of the position on this side is largely due to the small stocks now remaining on hand.

The total sales of figs to date amount to 228,391 sacks, as against 174,401 sacks last year this date. Stocks on the market are practically exhausted. The interior may or may not be holding back a few hundred tons, but it is problematic if the same will come to the market. Business for the season may be regarded as over so far as concerns new operations.

In their report for the week ended November 15 Messrs. Giraud state:—

The arrivals of sultanas are estimated at 37,000 tons, and the sales to date are put at 35,000 tons. Closing Prices: Per cwt. c.i.f. London-Liverpool. —Type 12, 48s.; 13, 55s.; 14, 59s.; 15, 63s.; 16, 70s.; 17, 77s. The sultana market is unchanged. Prices are very firm.

SPECIAL MARKET REPORTS.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank:—

Basrah, November 1.

There is still a strong demand from Egypt for Hillah dates, and there have been large arrivals from the region of Nejef. There has been a strong demand for sheep casings. Inquiries emanate from the United States.

Jaffa, November 8.

The first direct shipments of oranges to the United Kingdom commence next week. Certain small lots realised between 14s. and 15s. a case, which is very promising.

Mosul, November 8.

The cattle market is already quite active. Syrian merchants have begun to buy sheep.

Hamadan, October 18.

The market continues good for importers of Manchester and Indian cotton goods. The American demand for Hamadan and Sultanabad rugs and carpets continues strong, and exporters to Russia are making large purchases of dried fruits, rice, etc.

Cyprus, October 18.

The general tone of the markets is much brighter, owing to the increased demand and prices of produce, particularly carobs, raisins, and wine. The early rains are favourable to the growing crop.

Yugoslavia exported 384,596 tons of goods, valued at 937,368,216 dinars, in October, compared with 334,766 tons, valued at 914,013,910 dinars, in October, 1923.

DRIED FRUIT MARKET.

Messrs. J. C. Houghton and Co., of Liverpool, in their report dated December 1 state :—

Currants.—It is doubtful if in living memory we have ever experienced a more disappointing November trading. The firmer tendency towards the close of last month, with indications of some improvement in the demand, failed to develop, and we have passed through an exceedingly anxious time. Buyers apparently had no confidence to operate pending a revival of interest, and day after day passed without a transaction being recorded. The position of the market, nevertheless, is considered very sound. The knowledge that the Greek Government has decided to purchase a further 15,000 tons, and the measure having passed the first and second reading in the Greek Chamber, has certainly given confidence to the shippers, and has been one of the main features in stabilising values. Therefore, as soon as demand shows more life, the market should be quickly affected.

The additional supplies of 3,000 tons, comprising really attractive qualities, per Dido, Belize, Etrib, Cressado, and Sekstant, failed to attract the trade, and the small and insignificant business passing mostly centred round the lower grades, viz., Pyrgos, 42s. ; cleaned, 43s. 6d. to 44s. Other sales were :—Cleaned Patras, 47s. to 48s. ; Gulf and Panariti, 50s. to 56s. ; and with the exception of Vostizza, which was forced for sale at 60s. to 62s., values show very little damage. Quotations :—Pyrgos, 42s. ; Amalias, 44s. to 45s. ; Patras, 45s. to 48s. ; Zante, 45s. to 48s. ; Gulf and Panariti, 50s. to 56s. ; Vostizza, 56s. to 64s.

Australian.—The Hurunui and Cornwall arrived with small consignments, and sales were reported at 42s. to 45s. up to 50s. for any parcels of special quality.

Sultanas.—Further supplies per Destro and Siptah replenished our meagre stock, only a small proportion of the 43,000 boxes being for the market, and notwithstanding the scarcity of good and fine fruit available, demand has shown a falling off during the past week, and for most grades prices have an easier tendency. Quotations :—Fair, 52s. to 54s. ; Medium to Good, 56s. to 70s. ; Fine, 75s. to 90s. Greeks in good request earlier in the month, 65s. to 75s., but at the moment are neglected. Cretans sold 80s. to 90s.

Figs.—Destro brought 560 skeleton cases. This article has been persistently pushed for sale, culminating in prices dropping about 15s. per cwt. to meet the lower rates established at London Auctions. At the decline considerable progress has been possible in large boxes at 47s. 6d. to 52s. 6d. ; small boxes being still difficult of sale, 60s. to 65s. Locoums are scarce, 100s. to 115s. Bags Naturals : Good, 33s. 6d. ; Genuine, 35s. 6d., slow ; Boxes Pulled, 42s. 6d. to 48s.

Viscount Inchcape, accompanied by Viscountess Inchcape, left London last week for Paris to attend the monthly meeting of the Suez Canal Company.

Mr. Thomas F. A. Agnew, who died recently at Heswell, Cheshire, in his 91st year, was formerly a partner in Messrs. Line and Co., Madras, and also acted as agent to the Madras Irrigation and Canal Co. He was elected a director of the Bank of Madras, and was a member of the local committee of the Agra Bank. During the Indian Mutiny Mr. Agnew joined the Madras Volunteer Cavalry.

NOTES FROM YUGOSLAVIA.*

(From Our Own Correspondent.)

Zagreb, November 25.

The New Line in Yugoslavia.

On November 22 a new and important stretch of railway was opened to the public—the line from Ormoz to Murska Sobota, connecting the Slovene regions on both sides of the river Mur with the main railway system of the kingdom. At last direct traffic has become possible between this outlying north-western part of the country and its capital cities, Liubliana, Zagreb, and—most important, though farthest off—Belgrade. The Mur region was formerly part of Hungary, and, as such, scantily connected by rail only with Budapest and Vienna, but quite cut off from the other Yugoslav lands. The new stretch of line is especially important from the point of view of trade. As a grain-growing district the Mur district is second only to the Voivodina, which is one of the granaries of Europe. The vineyards around Liutomer and the quaintly named little town of Jeruzalem-Svetinye produce the finest of the Slovene white wines, topaz-coloured and with a bouquet resembling that of white Burgundy. Finally, a special breed of heavy carthorses, much valued throughout the Danubian States, is the pride of the wealthy farmers of those parts.

The people of the Muropolye and Prekmurye are descendants of the old Pannonian Slovenes, and differ somewhat in customs and national dress from their kinsmen in Styria and Carniola. Artistically, their songs are among the sweetest and most characteristic in Yugoslavia's native treasure hoard of folk melodies. (Every region in Yugoslavia has its own distinctive and altogether unmistakable local colour in folk music ; all of it is attractive, and the programmes of the various unaccompanied choirs in every sizable town, whose concerts are always welcome adjuncts to every public function, offer plenty of delightful opportunities to study the different types of song.) Truly, these old Pannonian lands are not among the least of the possessions of this young State, and it is an excellent thing that this new railway connection has now made them accessible, with all their wealth and their charm. The solemn opening ceremony was attended by M. Stanitch, Minister of Transport, and many notabilities from Belgrade, Zagreb, and Liubliana.

---

* An article, by our Zagreb Correspondent, on Politics in Yugoslavia, appears on page 585.—ED.

Mr. L. G. Rouffin, C.M.G., formerly Financial Secretary to the Egyptian Government, has been appointed the British member of the International Financial Commission of Athens.

Cotton and Cotton Goods.

THE EGYPTIAN MARKET.

Futures Irregular.

The Alexandria Commercial Company, in their report for the week ended November 20, state :—

Since our last report the futures market has been rather irregular; the net changes on the week are the following :—Sakellaridis : $2.80 up for November, $1.95 up for January, $1.85 up for March, $1.80 up for May, $1.10 up for November, 1925. Ashmouni : $0.30 down for December, $0.30 down for February, $0.20 down for April, $0.70 up for October, 1925. The demand from abroad has been rather good, and the consequent activity of the Spot market has given the Futures market a fairly firm tone. Sakel. has had the largest proportion of the demand, and its premium over Ashmouni has been increased during the week by over $2. The easier tone in Ashmouni may be attributed to the fact that New York has been quieter and somewhat weaker. November Sakellaridis has fluctuated in a most erratic way, its premium over January varying between $11½ and $3; the remaining open positions are now very small, commercial houses being the buyers against cotton remaining to be fixed by the native merchants. Ashmouni distant positions are now worth about the same price as December, but Sakel. distant positions are quoted with heavy discounts in comparison with January; despite the high prices of Sakel. cotton spinners abroad still continue to be keen buyers, and the daily arrivals are fairly easily absorbed by the demand. This year's Sakel supplies will be considerably smaller than those of last year, and a shortage of this variety during the summer months is likely to occur, so we recommend our spinner friends who must buy this cotton not to delay the covering of their requirements too long. The week's receipts amount to 428,384 krs., against exports 273,114 krs.; the stock stands at 1,765,424 krs.

Spot.—We have had a busy week at Minet el Bassal. A good business has been done, and sales amount to about 36,800 bales, of which we estimate 17,300 bales Sakellaridis, 7,200 bales Uppers, 10,900 bales Zagora, 1,000 bales Pilion, 150 bales Brown, and 250 bales White. Arrivals have been large, especially from Lower Egypt, but there has been a better demand from abroad, and this has been sufficient to maintain the spot market here.

Sakellarides.—There has been a brisk demand for all qualities except the very low grades. Prices of spot against contracts are well maintained at last week's rates, with an improving tendency in the better grades. Cotton is offered freely at market prices, but there is no tendency to press sales or depress premiums.

Uppers.—There has been a demand for all qualities. Spots premiums are firm at last week's rates, the better grades being inclined to go dearer.

Lower Egypt Zagora.—Continues in good request. Spot premiums are steady at last week's rates.

Pilion.—A good business has been done, but there is no longer the eager demand of the last few weeks. Spot premiums are firm at last week's rates for the better grades, but for the medium qualities they are slightly easier.

Brown.—A fair business has been done. Spot premiums are generally dearer than last week.

White.—A fair business has been done in medium and good grades. Spot premiums are generally easier except Fully Good, which is rather dearer.

COTTON TRADE REVIEW.

Active Demand for Near East.

The Manchester Cotton Trade Review of the Imperial Ottoman Bank for the week ended November 29 states :—

It is not possible to record any expansion of business during the past week, and, on the whole, the market remains in the state of quietude recently reported. Certain sections continue to enjoy an active business, but, on the other hand, there are others which are almost in a state of stagnation. The only development of interest has been the result of the spinners' ballot, which gave a majority in favour of continuing short time in a modified form. As from December 1 the hours worked will be 39¼ per week, which is an increase of 7¼ hours on those which are being run at present. It is quite probable that had the more active conditions of a month or so ago continued, the vote would have been in favour of full time, but the recent falling away of demand has reminded spinners that trade is still far from being normal.

Yarn.—The result of the ballot above referred to was practically without effect. The tone throughout the week has been subdued, and the individual experiences of spinners of American cotton have varied considerably. Egyptian spinnings still remain under the disturbing influence of high prices for the raw material. Good orders have been placed from Germany, presumably with the object of obtaining supplies before the new tariff comes into effect in that country.

Cloth.—Only a fair inquiry has been experienced. India and China both remain lookers on, comparatively speaking, and the activity of other markets does not by any means fully compensate. Egypt, in spite of political disturbances, continues to make good purchases, whilst other Near Eastern markets have also been fairly active.

Raw Cotton.—Nothing of special interest has transpired, and fluctuations in American have been within narrow limits. This arises more from an absence of active trading than from confidence in the stability of present prices. The position as regards Egyptian cotton still remains difficult. Closing quotations yesterday were as follows :—American middling, 13.59; Egyptian fully good fair, 26.20.

The production of crude oil by the British Burmah Company and the Rangoon Oil Company for October was 61,361 barrels.

The quantity of gold extracted from the mines in India during August amounted to 37,013 oz., valued at Rs. 21,30,814.

A Sound Buying and Selling Organisation

British manufacturers desirous of developing their trade with the Near East are invited to write us. Our knowledge of these markets extends over many years and we know the requirements.

Similarly we place our organisation at the disposal of exporters generally in the Near East who wish to enter the Home market. We have a selling service of which we are justly proud; let us demonstrate to you our claims.

LIVERPOOL COTTON REPORT.

Decline in Inquiry.

Messrs. Reynolds and Gibson report as follows for the week ended November 26 : —

Egyptian Spot.—There is little fresh to report this week. The daily inquiry has shown signs of dwindling, and the volume of spot business transacted has shrunk considerably. The large forwardings to which we have previously drawn attention have evidently provided spinners with enough cotton to carry on with for the time being, and with quieter conditions ruling in Manchester there has been no inducement to spinners to come into the market, except on a very small scale. There is no longer evident the anxiety which was recently shown to secure cotton "landing" or "close at hand." The strength of Alexandria continues to surprise most people. On this side we expect a somewhat quiet period to ensue between now and the end of the year, but as long as Alexandria maintains such a strong front, it is difficult to foresee any important break in values here. There is no doubt that a number of Sakel spinners have temporarily deserted this growth for others, but the available stock of Sakel here at present is so small that the defection has hardly become noticeable as yet. A fair selection of so-called good to fine Sakel is available here now, but much of it is of only moderate staple.

The fully good fair cotton has been in better request, but supplies are still wanting, and good staple cotton is rare. About 26.00d. is the value of fully good fair here to-day, but many spinners apparently expect to find it between 24.00d. and 25.00d. Low cotton has met with a moderate inquiry. Uppers between 16.00d. and 17.00d. have been inquired for, with but little offering to meet the inquiry. Fully good fair to good uppers between 17.50d. and 18.00d. have met with a fair amount of support. The interest in Pilion has subsided for the time being, chiefly, we fancy, owing to the prices asked. Brown and white cottons have been neglected. In Sudan the white variety still continues to claim the bulk of the small business transacted, and up to 550 on American has been paid for special lots. Sudan Sakel has changed hands in the neighbourhood of 24.00d. per lb. C.i.f. business has been quiet on the whole, but here and there have been signs of a revival of interest in cotton for prompt shipment. Forwardings to spinners for the week ending 21st inst. were returned as 13,066 bales. Estimated sales, 1,000 bales Egyptian and 500 bales Sudan. Quotations of Sakel are unchanged for fully good fair and below, but a rise of 30 points has been registered for the qualities good and above. Brown and upper show no change on the week.

Vickers, Ltd., Barrow-in-Furness, have received an important order for washing trommels for the Rand.

Sir Robert Horne, M.P. (chairman of the National Smelting Company), left London on November 27 en route to India and Burma.

The traffic receipts of the South Indian Railway Company for the week ended November 1 amounted to Rs.8,26,165, making the total from April 1 Rs. 2,90,03,951.

A Bulgarian report states that the export of tobacco is in full swing, and that large quantities of the 1923 crop are sold. Prices are higher by 10 levas per kilo on the average, according to quality.

The numbers are announced of 39 Seven per Cent. First Mortgage Bonds of the Bengal Telephone Corporation, amounting to £3,900, which have been drawn for redemption and will be paid off at par on December 31.

On his election as a Member of Parliament, Mr. R. Roy Wilson has sent in his resignation as assistant-general manager of the Bank of British West Africa, Ltd., and the directors have accepted it with great regret.

COMPANY NOTES AND REPORTS.

Phœnix Oil and Transport.

The report of the Phœnix Oil and Transport Company states that the production of crude oil for 1923 was 105,259 tons, as compared with 42,106 tons in the previous year. The beneficial effect of the vigorous drilling programme is already manifesting itself on the fortunes of the company, as is indicated by the fact that production has been very materially increased during the present year, amounting for the ten months ended October 31 to 145,197 tons. It is anticipated that for the whole of the current year the production will be approximately 185,000 tons.

The Chairman in May last made a visit of inspection to the properties in Roumania, and a short report was issued to the shareholders on the observations he was able to make on his return. The progress then indicated has been well maintained, 29 wells having been drilled down to the oil sand since the date of the previous annual report, and it is expected that by the end of the current year the full programme of 30 new wells will have been completed. Notwithstanding the fact that 29 wells have been brought in since the date of the previous report, there are at the present time in hand 68 wells, as compared with 59 in the previous year, and, as heretofore, all these wells are in proven oil-bearing territories.

Satisfactory operations have continued at Moreni-Stavropoleos, and the sanding-up difficulties peculiar to this field have been mainly overcome. As a result the producing wells have given a relatively steady output, and the anticipated large increase in production has been realised. Of the seven wells at Moreni-Tuicani mentioned in the previous report as in drilling, three have been brought into production, and the results are commensurate with expectations in this prolific field. Operations in the Tintea field continue on a large scale. Well No. 71 has on several occasions produced large quantities of oil, and although it has not come permanently into production continues to warrant most favourable anticipations. Of the 12 wells mentioned in the previous report as being drilled on this area eight have come into production.

The Gura Ocnitei field has achieved prominence in the company's programme owing to the success of well No. 4, which entered the oil sand in May last, and to date has produced a large quantity of oil, which would have been much exceeded had it not been temporarily stopped, due to the loss of a cleaning tool in the well. It is expected to resume production at any moment. Additional wells have been started in this district, and operations on a very extended scale will be carried out during the coming year. The results obtained from well No. 4 at Gura Ocnitei have proved a very large area in that district, and in other directions the reserve lands continue to inspire the confidence previously expressed.

It is anticipated that the new Roumanian mining law will produce results favourable to the company in regard to the State lands. The Austrian market appeared so advantageous that during 1924 the company acquired on favourable terms the old-established business of Everth and Co., A.G., of Vienna, and is now actively utilising that organisation for the distribution of its products. In addition, a favourable agreement has been concluded with an influential group for dealing with the company's products in Southern Germany. The accounts show a net profit of £77,861, making available £105,654, which the directors propose to carry forward, subject to taxation.

National Bank of Egypt.

Position at September 30, 1924, published in conformity with Article 8 of the Statutes.—Banking Department.—Liabilities: Share capital, £E2,925,000 (300,000 fully paid shares of £10 each). NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

Britain and Egypt.

In the plainest possible way Great Britain has announced her intention of allowing no one to intervene in any of the four questions which she reserved for discussion when she granted independence to Egypt in February, 1922. In a Note from the Foreign Office to the Secretary-General of the League of Nations, dated November 19, that is, before the assassination of General Sir Lee Stack, the Government laid down in unmistakable terms the decision that Egypt is an imperial or domestic question, to be discussed by no other Power. To some extent this Note has cleared the air, although it will be easier to write of Britain's precise attitude towards the League of Nations after Mr. Austen Chamberlain's wisely undertaken visit to Rome. At least it shows that the murder of the Sirdar was the sign for, and not the cause of, a tightening up of the screws, and it fully acquits the Government of the charge of hastily preparing its measures. Exactly how positive and constructive those measures are to be cannot yet be perceived, for until the Cairo Assembly meets again or fresh elections are held, the strength or the puppetry of the Ziwar Administration cannot really be estimated. It is something, at any rate, to have put oneself square, if not right, with the rest of the world over this delicate question of Egypt.

Political Manœuvring in Egypt.

Too much attention need not be paid to the petitions, and the Egyptian Premier's answers to them, that the Zaghloulist Party has addressed to King Fuad. It is, indeed, quite improbable that the Ziwar Administration can rightly be accused of unconstitutional practice, although the tendency among Egyptian Nationalists at present to confuse the unusual with the unconstitutional is comprehensible enough. All this petitioning and definition of legal niceties is, so to speak, political sparring for position, and it is not in the least probable that by means of it the heavy-weight Zaghloulists will defeat their bantam opponents. The really important matter is: What will happen to the Ziwar Administration when the Assembly is re-convoked or when fresh elections are held. The fundamental point at issue is not one of law, but of opinion.

The Sudan Mutiny.

Much history is enshrouded in the terse official words which were issued, concerning the recent mutiny of two Sudanese platoons, from Khartoum on December 5:—"Three officers were shot at dawn this morning." Whether, as is to be profoundly hoped, these words will remain unique in the record of Britain's co-operation in the Sudan, or whether they are the forerunners of other similar descriptions, are secrets in the keeping of to-morrow. At the moment all is well in the Sudan. The Egyptian troops have all been evacuated, and King Fuad has approved the wise appointment of Sir Geoffrey Archer to be Governor-General. It is gratifying to note that the new Governor-General's knowledge of and experience in Abyssinia and in Uganda will prove of immense importance in his future dealings with the question of the Nile Waters. This appointment, incidentally, made as it was by decree of the King of Egypt in accordance with the terms of the 1899 Agreement, should reassure those nervous souls which imagined that Great Britain was acting unconstitutionally in the Sudan. The dignity of Egypt is preserved through the reference to her King, and legally the position in the Sudan has in no way been altered.

France and Syria.

When General Weygand left Beyrout on December 5 for France, he cannot have looked back upon the progress of Syria under his régime without a certain satisfaction. For, as is shown in M. Henri Simon's recently published report on the Budget for the French Ministry for Foreign Affairs, the reduction of French expenditure on Syria has been most marked. In 1919, when France assumed the Mandate for Syria, her military expenditure amounted to 118,000,000 francs. Owing to the activities of the Turks and of the Arabs, this expenditure rose in 1921 to 748,000,000 francs. Peace having been established with the Turks and an understanding arrived at with the

Digitized by Google

Arabs, this expenditure fell in 1923 to 210,000,000 francs. Whether it will be possible to make a serious reduction upon this remains to be seen: the attitude of the French peasant at home does not coincide with that of the French soldier guarding Syria's very precarious northern frontier. On the civil side, expenditure in 1919 was 50,000,000 francs; in 1921, 185,000,000 francs; and in 1923, 9,080,000 francs. This represents a very definite achievement. And far greater, although it has not so far produced many tangible, concrete results, is the concord which the departing French High Commissioner succeeded in establishing with the British authorities in Palestine.

America and Palestine.

A certain amount of difficulty has been caused, from the point of view of American nationals in the Middle East, from the fact that the United States is not a member of the League of Nations. Certainly we have long been out of those feverish periods when, as in early 1919, for example, an American prospector could be hustled out of the Jordan Valley, but neither in Syria nor in Palestine was the position very satisfactory. In getting it regularised, Syria was ahead of Palestine, for the French-American agreement which was signed at Paris on April 4 last was ratified on July 13. On December 4 the Secretary of State for Foreign Affairs and the United States Ambassador in London signed a Convention with respect to the rights of Britain and of America in Palestine, and the Convention is, of course, subject to ratification on both sides.

Caution in Greece.

It was pleasing to read, just before the publication of the prospectus of the Greek Loan, of a sound piece of political conduct in the Athens Assembly. It will be remembered that one of the favourite schemes of M. Papanastassiou, a somewhat headstrong politician, was the immediate creation of a Provisional Senate. There was, of course, something to be said for such an institution, but in rejecting the proposal the Assembly has done wisely. The Constitution has not yet been discussed, and there will be plenty of time after this all-important task has been accomplished to discuss the desirability of a permanent Second Chamber. Now that Greece is more or less committed to stability, it would not be surprising to find her next year in possession of a Senate. But for the moment caution is rightly the order of the day in Athens.

Suspense in Arabia.

The situation in Arabia has, to all appearances, at least, come to a standstill. Reports occasionally are published, it is true, concerning the progress of Ibn Saoud's plan for convoking a general Islamic Congress at Mecca, and of Ali's plan for resuming the offensive against the Wahhabis. Thus Ibn Saoud is stated to have arrived in the Holy City from Riyadh, and Ali to be collecting aeroplanes and even tanks. Three ex-R.A.F. pilots are said to be on their way to Jeddah (whither aeroplanes have preceded them), in the purpose of assisting the Hejaz "Army." But whether there is in the Hejaz any pugnacious spirit surviving must be extremely doubtful, and the obscurity surrounding Wahhabi intentions thus becomes denser than ever. From the rest of the Moslem world little enough sign has come that it believes heartily in Ibn Saoud's expressed resolve to submit his future actions for general Islamic approval, even though the projected Islamic Conference in Cairo for 1925 is now more problematical than before. It does not seem probable that the arrival of three British air pilots in Jeddah will relieve this uncanny suspense.

TO READERS OF "THE NEAR EAST."

If you find any merit in "The Near East," if you hold with us that British interests in the Near and Middle East call for a Paper devoted exclusively to the affairs of that part of the world; if you consider it a worthy cause that Britain and the British should be sanely interpreted to the people of the East, and those people in their turn be made better known to Britons, support "The Near East" by becoming a subscriber yourself if you are not already, and by securing for us new subscribers. Specimen copies will be forwarded gratis. A subscription form will be found on page 624 of this issue.

INDIA.

The Reforms Inquiry.

The cabled forecasts of the report of the Committee inquiring into the working of the reformed Constitution accord very closely with the anticipations formed in this country. We confess that we have so far failed to understand the policy adopted in regard to this inquiry. To begin with, a small body of experts was chosen to examine the difficulties found in the practical working of the new institutions, and then the experts were reinforced—or, rather, diluted—by politicians already pledged to condemn those institutions as unworkable. To the ordinary man this procedure resembles the addition of professional undertakers to a consultation of Harley Street specialists, and consequently he is not surprised when the specialists in due course offer their prescriptions for the patients' health, while the undertakers press merely for his funeral. What is wanted now is to get the whole thing out of the way as soon as possible, and we hope that neither Delhi nor Whitehall will waste time in looking for a formula of the type so fashionable in India. The Constitution should be given a fair chance, with the elimination of friction wherever possible, and, if there must be a funeral, we should ourselves prefer to bury the undertakers.

The Lee Commission.

At last the India Office has issued its decision on the main recommendations of the Royal Commission on the Public Services, and it may fairly be said that the compromise reached by the Commissioners emerges practically unscathed from the scrutiny of two very different Secretaries of State, for the changes announced which affect the position of only a few officers at the top of the list do not materially disturb the balance between better terms for Europeans now employed, and largely increased recruitment of Indians in the near future. The decision to make the new concessions to officers appointed in England independent of the votes of Indian Legislatures will no doubt excite violent protests among the politicians who have rendered it inevitable by their votes and speeches in the past; but that is an inconvenience which must be faced, and we do not expect that it will develop into a perennial "grievance," though there is certain to be much strong language in the coming Budget debates. The most important subject now outstanding is the creation of the permanent Public Service Commission, which is already several years overdue. Until that body is at work, it is hopeless to look for the clear delimitation between the spheres of politics and administration which is essential to the success of the new régime.

Digitized by Google

Publicity Through Secrecy.

It is not, however, questions of politics or administration, important as they are, which have brought India so prominently before the public in this country of late, but the investigation of some very unsavoury transactions which have recently occupied the Law Courts, and apparently will continue to do so for some time to come. We have no doubt that the India Office was actuated by the best intentions in its attempt to conceal the name of the victim of these transactions, but the result has unfortunately been to secure the widest possible publicity. First came the portentous references in Court to the dangers of disclosure, which set all the quidnuncs chattering at once, and for a day or two there was eager canvassing of the personality of every Asiatic potentate living between Jericho and Johore. Then the foreign Press rent the veil, and the secret passed from mouth to ear with all the inaccuracies and accretions natural to that mode of transmission. At best the India Office "released" what was no longer a secret, and we had portraits on posters, interviews with ex-butlers, and all the rest of it. The moral of a most unpleasant business is simply that such a secret is like a tooth : when it must come out sooner or later, the way to save pain is to have it out at once.

THE WEEK AT HOME.

London, Tuesday Morning.

Parliamentary Affairs.

Parliament has met, the House of Commons has re-elected Mr. Speaker Whitley, members have taken the oath of allegiance to our Sovereign Lord the King, and have chosen their seats for the next session. The real business begins to-day with the King's Speech, which will be followed by the Address, and a debate on home and foreign affairs.

The King's Speech has, however, to some extent been anticipated by Mr. Baldwin, who addressed the victorious Conservatives at the Albert Hall last week. He spoke in no mood of triumph over a fallen foe, but as one who feels deeply responsible for the power that has been placed in his hands. And he made it clear that his Government intends to carry through a housing policy that will not merely build new houses, but will attempt to abolish slums; that it will not merely fill up odd gaps in the existing State insurance laws, but do its best to add to them by lowering the pensionable age and providing pensions for widows and young children; in short, that it means business in its social policy.

One sentence in particular in Mr. Baldwin's speech drew the attention of the whole country. "Do not ever mistake the voice of the clubman or the voice of the pressman for the voice of the country. It is the country that has chosen you, and the country that will judge you." This is perhaps a little hard on Fleet Street, but its underlying meaning is clear: the opinion of London is not necessarily the opinion of the country. The newspapers and the clubs are apt to become so interested in personal incidents of the game of politics that they lose sight of the field on which it is played.

The Two Oppositions.

Political cynics think it probable that the two Oppositions will be more ready to fight each other than the Government. But the possibilities are not confined to a feud between Liberal and Labour; it is understood that there is something of a rift in the Labour ranks, and the Liberals, or what remains of that unhappy family, are advertising the differences of Tweedledum and Tweedledee far and wide. Mr. Lloyd George has been elected, in the absence of Mr. Asquith, acting leader of the Liberal Party, but two or three Liberals, including Captain Wedgwood Benn, have mentioned in print their reluctance to follow him, and they will presumably form a party all to themselves.

At the same time, while Mr. Ramsay MacDonald has been re-elected leader of the Labour Party, some very outspoken criticism of his methods was indulged in by his followers, and he is not likely to find his post a bed of roses. The discontent comes mainly from the extremists, but the moderates in the party are also not too happy at the position. They recognise his purely intellectual abilities, but they object to the economy of truth which he practised during his election campaign and, it must be added, during his term in office. The whole Labour Party hates the very mention of the word Daimler.

On the whole, I do not think the Government has much to fear from its opponents in 1925.

Protecting Ministers.

The *Daily Mail* published last week news of a plot by Egyptians to assassinate British Cabinet Ministers. The information was authentic, and precautions were at once taken—or, rather, increased, for, in fact, the safety of Ministers has for many years been in the charge of Scotland Yard. During the Sinn Fein troubles under the Coalition Government gates and barriers were put up at Downing Street, but these were taken down under a subsequent Administration, only the ordinary routine precautions being continued.

As a rule, a private detective follows a Minister about at some little distance, like a faithful private secretary, and some curious stories are told in this connection. It used to be said that Mr. Birrell, as Irish Secretary, displayed a Puck-like propensity for tricking his own detective, and that he would dash through the subterranean passage at Westminster and into the Underground Railway, and board the first incoming train in the hope that his protector, a few yards behind, would be held up at the booking-office or the barrier, miss his quarry, and have to follow ingloriously by the next train.

Both Lord Balfour and Mr. Bonar Law, on the other hand, were loftily indifferent to any danger: but another great Minister, who shall be nameless, is said to have been rather disturbed at the rumour—it was nothing more—that a price had been set on his head. But perhaps this was merely the malicious gossip of his enemies.

European Debts and U.S.A.

Some disquiet is being shown at the possibility that France may be allowed to settle her debt to the United States on more favourable terms than Washington granted to Britain. The argument which has been advanced in favour of this course by some French and an occasional American politician is that France is financially less strong than Britain, and that since her credit is not so good she must be granted more favourable terms.

This sounds specious and even complimentary to ourselves until it is examined. But the fact is that there is a clause in the British Debt settlement with the United States by which America agrees not to settle the debts of other Allied countries on more favourable terms than those agreed last year with Britain, and a breach on this point would cause a great deal of feeling, not only in Britain but in America. And, further, the theory

Digitized by Google

that the terms of a settlement can be varied according to the status of the debtor, although occasionally adopted perforce in bankruptcy proceedings, is obviously destructive of ordinary debtor and credit relationships.

It is understood that the British Government intends to protest vigorously against this idea, if it should ever come within range of practical politics. Probably the main reason why it has been suggested is the fact that France wants to raise money in America, whereas we do not. On that account a certain number of American investors may believe it sound policy to write down the French indebtedness, as it would leave more for themselves in their private enterprise. With us this consideration does not arise.

A Railway Strike?

There have been mutterings and threatenings of another railway strike early in the New Year, consequent on the revision of the engine-drivers' terms which was arranged (with a year's notice) after the strike of last January. Luckily, Mr. Thomas, now returned from the Colonial Office to the National Union of Railwaymen, has set his face against another stoppage of traffic. He recognises that these things are no good to the railwaymen, that both the companies and the employees suffer from the loss of traffic, and that it is not sound policy to exasperate the public unnecessarily. There is plenty of time for negotiations, as the agreement does not expire until January, and with a conciliatory temper on both sides we may hope for the best.

A Women's Orchestra.

Last week I heard for the first time the British Women's Symphony Orchestra. It was composed entirely of ladies, the only man allowed on the concert platform being M. Cortot, the famous pianist. It would, I think, have been a good idea to have preserved the feminist atmosphere by having a woman at the piano—and also playing nothing but women's compositions, instead of which we had Brahms, Saint-Saëns, and Weber, who were indubitably of the less important sex.

The ladies acquitted themselves creditably, but the strings were far better than the wood-wind, and of the brass the less said the better. Sex, I admit, has no place in art. But somehow a woman does not loom so well behind a trumpet as behind a violin.

Troubles in the Theatre.

Mr. Arnold Bennett has caused something of a storm in the theatrical tea-cup by an article in which he says that only three good plays have been produced in the last two hundred years, and that actors and actresses do not know how to act or to speak their own language. As to the first point, he is impregnable; if a good play be interpreted as one that can be continually revived, then nothing good has been written since Sheridan. But I suppose a play is not necessarily rubbish because it does not survive the centuries.

As to the second point, I entirely agree that very few actors and actresses can talk good English. Unfortunately, it must in common fairness be added that the audience are in very much the same boat; even in the pulpit, I am told, one sometimes hears slipshod English from the ornaments of the Church, and, moreover, it is notorious that the clergy are deficient in the art of voice-production. But if we are to be thus critical, who would 'scape whipping? A master printer of my acquaintance once told me that he never knew an author who could spell his own language, and that most journalists relied on the printer to correct those grammatical blunders which can be excused only on the ground of haste.

TERTIUM QUID.

NEWS IN BRIEF.

Mr. V. J. Patel, the President of the Bombay Municipal Council, has resigned.

M. Albert Thomas, Director of the International Labour Office, arrived in Belgrade on December 5 from Sofia, and left for Paris last Monday.

Sir William Manning, Governor of Ceylon, is expected to leave Colombo at about the end of March, for England on leave, prior to his retirement.

The Greek Government has transmitted its thanks to the British Government for the latter's moral support in the issue of the Greek refugee loan.

Mr. F. J. Devar, Scout Master of the 12th Bombay Scout troop, who is making a world tour on his bicycle, expects to reach London at the beginning of January.

Mr. R. Coupland, M.A., Fellow of All Souls, has been appointed a Delegation for Superintending the Instruction of India Civil Service Candidates at Oxford University.

A Danish Egyptologist has identified a bust of an ancient Egyptian, which has for many years been in the New Glyptothek in Copenhagen, as that of King Tutankhamen.

Mr. Charles Howland, a well-known New York barrister who has been actively engaged on reconstruction work in the Near East since the War, has succeeded Mr. Henry Morgenthau as President of the Greek Settlement Commission.

Owing to ill-health Mr. J. P. Thompson, the Political Secretary to the Government of India, is about to take four months' leave. The Viceroy has appointed Lieutenant-Colonel S. B. Agnew Patterson, Resident at Jaipur, to act during Mr. Thompson's absence.

Two recent attempts to smuggle arms into Calcutta have been detected by the Customs. The automatic pistols seized on these occasions were of German manufacture and of the same type as those used in the murder of the Sankaritolla postmaster and of Mr. Ernest Day.

Mr. Harry Dayton, American Vice-Consul at Belgrade, was severely wounded last Thursday by a young Lithuanian woman who fired three revolver shots into the back of his neck. She then committed suicide by opening the veins of her forearm. He, too, has since died.

It is reported that three British airmen, whose names are given as McIntosh, Wigglesworth, and King, are proceeding to Jeddah to fly in the service of King Ali. Mr. McIntosh is well known on Continental air routes. All three are said to be engaged on six months' contracts.

The will of Colonel Arthur Grey, C.I.E., late Punjab Light Horse, of Roland Gardens, Kensington, S.W., barrister, late of the Inner Temple, E.C., and of Lahore, Punjab, India, who was called to the Bar in 1886, practising before the Punjab Chief Court (net personalty £3,707), has been proved at £3,881.

General Weygand, the outgoing French High Commissioner for Syria, left Beyrout last Friday for Franca. Crowds assembled to bid him farewell, including Moslem and Christian deputations from all parts of Syria, and he was carried shoulder high for a great part of the way from the Residency to the quay.

It is announced in Belgrade that the Venice Conference is to be wound up as soon as possible, and it is expected that all outstanding questions between Italy and Yugoslavia will be reserved for discussion when M. Nintchitch, the Foreign Minister, meets Signor Mussolini in Rome during the meeting of the League of Nations.

At Brooklyn Museum workmen were hoisting into position a large marble bas-relief, "The Maiden of Kossovo," by the Serbian sculptor Ivan Mestrovitch, when the stature, which was valued at £10,000, fell to the ground and was broken into four pieces. It is believed, however, that it can be repaired. The statue had been borrowed from the Yugoslav Government.

Mr. Campbell Thompson (78), M.Inst.C.E., of Ivy Chimneys, Mount Sion, Tunbridge Wells, formerly of the India Railway service (net personalty £1,301), left £1,379.

Fra. Raphael Raditch was consecrated last Sunday in Belgrade by Mgr. Pellegrinetti, Papal Nuncio to Yugoslavia, as the first Latin Archbishop of that city. The new prelate, who is a Franciscan Friar, speaks both Serbo-Croat and Slovene.

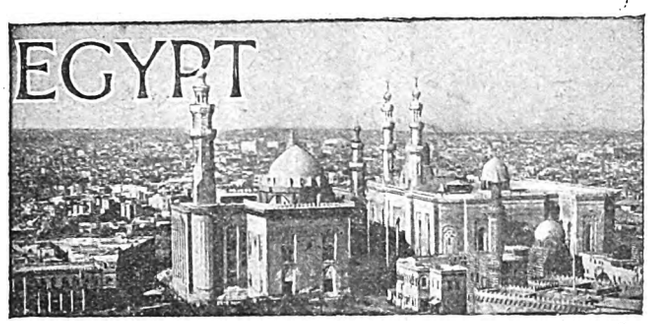
The Near and Middle East.*

From Our Own Correspondents.



Cairo, November 29.

The General Situation.

The situation in Egypt remains very critical. The reply to the ultimatum delivered by Lord Allenby on the day I wrote my last letter having proved unsatisfactory—since the Zaghloulist Cabinet accepted only four out of the seven demands of the British Government—instructions were given to the military authorities to occupy the Alexandria Customs. This was followed by the immediate resignation of Zaghloul Pasha on the ground that his retirement might facilitate a settlement, and at any rate prevent an aggravation of the situation. Within twenty-four hours he was succeeded by Ahmed Ziwar Pasha.

The new Cabinet is having by no means an easy time. The announcement of its formation was generally well received, but this was due more to the sympathetic personality of its president than to confidence in its members, all of whom are newcomers to Cabinet rank, and most of whom are unknown. Its first task, and the one on which it is still occupied, has been to arrive at a settlement which will enable it to accept the British demands and secure the removal of the occupation of the Alexandria Customs.

The points at issue are the recognition of the powers and privileges of the Financial and Judicial Advisers and the status and attributions of the Director-General of the European Section of the Department of Public Security, to whose recommendations upon matters falling within his sphere the Government must give due weight; and the revision of the rules and conditions governing the service, discipline and retirement of foreign officials.

The Arrests.

While the Cabinet was in the midst of its deliberations on these questions there came the arrest by the British military authorities of Mahmud Nekrashi Effendi, Under-Secretary of State for the Interior (appointed by Zaghloul Pasha), whose dismissal had been one of the first acts of the new Cabinet; William Makram Ebeid Effendi, a Deputy, who has throughout preached active hostility to the British; and Abdul Rahman Fahmy Bey, another Deputy who has gained notoriety, first, owing to the sentence to death passed on him by a Military Court in 1920 for organising murders of British officers and officials, and, secondly, owing to his recent assumption of the leadership of the Egyptian Labour movement.

These arrests were operated by the military authorities for very special reasons. Information had been received of a conspiracy against very high British officials. This information indicated that at any moment an outrage might be attempted. The three men in question had long been regarded as the prime-movers and possibly the organisers of the outrages committed of recent years. There was reason to believe, from their recent activities, that they were not unconnected with this conspiracy, and possibly with the Stack assassination. They were known to exercise considerable influence over the element from which the gang of assassins was certainly drawn. It was eminently desirable, in fact imperative, not only as a precaution, but also to permit of the investigation being able to prosecute its inquiry without interference, that they should be put under restraint. It was doubtful, in the light of past experience, whether the Egyptian authorities would carry out their arrest in the manner which the situation demanded, and so, although their intervention would be, to say the least of it, arbitrary, it was agreed that, to avoid any risk, their arrest should be made by the military authorities.

As soon as the news of the arrest became known the Cabinet felt compelled to take action. It made representations to the Residency, and on its undertaking to deal with these three men according to Egyptian law, they were handed over to the custody of the Egyptian Government. Next day, as a complementary measure, the Government itself effected the arrest of thirty-five persons implicated in one way or another in the investigations, among them four more Deputies.

The arrest of these six Deputies raised an outcry in the Zaghloulist and Opposition Press on the ground that this was a violation of the Parliamentary privilege they enjoyed under the Constitution. To this it was objected that as the King had suspended Parliament for a month their immunity likewise became suspended, and the question is at the moment of writing being argued before the committing magistrate.

Egyptian Troops and the Sudan.

Another incident that happened during the week also added to the troubles of the Cabinet. This was the order sent by the Minister of War to the Egyptian troops in the Sudan to obey the Governor-General and peaceably to allow themselves to be repatriated to Egypt. One of the conditions of the ultimatum had been that all the Egyptian

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Palestine, Iraq, and Persia.

officers and Egyptian units in the Sudan should be evacuated, and as the Egyptian Government had refused to agree to this, the British Government had sent instructions to the Sudan Government to execute the evacuation. The artillery at Khartoum, however, refused to budge, and telegraphed the Egyptian Government that it was going to resist. Realising that useless bloodshed would ensue, the Cabinet authorised the Minister of War to send a special messenger to Khartoum with a message to the Egyptian troops to the effect that they must submit to being repatriated.

Press Criticism.

All these incidents have been seized upon by the Zaghloulist and Opposition Press as an excuse for attacking the Cabinet. The criticism levelled at Ziwar Pasha and his colleague is, to say the least of it, unfair and unjust, and particularly does this apply to the Zaghloulists. The latter admittedly retired from government so as not to aggravate the situation, but simultaneously they have, in fact, not left one stone unturned to render impossible the settlement which they know is absolutely essential to the welfare of their country. They certainly did not display any patriotism when they forsook the helm at one of the most critical moments their country has experienced during the past forty-two years, and the manner in which they are assailing those who have intervened in order to steer the ship of State into a safe harbour merely serves to confirm the impression that one has always had that Zaghloulism is the antonym of patriotism.

Ziwar Pasha and his colleagues are certainly faced with an exceedingly difficult position. Whether they will succeed in weathering the storm it is impossible to foresee. If, unfortunately, they should fail, the catastrophe which will follow will clearly be one of their making, but they will have, at any rate, made a sincere and courageous effort to save the situation, and so will have a claim on their country's gratitude which the Zaghloulists, on the other hand, have forfeited.

BULGARIA.

Sofia, December 3.

Distinguished Visitors.

Bulgaria has been entertaining several well-known foreign politicians and statesmen. Foremost amongst them is M. Albert Thomas, Director-in-Chief of the International Labour Office. M. Thomas, who was Minister of Munitions in France during the War, came to Sofia at the invitation of the Government in order to study labour and social problems at close quarters. It is well known that Bulgaria has always been foremost in adhering to the various covenants passed by the International Labour Office, and for this reason, if for no other, M. Thomas was a welcome visitor.

It is understood that M. Thomas also manifested great interest in the problem of Macedonian refugees, which has of late been causing serious embarrassment to both the Bulgarian and Greek Governments. These unhappy people continue to cross from Greece into Bulgaria and *vice versa*, and as severe winter weather prevails their condition is most serious. Another visitor has been the French Senator Reynauld, who occupies the position of Vice-Chairman of the Foreign Affairs Committee in the French Senate. M. Reynauld made an exhaustive tour of Bulgaria, and gave two lectures; one on "The Work of the Fifth Assembly of the League of Nations" and one on "The Pacific Aims of France." Both lectures attracted crowded audiences, H.M. the King being present.

Congress of Reserve Officers.

This Congress was held last week and broke up, it is understood, under most satisfactory auspices. The reserve officers, of course, are a most important factor in Bulgarian affairs. Their influence is great, and it was they who stage-managed the *coup d'état* which overthrew the Stambolisky Government in June, 1923. At their recent Congress it is said that the mass of those present were, however, opposed to any immixing of officers in political matters. It was decided that while the League should keep a careful eye open for any intrigues on the part of the subversive elements amongst the Agrarians and Communists, its main duty must be to support the Government without in any way interfering with it.

PERSIA.

Teheran, November 8.

The Imbrie Murder.

Two more executions, making three in all, in connection with Major Imbrie's murder took place last Sunday, when two of the ringleaders in the attack were shot, one of them being the Seyed, who had more than anyone else incited the crowd to commit the murder by shouting out the ridiculous and, of course, false accusation that the water in the drinking-fountain had been poisoned. It was, however, only with the utmost difficulty that the American Chargé d'Affaires was able to have the executions carried out, for it was well known that the Persian Government was very averse from imposing the death penalty on the prisoners, and was doing its best to avoid doing so. The Chargé d'Affaires was informed that the accused men had been sentenced to imprisonment for life and would not be executed, whereupon Mr. Murray delivered a stiff Note to the Government, amounting practically to an ultimatum, to the effect that if the executions did not take place within sixty hours, diplomatic relations between the two Governments would be endangered. In fact, so serious did matters look that the new American Consul and his wife, who had reached Kazvin on their way to take the murdered Consul's place, received instructions from their Legation here not to proceed further, and accordingly returned to

Hamadan on their way back to Smyrna. The Persian Government ultimately gave in, and the executions took place in the presence of representatives of the American Legation, Mr. Murray himself examining the prisoners to satisfy himself that the guilty ones did not escape and that no substitutions should be made at the last minute. The firing-party consisted of 200 men, so it is not astonishing that the victims' bodies were literally riddled with bullets.

The Situation in Arabistan.

Relations between the Sheikh of Mohammerah and the Central Government have for some months past been very strained, and shortly after Sardar Sepah assumed the Premiership Sheikh Khazal telegraphed to the Mejliss that, though loyal to the Shah, he did not recognise the present Government under Sardar Sepah, to which the President of the Parliament replied that the latter's Cabinet as at present constituted had the full confidence and support of the National Assembly, and anyone not recognising it must be treated as a rebel. Negotiations have, however, been carried on, and still continue, between the Sheikh and the Government, and it is hoped that the former will be induced to abandon his defiant attitude, and that the negotiations will result in peace being restored between the two parties and the possibility of open warfare thus avoided. As a precautionary measure, however, the Minister of War dispatched from here to Ispahan a fortnight ago a force of some 1,800 men, fully equipped with artillery, field-kitchens, hospitals, and so forth, and the completeness of this equipment and the condition of the men speak well for the thoroughness with which the Persian Army of to-day has been reorganised as a fighting force. Reports of encounters between Government troops and the Sheikh's Arab tribesmen come through periodically, and it is significant that the Minister of War left Teheran hurriedly last Wednesday for Ispahan with his staff, in connection, it is said, with an engagement near Behbehan, where the Sheikh is said to have some 8,000 troops. Sardar Sepah evidently wishes to be in closer touch with the situation, and has announced his intention of leading his troops himself if necessary.'

Salar ed Dowleh, uncle of the present Shah, arrived in Ahwaz at the beginning of October and was received by the Sheikh of Mohammerah, but at whose invitation or on whose behalf he has returned to Persia is not clear. It will be remembered that Salar ed Dowleh has been living in Switzerland as an exile since the failure of the attempt of his brother, the ex-Shah, Mohamed Ali Mirza, to regain the throne in 1911, when a price of £5,000 was placed on his head by Mr. Morgan Shuster, the American Treasurer-General; but the Persian Government is said to have invited him to return to Persia last summer, after the unsuccessful agitation in favour of a Republic. Salar ed Dowleh has now returned to Baghdad.

Structural Changes in the Town.

For the past week the town has presented a truly extraordinary spectacle, at least in the two principal thoroughfares, the Ala ed Dowleh and Lalezar Streets. For some time past the Municipality have set their minds on pulling down (whether for the sake of safety, convenience, or for any other consideration it is difficult to say) any sort of covered-in archway jutting out over the street or pavement, supported by pillars, which have always been such common sights in the town, and the proprietors of such shops or houses were given the option of either demolishing the offending structures themselves or of having this done for them. No one seemed to consider the matter seriously, and, no notice having been taken of their repeated warnings, the Municipality decided to take matters into their own hands. Last week, therefore, the streets which in the morning wore their normal aspect were by the afternoon thick with the dust of falling masonry and littered with bricks and wreckage of all sorts, mixed with twisted telephone poles and wires; and the covered-in colonnade along the east side of the Lalezar, which has always been such a noticeable feature of the street, lay at the tender mercies of the housebreakers, who had not wasted much time in demolishing the roofs and tearing down the pillars, till in the evening the whole street looked like nothing so much as the abomination of desolation! Anyone new to the town would have been justified in thinking it had been subjected to a heavy bombardment or been the scene of a violent earthquake. There must be, one supposes, some good reason for it, and the streets may look better when all is finished, but so far I have met hardly anyone who has had a good word to say for such apparently wanton destruction, which has indisputably caused a tremendous amount of damage to property and loss to private individuals; and it is, therefore, no wonder that the Municipality authorities are not at present in very good odour with the proprietors of houses and owners of shops throughout the town. This ruthless demolition of property (in a good many cases rooms overhanging the streets have been cut completely in two and left exposed to the mercy of the elements) in the perhaps praiseworthy attempt to Westernise an Eastern capital may be highly commendable, in view of the spreading march of civilisation, but there is no doubt that it is very effectively destroying the admitted charm of the East, which is said to be unchangeable, but which is nevertheless changing so rapidly, even in remote slow-moving Persia. (It was rather refreshing to reflect on the very day that this demolition was taking place that a Conservative Government had been returned at home with an overwhelming majority!) The next step in the municipality's programme is, I am told, to cut down, for no apparent reason, all the trees in the main avenues of the town, which, apart from the actual coolness and welcome shade they impart during the hot summer months, lend the streets a distinctive picturesqueness and charm which none but the veriest vandals would wish to do away with.

Football.

Last week football matches were played on Drill Square, three mixed Persian and Armenian teams and a British team participating. In the first round the British XI.

beat a Persian military team, and were also successful in the final against a team representing "The Association of the Young Men of Persia," consisting mostly of past scholars of the American College. This school, run in conjunction with the American Presbyterian Mission, has perhaps done more than anything else to foster football and other sports in Teheran, and it is rather extraordinary to think that whereas only a few years ago football was practically unknown among the natives, it has now got a strong hold on them, and is played with quite remarkable keenness by Persians and Armenians alike; and, in fact, a Football Association was inaugurated two years ago, and several teams compete each winter for a presentation silver challenge cup.

CYPRUS.

Nicosia, November 18.

Island Progress.

Hopes are expressed that Cyprus may share in the financial encouragement which the British Government seems prepared to give to well-considered schemes for the development of Empire resources throughout the King's dominions. The *Phone tes Kyprou* is voicing these hopes in leading articles. That much could be done in the field of agriculture there is no doubt—*e.g.*, in cotton, silk, flax, and fruit cultivation. But in any schemes for improvement nothing can be done without more energetic co-operation by the Cypriots themselves for their own good. Unfortunately, to take one branch of agriculture, a project for the expansion of sericulture, which has been occupying so much attention lately—since the visit of Mr. Le Breton—and which might do much for a promising and profitable industry, instead of meeting with encouragement on the part of the very persons who should be the first to promote it, is meeting with opposition. This being so, the scheme is hardly likely to be carried through. On the other hand, there are some signs of progress. One is the establishment of a factory for the preparation of dried figs, in which the island might develop a remunerative business, and export figs almost equal to those of Smyrna. Prospects for agriculturists are favourable. There have been some good rains, and the torrents have brought down their fertilising soil to the central plains. There is, however, a considerable shortage of seed corn. Bodies of villagers have waited on the High Commissioner to ask that advances may be made on easy terms from the Government tithe grain stores. In many parts of the island the people are too poor to borrow from merchants, and it is hoped that Government will issue corn in a spirit of liberality to all needy agriculturalists.

The Late Chief Justice.

The departure of Sir Stanley Fisher, who has left Cyprus to take up his appointment as Chief Justice in Trinidad, is universally regretted. No British judge has perhaps endeared himself to the Cypriots so much during many years as President of a District Court, as Puisne judge, and as Chief Justice. The legal body desired to give a banquet in his honour; but although Sir Stanley was unable to accept an invitation, he received members of the Bar and other friends in the Law Court, where homage was rendered to his uniform justice, impartiality, and many good qualities. His successor is expected shortly. The Greeks have long desired that native judges, both Greeks and Turks, should be eligible for the offices of Puisne judge and King's Advocate, and the rumour is current that this privilege is to be now conceded. This is probably premature, but there is now a considerable number of Cypriots, both Greek and Turk, who have been called to the Bar in London. Mr. Thomas has been appointed judge of the Kyrenia Court and additional judge at Nicosia.

Crime in Cyprus.

There seems to be little, if any, diminution in criminal offences, notwithstanding the fact that the death sentence is carried out under British rule, whereas under Ottoman Government there had not been a case of execution for about thirty years, as cases of manslaughter and premeditated murder were compounded on payment of "blood money." Several murders and serious crimes not having been brought home to the perpetrators recently, a Nicosia paper suggests that the detective element in the Police should be strengthened and receive special training. The Cyprus police, under its British officers, is an excellent body, with able native Inspectors, and N.C. officers of both races, Greek and Turkish. It has, however, always been handicapped by the great reluctance of the people to come forward and give evidence, especially in murder cases, owing to the fear of retaliation.

WOMEN'S HOSPITALS.

The annual meeting of the Scottish Women's Hospitals Association of the Royal Free Hospital was held on November 29 at the hospital. Lady Ossulston, who presided, announced that the Duchess of York had consented to become president of the association. The main source of its income was the St. Andrew's Eve Ball, which last year brought in £605. A "British Macedonian Expeditionary Force" bed was about to be endowed by the association, over £1,000 having been raised; and the association was now anxious to endow a third bed, to be called the "Elsie Inglis" bed, after the founder of the association.

The Duchess of Atholl, M.P., described the heroic work done by the Scottish Women's Hospitals in the War in Serbia, and the courage shown by Dr. Elsie Inglis and Evelina Haverfield.

Mme. Grouitch, whose husband was the Serbian Under-Secretary for Foreign Affairs when war broke out in 1914, said the name of the Scottish Women's Hospitals Association would be for ever remembered in Serbia. Miss Etta Inglis, Lady Petrie, and Lady Barrett were among the subsequent speakers.

Sir Leslie Wilson, Governor of Bombay, and Lady Wilson made a State entry into Karachi on December 7.

The Archbishop of the National Council of Cyprus has, according to the Greek Press Bureau, invited Mr. Asquith to visit Cyprus.

A Belgrade message states that a train was derailed between Veles and Shtip, in Serbian Macedonia, last Saturday, and fifteen persons were injured. The accident is believed to have been deliberately caused, and an inquiry has been opened.

Messrs. Coutts and Co., bankers of the British Red Crescent Society, have received, among other donations for the Riff Medical Relief Fund, £100 from the Ruler of Bhopal, £50 from the Aga Khan, £25 from Izzet Pasha, and £10 from Mr. H. Gurney.

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.

Founded in 1911 to study all questions of common interest to Great Britain and Persia.

Subscription £1 per annum. Further particulars may be obtained of the Honorary Secretary, 74, Grosvenor St., W.1.

THE ANGLO-EGYPTIAN ASSOCIATION.

An extraordinary general meeting of the Anglo-Egyptian Association was held on December 3 at the Royal Colonial Institute (by permission). The assembly expressed their extreme detestation of the series of murders and attempted murders of British officials in the service of Egyptian Government which have culminated in the murder of General Sir Lee Stack.

The Right Hon. General Sir John Maxwell, G.C.B., K.C.M.G., was elected President of the Association.

There is a rapidly increasing membership of retired British officials of the Egyptian Government. The Association is now open to British subjects other than officials who have interests in Egypt or the Sudan.

The Hon. Secretary and Treasurer is J. F. G. Hopkins, Esq., O.B.E., and offices of the Association 12, Holborn Viaduct.

COUNCIL.

President.—Right Hon. General Sir John Maxwell, G.C.B., K.C.M.G.

Vice-Presidents.—Brig.-Gen. Sir G. F. Clayton, K.B.E.,. C.B., C.M.G., Colonel H. G. Lyons, F.R.S., and A. F. MacCallan, Esq., C.B.E., F.R.C.S.

Hon. Vice-Presidents.—H.E. General Sir Walter Congreve, V.C., K.C.B., Major Hon. W. Ormsby-Gore, M.P., and J. A. Spender, Esq.

Hon. Treasurer and Secretary.—J. F. G. Hopkins, Esq., O.B.E.

MEMBERS.

Sir E. M. Dowson, K.B.E., C. E. Dupuis, Esq., Col. Cathcart Garner, C.M.G., C.B.E., A.M.S., G. H. Griffith, Esq., O.B.E., S. C. Hebard, Esq., Rev. C. T. Horan, J. Langley, Esq., C.B.E., Major J. S. Liddell, C.M.G., D.S.O., A. T. Loyd, Esq., O.B.E., Sir Murdoch MacDonald, K.C.M.G., R. O'Donoghue, Esq., D.S.O., A. E. Robinson, Esq., T. D. Scott, Esq., M.C., R. E. Monteith Smith, Esq., P. Swan, Esq., Lieut.-Col. J. K. Watson Pasha, C.M.G., C.V.O., Leo Weinthal, Esq., C.B.E., F.R.G.S., L. B. Weldon, Esq., M.C., and H. W. Vaughan Williams, Esq. (Five vacancies.)

EXECUTIVE COMMITTEE.

Chairman, A. F. MacCallan, Esq., C.B.E., F.R.C.S.; S. C. Hebard, Esq., Colonel H. G. Lyons, F.R.S., R. O'Donoghue, Esq., D.S.O., P. Swan, Esq., J. F. G. Hopkins, Esq., O.B.E., Major J. S. Liddell, C.M.G., D.S.O., and T. D. Scott, Esq., M.C.

In the course of his address, the Chairman said:—"It is well known to all the members of this Association that it is an offshoot of the Association of British Officials in Egypt, an organisation which has rendered great services to its members there by advancing their claims and putting forward their points of view in negotiations having reference to the conditions of their service and of retirement. At a meeting of the Association of British Officials in Egypt which was held on September 26, 1923, it was decided to form an Anglo-Egyptian Association of Past and Present British Officials with the object of safeguarding the interests of those who had left Egypt on the termination of their service there.

"As laid down in the constitution which was then drawn up, and is reproduced in the new statutes, the Association aims at keeping in touch with those who have settled in Great Britain, Ireland, or abroad, as well as with those who may be still in Egypt. By maintaining close communication with the Association of British Officials this Association will be always informed of the trend of events in Egypt, and will be in a position to take any steps that may be desirable in order to safeguard the interests of its members. Moreover, it forms an organised body which, through its Council, will be in a position to put forward the views of the various grades of ex-officials among its members, and to draw attention to any conditions which may enact unfairly upon any particular group or individual.

"The Association may, it is hoped, be in a position before long to render assistance to any of its members who are desirous of finding employment by bringing to their notice such vacancies as may exist in the colonial services or elsewhere.

"At the same meeting of September 26, 1923, eight members were nominated to form an Executive Committee, and this Committee has held eight meetings since the spring, when the first meeting was held. Several letters have passed between the Committee and the Foreign Office on matters relating to pensions, the principal points urged by the Committee being the reference of all pensions to a gold standard, and for some guarantee for the regular payment of them in the future.

"The experience of the past six months has shown that certain of the rules of the original constitution might with advantage be amended, and that others are no longer operative. The Executive Committee has therefore prepared the draft of the new statutes which is now before you, and of which copies have been circulated to all members of the Association.

"The principal change which the Committee propose is that the affairs of the Association should be entrusted to a Council which will be elected annually by the members at the annual general meeting, and that the Executive and other Committees shall be nominated by this Council to which they shall be responsible.

"There are a few other minor changes, and with these the proposed statutes will provide the means for administering the Association efficiently in the interest of its members."

SCHOOL OF ORIENTAL STUDIES, LONDON INSTITUTION
(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to THE SECRETARY.

King Fuad on December 3 gave an audience to Lord Allenby, who presented Mr. Nevile Henderson, who was recently appointed Counsellor to the High Commissioner in Egypt, with the rank of a Minister Plenipotentiary.

Air Vice-Marshal Sir Sefton Brancker, Director of Civil Aviation, who is flying to India, arrived in Constantinople from Bucharest on December 5. He was the guest of Mr. Lindsay, the British Diplomatic representative, during his stay in Constantinople.

The King has been pleased to approve of the award of the Medal of the Civil Division of the Order of the British Empire to Fred Hamilton March, chauffeur to the late Major-General Sir Lee Oliver FitzMaurice Stack, G.B.E., C.M.G., for gallantry.

The Times Khartoum correspondent reports that a Court Martial held in Khartoum on December 3 sentenced to death four officers involved in the mutiny in the 11th Sudanese on November 27. One of the officers was an instructor at the School of Musketry, and the others were attending a course there. The sentences of three of them were confirmed, and they have been shot. That of the fourth was commuted to fifteen years' imprisonment.

Prince Paul of Greece left London on December 7 for Paris.

Sir Frederick and Lady Evans left London last Friday in the P. and O. s.s. Morea for Port Said.

Miss Megan Lloyd George arrived in London last Saturday evening, after nearly a year's stay in India.

Prince and Princess Arthur of Connaught left London last Thursday for India, and will be away for four months.

The Rt. Hon. H. H. Asquith returned to Cairo from Palestine last Thursday, and left for Luxor the following day.

Dr. Douritch, the Yugoslav representative of the Reparation Commission, returned to Paris last week from London.

Major-General Sir Torquhil and Lady Elizabeth Matheson arrived last Saturday at Russell's Hotel, Curzon Street, from India.

Lady Wilson, the wife of Lieutenant-Colonel Sir A. T. Wilson, has given birth to a son, at Morris Lodge, Lower Bourne, Farnham.

The Library Committee of Cambridge University have appointed Mr. H. M. J. Loewe, M.A. (Queen's), to be Curator in Oriental Literature for six months.

The Egyptian Minister, who intended to leave London on December 8 for the Continent, has postponed his departure in consequence of the illness of Mme. Aziz Izzet Pasha.

Lady Stack, widow of the late Sirdar, Major-General Sir Lee Stack, arrived last week in Exmouth, and is staying with her mother, Mrs. Moodie, at Louisa Terrace.

Lord and Lady Cable have booked their passages on the P. and O. s. Paldera, which leaves Marseilles for Bombay on January 2. They will not return to England before the end of March.

Mme. Yovanovitch, the wife of the Consul-General of the Kingdom of Serbs, Croats, and Slovenes, returned to London on December 4 from Italy. M. Yovanovitch is visiting Belgrade.

Vice-Admiral Sir Richard Webb, chief of the Naval Mission to Greece, left London last week for Athens, where he arrived on December 6, accompanied by Lady Webb and members of his staff.

Announcement has been made that Colonel F. H. Kisch, C.B.E., D.S.O., Director of the Political Department of the Palestine Zionist Executive, has accepted the invitation to visit the United States in the interests of the Jewish reconstruction work in Palestine, especially the Keren Bayesod, or Palestine Foundation Fund. Colonel Kisch left Jerusalem at the beginning of December, and is returning about the beginning of March.

Major A. W. D. Bentinck will lecture on "The Assyrians" (with lantern illustrations) before the Central Asian Society at the Royal United Service Institution, Whitehall, S.W., to-morrow (Friday) at 5 p.m.

M. Titulesco, the Rumanian Minister, has returned to London from the Continent. He attended a meeting at the Treasury last Monday to discuss various financial questions concerning Great Britain and Rumania.

Mahmoud Sabet Bey, First Secretary at the Egyptian Legation, and Mme. Sabet, left London on December 3 for Cairo. They were accompanied by Miss Elizabeth Downes, the daughter of Sir Arthur and Lady Downes, who is going on a visit to her aunt, Viscountess Allenby.

Sir Edward and Lady Beauchamp, Sir William and Lady Hale-White, and Sir Robert Highet left London last Thursday by the P. and O. Bombay express to join the P. and O. s. Caledonia at Marseilles. Lady Cruise and Admiral Sir Guy Gaunt embarked at Marseilles for Bombay.

The engagement is announced between Colonel Sydney Frederick Muspratt, C.S.I., C.I.E., D.S.O., A.D.C., son of the late Henry Muspratt, I.C.S., and Rosamonde, youngest daughter of Lieutenant-Colonel Sir Edward Barry, Bt., and the late Lady Barry, of Ockwells Manor, Bray.

Colonel Ion Antonesco, Rumania, and Colonel de l'Etat-Major Georges Ostoitch, Kingdom of the Serbs, Croats, and Slovenes, were among the foreign military attachés who received an invitation to a luncheon given at the Carlton Hotel on December 2 by the Secretary of State for War, Sir Laming Worthington-Evans.

The marriage of Sir Henri Wilhelm August Deterding, managing director of the Asiatic Petroleum Company, took place on December 4 at the St. George's District Registrar's Office, Princes Row, Buckingham Palace Road, to Mrs. Lydia Pavlovna Bagratouni. There were present at the ceremony two of the sons of the bridegroom, Mr. H. Deterding and Mr. R. Deterding. Afterwards Sir Henri and Lady Deterding left for the East Coast.

THURSDAY, DECEMBER 11, 1924.

STEADINESS IN EGYPT.

We cannot forbear expressing relief at the masterly way in which the Egyptian crisis has so far been handled. The Government at home and the British authorities in Egypt have acted with decided sapience, so that the matter now tends to assume a normal aspect. For what has been officially done there is, in short, little but praise. But there are disquieting signs that hysterical elements in London may attempt to force the pace at which the Government intends things to develop in Egypt. It appears that, on the advice given by Lord Allenby to the Cabinet, very necessarily, but at the same time only as a warning to cover the worst conceivable contingencies, to the effect that Egyptian plots existed to kill certain of our Ministers, sections of the Press had to go about, in the manner of Moscow sheets, screaming the wildest headlong cries. One might have thought from the appearance of the less responsible organs in London, which, nevertheless, have, especially in relation to foreign affairs, their moulding effect on public opinion, that since the assassination of the Sirdar every Egyptian, particularly every Egyptian in this country, had become a potential murderer. It was a most lamentable exhibition of hysteria, calculated to do Great Britain generally, and in this case of Egypt in particular, serious harm.

It is true that official efforts were made to minimise the effect that the exposure of this so-called plot had caused. The stigma, however, remains. If only certain journals would stop a minute to think—a change of habit which, though violent enough, could be easily accomplished—they might realise that it is these same Egyptians whom they now reproach as potential assassins upon whom the future governing of Egypt depends. Great Britain is not to govern Egypt: government of that country depends wholly and always upon the co-operation of the Egyptians. Whether the Press outburst last week concerning the Nationalist "murder-gang" has made any easier the already very difficult task of the British in Egypt in securing Egyptian collaboration may best be imagined. But if our hysterical sheets have no time to reflect on the possible reactions in Egypt and elsewhere of their stupid "stories," perhaps they might recall that our Intelligence Service, or Secret Service, which is the finest in the world, works best in secret. If they do not already know it, we can assure them that there is precious little that goes on in Cairo or anywhere else in Egypt that is not immediately made known to the London authorities. Even the wildest statements of Egyptian Nationalists, such as the asserted fact that one had two or three British Cabinet Ministers in his pocket, are duly collated. All such plots and intrigues can safely be left to the proper authorities. For the Press to chime in and to attempt to stir up opinion against a mass of people, most of whom must necessarily be innocent, savours too much of a short-sighted endeavour to justify in the most wrong way possible the recent actions of the British authorities. Steadiness is the virtue which is needed above all others now: panic is the worst vice into which we could decline.

EDUCATION AND POLITICS IN THE BALKANS.

To the observer of Balkan politics the baneful uses to which University education is frequently perverted is one of the most discouraging signs. Instead of being homes of enlightenment, inculcating the virtues of tolerance and of intellectual persuasion, Universities in Greece, in Bulgaria, and in Roumania have too often been the theatre of the displaying of most intolerant and partisan activities. Learning is, in short, at places like Athens, Sofia, and Jassy, sometimes made the sport of politics. And while this state of affairs endures, neither the Balkan professor nor the Balkan politician will be respected as he otherwise deserves.

It is regrettable to have to include in this lament Yugoslavia, the youngest of the Balkan States. But at Belgrade last week, it seems, an attempt was made to seize upon the dismissal of two Zagreb professors as the signal for an anti-Government outburst. Communist students are said to have been the principal agitators against the forces of order, and, although the incident in itself was perhaps negligible, it was, in view of the forthcoming elections, significant enough. In this connection we do not, of course, hold a brief either for the Pashitch-Pribitchevitch Government or for their opponents in Croatia; what we do wish to emphasise is the tendency of Balkan Universities to become, in times of excitement, miniature Al Azhars. That this is a decreasing tendency is probable, for the visits of Balkan students to Continental Universities, and especially to English Universities, are having a very good effect. Such students at Oxford and Cambridge will have seen, for example, that the recent elevation to office of the Labour Party was in essence an elevation of the University-trained Labour brain, for it is equally certain that the Labour Party could not have attained its prestige without its "intellectuals," and that, unless its "intellectuals" had pursued constitutional methods, the Party would not have enjoyed even its brief spell of office. To subordinate learning to politics, more especially to violent politics, is one of the vilest prostitutions, and, as the history alike of England and of Egypt shows, deservedly unremunerative. There is much to be said for the view that Egypt without her young students would be a happy country; and if the Belgrade student attempts unlawfully to divide the Croat peasant from the Serb, content will hardly descend upon Yugoslavia.

THE HEJAZ RAILWAY.

By MAJOR E. W. POLSON NEWMAN.

Now that the eyes of the whole Moslem world are turned towards the Hejaz, and the fate of that country, so closely linked with the welfare of the Holy Places of Islam, is at the present moment in the "melting pot," attention is drawn to an important factor which plays a powerful part in the destiny and interests of that country—namely, the Hejaz Railway. This factor in the situation seems to have been somewhat overlooked, partly due, no doubt, to the difficulty of restoring its war-shattered condition, and partly to the unsettled state of the country through which it passes, making its repair much more difficult than that of railways in ordinary devastated areas. A brief account of its construction, present condition, and future prospects may, therefore, be of interest at the present time.

The idea of building the Hejaz Railway germinated in the mind of Izzet Pasha El A'abed, of Damascus, Second Secretary to H.M. Sultan Abdul Hamid Khan IInd of Turkey, who was greatly attracted by the brilliant prospect of rendering a unique service to the Moslem world by facilitating the pilgrimages to the Holy Territory of the Hejaz, which had hitherto been undertaken by means of camels, thereby incurring much risk, expense, and loss of time. The new scheme held out the prospect of bringing the Holy Places of Islam within easy reach of all classes of true believers, and of thus creating a strong feeling of gratitude and attachment towards the ruling house of Turkey, the Khalifs of Beni Osman.

As the Sultan was also fully alive to the advantages of establishing an efficient means of transport with the Hejaz and making it an integral part of the Turkish Empire, he sanctioned the enterprise in 1897, and ordered its execution forthwith. The necessary funds were raised by subscriptions which were most liberally given by all Moslem nations, and by the imposition of the Hejaz Stamp Duty, which in the year 1910 alone produced no less than 270,000 Turkish pounds. The first contribution towards the fund was made by the Sultan himself, and amounted to 200,000 Turkish pounds, which was used for the purchase of rails. These bore the inscription: "Of the bounty of Our Lord Commander of the Faithful, Abdul Hamil Khan, may his victory prevail."

A military force of six battalions of infantry, consisting of both skilled and unskilled labour, was raised to help in the construction of the railway, and the work was carried out under the control of the Hamidieh-Hejaz Railway Board, with Kazim Pasha as President.

The work was started at Mezerib, the terminal station of the D.M.P. line, and situated in the Hauran district, 90 kilometres from Damascus, towards Deraa, at which point the line branched northwards in the direction of Damascus and southwards to Amman, Maan, and Medina. The Hejaz Railway Board contracted through the D.M.P. for the purchase of locomotives and rolling stock, but it very soon became apparent that the cost of transport was too great, and that it was essential for the railway to construct a line to the port of Haifa. In 1902 the line was completed and put in operation from Damascus to Amman, and in 1904 it had reached as far as Maan, while the line to Haifa was opened in the same year. Medina was reached in 1907.

Large numbers of pilgrims came from all parts of the world to perform the Holy Pilgrimage, and from 1907 till 1910 the line flourished and prospered. In 1912 the Hejaz Railway commenced the construction of the Afule-Jenin-Nablus-Jerusalem line, which was completed in 1914 as far as Nablus.

In 1913 the Hejaz Railway had reached a highly satisfactory state of organisation. A tri-weekly passenger and bi-weekly goods service, as well as a weekly express service with dining and sleeping accommodation, were run from Damascus and Haifa to Medina, and the latter journey was performed in forty-eight hours.

With the outbreak of War in 1914 the railway was taken over by the Turkish Ministry of War, and all plans for extensions, and so on, had to be put aside to give place to military transport requirements, and all the material collected at Medina, for the continuation of the line to Mecca, was utilised during 1914 and 1916 for the construction of the following military railways:—

1. Messoudieh-Surar-Bir Sabe'-Hafiratul Awja.
2. Tina-Gaza.
3. Widening of the Jaffa-Jerusalem line from 100 centimetre to 105 centimetre gauge.

This work was carried out by the German engineer Meizner Pasha, and completed in 1916-17.

The occupation of Palestine and Syria after the War, and the acceptance of the British Mandate for Palestine and Transjordan, necessitated the repair of such portions of the Hejaz Railway as fell within the areas of these countries. The Afule-Jenin and Haifa-Deraa sections offered no great difficulty, as Lord Allenby's advance had been so rapid that the Turks in their flight had no time to damage the line seriously; but the section passing through Transjordan and south thereof required very considerable repair, as both the British forces from the north and the Emir Faisal's army advancing from the south had blown up most of the bridges, and vital parts of the line. In September, 1921, the Palestine Railways, at the request of Mr. St. J. Philby, Chief British Representative at Amman, started to open up and operate the section to Maan. The first through train ran about two months later, and a regular weekly service was inaugurated.

From April 1, 1922, the Transjordan and Hejaz sections of the railway were separated from the supervision of the Palestine Railways, and were worked as an undertaking of their own, with a view to ultimately opening up the continuation through to Medina, from which point the repair of the southern section was commenced under the direction of the Emir Ali (now King Ali of the Hejaz). The first through train to Medina ran in June, 1923, carrying out repairs on its way.

During the rainy season of that year work had to be stopped altogether, but in the following January two through trains from Medina, conveying the Emir Ali and his party, arrived at Maan, where they picked up King Hussein on his way from Mecca to Amman. In April it was decided that the Haifa-El Hammeh, Afule-Jenin-Nablus, and Haifa-Acre branch line portions of the Hejaz Railway in Palestine, already operated by the Palestine Railways, together with the Nessib-Maan section of the Hejaz Railway, should be operated under the supervision and help of the Palestine Railways, but should maintain separate accounts. The section from Maan to Amman (exclusive) was temporarily allowed to remain in the southern section under the direction of the Emir Ali.

By May repairs to the southern section had sufficiently advanced to permit the running of pilgrim trains through to Medina, and between May and September over 4,000 pilgrims were carried over the line. Indeed, a much greater pilgrim traffic could have been carried had the southern section been in possession of sufficient engine power and stock to deal with it, and had it been more widely

Digitized by Google

known that the line was open right through to Medina. Therefore, it is intended that for the present all profits of this railway should go towards the improvement of the line and the purchase of more rolling stock. The railway is considerably hampered by the fact that the very limited rolling stock in running order is in the possession of three different administrations; for, in addition to the working arrangements with the Palestine Railways previously mentioned, the sections from Damascus to Deraa and from Deraa to El Hammeh are controlled and worked by the French, who have the large engine sheds and workshops at Damascus, the old headquarters of the administration.

At the present time the sections administered by the Palestine Railways are being worked with success and profit, and it is anticipated that in the near future the section of the line, which runs through Transjordan, will also come under Palestine control. The Palestine Railways, with their experienced staff and facilities for repairs, are in a position to restore and work advantageously the Hejaz Railway, which has before it perhaps a greater future than its creators ever realised; and it would seem a wise step if the Supreme Moslem Council, who may decide on the future of the working of the Medina section, were to consider well the advisability of placing its administration temporarily in the hands of the Palestine Railways, and thereby give it the opportunity of a really good "start in life." The Medain-Saleh-Medina section, which is open only to Moslems, could be controlled by a capable Moslem staff, which the Palestine Railways would have no difficulty in providing.

It is expected that the Moslems of India, who far outnumber their brethren in other parts of the world, will use the railway much more in the future than they did in pre-War days, owing to the fact that the opening up of the route via Basra and Baghdad by rail and motor-car places the Hejaz line, with its connections to Medina and Jerusalem, much more within their reach.

It is understood that there is every intention of improving the caravan route between Maan and Akaba, and of starting a motor service between these two points. This, together with regular steamer sailings between Akaba and Jeddah, should make the combined rail and steamer service a popular one for pilgrims. They can break their journey at Amman, where it is intended to open a comfortable pilgrim hostel, and those who wish to visit Jerusalem or Nebi Moussa can do so without much difficulty.

In order to enable the running of fast and comfortable pilgrim trains, more rolling stock is required, but it is understood that the necessary funds already exist and will be released as soon as a satisfactory arrangement can be made for the working of the line.

Undoubtedly, the future of the Hejaz Railway depends entirely on its administration, and there is in this connection only one sound policy. The entire line, with the exception of that section which runs through French territory, must be under British control.

Simla Municipality has decided to add a large lecture-room to the Dufferin Women's Hospital Hall, to be used for lectures by experts on midwifery and child welfare. Lady Reading has given a donation of 10,000 rupees (£666), which will practically cover the cost.

Three of the six destroyers maintained by the United States Navy in the Mediterranean, the Worden, Reid, and Converse, on December 8 arrived at Haifa, where they will remain until December 17. These destroyers have recently been visiting several Mediterranean and Adriatic ports, including Marseilles, Pola, and Bizerta.

AUTHORITY IN CYPRUS.

A correspondent sends us a copy of the *Cyprus Gazette* for October 31, which contains the following proclamation:—

"MALCOLM STEVENSON,
"High Commissioner.

"In exercise of the power vested in me by Section 2 (2) of the Public Professions Law, 1921, I, Malcolm Stevenson, Knight Commander of the Most Distinguished Order of Saint Michael and Saint George, His Majesty's High Commissioner and Commander-in-Chief in and over the Island of Cyprus, do hereby proclaim and direct that a procession in connection with a marriage which takes place at Tymbou on November 2, 1924, and is proceeding from the village of Tymbou to the village of Lymbia, is prohibited from passing through the village of Louroudjina.

"Given at Nicosia, this 31st day of October, 1924.

"GOD SAVE THE KING.
"(M.P. 790/21.)
"By His Excellency's Command,
"J. M. ELLIS,
"Acting Chief Secretary to Government."

Our correspondent adds: "The point is that Turks and Greeks would be at each other's throats were the British flag hauled down. Cyprus is really a second Ireland."

SKETCHES OF KASHMIR AND OF YUGOSLAVIA.

A very pleasing exhibition of water-colour sketches, done by Mrs. Ralph Berners, of Kashmir, India, and Yugoslavia, is now being held at Walker's Galleries, New Bond Street. Mrs. Berners appears to have explored the beauties of Kashmir thoroughly, and she succeeds well in representing to us its extreme loveliness. For the most part she draws natural landscape, and obtains most charming effects with her lotuses, chenar trees, irises, woods and valleys, and so on. It is difficult to particularise, but such pictures as "Hamadan Mosque, Srinagar," "The Monsoon at Gulmarg," and "Chenar Trees in the Sonwar Bagh, October" were especially notable.

Six little Indian sketches, tastefully done, contain one gorgeous representation, "Bringing in the Peacock—Province of Palamau."

Finally, there are four enviable Yugoslav drawings: "Spring in Slovenia," "Pear Blossom," "The Robbers' Castle," and, most lovely and picturesque of all, "The Pilgrimage Church on Lake Bled." To all those who have visited one of the most enchanting spots in Europe, this last picture will recall the pleasantest memories.

THE SUDAN GOVERNORSHIP.

On December 4, in Cairo, the Royal Decree was signed appointing Sir Geoffrey Archer Governor-General of the Sudan, in accordance with the Anglo-Egyptian Convention of 1899.

Sir Geoffrey has had great experience, and enjoys a high reputation in East Africa and Somaliland and in Abyssinia. He entered the Colonial Service in 1901. In 1912 he was appointed to Somaliland, and the following year came into contact with the Mad Mullah. In 1919 he was appointed Governor of Somaliland, and in 1922 Governor of Uganda.

Near East Bookshelf.

A ROMANCE OF TURKISH IRAQ.

"SOPHY, A TALE OF BAGHDAD." By E. S. Stevens. (London: Hurst and Blackett, Ltd. 7s. 6d. net.)

The brilliant writer who is widely known under the pen-name "E. S. Stevens" has laid the scene of her latest novel in Iraq while it was still a province of the Ottoman Empire. A young Scotsman named David Gilmour comes out to Baghdad in view of joining an uncle who has prospered in business and married an Armenian lady. But death intervenes to destroy David's projects, and he arrives only just in time to attend his relative's funeral. The widow, however, smiles on him through her tears, and he falls head over ears in love with a fascinating cousin named Sophy Matossian, who is the eponymous heroine of this romance. Miss Stevens deftly draws aside the veil which shrouds the Armenian's home life, and shows us the young Scotsman immersed in a sea of intrigues. Sophy's wealth is coveted by two wicked uncles, who long to see her married to their respective sons, and a third claimant to her hand comes into the scene in the person of the old Turkish Governor of the Baghdad vilayet. But Gilmour contrives to spirit his fair cousin away to Basra, whence she is smuggled on board a British liner in a bale of carpets. Alas! for his ardent hopes; on arriving at Bombay Sophy rejects the overtures of her European adorer, and insists on marrying a compatriot. David turns in despair to an old love, "Sybil" by name, who arrives most opportunely at Bombay, and the curtain falls on an exchange of love-pledges between the pair.

Miss Stevens's amazing capacity for reproducing exotic atmosphere and delineating character is conspicuous in her latest book. It displays a far wider range of thought than the vast majority of novels: all who desire to know more of the Near East should absorb the wisdom which shines on pp. 59, 106-7, 218, and 236. For statesmen, too, it has enduring value by reason of the light it casts on the tremendous problems which have arisen since the Armistice. Among them is the Armenian question, which has not been handled with firmness or justice by the Western Powers.

Armenia is a tableland at the head of the Delta formed by the Tigris and Euphrates. Its area is nearly 250,000 square miles, and, despite constantly recurring massacres, its population still exceeds a million and a-half. But, like the Jews, Armenians have undergone a dispersion, owing to relentless persecution, and they are found throughout Eastern Asia, India, and even Western Europe. With their dauntless bravery and staunch adhesion to an ancestral creed are associated turbulence and a genius for intrigue. The subjection of women which prevails throughout Asia, and is, perhaps, the chief cause of its stagnation, is very marked in every Armenian household. If the adage "Happy is the people which has no history" is of doubtful application, its converse is indubitably true. The Armenian's eyes are ever turned to his country's past. He cannot forget that she fought on equal terms with Imperial Rome, and twice in after years became the hub of a far-flung empire. Hence unrest is chronic in Armenia, which wholesale massacres are impotent to quell. Great Britain has persistently evaded her responsibilities towards this unhappy race. While the Berlin Congress of 1878 was actually sitting she made a secret treaty with Turkey which guaranteed the Sultan's Asiatic dominions from invasion conditionally on his introducing specified reforms into Armenia and protecting her from the inroads of barbarous neighbours. It has long been a dead letter, and regarding recent history Miss Stevens writes in her preface:—

> Armenia, hoping to gain much, since she had so little to lose, from the Great War, during which she threw in her lot with the Allies, was cruelly disappointed. Her sufferings exceeded in horror anything that had gone before; she was expelled from her home and robbed of her children. No martyrdom was like unto her martyrdom, no grief like unto her grief. Nor did peace bring her hope. America refused a mandate, and since then the problem of Armenia has been shelved, forgotten, deliberately ignored.

APPOINTMENTS, PROMOTIONS, ETC.

The appointment of Air Commodore R. H. Clark-Hall, D.S.O., to Headquarters, Egypt, for duty as Chief Staff Officer, as from December 1, is notified by the Air Ministry.

The Rev. C. Steer, M.C., vicar of Hornchurch, has been appointed by the Bishop of Jerusalem as priest-in-charge of St. George's Cathedral and chaplain to the British community.

The following appointment to the Colonial Service has been made by the Secretary of State for the Colonies during the month ended November 10:—Iraq.—Mr. D. D. Paterson, B.Sc. (For.), B.Sc. (Agric.), to Agricultural Inspector.

General Sarrail has been appointed High Commissioner of the French Republic in Syria and Commander-in-Chief of the Levant Army, in succession to General Weygand, who has resigned. General Sarrail was Commander-in-Chief of the Allied Forces in Macedonia during a considerable portion of the Great War.

The King has made the following appointments:

Sir Colville Adrian de Rune Barclay, K.C.M.G., C.B., C.B.E. M.V.O., to be his Majesty's Consul-General for the State of Hungary, to reside at Budapest (with effect as from June 28, 1924).

Mr. Henry Duncan Graves Law to be his Majesty's Consul for Kerman and Persian Baluchistan, to reside at Kerman (with effect as from September 24, 1924).

Mr. David John Footman to be his Majesty's Vice-Consul for the Kingdom of the Serbs, Croats, and Slovenes, to reside at Skoplje (with effect as from November 1, 1924).

Mr. Geoffrey Richard Arthur Herbert to be a Third Secretary in his Majesty's Diplomatic Service (with effect as from October 13, 1924).

Monsieur D. M. Dimitrion as Consul of Denmark at Larnaca for Cyprus.

The King has appointed the following three gentlemen to be judges of the High Court of Judicature at Rangoon, viz.:—Mr. Edward Dyce Duckworth, Indian Civil Service; Mr. Parungavur Narasimha Chari, Pleader of the High Court at Rangoon; Mr. Joseph Augustus Maung Gyi, Barrister-at-Law. Two of the above appointments constitute an addition to the permanent strength of the Court. The third appointment is in place of Mr. Justice May Oung, who has resigned.

The King has approved the appointment of Mr. Nevile Meyrick Henderson, C.M.G., a Counsellor in the Diplomatic Service, to be a Minister Plenipotentiary while employed at the Residency in Cairo. Mr. Henderson, who was born in 1882, joined the Diplomatic Service in 1905, and has served, among other places, at Nish and Constantinople. He was Chargé d'Affaires in Constantinople in July, 1922, from November, 1922, until February, 1923, and from April, 1923, until the appointment of Mr. Lindsay as H.M. Representative in January last.

The King has approved the following appointments:—Mr. Alfred James Chotzner, I.C.S., to be a Judge of the High Court of Judicature at Calcutta, vice Sir T. W. Richardson, who has retired; and Sir Sydney C. K. F. Nettleton (Chief Justice of the Supreme Court of the Bahama Islands), to be the Chief Justice of the Supreme Court of Cyprus. Sir Sydney Nettleton, who now leaves the Bahamas for Cyprus, has been Chief Justice at Nassau since 1922. He is a member of the Middle Temple, and since 1912 has held various judicial posts overseas.

OBITUARY.

Mr. George Birt Jenner, C.M.G., formerly British Minister at Bogota, died at his villa, Les Alouettes, Cannes, on December 1, after a short illness. Mr. Jenner, who was 84 years of age, entered the Diplomatic Service in 1857, was Secretary of Legation and Oriental Secretary at Teheran from 1882 to 1884.

A message from Madras announces the death of Sir Subramaniya Aiyer, K.C.I.E. Sir Subramaniya, who was in his 82nd year, had a distinguished legal career, culminating in a High Court Judgeship of Madras.

Mr. Percy Seymour Vesey FitzGerald, C.S.I., late Bombay Political Department, died at Bognor on November 18 at the age of 72. Mr. FitzGerald joined the Bombay Revenue Survey in 1871, and was shortly afterwards transferred to the Bombay Political Department, in which he acquired an unrivalled local knowledge, particularly of the Kathiawar and Northern Gujarat States. He was Political Agent in Palanpur from 1898 to 1900, and made his mark in famine administration during that period. In January, 1906, he was created C.S.I., and appointed Agent to the Governor in Kathiawar (the highest post of his department) in the same year.

THE
EUPHRATES & TIGRIS
STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

NOTES AND NEWS.

167, Strand, London, W.C.2,
Tuesday Morning.

The Greek Loan Success.

There was no doubt that the Greek Refugee Loan would be fully subscribed—the way in which Greece has consistently met her financial engagements, coupled with the attractive character of the investment, made that very clear—but no one could have imagined that there would be the demand for it that there was. Like the election, the result was in the category of things unexpected. The Loan was for an amount of £7,500,000, in 7 per cent. sterling bonds at a price of 88 per cent. The lists were opened at 9.45 a.m. on Monday morning, by which time there was a large gathering outside Hambros Bank, and when they were closed, which took place very shortly, it was estimated that the loan had been subscribed for fifteen times over. It was a remarkable result and thus surprising when the conditions are considered. The German Loan, it is true, was subscribed for thirteen times over, but for a variety of reasons it was improbable that a Balkan Loan would enjoy anything like the same degree of favour. The result proves once again the discriminating character of the average British investor. It was realised, as I have indicated above, that Greek finance has been above reproach, and, further, there was a very wide appreciation of the fact that this is a reconstruction Loan in the fullest sense of the term, and that its success was an essential factor in the way to the gradual recovery of Europe and the consequent expansion of British trade; hence the over-subscription.

Some Aspects of the Loan.

The Loan proves once again that London is still the predominant money market of the world. America could have had more of the Loan, but it was only possible to arrange for about 10,000,000 dollars to be raised there, though America is the only country at the present time which is really overburdened with surplus capital. The great demand for the Loan will not unnaturally lead Greece to suppose that the money might have been obtained on somewhat easier terms, and it is certainly open to doubt whether the conditions on which capital can be obtained when the security is of the highest class have quite kept pace with the improvement in the economic situation generally as reflected by the decreasing yield to be obtained from gilt-edged securities. The object of the Loan is, of course, the settlement in Greece of refugees from Asia Minor, who have brought with them to Greece an expert knowledge of a number of important industries, for the development of which in their new home only capital is required. What is Asia Minor's loss should be a gain of inestimable value to Greece. Now that the requisite money is available for the conclusion of the work of settling the refugees it should not be long before Greece is in the enjoyment of a number of flourishing new industries, one effect of which will be a great expansion of her external trade, in which it can reasonably be assumed Great Britain will benefit substantially. British trade relations with Greece have always been fairly good, and the willingness to take British goods which has always been in evidence is likely to be more pronounced in the future as a consequence of British help in reconstruction in the shape of this Loan.

Further Near Eastern Loans.

Other Near Eastern countries are certain in the near future to be in the market for loans, and it is hoped for their own sake that they will draw the correct conclusion from the result of the present issue. Loans can always be obtained on the London market by countries which invariably meet their engagements, but the converse is also the case.

Phœnix Oil and Transport.

At the meeting of the Phœnix Oil and Transport Company Sir Edward Manville gave a most encouraging survey of the position of the company. It is estimated that this year the production will be about 185,000 tons, while the production for the last four months has been at the rate of 240,000 tons for a full year. "I have previously told you," said Sir Edward, "that, in order to achieve the minimum results we aimed at, some 30 wells should be drilled down into the oil sands on the various fields in each year. When the report was put into your hands we informed you that 29 wells had actually been brought in this year, but during last week four additional wells have been drilled into the oil sand, making a total of 33 for the first eleven months of the year, with the probability of further ones being added during the remainder of this month. This will materially add to our production in the months ahead." During the coming year it is anticipated that at least 30 more wells will be drilled. Sir Edward concluded by touching on the question of a dividend, and indicated that they ought to be in a position to reach that stage by the next meeting.

HAMBROS BANK, LIMITED announce that

THE SUBSCRIPTION LIST HAS BEEN CLOSED, THE LOAN HAVING BEEN LARGELY OVER-SUBSCRIBED.

GREEK GOVERNMENT 7% REFUGEE LOAN OF 1924

UNDER THE AUSPICES OF THE LEAGUE OF NATIONS.

Issued pursuant to the Geneva Protocol dated the 29th day of September, 1923, and amending Protocol of the 19th day of September, 1924, the Greek Legislative Decree, dated the 13th October, 1923, and the Greek Acts of Parliament dated 4th June, 1924, and 24th October, 1924, and the Resolutions of the Council of the League of Nations, dated the 29th day of September, 1923, and the 19th day of September, 1924.

The proceeds of the Loan will be placed at the disposal of the Refugee Settlement Commission, who will apply the same and lands assigned to them by the Greek Government in promoting the establishment of Refugees in productive work upon the land or otherwise in Greece.

The Loan is the direct obligation of the Greek Government, and is repayable during a period of not more than 40 years.

ISSUE OF £7,500,000 7% STERLING BONDS

(Part of a total authorised amount of £12,300,000. The remainder as to £2,500,000 will be issued in Athens, and the balance is reserved for issue in America in Dollars).

The Loan is under the direct control of the INTERNATIONAL FINANCIAL COMMISSION, who have accepted definitely and irrevocably the order of the Greek Government to retain the amounts necessary for the payment of the interest and amortization of the Loan from

(a) Specific Revenues expressly assigned to them for the service of this Loan,
(b) the yearly surplus of other revenues previously assigned to and administered by them.

In addition the service of the Loan is secured by a first charge on the property and income of the Refugee Settlement Commission.

Official notification that the INTERNATIONAL FINANCIAL COMMISSION has undertaken the control of this Loan has been communicated to Hambros Bank Limited, under date the 3rd day of December, 1924, by His Majesty's Secretary of State for Foreign Affairs.

ISSUE PRICE 88 PER CENT.

HAMBROS BANK LIMITED

is authorised by the Greek Government to offer for public subscription £7,500,000 of the above Bonds at the price of 88 per cent. payable as follows:—

£5	**on Application.**
£10	**on Allotment.**
£20	**on 6th January, 1925.**
£25	**on 17th February, 1925.**
£28	**on 18th March, 1925.**
£88	

The service of the Loan both as to principal and interest is secured by—

1. A first charge on the following yearly revenues, which have been specially assigned by the Greek Government to the International Financial Commission for the service of this Loan, viz.:—

(*a*) The Revenue Receipts from the Monopolies, *i.e.*, Salt, Matches, Playing-Cards, and Cigarette Paper, in the new Greek Territories;

(*b*) The Revenue Receipts from the Customs of Canea, Candia, Samos, Chios, Mytilene, and Syra;

(*c*) The Revenue Receipts from the Tobacco Duty in the new Greek Territories;

(*d*) The Revenue Receipts from the Stamp Duty in the new Greek Territories;

(*e*) The Revenue Receipts from the Alcohol Duty in the whole of Greece, **which the Greek Government estimate will, on the basis of the returns for the 9 months ending September, 1924, produce for the year 1925** ... **£2,605,308**

(The revenues from the Alcohol Duty are subject to a contingent prior charge of approximately Drachmæ 20,500,000 per annum in favour of the Greek 1920 Internal Loan, if the surplus Revenues hypothecated to its service should prove insufficient.)

2. The yearly surplus of the revenues which are ceded to the International Financial Commission, **which surplus the Greek Government estimate will, on the basis of the returns made for the 9 months ending September, 1924, produce for the service of this Loan for the year 1925**... ... **£2,921,586**

£5,526,894

3. **A first charge upon the property and income of the Refugee Settlement Commission.**

AN IMPORTANT WATERWAY IN YUGOSLAVIA.

The King Peter I. Canal.

(By Our Zagreb Correspondent.)

From time immemorial the wheat grown in the great Hungarian plain has been world-famous for its excellence, and nowhere is the quality finer or the yield richer than in the region enclosed west and south by the angle of the Danube where it suddenly assumes an easterly course a little to the south of the confluence of the Drava and east by the Tisza on its southerly course into the Danube. It is from the rich alluvial soil deposited by these two great rivers as they modify their course throughout the centuries that this district derives its exceptional fertility. Yet, left to Nature, its agricultural possibilities would be discounted by the existence of wide marshlands and constant danger from flood or drought. To drain off the surplus moisture, regulate the supply of water, and establish a useful connection by water between the Danube and Tisza some fifty odd kilometres north of their natural junction, the two Hungarian military engineers, Josef and Gabriel Kiss, constructed the original old Francis Canal more than a century ago, and floated a company to work it. It was a vast undertaking for those times, and occupied the years between 1795 and 1802. This canal was 118 km. long, and extended from Monostor on the Danube to St. Gradiste on the Tisza. The Imperial Government of that day, recognising the immense value of the canal, assisted the newly constituted company with a 4 per cent. loan of 200,000 florins, and endowed it with certain lands along the canal banks, so that the rentals from these might help the undertaking to pay its way.

After a few years of great prosperity, the canal experienced a set-back through the silting up of the canal mouth at Monostor, owing to fresh deviations in the course of the Danube, and the whole canal was allowed to fall into such disrepair that the company decided in 1827 to make it over as it stood to the Government rather than incur the heavy costs of reconstruction. Negotiations to this effect dragged on until 1842, when Count Francis Zichy was commissioned by the Government to decide whether the canal should be restored or finally abandoned. Fortunately for the whole region, and, indeed, for one of Europe's best granaries, County Zichy allowed his judgment to be swayed by an old German settler, who replied to the Royal Commissioner's inquiries with the oracular dictum: "Alles was mer haba, verdanke mer dem Graba." ("All that we have we owe to the ditch.")

The canal was now taken in hand by the Government. The Danube mouth was transferred from Monostor to Bezdan, and by 1862 the canal was once more in a position to pay its way. The main drawback to it was that at times of low water its supply from the Danube would fail, and that therefore the shipping was subject to frequent interruptions.

In 1870 General Stefan Turr, the well-known expert on canal construction, obtained a 75 years' concession of the canal and canal lands with a view to placing the whole undertaking on a new and far wider basis, and the Francis Canal Company was formed under the Hungarian Laws of 1870, XXXIV., and 1873, XVII. The original share capital of this company was represented by 22,670 shares Series A, at a nominal value of 200 Austrian silver florins, Fl. 4,534,000; 20,090 shares series B, at a nominal value of 200 Austrian silver florins, Fl. 4,018,000; 5,000 preference bonds, at a nominal value of 1,000 Austrian silver florins, Fl. 5,000,000; total: Austrian silver florins, 13,552,000.

Shares Series A and the preference bonds were taken up in England, the chief shareholder being the firm of Messrs. Wythes and Longridge. Hereby the canal company became a semi-British concern, and was duly registered at Somerset House under the name of the Francis Canal Company. The shares of Series B were taken up at their nominal value by the Hungarian State by way of State subsidy to an enterprise of national importance.

Under the terms of the concession the canal was thoroughly reconstructed, a feeder and shipping canal was added, leading northward from Bezdan to Baja, where the permanently higher level of the Danube makes it possible to replenish the canal at all seasons. Finally, a new shipping and irrigation canal was dug from Mali Stapar on the main canal to Novi Sad on the Danube. The only important change made in the course of the canal since then has been that, owing to improved regulation of the river Tisza, the canal mouth at Staro Gradiste had to be transferred to Stari Becej in 1899.

The general specification of the canal system as then completed may be summed up as follows: The so-called "old" canal is 118 kilometres long. The difference in level between the Danube and Tisza is 11.1 metres, spread over four basins, divided from each other and the two rivers by five locks. The double lock at Stari Becej was a memorable construction of its kind at the time, and is still one of the finest locks in the world for inland shipping. It negotiates a fall of 7.20 metres, which is divided into two steps of 3.60 metres each.

The feeder canal is 47.3 kilometres in length, and draws its water supply at Baja, where the level of the Danube is normally at all times 3 metres higher than at the Bezdan canal mouth. The drop from the feeder canal into the main canal is negligibly small. The canals meet at a point 5.8 km. distant from the Bezdan mouth. The bottom width of these canals is 17 metres, and the depth of water 2.00 metres, so that the largest river craft plying on the Danube can freely pass through them.

The length of the shipping and irrigation canal from Mali Stapar to Novi Sad is 64.2 km., and it is divided into four basins. The fall of over 12 metres into the Danube at Novi Sad is negotiated by a double lock at Novi Sad and the lock at the mouth itself 4 km. further. This canal has a bottom width of 11 m., and a depth of 1.55 m. The banks of the canals are constructed of piles or brickwork, and almost everywhere are protected by reed plantations.

In this form the canal system soon became far more than even the main artery of irrigation and traffic—especially the grain traffic—between the Danube and the Tisza. The power derived from its falls drives the machinery of numerous important mills and factories along its banks. Prosperous villages owe their existence to its proximity. The canal company itself owns sawmills, flour mills, and a shipyard at Monostor.

(To be concluded.)

COMPANY NOTES AND REPORTS.

P. and O.

The report of the Peninsular and Oriental Steam Navigation Company for the year ended September 30 states that the accounts show that, after providing for depreciation, there is a credit balance on the year's accounts, including £101,873 9s. brought forward from last year, of £1,072,997 2s. 4d. The directors propose to deal with this amount as follows:—(1) 5 per cent. dividend on the preferred stock (of which 2½ per cent. was paid as interim dividend), £152,000; (2) 12 per cent. dividend on the deferred stock, free of income-tax (of which 6 per cent. was paid as an interim dividend), £431,102 3s. 2d.; (3) reserve for redemption of debenture stock, £249,150; (4) write off discount on debenture stock and cost of issue, £139,711 5s. 6d.; (5) to carry forward to next year, £101,033 13s. 8d.—£1,072,997 2s. 4d.

The Plassy, Syria, Poona, Palermo, and Palma have been sold for breaking up, the three latter since the accounts were closed. They gave effective service in their day, but were becoming out of date for the company's business. They were all over twenty years old, and expensive to keep up. They stood at merely nominal figures in the books, and the surplus realised on their sale has gone to reduce the book value of the fleet. The Assaye has again been chartered by the Government for trooping work, and continues to be an efficient steamer for this class of business. The Mooltan and Maloja, the two large steamers which were delivered last autumn, have proved to be attractive ships for the company's mail, passenger, and cargo work.

The Express steamer Razmak was launched on October 16, and is now fitting out at Belfast. It is expected she will be ready for her service in the early spring. The Ranpura, building at Messrs. Hawthorn Leslie's works on the Tyne, was launched on September 13, and the Ranchi is expected to be launched before the end of the year. It is hoped the first will be ready for service in the spring of next year. The Rawalpindi and the Rajputana are not expected to be ready until the summer of next year. These four ships are being constructed for the Bombay Mail Line. The Cathay and Comorin were launched on October 31, and it is expected that the first-named will take her place in the Australian Line in March. The Chitral, also for the Australian Line, is expected to be launched in December. The small feeder steamer which appears in the list of fleet as the Bulan has been delivered at Singapore, and, with the Mata Hari, which has been transferred from the British India Company, is performing a regular feeder service each week between Singapore and Penang and other Straits ports.

The insurance fund shows a small increase of £18,081 9s. 9d. since last year. Nothing has been taken from or added to the fund in the profit and loss account. There have, unfortunately, been several losses to place to the debit of the fund during the past year.

The new office at the corner of St. Mary Axe is now completed, and is fully occupied. The remodelling of the old office in Leadenhall Street will be taken in hand as soon as a suitable opportunity occurs. The property previously known as the "Ship and Turtle" adjoining the company's building in Leadenhall Street is under reconstruction so as to fit it for office use as required. The demolition of the old buildings opposite the offices in Leadenhall Street and the construction of up-to-date premises for Lloyd's and other shipping companies, bringing the centre of the shipping world to the neighbourhood, should not detract from the value of the City property. The old Agency House at Hong Kong, situated in the Des Voeux Road, has now been advantageously sold, as it is not now required, our new office building facing the harbour being ready for occupation. The new building is of seven stories, admirably adapted for commercial purposes. The difference realised by the sale of the old building and the amount at which it stood in the books has been applied to a reduction of the book value of the other properties.

Altogether, 258 members of the sea and land staff of the P. and O. Company gave their lives during the Great War, and as a permanent record a memorial in bronze has been installed in the office, outside the board room, and was unveiled by the Chairman in July last. This memorial will be seen by the proprietors attending the meeting.

Trade conditions in all the company's spheres of operation have been very difficult during the last twelve months, caused by the general depression and the feeling of unrest which has been prevalent in almost every direction. Labour conditions have not improved, with the result that most of the ships which the company had looked forward to being ready by the end of this year are still undelivered. The indications of a year ago of a slight improvement in outward trade have not materialised, and latterly the war in China has affected both outward and homeward business with the Far East. So far as the passenger business is concerned, this continues satisfactory. Every effort is being made to satisfy the travelling public and maintain the reputation of the P. and O.

The mail service has been carried on during the past year under some difficulty owing to the loss by enemy action of many of our fine ships; but next year there is every prospect of a reversion to the full pre-war schedule on all lines, as the company hope to resume, at the beginning of the year, their fortnightly service to and from Australia by means of the Cathay class, now under construction. The bulk of the mail continues to increase every year.

The directors feel compelled to state to the stockholders that but for the conservative policy adopted in the past it would not have been possible to propose the dividend which was paid last year, and which they now suggest for the year ended September 30, 1924.

Official returns show that during the first nine months of 1924 8,191 Jewish immigrants entered Palestine (3,226 men, 2,522 women, and 2,443 children). During the same period 1,701 Jews emigrated from Palestine.

INDIA'S INCREASING IMPORTS.*

Statistics for the Half-Year.

During the six months ended September 30 the value of the import trade into India increased by Rs. 13 crores, or 11 per cent., as compared with the corresponding period of 1923. The total exports of the country, including re-exports, increased by Rs. 5 crores, or 3 per cent., while the exports of Indian merchandise alone showed an increase of Rs. 4½ lakhs, or 3 per cent. The grand total of imports, exports, and re-exports amounted to Rs. 292 crores, as against Rs. 274 crores, i.e., an increase of 7 per cent.

India's visible balance of trade in merchandise and treasure during the six months was over Rs. 17 crores. The balance of trade in merchandise alone is in favour of India to the extent of nearly Rs. 48 crores. Of this amount Rs. 17½ crores have been met by net imports of gold and silver, while a further Rs. 26½ crores represent Council Bills, purchases of sterling, and other Government remittances to the United Kingdom, most of this representing, in fact, sterling purchases in India. As might be expected, exchange has remained firm throughout the period, and stood at 1s. 5 21-32d. T.T. on the last day of September.

Although the total imports from the United Kingdom rose from 65 to nearly 67 crores, the proportionate British share fell from 59 per cent. to 54 per cent. Germany, however, increased her proportion of the total imports from 5 per cent. to 6 per cent., Japan from 6 per cent. to nearly 7 per cent., Belgium from 2 per cent. to 2.7 per cent., and Italy from 1 per cent. to nearly 1½ per cent. Imports from the United States remained fairly stationary at about 6 per cent. on the whole.

The total imports of twist and yarn rose from 23 million lb. to 30 million lb. This is almost entirely accounted for by greatly increased imports from Japan, which rose from 10 million lb. to 17½ million lb. This advance was mainly in 40's counts. Imports from the United Kingdom fell from 12 million lb. to under 11 million lb., while imports from Switzerland rose from 498,000 lb. to 629,000 lb.

One of the most noteworthy features of the period under review has been a very heavy increase in the imports of unbleached goods from 317 million yards, valued at 9,89 lakhs, to 410 million yards, valued at Rs. 13,80 lakhs. It is most satisfactory to note that this increase is almost entirely accounted for by heavier shipments from the United Kingdom, whose share rose from 273 million yards, valued at 8,29 lakhs, to 359 million yards, valued at Rs. 11,91 lakhs. Our principal competitor, Japan, only increased her shipments from 42 million yards, valued at Rs. 153 lakhs, to 47 million yards, valued at Rs. 176 lakhs. A noteworthy feature has been the revival of trade in grey shirtings, etc., particularly for the Bengal market, which shows that Lancashire makers are still able to compete with the Japanese and with the Bombay mills in these goods.

As regards piecegoods—white (bleached)—there has been a most satisfactory advance in the total trade from 220 million yards, valued at Rs. 8,00 lakhs, to 274 million yards, valued at Rs. 10,18 lakhs, in which the United Kingdom has taken its full share. British shipments of whites rose from 215 million yards, valued at Rs. 764 lakhs, to 267 million yards, valued at Rs. 972 lakhs.

Under the heading piecegoods—coloured, printed or dyed—the showing has not been so good. In the corresponding period of 1923 the imports were 183 million yards, valued at Rs. 914 lakhs, while during the period under review they were 193 million yards, valued at Rs. 10,00 lakhs. British imports were actually reduced in quantity from 166 million yards to 164 million yards, but the value rose slightly from Rs. 810 to Rs. 844 lakhs. A most remarkable advance has been made in the case of Italy, which increased its shipments from 2 million yards, valued at Rs. 17 lakhs, to nearly 4 million yards, valued at Rs. 32 lakhs. Japan also nearly doubled its shipments, from 8½ million yards, valued at Rs. 31 lakhs, to 16½ million yards, valued at Rs. 63 lakhs. Imports from Switzerland also rose slightly. Italian competition in dyed and coloured woven goods is persistent, and is likely to continue.

The advance in the trade in woollen piecegoods has been extraordinary. The total shipments doubled from 3½ million yards, valued at Rs. 86 lakhs, to 7 million yards, valued at Rs. 154 lakhs. Bradford and other shippers are holding their own fairly well, imports from the United Kingdom advancing from Rs. 48 lakhs to Rs. 93 lakhs. German imports were stationary, but those from France rose from Rs. 9 to Rs. 16 lakhs, and those from Italy from Rs. 2 to Rs. 12 lakhs. Although the French and Italian share of the trade is small as compared with that of the United Kingdom, it is growing rapidly, and Continental prices in many lines are much below British rates.

The total imports of machinery and mill work fell from Rs. 1034 to Rs. 717 lakhs, owing to the industrial depression in India, which still continues. The British share shrank from Rs. 885 to Rs. 596 lakhs, and that of the United States from Rs. 104 to Rs. 76 lakhs. Germany's share rose slightly from Rs. 19 to Rs. 21 lakhs. The United Kingdom still supplies over 83 per cent. of the total imports of machinery, and on the whole is satisfactorily maintaining its position in this valuable trade.

The total imports of railway plant, etc., fell from Rs. 604 to Rs. 374 lakhs. The British share was reduced from Rs. 559 to Rs. 346 lakhs. As usual, there was little competition. The United States supplied Rs. 10 lakhs worth, Belgium Rs. 5½ lakhs, and all other countries just under Rs. 12 lakhs. These figures, of course, refer to imports for the company-worked railways. The imports on Government account amounted to an additional Rs. 42 lakhs in value.

The trade in iron bars and channels remained fairly stationary at Rs. 7½ lakhs value, of which the United Kingdom supplies were valued at Rs. 3½ lakhs, Belgian at over Rs. 2 lakhs, and Swedish at Rs. 1½ lakhs. There has been a heavy advance in the total imports of steel bars owing to the increased shipments from the Continent immediately before the imposition of the protective steel duty. During the six months the total trade rose from Rs. 90 to Rs. 141 lakhs. The British share rose from Rs. 13 to nearly Rs. 14 lakhs, whereas that of Germany advanced from Rs. 13 to Rs. 21 lakhs, that of Belgium from Rs. 58 to Rs. 89 lakhs, and that of Luxemburg from Rs. 3 to Rs. 10 lakhs. As regards beams, channels, pillars, girders, and bridge work, there has been a considerable advance in the total trade from Rs. 58 to Rs. 68 lakhs. The British share increased from Rs. 38 to Rs. 39 lakhs, while that of Belgium rose from Rs. 18 to Rs. 22 lakhs.

There has been a slight falling off in the total imports of bolts and nuts from Rs. 14½ to Rs. 14 lakhs. The British share fell from Rs. 8½ to Rs. 5½ lakhs, and that of Belgium from Rs. 4 to Rs. 2 lakhs. German shipments, however, advanced from a negligible quantity to Rs. 3 lakhs,

*From an analysis by H.M. Senior Trade Commissioner in India (Mr. T. M. Ainscough, O.B.E.).

Digitized by Google

and American supplies from Rs. 1 to nearly Rs. 2 lakhs.

The total trade in hoops and strips receded from Rs. 25½ lakhs to Rs. 24 lakhs. British shipments fell from Rs. 22 to Rs. 14 lakhs, whereas those of Belgium increased from Rs. 3 to Rs. 5 lakhs, and of the United States from a negligible quantity to nearly Rs. 3 lakhs. The total imports of nails, rivets, and washers (other than wire nails) remained stationary at a little over Rs. 28 lakhs. The British share, however, fell from Rs. 13½ to Rs. 11 lakhs. Swedish supplies rose from Rs. 3 to Rs. 5 lakhs, and German from Rs. 1 to Rs. 3½ lakhs. The trade in galvanised sheets and plates still shows expansion, the total imports rising from 71,500 tons, valued at Rs. 226 lakhs, to 96,000 tons, valued at Rs. 290 lakhs. The United Kingdom supplied no less than Rs. 285 lakhs of the latter total, and met with practically no competition. The trade in tin plates fell from Rs. 88 lakhs to Rs. 78 lakhs. British shipments fell from Rs. 76 to Rs. 44 lakhs, but imports of American tin plates rose from Rs. 12 to Rs. 34 lakhs, mainly for account of the oil companies. The imports of sheets and plates, not galvanised or tinned, advanced slightly from Rs. 80 to Rs. 83 lakhs. British supplies were reduced from Rs. 54 to Rs. 30 lakhs, whereas those from Belgium rose from Rs. 15 to Rs. 33 lakhs, and from Germany from Rs. 9 to Rs. 15½ lakhs. The trade in wrought tubes, pipes, and fittings advanced from Rs. 44 to Rs. 60 lakhs. The British share rose only from Rs. 32 to Rs. 37 lakhs, whereas that of Germany increased from Rs. 2 to Rs. 11 lakhs, and that of Holland from Rs. 1 to Rs. 5 lakhs. Shipments from the United States fell from Rs. 7 to Rs. 2 lakhs. The imports of wire nails rose from Rs. 15 to Rs. 22 lakhs, of which the United Kingdom supplied no more than a lakh. The German share advanced from Rs. 7 to Rs. 11 lakhs, and the Belgian from Rs. 5 to Rs. 8½ lakhs.

The total imports of wrought copper during the past six months attained a value of Rs. 71 lakhs. Of this Germany supplied Rs. 43 lakhs, the United Kingdom Rs. 13 lakhs, and the United States Rs. 14 lakhs. Here again Germany increased her share from Rs. 10 lakhs in 1922 to Rs. 17 lakhs in 1923 and Rs. 43 lakhs in the period under review.

HILL, SELBY & WOODCOCK, Ltd.

5, PHILPOT LANE, LONDON, E.C.

The total trade in hardware (excluding cutlery and electro-plated ware) rose from Rs. 222 to Rs. 264 lakhs. The United Kingdom supplied Rs. 102 lakhs, Germany Rs. 71 lakhs, the United States Rs. 44 lakhs, and Japan Rs. 12 lakhs. The reversion of the trade to German suppliers is noteworthy. Germany in 1922 shipped Rs. 60 lakhs' worth, in 1923 Rs. 45 lakhs' worth, and in 1924 no less than Rs. 71 lakhs' worth. Her shipments cover a wide range of builders' hardware, domestic hardware, and the hundred and one cheap meretricious articles for the bazaar trade. American competition was keenest in metal lamps, implements, and tools, while Austria supplied approximately Rs. 7 lakhs' worth of enamelled ironware.

Of a total import of electrical instruments and apparatus of Rs. 89 lakhs, the United Kingdom shipped Rs. 60 lakhs' worth, Germany Rs. 11 lakhs' worth, and the United States Rs. 9 lakhs worth. British cables still virtually control the market, but there is considerable competition from Holland and the United States in electric lamps, and from Germany in cheap fittings and accessories.

The valuable trade in provisions and oilman's stores increased from Rs. 117 to Rs. 170 lakhs. The British share rose from Rs. 54 to Rs. 66 lakhs, that of the Straits Settlements from Rs. 18 to Rs. 26 lakhs, that of the United States from Rs. 11 to Rs. 12 lakhs, that of Holland from Rs. 8 to Rs. 17 lakhs, while the imports from unenumerated countries rose from Rs. 13 to Rs. 35 lakhs.

The imports of motor-cars advanced from 3,120 cars, valued at Rs. 75 lakhs, to 4,527 cars, valued at Rs. 103 lakhs. Arrivals from the United Kingdom rose from 180 cars, valued at Rs. 10 lakhs, to 427 cars, valued at Rs. 17½ lakhs. The lower average value per car shows that the present high rates of duty are having the effect of driving the higher priced English vehicles out of the market in favour of the products of the United States and Canada. Imports from Canada rose from 1,264 cars, valued at Rs. 22 lakhs, to 2,015 cars, valued at Rs. 34½ lakhs, while those from the United States advanced from 1,274 cars, valued at Rs. 30 lakhs, to 1,896 cars, valued at Rs. 45 lakhs. The trade in Continental motors appears to be on the decline. The total trade in motor-cycles increased from 431 cycles, valued at Rs. 3½ lakhs, to 653, valued at Rs. 4½ lakhs. British shipments rose from 258, valued at Rs. 2 lakhs, to 489, valued at Rs. 3½ lakhs. Imports from America also advanced from 110, valued at Rs. 1¼ lakhs, to 135, valued, however, at only just over a lakh.

There has been a noteworthy expansion in the trade in bicycles during the past three years, the figures for the first half-year of 1922 being Rs. 15 lakhs, 1923 Rs. 28 lakhs, and 1924 Rs. 36 lakhs. During the last period the United Kingdom supplies were valued at over Rs. 30 lakhs, or approximately 90 per cent., German at Rs. 5½ lakhs, and all other countries half a lakh.

There has also been a considerable expansion in the imports of motor-omnibuses, motor-vans, and lorries from 482 vehicles, valued at Rs. 13 lakhs, to 843, valued at Rs. 18 lakhs. Although the number of British lorries imported rose from 32 to 43, the value declined from Rs. 3.7 lakhs to Rs. 3 lakhs. During the period under review America supplied 311 lorries, and other countries, unspecified, 489.

A Report on Somaliland for 1923 (No. 1,226, price 6d.) is issued by the Colonial Office. It is stated that during the last nine months of the year the country enjoyed more complete immunity from internal trouble than at any time for the past twenty years. There are 467 miles of motor roads in the Protectorate.

Cotton and Cotton Goods.

THE EGYPTIAN MARKET.

Futures Quiet.

The Alexandria Commercial Company, in their report for the week ended November 27, state :—

Since our last report the futures market has been quieter, but the undertone has remained firm; the net changes on the week are the following :— Sakellaridis : $0.23 up for January, $0.05 down for March, $0.15 down for May, $0.55 down for November, 1925. Ashmouni : $0.70 down for December, $0.50 down for February, $0.40 down for April, $0.35 down for October, 1925. The demand from abroad has slackened slightly, but has remained sufficiently strong to keep the spot market active and about balance the weight of the daily heavy arrivals. Sakel has again had the larger proportion of the demand, and its premium over Ashmouni has further widened, touching at to-day's close $15.98. Local speculators have been fairly active, but have confined their dealings almost exclusively to Sakel. This week's easier tone of New York and the cheaper level of prices there as compared to Ashmouni, in conjunction with the reduced demand for it, have contributed to its weaker tone; as a matter of fact, Ashmounis have been, of late, rather neglected. At the third November tender 12,500 krs. dockets were issued. We do not think that politics can have more than a temporary and sentimental effect on the market, and maintain our opinion of a further appreciation of Sakel in the course of the season; as regards Uppers, the course of prices will, we think, depend to a great extent upon American cotton fluctuations. The week's receipts amount to 386,398 krs., against exports 250,343 krs.; the stock stands at 1,901,479 krs.

Spot.—We have had a week of active markets at Minet el Bassal, and sales amount to about 29,800 B/s, of which we estimate 15,250 B/s Sakellarides, 7,900 B/s Uppers, 5,300 B/s Zagora, 1,000 B/s Pilion, 150 B/s Brown, and 200 B/s White. Arrivals continue heavy, and we think that the movement in Upper Egypt has increased somewhat. More of this growth is now offering on the spot than for some time past. Rains have interfered with the movement in Lower Egypt during the past week to some extent.

Sakellarides.—There has been a good demand for all grades. The better qualities, especially Fully Good Fair/Good, have met with most demand. The low grades are comparatively neglected. Spot parities are without quotable change; for Fully Good Fair/Good and above they are very firm.

Uppers.—A good business has been done in all styles, but spot parities are inclined to ease a little. There is rather more disposition to sell on the part of several holders.

Zagora.—Continues in good request, especially the higher grades. Spot parities are well maintained for Good and better; for other qualities they are inclined to go cheaper. This growth is tending more to approximate to the same value as Upper Egyptian, as consumers begin to realise its spinning merits.

Pilion.—A good business has been done. Spot parities have eased further from last week.

Brown.—A small business has been done. Spot parities are generally cheaper.

White.—A fair business has been done in medium and good grades. Spot parities are without change.

COTTON TRADE REVIEW.

Position Practically Unchanged.

The Manchester Cotton Trade Review of the Imperial Ottoman Bank for the week ended December 6 states :—

Little change has taken place in the condition of this market during the past week. Demand has again been unevenly distributed, with the consequence that the experiences of various sections have been widely different.

The final report of the American Agricultural Bureau regarding the current crop is due for publication on Monday next. Private reports during the last few days have been uniformly in the direction of an increase in the last estimate of the total yield, and it is possible that a certain amount of demand for yarn and cloth is being held back until these final figures become known.

Yarn.

Demand has not been at all active, and the position of spinners of American cotton has, if anything, become slightly weaker. There has been a fall in the price of their raw material, but it is probable that the concessions which they have had to make in their own prices have been at least equal to the benefit they have gained therefrom.

In Egyptian spinnings a somewhat better state of affairs has prevailed in spite of the very firm attitude on the part of spinners necessitated by a further advance in their raw material.

Cloth.

The principal item of note in this department has been a fair revival of inquiry and buying from China. India and other markets have continued to operate in only a quiet way. Demand at present chiefly runs on lines for early delivery, as buyers apparently have not sufficient confidence to commit themselves very far ahead.

Raw Cotton.

As mentioned above, conditions in America have been favourably reported upon, and the consequence has been an almost daily fall in quotations, the aggregate on the week being over ½d. per lb.: the final quotation for "spot" is under 13d. for the first time for over two years. Egyptian has again been a strong market, and the general position in this section can only be regarded as disquieting.

Closing quotations yesterday were as follows :— American Middling, 12.98; last week, 13.59. Egyptian Fully Good Fair, 26.75; last week, 26.20.

LIVERPOOL COTTON REPORT.

Steady Inquiry for Sudan Sakel.

Messrs. Reynolds and Gibson report as follows for the week ended December 3 :—

Egyptian Spot.—Conditions have remained practically unchanged in our market since last we wrote. The recent shipments from Egypt have included a very large proportion of cotton bought for forward delivery by spinners some time ago, and the trade at the moment appears to be fairly well supplied with Egyptian cotton. As a consequence, business on the spot has continued on very moderate lines, and the daily inquiry has further dwindled. Prices, however, have remained very steady, particularly for Sakellaridis, and it is significant to find that any sudden advance in the futures market, which in itself might possess no significance at all, at once brings in its train a small flood of active inquiries from Manchester. Interest in Sakellaridis cotton has not been marked this week, but what there was has centred chiefly round Fully Good Fair to Good cotton at from 26½d. to 28d. There have been a few isolated inquiries for the Best, but spinners are very unwilling to pay the prices asked, and no business has resulted. The lower grades have been entirely neglected.

The inquiry for Uppers has been on broader lines, but the basis both here and in Alexandria has shown a tendency to ease slightly. Prices have been proved to be somewhat irregular. Good Uppers of good staple have obtained from 17¾d. to 18½d. per lb., but there is a quantity of bright, leafy, cotton of short staple which is selling at anything from 17d. to 17½d. per lb. A small demand for Pilion has been in evidence, but it is only the very best which finds favour, and this has changed hands at about 25 points off January Egyptian contracts. Brown and White cotton have again failed to arouse any interest amongst buyers. In Sudan cotton, a small but steady inquiry persists for the Sakel variety, but this is now practically finished for the year. A small turnover has, we believe, been effected at round about 24d. The demand for White Sudan has continued good, but only a very small business has resulted. This cotton also is now practically unobtainable, although it should not be long now before some new crop arrivals begin to appear. C.i.f. business has been quiet on the whole. Forwardings to spinners for the week ending 28th ult. were returned as 17,128 bales. Estimated sales 1,300 Egypts and 110 Sudan. Quotation of Uppers and Brown have been officially reduced 40 points. Sakellaridis remains unchanged on the week. F.G.F. Sakel to-day 26d.

SPECIAL MARKET REPORTS.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank :—

Jaffa, November 15.

Approximately 40,000 cases of oranges were shipped to the United Kingdom during the week. It is estimated that there will be a million and a-half cases for export this season.

Hamadan, November 8.

The import market is quiet. There are small buyers of sugar (loaf) at 10¾ krans per batman of 3 kilos. The price of cotton goods has fallen 10 per cent. owing to the fall in the rupee. There is a small demand for rugs and carpets.

Cyprus, November 15.

The crops have greatly benefited by abundant rains. Exports of carobs to Spain and the United Kingdom continue; also of cattle to Greece.

Jaffa, November 22.

A great deal of rain fell during the week, and owing to the stormy weather very few oranges were shipped. Market prices are unchanged.

Basrah, November 8.

There is nothing of importance to report. Rain has been lacking. Large areas of land have been dried up, and the farmers are waiting for the rain in order to commence the sowing.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Tarantia for Bombay (Liverpool, December 23). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mandasor for Port Said, Colombo, Madras, and Calcutta (London, December 13).

Bibby Line.—S.s. Herefordshire for Port Said, Colombo, and Rangoon (Birkenhead, December 17).

British India Line.—S.s. Naringa for Bombay and Karachi (London, December 20); s.s. Manora for Colombo, Madras, and Calcutta (London, December 20).

Ellerman "City" Line.—S.s. City of York for Calcutta (Birkenhead, December 20).

Ellerman's Westcott and Laurance Line.—S s. Grodno for Gibraltar, Piræus, Salonika, Constantinople, and Smyrna (London, December 17).

Johnston Line.—S.s. Aviemore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, December 27); m.v. Tramore for Piræus, Volo, Salonika, Bourgas, Varna, and Constantza (Liverpool, January 3).

P. and O. Line.—S.s. Narkunda for Bombay (London, December 12); s.s. Nankin for Colombo, Madras, and Calcutta (London, December 13).

Prince Line.—S.s. Korean Prince for Malta, Alexandria, Jaffa, Haifa, and Beyrout (London, December 17).

The quantity of gold extracted from the mines in India during the month of September amounted to 35,824 oz., valued at Rs. 19,58,444.

TEXTILES.

IF you wish to obtain your Textile goods from England at the lowest possible prices, communicate with K. JEBARA, 25, Princess Street, Manchester. (Established 1887).

Engineering Topics.

America's 50,000,000 Tyres.

An interesting comparison between America's tyre consumption and our own is made by Sir George Beharrell, managing director of the Dunlop Rubber Company, in an interview on his return from the United States.

"I am more and more impressed," he said, "with the great strides the automobile industry has made over there. In every large city in America all through the busy hours of the day you see miles of cars parked, and it is not difficult to understand how the country consumes fifty million tyres a year. Familiarity with the automobile does not, however, appear to have bred respect; certainly American cars do seem to get less care and attention from their owners than British cars do over here.

"As far as pleasure motoring goes, golf is running it closer and closer for popularity in America every year. There is no question about the golf boom in the United States; indeed, we are selling almost as many golf balls over there as here, and the day is within sight when the number of our golf balls used in America may exceed the number used in this country.

"Business men in America," he added, "comment very freely on the similarity of thought in the electorate of England and the United States, and the combination of these two results seems to have given an impetus not only to trade in America, but also to trade between the United States and Europe."

Vickers and International Combustion Engineering.

Vickers and International Combustion Engineering, Ltd., have received an order for a complete boiler-house equipment, to include two water-tube boilers fired with pulverised fuel, this being the first section of a plant which will eventually be six times the size. The boilers are of the Thompson type, each having 9,000 sq. ft. of heating surface, and constructed for a working pressure of 275 lb. per square inch and superheat 650° F., the normal evaporation being 50,000 lb. of steam per hour, and the peak load 87,000 lb. Each boiler has an economiser of the Foster type, having 4,000 sq. ft. of heating surface, which will give a temperature rise of 100° F.; also a pre-heater of 7,000 sq. ft., to raise the temperature of the air to about 300° F.

The furnace is of the Lopulco type, essential features being the water screen at the bottom for the purpose of collecting the ashes in a dry, powdered condition, and water-cooled side walls, each having 100 sq. ft. of heating surface. The fuel will consist of coke and fuel duff which contains 15 per cent. of volatiles, and the air of combustion is pre-heated to about 300° F. in order to ensure good ignition of the mixed fuel.

The contract includes a complete coal-handling plant to deal with 75 tons of fuels per hour, with an automatic skip hoist to deliver the coal or the coke to independent bunkers; also two conveyor belts to drop either fuel into the receiving hopper in correct amounts, according to the speeds of the belts.

The fuel, in pieces to pass through a 1½-in. diameter ring, goes through a steam drier to reduce the moisture to below 10 per cent., and then to two Raymond six-roller mills, in which it is pulverised fine enough for 95 per cent. to pass through a 100-mesh sieve. A current of air lifts the fine powdered fuel to cyclones situated at the top of the boiler-house, and from the bottom of these cyclones the fuel is carried to the boiler bunkers by means of screw conveyors. The bottom of each bunker has a group of five screw feeders, which feed the pulverised fuel to five burners fixed on the flat suspended arch of the combustion chamber. Forced draught will blow the air of combustion through the air pre-heaters and deliver it into the Lopulco furnace through numerous air ports in the front wall, and an induced draught fan draws the gases of combustion into a conical-shaped chimney.

"THE INTERNATIONAL MERCANTILE DIARY AND YEAR BOOK."

"The International Mercantile Diary and Year-Book" for 1925, which has just made its appearance, is in its ninth year, and comes into the category of those books of reference which are really indispensable to the business man. Its utility may be indicated by a brief synopsis of some of the invaluable information it contains. There are foreign exchange conversion tables, a freight calculation table, and an international section giving just those details of foreign countries that are required in commerce. It is published by Syren and Shipping, Ltd., at 7s. 6d.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.)

Egypt.

General Stores.—The Ministry of War invites tenders for the supply of general stores and clothing required by the Frontier Districts Administration for the year 1925-26. The goods required include permanent stores, oils, paints, varnishes, and other consumable stores, and clothing and cloth. Tenders, on the proper form, must reach the Director of Stores, Frontier Districts Administration, Alexandria, not later than noon on January 14, 1925. It should also be noted that samples of permanent stores, oils, paints, etc., should reach the F.D.A. Arsenal ten days before the date fixed for opening tenders. (D.O.T.)

Clothing, etc.—The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of clothing, equipment, tents, etc., required for the year 1925-1926. January 16.

Calico and Sash.—The Surveyor-General of Egypt, Giza (Mudiriya), invites tenders for the supply of calico and sash required for the next financial year, 1925-1926. February 10.

Turkey.

Barbed Wire.—The Commission des achats des chemins de fer d'Anatolie invite tenders for the supply of five tons of galvanised barbed wire. (D.O.T.)

THE BRITISH INDIA CORPORATION LTD. CAWNPORE :: INDIA

The British India Corporation, Ltd., comprises an extensive group of industrial concerns including the Cawnpore Woollen Mills, The New Egerton Woollen Mills, Cawnpore Cotton Mills, Cooper, Allen and Co., The North-West Tannery, The Empire Engineering Co. and the Naini Tal M.T. Co. These firms, by pooling their resources and centralising control, form a Corporation which is able to supply Government Depts., Railways, Police and Armies, with every form of woollen and cotton clothing, boots, and all kinds of equipment of a quality and price which would not be possible for an individual undertaking.

Reference to the particulars below will give an idea of the Corporation's activities. Correspondence is invited from wholesale merchants, and may be addressed to the Corporation or direct to the Branches. Inquiries and applications for samples will receive immediate attention.

LAL-IMLI PURE WOOL

Makers of the famous Lal-Imli Pure Wool Products. Manufactures include: Rugs, Blankets, Lohis (shawls), all classes of Knit goods, Flannels, Tweeds, Serges, Worsteds, Broadcloths and Greatcoat Cloths. All requirements in Wool at lowest prices consistent with quality.

CAWNPOREWOOLLEN MILLS CO., CAWNPORE

Kakomi Cawnpore

These Mills produce the well-known Kakomi Cotton Goods.
The following articles are among their manufactures: Cotton Yarns, Twills, Table and Bed Linen of all kinds, Tents, Durries, etc.

CAWNPORE COTTON MILLS CO., CAWNPORE.

COOPER, ALLEN AND COMPANY.

This Company is one of the world's largest manufacturers of Army Boots, supplying the armies not only of India, but the world. Makers of all types of Boots, and every kind of Saddlery and Leather Equipment.
Everything in Leather.

COOPER, ALLEN & CO., CAWNPORE.

Dhariwal

Manufacturers of Dhariwal "Long Life Wool Wear."

Productions include: Serges, Tweeds, Broadcloths, Blankets, Rugs, Worsteds, and Woollen goods of all kinds.

The New Egerton Woollen Mills Co., DHARIWAL.

NOTES OF THE WEEK.

The Position in Egypt.

The number of arrests in Egypt in connection with the murder of Sir Lee Stack continues to increase, and, in spite of the lapse of time since the event, and the disappearance of certain suspects, the hope is entertained that the actual criminals will ultimately be brought to book. Ziwar Pasha has given further evidence of his courage in dealing with the situation by appointing as his Minister of the Interior Ismail Sidki Pasha, who, as a secessionist from the Wafd, is anathema to the Zaghloulists. Sidki Pasha claims to belong to no party; he has come forward at this stage to help the Prime Minister to clear Egypt of the reproach that none of her politicians dares to have a policy of his own, but must obsequiously conform, as Zaghloul Pasha did, to what mob clamour ordains. Both he and Ziwar Pasha expose themselves at the hands of the Zaghloulists to the jibe of being British tools. They have had, however, the strength of character to face the odium of an unjust charge, and we may hope that they will remain long enough in office to convince their fellow-countrymen that, if there has been any "playing into the hands of the British," it has been on the part of Zaghloul Pasha and not on their part. One day when Egypt has had time for reflection, the harm that Zaghloul Pasha has done to his country's interests will perhaps be recognised, whatever credit may be his for having hastened the day of independence. His hold on the popular imagination has synchronised with the adoption of murder and assassination as a political weapon, and, although British subjects may have been the immediate victims, every responsible Egyptian knows that with each fresh crime authority in the country has been further undermined. As Prime Minister he gave in no single direction a constructive lead to the country, but brought constitutional government into disrepute by surrounding himself with unofficial advisers who merely pandered to his weakness for popularity.

Time for Reflection.

It is not in the interests of Great Britain to have in Cairo a puppet Ministry not representative of the country. The British Government wishes to deal with Egypt, not with a few individuals who cannot speak with authority for their countrymen. In Ziwar Pasha's Cabinet it hopes to be able to treat with an Egypt sober, in the place of the Egypt drunk that alone it knew under the Zaghloulist régime. The event must prove whether Egypt is capable within a reasonable time of recovering from the orgies of intoxication in which Zaghloul Pasha indulged it. The signs are at least favourable, although it is too early to speak with any degree of certainty. For Egypt, the one thing needful is that no untoward incident should disturb the even tenour of the next few months. Great Britain has come down upon her, in common parlance, with a sledge-hammer. The need was imperative. The assassination of the Sirdar was no isolated incident, but the climax of an organised policy of murder, which was supposed to be playing the Egyptian Government's game. It was absolutely essential that Great Britain should act in a way that would appeal even to the half-baked intelligence of those who, with their demonstrations in front of his house, determined Zaghloul Pasha's policy. As was to be expected, the idol of street popularity at once deserted his post and the nation, and left it to others to extricate the country out of the mess into which he had brought it.

British Policy.

Great Britain is perfectly well aware that a lasting settlement of the difficulties in Egypt can be achieved only in agreement with the Egyptian people themselves, and of recent years she has had no other policy than to reach agreement in this way. Zaghloul Pasha was neither strong enough nor honourable enough to respond to the British gesture of 1922, when Egypt received her independence, and it was left to her honour to fulfil her part of the bargain at a later date. It has been necessary, therefore, for Britain to recover her freedom of action in regard to negotiations with Egypt. This, it may be said, is the explanation of the items of the

Digitized by Google

ultimatum which seemed to go beyond the immediate cause of its despatch. The desire for a friendly agreement with Egypt remains, and if the Egyptians can shake themselves free from Zaghloulist folly, and realise that circumstances impose certain restrictions on their relations with Great Britain, there would seem to be no reason why Egypt should not presently revert to the conditions which the British Government contemplated in February, 1922. Any move in this direction, however, it cannot be too strongly emphasised, should be left to British initiative, for which a period of loyal acceptance on Egypt's part of the consequences of her folly and crime is an essential preliminary. British politicians can give a useful lead to the Egyptians in this matter by setting an example of implicit trust in the Government to vindicate the nation's honour, which calls equally for a firm hand and a generous settlement.

Constitution Tinkering.

Whether the proposal attributed to M. Papanastasiou that the tenure of the Greek Premiership by any Minister should be limited to one year will be seriously considered in Greece remains to be seen. In the country's interests it is to be hoped that it will be regarded as a cynical witticism on the author's part. The ostensible reason for such a solecism in the new Constitution is either to discourage the numerous politicians who are credited with designs upon the post or to offer them an orderly prospect of satisfying their ambitions with the flux of time. As the year 1924 holds the "record" of "six, not out," in the matter of Greek Prime Ministers, it would be thought that the object to be sought is length of tenure for the occupants of the post. To this end the change necessary in Greek politics is that parties should become identified with fundamental questions of policy and not merely with personalities. The present Cabinet of M. Michalokopoulos is doing its best to break new ground in this direction, and for this reason deserves the widest support in Greece; but it attains power after changes in the Premiership have already been rung five times in the twelve months, and its task is admittedly a difficult one. Yet, if he can count on the loyalty of two of his colleagues, M. Michalokopoulos may prove to be *felix opportunitate*. Greece is wearied of politics; the economic situation of the country is wonderfully buoyant, and the possibility of turning to good purpose the tragic expulsion of Greeks from Turkey has seized the popular mind. Furthermore, there are several urgent questions of the day, of an economic, not political, character, calling for solution, and the Greek people will be tempted to bless the man who is able to keep his hand on the tiller long enough to bring the ship of State into a happier harbour than it will have known for a generation or more.

Angora and Constantinople.

An interesting report has been issued by a Commission appointed to inquire into the causes of the decline of Constantinople, and to make suggestions for its improvement. It is not possible here to summarise its findings; but the important part is that the future of the city should have engaged the attention of the Angora authorities to the extent of prompting them to agree to a commission of inquiry. The people of Constantinople have long laboured under a feeling of neglect on the part of the Government, when they have not had to complain of what seemed to be active hostility in the form of vexatious regulations which threatened to interfere with the prosperity of the city and port. The Angora Government is probably to be acquitted on the charge of having deliberately sought to "down" Constantinople; in any case, there has been time for it to appreciate the value of the biggest revenue-producing centre in the Republic, and it will be of interest to see whether action will be taken on the lines recommended by the Commission. These include the provision of funds to enable the development of real property, and here the question of Turkey's finances comes into prominence. We can but hope that the appointment of the Commission, its findings, and the reception accorded them by the Turkish Government will convince business and financial interests in Great Britain that things are gradually moving in Turkey, and that this is the psychological moment for a definite display of sympathetic interest in the future development of the country. It is not claimed that Turkey has ceased to be an Oriental country, but it is urged that Great Britain, for a variety of reasons, ought to be the first to recognise any genuine striving after better things in a country that, in spite of war, quarrels, and misunderstandings, has never lost its liking for the British people and its profound respect for British strength and British institutions.

Albania and Her Neighbours.

It is reported from Rome that, as a result of the visit of M. Nintchitch, Yugoslavia's Foreign Minister, an agreement regarding Albania has been reached by Italy and Yugoslavia. The two Powers undertake to refrain from any interference whatever in the internal affairs of Albania, and declare that their joint policy is the development of an independent Albania. This agreement has been reached none too soon, and it is to be hoped that it will be scrupulously honoured in both countries. It coincides with one of the periodical announcements of the Belgrade Press of a revolution in progress across the Serbian frontier. This time, however, the usual contradiction is couched in more serious language. The Albanian Government declares that no revolt has taken place in the country, but that on December 13 bands, considerable in number, composed of Serbian soldiers, of Russian and Bulgarian refugees, and of Albanians recruited on Serbian territory, attacked Albanian frontier posts in the district of Luma, making use of guns, machine-guns, and bombs. The Government, the statement continues, had information that the attack was fixed for December 10, and it was on that precise day that it was announced in Belgrade that a revolution had broken out in Albania. It will be impossible for the Yugoslav Government to ignore this very definite charge, and we can but hope that the agreement reached in Rome by M. Nintchitch implies that Yugoslavia has decided that the policy of fishing in troubled waters is unworthy of its position in the Near East.

Playing with Fire.

As the name of Ahmed Bey Zogu has been associated with the alleged "revolt" in Albania, it is obvious that the ex-Prime Minister of Albania has been behind the movement which, according to the Tirana Government, has culminated in attacks from Serbian territory on the Albanian frontier. Ahmed Bey Zogu has for several months been an honoured guest in Yugoslavia, staying first at a hotel in Belgrade, and subsequently having a residence at a short distance from the capital. If he has been correctly identified with the movement, it is clear that he cannot be allowed to abuse Serbian hospitality in this way, and his continued presence in Yugoslavia becomes inconsistent with the undertaking given by the Yugoslav Foreign Minister to the Italian Government. The

Digitized by Google

action imputed to Ahmed Bey corresponds with that imputed to certain ex-Ministers from Bulgaria who have also become political refugees in Serbia, and are accused by the Bulgarian Government of being implicated in incidents on the Bulgarian frontier. Yugoslav interests would seem to be so much better served by having tranquil neighbours that it is difficult to understand why successive Belgrade Governments expose themselves to the charge of being hostile to conditions making for tranquillity beyond their borders. In the case of Albania, there is little likelihood of its proving an easy country to govern. The Ministry of Mgr. Fan Noli may not yet have been able to live up to the high ideals of its official programme; but there was little in the régime of Ahmed Bey Zogu to convince the people of Albania that salvation was to be attained only at his hands. The policy agreed upon in Rome is clearly the right one. The Yugoslav Government can be trusted to adhere to it; if the Belgrade Press is to be equally loyal to its country's pledged word, it will have to lose no time in turning over a new leaf.

Persian Politics.

An amicable adjustment of the strained relations between the Sardar Sepah, Persia's Prime Minister, and the Sheikh of Mohammerah is the best thing that could have happened in the interests of all concerned, including Persia. The Sheikh has earned the warm regard of Great Britain for important services rendered over a course of many years; but it was impossible for the British Government to do more than express to both parties in the dispute the hope that they would be able to settle their differences. There is still in Persia a sufficiently active anti-British section to seize hold of any incident as an excuse for attacking Great Britain, and great play was made of the attitude of the Sheikh of Mohammerah, who was represented as being supplied with British money and armaments for his "war" against the Persian Government. The friendly agreement now reached effectually disposes of the stupid allegation. Memories in Persia are short; otherwise it might be recalled that not many years ago the Persian Government was indebted to Great Britain for a timely intervention which saved Northern Persia from considerable embarrassment. Towards the end of 1918 the Salar ed Dowleh appeared to regard conditions in Azerbaijan as ripe for intervention that would bring him into power in that province, if not in the whole of Persia. His sudden arrest by a British force then in the country nipped the plot in the bud; the Salar ed Dowleh was detained for a period in Baghdad and finally allowed to proceed to Constantinople before returning to Switzerland. He is now reported to be either in Persia or on his way back to that country. It is to be hoped that his return results from the conviction of the Persian authorities that the days of intrigue are over, and that the Salar ed Dowleh will bring his undoubted talents to bear solely on the promotion of the interests of the country as a whole.

THE WEEK AT HOME.

London, Tuesday Morning.

London and Fog.

Two things weighed heavily upon Londoners last week: foreign affairs and fog. And of the two the fog was immeasurably the more ponderable.

It descended last Wednesday upon London—and, indeed, upon other parts of the country which had no Press to tell how bad it was—with devastating completeness. You could not only see it, breathe it, but eat it, and, in later stages, drink it, too. Not at all the real thing, we were assured by those old enough to know of worse; but still, quite good enough for the common rut of unremembering mortals. Old men, and especially old ladies, spoke in a superior manner of *the* cattle-show fog when the cattle on view at the annual show at Smithfield had to be slaughtered because they could not breathe. But the problem must have been simpler then.

For one thing, traffic was so seriously impeded. And that is the Cockney's test of a fog. When the 'buses stop running, as at times and in places they had to, people really began to realise that the General Omnibus Company are not the only ones to suffer. Some sort of ghostly attempt was made to lighten the darkness at nodal points by means of flares, but they were rather like licks of ghoulish flame in some Cimmerian underworld.

Of course, it was not a "pea-souper." There was not enough sulphur about. And one did not hear of anyone's buying an evening paper, lighting it, and by it crossing the road—which is said to be the real test of fog. But it was quite sufficient to set some extraordinary medical men prattling on the virtues of fog.

At first—there is no denying it—it was an adventure It was rather fun to greet some invisible yet familiar face with the absurdly inapposite words, "Good morning"; it varied the monotony of one's daily travelling; above all, it gave unique scope for tempered grousing. But it certainly outlived its jocular qualities.

Foreign Affairs.

Try as he will, the poor Englishman cannot get away from the Continent and from America. He struggles his hardest to put in an administration which should allow him, from the point of view of foreign politics, to go to sleep, that is, to get on with his business, and his reward is—Egypt, evacuation of the Rhineland, debts to U.S.A., Mr. Chamberlain's visit to Rome. It is hard, indeed, yet there is, it seems, no way out of it. Heartily tired of it all, he is supporting the Government to the top of his weary bent, and does not care to have to confess that he can see no solution of any of the first three problems that I have named.

He is pleased with the speech which Mr. Winston Churchill the other day made on the subject of European debts to America, and does not wonder overmuch how it is that the Chancellor of the Exchequer has so quickly changed his mind (his

tactics?) on this enormous subject. Indignation on the French refusal to pay Britain until she is first paid by Germany is a little moderated by the fact that he cannot quite place these debts into the ordinary commercial category. Yet he is still far from being able to separate the moral from the business aspects of the debts.

The best thing, however, has been done. It has all been postponed until the New Year, so that Christmas can once more be a Christmas of forgetting.

Parliamentary Sparring.

So far there has been but the preliminary jockeying for position in Parliament. Members and parties have been like so many herring-boats waiting outside the harbour, each whistling his hardest and trying to catch the harbour-master's' eye. The Radicals have made a desperate attempt to assert themselves, but have made little impression as yet. Labour has not accustomed itself to its position of comparative insignificance, and the real fights in the House will not come until next year.

The only debate that made at all good reading was the conversation between the Premier and the ex-Premier on the subject of the Campbell case. Mr. Baldwin informed the House that the Government had excised their predecessor's instruction that the Attorney-General should direct no political prosecution without the consent of the Cabinet. This was, of course, a very proper step. The Attorney-General may now use his discretion about consulting the whole Cabinet. There was, incidentally, little hint given that interference by the Cabinet with the Attorney-General's duties has been indulged by all parties.

The Royal Academy.

One does not know whether to ascribe the election by the Royal Academy of Mr. Frank Dicksee to the resurgence of Victorian tradition, or merely to the comfortable taking of the line of least resistance, due to the approach of Christmas and the consequent respect of old age. There is no question that this artist has dignity and the look of a man who would fitly occupy the place so honoured in last century, but there can also be little question that it is the older members of the Academy who have this time prevailed.

There were people, I know, who shivered when they saw in this year's Academy the new President's "This for Remembrance." They felt that the gap between the painter and the thought of his time was of ghostly distance: and now he is P.R.A.!

How far, one wonders, should one century overlap another? Without prejudice to the Victorians, one can begrudge the amount that they have carried forward into our time. It will be 1928 before the Academy has to make up its mind that this is the twentieth century.

Aliens.

The political atmosphere is heavily laden at the moment with talk of restricting the number of aliens in this country. Now when such talk has been based on sentiment, it has been the veriest rubbish—the man who dislikes, say, a Russian Jew merely because he is a Russian Jew, and the man who says, in accordance with the old British traditions of providing a "right of asylum," in effect "Let 'em all come," are equally useless in a discussion of this sort. Neither creeping tales of insidious intrigue nor professions of impossible generosity should move opinion. But there is no doubt that the proportion of aliens to Englishmen has in certain places become very serious. I remember well having my eyes opened to the potential danger of it in France. To a certain Labour Company in 1918 drafts were sent out after the March offensive, and much trouble was experienced with them. They contained many "objectors," people who could hardly speak our language; all one could get out of them, in fact, was "Russia no more fight: I no fight." The harbouring of such men as this is manifestly a great risk, and it is very well that the House of Commons should, as it has just shown itself to be, be alive to the matter.

Raping the Locks.

Of all the subjects being discussed with zest in this festive season, none arouses so much fire as that of the bobbing of women's hair. What domestic entanglements, strife, and triumphs bobbing has caused is known only to that history which is so much more important than the stuff which gets into books. Mere man hardly dares touch the subject now: since women achieved independence, professors' and fools' are the only voices which can lament with impunity the raping of the locks.

An extraordinary gallant and sagacious man, Professor Hooper Roberts, has just had the temerity to point out what everyone out of earshot of women had been whispering: that bobbing is as old as the hills, that it originally was a mark of servitude, and that there are some heads which it does not suit.

Beethoven Quartets.

They were nearly at the end of their herculean task of playing right through the Beethoven string quartets when I went, last Friday, to the Æolian Hall to hear the London String Quartet. It may have been a natural fatigue, or the absurdly thin audience, or the effect of the previous two days' fog, or some perversity in myself, but I could not think that the four players had improved since I heard them a year or two ago. No question that they understand Beethoven, even in his mightiest moments—and he was at his profoundest in the last five quartets—but why should their tone coarsen in the more strenuous passages, and their rhythm have become a little too calculated, almost mechanical? In part, however, they are still most delightful artists; their lesser shades are beautifully determined. One wonders, incidentally, whether in their annual week of Beethoven they need be so severely educational: would it not be wiser to mix up, for the benefit of us unlearned ones, some of the racier, lighter works of the earlier period with those huge broodings of Beethoven's later, grander time?

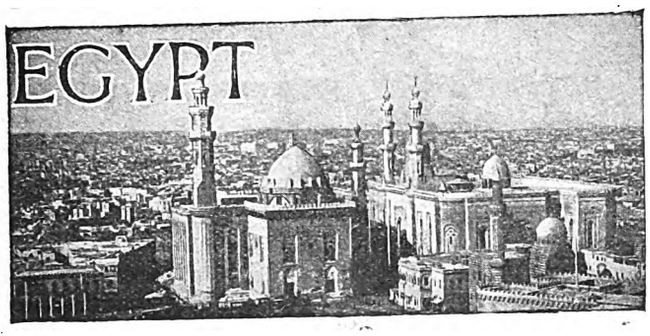
The Near and Middle East.*

From Our Own Correspondents.



Cairo, December 6.

The Alexandria Customs.

Details will have already reached you of the settlement reached between the Egyptian Government and the Residency which permitted His Majesty's Government to authorise the release of the Alexandria Customs. The settlement has pleased neither the Zaghloulists nor the Opposition, *i.e.*, the Constitutional Liberals and the Watanists. The Zaghloulist disapproval was almost a foregone conclusion. They had declared that they would support any Cabinet that worked in the interests of the country. But it was they who had to interpret exactly what "working in the interests of the country" might mean, and it was generally recognised that when it came to the point they would dispute any settlement, first, because otherwise it would reflect on them, and secondly, because it has become a fundamental principle of their creed not to approve of anything that is done by anybody but a member of the Wafd. As regards the Opposition they are hostile to the settlement, or, rather, they criticise it so as to have an opportunity of attacking the Zaghloulists, on whom they lay the entire responsibility for anything the country may have lost.

As a matter of fact, all reasonable Egyptians recognise that there was no way out of the dilemma into which the country had been driven. Egypt was faced by an ultimatum, and an occupation of the Customs as the first step to enforce acceptance of its conditions. The great point was to prevent any further encroachment on her sovereignty and to secure the release of the Customs, and in the opinion of these Egyptians, who are exceedingly numerous, but, as usual, dare not voice in public what they really think, Egypt, thanks to Ziwar Pasha, has emerged remarkably well from the critical situation in which Zaghloul Pasha had abandoned it. Foreign as well as British opinion cordially approves of the terms of the settlement which re-establish the *status quo* as at February 28, 1922, this time with the formal recognition of the Egyptian Government.

Resignation of Ministers.

The exchange of documents embodying the settlement was followed by the resignation of two of Ziwar Pasha's colleagues, but although the Zaghloulist Press has endeavoured to attribute this to disagreement with the terms, it is an official fact that the settlement was approved unanimously by the Cabinet, and the retirement, which, it may be pointed out, was notified to the Prime Minister only eighteen hours after the exchange of documents, is in all probability due to pressure brought on them by the Wafd. At any rate, Ziwar Pasha found little difficulty in replacing his two colleagues, and one of the new Ministers, Tewfik Rifaat Pasha, may be regarded as an improvement, since, from past experience of his policy, one may expect him to deal very firmly with the student movement, which is one of the unsatisfactory features of the present situation.

Question of the Arrests.

Last week I mentioned that the arrest of six deputies in connection with the investigation into the Stack outrage had raised an outcry amongst the Zaghloulists. The application for their release has now been rejected by the Court on the ground that when Parliament authorised Zaghloul Pasha to give an assurance to the British Government that the inquiry would be pressed with energy for the purpose of bringing the culprits to book, no matter what their position or age might be, it had implicitly waived the question of Parliamentary immunity in the case of any of its members who might be implicated in the matter.

Not content with this decision, the Wafd summoned a meeting of the party, and submitted an appeal signed by 110 members to the King calling upon him to order an immediate reassembly of Parliament to deal with the violation of the Constitution of which the Cabinet had been guilty. This appeal has been referred by His Majesty to his Ministers whose duty it is to advise him on such matters. It is confidently expected that it will be rejected. It is tantamount to disputing the King's prerogative to adjourn Parliament for a month which he exercised a week ago, and there is a strong feeling that pursuant to their past tactics to pick a quarrel with the Throne the Zaghloulists engineered this appeal in order to place the King in a bad light in the eyes of the people. At the moment of writing I am given to understand that Parliament will be dissolved just before the expiration of the month of adjournment.

Sir Geoffrey Archer.

The appointment of Sir Geoffrey Archer as Governor-General of the Sudan has been well received by the British community, because he made such a good impression on them when he attended Mr. Churchill's Middle-East Conference, and by the Egyptians because his appointment by Egyptian

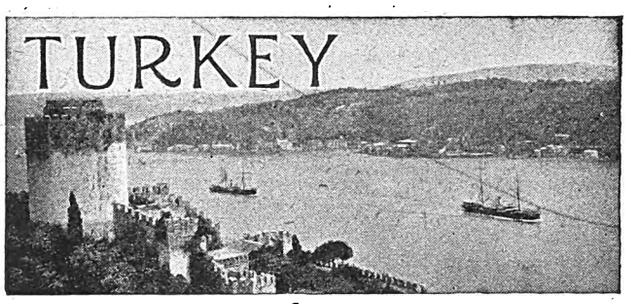
decree indicates that in spite of the changes she has made in the administration of the Sudan Great Britain has no intention of denouncing the Anglo-Egyptian Condominium of 1899.



Constantinople, December 9.

Turkey and Great Britain.

The surprise of Agha Oglou Ahmed Bey at the unexpected reception of his discourse in the Grand National Assembly (after the reading of certain Egyptian Deputies' telegrams regarding recent events) on the conduct of and tyrannical measures adopted by the British authorities in Egypt since the assassination of Sir Lee Stack can only be compared with the satisfaction given by Fethi Bey's just and opportune reprimand and his declaration regarding Turkey's attitude in connection with the Egyptian incident.

It was gratifying to observe that Fethi Bey availed himself of the opportunity presented on this occasion of showing himself a worthy leader of the Government. Up to the time of the new President of the Council's exposition of the Government's proposed policy towards Great Britain the local Press in general had devoted many leading articles of two and three columns to severe criticisms on the "unjust" action of the British, and apparently derived considerable pleasure in suggesting possible remedies which the Egyptians might administer. Turkey was given as an example of a country freed from the hands of such oppressors, and some papers declared themselves unable to understand how Egypt had withstood and suffered the dominating British rule for so long. But after Fethi Bey's statements on December 2 similar articles became conspicuous by their absence.

Telegrams: "MENTALLY." *'Phone:* MAYFAIR 1558.

Calcutta, Delhi, Simla, Lahore, Rawal Pindi and Murree.

The President of the Council's reference to Turkey's desire to preserve and to better her good relations with Great Britain is the first positive mention in this connection which has been made in the Assembly for some time. It appears that Fethi Bey realises that in the interests of Turkey a state of harmony and good will with Western nations is a necessity.

General Brancker's Visit.

Air Vice-Marshal Sir Sefton Brancker, with Mr. Allan J. Cobham as pilot, arrived here from Bucharest at 3 o'clock on Friday afternoon last. They were met at San Stefano aerodrome by Major Harenc, the British Military Attaché, and Captain Mouhsin Bey. Preparations for their reception had been made by the Turkish authorities, and for three days a military detachment and band waited in vain to welcome the Marshal and his well-known pilot, who were delayed owing to very heavy snows in Roumania. The journey from Bucharest to Constantinople took only three and a-half hours, as compared to forty hours by train. Constantinople, Mr. Cobham tells me, is by way of forming a very important stage in the proposed airship and aeroplane route to India. Their choice of this time of the year, when flying conditions are at their worst, to demonstrate the practicability of such air services, which are believed by many to be dangerous and difficult, but are in reality quite reliable, has up to the present been successful. It was intended to leave Constantinople yesterday for Angora, but the weather at present being too bad, the Marshal left for the capital this morning by train.

Proposed Press Law.

Much is to be said for the enterprise of the Constantinople journalist, especially when the information he seeks has important bearing on his paper's and his personal interest. During the last week there have been much discussion and speculation on the proposed law for the "Suppression of the Liberty of the Press." Ali Said Bey, the Deputy of Kozan, who is responsible for the proposition to modify the present law regarding the Press, has arrived at Constantinople. He can be described as being (at the moment) a very popular member of the Popular Party, and as such he was sought (but in vain) on his arrival at Haidar Pasha for interviews by numerous representatives of the local Press. Unsuccessful but undaunted, these enterprising reporters, anxious to glean enlightenment on this important question which directly interests them, proceeded to search diligently for the popular Deputy, and after some time found him enjoying his midday meal in a restaurant. Ali Said Bey considers it the duty of the Assembly to "put on the good road" the newspapers and journalists who do not respect dignity and honour, and who always wish to describe to those abroad the situation in Turkey as being very weak. The above-mentioned Deputy seemed somewhat surprised at the evident apprehension of the papers and their representatives, and his assurances regarding themselves do not appear to have done much to console the local Press in general, who continue to speculate on the possibilities of being able to continue their work under the probable conditions emanating from the new law.

IRAQ.

Baghdad, December 4.

Political Forebodings.

The political atmosphere appears to be calm but the weather prophets, with a gloomy shake

Digitized by Google

of the head, are understood to mutter that a storm is blowing up. The Prime Minister is said no longer to lead his party; as generally happens, his adherents have become too extreme for their leader, who is obliged to follow instead of heading the van. The extremists are so deeply imbued with Nationalism that they cannot help being anti-British. While official relations between the two countries are quite friendly, an insidious under-current of anti-British feeling exists, and shows itself in various petty and despicable ways; for example, an Anglophil official is removed from his post for no apparent reason, a criminal suspected of pro-British sentiments receives a heavier sentence than others convicted of far more serious offences. Meanwhile, with the passage of time Iraq is becoming rather less than more fit for the complete independence for which she clamours.

Elections.

The elections for Iraq's first Parliament have begun, though under the existing clumsy system of indirect representation three or four months must elapse before the deputies can take their seats. Every male Iraqi over twenty is a primary elector, provided that he is a taxpayer, has not been convicted of crime, nor lost his civil rights, and is not a bankrupt or a lunatic. Every 250 primary electors choose one of their number to be a secondary elector; in the hands of these latter rests the election of the deputies, each 20,000 of the male population being represented by one deputy. Minorities are safeguarded by the provision that Parliament must include at least four Christian and four Jewish members.

The Shiahs, whose influence in the past has been sufficient to stultify early attempts at elections, are this time eagerly participating, in the hope of securing representation commensurate with their large numbers. The most active party, however, is the Hizb al Ummah or People's Party, and it is feared that their superior organisation and greater exertions will lead to the election of extremists at the expense of the more moderate candidates favoured by the Government. It is difficult to say whether the tragic or the comic element will prevail if Iraq's first Parliament, fostered by Great Britain and owing its existence to her, is composed almost entirely of deputies holding violently anti-British views.

Northern Frontier.

All the Turkish forces have been withdrawn behind the line fixed upon by the Brussels decision. This corresponds with the true frontier of the Mosul vilayet, leaving to Iraq the Sindi-Guli country, through which ran the Turkish lines of communication, and to Turkey the northern Tiyari district.

Maude Anniversary.

On the anniversary of his death, an impressive ceremony was performed in front of the equestrian statue of General Maude outside the Residency gates. The guard of honour, composed of men from the Royal Inniskilling Fusiliers, the 6/13th Frontier Force Rifles, and the 1st Battalion Iraq Levies, was inspected by the High Commissioner and the Air Officer Commanding, after which his Excellency placed a large wreath at the foot of the statue. After the sounding of the Last Post by massed buglers, prayers were read by the R.A.F. chaplain, and a lament played by the band of the Royal Inniskilling Fusiliers. During the ceremony a flight of nine aeroplanes flew over in perfect formation. The Royal Salute and National Anthem ended the proceedings.

General News.

The Anglo-Persian Oil Company has undertaken to provide the capital, estimated at £450,000, required by the Iraq Government to enable it to dredge the bar at the mouth of the Shatt al Arab. At the annual meeting of the A.P.O.C., it was stated that the capital and interest will be repaid by the collection of dues, which the Port of Basrah Authority will levy.

A grant of Rs. 25,000 has been sanctioned by the Iraq Council of Ministers for the relief of the destitute Kurds and Assyrians now in Mosul. These unfortunates, whose homes are on the northern frontier, fled into Iraq before the recent Turkish advance.

It is stated that the invitation to take up his residence at Basrah, extended to ex-King Hussein by the Council of Ministers, has been declined by him. Basrah, detesting all matters political as much as Baghdad loves them, has heaved a sigh of relief.

Colonel S. H. Slater, C.M.G., C.I.E., who since 1920 has been Adviser to the Ministry of Finance, has resigned his post and leaves for England next week. The vernacular Press records its deep appreciation of his services to the country, and expresses great regret at his departure.

THE CHURCH MISSIONARY SOCIETY AND THE SUDAN.

In the secretaries' review of the work of the Church Missionary Society, presented to the general committee of the society on December 9, a tribute was paid to the late Sir Lee Stack, Governor-General of the Sudan, in whom, they stated, "the C.M.S. has lost a warm friend and supporter. He was deeply interested in the society's Sudan mission, and year by year lent the Palace grounds for the mission sale of work, when both he and Lady Stack not only subscribed, but worked personally to make the sale a great success. It was also due to Sir Lee Stack's energetic help that a considerable sum of money was raised for carrying on the work at the Khartoum Girls' School."

The report also announced that the society had been assured by cable of the safety of its workers in Khartoum.

SERBIAN RED CROSS.

Founded in August, 1914, the Serbian Red Cross Society in Great Britain, having completed its objects, has been dissolved after an existence of ten years. The King congratulates the society upon being in a position to make an annual grant of £1,000 in perpetuity to the Central Committee of the Serbian Red Cross, Belgrade, for the continuance of the work started by the branch in Great Britain.

CIVIL WAR IN PERSIA?

By MIRZA FIROOZ KHAN.

Tabriz, November 23.

Persia's Troubles.

The trials and tribulations of Persia seem never at an end. Hardly had the conflict between the Sardar Sipah's Government and the Eshayeer of Bakhtiaris been smoothed over than the conflict between Riza Khan and the powerful Sheikh Khazal broke out. This quarrel may or may not have "politics" behind it, but there certainly is a personal aspect to the matter. Towards the end of 1922, it will be remembered, the present Shah returned to Persia from Europe. When he was in the south of Persia, this same Sheikh of Arab Eshayeer went to meet his Majesty, and presented to him a hundred choice Arab mares, together with 10,000 Turkish gold lira. Riza Khan, the Sirdar of the Army of the Shah, was ignored by the mighty Sheikh, and there is no doubt that he felt himself thereby slighted. The quarrel has been increasing in intensity from the beginning of this summer, but neither side has given in yet. The Press is forbidden to write on the subject. And now, before this matter has been regulated, trouble has broken out in the North-West between the Persian and the Turkish-Kurd Eshayeer (tribesmen).

The Pitchdari Fighting.

Early in the spring of this year the "Pitchdari," tent-living *ashiret*, passed from Turkish on to Persian soil, for the purpose of grazing their sheep and cattle for the summer. For many years this had been their custom, and was almost regarded as a right. But this year the Persian Government, feeling itself strong enough to resist this violation of the frontier, refused the immigrants permission, except on the following terms:—

1. The Pitchdari to pay the Persian Government one Turkish pound "per head" as a tax.
2. To yield their arms to the Persian Government.
3. To pay to the Government their annual tribute for the past ten years.

To these demands reply was made that the Pitchdari were prepared to pay a tax of one Turkish pound per tent (not per head), that they would never part with their arms, and that they would not pay retrospective tribute.

Then the "war" began. It is stated that the Pitchdari had 15,000 men. The Regular Cossacks were assisted by nearly 2,000 Kurdish cavalry, recruited from all the tribes. Fighting was prolonged until last September. The enemy was, it is affirmed, defeated, leaving the Government troops victorious. I do not know the extent of the Cossack losses, but the Kurds lost 180 men. Afterwards Amir Lashgiar (Persian Commander-in-Chief in the province of Azerbaijan) drove in a motor-car to Souch-Bulak to congratulate the Kurdish chiefs upon their loyalty and victory, and presented them with pistols, revolvers, gold watches, rifles, and so on.

Another Expedition.

And now, with the Kurds' horses scarcely unsaddled, trouble has emerged in another quarter. The Commander-in-Chief has gone to Souch-Bulak and has ordered the Kurdish chiefs to report there within eight hours—with their troops all armed. On his first visit he had told them that everyone should have a rifle—if he were not possessed already of one, he must buy one. Now the Commander expects to have this time a force of over 4,000 fighting men gathered round him. Nearly one-half of the troops stationed in Tabriz have already started for Souch-Bulak, and it is stated that the Cossack forces in Maragha, Mianduab, Salmas, and Urumia have also been ordered to report at Souch-Bulak. Camels, mules, and pack-horses are being commandeered to carry war material, and, as usual, owners of these animals are hiding themselves!

Blaming Great Britain.

In this, as well as in the Pitchdari conflict, the British Government are blamed. Even well-known and highly situated Persians accuse the British of having brought about, for the purpose of a war between America and Persia, the recent murder of Major Imbrie. "So long as the Americans are in our country," I have heard patriotic Persians say, "the English will not give us a peaceful night's rest!" It is commonly stated that Britain employs, at a salary of £1,000 per month, influential Persians in Teheran to act as spies and to cause trouble between Americans and Persians and between different parties of Persians, both in the Mejliss and in the bazaars. Britain is accused, again, of fomenting the war between the Government troops and the Sheikh of Mohammerah. "Sheikh Khazal," it is said, "fights our troops with British money and British war material." Hatred of the English seems, indeed, to have reached boiling point. "The old soldier of the Russian regime," exclaim these Persian patriots, "used to cow us down with his whips and heavy boots, but the British are trying to cut our throats with cotton! The British are foxy, *bad-zot* (of bad stock). *fizool* (one who mischievously causes a quarrel between two men or parties), and *kopak-ogli* (son of a dog!)." They go on: "Not content with Sheikh Khazal, the Pitchdari, and Jelo troubles, the British have now once more urged on Ismail Agha (the notorious Simko) into the war maidan!"

The Campaign Against Simko.

Amir-Lashgiar is now preparing an expedition against Simko, who, it is said, has begun to claim Salmas, Urmi, and Khoi as the blood-price of his brother, Safar Agha, murdered by Mozaffar ed Din, Crown Prince, thirty years ago! He has with him Saiyid Taha and a powerful sheikh named Zola. Four years ago, in his first rebellion, Simko caused the death of about 5,000 Persian Cossacks and gendarmes. The very sound of his name strikes universal fear. For his first as well as for his second rebellion the English are blamed. As an example of this white-hot hatred, the Persian authorities have sent a herald through the bazaars in Saggig, Bokan, Mianduab, Salmas, Urmi, and other places proclaiming to the shopkeepers that anyone who has any British goods in his shop must dispose of them within three months, and if the goods are not sold or destroyed at the expiration of that time, the authorities will confiscate them and publicly burn them! In fact, if the authorities were not afraid of serious consequences, every Englishman, and even the servant and cook of every Englishman, would be taken as a "war-prisoner," stripped naked, tarred over, and burned! But the *bad-zot* Briton is too powerful, and his revenge might know no limits.

Simko's barbarous methods of war have so often made the people of Maragha and Mianduab and of

Digitized by Google

the other towns on the Tauris route to fly to Tabriz for safety, leaving behind their homes and cattle, that his present movements are causing very serious perturbation, especially because winter is approaching, and everyone has his winter stores filled. As a precautionary measure, probably very wise, Amir-Lashgiar is sending four of the leading Kurdish chiefs to Tabriz, whence they will be sent, as hostages, to Teheran. These four princes are' Kanj-Ali, Bey of Al-Bulak; Ali-Bey of Haji Ali Kand; Ali Bey of Sardarabad (son of the powerful chief Haji El Khani); and Carani Agha, lord of the troublesome Mamash tribe.

It may be of interest to record how these four men were "imprisoned," for the gracefulness of Persian military skill is shown thereby. Upon the arrival in Souch-Bulak of Amir-Lashgiar these four men had, among others, called upon him to pay their respects. After being entertained with tea and cigarettes for fifteen minutes, they begged permission to leave. Permission was granted by the Amir, but he had ordered—as a matter of special favour—that they should be taken to their quarters in his own motor-car. When once they were seated in the car the Cossack chauffeur turned the head of the car to the Tabriz road. "Why is the car going in this direction?" they asked. "Your streets," replied the smart chauffeur, "are too narrow for us to turn round; we must go by this wider street." Before they knew where they were the party were landed at the gates of the Cossack barracks in Tabriz.

Incidentally, during the first half of the Great War these four lords put into the battlefield a fighting force of 8,000 men, all mounted and armed, at their own expense. This force was led upon Tabriz, as far north as the town of Sofian, by Colonel Shaunemann, who before the War was German Consular Agent in Tabriz, and was both a "rug merchant" and also the "director" of the German "rug factory," built in Shahr-nov (the "new city"), just outside Tabriz. It was constructed in the Moslem style, with imposing minarets, painted green, the religious and national symbol of Persia.

THE SALAR ED DOWLEH.

A correspondent writes to correct a statement made by our Teheran Correspondent in our issue of December 11 to the effect that the Salar ed Dowleh has been living in exile since 1911. He attaches an interesting note in correction of this statement:—

"When the British occupation of Baghdad in March, 1917, finally interrupted the Central Powers' line of communication with Persia and Afghanistan through Kirmanshah, the Turks devoted considerable attention to opening the alternative route through the Caucasus and Persian Azerbaijan. They were assisted by Russia's withdrawal from the conflict, and, in the summer of 1918, succeeded in occupying Baku and in establishing themselves at Tabriz.

"While Turkish troops were advancing to these positions, plans were no doubt being matured for the establishment in Persia of a régime suitable to Turkish aspirations. In Kirmanshah and in Hamadan, and to a lesser extent in Kasvin, the presence of a small force under General Dunsterville was enough to render Turkish intrigues ineffective, while General Malleson, at Meshed, was able to stabilise the situation in Eastern Persia. But a more suitable field for Turkish designs was to be found in the province of Astarabad, where the turbulent Sunni Yomut and Goklan Turcomans had ever despised the authority of Teheran, and were now, as a result of enemy propaganda, looking with especial favour on the Ottoman Turks.

"General Allenby's successes in Palestine forced Turkey to sue for an armistice shortly after the British evacuation of Baku, but subsequent events on the south-east littoral of the Caspian give an idea of what might have occurred had Turkish schemes materialised.

"In the hills to the east of the city of Astarabad there dwelt a notorious brigand, Mehedi Shah, who, during the War, had been associated with the emissaries of the Central Powers. Shortly after the dawn of a day in mid-December, 1918, accompanied by two hundred armed retainers, this chieftain made a descent upon the provincial capital, taking the small garrison of Persian 'Cossacks' completely by surprise, only a few rounds being fired before the Government's troops acknowledged themselves defeated. The Governor-General, Sirdar Muqtadir, fled into the jungle, two days later to appear at Bander-i-Gaz, twenty miles distant, there to be under the protection of a detachment of British troops, which had arrived from Enzeli shortly before his inglorious departure from Astarabad.

"At the same time, it became known that, immediately after Mehedi Shah's victory, the Salar ed Dowleh had arrived at Khoja Nefass, a small Turcoman port ten miles to the south of Gumish Tappeh, where his brother, the ex-Shah Mohammed Ali Mirza, had inaugurated his unsuccessful campaign of 1911. It was reported also that the Salar was busy enrolling a following of Atabai and Jafarbai Yomuts, which had reached not inconsiderable proportions, prior to an advance on Astarabad, twenty-five miles away, where it was expected that he would again proclaim himself Shah.

"There could be no doubt that prompt action would be necessary to prevent Astarabad and the neighbouring provinces from being plunged into disorder, and it was known that the Salar, though probably actuated from motives of self-interest, had been in constant touch with the Turks during the War, and had given at least passive support to the quasi-Turkish régime of Nizam as Saltanah at Kirmanshah.

"A small steam vessel with a party of British soldiers on board anchored unobtrusively off Khoja Nefass as night was falling, and before many minutes had passed, the Salar ed Dowleh, taken by surprise outside the house in which he was lodging, was being hurriedly escorted on board. After a period of internment at Baghdad, he was permitted to reside in Constantinople, whence, after some time, he returned to Switzerland.

"With the disappearance of their leader the members of the lashkar at Khoja Nefass dispersed, and the Persian Government was able to reassume its authority in the town of Astarabad.

"The Salar ed Dowleh possesses considerable energy, and, without doubt, if he had succeeded in reaching his first objective, would have become again a serious embarrassment to the Persian Government. This brief episode, therefore, might be remembered both by the detractors of Britain's attitude towards Persia and by those who decry the value of the North Persian Force"

Prince Habib Lotfallah arrived recently at the Ritz Hotel, London, from Paris.

Hickmet Bey, Counsellor at the Turkish Embassy, has left London for Angora on leave.

Lord Meston left London last week for Khartoum, and will be out of England until February.

M. Yovanovitch, Yugoslav Consul-General in London, left Belgrade for London to take up his duties.

After an absence of over two months Sir John Cadman returned to London from Persia on December 10.

Sir William Sowden left London last Friday for Port Said in the Peninsular and Oriental steamship Narkunda.

General Sir William Birdwood arrived in London last Friday on relinquishment of the acting Commandership-in-Chief in India.

M. Nicolas Voulovitch, the newly appointed Secretary at the Yugoslav Legation, has arrived in London and entered upon his duties.

Count Léon Ostrorog, late Judicial Adviser to the Ottoman Government, has taken up the course of lectures on Ottoman Law at the University of London.

Sir Kay and Lady (Nadejda) Muir have left their residence in Scotland to spend the hunting season at Whilton Lodge, Northants, Sir Kay Muir's home in England.

Mr. Oswald and Lady Cynthia Mosley left London last week for Marseilles, whence they sailed for India. They will return to London about April, travelling home by way of Iraq, Syria, Palestine, and Egypt.

Aziz Izzet Pasha, the Egyptian Minister, and his wife, with Abdullah Bey Izzet, left London for Zurich, where they will stay for two months. Mohamed Fehmy Hussein Bey, Councillor, is acting as Chargé d'Affaires from December 4.

A lecture on "The Kingdom of the Serbs, Croats and Slovenes" (illustrated by lantern slides) was given by Mr. Edgar R. Brown, A.I.P.A., of the Yugoslav Legation, before the Peckham Co-operative Guild on December 9.

Sir Charles Bayley (upon relinquishing his appointment as a Member of the Council of India) and Sir Dadiba Dalal (upon relinquishing his appointment as High Commissioner for India) had the honour of being received by His Majesty at Buckingham Palace on December 12.

A marriage has been arranged, and will shortly take place, between Thomas M. Coffey, Imperial Forest Service, third son of P. M. Coffey, Ballinacree, Knocklong, Co. Limerick, and Isobel Anderson Graham, second daughter of the Rev. J. A. Graham, D.D., C.I.E., Kalimpong, Bengal.

Sir Montagu Butler was received in audience by the King at Buckingham Palace on December 13, and kissed hands upon his appointment as Governor of the Central Provinces, when His Majesty invested him with the Insignia of a Knight Commander of the Most Exalted Order of the Star of India.

The marriage arranged between Mr. John Collmann Wharry, elder son of the late Mr. Henry Gordon Wharry, M.R.C.S., and of Mrs. Wharry, of 105, Cadogan Gardens, S.W., and Esmé, second daughter of Mr. and Mrs. Reginald Whittall, of Rosalind House, Moda, Constantinople, will take place on Saturday, December 27, in Constantinople.

Princess Ileana of Roumania honoured the Roumanian Minister with her presence at luncheon last Friday. The guests included Sir Harry and Lady Brittain, Mr. and Mrs. Stephen Gaselee, Colonel I. Antonesco, M. Nicolas Misu, and M. D. N. Ciotori. Princess Ileana concluded her visit to England last Saturday and left for Bucharest. Her Royal Highness, accompanied by M. N. Misu and Colonel Ion Antonesco, motored to Dover from London, stopping en route at Canterbury to see the Cathedral.

APPOINTMENTS, PROMOTIONS, ETC.

The India Office announces that the King has approved the following appointments :—

Sir Bhupendranath Mitra, Adviser on Military Finance to the Government of India (at present Acting High Commissioner for India), to be a member of the Executive Council of the Governor-General of India, in succession to Mr. Atul Chandra Chatterjee, who will leave India in the third week in December to take up the post of High Commissioner for India, as already announced.

Khan Bahadur Sir Mahomed Habib-ul-lah Sahib Bahadur, member of the Executive Council of the Governor of Madras, to the vacancy caused by the expiry this month of the tenure of office of Sir Mahomed Shafi as member of the Governor-General's Council.

SEEKING FOR A SIGN.

We have recorded from time to time the eager efforts of Indian politicians to achieve some semblance of unity and the resulting intensification of the differences which in fact divide them. Their efforts derive increased significance from the fact that, taken together, they represent only a small fraction of the people whose interests are at stake; should they achieve unity, it would not be a united India, but only a coalition of those Indians who have gone actively into politics, and there would remain outside it the masses as a whole, and also the various classes whose wealth, influence, and intelligence would assure them the leadership of the people if they chose to claim it. It is with the attitude of these classes that we are concerned to-day. Regarded as a whole, they have not yet taken politics seriously. They are spectators of the game, not players, but they have heavy stakes depending on the result, and behind their impassive faces it is easy to detect their growing anxiety. Their present attitude is one of nervous expectation. Inexperienced as they are in practical politics, their reading of recent history is that England has no settled purpose, that Parliament will respond readily to pressure, and that old friends will be sacrificed to conciliate new foes. In their eyes it is one of those times, so familiar in the history of their country, when respectable people should sit quietly at home, leave the antagonists to fight it out, and be ready to adhere to the ultimate victor in the contest. To the men of these classes the preamble to the Constitution is already ancient history, buried under a mass of subsequent "gestures" and concessions. In the cabled summaries which make up their news, the considered pronouncements of Prime Ministers scarcely count for more than extracts from irresponsible journals, or interviews granted by pretentious nobodies. England speaks in their ears with various and discordant voices. They are puzzled and perplexed. They are seeking for a sign.

In our opinion it is the duty of the new British Government to give that sign. It is beside the point to argue that it has been given already, and, indeed, one of the real dangers of the situation, in India as elsewhere, arises from the characteristically English habit of accepting settled facts in silence. Among experienced politicians that course works well enough, but the classes we are speaking of have not yet got so far. Politically they are still children, in a stage where iteration is required to produce conviction, and we are not urging the Government to announce a new policy, but to insist on the policy already formulated by Parliament with the assent of the nation and the Empire. Their spokesmen, in England even more than in India, should master their natural dislike of boring experts with the obvious; they must persevere till it has really become obvious to their inexpert audience. If the lesson has not been understood, the remedy is to repeat it in simpler words, to pile precept upon precept and line upon line, to insist in particular on what is least familiar, and to take all possible care that no isolated act, nor casual gesture, can be interpreted as belying, or even modifying, the text of the discourse. We emphasise this last point in particular because of the disastrous effect known to have been produced during recent years by a few actions or phrases of individuals, which have set all India thinking that the kaleidoscope is to be shaken once again. There is some danger of the same thing happening in connection with the report of the Muddiman Committee, to which we referred last week. The authorities at Delhi are under a strong temptation to let the minority down easily, to indulge in phrases or gestures which may excite new hopes or new fears, and so to obscure further a situation which needs only to be clarified. We look to the new Secretary of State to dispel any obscurity that exists or may be so created, and we hope earnestly that he will take the opportunity presented by this report to inaugurate the policy we have urged of steadfast insistence on the settled fact, continued until all India realises that it is indeed settled.

To support precept by example, we will state the settled fact once again, familiar as it must be to our readers. The future of India is no merely Indian question, but one which concerns England, the Empire, and the world. The course of history has given England a mandate, far anterior to any League or Covenant, to enable India to play her proper part among the nations to her own benefit, but also to the benefit of others, and it is England's settled purpose to fulfil that trust. The preamble of the Constitution lays down the lines on which England has determined to proceed. For the first time in history the masses of the people are to be led and helped to control their own destiny through a government responsible to them. Progress in this direction must be gradual, and Parliament alone will determine the time and manner of each advance, the pace depending on the response received from India. All this is settled fact, though no one would suppose so who depended for his information on the published activities of Indian politicians. The dominant factor in the present situation is that the response on which the action of Parliament will depend has been disappointing. Many of the potential leaders have stood aloof and declined to profit by the new opportunities of service. Others have indulged in an orgy of mendicity and mendacity, misrepresenting the facts to ignorant hearers, and pressing for new privileges, while ignoring the tasks which have been assigned to them. In these circumstances the feeling of disappointment, so widespread in this country, should occasion no surprise. An offer has been made, and so far it has not been accepted: that a further offer should now be made is to our mind inconceivable. The existing offer, however, remains open, and in that fact lies the real hope for India. Time has been lost, but not irretrievably, and nearly half the decade of probation still lies ahead. If India now sets to work to make the most of it, the next advance need not be seriously delayed, but to secure that object it would be a mistake to look merely to the political leaders of to-day. The pressure must come from the classes of whom we have written above, from the men of wealth, influence, and intelligence who have stood aloof, and their mobilisation on the side of orderly progress would go far to transform the whole position.

FRANCE AND BRITAIN IN THE NEAR EAST.

"CE QUE J'AI VU EN ORIENT." Par R. Laurent-Vibert. Paris: Les Editions G. Crès et Cie. 7 frs. 50.)

The difficulties experienced in maintaining a workable co-operation between Great Britain and France in the west of Europe since the War have at least been easy to understand; fundamental differences of opinion on a vital question have manifested themselves, and it has been possible for the average Briton to appreciate, if not to agree with, the French point of view. In the Near and Middle East, however, the failure of France and Great Britain to hit upon a common policy has been a source of disappointment to many nationals of both countries. As no Briton is conscious of aiming at any line of policy that can be construed as being prejudicial to French interests, those who have studied Eastern affairs closely during the last six years are left with the uncomfortable feeling that France has deliberately set out to act in opposition to Great Britain in the Near and Middle East. A book, therefore, by a French author which purports to advocate Anglo-French co-operation in the East and to lay down the lines on which such co-operation is possible is worthy of careful and sympathetic attention. What M. Laurent-Vibert has succeeded in doing is to emphasise the radical differences not only of French and British policy, but also of the two points of view. He is a critic, at times to the extent of fierceness, of French policy, and if anywhere he can bring himself to approve of what Great Britain has done it is only because her conduct in that particular respect seems to fit in with the cynical materialism on which he would base the future Anglo-French co-operation in the East. Now, no country can be expected to carry very far officially altruism in international affairs, and there is no need to waste time in combating the prevalent idea that Great Britain has raised perfidy to a fine art, and, having elaborated the most selfish policy conceivable in any given direction, relentlessly pursues it to the pre-determined end. To carry conviction on these points, it might be necessary to reveal what a happy-go-lucky feckless attitude successive British Governments actually adopt towards foreign affairs, and the consistent way in which the mistakes of rivals and enemies give shape to what subsequently becomes known as British policy. But, if in the sphere of international relations the British line of action lacks directness or vision, we can at least claim that its application is hardly ever wanting in fairness, impartiality, and even generosity.

M. Laurent-Vibert subjects Eastern affairs—in his comprehensive survey of Egypt, Palestine, Syria, Iraq, and Turkey—to a shrewd analysis, which is unrelieved by a single generous thought, much less by the recommendation of a generous action or gesture. He stands for the apotheosis of French materialism. Being convinced that the British have it in them to attain ruthlessly their goal in the East, and being a thoroughgoing worshipper of success of that kind, he wants France to fit in her policy with Britain's, so that together they may divide the plums, as they present themselves to his imagination, which otherwise must go to Britain alone. Any other policy must leave Britain France's rival or enemy, and a successful one at that. Grievances are to hand at every turn, and, as though to modify his appreciation of British success, our author loses no opportunity of pandering to anti-British feeling. French prestige, it seems, is a plant of very delicate growth. Even poor Tutankhamen, if he had had an adequate realisation of things as they ought to be, would not have allowed himself to be discovered by an Englishman. There are in the book gratuitous insults of Great Britain's work in Palestine; our author does not himself believe that we have made a compact with the Turks that they should help themselves to French territory as compensation for Mosul, but he thinks it necessary to record the possibility of such a thing, perhaps because he remembers French treatment of the Armenians. Because Great Britain did not adopt an attitude in regard to the Ottoman Public Debt which France herself, with her special interests, did not adopt, it was, of course, with the deliberate intention of destroying a French organism in order to replace it with a British organism! And so on.

M. Laurent-Vibert is an ardent Royalist, and perhaps the non-realisation of his political leanings in France have left him too disgruntled to be an impartial or fair-minded observer of Eastern affairs. Monarchical France raised French prestige to great heights in the East; the Republic has basely abandoned its glorious heritage. Churches, schools, and hospitals—the great landmarks of French civilisation—were not apparently the outcome of religious zeal, but were merely the conscious agents of French imperialistic designs. They were founded—from our author's point of view—for the sole benefit of France, and not with any idea of serving the interests of Eastern peoples. And what is it that France is supposed to have lost? A privileged position, consular pre-eminence, the protectorate over the Latins, the rôle of arbiter between Christian communities. Never a word for the peoples under her charge. The list is too trivial for the consideration of serious people in these post-War days. Our author is forced to admit in the course of his argument that France was able to save herself in the recent War only by the help of Europe; he not only ignores the fact that Turkey was conquered single-handed by Great Britain, apart from Arab assistance, but he also conveniently overlooks the fact that the least that France can do in return for the help that Europe gave her is to make some sacrifices somewhere with a little grace. He attempts to explain away the attitude of Great Britain towards Egypt by saying that the British concern themselves only with the security of the Canal and are indifferent to what happens to Egypt itself. A less prejudiced view would recognise that Great Britain does recognise the rights of nations to be independent; she may not always see eye to eye with the nations in question as to the precise moment when they should be regarded as ready for independence, but she does consciously do her best to educate them for self-government, and she has none of the selfish aims which, according to our author, have been the sole *raison d'être* of French activities in the East. It is not true, as M. Laurent-Vibert declares, that Britain has done nothing "pour le progrès moral et civique des Palestinien dont elle se moque profondément." Even if it were, the assertion would come ill from one who in one and the same chapter can write: "Nous sommes en Syrie depuis 1919; nous y avons dépensé des milliards . . . fait un énorme effort d'organisation et d'ordre," and "De fait, on ne voit nulle part le résultat de l'occupation française. . . . Beyrouth a des rues invraisemblables de malpropreté . . . pas de bonne police urbaine . . . en somme, Beyrouth est restée entièrement une

Digitized by Google

ville turque . . . en un mot, on a fait de la politique, on a ni gouverné, ni administré."

British and French interests in the Near East may be, as M. Laurent-Vibert asserts, identical; but his interpretation of those interests will never commend itself to British readers. The mandates have been accepted, and both nations are morally bound to make the best of the situation. If France elects to be false to her pledges, that is her affair; she need not expect to find Great Britain an accomplice in her foolish designs any more than the latter is called upon to endorse our author's prejudiced view of the situation in Palestine and in Iraq.

"THE INDIAN WARS."

A HISTORY OF THE INDIAN WARS. By Clement Downing. Edited by W. Foster. (Oxford University Press, Humphrey Milford. 7s. 6d. net.)

Downing deserved a place in this excellent series of reprints of scarce books dealing with Indian history. His title is in these days rather misleading, his principal topics being the pirates of the Arabian Sea and his experiences as a gunner in the Mogul Army. He has a good story to tell, and tells it rather baldly. Mr. Foster's editorial work is, as usual, admirable. In a short introduction and concise, but adequate, footnotes, he settles once for all Downing's claims to a place as a source of history. Speaking generally, it is dangerous to trust any assertion of fact, for Downing was horribly inaccurate in details, besides being addicted to blowing his own trumpet in season and out; but, details apart, he gives us a good general idea of matters not otherwise to be easily learned, of pirate life in Madagascar, of a Mogul campaign against the Marathas, or of the inefficiency of the English organisation on the west coast of India. He played cricket, too, while his boat was at anchor in the Gulf of Cambay about the year 1721, and had a good gallery of predatory Kolis.

THE LAST HUNDRED YEARS.

"TWICE FIFTY YEARS OF EUROPE." By Percy Ashley. (London: Collins and Co. 15s. net.)

This book is a passionless sketch of the political development of Europe from 1815 to 1914. It is in the main a record of facts. The author does not colour his narrative with personal opinions, nor does he appear to be prompted either to seek any new interpretation or to question the accuracy of the usual text-book explanation. His account of the reaction of the Eastern Question upon Europe gives us nothing new, and the whole book, indeed, is intended for the general reader, who may or may not be stimulated by this story to further research. It is not unfair to say, however, that unless such research is undertaken, the reader will be rather a knowledgeable than a wise man.

THE INDIA SOCIETY.

By permission of the Secretary of State for India in Council the members of the India Society paid a visit to the India Office Library on December 11 to view the Indian drawings.

At a short meeting held on the same afternoon Sir Francis Younghusband described to the Secretary of State the past work of the society, emphasising its non-political character. He recalled that, in their work of spreading knowledge of the art and culture of India, the Committee had received much encouragement from their French colleagues, L'Association Française des Amis de l'Orient, who had extended privileges of membership and supplied lecturers. In return the India Society had been able to send lecturers to Paris in order to make known there what was being done in India for art. Further, the French Ambassador had presided at an India Society meeting here, and had been very appreciative.

In his reply, the Secretary of State said that it was a source of great satisfaction to him to find himself in the company of those who were attempting to make known the fame and to extend the reputation of great artists who had lived in India from remote times. The field which the India Society studied was one of the richest in the world, and its story went back to immemorial centuries. Amid the clash of dynasties the artistic expression of India had been maintained with a richness and variety which hardly any other country in the world could equal.

Amongst those present were :—Earl Winterton, Sir Arthur Hirtzel, Sir Thomas Arnold, Mr. William Foster, Dr. Thomas, Prof. Rothenstein, Mr. Laurence Binyon, Lady Scott, Dewan Bahadur Vijayarghavacharya, Mr. L. Heath, Mr. R. N. Tagore, Mr. A. Yusuf Ali, Mr. F. H. Brown, Mr. De la Valette, Mr. Mukhul Dey, Mr. E. B. Havell, Mr. H. V. Lanchester, and Mr. F. J. P. Richter (Hon. Secretary).

THE GREEK REFUGEE LOAN.

In view of the success of the Greek Refugee Loan, the British relief societies working among the refugees in Greece wish to point out that the Protocol of the loan definitely establishes that no part can be used for charitable assistance, but that it can be applied to productive settlement only. The assistance by charitable means of refugees who cannot immediately be placed in productive work is an essential complement to the scheme of reconstruction for which the loan was issued. That the need for such assistance is grave and urgent is borne out by recent news from Greece stating that conditions in many cases are approximating to the appalling distress which occurred during the Russian famine of 1921.

Donations for the work of relief should be sent to Sir Maurice Bonham Carter, K.C.B., the All-British Appeal, 26, Gordon Street, London, W.C.1. Gifts of old clothing and material, with the name and address of the donor, should be sent to the All-British Appeal, New Hibernia Wharf, London Bridge, S.E.1.

Sir Harcourt Butler, Governor of Burma, addressing the first Durbar held since his appointment, said that recent measures had resulted in checking the non-payment of the capitation tax, of which the collection was now almost normal.

The Indian Railway Board has decided to investigate the organisation of the medical services of the North-Western Railway, for which purpose Colonel Needham, Deputy Director-General of the Indian Medical Service, is being lent to the Board when he vacates his present appointment at the end of this month.

CORRESPONDENCE.

The columns of THE NEAR EAST *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST.

GREAT BRITAIN AND EGYPT.

To the Editor of THE NEAR EAST.

Sir,—With reference to the letter of Coles Pasha in your issue of December 4, I would like to endorse his remarks on that effectual remedy whipping, and ask why is not a similar method of firmness applicable to other situations? The murder of the Sirdar is only the old, old story of imbecilic toleration, which seems to have become a fetish with us.

Gordon was sacrificed because we decided to take a firm hand and do the whipping only when it was too late—and now it seems the very college which perpetuates his name and memory is being used to propagate the pernicious doctrines which are causing the trouble to-day in Egypt and the Sudan.

Again, it has taken the murder of a host of British officials, culminating in the death of the Sirdar, to induce us to do anything or to give a thought to whipping, although the very air has been full for months of the crying necessity for it. But no; toleration up to murder point is our stupid policy.

Yet, after all, what can one expect? When a brave and gallant general in India, who tried to do his duty to his country and protect his countrymen and women and other Europeans from a fanatical mob, believed in doing the whipping first, and not after, the atrocities, what is the result? Punished and penalised by the authorities above him, and it has to take a civil action at home to vindicate his action and honour! Is there any wonder at men on the spot—and they are the men who know—being afraid to act?

Our toleration has made British prestige almost a byword in the Near East, and all because of the ridiculous blanc-mange and jelly-like policies with which some of our supermen at home think they can manage Eastern affairs. No wonder Roosevelt said : "Either rule Egypt or get out." If there is such a thing as life after death, the great American will assuredly have said : "I told you so."—I am, etc.,

J. H. CRESSWELL.

Dewsbury, December 8.

LEEDS TO QUETTA BY CAR.

Major Forbes Leith, who, with two companions, set out on a motor journey from Leeds to Quetta, has returned to England after having accomplished a journey of 8,527 miles. Major Forbes Leith, who is fit and well, travelled 2,850 miles in country with no roads and 1,550 miles through desert. He said his car worked splendidly throughout the trip of ninety-six days. The fuel consumption worked out at about 18 miles per gallon.

The Viceroy and Lady Reading arrived in Calcutta on December 9, on a three weeks' visit.

General Weygand, the retiring French High Commissioner for Syria, has been promoted to the dignity of Grand Cross of the Legion of Honour.

Wireless messages will henceforth be accepted by the Eastern Telegraph Company addressed to passengers travelling in ships on the sea routes to and from Egypt, Aden, India, Ceylon, the Far East, Australia, New Zealand, Africa, South America. Telegrams for various parts of the British Empire containing Christmas greetings only will be transmitted by the company at special rates.

OBITUARY.

The death occurred on December 10 in a nursing home of Dr. Ernest Schuster, K.C., LL.D., in his seventy-fifth year, father of Colonel G. E. Schuster, C.B.E., M.C., Financial Secretary to the Sudan Government.

Mrs. Watts, widow of Colonel J. B. Watts, of the Indian Army, and daughter of the late General E. S. Jackson, of York House, Bideford, Devon, died suddenly at sea while on her way home from India last week.

Colonel Frederick White, D.S.O., late R.M.L.I., died at Blackheath on December 8 at the age of sixty-three. He served in the Egyptian campaign of 1882, being present at the bombardment of Alexandria, and in the operations in the Eastern Sudan in 1884, being present at the actions of El Teb and Tamai and the relief of Tokar.

The death is announced of Lieutenant G. H. Tapp, of the South Waziristan Scouts, as the result of an engagement with Mahsud raiders. News from Peshawar states that Lieutenant Tapp's death was the result of a treacherous attack by a gang of Mahsuds on a squad of recruits of the South Waziristan Scouts, who were engaged in field exercises under Mr. Tapp.

One of the few surviving officers who fought in the Indian Mutiny campaign has passed away in the person of Colonel Herbert Augustus Tierney Nepean, late Indian Army, who died last week at his residence at Worthing, at the age of eighty-five. The son of the late Canon Nepean, of Westminster, he obtained a cadetship in the Indian Army, and went out when barely seventeen. He saw active service also in the Burmese War of 1885-6.

Lieut.-Colonel Reginald Ffoulkes Cottrell, R.A., D.S.O., who died suddenly after an operation, served in the Royal Artillery for six years (1903-9), and rejoined immediately on the outbreak of war. In Macedonia he commanded a field battery of the 26th Division in the action familiarly known as the "Petit Couronne Stunt," as a result of which he was awarded the D.S.O. Later, as Commandant of the Army Artillery School, he not only organised an efficient scheme of training in gunnery, but was responsible for the training of the Greek heavy artillery, and so did important work in preparation for the action which, in 1918, broke down the Bulgarian defences. In that action he was commanding the 99th Brigade, R.F.A.

Sir Robert Horne, M.P., arrived in Bombay last Saturday. He left immediately for Calcutta en route for Rangoon.

In response to a request from the Turkish Government, the Polish Government will undertake the protection of Turkish citizens in Yugoslavia.

The Bengal Criminal Law Amendment Ordinance, 1924, under which fifty-six persons suspected of complicity in terrorist conspiracy were recently arrested in Bengal, has been published as a White Paper (Cmd. 2,288. Price 6d.)

The Egyptian Government has renewed the appointment of Sir Maurice Amos as Judicial Adviser for six months, as from November 27. Sir Maurice had wished to retire immediately, but in view of the present circumstances has agreed to stay on for another six months, which explains the unusually short period of the renewal of his appointment.

The *London Gazette* states that the King has been graciously pleased to approve of the award of the medal of the Civil Division of the Most Excellent Order of the British Empire to the undermentioned: For gallantry—Sol Ibrahim Negib, Khartoum Police Force; Shawish Jak Taha, Khartoum Police Force, Nafar Mohammed Abdulla Mohammed, Khartoum Police Force.

NEWS IN BRIEF.

M. Venizelos and Mme. Venizelos last week arrived at Leysin, Switzerland.

Mr. Leslie Lord, Deputy Director of Agriculture at Mandalay, Burma, has been offered and has accepted a post on the staff of the School of Rural Economy, Oxford University.

M. Ninchitch, Yugoslav Minister for Foreign Affairs, arrived in Rome on December 10 and conferred with Signor Mussolini, the Prime Minister, on various questions affecting Italy and Yugoslavia.

The Iraq Council of Ministers has decided to register the land occupied by permanent British cemeteries at Baghdad, Amara, Kut, and Barra respectively as the property of the Imperial War Graves Commission.

According to the *Morning Post* Calcutta correspondent, a train carrying Tata's workpeople, near Chichwad, was attacked recently by armed men. Eleven passengers were wounded, seven of whom had to be taken to hospital.

Jevad Bey, the Turkish Minister at Bucharest, has been appointed Turkish Ambassador in Paris. M. Constantin Diamandy, the former Roumanian Minister at Petrograd and delegate at the Lausanne Conference, has been appointed Roumanian Minister in Paris.

The Times Delhi correspondent reports that Lieut.-General Sir John Shea, while taking riding exercise on December 9, met with an accident. His horse shied owing to the sudden appearance of a stray dog, and Sir John was thrown, breaking his nose. He is progressing satisfactorily.

One thousand persons have been rendered homeless as the result of a disastrous fire which occurred last week in the congested area of Ashar, Basra, which is situated near the dockyard and inhabited mostly by the poorer classes. A strong wind was blowing, and the fire brigade restricted their efforts to the prevention of the destruction of the whole town.

On the motion of Mr. A. W. Pickard-Cambridge, Fellow of Balliol, the Craven Committee has been authorised to make two grants of £50, one towards the expenses of publication of a work by Mr. Stanley Casson, M.A. (New College), on Thrace, Macedonia, and Illyria; the other towards the expenses of the excavations at Sparta undertaken by the British School at Athens.

THE

NOTES AND NEWS.

167, Strand, London, W.C.2,
Tuesday Morning.

State-owned Ships.

At the meeting of the P. and O. Company Lord Inchcape, in an illuminating review of the general shipping position, dealt with competition by State-owned ships, and pointed out that while during the War the British Government built a great many ships, very wisely, as soon as the War was over, they got rid of them. Other Governments have not been so wise, and have held on to their State-owned steamers, and these have been competing with privately owned vessels, with the result that the countries concerned have lost millions of pounds, which have had to be made good by the taxpayer. Some of the Governments, Lord Inchcape pointed out, are now attempting to dispose of their vessels, but the vessels, if sold, would not realise one-fourth of their cost. Lord Inchcape added that it was not within the capacity of public servants or Government departments to manage such great enterprises as shipping. Businesses such as that were built up by men who had been trained for and had devoted themselves to commerce. It would, Lord Inchcape believed, have paid the ship-owning Governments to have sunk their ships rather than to have kept them running during the last four years. When Governments had rid themselves of the incubus of State-owned vessels, he thought that the public might see a moderate return to prosperity in the shipping industry. Meantime the shipbuilding yards of this country would have many empty berths, with resulting lack of employment; but shipowners would not go on building ships unless they could expect a reasonable margin of profit. Governments would be better off if, instead of competing with private enterprise, they took a share of business profits in the form of income-tax. If they continued to run ships they would fail commercially, and, to make good their losses, would have recourse to additional taxation.

The Outlook.

Lord Inchcape went on to deal with shipbuilding costs, and pointed out that they are still from 60 to 70 per cent. above the pre-war level, mainly through high wages and low output in the shipbuilding and contributing trades. He quoted figures taken from British and foreign tenders for railway material to illustrate the difficulties British manufacturers have as against Continental manufacturers in competing for orders for their factories. Continental prices, he believed, however, were rising, as Continental firms found that they were working at a serious loss. It was not always understood by the public, he continued, what effect even a slight advance of wages might have on the community unless accompanied by a corresponding increase of output. We had to depend on other countries for the bulk of the necessaries of life, and we could not pay for these unless we could market our exports. To do this we had to meet, in our prices, the competition of other countries. Only by persistent hard work, and the rigid keeping down of expenses, he added, should we get our share of the world's trade, and be enabled to support our population.

Greek Loan Allotments.

Yesterday dealings began on the Stock Exchange in the Greek Refugee Seven per Cent. Loan, and as a result of the surplus of buying orders the price had reached 7¼ premium at the close, which must have left the "stags" in good heart. For the issue of £7,500,000 the applications received in time totalled £170,000,000, while subscriptions for almost a third of that amount were received subsequently. In view of these figures, it was obvious that applicants for the bonds would only receive a fraction of the amount they had subscribed for. Actually applications for amounts under £2,000 have been ruled out, those for between £2,000 and £3,000 have been allotted £100, those between £3,000 and £10,000 have received 4 per cent., and applicants for larger sums have received 3½ per cent.

Fate of the Small Investor.

In other words, the small investor has been completely ignored in the allotments, and is faced with the necessity, if he still desires to participate in the loan, of purchasing the bonds at a heavy premium. No one would, of course, question the fact that applicants for amounts under £2,000 included a large number of would-be "stags," but the proportion is unlikely to be any larger than in the case of the applications for greater amounts. There is the point to be considered that the division of a loan among a very large number of small investors means greatly increased work in the future, but that aspect is, after all, a minor consideration; and it is a recognised principle that the more widely spread the holdings the steadier the market, whereas, if the holdings are large there is always the possibility that the market may be unduly affected by realisations.

(Reports from Our Own Correspondents.)

BULGARIA.

Sofia, December 3.

Pernik Coal-Mine

Last week the Sobranye began to discuss whether a certain measure of autonomy should be granted to the State coal-mine of Pernik. Up to the present the mines, the railways, and, in fact, practically all the natural and artificial resources of the country have been more or less State-owned. Now there is a strong movement afoot to accord a fairly large measure of autonomy first to the mines and then the railways. It is argued that many of the evils arising out of bureaucracy will be got rid of and that the country will gain in the long run. At present the discussion is in its initial stages, and there does not seem to be any great opposition to the proposed measure.

Proposed Economic Reforms.

On the initiative of the Prime Minister, M. Tsankoff, a Conference of the Ministers of Finance and Agriculture, the Governor of the National Bank, and two Deputies was held this week to consider what reforms tending towards national economy could be made. The following are among the principal decisions taken :—

(1) A vast irrigation scheme is to be carried out in South-Eastern Bulgaria. Foreign capitalists will be invited to participate in this work.

(2) Three forest concessions will be given to private groups, whilst the construction of new railway lines on a modest scale, in collaboration with a specially arranged loan from the National Bank, will be proceeded with.

(3) Attempts will be made to industrialise the agricultural life of the country.

(4) Efforts will be made to raise the standard of technical schools.

The above are all important matters, and if the Government is able to carry them through, much good should result to the country.

ROUMANIA.

Bucharest, December 2.

The Budget.

The last month of the year will be devoted by Parliament to the Budget, the discussions on which will have to be finished before the Christmas vacation in order that it may have effect as from January 1. The debates will, therefore, not concern themselves with details, but will be confined to general principles as laid down by M. Vintila Bratianu last Sunday at the Ministry of Finance to the assembled representatives of the Bucharest Press.

The lively interest which usually attends the presentation of the Budget in Roumania has been even more than usually marked this year, coming as it does at a time of economic crisis, when the commerce and industry of the country are confronted with the gravest difficulties. In a country like Roumania the State must foster more than in other countries the development of growing industries and take special care to apply the necessary remedies to conditions which, if continued, may bring about their fall.

The Budget of 1925 is the fourth Budget presented by M. Vintila Bratianu. The first three, says the Minister, aimed at establishing the financial position of Roumania abroad—that is to say, the payment of foreign debts. These debts being to-day in part paid off and in part consolidated, the Minister of Finance is able to turn his attention to other matters, viz. :—The arrangement of internal debts, and this is the aim of the present Budget.

The Budget total is 31,750,000,000 lei, as against 24 milliard lei in 1924. The first Budget of M. Vintila Bratianu, that of 1922, totalled 10 milliards, and was, according to the statement of the Minister, a trial Budget to prove the possibilities of the State. The second, that of 1923, was for 15 milliards for nine months (*i.e.*, about 20 milliards for the year).

The Budget for 1925 shows an increase of 20 per cent. on that of the preceding year. The revenues are estimated at 31,750,000,000, and the expenditure at 28,540,000,000 approx. To this must be added about 159,541,000 lei for extraordinary credits, 250,000,000 for payment of war damages, and finally 2,000,000,000 for the increase of salaries to public officials and pensioners.

It is interesting to note that in the increase of 7,500,000,000 in the expenditure, as compared with 1924, there is included 1,500,000,000 for proposed improvements to the State railways. The Ministry of Communications has obtained the most important increase, an increase amounting to over 3 milliard lei.

M. Vintila Bratianu believes that he may reasonably hope for a considerable surplus from the Budget, taking into consideration the very real improvement which has taken place in different aspects of Roumania's economic situation. The revenues from export taxes and from the tax on business turnover have not fallen, nor will they fall in the future, according to the predictions of the Minister. He estimates that the Customs import taxes will bring in 1,500,000,000 lei, and that the revenues from export taxes will amount to 5 milliard lei.

It must be admitted that the majority of the Press is sceptical as regards this outlook, which, in view of the unfavourable condition of business in Roumania at the present time and of the financial crisis which is restricting trade, appears to be too optimistic.

The Opposition newspapers affect to see in the Budget a new sign of the approaching fall of the Liberals. According to these papers it is an inflated Budget without any solid basis, which is to be passed on by the Liberals to the party which succeeds them.

As already stated in these letters, in Roumania, where the Government does not appear to rest upon any real majority or on the freely expressed will of the people, the tenure of office depends entirely on the Royal decision.

It would appear that any other Administration situated as the Liberal Government is would certainly have fallen ten times over. The Opposition, however, is non-existent. If two of the parties were to succeed in drawing up a combined programme along general lines, the knell of the Liberals would have tolled.

Steaua Romana (British), Ltd., are advised that the production of the Steaua Romana Co., of Bucharest, during November was 24,370 tons.

After a heated debate in the Punjab Legislative Council on November 24, the Rural Bloc defeated the Government by recommending a repeal of the notification raising the irrigation water rates.

The National Assembly in Greece has voted the Bill for settlement by foreign arbitration of the dispute between the British Lake Copais Company on the one side and private individuals and the Government on the other.

AN IMPORTANT WATERWAY IN YUGOSLAVIA.

(Concluded.)

(BY OUR ZAGREB CORRESPONDENT.)

The canal was worked satisfactorily until the outbreak of the Great War, when it ceased to be available for general commercial purposes. At the time of the Paris Peace Conference the canal territory and adjoining region formed the subject of much discussion and negotiation. The larger part of the canal passes through the Serbian Vojvodina, then a part of South Hungary, and peopled largely by Serbs, descendants of Serbian immigrants who had been encouraged by the Emperors to settle there in the age of Turkish invasions; so this province was united on national grounds with the Kingdom of Serbs, Croats, and Slovenes. By the Treaty of Trianon the Hungaro-Yugoslav frontier was drawn across the feeder canal at a point a little north of Bezdan, leaving by far the largest part of the system to Yugoslavia, but cutting it off from the headworks at Baja and necessitating subsequent special conventions between the two States concerned.

At the conclusion of peace the canal was first placed under sequester; but the Serb-Croat-Slovene Government soon permitted the existing board of directors to form an administrative board to which were attached two delegates of the S.C.S. Government. At the same time the native name of the main canal was changed to King Peter I. Canal, and the irrigation canal was renamed after Prince (now King) Alexander. The headquarters of the company were transferred from Budapest to Yugoslavia. The arrangement for Government control was merely a temporary measure.

By this time the British bondholders had become anxious to have their interests guaranteed afresh under the new régime, and so—in June, 1922—they dispatched Mr. J. J. Manning, a British engineer, to take charge of the practical working of the canal and the various enterprises worked by the company, and the task of reorganisation and adjustment to post-war conditions was energetically taken in hand. A new company was formed under the name of A. D. Kanala Kralja Petra I. The headquarters of the company were definitely established in Belgrade, and only the technical direction remains in Sombor for the more direct practical administration of the canal. One of the problems which the new company has to face is that the introduction of fresh capital is very necessary, but this will scarcely be forthcoming unless an extension of the concession is granted, and the shareholders and bondholders are thereby given reasonable prospect of an adequate return for their investment. The continuance of the administration of the canal in the hands of a private company would also tend to neutralise much of the inconvenience caused by the fact that the canal system now lies on two sides of a frontier. As it is, there are at the present moment quite a number of outstanding questions touching the canal to be settled by the Yugoslav and Hungarian Governments before the canal can be run as profitably as it might be. In time of flood, life and property over a vast area of valuable wheat country depend upon timely precautions being taken at Baja. In time of drought the shipping facilities over the whole of the canal system are equally dependent upon the provident regulation of the water supply at the same point. Yet at the time of writing direct telephone communication between the technical direction of the canal at Sombor and the works at the canal head at Baja have not yet been re-established, despite its extreme importance. The Statutes of the original company have been revised to suit the new order of things, and at the head of the present company stand an administrative board and a supervisory board, the former consisting of ten members, four of whom are nominated by the S.C.S. Government, and the latter of four members, two of whom are nominated by the same Government. In the interests of the canal company it would be well if one Hungarian member were admitted to each of these boards, to represent the Hungarian interest in the canal, and also to see to it that the decisions of the administrative board are duly applied in the Hungarian section of the canal.

One of the chief sources of revenue for the canal in pre-war times was the shipping which made use of that route. Under the new order, the main canal is a Yugoslav national water, and foreign craft are not allowed to enter it. As a result, the canal traffic has greatly declined, with a consequent diminution of the canal's receipts. For, though technically a national water, exclusively within Yugoslav and—by a small but very important section—Hungarian territory, the canal is of international significance and value, and could be profitably used by the shipping of several States, to the advantage of the canal and the surrounding country, and the States through which it passes.

A further handicap has been the sequestration of some of the canal lands under the Agrarian Reform Law. The breaking up of various large estates along the canal banks under the same law has also adversely affected the canal traffic, and especially the grain trade, since it is obviously more difficult to deal with a large number of smallholders than with a few great landed proprietors. This last difficulty could, however, be met by the provision of a special warehouse in Sombor, where goods might be collected and stored for shipping. A grain elevator, too, is urgently needed, and would well repay the cost of erection, as it would attract the grain trade back to the canal, which has latterly been abandoned in favour of the more expensive but at present more convenient railway.

All things considered, it may safely be said that the difficulties with which the canal company has to contend are not insurmountable, and no more than the natural outcome of transformed conditions in Central Europe of a new order which is, gradually but surely, being regulated and made workable. Since the reorganisation of the company the canal receipts, which had gone down to nothing, have improved greatly. The traffic has increased. Canal tariffs and the rents of the canal property have been revised and made to accord with the present-day rate of exchange. The administrative board includes men of ability and experience such as Mr. J. Hanau, whose intimate knowledge of Yugoslav affairs is most valuable, and Mr. J. J. Manning, the company's technical director.

There is no doubt that if the canal is permitted to be run on businesslike commercial lines it will before long once more prove its enormous economic value to the surrounding country, to the Yugoslav State as a whole, and, indeed, to all countries which have for generations past looked to that remote region for some of the finest wheat flour in the world.

The Department of Overseas Trade expects to resume the series of British Industries Fairs in London in 1926.

The attention of holders of Bulgarian Treasury bonds is drawn to the fact that the 1,000 levas Treasury bonds will be definitely withdrawn from circulation on January 31, 1925. Until that date they may be exchanged for bank notes at the Bulgarian National Bank.

Company Meeting.

PENINSULAR AND ORIENTAL STEAM NAVIGATION COMPANY.

The Shipping Position.

Lord Inchcape's Speech.

Viscount Inchcape, the company's Chairman, presided on December 10 at the 84th annual general meeting of the P. and O. Steam Navigation Company.

The report and accounts having been taken as read,

His lordship said that after setting aside £249,150 for retlemption of the 5 per cent. and 5½ per cent. debentures and writing off the discount and cost (£139,711 5s. 6d.) of the 5 per cent. debenture issue, they were able to recommend the same dividend as last year and to carry forward £101,033 13s. 8d. These results were not derived from working profits but from the company's investments and other sources, such as dividends from their allied lines.

The insurance fund, which had suffered heavy losses, had increased by only £18,081, and several claims were still outstanding against the year's premiums. Since the fund was started seven years ago their premium had exceeded claims by £1,918,961 10s. 2d. With 427 ships at sea covered by the fund they could not expect to run free of accident every year.

Competition by State-Owned Ships.

Twelve months ago he had said that with few exceptions the earnings of every voyage had fallen short of disbursements, and that he feared some years must elapse before we got back to pre-war conditions. The same remark applied to-day. While crop prospects in Australia and India were hopeful, there was no indication of a rise in freights, and the war in China was seriously affecting their trade with that country.

During the war our Government built a great many steamers. Very wisely, as soon as the war was over, they got rid of them, and at high prices, for trade was booming. Not so wise were Canada, America, Australia, Brazil, and Portugal, which held on to their State-owned steamers. These had been competing with privately owned vessels the world over, with the result that these countries had lost millions of pounds which had had to be made good by the taxpayer. Some of these Governments were now attempting to dispose of their ships, but the vessels, if sold, would not realise one fourth of their cost. In saying this he was not exaggerating. He recently bought for about £60,000 two steamers which had cost a certain Government no less than £600,000 only four years ago, and heaven only knew how much more they had cost in the interval.

It was, he continued, not within the capacity of public servants or Government departments to manage great international enterprises such as shipping.

He would like to quote a trenchant speech which he had heard Lord Birkenhead make in the House of Lords a few months ago—"You cannot master the business system of this country in the cloisters of Oxford and suddenly take up and deal with a most complex organisation which has developed and grown up with centuries of our life. You can no more become an adequate and intelligent reformer in this respect than you can at the age of 50 or 55 go suddenly into the practice of law or medicine. The whole business is one of the most extraordinary nicety and complexity, and to attempt to deal with it without the advantage of most careful preparation is to invite a sure and certain failure."

Lord Birkenhead's axiom was, he thought, illustrative of the fallacy of any Government embarking on shipping or business of any kind. Such businesses were built up by men who had been trained for and had devoted themselves to commerce. It would, he believed, have paid the shipowning Governments to have sunk their ships rather than to have kept them running during the last four years. When Governments had rid themselves of the incubus of State-owned vessels, the public might see a moderate return to prosperity in the shipping industry. Meantime the shipbuilding yards of this country would have many empty berths, with resulting lack of employment; but shipowners would not go on building ships unless they could expect a reasonable margin of profit.

Governments would be better off if, instead of competing with private enterprise, they took a share of business profits in the form of income-tax. If they continued to run ships, they would fail commercially and, to make good their losses, would have recourse to additional taxation.

A Hopeless Enterprise.

He had, he continued, heard a good deal lately of a proposal to build six 20-knot steamers to carry only passengers, mails, chilled meat and fruit between England and Australia, a proposal in which the Commonwealth Government had been invited to assist financially. Application had also been made to the Trade Facilities Committee for public money to finance the project. It was said that £9,000,000 would have to be put into the venture. Such proposals had been hardy annuals for twenty-five years. Let the promoters, he said, go to the public for the money; he doubted if they would get it, and if they got it he doubted whether the subscribers would ever see any interest on their investment. It was much more likely that the principal would vanish. In his opinion the whole idea was doomed to failure. In his (the speaker's) opinion—he might, he said, be wrong—it would be sounder to leave the public to subscribe any money required to develop the industry.

Building and Operating Costs.

Shipbuilding costs were still from 60 to 70 per cent. above the pre-war level, mainly through high wages and low output in the shipbuilding and contributory trades, while overhead charges in yards not fully employed were a serious cost factor.

Continuing, he quoted figures, taken from British and foreign tenders for railway material, to illustrate the difficulty British manufacturers had as against continental manufacturers in competing for orders for their factories and employment for their workpeople. For wheels and axles, the highest British and continental tenders were respectively: British £1,350, continental £800; the lowest tenders: British £920, continental £678. For steel tyres for locomotives, the highest tenders were: British £1,988, continental £1,531; the lowest British tender was £1,891, continental £1,119. For steel springs, the highest tenders were: British, £2,040, continental £1,706; the lowest, British £1,463, continental £978. The lowest tenders for locomotive boilers were: British £94,691, continental £54,695. These samples, he said, could be multiplied. The current f.o.b. quotations for English bar iron were £8 2s. 6d. to £9 16s. 6d., against, for continental bar iron, £5 10s. to £5 12s. 6d. He believed, however, that continental prices were rising, as continental firms found they were working at a serious loss.

In London and the outports used by the P. and O. the cost of loading and discharging showed a percentage increase of about 131 per cent. over pre-war charges; in Antwerp it was a little over 49 per cent. Port dues in London had advanced 63 per cent.; their coal now cost 80 per cent. to 90 per cent. more than in pre-war days. These increases had resulted from the higher cost of labour. Production costs must be reduced in order that our export trade might revive.

Peace in Industry.

It was, he continued, not always understood by the public what effect even a slight advance of wages might have on the community unless it was accompanied by a corresponding increase of output. Despite all suggestions to reduce it, our population continued to increase, we had to depend on other countries for the bulk of the necessaries of life, and we could not pay for these unless we could market our exports. To do this we had to meet, in our prices, the competition of other countries.

Only by persistent hard work and the rigid keeping down of expenses should we get our share of the world's trade, and so be enabled to support our population.

Many orders for steamers had been placed abroad on terms with which our builders could not apparently compete. He supposed hard economic facts would bear their fruit eventually, but meantime the people of this country were suffering. The loss of wages occasioned by strikes during the past few years must have run into many millions, causing great privation among the employees' families and depleting the trade union funds, which had to be restored by levies on the workmen's wages. If this vicious circle continued, Great Britain would become a land of paupers. If common sense were allowed to prevail and our Government departments displayed economy we should, despite drastic taxation, regain our world supremacy in trade and finance. So far ours was the only country which had met its war commitments; our credit remained untarnished; and he believed, despite certain prophecies, London would continue to be the centre of the world's finance. The resumption of

a free market for gold would be good for trade and good for the City of London.

"Peace and industry" should be our watchword. Much depended on sane counsel by the leaders of labour. His faith in the good sense of the British workman remained unshaken. It was vital, as never before, that our industries should go on unchecked by trade disputes. Thereby we might see, better than a rise in wages, a rise in the purchasing power of wages. This, he was convinced, was the best way to increased prosperity for the country and to a better standard of living for the workers.

Troubles in Australia.

An extraordinary state of affairs had, he continued, lately arisen in Australia. From what they could gather a bureau was some time ago set up in Sydney for the enrolment of ex-Service men as waterside workers. Recently the Labour Union had objected to members of the bureau being employed who were not also members of the Union. The company's steamer Maloja, which had been partly loaded by bureau men in Sydney, was declared "black" on arrival in Melbourne, and could get no cargo. On reaching Adelaide she was there also declared "black," and could get no cargo. They had been informed she would get no pilot or tugs at Fremantle, and would be unable to embark mails, so she was sent into Albany, where she picked up the mails, but she was refused the service of tugs, and passengers had to be embarked in the ship's boats. She was now on her way home, practically without cargo.

Several other steamers were in the same predicament, although they had not worked cargo by bureau labour. One steamer outward bound was not allowed to get a pilot at Fremantle, and when she came alongside in charge of the captain her hawsers were cast adrift, and she had to anchor in the stream. A steamer, chartered by the Australian Commonwealth Line (Government owned) to take cargo from this country to Australia, had been tied up three or four weeks in Fremantle with all her cargo on board, because her crew were not being paid the Australian rate of wages, and the Government had chartered this vessel and laid up some of their own ships because they could not run them except at a heavy loss.

The position was almost inconceivable. They were between the devil and the deep sea, and apparently law and order in the Australian ports did not exist. He had, he continued, implicit faith in Mr. Bruce, the Prime Minister of Australia, to protect his country from what was more or less Bolshevism and to save her trade from such paralysis.

The British Maritime Board.

During the six years in which the Maritime Board, by which seagoing wages were fixed, had been in operation the trade had been free from strikes. The relations between shipowners, seafaring men, and the men's leaders were most cordial. Although in anticipation of improved freights wages afloat were some months ago advanced, there were few vessels which, even yet, were making ends meet in their earnings and disbursements.

The Mail Service.

Their mail service had been carried on satisfactorily, but not without difficulty. Until they got possession of the ships now building, they would not reach the efficiency at which they had always aimed. The delivery of these ships would enable them to revert to the full schedule on all the company's lines.

Last year they carried 700,000 bags of mails, equal to nearly 70,000 tons of space, an increase in ten years of about 100 per cent. of mail matter. This increase to a great extent had resulted from the development of the parcel post, which, even with a limit of 11 lb. per parcel, greatly affected the company's freight traffic.

In the resumption of the fortnightly mail service to and from Australia the directors, looking for additional sources of revenue, had instituted regular calls at Algiers and Port Sudan.

War Memorial.

Three hundred and sixty-one members of the sea and land staffs—258 of the P. and O. and 103 of the British India companies—gave their lives during the Great War. To commemorate the service they rendered to their country a permanent memorial had been placed at the entrance to the board room.

The Political Outlook for Trade.

The Conservatives having taken up the reins, he trusted we might have a stable Government for a lengthened period. Pledges given by the leader of the party not to interfere in trade were sufficient to inspire confidence of the business community. The minds of a certain section of the Conservative Party might still lean towards Protection, but the country had pronounced against this a year ago, and the decision had been accepted by Mr. Baldwin.

The country had now given its verdict as to whether the nation was to carry on with its constitutional monarchy—God save the King—or whether the whole fabric of society was to be demolished.

In Russia, under Bolshevism, murder was rampant, property confiscated, family and moral life destroyed, and the teachings of the Christian religion being annihilated. He did not believe there were two people in four hundred thousand of our population who wished to see their native land reduced to this condition. He believed that not for five years, not for five hundred years, should we have any Bolshevist nonsense in this country. The people would have nothing to do with it.

The Year's Passenger Traffic.

Although cargo had been scarce and freight rates low, passenger traffic had been well maintained. He could not speak too highly of the devotion and zeal of their agents, their shore establishments in all departments, their captains, officers, engineers, pursers and pursers' staff, to whom the board were indebted for the P. and O. Company's popularity with passengers. Any complaint was inquired into with a view to improvement, and every letter of thanks was, he said, sent to the captain for his information and that of those below him.

In the vessels now under construction to take the place of those destroyed by enemy action they were avoiding extravagance in the way of decoration; but every care was being bestowed on the arrangements for the convenience and comfort of the travelling public. This was a matter of great interest to their technical staff and to all of those who were concerned in the success of the new ships, an interest which was shared by his wife and his daughter Elsie, whose suggestions were of value. Lady Inchcape and he were, he said, going with their technical advisers to Belfast next week to go through the arrangements on board the Razmak.

During the year the number of steamers in commission of the P. and O. and allied lines was 445; number of sea miles run, 16,692,686; number of entries into port, 28,773; tons of cargo carried, 14,470,267; number of animals carried, 253,227; number of passengers carried, 1,883,027; average daily number of crew employed, 37,027; expenditure in wages and victualling of crews per annum, £5,127,000.

Trade With Germany.

The Commercial Treaty with Germany negotiated by the President of the Board of Trade, Sir Philip Cunliffe-Lister, signed on behalf of the British and German Governments within the last few days, and which would shortly come up for that ratification by Parliament, which it would most assuredly get, was, he said, the most important step yet taken towards a renewal of our trade, not only with the Continent, but all over the world. If he might venture to say so, the time had now come when the hatchet had to be buried. Germany was now expiating as far as she could the horrible outrage perpetrated by Prussian militarism; and it was important to resume friendly commercial relations with her, with all the safeguards provided by the Treaty. Our present Government had only been a few weeks in power, and already by the firm steps they had taken in Egypt and by their Trade Treaty with Germany they had vindicated the verdict of the country. The denunciation of the proposed Treaty with the Soviet Government, which

would have done no more for British commerce with Russia than the Trading Agreement made in 1921, was, he said, all to the good.

The Coming Year.

With regard to the operations of the year on which they had just entered, many of their voyages were not even now covering expenses. Every economy consistent with efficiency was being effected. Until trade revived they would have considerable anxiety. Their Stock Exchange investments, taken as a whole, stood in their books at much less than they would realise if sold to-day. Their ships stood at considerably less than cost, after allowing depreciation at 5 per cent. per annum on the original price; their properties all over the world were well written down. Their allied companies were all perfectly sound, although they too were suffering from the general depression.

The company would, he said, carry on its great work, but if the board had to recommend a lower dividend for the current year they, the stockholders, would, he was sure, accept it philosophically.

A Conservative Policy.

Continuing, his lordship said he had always favoured Free Trade, but now that Protection had had its quietus, at any rate for the time being, by the Prime Minister, he did not know on which side he was except that he was not a Communist, a Socialist, or a Bolshevist. But as long as he remained their chairman he would, with the approval of his colleagues, observe the conservative financial policy which had built up the P. and O. On the other hand, he would continue to adopt what might still be called a liberal policy in marching with the times, and in improving their ships, for the convenience of their passengers and shippers, in large things and in small things.

Suez Canal Dues.

He had been assailed by the Chamber of Shipping more than once to get the Canal dues reduced, and he was not without hope that a reduction would shortly be announced. Although he had no authority to say so, he hoped the reduction would be 25 gold centimes a ton. The dues would then be 7.25 frs., as against 6.25 frs. in 1914. He trusted, if the traffic continued to improve, that a further reduction might be made before long.

As chairman of the London Committee and a vice-president of the board he had never failed to urge that the lower the dues were the more would traffic be attracted to the Canal. His representations had always been received with the greatest courtesy, and he cordially acknowledged that the President of the Canal Company and its officials, by the high quality of their administration and the manner in which their staff in Egypt discharged their responsibilities both as to the traffic and the improvement of the Canal, left nothing in this respect to be desired. The Canal system and its administration were an object lesson against nationalisation of industry. Woe betide this country if railways, banks, shipping, and other enterprises were handed over to Government departments. There would be much weeping and wailing and waiting at the doors, to say nothing of the gnashing of teeth

The Staff—An Appreciation.

He would, he said, continue to add to the comfort and amenities of all those who spent their lives afloat in charge of the company's vessels, from the captain downwards. Their devoted service and their resource in emergencies were beyond praise. Speaking from experience both as a subordinate (they were, he said, all subordinate to somebody; some, he would not say all, were subordinate to their wives!) and from a long experience of administration, he had never known loyalty and discipline to surpass those which characterised the entire staffs, both afloat and ashore, of the P. and O. Company. This, he said, made his work not a task but a real pleasure.

They still drew their young officers from the Worcester under Sir Thomas Sutherland's scheme, and in Captain Sayer (H.M.S. Worcester) they had an admirable disciplinarian and instructor. The young officers were highly spoken of by their commanders; and their respected friend Captain Angus, the company's former nautical inspector, who was with them to-day, put them through a crucial examination before passing them for the service.

A Trip to Ceylon.

He had made a voyage to Ceylon by the new steamer Maloja last winter and came back by the Moldavia. Everything on board went like clockwork, and the vessels were kept like yachts. If anyone wanted to get away from the winter at home he could do nothing better than take a run out from Marseilles to Colombo by P. and O., spend ten days in the charming island of Ceylon, with its delightful climate of Neuralia, and get back to Marseilles after having been absent less than six weeks. If he backed a winner at the Neuralia races at 500 to 1—as he, the speaker, had been credited with doing—he could have his trip for nothing and something in hand, which, as they all knew, he could double with ease at Monte Carlo on his way home.

Directors.

The board had nominated as a director the Right Honourable the Viscount Churchill, who, as chairman of one of our greatest, most up-to-date, and best-managed railways, the Great Western, had had a long experience of affairs. If his appointment were confirmed, as he was sure it would be, they would have in him not only a most valuable but a most agreeable colleague.

Auditors.

He wished to express their great regret at the death of Mr. W. F. Courthope, who had served as auditor with great ability for twenty years. He was a member of the firm of Williams Deacon and Company, and, following tradition, they suggested Sir Robert Williams, of the same banking firm, to fill Mr. Courthope's place.

Mr. F. A. White, whose services as auditor they had had for nearly twenty-five years, also came before them for re-election to-day, and would, he hoped, for many more years.

In conclusion he said that if he had trodden on anyone's toes in his remarks on general topics he hoped he would be forgiven.

Before putting the resolution he would be glad to answer any questions to the best of his ability.

He concluded by proposing: "That the report and statement of accounts now read, which have been circulated amongst the proprietors, be adopted."

Mr. H. N. Gladstone seconded the resolution.

A shareholder said that it was true that the deferred stockholders were getting 12 per cent., but that stock represented only one-eighth of the total capital employed, and, as a matter of fact, the return upon the whole of the capital was considerably less than 3 per cent. He was not complaining of that, as he knew the reason for it. This was a public concern, the premier shipping company of the world, and its business was to "carry on." If the shareholders had to put up with lower dividends in the future until better times came they would have to do so. He hoped that the public understood the position and appreciated the fact that this great company would carry on even at a loss, if necessary.

The Chairman, in reply, said that he agreed that they were getting a very poor return upon the capital employed

in the undertaking. Of course, they had paid considerably higher dividends in previous years, not only in actual dividends but also in distributions of bonuses, and the board would be only too pleased, when trade improved, as they hoped it would in the course of a year or two, to give the stockholders a larger dividend than the one they were receiving on the present occasion.

The resolution was carried unanimously.

The Chairman next proposed: "That a dividend for the half-year ended September 30 last of 2½ per cent. on the preferred stock, less income-tax, and a dividend of 6 per cent. on the deferred stock, free of income-tax, as recommended in the report, be now declared, and that payment for the same be made on and after December 12."

Sir Montagu Cornish Turner seconded the resolution, which was unanimously approved.

On the motion of the Chairman, seconded by Sir Charles S. Addis, K.C.M.G., the Right Hon. Viscount Churchill, G.C.V.O., was unanimously re-elected a director of the company.

On the proposition of Mr A. Pitt, seconded by Mr. H. B. Henley, Mr. F. A. White was re-elected an auditor, and Colonel Sir Robert Williams, Bt., was elected an auditor.

Vote of Thanks.

Sir Charles Stewart-Wilson, K.C.I.E.: My Lords, ladies and gentlemen,—Before we break up this meeting I have to ask your permission to put another resolution. It is: "That the cordial thanks of the proprietors are due to the chairman, directors, and staff for their continued successful management of the company's business." The shareholders of the P. and O. Company owe to you, my Lord, and to your colleagues on the board, their sincerest thanks for the brilliant manner in which you have conducted their business. It is no little thing to control the destinies of a great concern like ours, and we should like you to feel that we are indeed grateful for the splendid efficiency with which the task has been executed. I trust I shall not be misunderstood if I say that most of us here are thinking that if such results can be achieved in the dry tree, withered by the drought of years of bad trade, what may we not expect when returning normal conditions enable the tree to put forth its green leaves again. I am much encouraged by what his lordship has said on that subject.

Turning to the staff, I know I have a sympathetic listener in your lordship; we perceive that from what you said today, and we knew it before. No one realises better than our chairman what the board owe to the loyal devotion, quiet unassuming industry, resourceful skill and efficiency, and often the magnificent heroism of the staff ashore and afloat. Those of us who are here present have the privilege of tendering to you, my lord, and to your colleagues, our thanks for what you have done for us, and we do so most heartily. I know that I am saying only what all of us are feeling when I ask you to be good enough to convey to the staff, large and small, ashore and afloat, an expression of the shareholders' thanks for, and warm appreciation of, what they have done.

The vote was accorded with acclamation, and the chairman, in briefly acknowledging it, said that it would be a great pleasure to the board to convey the appreciation of the shareholders to the staff of the company both ashore and afloat.

The proceedings then terminated.

The Egyptian Railways have entered into a contract for 150,000 tons of Monmouthshire coal, 100,000 tons to be shipped from Newport and 50,000 tons from Cardiff.

The Government of India has decided to ask the Legislature in January to agree to grant the steel industry in India a bounty limited to 50 lacs of rupees a year.

16, GRACECHURCH STREET, LONDON, E.C.3.

CHESS.

By "CARO-KANN."

The City of London Chess Club Championship is now nearing the halfway stage. Sir George Thomas, Bart., is leading with 5½ out of 6, and Mr. R. P. Michell is next with 4½ out of 6.

The following game was played in a recent match between Mr. J. M. Bee (White) and Mr. C. M. Payne (Black). The notes are by Mr. Payne. 1. P—Q4, P—Q4; 2, P—KB4, P—K3; 3, P—K3, B—Q3; 4, Kt—Q2, Kt—KR3(1); 5, QKt—B3, O—O; 6, B—Q3, P—KB3; 7, P—B3, P—K4(2); 8, Q—Kt3, P—B3; 9, QP x P, P x P; 10, P x P, B—B2; 11, Q—B2, B—B4; 12, P—K4, P x P; 13, B x P, B x B; 14, Q x B, Kt—B2; 15, P—K6, R—K; 16, Kt—R3(3), Kt—Q2; 17, O—O, Kt—Q3; 18, Q—K2, Q—K2; 19, QKt—Kt5(4), P—KR3; 20, Q—Q3!, Kt—B3; 21, Q—Kt6!, P x Kt; 22, B x P, KKt—K5; 23, B x Kt, Kt x B; 24, Kt—Kt5, B—Kt3 (ch); 25, K—R, B—K6; 26, P—R4(5), KR—K; 27, R—B3, B x Kt; 28, P x B, Q—K(6); 29, Q—B7(ch), Q x Q; 30, P x Q(ch), K x P; 31, P x Kt, P x P; 32, QR—B, R—Q3; 33, P—KKt3, R—K; 34, QR—B2, R—K8(ch); 35, K—Kt2, QR—Q8; 36, P—Kt4, K—Kt3; 37, K—Kt3, QR—Q6; 38, R x R, R x R(ch); 39, K—B4, R—Q2. Drawn.

(1) The object of this peculiar-looking move is to play P—KB3, Kt—B2, and P—K4 if possible.

(2) White does not give Black time for Kt—Q2 for then Q—B2 with the advantage. The text move sacrifices a pawn, but Black's defensive power is greatly increased thereby, and there is a good chance of presently regaining the pawn.

(3) If 16, P x Kt(ch), K x P; 17, Kt—Kt5(ch), K—Kt; 18, Kt—K6, Q—Q3, with at least an equal game.

(4) This leads to a most enduring attack.

(5) White disdains the draw by R x Kt, etc.

(6) If Kt—K, 29, R—B7, Q—Q3; 30, QR—KB, and Black has no defence to the threat of R—B8(ch).

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Tarantia for Bombay (Liverpool, December 23). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Holywell for Port Said, Colombo, Madras, and Calcutta (London, December 27).

Bibby Line.—S.s. Gloucestershire for Port Said, Colombo, and Rangoon (Birkenhead, December 31).

British India Line.—S.s. Naringa for Bombay and Karachi (London, December 20).

Ellerman "City" Line.—S.s. City of York for Calcutta (Birkenhead, December 20).

Ellerman's Westcott and Laurance Line.—S s. Bulgarian for Gibraltar, Piræus, Salonika, Contantinople, and Smyrna (London, January 7).

Johnston Line.—S.s. Aviemore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, December 27); m.v. Tramore for Piræus, Volo, Salonika, Bourgas, Varna, and Constantza (Liverpool, January 3).

P. and O. Line.—S.s. Mooltan for Bombay (London, December 19); s.s. Novara for Colombo, Madras, and Calcutta (London, January, 10).

Prince Line.—S.s. Scottish Prince for Malta, Alexandria, Jaffa, Haifa, and Beyrout (Manchester, December 23).

Cotton and Cotton Goods.

THE EGYPTIAN MARKET.

Activity in Sakel Futures.

The Alexandria Commercial Company, in their report for the week ended December 4, state :—Since our last report the futures market has shown great activity and strength for Sakel, whilst for Ashmouni it has remained very dull. The net changes on the week are :—Sakellaridis : $2.17 up for January, $1.85 up for March, $1.40 up for May, $0.60 up for November, 1925. Ashmouni : $0.60 down for December, $0.80 down for February, $0.80 down for April, $0.40 up for October, 1925. The feature of the week has been the exceptional strength of Sakel : all the positions have been actively dealt in, and have advanced substantially. The main reason for this is that the demand from abroad continues at such a scale that it equals the arrivals from the villages; furthermore, we understand that straddlers have been active in buying Sakel and selling Ashmouni and/or American. Naturally, these straddles make the position of Sakel somewhat precarious; nevertheless, we think the statistical position is sufficiently strong to resist, at least for the time being, a permanent break in prices. Ashmounis have been only moderately dealt in, and, as a result of the much easier tone of New York, experienced a further drop in prices. The discount of December Ashmouni to January Sakel is now $18.75; we think, however, that Ashmounis have been of late somewhat oversold, and should the reversal of the straddles to which reference is made above coincide with a more active demand from abroad, a sharp reaction might be witnessed. Cotton from Upper Egypt has come down more freely during the last fortnight, but has generally found a ready sale. At the December 1st tender no dockets were issued. The week's receipts amount to 383,041 krs. against export 371,226 krs.; the stock stands at 1,913,294 krs. Spot.—We have had a busy week at Minet-el-Bassal, and sales amount to about 29,700 B/s, of which we estimate 17,200 B/s Sakel, 6,600 B/s Uppers, 4,800 B/s Zagora, 400 B/s Pilion, 300 B/s Brown, and 400 B/s White.

Sakellaridis.—All qualities have been in request, except the very low grades. There is a persistent demand for good and better, and full prices have been paid. Strict fully good fair with extra staple has also commanded good premiums. Spot premiums for fully good fair and above are very firm, with good inclined to go dearer. For good fair and good fair/fully good fair they are without change. The lower qualities are inclined to ease.

Uppers.—All styles have been dealt in, though low grades have only met with a limited demand. Spot premiums for the grades above fully good fair are well maintained. For the lower grades they have eased a little.

Zagora.—A good business has been done mainly in the medium and good grades, which have well maintained their parities with contracts. The lower grades are not in much demand, and have gone a little cheaper.

Pilion.—The demand has slackened for this growth, and the turnover has been rather smaller than for some weeks. Spot parities are firm at last week's rates for the good grades and unchanged for the medium qualities. Prices generally, however, are very irregular.

Brown.—A fair business has been done. Spot parities are generally rather easier.

White has been in rather better demand. Spot parities have, however, eased considerably.

The report of the Alexandria General Produce Association for the month of November reads :—

Lower Egypt.—There was very little cotton to pick in November and that in the Northern districts.—The temperature during the month was favourable to these belated pickings. Actually there is no more cotton standing. As stated in our former report, the yield per feddan is equal if not superior to that of last year, and the ginning yield is inferior.

Upper Egypt and Fayoum.—There was no picking in November, as the plants had been pulled up. We maintain our estimate of last month.

COTTON TRADE REVIEW.

Position Practically Unchanged.

The Manchester Cotton Trade Review of the Imperial Ottoman Bank for the week ended December 13 states :—

Conditions have changed little during the past week. Although American cotton has been very steady recently, the development of demand which was confidently expected when such a state of things came about has, unfortunately, not materialised, and it now looks as if it is too late to expect it to do so until after the turn of the year. There is undoubtedly a feeling that, in view of the much larger supplies which are assured, American cotton is dearer than it ought to be, and possibly herein lies the explanation of the continued inactivity.

Yarn.—Operations have been on a small scale, and the tendency is for the position of spinners to weaken. It appears that the larger output is not being absorbed. The very difficult situation in the Egyptian raw cotton market is, of course, acting detrimentally to spinners of that type of cotton. Shipments of yarn last month were 12,792,400 lb., as compared with 13,454,100 in the previous month and 14,619,500 in November last year.

Cloth.—The turnover has been restricted, and buyers appear in the main to be holding off. There has been nothing of outstanding interest in connection with any of the foreign or home markets. Shipments of cloth in November were 329,435,300 sq. yds., as compared with 364,293,000 sq. yds. in the previous month and 349,697,400 sq yds. in November last year.

Raw Cotton.—Fluctuations in American cotton have been small throughout the week. Imports have been on a substantial scale, and the stocks held in Liverpool are improving. The American Agricultural Bureau's final crop estimate, published on Monday last, gave the yield as 13,153,000 bales, of which 12,225,000 had already been ginned. The

Digitized by Google

yield was less than had been anticipated. There has been a very substantial rise in Egyptian, and this section seems at the moment to be thoroughly disorganised. It is thought that the present state of affairs is largely due to speculation in Liverpool and Alexandria. The situation is full of awkward possibilities, and is being closely followed. Closing quotations yesterday were as follows:—American Middling, 13.11; Egyptian Fully Good Fair, 29.00.

LIVERPOOL COTTON REPORT.

Sharp Advance in Spot Prices.

Messrs. Reynolds and Gibson report as follows for the week ended December 10:—

Egyptian Spot.—Following an hysterical advance in "futures" last Monday, spot prices here registered a very sharp advance, and at each reaction that occurred a good deal of rather panicky "fixing" has taken place, which, in the aggregate, must represent a severe blow to the spinning trade. Apart from this, conditions here remain practically unchanged from those ruling during the past two or three weeks. Spinners are still digesting the large forwardings which have been such a pronounced feature lately, and the daily sales have continued on a mere hand-to-mouth scale. There has been much talk, both here and in Manchester, of spinners boycotting Sakellaridis cotton on account of the high prices ruling, and rearranging their machinery in order to spin more Uppers instead of Sakel. Undoubtedly there is a certain amount of truth in this statement, but to our mind the significance of the move has been greatly exaggerated. In the first place, a spinner who has spent years building up a connection which is based on certain counts spun from Sakel cotton, is not going to jeopardise that connection by ceasing to spin those counts even at present prices. By doing so he courts certain disaster at the hands of competitors, and it would seem that the ultimate price of Sakel this season rests not so much with the spinner as with the manufacturer. There are, of course, a considerable number of American spinners who have been experimenting with Egyptian cotton and they have no doubt found it profitable at times to meet what was never much more than a surplus inquiry. These are the spinners who now, with the demand for Egyptian yarns temporarily easing off, and with the price of the raw material mounting against them, are the ones to feel the pinch. Naturally enough, with the American contract at 12.75d., they have "gone off" Egyptians.

A usually reliable informant wired us to-day that the maximum quantity of unsold Sakel cotton lying in Egypt to-day was 800,000 kantars, or just over 100,000 bales. Of this quantity he estimates that only 25 per cent. is tenderable cotton. And this in the middle of December with a flourishing trade still proceeding on the Continent. Under these circumstances we really cannot foresee any permanent break in the Sakel basis, even though a considerable percentage of the Egyptian spinning trade should turn permanently on to Uppers, and this is a contingency which for the reasons outlined above we cannot consider very probable.

As usually happens when a sudden price upheaval takes place, the spot inquiry has not been good. Attention has been fairly evenly divided between Sakel and Uppers, the "good" grades of both being chiefly in demand. Good Sakel varies in price from about 250 to 350 on January, and staple cotton appears very hard to find. Fine Sakel of good staple commands a price between 30.00d. and 31.00d., but few are the spinners who will buy at this price. The qualities below Fully Good Fair have been neglected. Good Uppers have changed hands at from 18¼d. to 18½d. Uppers, particularly in Alexandria, have remained remarkably steady in face of the recent excitement, and there is no doubt that should they begin to attract an increased amount of attention from the trade there is room for a considerable amount of appreciation over current prices. White Sudan and Pilion have continued in fair request, but the former is scarce, and price difficulties have imposed a check on business in the latter. Brown and White Egyptians have been neglected, but the basis for the former shows a pronounced hardening.

C.i.f. business is officially reported as quiet, but there were rumours current over the week-end that one or two good lines had been placed in Manchester. Little appears to have been done beyond March, however, and we doubt whether the majority of spinners are booked beyond February. Forwardings for the week ending 5th inst. were returned at 9,215 bales. Estimated sales 1,400 Egyptian, and 160 bales Sudan. Quotations of Sakellaridis are raised 180 to 230 points, those of Brown 165 to 215, and Uppers 25 points. Fully Good Fair Sakel to-day 28.05d.

NEWS FROM ALL SOURCES.

The Department of Overseas Trade notifies that the Commercial Secretary for Roumania (Mr. R. J. E. Humphreys) has secured new office premises at Bucharest, situated between the Athenée Palace Hotel and H.M. Legation. The new address of the Commercial Secretariat is: Strada Episcopiei 6, Bucharest.

The East Indian Railway Company recommends a dividend from the surplus profits account of 7s. 10d. per cent. on the deferred annuity capital and the deferred annuity capital class "D," in addition to the guaranteed interest of £1 13s. 4d. per cent. for the five months ending December 31, 1924, and 3s. 10d. per cent. compensation paid by the Secretary of State for India on account of income-tax.

The Secretary of State for Foreign Affairs and the United States Ambassador in London signed on December 3 a convention with respect to the rights of the two Governments and their respective nationals in Palestine. The convention is subject to ratification on both sides. Its object is to give United States nationals the same rights in Palestine as are enjoyed by nationals of countries which are members of the League of Nations

The newspapers state (says a Reuter message from Bucharest) that the Danube Commission at the last session decided to undertake works to ensure a depth of 19 ft. at the entrance to the Sulina branch and of 18 ft. at the exit. It is hoped that the new dyke will be completed by the spring of 1925. In order to meet the expenditure, the Commission has decided to levy its taxes on shipping on a gold basis, payments to be calculated according to the exchange on the 1st and 15th of every month. At the same time, the formalities with which shipping has to comply will be simplified.

NOTES OF THE WEEK.

The Fighting in Albania.

It is not easy to unravel the truth from the falsehood in regard to what is happening in Albania. That fighting is taking place is not denied; but whether it represents merely a bid for power on the part of Albanian exiles or is a genuine protest of a section of the people in the country against the administration of Mgr. Fan Noli remains for the present an open question. As Ahmed Bey Zogu is admittedly associated with the movement, there is *a priori* evidence that the revolt has been arbitrarily provoked from across the Albanian frontier. Its origin, however, is perhaps not so important as its fate. If Ahmed Bey Zogu were to find himself back in power in Tirana in the course of the next few days or weeks, there is nothing to suggest that he will be able to govern Albania more efficiently or more successfully than last year. He was credited with the intention of profiting by his banishment to pursue a course of study in Europe, and after a lapse of years to qualify for the leadership of the Albanians. It seems a pity that he has allowed himself to be turned from his former purpose, if he ever entertained it. If it be correct that Mgr. Fan Noli allowed his immediate predecessors in office to be condemned to death, and actually confiscated their property, he asked for trouble and will receive it in due course. The first statesman to arise in the Balkans will be the man who can take by the hand the politician whom he has supplanted, lead him to a conference table, and there say: "The times are too serious for our personal quarrels; let us see whether we cannot co-operate solely for the country's interests." When a cleric assumes the highest office in the State, it was to be expected that an end would be put, at least, to political proscription.

Yugoslavia's Position.

Yugoslavia's position in regard to the rising in Albania is a delicate one. The Belgrade Government states that it has lent no aid to the rebels and has no designs on the independence of Albania. Its statement can be believed. On the other hand, we have to bear in mind that Yugoslavia is terribly exercised in mind over Italian designs in the Balkans. Rightly or wrongly, it regards Italy as a perpetual menace to the policy of "the Balkans for the Balkan peoples," and any movement or event that seems to promote the Italian cause in the Peninsula is held to call for prompt action on the part of the Yugoslav Government. It may have been that the Cabinet of Mgr. Fan Noli was credited with being a pawn in the Italian game. If such was the belief in Yugoslavia, it would explain why Ahmed Bey Zogu was received with open arms, and a blind eye turned to his intrigues against the Tirana Government. The excuse may seem valid in Serbia; but it will carry no weight with the League of Nations. The wisest course seems to have been adopted in Rome by agreeing with Italy upon a self-denying ordinance, under which both countries undertake to refrain from any interference in the internal affairs of Albania and pledge themselves to support the development of its independence. If Yugoslavia can be relieved of all anxiety regarding Italian designs on Albania, there will be no need for her to run the risk of prejudicing her reputation in Europe by allowing people like Ahmed Bey Zogu to abuse Yugoslav hospitality. Unfortunately, her mistake does not really serve to bring her nearer her goal, which may be supposed to be that of friend, philosopher, and guide to the Albanian people. The Yugoslavs may sacrifice themselves and their good name for the *beaux yeux* of Ahmed Bey Zogu, as they did for Essad Pasha before him, but their action merely embitters Albanians as a whole. Only by strict impartiality between conflicting interests can the Yugoslav Government hope to disentangle the interests of Albania as a whole from the petty ambitions of designing chiefs. In a boxing match the rôle of referee is superior to that of the seconds who hold sponge or towel.

Cui Bono?

It would be interesting to learn what good those concerned, directly or indirectly, in the Albanian rising hope to derive from it. Albania stands to lose her independence, for one day there may be an end to Europe's patience, if there is to be no

Digitized by Google

end to civil strife in Albania. The complaint that blame rests upon Italy or Yugoslavia or both can be met with the retort that, whoever may be responsible for the intrigue, it is the Albanians who do the fighting. Although the Belgrade Press may make a great point of Ahmed Bey Zogu's arrival in Albania from France, it is well known that preparation for the rising must have been made while he was still in Serbia. It will be difficult for the Yugoslav Government to explain this away, and its prestige would have been higher if the fighting in Albania had not broken out again. The League of Nations also becomes involved, for the pointed charges of the Tirana Government raise an awkward problem. If Yugoslavia is to be taken to task, it would be well that the League should previously examine the situation created by Italy's claim to a preferential position in Albania. There is everything to be said for the contention that there is room in the Balkan Peninsula for the Balkan peoples only. One day they will, it is to be hoped, form a single confederation, and Italy will be well advised to have her interests in the Balkans at that time severely restricted to matters of commerce and finance. The present trouble affords an excellent opportunity for the League of Nations to carry the settlement of the vexed Balkan question many points farther; but it will be well not to start off with the conviction that the whole blame is confined to Yugoslavia. Even if it were, there would be much to say for a settlement that would enable the hatchet to be buried and a fresh start made in Albano-Yugoslav relations. It would be of considerable advantage to the peace of the Balkans if a hard-and-fast rule could be made that no ex-Minister of a Balkan State, who exiled himself from his country, should be allowed to find refuge anywhere on the Continent of Europe.

The Œcumenical Patriarchate.

A new election to the Œcumenical Patriarchate has taken place in Constantinople, and the Turkish civil authorities have informed the new Patriarch, Mgr. Constantine VI., formerly Metropolitan of Therapia, that he is subject to expulsion under the Convention for the exchange of Greek and Turkish populations. The argument in support of the Turkish ruling is that Mgr. Constantine came to Constantinople after 1918; the Greeks on the other hand claim that the Phanar is the legal domicile of Metropolitans, and that the new Patriarch, as a former functionary of the Patriarchate, is entitled to remain in Constantinople. The question has been submitted to the Commission for the Exchange of Populations; but it would have been a tactful act on the part of the Turkish Government if the question had not been raised at all. Turkish interests are in no way affected, whether Mgr. Constantine or an "established" prelate becomes Patriarch. The policy of exchange has been carried through on a sufficiently wide scale to fulfil the purpose that the Turks had in view, and the time has now come to show that the new order in Turkey is quite as capable of constructive work as of merely destroying. Its object was to deal a final decisive blow to the designs on Asia Minor, to which M. Venizelos committed Greece. That object achieved, the sooner the Turkish Government can establish correct relations with Greece the better for the material progress of Turkey. A voluntary decision to waive any challenge of the election of the new Patriarch would have impressed not only Greece, but a wider section of Europe. If the challenge is a cloak for the desire to oust the Patriarchate from Constantinople, Turkey will be continuing a policy that stands to do her in the long run more harm than good.

INDIA.

Plain Truths for Burma.

Sir Harcourt Butler's speech in Durbar at Rangoon seems to have complied, of course, by anticipation, very closely with the prescription of plain speaking which we ventured last week to offer to Whitehall and Delhi. The mentality of the Burmese differs widely from that of Indians, but they share one weakness at least in their susceptibility to delusions, and in both countries alike liberalisation has been assumed to be the precursor of abdication, with the result that all sorts of people have been busy staking out claims in anticipation of the ground being left vacant. In Burma, curiously enough, the priests seem to have taken the initiative in this direction, and they are no better as politicians than the priests of other countries further West. Probably their hearers are, on the whole, wiser, and it is among them that we may look for a result of Sir Harcourt's firm declarations that the British are not leaving Burma, and that the common talk of intimidating the Government is sheer madness. In India also there has been plenty of talk about intimidation of late. It is the fruit of ignorance and inexperience, but it is not the less mischievous for that.

The Durbar and the Legislatures.

Looking back over some recent official pronouncements, one is tempted to think that the Durbar will for a time hold its own against the Legislative Council. The Durbar consists of the natural leaders of the people, summoned to receive the orders of the Ruler. The Council also will in time, if the hopes of England are justified, consist of the natural leaders, but for the moment its composition is very different, and, with so many people trying to play parts for which they lack the essential qualification, there is an atmosphere of make-believe, through which the actual facts can scarcely be discerned. Even the Governor himself often seems to be affected by this atmosphere when he addresses his Council, and essential facts get blurred, but in the purer air of the Durbar they stand out clearly, and from the immediate audience they spread downward and outward to circles which as yet pay very little heed to the proceedings of the self-styled leaders in the Council. There will, we suppose, be no Durbars in the federation of autonomous provinces of which India will one day consist, but to-day, and also to-morrow, they can serve a most important purpose in bringing truth to people's doors.

Sir Frank Sly's Farewells.

We must not omit to record that Sir Frank Sly has been telling a good many home truths in his farewell addresses in the Central Provinces, the little political Alsatia which he is about to hand over to Sir Montagu Butler. His recent speech at Jubbulpore shows how he treated the rather grotesque demand which has arisen in the Hindi-speaking north for secession from the sharper-witted south. The north complains that it does not get fair treatment: the remedy Sir Frank offers is that it should choose representatives fit for their work. The northern districts are suffering now for their own defects, a backward electorate, and the failure of the old and leading families to take the position they can claim. The dream of secession would only land them in the United Provinces, where they would be worse off than now; if the natural leaders will but get to work, they can make a party in the Council strong enough to secure a fair share of whatever is going; but, so long as they sit idle, they must bear the consequences.

THE WEEK AT HOME.

London, Monday Morning.

The Government.

Parliament adjourned last week, leaving a considerable impression of the might of the Government. In foreign affairs it obviously intends to stand no nonsense, and although Mr. Chamberlain chose to indulge in the traditional exaggerations as to the success abroad of British foreign policy—*e.g.*, his exclamation that he had to return to England from the Continent to hear anti-British sentiments—there is little doubt that the Government's foreign policy is being respected by both our friends and our rivals. The conviction prevails that at last we have an Administration which knows its own mind, and is not to be deterred from pursuing it by any such domestic considerations as have hampered the various British Governments since the War. Opposition to this policy has so far, in fact, been based on purely personal or party considerations; whether, before Parliament meet again, better grounds for opposing Mr. Chamberlain's policy will reveal themselves is a matter of opinion.

The affair that is really stirring up hornets' nests is the declaration by the Prime Minister concerning Imperial Preference and the Safeguarding of Industries. It is not quite clear yet exactly how much protection the Government intends to introduce into this country, for the qualifications which Mr. Baldwin gave for the assistance to any particular trade of Government protection were vague. On the question of Imperial Preference there is not much doubt that the country as a whole is with the Government. But this support is not so certain in regard to the obscure matter of Protection.

It is claimed by those who follow Mr. Baldwin in his proposals that some such scheme was essential, owing to the changed conditions, that something had to be done to relieve unemployment—a spectre which the Premier has since he entered politics consistently attacked. The scheme is, briefly, to give the Dominions a preference in our market by means of a subsidy—the cost of preference to be borne by the British public as taxpayer and not in higher prices to the tradesmen. And the Bill that is to be analogous to the Safeguarding of Industries Act is not really the thin edge of the wedge of Protection; it will apply only to industries of "substantial importance."

Against the scheme there is a good deal being said. It is pointed out that almost anything—depreciated currency, low wages, long hours, and so on can now be made an excuse for a tariff. Little is expected from the committee which Mr. Baldwin is constituting to hear the demand of any industry for the protection of a tariff. The criticism is not easy to overcome that the difference between the Government's plan and Protection is that under Protection a manufacturer gets a tariff whether he wants it or not, but under the new safeguarding of industries he only gets it if he asks for it.

The opinion of the country obviously cannot be formed until the vagueness of the Government's intentions is dispelled and the actual machinery has been set up.

Ecclesiastics Diversions.

The storm which for a long time has been brewing round the head of the Bishop of Birmingham, who has not shrunk from heartily attacking the Anglo-Catholics, has at last broken—the journals being wet with angry tears. For such an attack there were plenty of ecclesiastics, and, even more formidable, ecclesiastically-minded persons, lying in wait; these have pounced with their traditional vigour upon the unfortunate Bishop. Quickly to the defence of Bishop Barnes have swarmed various "intellectual" leaders of the Church, including the redoubtable Dean of St. Paul's. It has now become an exciting diversion, but whether it has much real significance I should hesitate to say. From neither side is there any superabundance of digestible food for the starving flocks. At the moment, indeed, most fame seems to fall to the lot of bishops and deans through their facility and versatility in the quotation of limericks.

The Birth-Rate.

One does not know whether those most gloomy people of our time, the Malthusians, will hail this year's falling birth-rate as a triumph of their doctrines, or will decently cease from troubling us. It is said that this year the birth-rate will stand about 19.4 per 1,000 of the population, as against 19.7 in 1923 and 20.4 in 1922. At the same time, of course, the death-rate is declining; and the upshot of this is that the population is increasing by about 300,000 persons a year. Obviously, the death-rate cannot decline very much more, so that there must come a time when the population begins to decline. It has been stated, in fact, that a decline has been in progress for about forty years.

Into the causes of this, and into the hopes and fears caused by it, I confess I am not competent to enter. There are always people who can be frightened or encouraged by statistics. If they do not grumble at the ever-increasing population, the impossibility of its economic subsistence, and so on *ad nauseam*, then they are gloomily predicting the decline of our race.

"The Freeman's Journal."

Whatever one's views upon the history and the rights and wrongs of the Irish question, there can be few who did not lament the passing last week of the *Freeman's Journal*. It was a very good paper, full of that courage, colour, and lack of proportion which may perhaps be said to characterise the temperate Irishman. To one who, like myself, reads very many newspapers in a week, there was a most refreshing touch about the *Freeman's Journal:* you could disagree with it, but you could not possibly misunderstand it. It was, therefore, never your enemy. For all its waywardness and violence (or because of them?), it never stooped to the sitting-on-the-fence and double-dealing, unprincipled methods which have stamped some of the more successful but less considerable journals of our modern time.

Labour Leaders from Russia.

Much bickering and wonderment have been caused by the report of the Trade Union delegates who recently visited Russia, for the notion that all was discontent and misery under the Soviet régime had become almost a shibboleth in this country, even in some official Labour circles. Practically every unofficial sympathiser with Labour in this country who had visited Soviet Russia had returned convinced of the tyranny of Moscow; and yet these latest visitors maintain that even in such a place as Georgia there are content and a certain prosperity!

The whole subject is one of importance, and not to be dismissed with appeals to prejudice and sentiment. It may be that Mr. Purcell and his colleagues were spoonfed by the Soviet authorities, that they were permitted to see only what the Soviet people wished them to see; but all this will need proof. It happens that I have heard a good deal on both sides of this Georgian question, and even now I am not prepared to swear that these Trade Union delegates are right or wrong.

Digitized by Google

However, it is always a subject which arouses a certain amount of passion, and it is sure to provide some fun in the way of wild and unrestrained talking.

Labour's Latest Recruit.

The act of desperate volunteering which Mr. Augustus John has just performed in joining the Labour Party seems to have puzzled those who make it their business to give publicity to, and to make comments upon, such unimportant events. It has been ingeniously suggested that Mr. John's declaration of allegiance to a defeated minority party was a *quid pro quo* for the election, during the régime of a Conservative Government, of Mr. Frank Dicksee to the Academy. One had certainly not connected Mr. John with any political tendencies, or with any belief in his ability to give a "message" to mankind. Artists of his *genre*, in fact, generally avoid politics: it is only the less successful people—poets like Shelley—who imagine that they are "the unacknowledged legislators of mankind."

Christmastide.

I could not think, nor could anyone tell me, of any better way of forestalling the spirit of Christmas than going to hear John Coates singing his programme of Christmas and festive songs last week in the West-End. It was at once an artistic and a humanising experience. No matter whether it was Tudor jollity or Georgian mirth, French grace or *élan*, German simplicity or English wistfulness that the singer was indulging, he was supreme in all. He succeeded, even, in getting a West-End audience to join in choruses, and those who know the limits of such audiences will realise that good-natured audacity could no further go. An even greater accomplishment was his persuading that superb accompanist, Mr. Berkeley Mason, once or twice to doff the mask of melancholy.

If only Mr. Coates' art were as infectious as his humanity! It was easy to laugh and be merry with him as he sang "Maulte's Come Down" or "Qu'ils sont doux" or "Christmas doth make an end," but could we sufficiently admire the beauty and distinction of him in Henry VIII.'s "Grene groweth ye holy," in Dent's and Hardy's "The Oxen" (at least in the second attempt), and in Armstrong Gibbs' and de la Mare's "Mistletoe"? In fine, a most pleasant and vital evening, provided by one of the finest of English artists and gentlemen.

Cricket and Rugger.

The hearts and eyes of all sportsmen are at this festive time rather in Australia than in Britain and on the midday paper than on the morning paper. Nothing has set people talking so much as the success of Tate and, generally, the fine fight that this country is putting up against a team which is manifestly as full of genius and grit as ever. Schoolboys at this moment are dreaming of the Test Match at Sydney, where, it has been said, it is a Lotus-land, always afternoon and three hundred or so for two wickets; and they are praying that Tate may bowl 'em all out, and that Hendren will hold his catches, and that Hobbs and Chapman will each score several centuries.

From the Rugger point of view there does not seem to be such optimism. It was disquieting to find The Rest beating England on Saturday, and there is little doubt that, though we shall field our best available side against the victorious All Blacks next January, it is not so good a side as we had, say, two years ago. However, hope is large—and Twickenham itself may do the rest.

London Theatres.

Theatreland is in an interesting condition at the moment. The tears that theatre-managers have so lavishly shed have fallen on rather dry ground, and the public is no more disposed to listen to their plaints when it reads of the resumption of theatre-building. On the whole, those theatre-managers who lose money deserve to.

The noticeable point about the new theatres is that all of them are small, and, too, so are all the projected ones. There are some, indeed, who talk of the doom of the larger theatres, that is, those of the type of Drury Lane, Covent Garden, His Majesty's, the Lyceum, and Princes: it will be very instructive to watch the fate of Mr. Basil Dean's venture in producing "Midsummer Night's Dream" at Drury Lane. The present tendency in building is undoubtedly to follow rather the Little and the Ambassadors than the middle-sized theatres, such as the Gaiety or Daly's, or the Shaftesbury Avenue houses, or even than the smaller Royalty and Court type. In music there is, of course, the same tendency: the smaller concert-hall, the *concert intime*. It is in the main due rather to economic than to artistic reasons, and there will without doubt be a revulsion from it later on.

Street Chaos.

Last week the Minister of Transport gave particulars of the constitution of the new Traffic Advisory Committee, which has since held its first meeting. The problem with which this Committee will have to deal is becoming increasingly heavy, and it is not made easier by the fact that it covers questions other than that of strictly vehicular communications. There is the matter of the regulation of vehicles which use the streets, and there is the closer control over the streets themselves. Something, of course, will be done in the constructing, widening, and general improving of streets, but the main difficulty will probably be encountered in the ridiculous abundance of motor-traffic (implying the question of trusts) and in the segregation of fast from slow-moving traffic.

ALTER EGO.

A Royal decree has been issued in Cairo appointing Mr. E. Tatton-Brown, formerly Assistant Director of the Customs Administration, Director-General of the Egyptian Customs in succession to Mr. H. Macauley, retired.

General Weygand, the former French High Commissioner in Syria, arrived in Paris last Friday, accompanied by Mme. Weygand. He was welcomed at the Gare de Lyon by Marshal Foch.

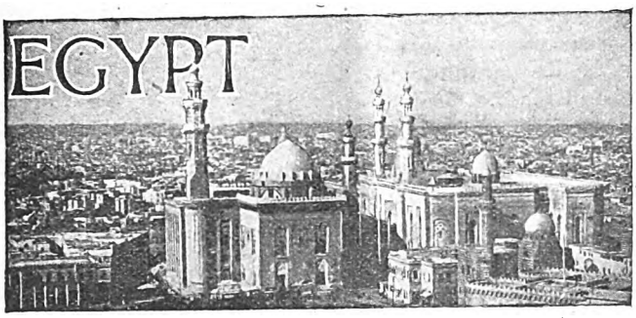
The Near and Middle East.*

From Our Own Correspondents.



Cairo, December 13.

Ismail Sidky Pasha at the Interior.

The political situation underwent an important development this week when Ismail Sidky Pasha was appointed Minister of the Interior. The new Minister is no stranger to readers of THE NEAR EAST. After a long period of service in the Ministry of the Interior, where he reached the senior post of Under-Secretary of State, he first attained Cabinet rank in 1914 as Minister of Agriculture; he entered the Adly Cabinet in 1921 as Minister of Finance, and was a member of the Official Egyptian Delegation that went to London that year to negotiate with the British Government; he and Sarwat Pasha conducted the negotiations with the British Government which led to the British declaration of February 28, 1922; and he again held the Finance portfolio in the Cabinet which Sarwat Pasha formed in March of that year.

His capacity and intelligence are recognised by everyone, be they friend or foe, and his assumption of the important position of Minister of the Interior has been received with dismay by the Zaghloulists. They have good reason to know from the exploits of Fathalla Barakat Pasha, who was Minister of the Interior under Zaghloul Pasha, what influence that post exercises throughout the land. There is, however, no fear of the re-establishment of an era of intimidation such as that master-propagandist introduced, and there is, indeed, every prospect that the country will be able to breathe once again and the provincial administration be carried out without the persistent interference from outside which marked the Zaghloulist régime.

The presence of Ismail Sidky Pasha at the Ministry of the Interior should also have a salutary influence over the elections, which are expected to take place some time in February. While in certain respects the Zaghloulists owed their victory at the polls last year to the popularity of their leader, there is little doubt that their crushing victory was due to the campaign of intimidation and coercion which they and their agents waged throughout the country. As far as they can be free in such a country as Egypt, the coming elections should be relatively free, and it will be no surprise to find that the Zaghloulists end by being in the minority. Already what may be regarded as a sign of the times has been afforded this week at the by-election held at Minet-El-Kamh. A Wafd candidate again won the seat, but his majority was reduced to about one-third of what it was at the elections last autumn.

The Judicial Adviser.

Sir Sheldon Amos has had his contract as Judicial Adviser renewed by the Council of Ministers for six months from November 27. His contract expired on November 27, but the Zaghloul Cabinet raised objections to its renewal, as it held that the post of Judicial Adviser was incompatible with the status of Egypt as an independent sovereign State. The question of the Advisers having been settled by the settlement arrived at on November 30 between the British and the Egyptian Governments, and their status as fixed by the declaration of February 28 having been definitely recognised, the Ziwar Cabinet has, as mentioned, renewed the contract. The renewal is, however, for six months only, instead of the usual period of five years—the reason being that Sir Sheldon Amos wished to retire, but agreed to stay on for this short period in order to tide over the present difficult situation.

Parliament.

There is every reason to believe that the dissolution of Parliament will take place on the eve of the expiry of the adjournment. Ziwar Pasha replied to the Deputies' petition for an immediate re-assembly of Parliament by requesting them to state specifically whether they asked for an extraordinary session in the terms of Clause 40 of the Constitution, or whether they demanded a reduction in the period of adjournment in regard to which the King had already exercised his prerogative. The Deputies, realising that a direct answer to either of these questions would put them in the wrong, merely replied that they wanted a re-assembly of Parliament no matter how it might be possible to bring about. There the matter remains for the moment. It is expected that the Cabinet will reply by a refusal in the course of the next few days, and that a week later the dissolution decree will follow.

Ministers' Pensions.

The Cabinet this week took an excellent step by abolishing the regulation by means of which any Government official who has served twenty years can on entering the Cabinet obtain immediately a pension of £E1,500 a year in lieu of the ordinary pension, the minimum of which is £E960.

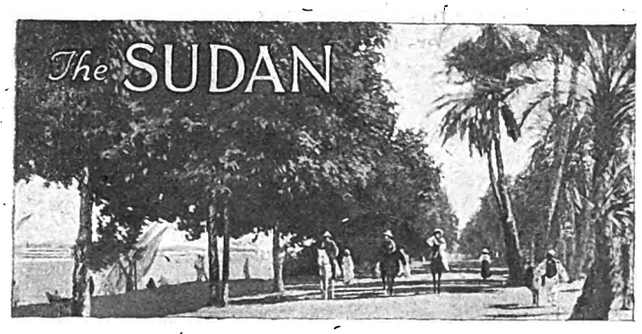
This decision was taken in consequence of the scandal—it was nothing short of that—caused by the resignation of Osman Bey Moharram, who as a result of but one week's presence in the Cabinet had his pension raised from £E800 to £E1,500, which was more than he had been actually drawing in pay six months ago.



Khartoum, December 7.

The Sirdar.

Consternation is rather a mild word to use as expressing the feelings of the inhabitants and residents of this country when news arrived stating that the Governor-General of the Sudan had been shot and lay dying at Cairo from the treacherous hands of some unknown Egyptians. From all quarters of the country native merchants, sheikhs, and notables maintained a regular stream of telegrams expressing feelings of horror and wishes for his speedy recovery, and all people coupled themselves with the Acting-Governor-General, Wasey Sterry, Esq., C.B.E., in his telegram of sympathy sent to Lady Stack.

Sir Lee Stack died on Thursday evening, November 20, at 11.45, and the funeral took place at Cairo on Saturday morning.

In Khartoum a memorial service was held, timed to take place concomitantly with the Burial Service in Cairo. It was attended by approximately 2,000 residents, comprising nearly every nationality. They faced a terrifically hot sun to pay their last outward token of love and respect to their late leader, for Sir Lee Stack was beloved by all with whom he came in contact, and all felt that by his death they had experienced a definite and personal loss.

The service was simplicity itself and of short duration, and, following the singing of the last hymn, the "Last Post" was sounded and the piper's lament, "The Flowers of the Forest," was played.

Britain's Action.

The British Government's Note to Egypt consequent upon the murder of Sir Lee Stack was handed to Zaghloul Pasha, the Egyptian Premier, on Saturday, November 22, a few hours following the burial ceremony.

Item 5 of the Note—the evacuation of Egyptian troops from the Sudan—was applied immediately, and troops were evacuated party by party.

The officers of the 3rd Battalion and the Artillery, fearing subsequent action by the Egyptian Ministry of War should they evacuate prior to the receipt of orders, "sat tight," and would not move. They stated they desired King Fuad's own order of evacuation. No war having been declared between the two nations, this attitude was tolerated by the military authorities pending the arrival of the letter by special courier, Bimbashi Amin Eff Heiman. The aeroplane conveying this officer had to land at Atbara, and the Government despatched the messenger to Khartoum by special train. With King Fuad's authority for evacuation in their possession, the officers and men entrained for Port Sudan, where transports were waiting to convey the troops to Egypt. By the end of the month practically the whole of the Egyptian forces stationed at Khartoum had been removed.

Mutiny of 11th Sudanese.

On the afternoon of November 27 two platoons of the 11th Sudanese Battalion mutinied as a result of continuous propaganda carried out by pro-Egyptian enthusiasts in the Sudan during the past few months. The Sudanese had been persistently accused of dishonour and of having ignored their oaths of fealty to King Fuad, King of Egypt, and the head of the Egyptian Army under whom they served. The two platoons, which had crossed from Omdurman earlier in the day for special duty, marched through the streets of the city and towards the bridge spanning the Blue Nile. *En route* they were stopped by McCowan Pasha, who, discovering that they desired to join the Egyptian troops at Khartoum North, attempted to dissuade them from such an action, and urged them to return to barracks. The reply of the officer in command was that if McCowan Pasha did not immediately depart, he would be shot. This officer at once reported the circumstances to the General Staff, and Huddleston Pasha, Acting Sirdar of the Egyptian Army, proceeded to the place where the Sudanese soldiers were drawn up by the side of the road, their further progress having been barred by a picket of British troops. Huddleston Pasha approached them and called upon them in the name of the Sirdar to return to quarters. The reply was to the effect that the Sirdar was unknown to them, and they would, therefore, obey none of his orders. The mutinous intentions of the party having been thus proved beyond doubt, Huddleston Pasha stepped back, and ordered the picket to open fire on the mutineers. By this time dusk had fallen, and the Sudanese experienced little difficulty in forcing an entrance into the Egyptian Military Hospital, when they killed Major Carlyle (Second Medical Officer), Sergt. Renshaw (Egyptian Army), and two Syrian doctors. British troops were soon brought forward, and, after a short struggle, drove the Sudanese from the hospital, across the compound, and they eventually took possession of the officer's mess. Fighting in the area continued during the night and the early

hours of the morning. The position held was a very strategic one, as the attack could only be made from two sides—front and rear.

The British adopted rush tactics, but these proved futile and costly; the plan was changed, and artillery was introduced to smash the building. This was a particularly delicate undertaking, as a direct hit had to be registered with every shell—for the hospital, filled with sick, was situated immediately behind the line of fire. This feat was accomplished and, assisted by bombs with rifle fire, the position was finally reduced to ruins. It is difficult to estimate the number of enemy casualties until the whole of the débris has been cleared. The British and Egyptian section of the community assembled at the Gordon College and the Palace, whilst other nationalities proceeded to the White Nile, where they stayed until the situation had been restored to normal.

ROUMANIA.

Bucharest, December 15.

Party Politics.

As stated in my last letter, the presentation of the Budget has raised the hopes of the Opposition that the days of the Liberal Government are now at last numbered. In view of the difficulty experienced abroad in understanding the trend of party politics in Roumania, I have thought it of interest to obtain the point of view of the Opposition parties in regard to the policy that Roumania ought to pursue at home and abroad. The Liberal Party under M. Bratianu stands on the merits of its achievements in office, and does not need to state its case more precisely.

As it is generally supposed that, in the event of a change of Government, the People's Party, under General Averescu, would succeed the Liberals, I give first the ideas on the questions of the day of that political group, which have been kindly summarised for THE NEAR EAST by M. Mancilescu, who, although young, is regarded as one of its most brilliant leaders.

The People's Party.

Why does General Averescu's party not support the Government, and what are, broadly speaking, the divergencies of opinion between that party and the Liberals?

Between the Liberal Party and the People's Party there is an organic difference and a difference of doctrine. The Liberal Party is an old Roumanian party dating from before the War, and retains the stamp of its origin. The People's Party is the product of the new spontaneous movement of the masses aroused by their sufferings and sacrifices during the world War, and these masses have grouped themselves around the most representative personality of his time, General Averescu, the leader of the party. Thus, while the Liberal Party represents almost exclusively a large bourgeoisie in the throes of birth, the powerful organisation of the People's Party embraces the interests of all social classes and, what is more important, of all the different parts of the greater Roumania which has emerged from the War. It might, therefore, be stated that the Liberal Party is a class party, whereas the People's Party aims at the conciliation of all social interests.

Those differences of doctrine are not without practical consequences. Take, for example, the collaboration of foreign capital. Whereas the Liberal Party fears that the infiltration of foreign capital will produce an eventual weakening of the national "bourgeoisie," the People's Party is of opinion that an honourable and wide collaboration of foreign capital is a necessity of these times for the prosperity of the country.

What, in your opinion, is the present situation of the Liberal Party in regard to the country and to the Opposition?

In the eyes of the country the Liberal Party is losing ground. In order to come into power it promised an amelioration of the economic and financial situation which has not been realised. The country has no further hopes from the Liberals, and, according to the well-known saying, "Quand on ne peut plus faire naître des espoirs on ne peut plus gouverner" (When one can raise no further hopes one can no longer govern).

As regards the Opposition, it can never forgive the Government for the general elections. The Parliamentary majorities of to-day are far from representing the will of the people.

Would General Averescu's party be disposed to accept power? What would be its programme? Has it a plan of action as regards the economic situation and the financial crisis? Generally speaking, would it consider the introduction of foreign capital, and in what way? Would it not abandon those principles of State which prevent foreign capital from collaborating effectively?

Our party has never demanded power, but, through the expressions of its leader, General Averescu, it has declared itself ready to accept the responsibility if the Crown and the electoral body give it their confidence.

Our programme embraces all the needs of the country at the present moment. The parts of this programme which I wish to emphasise are: the completion of agrarian reform (which is the work of our party) by the intensification of agrarian production; the prompt re-establishment (at whatever sacrifice) of the railways, the maintenance of which has been neglected by the present Government; the favouring of loyal and friendly collaboration of foreign capital, and, finally, a monetary reform consisting essentially in the stabilisation of the leu at or near that level at which it stands when the stabilisation becomes possible.

The stabilisation of the currency is indeed indispensable in order to attract foreign capital. On the other hand, an eventual general inflow of foreign capital would, in turn, strengthen the national currency by ensuring not only the balance of accounts, but even a surplus in our favour.

As regards the conditions to be imposed upon foreign capital in this country, the People's Party guarantees all possible security; legislative continuity, perfect respect of contracts and rights acquired, and the cessation of all one-sided mea-

sures for the protection of individual Roumanian interests at the expense of foreigners, such as the moratorium, the "Loi d'Imprévision," etc.

The party is of opinion that Roumania must be more careful of the good name of her merchants than of the higher or lower value which the leu may attain.

What would be the attitude of your party towards the Mining Law?

The system of annulling the work done by another Government is indeed a most deplorable system, and although it was practised by the present Government in regard to certain laws made by the Government of the People's Party, it is certain that our party will not imitate this unhappy example. On the other hand, as foreign investments stand in a direct connection with the normalisation of the country, it is equally certain it will not hesitate to eliminate all real difficulties in the way of such investments.

Why does the party not join with other Opposition parties, and what would be the basis of a possible agreement?

The People's Party has several times declared itself ready to unite with other Opposition parties, but on condition that this union should not have the transitory character of a governmental collaboration, but should be a definite fusion of parties.

Do you think the present Cabinet will remain in power until its programme of legislative reforms is completed?

It is not possible that the Government remain in power until what it calls "its task" is completed. The country is tired of its experiences; it does not believe that its happiness will be assured by new laws, but rather looks for practical measures which might alleviate the monetary crisis and stop the rise in prices.

The impatience and irritation of the people may attain proportions which it would not be wise to allow to grow dangerous.

Do you consider that the succession of General Averescu is assured? On what would you base this assertion?

If it is just and logical that the most powerful party in the country should succeed the present Government, the best balanced party, that which has experience of the affairs of State and enjoys the highest consideration through the personality of its leader, by the wisdom of its former action and of its future programme, then the People's Party should succeed.

[In the next letter I hope to record the opinions of M. Raducanu, one of the leaders of the Peasants' Party.]

PERSIA.

Teheran, November 19.

The American Advisers.

From the seventh quarterly report of the Administrator-General of the Finances, the English text of which has just been published, it is evident from Dr. Millspaugh's prefatory remarks addressed to the Minister of Finance, that the American Advisers have not been able to rely on the wholehearted support of the Government, to which they should be entitled. Dr. Millspaugh remarks that, in order to make their task a success, they must have the co-operation of other departments of the Government, and this co-operation they did not receive during the first quarter of the current Persian year. He goes on to say that the work of the Advisers met with criticism and obstruction; their contracts were violated; no active steps were taken by Persian officials to give them effective support; the Budget was not passed, and threats were even made in the Parliament to reduce the credits proposed for the Ministry of Finance, which were essential if the work of collecting revenue and controlling expenditure were to be proceeded with. He complains that the treatment by the Mejliss and Government of the Budget was one of the most serious difficulties with which they had to contend, and that these actions have undoubtedly delayed for at least a year the execution of any fundamental plans for the economic reconstruction of Persia. He pays a tribute to his staff, American and local, and concludes by saying that if the work entrusted to them of financial reform is eventually a failure, the responsibility rests on those who have ignored their advice, rejected their proposals, interfered with their efforts, and created innumerable difficulties for them. For those who hoped so much from the advent of the American Financial Mission the above report is not very encouraging reading, and it is little wonder that with such an unfriendly atmosphere prevailing and such an obstructionist attitude adopted by the Government, the Advisers should have lost heart in their thankless task, and there is little hope that any of them will remain after the expiration of their three years' contract, if, indeed, they stay so long.

The Situation in the South.

The situation arising out of the Sheikh of Mohammerah's open defiance of the Central Government continues to be the topic of the moment, accentuated as it has been by the Prime Minister's visit to Ispahan and later to Shiraz, where he now is. The report was current last week to the effect that Sardar Sepah intended to proceed to Bushire from Shiraz, and meet the Sheikh with a view to arranging an amicable settlement with British mediation, Sir Percy Loraine, the British Minister (who last week arrived in Baghdad from leave, with Lady Loraine) having proceeded to Mohammerah to see the Sheikh and to examine the situation. This report aroused much indignation here, and a secret session of the Mejliss was summoned to discuss the matter. The meeting expressed very strong disapproval of any such action on the part of the Prime Minister, and denounced any interference by foreigners. The matter being brought to the notice of Sardar Sepah by telegram by the Military Governor of Teheran, the Prime Minister replied in a strong, angry wire emphatically contradicting the report, which he ascribes to his many enemies, and denying any such intention on his part, pointing out at the same time that he will seek advice or counsel from nobody, and will act in whatever way he deems most advisable in the interests of his country, whether it be in waging war or in negotiating peace. This telegram is typical of Persia's "strong man," and shows his independence of the advice of others, and that he will brook no interference in his actions as head of the Government.

November 20.

The papers this morning publish the text of a telegram despatched by Sheikh Khazal to Sardar

THE PERSIA SOCIETY.

Sepah at Shiraz, which means the end of the former's defiance of the Central Government. The Ministry of War had published a few days previously a *communiqué* announcing the advance of the Government forces towards Dizful, and also successful engagements against the Sheikh's followers by the column from Behbehan, and further reported that throughout Arabistan the tribal chieftains and tribesmen had risen against the Sheikh of Mohammerah, and that some of these had burned one of his palaces at Hamidieh. Whether these reports were actually true or merely a case of the wish's being father to the thought, it is difficult to say in a country like this; but it seems very probable that the closing in on him of the Government troops and the turning against him of tribes on whom he thought he could rely, persuaded the Sheikh that the game was played out, and decided him to throw up the sponge. Khazal's telegram is couched in the meekest terms, and commences by stating that he had been led astray by scheming intriguers, who had told him that Sardar Sepah was ill-disposed towards him, but now that he had found this not to be the case, he hastened to express his deepest regrets and repentance for his recent actions against the Government. He begs the Prime Minister to accept these assurances of his regret, and states his entire willingness to serve the Government faithfully henceforward and obey the Premier's orders. He adds that he hears Sardar Sepah intends to proceed south, in which case he hopes he may be allowed to meet him and tender his apologies and regrets in person and show evidences of his devotion. The reply of Sardar Sepah to this telegram was curt and to the point; he merely acknowledges receipt and accepts the Sheikh's repentance conditional on absolute submission only. The Sheikh's reply is not yet known, but there seems no doubt that he will consent to any terms laid down by Sardar Sepah, who has thus, once again, proved his complete ability to deal successfully with any internal disorders, and justified the formation and upkeep of an efficient army.

CYPRUS.

Nicosia, Undated.

General News.

The island still suffers from depression. Although the exports and imports for the quarter ended September 30 exceed considerably those of the corresponding period in 1923, imports exceed exports by £6,445. The rainfall has been satisfactory, and agricultural prospects are good. Snow fell early this year, the hills being covered at the end of November. An invitation to Mr. Asquith in Cairo to visit Cyprus was dispatched in accordance with a resolution passed at a meeting of the "National Council" that one should be sent to the distinguished statesman who was Prime Minister in 1915, when Cyprus was offered (conditionally) to Greece!

A "Pan-Cypriot" Pamphlet.

A pamphlet recently published, and issued by the "Pan-Cypriot Agricultural Association," which has an Executive Council of seven Greeks and four Turks, contains a resolution which was forwarded to the High Commissioner, in view of the critical situation which has arisen during the last two to three years. Dealing with the paramount problem of an increased water supply, it calls upon the Government to come to a decision on the still unsettled question whether artesian supplies can be made available. It is false economy to allow any further delay, and expert opinion should be called in. If underground water cannot be so obtained, some provision should be made for other works. Proceeding to the proposed abolition of tithes on cereals, practical suggestions are made for the adoption of other sources of revenue to replace the present system. They include a very slight increase of the tax on real property, on salt, cotton, silk, cotton yarn, glass, cement, etc., and fresh imposts on wine-shops and coffee-houses. The total increases would yield £64,044, or an average equivalent of tithe, after deducting part of the cost of assessment and collection. The pressing need of an agricultural bank, which would make advances to needy agriculturists at not more than 8 per cent., and many other matters are dealt with. The resolution discusses the very serious evil which is believed largely to account for the great falling-off in the demand for Cypriot products, *i.e.*, the suicidal habit of the villagers of adulterating almost every article which it is possible to depreciate by methods which are dealt with in no sparing terms. Whereas, it says, "other people endeavour to present their goods in as attractive a manner as possible, one may say in Cyprus that, on the contrary, every care is taken to give an appearance of the most miserable quality." The Government is asked to deal with this crying evil by Draconian legislation. It has long been a subject of bitter complaint. The depreciation of property is referred to. Villagers' lands are being sold for a twentieth part of their value, while the costs of legislation have been enormously increased. Many other matters are touched upon, and the pamphlet, whatever its effects may be, is one of great interest.

A Council Appointment.

Mr. G. du Boulay, Island Treasurer, has been appointed a member of the Executive Council.

Prince and Princess Arthur of Connaught arrived in Bombay last Friday. Their Royal Highnesses were welcomed by Sir Leslie Wilson, the Governor, and Lady Wilson, and motored to Government House. Their Royal Highnesses left Bombay the following evening for Poona, returning there on December 22 before proceeding to Calcutta.

IN UNKNOWN ARABIA.

The Arabian Deserts of Jafura and Jabrin.

At the Æolian Hall, on December 15, Major R. E. Cheesman, until lately A.D.C. to Sir Percy Cox in Iraq, lectured to the Royal Geographical Society upon his visit last year to the Deserts of Jafura and Jabrin, in Arabia.

There are few places in the world to-day that have not been seen by European eyes. The North and South Poles have, one by one, given up their secrets. The deserts of Africa have been crossed and re-crossed. The Great South Desert of Arabia has not only never been crossed, but, of the few European travellers of different nationalities who have been allowed to enter the country, but four can claim even to have had a distant glimpse of the outskirts. It is satisfactory that the first to set foot in, and bring back views of, this virgin desert is an Englishman.

Major Cheesman, in describing his journey across the waterless Jafura to the oasis of Jabrin, said that while staying as the guest of Ibn Saud, the Wahhabi Sultan of Nejd, he was sent with men and camels to stay with the Al Murra, an Ikhwan tribe that roams in these inhospitable wastes. He showed photographs of these nomads, and remarked on the similarity between their features and those seen on ancient Sumerian sculptures, suggesting that they might be the descendants of this, the earliest known civilisation. He also learned of a place called Magainma, in the sands, about one hundred and twenty miles south of Jabrin, and drew attention to the resemblance between the name Magainma and that of Magan, or Maganna, a lost country frequently mentioned on Sumerian inscriptions, and supposed by some authorities to have been situated somewhere in the region of the Persian Gulf.

Jabrin itself, which has long been veiled in mystery, was found to be a depression with date palms and ruined castles, reputed by the bedawin to be haunted by spirits. The desert is encroaching on all sides, and the wells are drying up. Ancient geographers had filled in the blank space in this part of the map of Arabia by introducing a lake and two rivers, Wadi Aftan and Wadi Jabrin, flowing across the desert, important features in forming an opinion on the hydrography of an unexplored country. Lately doubts had been cast on the possibility of their existence, but it remained for Major Cheesman to sound their death-knell.

He crossed the mile-wide channel of the Wadi Sahba, and was thus able to confirm its position and importance as a drainage channel that once carried the waters of the Nejd highlands across the great Arabian peninsula to flow into the Persian Gulf, at the same time indicating the land-slope of some 300 miles of unknown country. The course is now choked in places by drift sand, and it is probably at a remote period of the world's history that it was a flowing river. Certain stones from the gravel plains in this area are believed by the bedawin to be bewitched, and are said to be seen rolling along the ground. One was brought home and was exhibited at the meeting.

The Jafura Desert, a vast tract of moving sand dunes, was mapped along its western side, and new information indicating the boundaries of sand and gravel plains was obtained from the Al Murra. Specimens of a fish which lives in hot water were also exhibited. They were caught in a hot spring at Hufuf, of which the temperature was 101 deg. Fahrenheit. A hot bath of that temperature is almost too hot to get into.

There were photographs of the ruined town found by Major Cheesman on the coast at Oqair, which is supposed to be the site of the ancient Phœnician port of Gerra. Near by the phenomenon of the singing sands was encountered on the beach, where each footstep brings forth a mysterious, piping whistle.

A map was made of all the country passed over, and the positions of Oqair, Hufuf, Wadi Sahba, and Jabrin were accurately fixed for the first time by astronomical observations.

Some remarkably pale desert-coloured animals and birds were obtained, which show, to a wonderful degree, how a fauna is capable of developing colours to harmonise with its environment. Some of these were exhibited side by side with their darker neighbours. The collections made during the expedition contained nine species and eight sub-species new to science, and among the geological specimens were some beautifully polished stones, showing the effect of sand blast, and equalling in effect the work of a jeweller.

Among those present were Lord Rothschild, Sir Percy Cox and Lady Cox, Sir Arnold Wilson, and Dr. D. G. Hogarth. Lord Rothschild, Sir Percy Cox, and Dr. Hogarth contributed to the discussion after the lecture.

NEWS IN BRIEF.

The Earl of Balfour hopes to be present at the opening of the Jewish University in Jerusalem next year.

Sir Robert Horne arrived at Rangoon on December 17 in connection with the meeting of the Burma Corporation shareholders.

Air Vice-Marshal Sir Sefton Brancker, Director of Civil Aviation, left Aleppo last Thursday morning, flying directly to Baghdad.

M. Marinkovitch, the former Yugoslav Foreign Minister, has been paying a private visit to Sofia. This is the first time for ten years that a prominent Serbian statesman has visited Bulgaria.

An aeroplane of the German Junker Company, carrying the first aerial mail in Persia, left Teheran on December 16 for Enzeli. The mail was conveyed from Enzeli to Baku in a seaplane in five and a-half hours.

The body of Major Lilly, M.C., 3rd Battalion, 7th Rajput Regiment, the British Military Attaché in Kabul, who died of appendicitis, was conveyed to Peshawar, where the funeral took place on December 18.

Certain unknown persons on December 15 shot and seriously wounded the Public Prosecutor of the Sofia Court. He had received threatening letters following the severe measures which he had taken against Communists.

A Dutch engineer, M. de Roode, for many years engaged on construction work at the port of Rotterdam, is joining the Turkish service for the purpose of extending or constructing harbours at Constantinople, Mersina, Trebizond, and Samsoun.

The Bucharest *Official Gazette* publishes text of a law fixing a maximum penalty of ten years' imprisonment for plotting against public peace and order, for membership of associations to provoke disorders, and for those guilty of entering into relations with foreign Communist bodies.

Mgr. Constantine, Metropolitan of Derkos, has been elected Œcumenical Patriarch, in succession to the late Mgr. Gregorios VII., although he has been warned by the Turkish police that he is an exchangeable subject under the Convention for the Exchange of Populations with Greece.

The *Morning Post* Geneva correspondent states that, in virtue of the decision of the League of Nations Council, the International Court of Justice will meet at The Hague on January 12 to decide the interpretation of the word "established" in relation to Greeks domiciled in Constantinople who claim exemption from obligatory exchange under the Lausanne Treaty.

Mr. and Mrs. Sterling sailed on December 19 in the s.s. Mooltan for Egypt.

The Earl and Countess of Dalkeith arrived at Bombay last week from England.

Noureddin Bey, Turkish Inspector of Finance, has arrived in London from Angora.

Mr. A. C. Chatterjee, Indian High Commissioner in London, sailed from Bombay last Saturday.

Hechmat Bey, secretary at the Egyptian Legation, left London on December 17 for Cairo, on leave.

M. Dimitri Stancioff and Mme. Stancioff have arrived from Varna in London, where they will be staying for the next few months.

Sir Robert and Lady Gardiner have left London for Westwood, Mayfield, Sussex, where they will spend the winter.

Sir Stephen and Lady Demetriadi have left London for St. Moritz, and Lady Demetriadi will be away until the end of March.

Sir Mancherjee Bhownagree left on December 16 for Mentone, and will remain on the Riviera for reasons of health for two months.

General Yoxsimovitch and Captain Kovatchevitch arrived in London last Thursday from Belgrade in connection with Serbian war debts.

Sir Alfred and Lady Mond are leaving London for Palestine and the Near East in the first week in January. They will be away until March.

M. Gregoire Michaesco, Commercial Attaché at the Roumanian Legation, who recently underwent a serious operation while in Switzerland, returned to London last Friday.

General Sir William Birdwood, Bt., whom His Majesty invested with the insignia of a Knight Grand Cross of the Most Honourable Order of the Bath (Military Division), had the honour of being received by the King last Friday at Buckingham Palace.

Lieut.-Colonel H. J. Solomon, O.B.E., M.C., was presented on December 12 at the offices of the Economic Board for Palestine by the exhibitors at the Palestine Pavilion at Wembley with a silver salver engraved with the Wembley lion and the following inscription:—"Presented by the exhibitors at the Palestine Pavilion, British Empire Exhibition, 1924, to Lieut.-Colonel H. J. Solomon, O.B.E., M.C., who brought Palestine to Wembley."

Sir Archibald and Lady Birkmyre, Sir Montague Barlow, Sir Francis Oppenheimer, and Sir T. J. and Lady Strangman left London last Thursday by the P. and O. Bombay express to join the s.s. Narkunda at Marseilles. Sir Warden Chilcott and the Thakur Sahib of Rajkot joined the Narkunda at Marseilles for Bombay.

Major-General Lord Edward Gleichen will preside at a general meeting of the Near and Middle East Association on "The Balkans," to be held on Thursday, January 8, 1925, at 8.30 p.m., at 14, Hans Crescent, S.W.1, by kind permission of Mrs. L. Cobham. The speakers will be the Rt. Hon. Sir Maurice de Bunsen, Bt., G.C.M.G., Miss Edith Durham ("Fresh Light on the Serajevo Crime"), and Sir Edward Boyle, Bt. ("The Present Situation in the Balkans").

The President (Lord Lamington) and the Council of the East India Association gave a reception at the Caxton Hall on December 15, when the guests included:—Lady Pentland, Viscount and Viscountess Willingdon, Earl Winterton, Colonel Sir Charles Yate, Sir Michael and Lady O'Dwyer, Sir Lionel Jacob, Sir Reginald and Lady Mant, Sir John Maffey, Sir Patrick Fagan, Sir William O. Clark, Sir Stuart Fraser, Mr. and Mrs. N. C. Sen and the Misses Sen, Sir Henry and Lady Stone, Sir Francis and Lady Oldfield, Sir Armine and Lady Dew, Mr. F. J. P. Richter, Mr. and Mrs. John Nicholson, and Mr. and Mrs. Stanley Rice.

December 17 was the thirty-sixth anniversary of the birthday of King Alexander of the Kingdom of Serbs, Croats, and Slovenes. King George's congratulatory message was conveyed by Major-General Sir John Hanbury-Williams, Marshal of the Diplomatic Corps, to Dr. Georges V. Todorovitch, the Chargé d'Affaires at the Legation, whence it was transmitted to King Alexander. Cards were left at the Legation on behalf of the Secretary for Foreign Affairs, the Lord Chamberlain, the State Chamberlain, and the Comptroller of the Ceremonial Department. At noon M. Todorovitch, with the personnel of the Legation and prominent members of the Yugoslav colony in London, were at the Russian Church in Buckingham Palace Road, where a *Te Deum* was sung. In the afternoon a reception was held at the Legation, at which the guests included the Greek Minister, the Polish Chargé d'Affaires, Mr. J. B. Monck, Mme. Yovanovitch, M. Miyatovitch, formerly Serbian Minister in London, and Mr. Frank Hastings.

THURSDAY, DECEMBER 25, 1924.

TURKEY AND GREAT BRITAIN.

Foreign affairs are engaging the attention of the authorities in Turkey more than Press notices would lead the general reader to suppose, and more than might be expected from a country that claims to have become independent of the rest of the world. The fact is that there are some shrewd thinkers in Angora. Turkey felt called upon to make a clean sweep of the past, and, as so often happens in similar circumstances in the humbler domain of domestic life, a certain amount of what was still serviceable or even invaluable was got rid of in the process. As soon as there has been time for these things to be missed, the question arises whether they can be dispensed with entirely, and, if not, how can they be replaced without loss of "face." There is reason to suppose that in the seclusion of Angora this stage has been reached. The glamour of splendid isolation has passed. It was flattering to Turkish *amour propre* to cozen the nation into believing that in driving the Greeks into the sea it was really defeating Europe. Russia had been "squared" for the time being, and the Western Powers were not going to stand by Greece; so there was no danger in the boast. Things, however, have a habit, especially in international politics, of not standing still. The makeshift arrangement with Soviet Russia has served its temporary purpose, as far as Turkey is concerned, and indications are multiplying that there is a fundamental antagonism between Russian and Turkish interests, whether the Soviet be in power in Moscow or a Tsar be on the throne in Petrograd. A factor of immediate importance for Turkey is that Russia is about to receive back her Black Sea fleet. The Turks may be satisfied that they have nothing to fear from the Red Army; but a Red Navy of any strength opens up unpleasant possibilities. Those who must be supposed to be best able to judge, that is to say, Turkish naval circles, are admittedly exercised in mind, and are inclined to adopt the attitude that they cannot stand by and see the country go under in the particular sphere for which they are responsible, merely to serve some dogma of the politicians. Hence it comes about, if for no other reason, that responsible circles in Turkey are being compelled to consider seriously Turkey's international relations.

Some inkling of what is passing at Angora must have reached the Constantinople Press: but as it is not cumbered with the responsibility that besets those charged with the duty of preserving the Turkish State, it can afford to indulge in the obsolete views of yesterday and strike a spurious note of patriotism by inveighing against foreign designs. The change of Government in Great Britain was received with some misgivings in Turkey, from the general idea that the British Labour Party must be easier for a foreign State to get on with than either of the other parties. Accordingly a sharp watch has been kept on the new Government's words and actions with a view to finding confirmation of the misgivings. The firm attitude adopted in the face of the latest development in the Egyptian murder campaign and Mr. Austen Chamberlain's conversations in Paris and Rome have been regarded as fitting in with the Turkish theory, and have afforded a text to the Constantinople Press for fresh homilies on Great Britain's hostility towards Turkey. In this, however, the lack of understanding between Constantinople and Angora is further exemplified, unless, indeed, the papers are being used by the section at the capital which is supporting the vigorous bid that Germany is now making to become paramount once again in Turkey. For it has to be remembered that the aloofness from Turkish affairs which the British Government has cultivated, not from hostility to Turkey, but from a studied desire to refrain from anything which might embarrass the new régime, is not practised by other Powers. Under various guises, commercial in Germany's case, frankly political in that of France, there is keen competition to benefit from Great Britain's apparent eclipse in Turkey. During the lifetime of Mr. Lloyd George it will, no doubt, always be possible to obtain some sort of a hearing in Turkish chauvinist circles for warnings against British "hostility," for few Turks seem to have sought consolation by reflecting on the present fortunes of the "great enemy of the Turkish race" in terms of parliamentary following. Thus, when a proposal is made to the Turkish Government for closer co-operation with Great Britain, as it may be taken for granted has recently been done on the part of Turkey's naval authorities, opposition is certain to be encountered from the section of the Cabinet pledged to play the German game. Gradually the logic of the whole position is being proved to be against the German party, and it is at this precise moment that a definite appreciation of the fact is called on the part of the British Government.

A dispassionate analysis of the situation in Turkey suggests that the new order, in an undoubted striving after better things—if better only from the Turkish point of view—will either show some marked improvement on the old, or will gradually slip back into former ruts. At the worst, then, Great Britain has nothing to lose by friendly co-operation with Turkey; in standing by at the present time she may, on the other hand, be the means of leading Turkish efforts into more practical channels. If the diagnosis here attempted be correct, Turkey, or at least a responsible section of Turkish opinion, is conscious of needing a friend among the nations; but pride in what is summed up in the substitution of the Lausanne Treaty for the Treaty of Sèvres runs high, and if there is to be an admission of administrative mistakes since, it will be by implication only. Great Britain's main interest is to see Turkey well governed, efficient, and progressive; she has no scores to wipe off, and can be indifferent to the hasty legislation of recent date which has proved almost as embarrassing for Turks as for foreigners. She must recognise, however, that after what has taken place Turkey will feel a certain diffidence in making the first overtures. The initiative to better relations between Turkey and Great Britain should be taken by the British Government. It need be little more than one of those diplomatic gestures which can mean much in international relationships. Without a formal agreement the two countries can so understand one another that British business interests will acquire the necessary confidence for taking part in the development of Turkey, and with material progress the work of improvement in other spheres will be greatly facilitated.

COMMUNISM IN THE BALKANS.

The report that the Yugoslav Government proposes to approach the Bulgarian Government with a view to joint action in dealing with Communism will, it is to be hoped, prove to be correct. No harm would be done if the neighbouring countries of Roumania and Greece were to be invited to take part in the discussion, as Communism is a menace shared by all the Balkan States, and, if concerted measures are advisable, none probably will be as permanently effective as those which are carried out simultaneously and uniformly throughout the Peninsula. A conference of the four States, moreover, would ensure a wider field of discussion, for it is possible that investigation will prove that the experiences of the different Governments are not entirely the same. Communism, theoretically, should take on more or less identical forms in each country, but it is clear that this is not the case. An interchange of views, therefore, between representatives of the four States might, in addition to providing for common action, suggest to one or more of the Governments that the reason why a neighbour has had less difficulty in contending with the nuisance is to be found in its wiser attitude towards it. The Balkans might have been expected to be the last portion of Europe to be infected with Communism, yet the fact remains that in one country at least the menace has assumed a more dangerous aspect than anywhere else, Russia alone excepted. In Greece, it is true, it cannot be said to have made any headway; in Yugoslavia it presents certain peculiar features; in Roumania it would seem to owe the little hold that it has on the country to geographical proximity to Russia. For Bulgaria alone can Communism be said to have become an actual and ever-present preoccupation, although the reported proposal of the Yugoslav Government suggests that it, too, finds cause for uneasiness in the outlook. A conference on the lines indicated would do well to call upon each country to trace as dispassionately as possible the genesis and subsequent growth of Communism, in order that where mistakes in policy are clearly recognisable other countries may benefit by the experience.

Conditions in Bulgaria.

In Bulgaria it is suggested that Communism in its present form takes its origin from the establishment after the War of a society of officers who were dissatisfied generally with the state of affairs then existing in the country and with the Government in particular. They called themselves Communists, as the word appeared to them a convenient term with which to label their quarrel with the authorities. Very few of them, if any, would have subscribed to more than a modicum of Communist doctrine; but they were in a state of discontent, and consequently offered a useful field to any skilled agitator. They were gradually steered, it is alleged, in a Communist direction by a couple of politicians, who were quick to appreciate the political value of the material on which they could work, and it was as lip-adherents of Communism that they became a political party. When Stamboliski came into power he was anxious to secure all the support that he could in the country, and readily accepted the co-operation of the Communists, who by this time had made a notable advance in their adherence to the more extreme doctrines of Communism. Before long Stamboliski found himself obliged to pay more heed to the Communists than he had bargained for, and there can be no doubt that shortly before he met his death he had determined to break with a party that had been instrumental in extending his hold on the country. He had not, however, proceeded far enough in this direction to make the bourgeois party that succeeded him in office consider it necessary to draw any sharp distinction between the Agrarian Party and the Communists. In every Balkan revolution there are a good many scores, official and unofficial, to be paid off, and it is not usual to ask for instructions from headquarters. Rightly or wrongly, considerable bodies of peasants previously associated with the Agrarian Party regarded themselves as being in danger, if not of extermination, at least of being roughly handled by the agents of the new party in power, and they turned instinctively to the Communists, who by this time were possessed of some weapons of defence. It is not necessary to follow closely every stage that has led up to the present state of Communism in Bulgaria, suffice it to say that, for one reason or another, numbers of peasants found themselves thrown into the arms of the Communists, to the natural encouragement of the latter, who were by now wholly the tools of Soviet Russia. Nothing better exemplifies the alienation of the peasants than the fact that Bulgarian troops encounter almost insuperable difficulties in trying to deal with any serious case of brigandage—a term which has to include the time-honoured "taking to the hills" as a protest against the powers that be. But for the passive resistance of the peasantry, due to secret sympathy with their cause, the handful of outlaws who have operated so long in the neighbourhood of Bourgas and defied the attempts of troops to capture them must have been overcome or dispersed. Official Communism in Bulgaria was dealt what ought to have been a knock-out blow in the autumn of 1923, and one of the problems before the Government to-day would seem to be to distinguish between the genuine article and the spurious Communism, which will adopt any label that promises it help in its quarrel against constituted authority.

Yugoslavia, it may be supposed, is primarily interested in doctrinaire Communism lest the more specious arguments of Soviet Russia are used to bolster up Croatian Republicanism in its fight against Serbian centralisation. The evil genius of Moscow may be behind each movement; but it does not follow that the means of combating the intrigue must be the same. If Yugoslavia were to decide that the danger to which she is exposed is on all fours with the history of Communism in Bulgaria, then she would still have to make up her mind whether she would adopt the policy that appears to have made Communism in the neighbouring country such a formidable problem. If, for instance, it could be shown that centralisation can be persisted in only to the encouragement of Communism there would be graver misgivings in Belgrade in regard to a policy which in its earlier stages at least can be so easily justified. Any attempt to identify Croatia with Communism because the Croats line themselves up behind M. Raditch, and M. Raditch goes to Moscow to talk pleasant words about the Third International, must seem to some Serbians as wholly incongruous with the considerable business interests in Croatia which must inevitably suffer if Communism were to become the supreme power in the State. Nevertheless, it is impossible to speak of Communism in Yugoslavia without a side glance at Croatia, and the Croat business interests continue to humour M. Raditch, or at least not to oppose him, because they cannot resist the pleasure of seeing someone twist the Serbian lion's tail. Such a state of affairs

Digitized by Google

would not seem to call for the drastic methods that have temporarily suppressed Communism in Bulgaria, only at the expense, it may be found, of driving it underground.

A Practical Step.

There is, however, one measure which suggests itself as a means of winning all the countries of the Balkans back to more tranquil ways of living. At present the police are apt to regard themselves not as a permanent institution, with a status and traditions of its own, but merely as agents of the Government, under the Ministry of the Interior of the day. If, in addition, they happen to be badly paid, it is inevitable that they should feel obliged to eke out a livelihood by other means. If in each country there could be an efficient, adequately paid police force, organised preferably under a foreigner (as is, indeed, the Greek force), acting under the Ministry of the Interior, but in no way subordinated to party politics—a force that could acquire a pride in itself and inspire respect—the first step would have been taken towards the elimination of civil strife and the deadly political feuds that interfere with the material progress of the Balkans. One outcome of such a force would be that each country would have a more potent guarantee than it possesses at present for the holding of fair elections, with the result that it would be enabled gradually to build up a proper system of party government, instead of being taught to regard each swing of the election pendulum as an invitation to inflict material damage on political opponents.

Whether agreement is reached or not, every conference between two or more Balkan States is to be welcomed as an earnest of a desire for co-operation on a wider and more lasting basis.

CORRESPONDENCE.

The columns of THE NEAR EAST *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST.

HELPING THE RIFI.

To the Editor of THE NEAR EAST.

Sir,—Referring to the reports which have appeared recently in the Press to the effect that the Rifi are very badly in want of medical aid and supplies, and to the refusal of the Spanish authorities to assist in any way in providing them, or giving them passage, I beg to inform you that this Association has, after considerable correspondence on the matter with the authorities and societies concerned, decided urgently to appeal to the public for funds wherewith to help these unfortunate people.

May I beg you to insert this letter, and state that contributions for the purpose may be sent direct to myself at 35, Catherine Street, S.W.1?—I am, etc.,

EDWARD GLEICHEN,
President, Near and Middle East Association.
December 16.

According to *The Times* Calcutta correspondent, the Calcutta Corporation has granted three months' leave of absence, without pay, to Subhas Chanda Bose, its chief executive officer, who, since his arrest under the Bengal Ordinance on October 26, has been a prisoner in Berhampore Gaol, and has appointed a deputy to act for him during that period.

THE ASSYRIANS.

On December 12, at the Royal United Service Institution, Major A. W. D. Bentinck, who had served, among other places, in Egypt, Somaliland, Abyssinia, and Kurdistan, lectured to the Central Asian Society on "The Assyrians," Viscount Peel being in the chair.

After stating that if he might be accused of being pro-Assyrian at least that accusation could not proceed from the imputation of his ignorance of the Arab and the Kurd, the lecturer sketched the rise and fall of the Assyrian State, showing how its capital moved further and further north, until, at the outbreak of the War, the Assyrians were found in the Hakiari Mountains, owing allegiance, it was true, to the Ottoman Empire, but in reality enjoying much independence. At the beginning of the War, the Assyrians, who were Christians, some Nestorians and others Chaldeans, who recognised the Pope of Rome, were urged by the Russians to join the Allies. Upon the retreat of the Russians from Kurdistan, the Assyrians found themselves stranded, and had to fight their way through to join up with the British. But they accomplished notable work in harassing the Turk throughout the War.

Later, a refugee camp was formed at Bakuba for the refugees. During the Arab rebellion the Assyrians remained loyal to the British. The following year the Assyrian levies were formed, and have proved a great success. Commanded by British officers, these levies were splendid fighting material; their record was admittedly smudged this year at Kirkuk, but in that matter there was something to be said for them.

Major Bentinck outlined the invasion of the Turks last September, and declared that there was no question what was and what was not British mandated territory. Owing to that raid, the Assyrians, who had filtered back to their homelands, lost all their possessions. The question arose: What to do with them? These Assyrians were said to have done little for themselves, but of one thing the lecturer was certain—they had done much for us. The offer of living on the Mosul plains amounted to little, for it meant—fever, fever, fever. The idea of resettling them elsewhere, say in Canada or in Australia, was equally uncommendable. All that they wanted was their hills, their valleys, their rocks.

Subsequently, Sir Charles Yate, Sir Edgar Wigram and the Rev. Harold Buxton spoke on behalf of the Assyrian cause. On the frontier question, the second speaker pointed out that the tendency to make boundaries of rivers was a wrong one, for tribes dwelt on both sides of a river—the true barriers were the mountain ranges.

Viscount Peel suggested that such causes as the Assyrian cause might unfortunately get lost among the larger issues of the Great War. He hoped, however, that the League of Nations Commission to delimit Iraq's northern frontier would be able to draw the boundary so as to provide for these homeless Assyrians.

The engagement is announced between Captain H. R. C. Meade, I.A., Survey of India, son of Colonel J. W. B. Meade, Indian Army (retired), and Joan, daughter of Sir John Kerr, Governor of Assam, and of Lady Kerr.

The Greek Archbishop in London, Mgr. Germanos, has been appointed a Commander of the Order of the Saviour in recognition of his services to his country.

A MEDIÆVAL HINDU MYSTIC.

"THE WORD OF LALLA THE PROPHETESS." By Sir Richard Temple, Bart. (Cambridge University Press. 16s. net.)

Five and a-half centuries ago a *Yogini*, or female mendicant devotee, wandered about Kashmir in rags, singing and dancing in ecstasy to the glory of the one Supreme God whom she called Shiva. Five and a-half centuries later what she sang is still so alive that every Hindu or Mussulman in that country to-day makes use of her sayings in his everyday conversation.

Some four years ago Sir George Grierson and Dr. L. D. Barnett produced for the Royal Asiatic Society a learned, and, for scholars, definitive, edition of her hymns. But Sir Richard Temple, the learned founder and editor of *The Indian Antiquary*, felt that, if the ordinary reading public were to be given an opportunity of knowing something of the history, meaning and development of Hinduism, no better medium could be found than in these old songs which are still new, and which are "a picture of the actual hopes and fears of the common folk." It was necessary, however, that they should be presented in such a way that they would reach the public whom Sir Richard Temple desired to interest.

This was a far more difficult task than that undertaken by the former editors, and we can only say that it has been carried through with triumphant success. Sir Richard has, of course, given us a rendering of the hymns, if we may call them so, which is at the same time scholarly and indicative of the manner of the originals. To this he has added full notes which bring out the meaning of the often cryptic and symbolical nature of the references and of the underlying thoughts. But he has not rested there. For his purposes it was necessary to show how Lalla's work fitted in with contemporary Hindu philosophy and practice, what were the developments that, through the centuries, had led to these contemporary ideas, and how further evolution has guided Hindu thought up to the present day. He has done this, and done it extraordinarily well, in the incredibly short space of not quite 100 pages. It is not too much to say that this short treatise is the most important exposition of Hinduism so far addressed to the ordinary reader. Although details are not shirked, the writer never loses his thread, and his own deep scholarship enables him to avoid the fatal technicalities which are so often an insuperable stumbling-block to the non-specialist. In the end the reader has a definite conception of the curiously eclectic group of philosophies which are known as Hinduism, and some understanding of how, in spite of stifling ritual and sacerdotalism, Hinduism has remained the living influence it is to-day.

We have thought it right to devote most of our space to calling attention to this exposition, which, in our opinion, deserves to be read and studied by every intelligent person who feels that he should know something of one of the most important religions of the world. Lalla's hymns are, however, well worth study for their own sake. They are curiously reminiscent of our own mystical poets. The conception of the oneness of the universe and of all its components with God is ever present. Take the following :—

Lord, myself not always have I known;
Nay, nor any other self than mine.
Care for this vile body have I shown,
Mortified by me to make me Thine.

Lord, that I am Thou I did not know,
Nor that Thou art I, that One be twain.
"Who am I?" is doubt of doubts, and so
"Who art Thou?" shall lead to birth again.

Shiv or Keshav, Lotus-Lord or Jin;
These be names. Yet takest Thou from me
All the ill that is my World within;
He be Thou, or He or He or He.

This short extract will also give some idea of the quality of the rendering.

C. S.-W.

STUDIES IN HINDUISM.

"THE MAKING OF MODERN INDIA." By Nicol MacNicol, D.Litt. (Humphrey Milford, Oxford University Press. 7s. 6d. net.)

This is an interesting book with a rather misleading name. It is not a formal history, like "The Making of England," and in fact it does not mention some of the most important formative tendencies of the recent past; nor does it deal with India as a whole, the Moslem question, among others, being ignored. It is a collection of studies, most of them reprinted from periodicals, which, taken together, constitute a description of the present state of Hindu thought and feeling, especially as affected by Christian teaching and ideals. As such it is well worth reading. The writer has realised both the strong points of Hinduism and its many weaknesses, and he succeeds in holding a just balance between the two, while his illustrations from Indian poetry in particular are both enlightening and stimulating.

THE GORDON MEMORIAL COLLEGE.

The annual "Report and Accounts" of the Gordon Memorial College at Khartoum was published last week. It contains the address delivered by the late General Sir Lee Stack when, as President of the College, he opened the Kitchener Memorial School of Medicine last February.

General Sir Reginald Wingate, Chairman of the Committee of the College, in a prefatory note to the Report, refers to the murder of Sir Lee Stack. "By this cruel murder," he says, "the College has lost an exceptionally able and sympathetic President, who never failed to take the keenest interest in its many and varied activities, and whose untimely death is bitterly deplored and deeply mourned by the inhabitants of the Sudan, as well as by the students of the College and their parents and relatives—and last but not least is he mourned by every member of the Governing Body of the Gordon Memorial College Fund.

"We have had the fullest opportunities of appreciating Sir Lee Stack's sterling administrative qualities, business capacity, and sympathetic treatment of the various matters dealt with by this Committee; and in expressing our abhorrence of the dastardly crime which has deprived us of our President's invaluable services, I am sure you will all desire to unite with me in conveying to his widow and daughter our deepest condolences in their overwhelming sorrow and our heartfelt sympathy in the cruel loss which has fallen upon them, upon our country, upon the Sudan, and upon this Committee, of which he was so distinguished and esteemed a member."

Sir Reginald Wingate also referred with regret to the death of Mr. F. G. Van de Linde, hon. secretary of the Gordon Memorial College Fund since 1919.

"It is most satisfactory to note," continued General Wingate, "that in spite of political unrest and disorders in Egypt (of which there has been a certain repercussion in the Sudan) the work of real government and of true development, of which the Gordon College has hitherto been an outstanding example, goes steadily forward. I am informed by the Principal of the College that, so far as he knows, three old graduates only have become members of the political organisation known as the White Flag Society, which apparently owes its inception to outside propaganda.

"The fact that the College is gradually being brought into closer touch with other parts of Africa and that interest in its methods and activities is being displayed by the authorities in Kenya, Uganda, and Nigeria, is a favourable indication that there is a spirit abroad, within British spheres of influence in Africa, for organising and co-ordinating a system of education for the native, on gradually progressive lines, adapted to the immediate requirements of the respective localities, and I venture to think the illustrious founder of the Gordon College would have been proud could he have lived to see that the seed sown in the ruins of Khartoum in 1898 was gradually spreading, a quarter of a century later, throughout the British African Colonies and Protectorates."

The auditors' report on the accounts, says Sir Reginald Wingate, shows that the financial situation is generally satisfactory.

In his report, the Principal, Mr. John W. Crowfoot, deals fully with the educational and research sides of the College. He refers to the changes made on the education side, *e.g.*, the transfer of all instruction in iron working from the College workshops to Atbara, and the retrenchment of one class each in the Kadis' and Engineers' Sections. The results obtained from the bacteriological, chemical, geological, archæological, and natural history sections appear to be very satisfactory.

AIRSHIP BASE IN INDIA.

Group Captain P. F. M. Fellowes, the Director of Airship Development, Flight-Lieutenant S. Nixon, also of the airship branch, and Mr. Dale, of the Building and Works Department of the Air Ministry, left last Friday for India to join the Director of Civil Aviation there in the conferences on a suitable airship base in India.

CONSULAR APPOINTMENTS.

The following Consular appointments are notified in the *London Gazette*:—

Mr. Douglas Young, Vice-Consul at Sofia.

Mr. Leonard Henry Hurst, Consul at Adana.

Mr. Stanley Rupert Jordan, Vice-Consul at Port Said.

Mr. Robert Henry Clive, C.M.G., Consul-General for the Dominions of His Imperial Majesty the Sultan of Morocco, to reside at Tangier.

Mr. George Percy Churchill, Consul-General for the State of Algeria, to reside at Algiers.

Mr. Bernard Joseph Gilliat-Smith, Consul at Tiflis.

Mr. Cecil John Edmonds, Vice-Consul at Bitlis.

NOTES AND NEWS.

167, Strand, London, W.C.2,
Monday Morning.

Sudan Trade Expansion.

The statistics of the trade of the Sudan for the first nine months of this year are now available, and make very interesting reading. The value of the imports was £E3,875,002, an increase of £E706,859 on the figures for the corresponding period of 1923, or 22.3 per cent., while that of the exports was £E2,887,485, an increase of £E782,123, or 37.1 per cent. The value of the total trade was £E6,941,567, as compared with £E5,404,736 in 1923, there being thus an increase of £E1,536,831. Great Britain is second in the list of countries from which the Sudan draws its imports with £E1,274,404, or 32.9 per cent., and first in the list of countries exporting from the Sudan with £E1,904,936, or 66 per cent. As regards the figures for the import trade, it has, however, to be borne in mind that the figures for Great Britain represent direct imports only, and that in reality the figures are much more substantial than would appear. The Sudan still has a substantial adverse trade balance, and it would be surprising if this were not so in view of the great work of development now in progress, but it is tending to disappear, and when the new cotton areas begin to yield their harvest the trade figures of the Sudan will begin to make a very different showing.

The Passing Year.

I do not suppose anyone will see the year go out with any feelings of regret. It has, in short, been a milestone on the painful road of reconstruction, and that is perhaps the most that can be said for it. It was hoped a year ago that the present year would see a very general revival of trade, but while the fullest anticipations in this respect have not been fulfilled, recent months have seen a notable improvement in many respects, and in general the world situation has so far altered that it is possible to look forward to 1925 with feelings of distinct optimism. How far they will be gratified must remain to be seen, but this much, at any rate, can be said—that the present year has seen the removal of more than one of the most serious obstacles in the way of the development of world trade. So long as there was no settlement with Germany a general commercial revival was out of the question. The settlement has been followed by a distinct development of buying for the Continent, one effect of which (and this had long been foreseen as an inevitable consequence of the return of Germany to the world's markets) has been to raise prices here. It is curious that following the loan we should have to pay more for clothes and other necessaries, but it is an inconvenience of a temporary character with which people will put up for the sake of the more general gain in expanding markets. The settlement and other favourable factors have had their effect in markets outside the Continent, and India and the Near East have been taking goods much more freely in recent months, and the cotton trade, which is first to feel the effects of rising trade, is now beginning to develop, and throughout Lancashire the roll of unemployed has sensibly diminished. These are straws which show the way the wind is blowing and within another twelve months it may be hoped that many other trades will have begun to enjoy the warming gleams of rising trade.

The Prospects.

For Great Britain it must be admitted that the New Year in general will open under much more favourable auspices. The Empire Exhibition is wisely being continued for another year, and this time, with a Government in power whose policy in particular is to concentrate on the development of Imperial trade, it may be anticipated that the results will be more commensurate with anticipations. So far as one knows, all the parts of the Empire represented last time will again be present, while already there are two newcomers—a self-evident tribute to the recognition of the value of the Exhibition as a medium for promoting inter-Imperial commerce. Among the negative acts of the late Government was the removal of certain preferences on dried fruits, etc., and these are to be restored in due course. I do not think that they are likely to have any adverse effect on Near Eastern countries, for the consumption of dried fruits is constantly on the increase, but their value as opening up new areas of employment should be great.

The Smyrna Fire Decision.

Few commercial cases have been followed more intently than that fought by the American Tobacco Co., Inc., to recover insurance in respect of goods destroyed in the Smyrna fire, for on it depended the hopes of compensation on the part of many other companies and individuals. Mr. Justice Rowlatt, whose judgment is given *in extenso* on another page, found for the defendants, holding that the Smyrna fire was due to incendiarism following the Turkish occupation of the town in September, 1922. It is now left to traders to press their claims for compensation on the Government, but in the circumstances it cannot be maintained that there can be any great prospect of hope in this direction.

PERSIA AS A TRADE CENTRE.

The Principal Markets.

(*From a Correspondent.*)

In ancient times the inhabitants of Iran, Medes, Persians, and Parthians, were nomads, husbandmen, and warriors, and trade was not popular; but after they came into close contact with the Greeks, Armenians, and Jews, trade began to develop, and now the average Persian merchant, though his enterprise does not come up to that of the above-named nationalities, is a prosperous person, and trade, especially at the towns, is flourishing. But from a European point of view, the Persian merchant is difficult to deal with, owing to the fact that, though he buys goods readily, he meets his liabilities only with great delay. This makes it necessary to grant long credits, and this is perhaps the reason why relatively few European firms do direct business with Persia, and the foreign trade of Persia is to a great part in the hands of Armenians, and Persian merchants have their agents in only a few foreign towns, such as Astrakhan, Baku, Tiflis, Constantinople, Cairo, Baghdad, Bombay, and other Eastern centres, whereas the Armenians invade nearly all the larger towns of Europe and a great many Oriental ones.

In the northern provinces of Persia the trade is more developed than in the South. The cause is that the population is more numerous and the country more productive; this accounts also for the fact that the towns in the north are larger and the traffic and exchange of goods with the adjoining foreign countries more lively. A great many Armenians, and some Greek, Russian, and Jewish firms participate in the import and export trade, whereas in the southern provinces Parsees, Indian, and some leading Persian firms transact foreign business, leaving the local trade entirely in the hands of the natives.

Tabriz, the capital of the province of Azarbaijan, is one of the principal trading centres of Persia. The province is the most fertile and productive in the country, and the exchange of goods with Russia and other foreign countries carried on by way of Tiflis, where there has always been a large Persian colony, and Batoum, has been a considerable one, and the construction of the Tiflis-Tabriz Railway promised the development of this trade still further; but since the Russian revolution the trade with Russia has, of course, suffered very severely. Another important commercial road is that from Tabriz via Khoi, Bayazid, Erzeroum, and Trebizond to the European ports. Though it is a good deal longer and considerably more difficult, it is by far the cheaper, and large quantities of goods from and to Europe are forwarded by this road in preference to the Caucassian one. With the ports of the Caspian Sea and Russia Tabriz trades by the road of Ardabil and Astara, and with Turkey, except by the mentioned Trebizond road, by one via Salmas and Van. The local trade of Tabriz extends over all the north-western part of the province of Azarbaijan and Kurdistan.

Resht, the capital of the province of Gilan, with its port of Enzeli, is a very important commercial town and a place of transit between Russia and the Western European countries (via Baku-Batum) on the one side and Central Persia on the other. The trade was greatly developed by the construction of the causeways from Enzeli to Resht, Kasvin, Teheran, and Hamadan, which enable the transport of heavy goods not only by caravan loads, but also by waggons and carts; still, the camel caravans remain the cheaper means of transport. The local trade of Resht is considerable and extends over the eastern half of the province of Gilan, with its low lands and mountain districts, while the trade of the western part of the province inclines more to the port of Astara.

Langerud is also a lively little commercial town on the Caspian shore, and its local trade extends as far as the western part of the province of Mazanderan and the district of Dilman. Kasvin being the centre of a well-populated, fertile track of land, has a considerable local trade, and is also a centre for the exchange of transit goods between Teheran, Isfahan, and Hamadan on the one side and Resht-Enzeli and foreign countries on the other.

Teheran, the capital, situated in a fertile and well-populated tract of land, possesses the largest local trade of the country, which extends also to the towns of Kom and Kashan, and its trade with foreign countries via Kasvin-Resht-Enzeli, Barferush-Mashadisar, Isfahan-Shiraz-Bushire, Hamadan-Kermanshah-Baghdad and Meshed-Herat, is certainly the most developed in Persia. In fact, Teheran is the most important commercial town.

Barferush, with its port of Mashadisar, is the largest commercial town in the province of Mazanderan. Before the construction of the Enzeli-Teheran causeway part of the goods from and to Teheran and the foreign countries used to be transported via Firuzkuh and Barferush, but the more convenient port of Enzeli has now drawn all the Teheran traffic from Barferush.

Bandar-i-Gaz is the port of Asterabad, whence the trade with the Turkoman tribes is transacted by way of the port of Ak-Kal'eh. The local commerce extends as far as the town of Ashraf in the west, Bujnurd in the east, and Shahrud, Damghan, and Sabzavar in the south.

Meshed is the most important commercial town of Eastern Persia. It has direct caravan communication via Kutchan and Askabad, and from there by railway with the ports of the Caspian Sea, Merv, Bukhara, and Turkestan, and via Herat with Afghanistan. There is also caravan communication between Meshed, Kerman, Sistan, and Bunder-Abbas on the Persian Gulf, and the local trade is just as extensive.

Since the Russian revolution the trade of Northern Persia has been very adversely influenced,

Digitized by Google

and the commercial traffic of Northern and Central Persia has had to be entirely directed to the roads of Hamadan-Baghdad and Teheran-Isfahan-Bushire. The Kasvin-Hamadan causeway, constructed by the Russians before the war, has contributed greatly to the easy transport of goods, as the old carriage road from Teheran via Kom and Sultanabad is not nearly so convenient; still the ancient road from Teheran via Nobaran to Hamadan, notwithstanding its mountainous character, is shorter and cheaper for the transport of goods, and is used also by many caravans. Of lesser importance are the two caravan roads from Hamadan to Isfahan, one over the mountains, the other rounding them from the north-east. The caravan road from Hamadan to Tabriz is only little frequented. The same can be said about the road to Zindjan.

Isfahan has the largest trade of Central Persia, being surrounded by a great number of prosperous villages, and some small towns of the neighbouring districts are dependent on the commerce of it. Shiraz is in about the same position as Isfahan, but not nearly of such importance.

Bushire, on the Persian Gulf, is the principal port of Southern Persia, and has a considerable local trade with Persian Arabistan and the districts of Dashtistan, Tangsir, and Sarhad; it is a pity that the sea is so shallow at the harbour, so that the ships have to anchor about a mile off the shore. The passes from the low land up to the Shiraz plain on the road to Teheran are very difficult, so that heavier loads cannot be transported by this way.

Tazd has direct commercial traffic with the Persian Gulf and India by the ports of Bunder-Abbas and Lingeh, and its local trade comprises the whole country around, but, owing to the small population and the limted area of cultivated land, the trade is not very prosperous. Bunder-Abbas, on the Persian Gulf, the port of the province of Kerman, has a limited local trade, as the country around is only poorly populated.

Kerman is a populous town, and is surrounded by well-cultivated land. Its trade is considerable, and extends even as far as Meshed and Sistan in the north, Quetta and Nushki in the east, and the districts of Rafsidjan and Anar in the west. The foreign trade of Kerman is limited to India, especially Bombay, with which town the exchange of goods is very active. On the whole Persian foreign trade is not large Before the war Northern Persia exported on the average goods of the value of about £2,500,000 and Southern Persia of £1,500,000; at the same time Northern Persia imported goods of the value of about £5,000,000 and Southern Persia of £2,500,000, the imports thus exceeding the exports by about £3,500,000, or nearly 50 per cent.

TURKISH UNIFIED DEBT.

The Council of Foreign Bondholders notify British holders of bonds of the Four per Cent. Turkish Unified Converted debt, who have deposited coupons Nos. 23 to 33 with the object of prosecuting the claim for recovery from Germany. at the pre-war rate of exchange, of the sums collected on behalf of the bondholders during the war and deposited in German banks by the Council of Administration of the Ottoman Public Debt (which at the time consisted of a German, Austro-Hungarian, and Ottoman member only), that the claim of the French holders in respect of these coupons, brought by their representatives in Paris, has been argued before the Franco-German Mixed Arbitral Tribunal constituted by the Treaty of Versailles, and that judgment has been given entirely rejecting the claim. This judgment is mainly based on the ground that the transfer to Germany of the funds, amounting to some £7,500,000, was a transaction effected by the Debt Council in the temporary employment of revenues authorised by the Decree of Mouharrem pending distribution: that the legal right to repayment from the Kerman banks was vested in that Council alone and not in the bondholders; that the Debt Council not being a subject of or domiciled in the territory of any of the Allied Powers is not a claimant within the meaning of the Treaty of Versailles whose claim it is competent for the Arbitral Tribunal to deal with; and that the bondholders themselves, or their representatives, have no *locus standi* to prosecute before the Tribunal a claim to money which in a legal sense was vested in the Debt Council alone. In these circumstances the Council of Foreign Bondholders are undecided whether or not to proceed before the Anglo-German Tribunal.

NEWS FROM ALL SOURCES.

A Reuter message from Athens states that the Government has decided to put in force the international tariff rate for goods traffic on the line between Salonika and Ghevgheli.

The Bengal and North-Western Railway Company recommends a final dividend of 5 per cent., together with a bonus of 2 per cent., on the ordinary stock, making 13 per cent. per annum. The dividend and bonus will be paid, less tax at 2s. 5d., on February 2.

A registration of 3,013 passenger cars, 260 trucks, and 161 motor cycles is estimated for Palestine and Syria (says an American report). Since the military occupation in Palestine, the demand for automobiles has been steadily growing, so that the army stocks of trucks and automobiles has not only been absorbed but a larger number of new passenger cars have been imported in addition.

The latest information on every phase of industrial and Agricultural development in Canada is procurable from the Bureau of Canadian Information of the Canadian Pacific Railway, 62-65, Charing Cross, London, S.W. 1. The reference library of the Bureau contains complete data on the natural resources, climate, labour, transportation, openings, etc., in Canada. Private individuals and commercial undertakings are invited to make use of it. Inquiries by post receive prompt attention

The directors of the Constantinople Telephone Company announce that although the business of the company has continued to develop, in spite of the depression in trade in Constantinople, they much regret that, mainly owing to the depreciation in Turkish exchange, it has been found necessary to defer the payment of the coupons on the 6 per cent. Obligations and 6 per cent. Certificates due January 1 next. The holders of Obligations and Certificates will be invited to attend a meeting as soon as possible, at which the position of the company will be reported, and an arrangement be proposed for dealing with the situation pending such an improvement in conditions as will permit interest payments to be resumed.

THE SMYRNA FIRE.

Insurance Offices Not Liable.

Mr. Justice Rowlatt, in the Commercial Court on December 19, gave judgment for defendants in the action brought by the American Tobacco Company, Inc., against the Guardian Assurance Company in respect of insured goods destroyed, on the ground that the Smyrna fire was due to incendiarism following the Turkish occupation of the town in September, 1922. The plaintiffs claimed £168,245 4s. 1d. under a policy of fire insurance. The defendants, by an insurance policy dated June 24, 1922, insured certain tobacco at Smyrna against destruction by fire between May 1, 1922, and May 1, 1923. The goods were lost in a fire on September 13, 1922, when almost the whole town was destroyed. The plaintiffs claimed under the policy, but defendants refused to pay, and this action was brought.

Various defences were put in, but the main question raised was whether the fire was accidental.

Mr. Justice Rowlatt, in delivering judgment, said that in 1919 the Greek Army occupied Smyrna and drove out the Turks, who withdrew into the interior. A Turkish Nationalist Government was formed, and in August, 1922, their army inflicted a crushing defeat on the Greek forces. The Greek Army was expelled from Asia Minor; it was disorganised and retreated on Smyrna in a condition which was described as pitiable. On the retreat it burnt villages and laid waste the country. On September 9 the head of the Turkish Army entered Smyrna; there was no fighting in connection with that entry, and possession was taken in a disciplined way. On September 10 the main body of the Turkish Army arrived. Smyrna had a mixed population of Greeks, Armenians, and Turks, and between them there was bitter animosity arising from race, religious, and economic reasons. The Turks were naturally exultant. On occupying the city they proclaimed martial law and terminated the authority of the existing police and revived the Turkish police who had been in existence before the Greek occupation. Military patrols were sent out, but it was clear that the policing of the Armenian quarter failed entirely. Disorderly groups began to loot and commit outrages: doors were broken open and goods were scattered outside, and corpses were to be seen lying in the streets. The state of things got steadily worse.

It was clear that a reign of terror was established in the Armenian quarter; the inhabitants fled from the place in terror and left the quarter in the hands of unruly and ruthless people. The buildings of the city were largely composed of wood and were highly inflammable; Smyrna has a dry summer, and at this time there had been no rain to speak of for five months. So much for the general situation.

It was clear that the great fire of September 13 could not be attributed to the Turkish military authorities officially, but the evidence was most strongly in favour of incendiarism by individuals.

His Lordship continued: There was evidence of other fires independent of one another, and little fires kept springing up behind the firemen. It was urged that some of the independent fires might have been caused by sparks from houses already burning; it might be so in some cases; but there was actual evidence of incendiarism, and he drew the inference that the fire arose and prevailed owing to the Armenian quarter's being infested by bands of looters, to whose recklessness or ruthlessness the fire was due. Those disorderly people were the only people in the quarter at the time; and it was all an incident of the Turkish entry which led to a dissolution of the existing police force and insufficient measures taken to replace it.

Applying the exceptions clause to this state of facts, he ruled out the words "riot" and "civil commotion." There was widespread outrage by a number of separate groups of individuals, but there was nothing that could be described as a riot or civil commotion. But the remaining words of the exception were of the widest possible kind. The words "in connexion with" implied a causal connexion and did not merely mean "during." But causation was not simple but manifold; and looking at the facts from a business point of view it was clear that the military occupation gave an opportunity for looting and outrage, and as the fire arose out of the looting it could not be said that it was not caused by, contributed to, or connected with the military occupation. In both cases, therefore, there must be judgment for the defendants, with costs.

[The decision also covered an action against the Alliance Assurance Company.]

Cotton and Cotton Goods.

THE EGYPTIAN MARKET.

Futures Firm.

The Alexandria Commercial Company in their report for the week ended December 11 state :—

Since our last report the Futures market has shown unabated firmness, especially for Sakellaridis, and prices all round have secured substantial advances; the net changes on the week are :—Sakellaridis : $5.35 up for January, $5.30 up for March, $5.55 up for May, $2.85 up for November, 1925; Ashmouni : $1.65 up for December, $1.85 up for February, $2.05 up for April, $1.15 up for October, 1925. The market has this week derived its strength mainly from the persistent good demand from abroad; all consuming centres have been buying heavily, both Sakel and Uppers, and the high levels touched do not appear to influence buyers for the time being. Events so far this season have been in striking contradiction to those of the last two years, as, despite the fact that Sakels are now $22.45 over Uppers and the latter $7.52 over American, both varieties are eagerly sought after, whereas not so very long back spinners were reluctant to buy even at about the prices of American cotton. Another reason for the strength of the Sakel market is that hedging operations have this year been very small, owing to the high premiums ruling for spot cotton, a fact which has also eliminated the possibility of tenders against Futures contracts. Ashmouni contracts have been rather actively dealt in this week, mainly straddle reversing operations and some commercial buying; prices have risen considerably, and the difference with New York has widened sharply. It seems that the high level of Sakel prices is influencing Uppers, and in view of the fact that high prices have not in the least weakened the demand, we shall not be surprised to see the difference with American still further increased. We consider that the statistical position of Sakel is strong, whilst that of Uppers is not unsatisfactory. Exports continue on almost the same scale as last year, and all indications are in favour of heavy figures during the coming weeks. Receipts amount to 350,926 kantars, against exports 303,786 kantars; the stock stands at 1,960,434 kantars.

Spot.—We have had a busy week at Minet el Bassal, and there has been a good demand from spinners. Sales amount to about 32,700 bales, of which we estimate 17,000 bales Sakel, 10,000 bales Uppers, 4,500 bales Zagora, 300 bales Brown, 600 bales Pilion, and 300 bales White. A feature of the week's trading has been the increasing interest shown by spinners in Upper Egypts and Zagora, the trade being probably attracted to these varieties owing to their very wide difference with Sakellaridis.

Sakellaridis.—There has been business in all qualities, and low grades have received more attention than for some time past, due, no doubt, to the considerable discounts at which they can be bought below the present high level of contracts and their comparative cheapness as against medium and good grades. Spot parities are steady at about last week's rates for Fully Good Fair and above, but below Fully Good Fair they have eased somewhat, especially Fair and Fully Fair.

Uppers,—A good business has been done in all qualities. Spot premiums are steady at last week's rates.

Zagora.—Has been in good request, especially the higher grades. Spot premiums are unchanged, but the grades above Fully Good Fair are inclined to stiffen.

Pilion.—A fair business has been done. Spot premiums are markedly easier than last week.

Brown—Has met with a moderate demand, and prices of spot against contracts are generally cheaper than last week.

White.—A fair business has been done. Spot premiums are generally easier than last week.

LIVERPOOL COTTON REPORT.

Rise in Egyptian Cotton.

Messrs. Reynolds and Gibson report as follows for the week ended December 17 :—

Egyptian Spot.—The upward movement in Egyptian cotton has continued during the past week, and the highest point recorded so far this season was reached on Saturday last, the 13th inst., when the official quotation for Fully Good Fair Sakel touched 30.50d. per lb.

During the past few days, however, the futures markets, both here and in Alexandria, have displayed a somewhat uncertain tone, and the ensuing fluctuations, often of some violence, have been reflected more or less in our spot prices. Nevertheless, with the sole exception of Fair Sakellaridis, we close the week with a further series of very substantial gains, particularly in the case of the finer grades. The feature of the week has been the strength of Uppers. Until quite recently this cotton has been but little affected by the phenomenal rise in the Sakel contract, and it was considered in many quarters that there was little prospect of an immediate appreciation, owing to the premium at which it stood (and had stood for some time) over American. A difference of over 500 points between Fully Good Fair Uppers and December American was thought to be already

more than enough. However, with the difference between Fully Good Fair Uppers and December Egyptian reaching one thousand and fifty points, as it did on the 12th inst., it became clear that the balance needed adjustment in the opposite direction. Since then a marked stiffening has occurred in the basis of all offers for Upper Egyptian from Alexandria, and the price of spot Uppers on this market has been raised over 1½d. per lb. After such a period of inaction, this sudden rise has come as a most unwelcome surprise to spinners, who had been relying on this growth to help them out, now that the price of Sakellaridis has risen to such a height that they are being forced to reduce their Sakel mixings to the utmost possible extent. To our mind, there is still room for further appreciation in the current price of Uppers, and the wise spinner will be the one who does not delay too long before covering at least a proportion of his probable requirements. With Fully Good Fair Sakellaridis at 30.00d., it is not surprising that the inquiry for this cotton, and particularly for the more expensive qualities, should have quietened down. No business over 28.00d. has been reported during the week, and the bulk of the small demand has been for the Strictly Good Fair quality. The inferior grades (Fair and below) are entirely neglected, and the quotation for Fair Sakel even shows a slight reduction on the week.

Pilion has been in good request, but prices are extremely irregular, and it is impossible to quote any hard-and-fast basis on which to work. White and Brown cottons have been the subject of a few isolated inquiries, but the business passing is insignificant. Sudan cotton has been neglected. A considerable amount of cotton has recently arrived here, and the selection of both Sakel and Uppers should now begin to show some improvement. The Liverpool stock shows an increase over last week's figures of some ten thousand bales. Forwardings to spinners for the week ending 12th inst. were returned as 11,500 bales. C.i.f. business has shown some improvement. Estimated sales 1,500 bales Egyptian and 10 bales Sudan. Quotations of Sakellaridis are advanced 155 points (Fair exceptionally 10 points lower). Uppers are advanced from 125 points for Fair, to 185 points for Extra Fine. Brown is advanced 115 for Fair, to 225 points for Extra Fine. Fully Good Fair Sakellaridis 29.60d.

Egyptian Futures.—There has been little if any falling off in the interest latterly shown in this market, and the majority of sessions under review have again been marked by excited and heavy trading. The outstanding feature of the week has been furnished by the strength of the Sakel options in Alexandria, and it would appear from the action of their market that the "long" interests are, at the moment, having matters pretty much their own way. . . . Pure Sakel is at a considerable premium, and on this account cannot be placed against the contract except at a considerable basic loss. Up to the end of last week we witnessed a heavy and sustained advance, mainly under the influence of the overseas market, and in a slightly lesser degree to trade calling and the covering of a large short account. Fresh high levels for the season were witnessed during Saturday's session, when the January position touched 28.85, but more recently trading has revealed a slightly easier undertone, and after erratic fluctuations, which have been shared by the Alexandria market, we close about one penny off the top, price alterations on the week showing an advance of 135 to 160 points for near and 95 to 112 points for more distant positions. Rather more interest has been shown in the new contracts (November, 1925), principally by straddlers, and the Sakel option has registered an advance of 115 points and the Upper 75 points. The present period of the season generally witnesses a quiet spell, as far as the trade are concerned, and, apart from this, the erratic movements in our market must have made matters still more difficult, as far as the producer of fine counts is concerned, for the booking of fresh business, the demand for both spot and forward cotton (Sakel) has only been on a limited scale, but the coarser qualities (and these do not influence our contract to any extent) have met a large demand. Spinners' takings continue on quite a heavy scale, last week over 11,000 bales going forward to the mills. Whilst we consider that the probability is for still higher prices, the position appears too dangerous to advise commitments.

The Khedivial Mail Steamship and Graving Dock Company announces a dividend on the ordinary shares of 5 per cent. for the year ended June 30, 1924, which will be paid, less tax at rate of 4s. 6d. in the £, at the P. and O. Banking Corporation, London, and at the Imperial Ottoman Bank, Alexandria. Holders of warrants to bearer are requested to present coupon No. 22.

The Egyptian Ministry of Agriculture states that the report that the Egyptian Government had decided to take all seed for sowing the next crop from the Damanhour ginneries is incorrect. The Egyptian Ministry of Agriculture, as it has always done, is taking the usual precautions to ensure that the seed purchased for distribution to the small cultivators is of good quality. All seed purchased by the Ministry up to date is from Gharbieh and Dakahlia provinces.

GROWTH OF SYRIAN LEATHER INDUSTRY.

The growth of the Syrian leather industry is due principally to the fact that during the World War this country was cut off from the rest of the world and the sources from which it usually received most of its leather. Being unable to import leather from foreign markets, local dealers began to establish tanneries of their own, and at present there are twelve tanneries in Syria, located at Beyrout, Damascus, Aleppo, Zahleh, and Mashgara. It has been estimated (says an American Consular report) that 1,000,000 sheep and goat skins and 200,000 cow and horse hides are tanned annually by the Syrian plants.

The leather produced locally cannot compete in quality or workmanship with that imported from France, Germany, England, Italy, or the United States, as uniformity in quality or finish is entirely lacking. The imports from the United States consist chiefly of kid, patent cow sides, cow sides, black and coloured suede, and black box calf. France supplies sole leather, kid, and box calf. Belgium furnishes sole leather and box calf, while Czecho-Slovakia sends box cowhides and box calf and Germany box calf and patent cow hides. The majority of the imports come into the country through Beyrout, the total for this port being 900,000 kilos in 1922 and 600,000 kilos in 1923.

The expansion of the leather industry in Syria depends largely on the correction of the defects now found in it, and the introduction of modern machinery for tanning and finishing. Furthermore, greater care must be taken in slaughtering and flaying the animals and preparing the skins for tanning. A more or less general centralisation or concentration of the industry into the hands of a few large firms is also necessary if progress is to be made. The utter lack of scientific knowledge is also one of the drawbacks in the modernisation of the local tanning industry, and, as with the other obstacles, can only be overcome through a campaign of education. Despite its many defects, however, the Syrian leather industry is of considerable importance. A large portion of the domestic requirements are met through local production, while a certain surplus is also available for export.

INDIA'S TRADE IN OCTOBER.

Increase in Exports.

The trade returns of British India for the month of October showed, as compared with the preceding month, decreases in the values of imports and re-exports, with an increase in exports. The imports of private merchandise totalled Rs.20,84 lakhs, and showed a decrease of Rs.1,98 lakhs, as compared with the preceding month. The value of the exports of Indian produce and manufactures rose from Rs.27,10 lakhs in September to Rs.29,07 lakhs, while re-exports decreased by Rs.54 lakhs to Rs.76 lakhs.

Measured by the statistics of merchandise and treasure, the visible balance of trade was in favour of India to the extent of Rs.1,45 lakhs in October, as compared with an adverse balance of Rs.1,07 lakhs in September and a favourable balance of Rs.93 lakhs a year ago. During the seven months ending October the visible balance of trade in merchandise and treasure was Rs.18,92 lakhs in favour of India, as compared with Rs.33,15 lakhs in the corresponding period of the preceding year. The balance of the remittances of funds in October was minus Rs. 14,00 lakhs.

The share of the United Kingdom in imports fell from 53 per cent. in October, 1923, to 51 per cent. in October, 1924, while in exports it rose slightly, from 31.1 to 31.4 per cent. The shares of Germany, Japan, and the United States in October, 1924, were respectively 7, 7, and 5 per cent. under imports, and 5, 7, and 8 per cent. under exports.

The tonnage of vessels entered into British India and cleared outwards with cargoes from and to foreign countries and British Possessions during October, 1924, amounted respectively to 652,000 and 700,000, as against 510,000 and 644,000 in September and 581,000 and 610,000 a year ago. The tonnage entered into and cleared from British India during the seven months April to October was 3,933,000 and 4,761,000 respectively, as compared with 3,836,000 and 4,516,000 in the same period last year.

COMPANY NOTES AND REPORTS.

National Bank of Egypt.

Position at October 31, 1924, published in conformity with Article 8 of the Statutes. Banking Department.—Liabilities :—Share capital (300,000 fully paid shares of £10 each), £E2,925,000; reserve fund: statutory reserve, £E1,462,500; special reserve, £E804,375; current, deposit, and other accounts, £E13,846,310; Egyptian Government, £E15,375,118; Sudan Government, £E208,989; Mixed Tribunals, £E1,460,118; bankers' accounts, £E504,597; cheques and bills payable, £E571,697; sundry other accounts, £E993,187 — £E38,151,891. *By authority of the Egyptian Government these Treasury Bills are deposited in lieu of gold. (See *Journal Officiel* of October 30, 1916.)

The Dacia Romano Petroleum Syndicate, Ltd., announces that the production for November amounted to 350 tons.

M. Bratianu, the Minister of Finance, speaking in the Chamber on December 12 during the debate on the Budget, said that the policy of the Government was in the direction of unification and the normal functioning of the administration, the stabilisation of the financial situation, increase in production, and the valuation of the national resources (says a Reuter message from Bucharest). The Chamber passed the Budget.

Near East Markets.

SUDAN PRODUCE.

The following extracts are taken from the report of the Central Economic Board of the Sudan Government, dated November 25 :—

Gum.

The exports of gum during October were as follows: Via Port Sudan, 27 tons of bleached of the value of £E1,981; 827 tons of hashab, of the value of £E35,710; and 36 tons of talh, of the value of £E885.

Kordofan Province.—4,590 kantars were sold in El Obeid market during October, as against 6,353 kantars during the same month last year. The average price was £E1.049m/ms. per kantar. The 4,590 kantars include 1,798 kantars received from Nahud for sale and exclude 801 kantars already sold at Nahud and sent to El Obeid for resale. The arrivals at El Obeid from Nahud, for checking, were 2,408 kantars, as against 2,733 kantars during the same month last year. The amount sold at Nahud during the month was 2,426 kantars, as against 1,557 kantars during the same month last year. The average price was £E0,896 m/ms. the kantar. No gum was sold at Um Ruaba during October, 1924, or 1923. No gum was sold at Rahad during the month, against 8 kantars during the same month last year.

The Fung Province.—October: 48 tons of gum hashab were exported from the province via Makwar River Siding during the month.

Kassala Province.—October: Talh gum has appeared at Gedaref, and 113 kantars were exported from there during the month.

Cotton.

While Nile Province.—In Geteina district the crops on the east bank have been very poor owing to insufficient rainfall. There has been no rain-grown American cotton for the same reason. That sown as a seluka crop is doing well. American rain-grown cotton in the Maatuk area looks very promising. It is very popular, and applications have already been received from that omodieh for 150 sacks of seed for 1925. Cotton grown in El Dueim as a sagia crop is doing very well.

Red Sea Province.—The rains have done much good, and crops both at Tokar and Khor Arbaat are looking most promising. There is every prospect of a very valuable crop again this year.

Blue Nile Province.—Rain cotton reports are very mixed—heavier rains at the beginning would have suited the cotton better in some cases. A considerable quantity has been planted on rather lightly watered land, and this has been attacked by thrips—other cotton was planted too early on heavy watered land, and has suffered from black arm. The hot period between the end of the rains and the beginning of cooler weather has not suited cotton, but there has been a general improvement since the weather got cooler, and there can be no doubt that there is a lot of very good cotton. On the whole, a better yield than last year is anticipated, and it is hoped at least 40,000 kantars of 315 rottles seed cotton will come into the province markets, for which 30,000 kantars should be from the Blue Nile Province.

Kassala Province.—Cotton picking is in full swing round Mefaza, and labour has been sent there from Gedaref to supplement the shortage. The first market will be held on November 1. The quality of the cotton is not quite as good as was expected, owing to the lack of late rain.

Upper Nile Province.—Following a very dry period during the last fortnight of September, heavy storms occurred in October. Very few of the bolls which formed everywhere in September opened during that month, and the rain does not appear to have damaged the crop. Reports from Renk are on the whole favourable. The crop at Tonga is reported to be bad.

Dongola Province.—Nuri: The cotton crop, 726 feddans, is looking well. The earliest sown has started opening, but picking will not be general for some time yet. Gureir: The cotton crop of 400 feddans is looking very well, and flowering and bolling is satisfactory. Some of the bolls on the earlier sown area have already opened, and a quantity of cotton should be ready for picking in November.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar & Egypt.

LARGE STEAMSHIPS. UPPER DECK CABINS.
MODERATE FARES.
RECOGNISED BY INDIAN GOVERNMENT.

Passenger sailing dates:—

*SCINDIA, Jan. 16. *ELYSIA, Feb. 11.
*MASSILIA, Jan. 30. *CIRCASSIA, Feb. 27.

*First class passengers only. Specially low fares.

CROP CONDITIONS IN IRAQ.

The following further extracts are taken from the Agricultural Bulletin of Iraq :—

The low-level of the Tigris has continued to affect the cultivation in the Amarah Ma'qa'atas adversely. The "Harfi" rice crop has threshed out very badly, and the "Afli" rice will be below the average. On the Dialah canals an improvement in the water-supply took place towards the end of the month. Rice from this area is reported to be good where sufficient water has been available. The water-supply on all Euphrates canals has remained good, and the rotation as practised throughout the summer appears to have been highly satisfactory. Silt-clearing operations have now started on some of the canals. Maize is reported an average crop from all districts. A fair crop of early sown "Mash" and Sesame has been harvested.

Deliveries of cotton to the British Cotton Growing Association's ginnery up to the end of September amounted to the equivalent of 820 bales of ginned cotton, as against 508 bales for the same period last year. The recovery of the crop from the trying July-August weather has been slow this year, and second pickings are uniformly late. There is every prospect of satisfactory late October pickings. Climatic conditions have favoured the increase of boll-worm where this is present. The fifth generation of this pest hatched out at Rustam between September 9 and 16. The boll-worm population was increased in consequence from 16 per 100 hills to 55 per 100 hills, and the mortality of the pest was also much lower. Careful records of the intensity of the attack have been maintained, and at the end of September it was found that 23 per cent. of bolls were attacked. Many of these, however, are new bolls which would not, in any case, have produced cotton. Up to the end of September the different varieties in the main varietal test had yielded from 1,052 lb. per acre to 1,527 lb. per acre according to variety, whilst the bulk crop of 95 acres had given at the rate of 769 lb. per acre.

Great activity in preparation for winter sowings is being shown in all districts. Wherever possible, land is being irrigated to facilitate ploughings and early sowings of barley for fodder and winter vegetables are already being made. Sowings of "daim" (rain-fed) winter cereals have already commenced in the northern districts.

The July-September exports of wheat from Iraq were 949 tons and of barley 12,487 tons, total 13,436 tons, as compared with 54,815 tons exported during the same period last year. The August-September exports of dates from Iraq were 55,845 tons, valued at Rs. 7,939,757, as compared with 16,210 tons, valued at Rs. 2,318,649 for the corresponding season last year. The July-September exports of wool from Iraq were 11,404 tons as compared with 2,349 tons exported during the corresponding season last year.

Lieut.-General Sir Reginald Pole-Carew, K.C.B., of Antony House, Torpoint, Cornwall, chairman of the Sunja Syndicate, Limited, a director of the West Caucasian Oilfields, Limited, and of the Yarde Kerri Group Tin Mines, Limited, Conservative M.P. for the Bodmin Division, 1910-16, who saw service in the Afghan War, 1879-80, in Egypt, in Burma and South Africa, and as Inspector-General of the Territorial Force during the Great War, who died on September 19, aged 75, left, exclusive of settled property, estate of the gross value of £15,444, with net personalty £14,108.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.)

The Sudan.

Steel Tank.—The Inspector-General of Sudan Irrigation, Khartoum, invites tenders for the supply of a mild steel tank, dimensions 10 × 10 × 2½ metres, to be used for water, with a small head between the two levels; the plates and the angle frames should be supplied drilled and cut according to the dimensions required, and ready to be erected in the sudds zone. January 15.

Egypt.

Surgical Instruments.—The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of surgical instruments required for the period of one year from April 1, 1925. January 27.

Binding and Printing Material.—The Superintendent, Government Press, Bulâq, Cairo, invites tenders for the supply of binding and printing material. Price of conditions of contract: 50 mills. per copy. January 23.

Stationery, etc.—The Director, Central Stationery Stores, Ministry of Finance, Cairo, invites tenders for the supply of stationery articles and papers required for the year 1925-1926. February 2.

Printing Paper, etc.—The Superintendent, Government Press, Bulâq, Cairo, invites tenders for the supply of printing and writing paper, bristol-board, grey-board, and straw-board. January 13.

General Stores.—The Ministry of War invites tenders for the supply of general stores and clothing required by the Frontier Districts Administration for the year 1925-26. The goods required include permanent stores, oils, paints, varnishes, and other consumable stores, and clothing and cloth. Tenders, on the proper form, must reach the Director of Stores, Frontier Districts Administration, Alexandria, not later than noon on January 14, 1925. It should also be noted that samples of permanent stores, oils, paints, etc., should reach the F.D.A. Arsenal ten days before the date fixed for opening tenders. (D.O.T.)

Calico and Sash.—The Surveyor-General of Egypt, Giza (Mudiriya), invites tenders for the supply of calico and sash required for the next financial year, 1925-1926. February 10.

Clothing, etc.—The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of clothing, equipment, tents, etc., required for the year 1925-1926. January 16.

Candles.—The Financial Secretary, Egyptian Army, War Office, Cairo, invites tenders for the supply of two English tons of candles. February 3.

Turkey.

Barbed Wire.—The Commission des achats des chemins de fer d'Anatolie invite tenders for the supply of five tons of galvanised barbed wire. (D.O.T.)

The incoming Christmas mail is reported to have created a post-war record, being nearly up to the highest previous to the War. Bombay and Calcutta have over a thousand bags each.

The members of the Mosul Commission appointed by the League of Nations have reserved passages by the Nairn Overland Motor Service, leaving Beyrout for Baghdad in the second week of January.

Steaua Romana (British) is advised that well No. 14 Runcu produced on Friday week 1,060 tons, and Saturday 800 tons, and on Sunday 780 tons. The well then sanded up, but active cleaning operations are in progress.

According to Reuter's Sofia correspondent, the Bulgarian Premier, M. Tsankoff, will shortly pay a number of visits to foreign countries for the purpose of discussing various matters affecting Bulgaria. The Premier will probably first visit Belgrade and Bucharest.

Fifteen Chittagong fishermen have been rescued off Madras after being buffeted in the Bay of Bengal for thirty-nine days by the recent cyclone. They exhausted their food supply on December 13, and they had only half a cup of water each daily.

At a meeting of the Russo-Roumanian Mixed Commission on December 15, which is dealing with the question of the Dniester frontier, it was decided to place a strict prohibition on the passage of refugees and to take energetic measures to guard the frontier.

At a recent Durbar at Amraoti Sir Frank Sly, the Governor of the Central Provinces, India, gave an assurance that no step would be taken in regard to the possible transfer of Berar to the administration of the Nizam of Hyderabad without giving the people of Berar full opportunity of expressing their wishes.
